10. The Lacedæmonians, after the business of Plataea, sent messengers presently up and down Peloponnesus, and to their confederates without, to have in readiness their forces, and such things as should be necessary for a foreign expedition, as intending the invasion of Attica. And when they were all ready, they came to the rendezvous in the isthmus at a day appointed, two-thirds of the forces of every city. When the whole army was gotten together, Archidamus, king of the Lacedæmonians, general of the expedition, called together the commanders of the several cities, and such as were in authority and most worthy to be present; and spake unto them as followeth:

the oration of archidamus. year 1. A. C. 431. Ol. 87. 1. Oration of Archidamus. year 1. A. C. 431. Ol. 87. 1. Oration of Archidamus.

11. "Men of Peloponnesus and confederates, not only our fathers have had many wars, both within and without Peloponnesus, but we ourselves also, such as are anything in years, have been sufficiently acquainted therewith; yet did we never before set forth with so great a preparation as at this present. And now, not only we are a numerous and puissant army, that invade; but the state also is puissant that is invaded by us. We have reason therefore to show ourselves neither worse than our fathers, nor short of the opinion conceived of ourselves. For all Greece is up at this commotion, observing us: and through their hatred to the Athenians, do wish that we may accomplish whatsoever we intend. And therefore, though we seem to invade them with a great army, and to have much assurance that they will not come out against us to battle, yet we ought not for this to march the less carefully prepared; but of every city as well the captain as the soldier, to expect always some danger or other in that part wherein he himself is placed. For the accidents of war are uncertain; and for the most part the onset begins from the lesser number and upon passion. And oftentimes the lesser number, being afraid, hath beaten back the greater with the more ease; for that through contempt they have gone unprepared. And in the land of an enemy, though the soldiers ought always to have bold hearts, yet for action, they ought to make their preparations as if they were afraid. For that will give them both more courage to go upon the enemy, and more safety in fighting with him. But we invade not now a city that cannot defend itself, but a city every way well appointed. So that we must by all means expect to be fought withal, though not now, because we be not yet there, yet hereafter, when they shall see us in their country wasting and destroying their possessions. For all men, when in their own sight and on a sudden they receive any extraordinary hurt, fall presently into choler; and the less they consider, with the more stomach they assault. And this is likely to hold in the Athenians somewhat more than in the others; for they think themselves

worthy to have the command of others, and to invade and waste the territories of their neighbours, rather than to see their neighbours waste theirs. Wherefore, as being to war against a great city, and to procure both to your ancestors and yourselves a great fame, either good or bad as shall be the event; follow your leaders in such sort, as above all things you esteem of order and watchfulness. For there is nothing in the world more comely nor more safe, than when many men are seen to observe one and the same order.”

Archidamus sends before him an ambassador to the Athenians; and tries all other means to right his country, before war. The ambassador from Archidamus convoyed back without conference. year 1. A. C. 431. Ol. 87. 1. Archidamus marcheth forward.

12. Archidamus, having thus spoken and dismissed the council, first sent Melesippus the son of Diacritus, a man of Sparta, to Athens, to try if the Athenians, seeing them now on their journey, would yet in some degree remit of their obstinacy. But the Athenians neither received him into their city, nor presented him to the state: for the opinion of Pericles had already taken place, not to receive from the Lacedæmonians neither herald nor ambassador, as long as their army was abroad. Therefore they sent him back without audience, with commandment to be out of their borders the self-same day; and that hereafter if they would any thing with them, they should return every one to his home, and send their ambassadors from thence. They sent with him also certain persons to convoy him out of the country, to the end that no man should confer with him; who, when he came to the limits and was to be dismissed, uttered these words: “This day is the beginning of much evil unto the Grecians”; and so departed. When he returned to the camp, Archidamus perceiving that they would not relent, dislodged and marched on with his army into their territory. The Bœotians with their

appointed part and with horsemen aided the Peloponnesians; but with the rest of their forces went and wasted the territory of Plataea.

Pericles imagining Archidamus might spare his grounds, promiseth, if he did, to give them to the state. The speech of Pericles to the assembly at Athens, touching the means of the war, &c. year 1. A. C. 431. Ol. 87. 1. The treasure of the people of Athens. year 1. A. C. 431. Ol. 87. 1. The length of the walls to which the watchmen were appointed. year 1. A. C. 431. Ol. 87. 1. Their galleys.

13. Whilst the Peloponnesians were coming together in the isthmus, and when they were on their march, before they brake into Attica, Pericles the son of Xantippus, who with nine others was general of the Athenians, when he saw they were about to break in, suspecting that Archidamus, either of private courtesy or by command of the Lacedaemonians to bring him into jealousy, (as they had before for his sake commanded the excommunication), might oftentimes leave his lands untouched, told the Athenians beforehand in an assembly, “that though Archidamus had been his guest, it was for no ill to the state; and howsoever, if the enemy did not waste his lands and houses as well as the rest, that then he gave them to the commonwealth”; and therefore desired “that for this he might not be suspected”. Also he advised them concerning the business in hand the same things he had done before; “that they should make preparations for the war, and receive their goods into the city; that they should not go out to battle, but come into the city and guard it; that they should also furnish out their navy, wherein consisted their power, and hold a careful hand over their confederates”: telling them, “how that in the money that came from these lay their strength, and that the victory in war consisted wholly in counsel and store of money”. Farther he bade them be confident, “in that there was yearly coming into the state from the confederates for tribute, besides other revenue, six hundred talents; and remaining yet then in the citadel six

thousand talents of silver coin.” (for the greatest sum there had been, was ten thousand talents wanting three hundred: out of which was taken that which had been expended upon the gate-houses of the citadel, and upon other buildings, and for the charges of Potidæa): “besides the uncoined gold and silver of private and public offerings; and all the dedicated vessels belonging to the shows and games, and the spoils of the Persian, and other things of that nature, which amounted to no less than five hundred talents”. He added farther, that “much money might be had out of other temples without the city, which they might use; and if they were barred the use of all these, they might yet use the ornaments of gold about the goddess herself;” and said that “the image had about it the weight of forty talents of most pure gold, and which might all be taken off; but having made use of it for their safety”, he said, “they were to make restitution of the like quantity again”. Thus he encouraged them touching matter of money. “Men of arms”, he said, “they had thirteen thousand; besides the sixteen thousand that were employed for the guard of the city and upon the walls.” For so many at the first kept watch at the coming in of the enemy, young and old together, and strangers that dwelt amongst them as many as could bear arms. For the length of the Phalerian wall, to that part of the circumference of the wall of the city where it joined, was thirty-five furlongs; and that part of the circumference which was guarded, (for some of it was not kept with a watch, namely, the part between the long wall and the Phalerian), was forty-three furlongs. And the length of the long walls down to Piræus, (of which there was a watch only on the outmost), was forty furlongs. And the whole compass of Piræus together with Munychia, was sixty furlongs; whereof that part that was watched, was but half. He said farther, “they had of horsemen, accounting archers on horseback, twelve hundred; and sixteen hundred archers; and of galleys fit for the sea, three hundred.” All this and no less had the Athenians, when the invasion of the Peloponnesians was

first in hand, and when the war began. These and other words spake Pericles, as he used to do, for demonstration that they were likely to outlast this war.

The Athenians fetch in their wives and children and substance into the city.

14. When the Athenians had heard him, they approved of his words; and fetched into the city their wives and children, and the furniture of their houses, pulling down the very timber of the houses themselves. Their sheep and oxen they sent over into Eubœa, and into the islands over against them. Nevertheless this removal, in respect they had most of them been accustomed to the country life, grieved them very much.

The Athenians accustomed ever to live in the country. year 1. A. C. 431. Ol. 87. 1. Theseus first brought the inhabitants of Attica to make Athens their capital city. year 1. A. C. 431. Ol. 87. 1.

15. This custom was from great antiquity more familiar with the Athenians, than any other of the rest of Greece. For in the time of Cecrops and the first kings, down to Theseus, the inhabitants of Attica had their several boroughs, and therein their common halls and their governors; and, unless they were in fear of some danger, went not to the king for advice, but every city administered their own affairs and deliberated by themselves. And some of them had also their particular wars; as the Eleusinians, who joined with Eumolpus against Erectheus. But after Theseus came to the kingdom, one who besides his wisdom was also a man of very great power, he not only set good order in the country in other respects, but also dissolved the councils and magistracies of the rest of the towns; and assigning them all one hall and one council-house, brought them all to cohabit in the city that now is; and constrained them, enjoying their own as before, to use this one for their city, which (now when they all paid their duties to it) grew great, and was by Theseus so delivered to posterity. And

from that time to this day, the Athenians keep a holiday at the public charge to the goddess, and call it Synœcia. That which is now the citadel, and the part which is to the south of the citadel, was before this time the city. An argument whereof is this; that the temples of the gods are all set either in the citadel itself; or if without, yet in that quarter: as that of Jupiter Olympius, and of Apollo Pythius, and of Tellus, and of Bacchus in Limnæ; (in honour of whom the old Bacchanals were celebrated on the twelfth day of the month Athesterion, according as the Ionians who are derived from Athens, do still observe them); besides other ancient temples situate in the same part. Moreover, they served themselves with water for the best uses of the fountain, which, now the Nine-pipes, built so by the tyrants, was formerly, when the springs were open, called Callirhoe, and was near. And from the old custom, before marriages and other holy rites they ordain the use of the same water to this day. And the citadel, from the ancient habitation of it, is also by the Athenians still called the city.

The Athenians remove out of the borough towns into the city unwillingly. year 1. A. C. 431. Ol. 87. 1. Athens thronged with the coming in of the country. An old prophecy against dwelling in the Pelasgicum. year 1. A. C. 431. Ol. 87. 1.

16. The Athenians therefore had lived a long time governed by laws of their own country towns; and after they were brought into one, were nevertheless (both for the custom which most had, as well of the ancient time as since till the Persian war, to live in the country with their whole families; and also especially for that since the Persian war they had already repaired their houses and furniture) unwilling to remove. It pressed them likewise, and was heavily taken, besides their houses to leave the things that pertained to their religion, (which, since their old form of government, were become patrial), and to change their manner of life, and to be no better than banished every man his city. 17. After they came into Athens, there was

habitation for a few, and place of retire, with some friends or kindred. But the greatest part seated themselves in the empty places of the city, and in temples and in all the chapels of the heroes; saving in such as were in the citadel, and the Eleusinium, and other places strongly shut up. The Pelasgicum also under the citadel, though it were a thing accursed to dwell in it, and forbidden by the end of a verse in a Pythian oracle, in these words: Best is the Pelasgicum empty: was nevertheless for the present necessity inhabited. And in my opinion, this prophecy now fell out contrary to what was looked for. For the unlawful dwelling there caused not the calamities that befell the city, but the war caused the necessity of dwelling there: which war the oracle not naming, foretold only that it should one day be inhabited unfortunately.

The Athenians make ready a hundred galleys to send about Peloponnesus.

Many also furnished the turrets of the walls, and whatsoever other place they could any of them get. For when they were come in, the city had not place for them all: but afterwards they had the long walls divided amongst them, and inhabited there, and in most parts of Piræus. Withal they applied themselves to the business of the war, levying their confederates, and making ready a hundred galleys to send about Peloponnesus. Thus were the Athenians preparing.

The Peloponnesian army assault Œnoe, a frontier town of Attica, in vain.

18. The army of the Peloponnesians marching forward, came first to Œnoe, a town of Attica, the place where they intended to break in; and encamping before it, prepared with engines and by other means to assault the wall. For Œnoe lying on the confines between Attica and Bœotia, was walled about; and the Athenians kept a garrison in it, for defence of the country when at any time there should be war. For which cause they made

preparation for the assault of it; and also spent much time about it otherwise.

Archidamus taxed of backwardness and favour to the Athenians. year 1. A. C. 431. Ol. 87. 1. Archidamus with his army entereth into Attica: and comes to Acharnas, and stays there long, cutting down their corn and trees.

And Archidamus for this was not a little taxed, as thought to have been both slow in gathering together the forces for the war, and also to have favoured the Athenians in that he encouraged not the army to a forwardness in it. And afterwards likewise his stay in the isthmus and his slowness in the whole journey was laid to his charge, but especially his delay at Cœnoe. For in this time the Athenians retired into the city: whereas it was thought, that the Peloponnesians marching speedily, might but for this delay have taken them all without. So passionate was the army of Archidamus for his stay before Cœnoe. But expecting that the Athenians, whilst their territory was yet unhurt, would relent and not endure to see it wasted, for that cause (as it is reported) he held his hand. 19. But after, when they had assaulted Cœnoe, and tried all means, but could not take it; and seeing the Athenians sent no herald to them; then at length arising from thence, about eighty days after that which happened to the Thebans that entered Plataea, the summer and corn being now at the highest, they fell into Attica, led by Archidamus the son of Zeuxidamus, king of the Lacedæmonians. And when they had pitched their camp, they fell to wasting of the country, first about Eleusis, and then in the plain of Thriasia; and put to flight a few Athenian horsemen at the brooks called Rheiti. After this, leaving the Ægaleon on the right hand, they passed through Cecropia, till they came unto Acharnas, which is the greatest town in all Attica of those that are called Demoi; and pitching there, both fortified their camp, and staid a great while wasting the country thereabout.

20. Archidamus was said to have staid so long at Acharnas with his army in battle array, and not to have come down all the time of his invasion into the champaign, with this intention. He hoped that the Athenians, flourishing in number of young men, and better furnished for war than ever they were before, would perhaps have come forth against him, and not endured to see their fields cut down and wasted; and therefore seeing they met him not in Thriasia, he thought good to try if they would come out against him lying now at Acharnas. Besides, the place seemed unto him commodious for the army to lie in; and it was thought also that the Acharnans being a great piece of the city, (for they were three thousand men of arms), would not have suffered the spoiling of their lands, but rather have urged the rest to go out and fight. And if they came not out against him at this invasion, they might hereafter more boldly both waste the champaign country, and come down even to the walls of the city. For the Acharnans, after they should have lost their own, would not be so forward to hazard themselves for the goods of other men: but there would be the thoughts of sedition in one towards another in the city. These were the cogitations of Archidamus, whilst he lay at Acharnas.

The Athenians hardly contain themselves from going out to fight. year i. A. C. 431. Ol. 87. 2. A skirmish between the Athenian and Bœotian horse. year i. A. C. 431. Ol. 87. 2.

21. The Athenians, as long as the army of the enemy lay about Eleusis and the fields of Thrius, and as long as they had any hope it would come on no farther, remembering that also Pleistoanax the son of Pausanias, king of Lacedæmon, when fourteen years before this war he entered Attica with an army of the Peloponnesians as far as Eleusis and Thriasia, retired again and came no farther; (for which he was also banished Sparta, as thought to have gone back for money); they stirred not. But when they saw the army now at Acharnas but sixty furlongs from the city, then they thought it no longer to

be endured; and when their fields were wasted (as it was likely) in their sight: which the younger sort had never seen before, nor the elder but in the Persian war; it was taken for a horrible matter, and thought fit by all, especially by the youth, to go out and not endure it any longer. And holding councils apart one from another, they were at much contention, some to make a sally, and some to hinder it. And the priests of the oracles giving out prophecies of all kinds, every one made the interpretation according to the sway of his own affection. But the Acharnians, conceiving themselves to be no small part of the Athenians, were they that, whilst their own lands were wasting, most of all urged their going out. Insomuch as the city was every way in tumult, and in choler against Pericles, remembering nothing of what he had formerly admonished them; but reviled him, for that being their general he refused to lead them into the field, and imputing unto him the cause of all their evil. 22. But Pericles, seeing them in passion for their present loss and ill advised, and being confident he was in the right touching not sallying, assembled them not nor called any council, for fear lest being together they might upon passion rather than judgment commit some error: but looked to the guarding of the city, and as much as he could to keep it in quiet. Nevertheless he continually sent out horsemen, to keep the scouts of the army from entering upon and doing hurt to the fields near the city. And there happened at Phrygii a small skirmish between one troop of horse of the Athenians, with whom were also the Thessalians, and the horsemen of the Bœotians. Wherein the Athenians and Thessalians had not the worse, till such time as the Bœotians were aided by the coming in of their men of arms; and then they were put to flight, and a few of the Athenians and Thessalians slain; whose bodies, notwithstanding, they fetched off the same day without leave of the enemy. And the Peloponnesians the next day erected a trophy. This aid of the Thessalians was upon an ancient league with the Athenians, and consisted of

Larissæans, Pharsalians, Parasians, Cranonians, Pyrasians, Gyrtonians, Pheræans. The leaders of the Larissæans were Polymedes and Aristonus, men of contrary factions in their city: of the Pharsalians, Meno: and of the rest, out of the several cities several commanders.

Archidamus removes from Acharnas. The Athenians send a hundred galleys to infest the sea coast of Peloponnesus. The Peloponnesians go home. year i. A. C. 431. Ol. 87. 2.

23. The Peloponnesians seeing the Athenians would not come out to fight, dislodging from Acharnas, wasted certain other villages between the hills Parnethus and Brelissus. Whilst these were in Attica, the Athenians sent the hundred galleys which they had provided, and in them one thousand men of arms and four hundred archers, about Peloponnesus; the commanders whereof were Charcinus the son of Xenotimus, Proteus the son of Epicles, and Socrates the son of Antigenes; who thus furnished, weighed anchor and went their way. The Peloponnesians, when they had stayed in Attica as long as their provision lasted, went home through Bœotia, not the way they came in; but passing by Oropus, wasted the country called Peiraice, which is of the tillage of the Oropians, subjects to the people of Athens. And when they were come back into Peloponnesus, they disbanded and went every man to his own city.

The Athenians set by 1000 talents and 100 galleys, for defence against an invasion by sea.

24. When they were gone, the Athenians ordained watches both by sea and land, such as were to continue to the end of the war: and made a decree, to take out a thousand talents of the money in the citadel and set it by, so as it might not be spent, but the charges of the war be borne out of other moneys; and made it capital for any man to move or give his vote for the stirring of this money for any other use, but only if the enemy should come with an army by sea to invade the city, for necessity of that defence.

Together with this money they likewise set apart one hundred galleys, and those to be every year the best, and captains to be appointed over them; which were to be employed for no other use than the money was, and for the same danger, if need should require.

25. The Athenians that were with the hundred galleys about Peloponnesus, and with them the Corcyræans with the aid of fifty sail more, and certain others of the confederates thereabout, amongst other places which they infested in their course landed at Methone, a town of Laconia; and assaulted it, as being but weak and few men within. But it chanced that Brasidas the son of Tellis, a Spartan, had a garrison in those parts; and hearing of it, succoured those of the town with one hundred men of arms. Wherewith running through the Athenian army, dispersed in the fields, directly towards the town, he put himself into Methone; and with the loss of few of his men in the passage he saved the place, and for this adventure was the first that was praised at Sparta in this war. The Athenians putting off from thence sailed along the coast, and put in at Pheia of Elis, where they spent two days in wasting the country, and in a skirmish overthrew three hundred choice men of the Lower Elis, together with other Eleians thereabouts, that came forth to defend it. But the wind arising, and their galleys being tossed by the weather in a harbourless place, the most of them embarked, and sailed about the promontory called Icthus into the haven of Pheia. But the Messenians, and certain others that could not get aboard, went by land to the town of Pheia and rifled it. And when they had done, the galleys, that now were come about, took them in, and leaving Pheia put forth to sea again. By which time a great army of Eleians was come to succour it; but the Athenians were now gone away, and wasting some other territory.

26. About the same time the Athenians sent likewise thirty galleys about Locris; which were to serve also for a watch about Eubœa. Of these,

Cleopompus the son of Clinias had the conduct; and landing his soldiers in divers parts, both wasted some places of the sea coast, and won the town of Thronium, of which he took hostages: and overcame in fight at Alope the Locrians that came out to aid it.

The inhabitants of Ægina removed by the Athenians: and received by the Peloponnesians. year i. A. C. 431. Ol. 87. 2.

27. The same summer, the Athenians put the Æginetæ, man, woman and child, out of Ægina; laying to their charge that they were the principal cause of the present war. And it was also thought the safer course to hold Ægina, being adjacent to Peloponnesus, with a colony of their own people; and not long after they sent inhabitants into the same. When the Æginetæ were thus banished, the Lacedæmonians gave them Thyrea to dwell in, and the occupation of the lands belonging unto it to live on: both upon hatred to the Athenians, and for the benefits received at the hands of the Æginetæ in the time of the earthquake and insurrection of the Helotes. This territory of Thyrea is in the border between Argolica and Laconica, and reacheth to the sea-side. So some of them were placed there: and the rest dispersed into other parts of Greece.

Eclipse of the sun: and stars discerned.

28. Also the same summer, on the first day of the month according to the moon, (at which time it seems only possible), in the afternoon happened an eclipse of the sun. The which, after it had appeared in the form of a crescent, and withal some stars had been discerned, came afterwards again to the former brightness.

The Athenians seek the favour of Sitalces, king of Thrace, and Perdiccas, king of Macedonia. year i. A. C. 431. Ol. 87. 2. Sadocus the son of Sitalces, king of Thrace, made free of Athens.

29. The same summer also the Athenians made Nymphodorus the son of Pythos, of the city of Abdera, (whose sister was married to Sitalces, and that

was of great power with him), their host, though before they took him for an enemy; and sent for him to Athens, hoping by his means to bring Sitalces the son of Teres, king of Thrace, into their league. This Teres, the father of Sitalces, was the first that advanced the kingdom of the Odrysians above the power of the rest of Thrace. For much of Thrace consisteth of free states. And Tereus that took to wife out of Athens Procne the daughter of Pandion, was no kin to this Teres, nor of the same part of Thrace. But that Tereus was of the city of Daulia in the country now called Phocis, then inhabited by the Thracians. And the fact of the women concerning Itys, was done there; and by the poets, where they mention the nightingale, that bird is also called Daulias. And it is more likely that Pandion matched his daughter to this man, for vicinity and mutual succour, than with the other, that was so many days' journey off as Odrysæ. And Teres (which is also another name) was the first that seized on the kingdom of Odrysæ. Now Sitalces, this man's son, the Athenians got into their league, that they might have the towns lying on Thrace and Perdiccas to be of their party. Nymphodorus, when he came to Athens, made this league between them and Sitalces, and caused Sadocus the son of Sitalces, to be made free of Athens; and also undertook to end the war in Thrace. For he would persuade Sitalces to send unto the Athenians a Thracian army of horsemen and targettiers. He likewise reconciled Perdiccas to the Athenians, and procured of him the restitution of Therme. And Perdiccas presently aided the Athenians and Phormio in the war against the Chalcideans. Thus were Sitalces the son of Teres, king of Thrace, and Perdiccas the son of Alexander, king of Macedonia, made confederates with the Athenians.

Year i. A. C. 431. Ol. 87. 2. The Athenians take Solium and A stacus, and the island of Cephalonia.

30. The Athenians being yet with their hundred galleys about Peloponnesus, took Solium, a town that belonged to the Corinthians, and

put the Palæenses only, of all the Acarnanians, into the possession both of the town and territory. Having also by force taken Astacus from the tyrant Euarchus, they drove him thence, and joined the place to their league. From thence they sailed to Cephalonia, and subdued it without battle: (this Cephalonia is an island lying over against Acarnania and Leucas; and hath in it these four cities, the Pallenses, Cranii, Samæi, and Pronæi:) and not long after returned with their fleet to Athens.

The Athenians invade Megaris. year i. A. C. 431. Ol. 87. 2. The Athenians' greatest army. The Athenians duly once a year invade Megaris.

31. About the end of the autumn of this summer, the Athenians, both themselves and the strangers that dwelt amongst them, with the whole power of the city, under the conduct of Pericles the son Xantippus, invaded the territory of Megara. And those Athenians likewise that had been with the hundred galleys about Peloponnesus, in their return, being now at Ægina, hearing that the whole power of the city was gone into Megaris, went and joined them. And this was the greatest army that ever the Athenians had together in one place before; the city being now in her strength, and the plague not yet amongst them. For the Athenians themselves were no less than ten thousand men of arms, besides the three thousand at Potidæa: and the strangers that dwelt amongst them, and accompanied them in this invasion, were no fewer than three thousand men of arms more; besides other great numbers of light-armed soldiers. And when they had wasted the greatest part of the country, they went back to Athens. And afterwards, year after year during this war, the Athenians often invaded Megaris, sometimes with their horsemen and sometimes with their whole army, until such time as they had won Nisæa.

The end of the first summer.

32. Also in the end of this summer they fortified Atalante, an island lying upon the Locrians of Opus, desolate till then; for a garrison against thieves,

which passing over from Opus and other parts of Locris might annoy Eubœa. These were the things done this summer after the retreat of the Peloponnesians out of Attica.

Year i. A. C. 431. Ol. 87. 2. Euarchus the tyrant recovereth Astacus.

33. The winter following, Euarchus of Acarnania, desirous to return to Astacus, prevaieth with the Corinthians to go thither with forty galleys and fifteen hundred men of arms, to re-establish him; to which he hired also certain other mercenaries for the same purpose. The commanders of this army were Euphamidas the son of Aristonymus, Timoxenes the son of Timocrates, and Eumachus the son of Chrysis. When they had re-established him, they endeavoured to draw to their party some other places on the sea-coast of Acarnania; but missing their purpose, they set sail homeward. As they passed by the coast of Cephalonia, they disbarked in the territory of the Cranii; where, under colour of composition, they were deceived, and lost some part of their forces. For the assault made upon them by the Cranii being unexpected, they got off with much ado, and went home.

The manner of the Athenians in burying the bones of the first slain in the wars. year i. A. C. 431. Ol. 87. 2. year i. A. C. 431. Ol. 87. 2.

34. The same winter the Athenians, according to their ancient custom, solemnized a public funeral of the first slain in this war, in this manner. Having set up a tent, they put into it the bones of the dead three days before the funeral: and every one bringeth whatsoever he thinks good to his own. When the day comes of carrying them to their burial, certain cypress coffins are carried along in carts, for every tribe one, in which are the bones of the men of every tribe by themselves. There is likewise borne an empty hearse covered over, for such as appear not, nor were found amongst the rest when they were taken up. The funeral is accompanied by any that will, whether

citizen or stranger; and the women of their kindred are also by at the burial, lamenting and mourning. Then they put them into a public monument, which standeth in the fairest suburbs of the city; in which place they have ever interred all that died in the wars, except those that were slain in the field of Marathon; who, because their virtue was thought extraordinary, were therefore buried thereright. And when the earth is thrown over them, some one thought to exceed the rest in wisdom and dignity, chosen by the city, maketh an oration, wherein he giveth them such praises as are fit: which done, the company depart. And this is the form of that burial: and for the whole time of the war, whensoever there was occasion, they observed the same. For these first, the man chosen to make the oration was Pericles the son of Xantippus: who when the time served, going out of the place of burial into a high pulpit, to be heard the farther off by the multitude about him, spake unto them in this manner:

the funeral oration made by pericles. year i. A. C. 431. Ol. 87. 2. The funeral oration made by Pericles.

35. "Though most that have spoken formerly in this place, have commended the man that added this oration to the law, as honourable for those that die in the wars; yet to me it seemeth sufficient, that they who have showed their valour by action, should also by an action have their honour, as now you see they have, in this their sepulture performed by the state; and not to have the virtue of many hazarded on one, to be believed as that one shall make a good or bad oration. For to speak of men in a just measure, is a hard matter: and though one do so, yet he shall hardly get the truth firmly believed. The favourable hearer, and he that knows what was done, will perhaps think what is spoken short of what he would have it, and what it was: and he that is ignorant, will find somewhat on the other side which he will think too much extolled; especially if he hear aught above the pitch of his own nature. For to hear another man praised finds patience so

long only, as each man shall think he could himself have done somewhat of that he hears. And if one exceed in their praises, the hearer presently through envy thinks it false. But since our ancestors have so thought good, I also, following the same ordinance, must endeavour to be answerable to the desires and opinions of every one of you, as far forth as I can.

Year i. A. C. 431. Ol. 87. 2. The funeral oration made by Pericles. He glanceth at the Lacedæmonians, because they ever looked sourly on soft and loose behaviour. year i. A. C. 431. Ol. 87. 2. The funeral oration made by Pericles. year i. A. C. 431. Ol. 87. 2. The funeral oration made by Pericles. year i. A. C. 431. Ol. 87. 2. The funeral oration made by Pericles.

36. “I will begin at our ancestors: being a thing both just and honest, that to them first be given the honour of remembrance in this kind. For they, having been always the inhabitants of this region, by their valour have delivered the same to succession of posterity, hitherto in the state of liberty. For which they deserve commendation, but our fathers deserve yet more: for that besides what descended on them, not without great labour of their own they have purchased this our present dominion, and delivered the same over to us that now are. Which in a great part also we ourselves, that are yet in the strength of our age here present, have enlarged; and so furnished the city with every thing, both for peace and war, as it is now all-sufficient in itself. The actions of war whereby all this was attained, and the deeds of arms both of ourselves and our fathers in valiant opposition to the barbarians or Grecians in their wars against us, amongst you that are well acquainted with the sum, to avoid prolixity I will pass over. But by what institutions we arrived at this, by what form of government and by what means we have advanced the state to this greatness, when I shall have laid open this, I shall then descend to these men’s praises. For I think they are things both fit for the purpose in hand, and profitable to the whole company, both of citizens and strangers, to hear related. 37. We have a form of

government, not fetched by imitation from the laws of our neighbouring states; (nay, we are rather a pattern to others, than they to us); which, because in the administration it hath respect not to a few, but to the multitude, is called a democracy. Wherein, though there be an equality amongst all men in point of law for their private controversies; yet in conferring of dignities one man is preferred before another to public charge, and that according to the reputation, not of his house, but of his virtue; and is not put back through poverty for the obscurity of his person, as long as he can do good service to the commonwealth. And we live not only free in the administration of the state, but also one with another void of jealousy touching each other's daily course of life; not offended at any man for following his own humour, nor casting on any man censorious looks, which though they be no punishment, yet they grieve. So that conversing one with another for the private without offence, we stand chiefly in fear to transgress against the public; and are obedient always to those that govern and to the laws, and principally to such laws as are written for protection against injury, and such unwritten, as bring undeniable shame to the transgressors. 38. We have also found out many ways to give our minds recreation from labour, by public institution of games and sacrifices for all the days of the year, with a decent pomp and furniture of the same by private men; by the daily delight whereof we expel sadness. We have this farther by the greatness of our city, that all things from all parts of the earth are imported hither; whereby we no less familiarly enjoy the commodities of all other nations, than our own. 39. Then in the studies of war, we excel our enemies in this. We leave our city open to all men; nor was it ever seen, that by banishing of strangers we denied them the learning or sight of any of those things, which, if not hidden, an enemy might reap advantage by; not relying on secret preparation and deceit, but upon our own courage in the action. They, in their discipline, hunt after valour presently from their youth

with laborious exercise; and yet we that live remissly, undertake as great dangers as they. For example; the Lacedæmonians invade not our dominion by themselves alone, but with the aid of all the rest. But when we invade our neighbours, though we fight in hostile ground, against such as in their own ground fight in defence of their own substance, yet for the most part we get the victory. Never enemy yet fell into the hands of our whole forces at once; both because we apply ourselves much to navigation, and by land also send many of our men into divers countries abroad. But when fighting with a part of it, they chance to get the better, they boast they have beaten the whole; and when they get the worse, they say they are beaten by the whole. And yet when from ease rather than studious labour, and upon natural rather than doctrinal valour, we come to undertake any danger, we have this odds by it, that we shall not faint beforehand with the meditation of future trouble, and in the action we shall appear no less confident than they that are ever toiling; 40. procuring admiration to our city as well in this as in divers other things. For we also give ourselves to bravery, and yet with thrift; and to philosophy, and yet without mollification of the mind. And we use riches rather for opportunities of action, than for verbal ostentation: and hold it not a shame to confess poverty, but not to have avoided it. Moreover there is in the same men, a care both of their own and the public affairs; and a sufficient knowledge of state matters, even in those that labour with their hands. For we only think one that is utterly ignorant therein, to be a man, not that meddles with nothing, but that is good for nothing. We likewise weigh what we undertake, and apprehend it perfectly in our minds; not accounting words for a hindrance of action, but that it is rather a hindrance to action to come to it without instruction of words before. For also in this we excel others; daring to undertake as much as any, and yet examining what we undertake; whereas with other men, ignorance makes them dare, and consideration dastards. And they are most rightly reputed valiant, who

though they perfectly apprehend both what is dangerous and what is easy, are never the more thereby diverted from adventuring. Again, we are contrary to most men in matter of bounty. For we purchase our friends, not by receiving, but by bestowing benefits. And he that bestoweth a good turn, is ever the most constant friend; because he will not lose the thanks due unto him from him whom he bestowed it on. Whereas the friendship of him that oweth a benefit, is dull and flat, as knowing his benefit not to be taken for a favour, but for a debt. So that we only do good to others, not upon computation of profit, but freeness of trust.

Year i. A. C. 431. Ol. 87. 2. The funeral oration made by Pericles.

41. “In sum it may be said, both that the city is in general a school of the Grecians, and that the men here have, every one in particular, his person disposed to most diversity of actions, and yet all with grace and decency. And that this is not now rather a bravery of words upon the occasion, than real truth, this power of the city, which by these institutions we have obtained, maketh evident. For it is the only power now, found greater in proof than fame; and the only power, that neither grieveth the invader, when he miscarries, with the quality of those he was hurt by, nor giveth cause to the subjected states to murmur, as being in subjection to men unworthy. For both with present and future ages we shall be in admiration, for a power not without testimony, but made evident by great arguments; and which needeth not either a Homer to praise it, or any other such, whose poems may indeed for the present bring delight, but the truth will afterwards confute the opinion conceived of the actions. For we have opened unto us by our courage all seas and lands, and set up eternal monuments on all sides, both of the evil we have done to our enemies, and the good we have done to our friends.

“Such is the city for which these men, thinking it no reason to lose it, valiantly fighting have died. And it is fit that every man of you that be left, should be like minded to undergo any travail for the same. 42. And I have therefore spoken so much concerning the city in general, as well to show you that the stakes between us and them, whose city is not such, are not equal; as also to make known by effects, the worth of these men I am to speak of; the greatest part of their praises being therein already delivered. For what I have spoken of the city, hath by these, and such as these, been achieved. Neither would praises and actions appear so levelly concurrent in many other of the Grecians, as they do in these: the present revolution of these men’s lives seeming unto me an argument of their virtues, noted in the first act thereof, and in the last confirmed. For even such of them as were worse than the rest, do nevertheless deserve, that for their valour shown in the wars for defence of their country they should be preferred before the rest. For having by their good actions abolished the memory of their evil, they have profited the state thereby more than they have hurt it by their private behaviour. Yet there was none of these, that preferring the further fruition of his wealth, was thereby grown cowardly; or that for hope to overcome his poverty at length and to attain to riches, did for that cause withdraw himself from the danger. For their principal desire was not wealth, but revenge on their enemies; which esteeming the most honourable cause of danger, they made account through it both to accomplish their revenge and to purchase wealth withal; putting the uncertainty of success to the account of their hope; but for that which was before their eyes, relying upon themselves in the action; and therein choosing rather to fight and die, than to shrink and be saved, they fled from shame, but with their bodies they stood out the battle; and so in a moment, whilst fortune inclineth neither way, left their lives not in fear, but in opinion of victory.

43. “Such were these men, worthy of their country. And for you that remain, you may pray for a safer fortune, but you ought not to be less venturously minded against the enemy; not weighing the profit by an oration only, which any man amplifying, may recount, to you that know as well as he, the many commodities that arise by fighting valiantly against your enemies; but contemplating the power of the city in the actions of the same from day to day performed, and thereby becoming enamoured of it. And when this power of the city shall seem great to you, consider then, that the same was purchased by valiant men, and by men that knew their duty, and by men that were sensible of dishonour when they were in fight; and by such men, as though they failed of their attempt, yet would not be wanting to the city with their virtue, but made unto it a most honourable contribution. For having every one given his body to the commonwealth, they receive in place thereof an undecaying commendation and a most remarkable sepulchre; not wherein they are buried so much, as wherein their glory is laid up, upon all occasions both of speech and action to be remembered for ever. For to famous men all the earth is a sepulchre: and their virtues shall be testified, not only by the inscription in stone at home, but by an unwritten record of the mind, which more than of any monument will remain with every one for ever. In imitation therefore of these men, and placing happiness in liberty, and liberty in valour, be forward to encounter the dangers of war. For the miserable and desperate men, are not they that have the most reason to be prodigal of their lives; but rather such men, as if they live, may expect a change of fortune, and whose losses are greatest if they miscarry in aught. For to a man of any spirit, death, which is without sense, arriving whilst he is in vigour and common hope, is nothing so bitter as after a tender life to be brought into misery.

44. "Wherefore I will not so much bewail, as comfort you, the parents, that are present, of these men. For you know that whilst they lived, they were obnoxious to manifold calamities. Whereas whilst you are in grief, they only are happy that die honourably, as these have done: and to whom it hath been granted, not only to live in prosperity, but to die in it. Though it be a hard matter to dissuade you from sorrow for the loss of that, which the happiness of others, wherein you also when time was rejoiced yourselves, shall so often bring into your remembrance; (for sorrow is not for the want of a good never tasted, but for the privation of a good we have been used to); yet such of you as are of the age to have children, may bear the loss of these in the hope of more. For the later children will both draw on with some the oblivion of those that are slain, and also doubly conduce to the good of the city, by population and strength. For it is not likely that they should equally give good counsel to the state, that have not children to be equally exposed to danger in it. As for you that are past having of children, you are to put the former and greater part of your life to the account of your gain; and supposing the remainder of it will be but short, you shall have the glory of these for a consolation of the same. For the love of honour never groweth old: nor doth that unprofitable part of our life take delight (as some have said) in gathering of wealth, so much as it doth in being honoured. 45. As for you that are the children or brethren of these men, I see you shall have a difficult task of emulation. For every man useth to praise the dead; so that with odds of virtue you will hardly get an equal reputation, but still be thought a little short. For men envy their competitors in glory, while they live; but to stand out of their way, is a thing honoured with an affection free from opposition. And since I must say somewhat also of feminine virtue, for you that are now widows, I shall express it in this short admonition. It will be much for your honour not to recede from your sex: and to give as

little occasion of rumour amongst the men, whether of good or evil, as you can.

Year i. A. C 431. Ol. 87. 2.

46. “Thus also have I, according to the prescript of the law, delivered in word what was expedient; and those that are here interred, have in fact been already honoured; and further, their children shall be maintained till they be at man’s estate at the charge of the city; which hath therein propounded both to these, and them that live, a profitable garland in their matches of valour. For where the rewards of virtue are greatest, there live the worthiest men. So now having lamented every one his own, you may be gone.”

47. Such was the funeral made this winter; which ending, ended the first year of this war.

Year ii. A. C. 430. Ol. 87. 2. The second invasion of Attica by the Lacedæmonians. The plague at Athens. year ii. A. C. 430. Ol. 87. 2. It began in Æthiopia. The Peloponnesians supposed to have poisoned their wells. year ii. A. C. 430. Ol. 87. 2. The author sick of this disease.

In the very beginning of summer, the Peloponnesians and their confederates, with two thirds of their forces as before, invaded Attica under the conduct of Archidamus the son of Zeuxidamas, king of Lacedæmon: and after they had encamped themselves, wasted the country about them. They had not been many days in Attica, when the plague first began amongst the Athenians, said also to have seized formerly on divers other parts, as about Lemnos and elsewhere; but so great a plague and mortality of men was never remembered to have happened in any place before. For at first neither were the physicians able to cure it, through ignorance of what it was, but died fastest themselves, as being the men that most approached the sick; nor any other art of man availed whatsoever. All supplications to the gods, and enquiries of oracles, and whatsoever other means they used of

that kind, proved all unprofitable; insomuch as subdued with the greatness of the evil, they gave them all over. 48. It began, by report, first in that part of Æthiopia that lieth upon Egypt; and thence fell down into Egypt and Africa, and into the greatest part of the territories of the king. It invaded Athens on a sudden; and touched first upon those that dwelt in Peiræus; insomuch as they reported that the Peloponnesians had cast poison into their wells; (for springs there were not any in that place). But afterwards it came up into the high city, and then they died a great deal faster. Now let every man, physician or other, concerning the ground of this sickness, whence it sprung, and what causes he thinks able to produce so great an alteration, speak according to his own knowledge. For my own part, I will deliver but the manner of it, and lay open only such things, as one may take his mark by to discover the same, if it come again; having been both sick of it myself, and seen others sick of the same.

The description of the disease: ache of the head: redness of the eyes: sore throat: unsavoury breath: vomitings: hickyexe: year ii. A. C. 430. Ol. 87. 2. livid pustules: extreme heat of their bodies: insatiate thirst: want of sleep: after seven or ten days, death: disease in the belly: looseness: year ii. A. C. 430. Ol. 87. 2. loss of the parts where the disease brake out: oblivion of all things done before their sickness: birds and beasts perished that fed on carcasses.

49. This year, by confession of all men, was of all other, for other diseases, most free and healthful. If any man were sick before, his disease turned to this; if not, yet suddenly, without any apparent cause preceding and being in perfect health, they were taken first with an extreme ache in their heads, redness and inflammation of the eyes; and then inwardly, their throats and tongues grew presently bloody, and their breath noisome and unsavoury. Upon this followed a sneezing and hoarseness, and not long after the pain, together with a mighty cough, came down into the breast.

And when once it was settled in the stomach, it caused vomit, and with great torment came up all manner of bilious purgation that physicians ever named. Most of them had also the hickyexe, which brought with it a strong convulsion, and in some ceased quickly, but in others was long before it gave over. Their bodies outwardly to the touch were neither very hot nor pale; but reddish, livid, and beflowered with little pimples and wheles; but so burned inwardly, as not to endure any the lightest clothes or linen garment to be upon them, nor anything but mere nakedness; but rather most willingly to have cast themselves into the cold water. And many of them that were not looked to, possessed with insatiate thirst, ran unto the wells; and to drink much or little was indifferent, being still from ease and power to sleep as far as ever. As long as the disease was at its height, their bodies wasted not, but resisted the torment beyond all expectation; insomuch as the most of them either died of their inward burning in nine or seven days, whilst they had yet strength; or if they escaped that, then the disease falling down into their bellies, and causing there great exulcerations and immoderate looseness, they died many of them afterwards through weakness. For the disease, which took first the head, began above, and came down and passed through the whole body; and he that overcame the worst of it, was yet marked with the loss of his extreme parts; for breaking out both at their privy members, and at their fingers and toes, many with the loss of these escaped: there were also some that lost their eyes. And many, that presently upon their recovery were taken with such an oblivion of all things whatsoever, as they neither knew themselves nor their acquaintance.

50. For this was a kind of sickness which far surmounted all expression of words, and both exceeded human nature in the cruelty wherewith it handled each one; and appeared also otherwise to be none of those diseases that are bred amongst us, and that especially by this. For all, both birds and beasts, that use to feed on human flesh, though many men lay abroad unburied,

either came not at them, or tasting perished. An argument whereof as touching the birds, is the manifest defect of such fowl; which were not then seen, neither about the carcasses or any where else. But by the dogs, because they are familiar with men, this effect was seen much clearer.

Year ii. A. C. 430. Ol. 87. 2. Want of attendance. Dejection of mind. year ii. A. C. 430. Ol. 87. 2. No man sick of it mortally the second time.

So that this disease, (to pass over many strange particulars of the accidents that some had differently from others), was in general such as I have shown; and for other usual sicknesses, at that time no man was troubled with any. Now they died, some for want of attendance, and some again with all the care and physic that could be used. Nor was there any, to say certain medicine, that applied must have helped them; for if it did good to one, it did harm to another. Nor any difference of body, for strength or weakness, that was able to resist it; but it carried all away, what physic soever was administered. But the greatest misery of all, was the dejection of mind in such as found themselves beginning to be sick: (for they grew presently desperate, and gave themselves over without making any resistance): as also their dying thus like sheep, infected by mutual visitation; for the greatest mortality proceeded that way. For if men forebore to visit them for fear, then they died forlorn; whereby many families became empty, for want of such as should take care of them. If they forbore not, then they died themselves, and principally the honestest men. For out of shame they would not spare themselves, but went in unto their friends; especially after it was come to this pass, that even their domestics, wearied with the lamentations of them that died, and overcome with the greatness of the calamity, were no longer moved therewith. But those that were recovered, had much compassion both on them that died, and on them that lay sick; as having both known the misery themselves, and now no more subject to the

danger. For this disease never took any man the second time, so as to be mortal. And these men were both by others counted happy; and they also themselves, through excess of present joy, conceived a kind of light hope never to die of any other sickness hereafter.

Men died in the streets. Disorder in their funerals. year ii. A. C. 430. Ol. 87. 2. Licentiousness of life justified. Neglect of religion and law. year ii. A. C. 430. Ol. 87. 2.

Besides the present affliction, the reception of the country people and of their substance into the city, oppressed both them, and much more the people themselves that so came in. For having no houses, but dwelling at that time of the year in stifling booths, the mortality was now without all form; and dying men lay tumbling one upon another in the streets, and men half-dead about every conduit through desire of water. The temples also where they dwelt in tents, were all full of the dead that died within them. For oppressed with the violence of the calamity, and not knowing what to do, men grew careless both of holy and profane things alike. And the laws which they formerly used touching funerals, were all now broken; every one burying where he could find room. And many for want of things necessary, after so many deaths before, were forced to become impudent in the funerals of their friends. For when one had made a funeral pile, another getting before him would throw on his dead, and give it fire. And when one was in burning, another would come, and having cast thereon him whom he carried, go his way again. 53. And the great licentiousness, which also in other kinds was used in the city, began at first from this disease. For that which a man before would dissemble, and not acknowledge to be done for voluptuousness, he durst now do freely; seeing before his eyes such quick revolution, of the rich dying, and men worth nothing inheriting their estates. Insomuch as they justified a speedy fruition of their goods, even for their pleasure; as men that thought they held their lives but by the day. As for

pains, no man was forward in any action of honour to take any; because they thought it uncertain whether they should die or not before they achieved it. But what any man knew to be delightful, and to be profitable to pleasure, that was made both profitable and honourable. Neither the fear of the gods, nor laws of men, awed any man: not the former, because they concluded it was alike to worship or not worship, from seeing that alike they all perished: nor the latter, because no man expected that lives would last till he received punishment of his crimes by judgment. But they thought, there was now over their heads some far greater judgment decreed against them; before which fell, they thought to enjoy some little part of their lives.

Predictions called to mind.

Such was the misery, into which the Athenians being fallen were much oppressed; having not only their men killed by the disease within, but the enemy also laying waste their fields and villages without. In this sickness also, (as it was not unlikely they would), they called to mind this verse, said also of the elder sort to have been uttered of old:

A Doric war shall fall,

And a great plague withal.

An ambiguous prophecy expounded by the event. year ii. A. C. 430. Ol. 87. 2.

Now were men at variance about the word, some saying it was not λοιμός that was by the ancients mentioned in that verse, but λιμός. But upon the present occasion the word λοιμός deservedly obtained. For as men suffered, so they made the verse to say. And I think, if after this there shall ever come another Doric war, and with it a famine, they are like to recite the verse accordingly. There was also reported by such as knew, a certain answer given by the oracle to the Lacedæmonians, when they inquired whether they should make this war or not: that if they warred with all their

power, they should have the victory; and that the God himself would take their parts. And thereupon they thought the present misery to be a fulfilling of that prophecy. The Peloponnesians were no sooner entered Attica, but the sickness presently began; and never came into Peloponnesus, to speak of, but reigned principally in Athens, and in such other places afterwards as were most populous. And thus much of this disease.

Pericles with 100 sail of Athenians about Peloponnesus. year ii. A. C. 430. Ol. 87. 2.

After the Peloponnesians had wasted the champagne country, they fell upon the territory called Paralos, as far as to the mountain Laurius, where the Athenians had silver mines; and first wasted that part of it which looketh towards Peloponnesus, and then that also which lieth toward Andros and Eubœa. And Pericles, who was also then general, was still of the same mind he was of in the former invasion, that the Athenians ought not to go out against them to battle. 56. Whilst they were yet in the plain, and before they entered into the maritime country, he furnished a hundred galleys to go about Peloponnesus, and as soon as they were ready, put to sea. In these galleys he had four thousand men of arms; and in vessels then purposely first made to carry horses, three hundred horsemen. The Chians and Lesbians joined likewise with him with fifty galleys. This fleet of the Athenians, when it set forth, left the Peloponnesians still in Paralia; and coming before Epidaurus, a city of Peloponnesus, they wasted much of the country thereabout, and assaulting the city had a hope to take it, though it succeeded not. Leaving Epidaurus, they wasted the territories about of Trœzene, Halias, and Hermione, places all on the sea-coast of Peloponnesus. Putting off from hence, they came to Prasiæ, a small maritime city of Laconia; and both wasted the territory about it, and took and razed the town itself. And having done this, came home, and found the Peloponnesians not now in Attica, but gone back.

The Peloponnesians depart out of Attica.

All the while the Peloponnesians were in the territory of the Athenians, and the Athenians abroad with their fleet, the sickness, both in the army and city, destroyed many; insomuch as it was said that the Peloponnesians fearing the sickness, (which they knew to be in the city, both by fugitives and by seeing the Athenians burying their dead), went the sooner away out of the country. And yet they stayed there longer in this invasion than they had done any time before; and wasted even the whole territory: for they continued in Attica almost forty days.

Year ii. A. C. 430. Ol. 87. 2. 3. The Athenian fleet returned from Peloponnesus, go to Potidæa with ill success by reason of the sickness.

The same summer Agnon the son of Nicias, and Cleopompus the son of Clinias, who were joint commanders with Pericles, with that army which he had employed before, went presently and made war upon the Chalcideans of Thrace, and against Potidæa, which was yet besieged. Arriving, they presently applied engines, and tried all means possible to take it; but neither the taking of the city, nor any thing else, succeeded worthy so great preparation. For the sickness coming amongst them, afflicted them mightily indeed, and even devoured the army. And the Athenian soldiers which were there before and in health, caught the sickness from those that came with Agnon. As for Phormio and his sixteen hundred, they were not now amongst the Chalcideans. And Agnon therefore came back with his fleet, having of four thousand men in less than forty days lost one thousand and fifty of the plague. But the soldiers that were there before, stayed upon the place and continued the siege of Potidæa.

The Athenian people vexed at once both with the war and pestilence, grow impatient toward Pericles. year ii. A. C. 430. Ol. 87. 2. 3.

After the second invasion of the Peloponnesians, the Athenians having their fields now the second time wasted, and both the sickness and war falling upon them at once, changed their minds, and accused Pericles as if by his means they had been brought into these calamities, and desired earnestly to compound with the Lacedæmonians; to whom also they sent certain ambassadors, but they returned without effect. And being then at their wits' end, they kept a stir at Pericles. And he seeing them vexed with their present calamity and doing all those things which he had before expected, called an assembly (for he was yet general) with intention to put them again into heart, and assuaging their passion, to reduce their minds to a more calm and less dismayed temper. And standing forth, he spake unto them in this manner:

Oration of Pericles. year ii. A. C. 430. Ol. 87. 2. 3. Oration of Pericles. year ii. A. C. 430. Ol. 87. 2. 3. Oration of Pericles.

“Your anger towards me cometh not unlooked for; for the cause of it I know. And I have called this assembly therefore, to remember you, and reprehend you for those things wherein you have either been angry with me, or given way to your adversity, without reason. For I am of this opinion, that the public prosperity of the city is better for private men, than if the private men themselves were in prosperity and the public wealth in decay. For a private man, though in good estate, if his country come to ruin, must of necessity be ruined with it; whereas he that miscarrieth in a flourishing commonwealth, shall much more easily be preserved. Since then the commonwealth is able to bear the calamities of private men, and every one cannot support the calamities of the commonwealth, why should not every one strive to defend it: and not, as you now, astonished with domestic misfortune, forsake the common safety, and fall a censuring both me that counselled the war, and yourselves that decreed the same as well as I? And it is I you are angry withal: one, as I think myself, inferior to none, either in

knowing what is requisite, or in expressing what I know, and a lover of my country and superior to money. For he that hath good thoughts and cannot clearly express them, were as good to have thought nothing at all. He that can do both, and is ill affected to his country, will likewise not give it faithful counsel. And he that will do that too, yet if he be superable by money, will for that alone set all the rest to sale. Now if you followed my advice in making this war, as esteeming these virtues to be in me somewhat above the rest, there is sure no reason that I should now be accused of doing you wrong. 61. For though to such as have it in their own election, (being otherwise in good estate), it were madness to make choice of war; yet when we must of necessity either give way, and so without more ado be subject to our neighbours, or else save ourselves from it by danger; he is more to be condemned that declineth the danger, than he that standeth to it. For mine own part, I am the man I was, and of the mind I was; but you are changed, won to the war when you were entire, but repenting it upon the damage, and condemning my counsel in the weakness of your own judgment. The reason of this is, because you feel already every one in particular that which afflicts you; but the evidence of the profit to accrue to the city in general, you see not yet. And your minds dejected with the great and sudden alteration, cannot constantly maintain what you have before resolved. For that which is sudden and unexpected, and contrary to what one hath deliberated, enslaveth the spirit; which by this disease principally, in the neck of the other incommodities, is now come to pass in you. But you that are born in a great city, and with education suitable, how great soever the affliction be, ought not to shrink at it and eclipse your reputation; (for men do no less condemn those that through cowardice lose the glory they have, than hate those that through impudence arrogate the glory they have not); but to set aside the grief of your private losses, and lay your hands to the common safety.

62. “As for the toil of the war, that it may perhaps be long and we in the end never the nearer to victory, though that may suffice which I have demonstrated at other times touching your causeless suspicion that way; yet this I will tell you moreover, touching the greatness of your means for dominion, which neither you yourselves seem ever to have thought on, nor I touched in my former orations; nor would I also have spoken it now, but that I see your minds dejected more than there is cause for. That though you take your dominion to extend only to your confederates, I affirm that of the two parts of the world of manifest use, the land and the sea, you are of one of them entire masters; both of as much of it as you make use of, and also of as much more as you shall think fit yourselves. Neither is there any king or nation whatsoever of those that now are, that can impeach your navigation with the fleet and strength you now go. So that you must not put the use of houses and lands, wherein now you think yourselves deprived of a mighty matter, into the balance with such a power as this, nor take the loss of these things heavily in respect of it; but rather set little by them, as but a light ornament and embellishment of wealth; and think that our liberty as long as we hold fast that, will easily recover unto us these things again; whereas subjected once to others, even that which we possess besides will be diminished. Show not yourselves both ways inferior to your ancestors; who not only held this, (gotten by their own labours, not left them), but have also preserved and delivered the same unto us: (for it is more dishonour to lose what one possesseth, than to miscarry in the acquisition of it): and encounter the enemy not only with magnanimity, but also with disdain. For a coward may have a high mind upon a prosperous ignorance; but he that is confident upon judgment to be superior to his enemy, doth also disdain him; which is now our case. And courage, in equal fortune, is the safer for our

disdain of the enemy, where a man knows what he doth: for he trusteth less to hope, which is of force only in uncertainties, and more to judgment upon certainties, wherein there is a more sure foresight. 63. You have reason besides to maintain the dignity the city hath gotten for her dominion, in which you all triumph: and either not decline the pains, or not also pursue the honour. And you must not think the question is now of your liberty and servitude only. Besides the loss of your rule over others, you must stand the danger you have contracted by offence given in the administration of it. Nor can you now give it over: (if any fearing at this present that that may come to pass, encourage himself with the intention of not to meddle hereafter): for already your government is in the nature of a tyranny, which is both unjust for you to take up and unsafe to lay down. And such men as these, if they could persuade others to it, or lived in a free city by themselves, would quickly overthrow it. For the quiet life can never be preserved, if it be not ranged with the active life: nor is it a life conducive to a city that reigneth, but to a subject city, that it may safely serve. 64. Be not therefore seduced by this sort of men, nor angry with me, together with whom yourselves did decree this war, because the enemy invading you hath done what was likely he would, if you obeyed him not. And as for the sickness, the only thing that exceeded the imagination of all men, it was unlooked for: and I know you hate me somewhat the more for that; but unjustly, unless when anything falleth out above your expectation fortunate, you will also dedicate unto me that. Evils that come from heaven, you must bear necessarily; and such as proceed from your enemies, valiantly; for so it hath been the custom of this city to do heretofore, which custom let it not be your part to reverse. Knowing that this city hath a great name amongst all people for not yielding to adversity, and for the mighty power it yet hath after the expense of so many lives and so much labour in the war: the memory whereof, though we should now at length miscarry, (for all things are made with this law, to

decay again), will remain with posterity for ever. How that being Grecians, most of the Grecians were our subjects; that we have abidden the greatest wars against them, both universally and singly, and have inhabited the greatest and wealthiest city. Now this, he with the quiet life will condemn; the active man will emulate; and they that have not attained to the like, will envy. But to be hated and to displease, is a thing that happeneth for the time to whosoever he be that hath the command of others; and he does well, that undergoeth hatred for matters of great consequence. For the hatred lasteth not; and is recompensed both with a present splendour and an immortal glory hereafter. Seeing then you foresee both what is honourable for the future, and not dishonourable for the present, procure both the one and the other by your courage now. Send no more heralds to the Lacedæmonians, nor let them know the evil present does any way afflict you; for they whose minds least feel, and whose actions most oppose a calamity, both among states and private persons are the best.”

Pericles fined in a sum of money. Athens at the greatest in the time of Pericles. year ii. A. C. 430. Ol. 87. 2. 3. The death of Pericles. Sept A. C. 429. Ol. 87. 4. The commendation of Pericles. year ii. A. C. 430. Ol. 87. 2. 3. year ii. A. C. 430. Ol. 87. 2. 3.

65. In this speech did Pericles endeavour to appease the anger of the Athenians towards himself, and withal to withdraw their thoughts from the present affliction. But they, though for the state in general they were won, and sent to the Lacedæmonians no more, but rather inclined to the war; yet they were every one in particular grieved for their several losses: the poor, because entering the war with little, they lost that little; and the rich, because they had lost fair possessions, together with goodly houses and costly furniture in them, in the country; but the greatest matter of all was, that they had war instead of peace. And altogether, they deposed not their anger till they had first fined him in a sum of money. Nevertheless, not long

after (as is the fashion of the multitude) they made him general again, and committed the whole state to his administration. For the sense of their domestic losses was now dulled; and for the need of the commonwealth, they prized him more than any other whatsoever. For as long as he was in authority in the city in time of peace, he governed the same with moderation, and was a faithful watchman of it; and in his time it was at the greatest. And after the war was on foot, it is manifest that he therein also foresaw what it could do. He lived after the war began two years and six months. And his foresight in the war was best known after his death. For he told them, that if they would be quiet, and look to their navy, and during this war seek no further dominion, nor hazard the city itself, they should then have the upper hand. But they did contrary in all: and in such other things besides as seemed not to concern the war, managed the state, according to their private ambition and covetousness, perniciously both for themselves and their confederates. What succeeded well, the honour and profit of it came most to private men; and what miscarried, was to the city's detriment in the war. The reason whereof was this: that being a man of great power both for his dignity and wisdom, and for bribes manifestly the most incorrupt, he freely controled the multitude; and was not so much led by them, as he led them. Because, having gotten his power by no evil arts, he would not humour them in his speeches, but out of his authority durst anger them with contradiction. Therefore, whensoever he saw them out of season insolently bold, he would with his orations put them into a fear; and again, when they were afraid without reason, he would likewise erect their spirits and embolden them. It was in name, a state democratical; but in fact, a government of the principal man. But they that came after, being more equal amongst themselves, and affecting every one to be the chief, applied themselves to the people and let go the care of the commonwealth. From whence amongst many other errors, as was likely in a great and dominant

city, proceeded also the voyage into Sicily; which was not so much upon mistaking those whom they went against, as for want of knowledge in the senders of what was necessary for those that went the voyage. For through private quarrels about who should bear the greatest sway with the people, they both abated the vigour of the army, and then also first troubled the state at home with division. Being overthrown in Sicily, and having lost, besides other ammunition, the greatest part of their navy, and the city being then in sedition; yet they held out three years, both against their first enemies and the Sicilians with them, and against most of their revolted confederates besides, and also afterwards against Cyrus the king's son, who took part with, and sent money to the Peloponnesians to maintain their fleet; and never shrunk till they had overthrown themselves with private dissensions. So much was in Pericles above other men at that time, that he could foresee by what means the city might easily have outlasted the Peloponnesians in this war.

The Lacedæmonians war against Zacynthus.

66. The Lacedæmonians and their confederates made war the same summer with one hundred galleys against Zacynthus, an island laying over against Elis. The inhabitants whereof were a colony of Achæans of Peloponnesus, but confederates of the people of Athens. There went in this fleet a thousand men of arms, and Cnemus a Spartan for admiral; who landing, wasted the greatest part of the territory. But they of the island not yielding, they put off again and went home.

C. 430. Ol. 87. 3. The Lacedæmonian ambassadors taken by the Athenian ambassadors in Thrace, and sent to Athens. year ii. A. C. 430. Ol. 87. 3. year ii. A. C. 430. Ol. 87. 3. The Athenians put them to death

67. In the end of the same summer, Aristeus of Corinth, and Aneristus, Nicolaus, Stratodemus, and Timagorus of Tegea, ambassadors of the Lacedæmonians, and Pollis of Argos, a private man, as they were travelling

into Asia to the king, to get money of him and to draw him into their league, took Thrace in their way, and came unto Sitalces the son of Teres, with a desire to get him also, if they could, to forsake the league with Athens, and to send his forces to Potidæa, which the Athenian army now besieged, and not to aid the Athenians any longer: and withal to get leave to pass through his country to the other side of the Hellespont, to go, as they intended, to Pharnabazus the son of Pharnaces, who would convoy them to the king. But the ambassadors of Athens, Learchus the son of Callimachus, and Ameiniades the son of Philemon, then resident with Sitalces, persuaded Sadocus the son of Sitalces, who was now a citizen of Athens, to put them into their hands, that they might not go to the king, and do hurt to the city whereof he himself was now a member. Whereunto condescending, as they journeyed through Thrace to take ship to cross the Hellespont, he apprehended them before they got to the ship by such others as he sent along with Learchus and Ameiniades, with command to deliver them into their hands. And they, when they had them, sent them away to Athens. When they came thither, the Athenians, fearing Aristeus, lest escaping he should do them further mischief, (for he was manifestly the author of all the business of Potidæa and about Thrace), the same day put them all to death, unjudged and desirous to have spoken, and threw them into the pits; thinking it but just to take revenge of the Lacedæmonians that began it, and had slain and thrown into pits the merchants of the Athenians and their confederates, whom they took sailing in merchant-ships about the coast of Peloponnesus. For in the beginning of the war, the Lacedæmonians slew as enemies whomsoever they took at sea, whether confederates of the Athenians or neutral, all alike.

The Ambraciotes war on Acarnania. year ii. A. C. 430. Ol. 87. 3. The end of the second summer.

68. About the same time, in the end of summer, the Ambraciotes, both they themselves and divers barbarian nations by them raised, made war against Argos of Amphilochia, and against the rest of that territory. The quarrel between them and the Argives, arose first from hence. This Argos and the rest of Amphilochia was planted by Amphilochus the son of Amphiaraus, after the Trojan war; who at his return, misliking the then state of Argos, built this city in the Gulf of Ambracia, and called it Argos, after the name of his own country. And it was the greatest city, and had the most wealthy inhabitants of all Amphilochia. But many generations after, being fallen into misery, they communicated their city with the Ambraciotes, bordering upon Amphilochia: and then they first learned the Greek language now used from the Ambraciotes that lived among them. For the rest of the Amphilochians were barbarians. Now the Ambraciotes in process of time drove out the Argives, and held the city by themselves. Whereupon the Amphilochians submitted themselves to the Acarnanians, and both together called in the Athenians; who sent thirty galleys to their aid, and Phormio for general. Phormio being arrived, took Argos by assault, and making slaves of the Ambraciotes, put the town into the joint possessions of the Amphilochians and Acarnanians. And this was the beginning of the league between the Athenians and Acarnanians. The Ambraciotes therefore, deriving their hatred to the Argives from this their captivity, came in with an army, partly of their own, and partly raised amongst the Chaonians and other neighbouring barbarians, now in this war. And coming to Argos, were masters of the field; but when they could not take the city by assault, they returned, and disbanding went every nation to his own. These were the acts of the summer.

69. In the beginning of the winter, the Athenians sent twenty galleys about Peloponnesus under the command of Phormio; who coming to lie at Naupactus, guarded the passage, that none might go in or out from Corinth and the Crisæan gulf. And other six galleys under the conduct of Melesander, they sent into Caria and Lycia; as well to gather tribute in those parts, as also to hinder the Peloponnesian pirates, lying on those coasts, from molesting the navigation of such merchant-ships as they expected to come to them from Phaselis, Phœnicia, and that part of the continent. But Melesander, landing in Lycia with such forces of the Athenians and their confederates as he had aboard, was overcome in battle and slain, with the loss of a part of his army.

C. 429. Ol. 87. 3. Potidæa rendered to the Athenians. year ii. A. C. 429. Ol. 87. 3.

70. The same winter, the Potidæans unable any longer to endure the siege, seeing the invasion of Attica by the Peloponnesians could not make them rise, and seeing their victual failed, and that they were forced, amongst divers other things done by them for necessity of food, to eat one another, propounded at length to Xenophon the son of Euripides, Hestiodorus the son of Aristocleidas, and Phanomachus the son of Callimachus, the Athenian commanders that lay before the city, to give the same into their hands. And they, seeing both that the army was already afflicted by laying in that cold place, and that the state had already spent two thousand talents upon the siege, accepted of it. The conditions agreed on were these: “to depart, they and their wives and children, and their auxiliar soldiers, every man with one suit of clothes, and every woman with two; and to take with them every one a certain sum of money for his charges by the way.” Hereupon a truce was granted them to depart; and they went, some to the Chalcideans, and others to other places, as they could get to. But the people of Athens called the commanders in question for

compounding without them; conceiving that they might have gotten the city to discretion: and sent afterwards a colony to Potidæa of their own citizens. These were the things done in this winter. And so ended the second year of this war, written by Thucydides.

Year iii. The siege of Plataea. The Plataeans' Speech to Archidamus. year iii. A. C. 429. Ol. 87. 3. The Plataeans' speech to Archidamus. year iii. A. C. 429. Ol. 87. 3. The Answer of Archidamus to the Plataeans. The Reply of the Plataeans. The Answer of Archidamus to their Reply. year iii. A. C. 429. Ol. 87. 3. The Plataeans reply again, and desire to know the pleasure of the people of Athens. The Athenians' message to the Plataeans. year iii. A. C. 429. Ol. 87. 3. The Plataeans' last Answer to Archidamus from the wall. Archidamus' Protestation.

71. The next summer, the Peloponnesians and their confederates came not into Attica, but turned their arms against Plataea, led by Archidamus the son of Zeuxidamus, king of the Lacedaemonians; who having pitched his camp, was about to waste the territory thereof. But the Plataeans sent ambassadors presently unto him, with words to this effect: "Archidamus, and you Lacedaemonians, you do neither justly, nor worthy yourselves and ancestors, in making war upon Plataea. For Pausanias of Lacedaemon, the son of Cleombrotus, having, together with such Grecians as were content to undergo the danger of the battle that was fought in this our territory, delivered all Greece from the slavery of the Persians, when he offered sacrifice in the market-place of Plataea to Jupiter the deliverer, called together all the confederates, and granted to the Plataeans this privilege: that their city and territory should be free: that none should make any unjust war against them, nor go about to subject them: and if any did, the confederates then present should to their utmost ability revenge their quarrel. These privileges your fathers granted us for our valour and zeal in those dangers. But now do you the clean contrary; for you join with our greatest enemies, the Thebans, to bring us into subjection. Therefore calling to witness the gods then sworn by, and the gods both of your and our country, we require

you, that you do no damage to the territory of Plataea, nor violate those oaths; but that you suffer us to enjoy our liberty in such sort as was allowed us by Pausanias.” 72. The Plataeans having thus said, Archidamus replied and said thus: “Men of Plataea, if you would do as ye say, you say what is just. For as Pausanias hath granted to you, so also be you free; and help to set free the rest, who having been partakers of the same dangers then, and being comprised in the same oath with yourselves, are now brought into subjection by the Athenians. And this so great preparation and war, is only for the deliverance of them and others; of which if you will especially participate, keep your oaths; at least (as we have also advised you formerly) be quiet, and enjoy your own in neutrality; receiving both sides in the way of friendship, neither side in the way of faction.” Thus said Archidamus. And the ambassadors of Plataea, when they had heard him, returned to the city: and having communicated his answer to the people, brought word again to Archidamus: “that what he had advised, was impossible for them to perform without leave of the Athenians, in whose keeping were their wives and children; and that they feared also for the whole city, lest when the Lacedaemonians were gone, the Athenians should come and take the custody of it out of their hands; or that the Thebans, comprehended in the oath of receiving both sides, should again attempt to surprise it.” But Archidamus to encourage them, made this answer: “Deliver you unto us Lacedaemonians your city and your houses, show us the bounds of your territory, give us your trees by tale, and whatsoever else can be numbered: and depart yourselves whither you shall think good, as long as the war lasteth: and when it shall be ended, we will deliver it all unto you again. In the mean time we will keep them as deposited, and will cultivate your ground, and pay you rent for it, as much as shall suffice for your maintenance.” 73. Hereupon the ambassadors went again into the city, and having consulted with the people, made answer “that they would first

acquaint the Athenians with it, and if they would consent, they would then accept the conditions: till then, they desired a suspension of arms, and not to have their territory wasted.” Upon this he granted them so many days truce, as was requisite for their return: and for so long forebore to waste their territory. When the Plataean ambassadors were arrived at Athens, and had advised on the matter with the Athenians, they returned to the city with this answer: “The Athenians say thus: that neither in former times, since we were their confederates, did they ever abandon us to the injuries of any; nor will they now neglect us, but give us their utmost assistance. And they conjure us by the oath of our fathers, not to make any alienation touching the league.” 74. When the ambassadors had made this report, the Plataeans resolved in their councils not to betray the Athenians; but rather to endure, if it must be, the wasting of their territory before their eyes, and to suffer whatsoever misery could befall them; and no more to go forth, but from the walls to make this answer: “that it was impossible for them to do as the Lacedæmonians had required.” When they had answered so, Archidamus, the king, first made a protestation to the gods and heros of the country, saying thus: “All ye Gods and Heros, protectors of Plataeis, be witnesses, that we neither invade this territory (wherein our fathers after their vows unto you overcame the Medes, and which you made propitious for the Grecians to fight in) unjustly now in the beginning; because they have first broken the league they had sworn: nor what we shall further do, will be any injury; because, though we have offered many and reasonable conditions, they have yet been all refused: assent ye also to the punishment of the beginners of injury, and to the revenge of those that bear lawful arms.” 75. Having made this protestation to the gods, he made ready his army for the war.

A mount raised against Plataea. year iii. A. C. 429. Ol. 87. 3. The Plataeans raise their wall higher against the mount by a frame of timber, in

which they laid their bricks. The Plataëans' device to draw the earth from the mount, thro' the wall. year iii. A. C. 429. Ol. 87. 3. The Peloponnesians remedy that evil. The Plataëans fetch the earth away from under the mount by a mine. The Plataëans make another wall within that which was to the mount. The Peloponnesians assault the wall with engines year iii. A. C. 429. Ol. 87. 3. The Plataëans' defence against the engines. The Peloponnesians throw faggots and fire into the town from the mount. A great fire. year iii. A. C. 429. Ol. 87. 3.

And first having felled trees, he therewith made a palisado about the town, that none might go out. That done, he raised a mount against the wall, hoping with so great an army all at work at once, to have quickly taken it. And having cut down wood in the hill Cithæron, they built a frame of timber, and wattled it about on either side, to serve instead of walls, to keep the earth from falling too much away; and cast into it stones, and earth, and whatsoever else would serve to fill it up. Seventy days and nights continually they poured on, dividing the work between them for rest in such manner, as some might be carrying, whilst others took their sleep and food. And they were urged to labour by the Lacedæmonians that commanded the mercenaries of the several cities, and had the charge of the work. The Plataëans seeing the mount to rise, made the frame of a wall with wood, which having placed on the wall of the city in the place where the mount touched, they built it within full of bricks, taken from the adjoining houses, for that purpose demolished; the timber serving to bind them together, that the building might not be weakened by the height. The same was also covered with hides and quilts, both to keep the timber from shot of wildfire, and those that wrought from danger. So that the height of the wall was great on one side, and the mount went up as fast on the other. The Plataëans used also this device; they brake a hole in their own wall where the mount joined, and drew the earth from it into the city. 76. But the Peloponnesians,

when they found it out, took clay, and therewith daubing hurdles of reeds, cast the same into the chink; which mouldering not, as did the earth, they could not draw it away. The Plataëans excluded here, gave over that plot; and digging a secret mine, which they carried under the mount from within the city by conjecture, fetched away the earth again; and were a long time undiscovered; so that still casting on, the mount grew still less, the earth being drawn away below and settling over the part where it was voided. The Plataëans nevertheless, fearing that they should not be able even thus to hold out, being few against many, devised this further. They gave over working at the high wall against the mount, and beginning at both ends of it where the wall was low, built another wall in form of a crescent, inward to the city; that if the great wall were taken, this might resist, and put the enemy to make another mount; and by coming further in, to be at double pains, and withal more encompassable with shot. The Peloponnesians, together with the rising of their mount, brought to the city their engines of battery. One of which, by the help of the mount, they applied to the high wall; wherewith they much shook it, and put the Plataëans into great fear. And others to other parts of the wall; which the Plataëans partly turned aside by casting ropes about them; and partly with great beams, which, being hung in long iron chains by either end upon two other great beams, jetting over and inclining from above the wall like two horns, they drew up to them athwart, and where the engine was about to light, slacking the chains and letting their hands go, they let fall with violence, to break the beak of it. 77. After this the Peloponnesians, seeing their engines availed not, and thinking it hard to take the city by any present violence, prepared themselves to besiege it. But first they thought fit to attempt it by fire, being no great city, and when the wind should rise, if they could, to burn it: for there was no way they did not think on, to have gained it without expense and long siege. Having therefore brought faggots, they cast them from the mount into the space between it

and their new wall, which by so many hands was quickly filled; and then into as much of the rest of the city, as at that distance they could reach: and throwing amongst them fire, together with brimstone and pitch, kindled the wood, and raised such a flame, as the like was never seen before made by the hand of man. For as for the woods in the mountains, the trees have indeed taken fire, but it hath been by mutual attrition, and have flamed out of their own accord. But this fire was a great one; and the Plataëans that had escaped other mischiefs, wanted little of being consumed by this. For near the wall they could not get by a great way: and if the wind had been with it, (as the enemy hoped it might), they could never have escaped. It is also reported, that there fell much rain then with great thunder, and that the flame was extinguished, and the danger ceased by that.

In the beginning of September the siege laid to Plataea.

78. The Peloponnesians, when they failed likewise of this, retaining a part of their army, and dismissing the rest, enclosed the city about with a wall; dividing the circumference thereof to the charge of the several cities. There was a ditch both within and without it, out of which they made their bricks; and after it was finished, which was about the rising of Arcturus, they left a guard for one half of the wall; (for the other was guarded by the Bœotians); and departed with the rest of their army, and were dissolved according to their cities. The Plataëans had before this sent their wives and children, and all their unserviceable men, to Athens. The rest were besieged, being in number, of the Plataëans themselves four hundred, of Athenians eighty, and a hundred and ten women to dress their meat. These were all, when the siege was first laid; and not one more, neither free nor bond, in the city. In this manner was the city besieged.

Year iii. A. C. 429. Ol. 87. 4. The Athenians send an army against the Chalcideans. The Athenians foughten with by the Chalcideans at Spartolus: year iii. A. C. 429. Ol. 87. 4. and overthrown, with the loss of three commanders.

79. The same summer, at the same time that this journey was made against Plataea, the Athenians with two thousand men of arms of their own city, and two hundred horsemen, made war upon the Chalcideans of Thrace and the Bottiæans, when the corn was at the highest, under the conduct of Xenophon the son of Euripides, and two others. These coming before Spartolus in Bottiæa, destroyed the corn; and expected that the town should have been rendered by the practice of some within. But such as would not have it so having sent for aid to Olynthus before, there came into the city for safeguard thereof a supply both of men of arms and other soldiers from thence. And these issuing forth of Spartolus, the Athenians put themselves into order of battle under the town itself. The men of arms of the Chalcideans, and certain auxiliaries with them, were overcome by the Athenians, and retired within Spartolus. And the horsemen of the Chalcideans and their light-armed soldiers, overcame the horsemen and light-armed of the Athenians; but they had some few targettiers besides of the territory called Crusis. When the battle was now begun, came a supply of other targettiers from Olynthus. Which the light-armed soldiers of Spartolus perceiving, emboldened both by this addition of strength, and also as having had the better before, with the Chalcidean horse and this new supply charged the Athenians afresh. The Athenians hereupon retired to two companies they had left with the carriages. And as oft as the Athenians charged, the Chalcideans retired; and when the Athenians retired, the Chalcideans charged them with their shot. Especially the Chalcidean horsemen rode up, and charging them where they thought fit, forced the Athenians in extreme affright to turn their backs; and chased them a great way. The Athenians fled to Potidæa; and having afterwards fetched away the bodies of their dead upon truce, returned with the remainder of their army to Athens. Four hundred and thirty men they lost, and their chief commanders all three. And the Chalcideans and Bottiæans, when they had

set up a trophy and taken up their dead bodies, disbanded and went every one to his city.

The Ambraciotes invade Acarnania, together with the Lacedæmonians. year iii. A. C. 429. Ol. 87. 4. The army of the Ambraciotes and their confederates. year iii. A. C. 429. Ol. 87. 4. They go toward Stratus: the greatest city of Acarnania.

80. Not long after this the same summer, the Ambraciotes and Chaonians, desiring to subdue all Acarnania and to make it revolt from the Athenians, persuaded the Lacedæmonians to make ready a fleet out of the confederate cities, and to send a thousand men of arms into Acarnania; saying, that if they aided them both with a fleet and a land army at once, the Acarnanians of the sea-coast being thereby disabled to assist the rest, having easily gained Acarnania they might be masters afterward both of Zacynthus and Cephalonia, and the Athenians hereafter less able to make their voyages about Peloponnesus; and that there was a hope beside to take Naupactus. The Peloponnesians assenting, sent thither Cnemus, who was yet admiral, with his men of arms in a few galleys immediately; and withal sent word to the cities about, as soon as their galleys were ready, to sail with all speed to Leucas. Now the Corinthians were very zealous in the behalf of the Ambraciotes, as being their own colony. And the galleys which were to go from Corinth, Sicyonia, and that part of the coast, were now making ready; and those of the Leucadians, Anactorians, and Ambraciotes, were arrived before, and stayed at Leucas for their coming. Cnemus and his thousand men of arms, when they had crossed the sea undescried of Phormio, who commanded the twenty Athenian galleys that kept watch at Naupactus, presently prepared for the war by land. He had in his army, of Grecians, the Ambraciotes, Leucadians, Anactorians, and the thousand Peloponnesians he brought with him; and of barbarians, a thousand Chaonians, who have no king, but were led by Photius and Nicanor, which

two being of the families eligible had now the annual government. With the Chaonians came also the Thesprotians, they also without a king. The Molossians and Atintanians were led by Sabylinthus, protector of Tharups their king, who was yet in minority. The Parauæans were led by their king Orædus; and under Orædus served likewise, by permission of Antiochus their king, a thousand Orestians. Also Perdiccas sent thither, unknown to the Athenians, a thousand Macedonians; but these last were not yet arrived. With this army began Cnemus to march, without staying for the fleet from Corinth. And passing through Argeia, they destroyed Limnæa, a town unwallèd. From thence they marched towards Stratus, the greatest city of Acarnania; conceiving that if they could take this first, the rest would come easily in.

Year iii. A. C. 429. Ol. 87. 4. Wariness of the Grecians. Rashness of the Chaonians. Stratagem of the Stratians. year iii. A. C. 429.

Ol. 87. 4. The Peloponnesians and Ambraciotes retire without effect.

81. The Acarnanians seeing a great army by land was entered their country already, and expecting the enemy also by sea, joined not to succour Stratus, but guarded every one his own, and sent for aid to Phormio. But he answered them, that since there was a fleet to be set forth from Corinth, he could not leave Naupactus without a guard. The Peloponnesians and their confederates, with their army divided into three, marched on towards the city of the Stratians, to the end that being encamped near it, if they yielded not on parley, they might presently assault the walls. So they went on, the Chaonians and other barbarians in the middle; the Leucadians and Anactorians, and such others as were with these, on the right hand; and Cnemus with the Peloponnesians and Ambraciotes on the left; each army at great distance, and sometimes out of sight of one another. The Grecians in their march kept their order; and went warily on, till they had gotten a convenient place to encamp in. But the Chaonians confident of themselves,

and by the inhabitants of that continent accounted most warlike, had not the patience to take in any ground for a camp; but carried furiously on together with the rest of the barbarians, thought to have taken the town by their clamour, and to have the action ascribed only to themselves. But they of Stratus, aware of this whilst they were yet in their way, and imagining, if they could overcome these thus divided from the other two armies, that the Grecians also would be the less forward to come on, placed divers ambushes not far from the city; and when the enemies approached, fell upon them both from the city and from the ambushes at once; and putting them into affright, slew many of the Chaonians upon the place: and the rest of the barbarians seeing these to shrink, stayed no longer, but fled outright. Neither of the Grecian armies had knowledge of this skirmish, because they were gone so far before to choose (as they then thought) a commodious place to pitch in. But when the barbarians came back upon them running, they received them, and joining both camps together stirred no more for that day. And the Stratians assaulted them not, for want of the aid of the rest of the Acarnanians; but used their slings against them, and troubled them much that way: (for without their men of arms there was no stirring for them): and in this kind the Acarnanians are held excellent. 82. When night came, Cnemus withdrew his army to the river Anapus, from Stratus eighty furlongs, and fetched off the dead bodies upon truce the next day. And whereas the city Ceniadæ was come in of itself, he made his retreat thither before the Acarnanians should assemble with their succours; and from thence went every one home. And the Stratians set up a trophy of the skirmish against the barbarians.

Phormio with twenty galleys of Athens, overcometh forty-seven of the Peloponnesian galleys. year iii. A. C. 429. Ol. 87. 4. The order of the Peloponnesian galleys. The order of the Athenian galleys and the stratagem

of Phormio. year iii. A. C. 429. Ol. 87. 4. The Peloponnesians fly. year iii. A. C. 429. Ol. 87. 4.

83. In the meantime the fleet of Corinth and the other confederates, that was to set out from the Crisæan gulf and to join with Cnemus, to hinder the lower Acarnanians from aiding the upper, came not at all; but were compelled to fight with Phormio and those twenty Athenian galleys that kept watch at Naupactus, about the same time that the skirmish was at Stratus. For as they sailed along the shore, Phormio waited on them till they were out of the strait, intending to set upon them in the open sea. And the Corinthians and their confederates went not as to fight by sea, but furnished rather for the land-service in Acarnania; and never thought that the Athenians with their twenty galleys durst fight with theirs, that were seven-and-forty. Nevertheless, when they saw that the Athenians, as themselves sailed by one shore, kept over against them on the other; and that now when they went off from Patræ in Achaia to go over to Acarnania in the opposite continent, the Athenians came towards them from Chalcis and the river Evenus, and also knew that they had come to anchor there the night before: they found they were then to fight of necessity directly against the mouth of the strait. The commanders of the fleet, were such as the cities that set it forth had severally appointed; but of the Corinthians, these; Machon, Isocrates, and Agatharchidas. The Peloponnesians ordered their fleet in such manner as they made thereof a circle, as great as, without leaving the spaces so wide as for the Athenians to pass through, they were possibly able, with the stems of their galleys outward, and sterns inward; and into the midst thereof received such small vessels as came with them, and also five of their swiftest galleys; the which were at narrow passages to come forth in whatsoever part the enemy should charge. 84. But the Athenians with their galleys ordered one after one in file, went round them and shrunk them up together, by wiping them ever as they past and putting them in expectation

of present fight. But Phormio had before forbidden them to fight, till he himself had given them the signal. For he hoped that this order of theirs would not last long, as in an army on land; but that the galleys would fall foul of one another, and be troubled also with the smaller vessels in the midst. And if the wind should also blow out of the gulf, in expectation whereof he so went round them, and which usually blew there every morning, he made account they would then instantly be disordered. As for giving the onset, because his galleys were more agile than the galleys of the enemy, he thought it was in his own election, and would be most opportune on that occasion. When this wind was up, and the galleys of the Peloponnesians, being already contracted into a narrow compass, were both ways troubled, by the wind, and withal by their own lesser vessels that encumbered them; and when one galley fell foul of another, and the mariners laboured to set them clear with their poles, and through the noise they made, keeping off and reviling each other, heard nothing neither of their charge nor of the galleys' direction; and through want of skill unable to keep up their oars in a troubled sea, rendered the galley untractable to him that sat at the helm: then and with this opportunity he gave the signal. And the Athenians charging, drowned first one of the admiral-galleys, and divers others after it in the several parts they assaulted; and brought them to that pass at length, that not one applying himself to the fight they fled all towards Patræ and Dyme, cities of Achaia. The Athenians, after they had chased them, and taken twelve galleys, and slain most of the men that were in them, fell off and went to Molycreium; and when they had there set up a trophy, and consecrated one galley to Neptune, they returned with the rest to Naupactus. The Peloponnesians with the remainder of their fleet, went presently along the coast of Cyllene, the arsenal of the Eleians; and thither, after the battle at Stratus, came also Cnemus from Leucas, and with him

those galleys that were there, and with which this other fleet should have been joined.

Preparation for another fight. year iii. A. C. 429. Ol. 87. 4. Twenty sail of Athenians, sent to aid Phormio, stay in Crete. year iii. A. C. 429. Ol. 87. 4.

85. After this the Lacedæmonians sent unto Cnemus to the fleet, Timocrates, Brasidas, and Lycophron to be of his council, with command to prepare for another better fight, and not to suffer a few galleys to deprive them of the use of the sea. For they thought this accident (especially being their first proof by sea) very much against reason; and that it was not so much a defect of the fleet, as of their courage: never comparing the long practice of the Athenians with their own short study in these businesses. And therefore they sent these men thither in passion. Who being arrived with Cnemus, intimated to the cities about to provide their galleys, and caused those they had before to be repaired. Phormio likewise sent to Athens, to make known both the enemy's preparation and his own former victory; and withal to will them to send speedily unto him as many galleys as they could make ready; because they were every day in expectation of a new fight. Hereupon they sent him twenty galleys; but commanded him that had the charge of them, to go first into Crete. For Nicias, a Cretan of Gortyna, the public host of the Athenians, had persuaded them to a voyage against Cydonia; telling them they might take it in, being now their enemy: which he did to gratify the Polichnitæ, that bordered upon the Cydonians. Therefore with these galleys he sailed into Crete, and together with the Polichnitæ wasted the territory of the Cydonians; where also, by reason of the winds and weather unfit to take sea in, he wasted not a little of his time.

The Peloponnesians sail by the coast of Panormus. year iii. A. C. 429. Ol. 87. 4.

86. In the meantime, whilst these Athenians were wind-bound in Crete, the Peloponnesians that were in Cyllene, in order of battle sailed along the

coast of Panormus of Achaia, to which also were their land-forces come to aid them. Phormio likewise sailed by the shore to Rhium Molycrium, and anchored without it with twenty galleys, the same he had used in the former battle. Now this Rhium was of the Athenians' side, and the other Rhium in Peloponnesus lies on the opposite shore, distant from it at the most but seven furlongs of sea; and these two make the mouth of the Crisæan gulf. The Peloponnesians therefore came to an anchor at Rhium of Achaia with seventy-seven galleys, not far from Panormus where they left their land forces. After they saw the Athenians, and had lain six or seven days one against the other, meditating and providing for the battle, the Peloponnesians not intending to put off without Rhium into the wide sea, for fear of what they had suffered by it before; nor the other to enter the strait, because to fight within they thought to be the enemy's advantage. At last Cnemus, Brasidas, and the other commanders of the Peloponnesians, desiring to fight speedily before a new supply should arrive from Athens, called the soldiers together; and seeing the most of them to be fearful through their former defeat, and not forward to fight again, encouraged them first with words to this effect:

The Oration of Cnemus. year iii. A. C. 429. Ol. 87. 4. Oration of Cnemus.

87. "Men of Peloponnesus, if any of you be afraid of the battle at hand for the success of the battle past, his fear is without ground. For you know, we were inferior to them then in preparation; and set not forth as to a fight at sea, but rather to an expedition by land. Fortune likewise crossed us in many things; and somewhat we miscarried by unskilfulness. So as the loss can no way be ascribed to cowardice: nor is it just, so long as we were not overcome by mere force, but have somewhat to allege in our excuse, that the mind should be dejected for the calamity of the event: but we must think, that though fortune may fail men, yet the courage of a valiant man

can never fail, and not that we may justify cowardice in any thing by pretending want of skill, and yet be truly valiant. And yet you are not so much short of their skill, as you exceed them in valour. And though this knowledge of theirs, which you so much fear, joined with courage, will not be without a memory also, to put what they know in execution; yet without courage no art in the world is of any force in the time of danger. For fear confoundeth the memory, and skill without courage availeth nothing. To their odds therefore of skill, oppose your odds of valour; and to the fear caused by your overthrow, oppose your being then unprovided. You have further now a greater fleet, and to fight on your own shore with your aids at hand of men of arms: and for the most part, the greatest number and best provided get the victory. So that we can neither see any one cause in particular, why we should miscarry; and whatsoever were our wants in the former battle, supplied in this, will now turn to our instruction. With courage therefore, both masters and mariners, follow every man in his order, not forsaking the place assigned him. And for us, we shall order the battle as well as the former commanders; and leave no excuse to any man of his cowardice. And if any will needs be a coward, he shall receive condign punishment; and the valiant shall be rewarded according to their merit.”

88. Thus did the commanders encourage the Peloponnesians. And Phormio, he likewise doubting that his soldiers were but faint-hearted, and observing they had consultations apart and were afraid of the multitude of the enemy's galleys, thought good, having called them together, to encourage and admonish them upon the present occasion. For though he had always before told them, and predisposed their minds to an opinion, that there was no number of galleys so great, which setting upon them they ought not to undertake; and [also] most of the soldiers had of long time assumed a conceit of themselves, that being Athenians they ought not to decline any number of galleys whatsoever of the Peloponnesians: yet when

he saw that the sight of the enemy present had dejected them, he thought fit to revive their courage, and having assembled the Athenians, said thus:

the oration of phormio. year iii. A. C. 429. Ol. 87. 4. Oration of Phormio.
year iii. A. C. 429. Ol. 87. 4. Oration of Phormio.

89. "Soldiers, having observed your fear of the enemy's number, I have called you together, not enduring to see you terrified with things that are not terrible. For first, they have prepared this great number and odds of galleys, for that they were overcome before, and because they are even in their own opinions too weak for us. And next, their present boldness proceeds only from their knowledge in land service, in confidence whereof (as if to be valiant were peculiar unto them) they are now come up: wherein having for the most part prospered, they think to do the same in service by sea. But in reason the odds must be ours in this, as well as it is theirs in the other kind. For in courage they exceed us not: and as touching the advantage of either side, we may better be bold now than they. And the Lacedæmonians, who are the leaders of the confederates, bring them to fight for the greatest part (in respect of the opinion they have of us) against their wills. For else they would never have undertaken a new battle, after they were once so clearly overthrown. Fear not therefore any great boldness on their part. But the fear which they have of you, is far both greater and more certain, not only for that you have overcome them before, but also for this, that they would never believe you would go about to resist, unless you had some notable thing to put in practice upon them. For when the enemy is the greater number, as these are now, they invade chiefly upon confidence of their strength: but they that are much the fewer, must have some great and sure design when they dare fight unconstrained. Wherewith these men now amazed, fear us more for our unlikely preparation, than they would if it were more proportionable. Besides, many great armies have been overcome by the lesser through unskilfulness, and some also by timorousness; both

which we ourselves are free from. As for the battle, I will not willingly fight it in the gulf, nor go in thither: seeing that to a few galleys with nimbleness and art against many without art, straitness of room is disadvantage. For neither can one charge with the beak of the galley as is fit, unless he have sight of the enemy afar off; or if he be himself over-pressed, again get clear. Nor is there any getting through them or turning to and fro at one's pleasure, which are all the works of such galleys as have their advantage in agility; but the sea-fight would of necessity be the same with a battle by land, wherein the greater number must have the better. But of this, I shall myself take the best care I am able. In the meantime, keep you your order well in the galleys, and every man receive his charge readily; and the rather because the enemy is at anchor so near us. In the fight, have in great estimation order and silence, as things of great force in most military actions, especially in a fight by sea; and charge these your enemies according to the worth of your former acts. You are to fight for a great wager, either to destroy the hope of the Peloponnesian navies, or to bring the fear of the sea nearer home to the Athenians. Again, let me tell you, you have beaten them once already; and men once overcome, will not come again to the danger so well resolved as before."

Year iii. A. C. 429. Ol. 87. 4. The stratagem of the Peloponnesians. The Peloponnesians give the onset. year iii. A. C. 429. Ol. 87.

4.

90. Thus did Phormio also encourage his soldiers. The Peloponnesians, when they saw the Athenians would not enter the gulf and strait, desiring to draw them in against their wills, weighed anchor, and betime in the morning having arranged their galleys by four and four in a rank, sailed along their own coast within the gulf; leading the way in the same order as they had lain at anchor, with their right wing. In this wing they had placed twenty of their swiftest galleys, to the end that if Phormio, thinking them going to

Naupactus, should for safeguard of the town sail along his own coast likewise within the strait, the Athenians might not be able to get beyond that wing of theirs and avoid the impression, but be inclosed by their galleys on both sides. Phormio fearing (as they expected) what might become of the town now without guard, as soon as he saw them from anchor, against his will and in extreme haste went aboard and sailed along the shore, with the land forces of the Messenians marching by to aid him. The Peloponnesians, when they saw them sail in one long file, galley after galley, and that they were now in the gulf and by the shore (which they most desired), upon one sign given turned suddenly every one as fast as he could, upon the Athenians, hoping to have intercepted them every galley. But of those the eleven foremost, avoiding that wing and the turn made by the Peloponnesians, got out into the open sea. The rest they intercepted, and driving them to the shore, sunk them. The men, as many as swam not out, they slew; and the galleys, some they tied to their own, and towed them away empty, and one with the men and all in her they had already taken. But the Messenian succours on land, entering the sea with their arms, got aboard of some of them; and fighting from the decks recovered them again, after they were already towing away.

Year iii. A. C. 429. Ol. 87. 4. The Athenians have the victory. Timocrates, a Lacedæmonian commander, slayeth himself. year iii.

A. C. 429. Ol. 87. 4. The end of the third summer.

91. And in this part the Peloponnesians had the victory, and overcame the galleys of the Athenians. Now the twenty galleys that were their right wing, gave chase to those eleven Athenian galleys, which had avoided them when they turned, and were gotten into the open sea. These flying toward Naupactus, arrived there before the enemies, all save one; and when they came under the temple of Apollo, turned their beak-heads and put themselves in readiness for defence, in case the enemy should follow them

to the land. But the Peloponnesians, as they came after, were pæanising as if they had already had the victory; and one galley which was of Leucas, being far before the rest, gave chase to one Athenian galley that was behind the rest of the Athenians. Now it chanced that there lay out into the sea a certain ship at anchor, to which the Athenian galley first coming fetched a compass about her, and came back full butt against the Leucadian galley that gave her chase, and sunk her. Upon this unexpected and unlikely accident they began to fear; and having also followed the chase, as being victors, disorderly, some of them let down their oars into the water and hindered the way of their galleys, (a matter of very ill consequence, seeing the enemy was so near), and staid for more company: and some of them, through ignorance of the coast, ran upon the shelves. 92. The Athenians seeing this took heart again, and together with one clamour set upon them; who resisted not long, because of their present errors committed and their disarray; but turned, and fled to Panormus from whence at first they set forth. The Athenians followed, and took from them six galleys that were hindmost, and recovered their own which the Peloponnesians had sunk by the shore and tied astern of theirs. Of the men, some they slew, and some also they took alive. In the Leucadian galley that was sunk near the ship, was Timocrates, a Lacedæmonian, who, when the galley was lost, ran himself through with his sword; and his body drave into the haven of Naupactus. The Athenians falling off, erected a trophy in the place from whence they set forth to this victory; and took up their dead and the wreck, as much as was on their own shore, and gave truce to the enemy to do the like. The Peloponnesians also set up a trophy, as if they also had had the victory, in respect of the flight of those galleys which they sunk by the shore; and the galley which they had taken they consecrated to Neptune in Rhium of Achaia, hard by their trophy. After this, fearing the supply which was expected from Athens, they sailed by night into the Crisæan gulf and to

Corinth, all but the Leucadians. And those Athenians with twenty galleys out of Crete, that should have been with Phormio before the battle, not long after the going away of the galleys of Peloponnesus arrived at Naupactus. And the summer ended.

The Peloponnesians resolve to attempt the surprise of Peiræus. year iii. A. C. 429. Ol. 87. 4. The Peloponnesians dare not execute their design, but turn to Salamis. year iii. A. C. 429. Ol. 87. 4.

93. But before the fleet, gone into the Crisæan gulf and to Corinth, was dispersed, Cnemus and Brasidas and the rest of the commanders of the Peloponnesians in the beginning of winter, instructed by the Megareans, thought good to make an attempt upon Peiræus, the haven of the Athenians. Now it was without guard or bar; and that upon very good cause, considering how much they exceeded others in the power of their navy. And it was resolved that every mariner with his oar, his cushion, and one thong for his oar to turn in, should take his way by land from Corinth to the other sea that lieth to Athens; and going with all speed to Megara, launch forty galleys out of Nisæa, the arsenal of the Megareans, which then were there, and sail presently into Peiræus. For at that time there neither stood any galleys for a watch before it, nor was there any imagination that the enemies would on such a sudden come upon them: for they durst not have attempted it openly, though with leisure; nor if they had had any such intention, could it but have been discovered. As soon as it was resolved on, they set presently forward; and arriving by night, launched the said galleys of Nisæa, and set sail; not now towards Peiræus, as they intended, fearing the danger, (and a wind was also said to have risen that hindered them), but toward a promontory of Salamis, lying out towards Megara. Now there was in it a little fort, and underneath in the sea lay three galleys, that kept watch to hinder the importation and exportation of any thing to or from the Megareans. This fort they assaulted, and the galleys they towed empty away

after them: and being come upon the Salaminians unawares, wasted also other parts of the island. 94. By this time the fires signifying the coming of enemies, were lifted up towards Athens; and affrighted them more than any thing that had happened in all this war. For they in the city, thought the enemies had been already in Peiræus: and they in Peiræus, thought the city of the Salaminians had been already taken, and that the enemy would instantly come into Peiræus; which, had they not been afraid, nor been hindered by the wind, they might also easily have done. But the Athenians, as soon as it was day, came with the whole strength of the city into Peiræus, and launched their galleys, and embarking in haste and tumult set sail toward Salamis, leaving for the guard of Peiræus an army of foot. The Peloponnesians upon notice of these succours, having now overrun most of Salamis, and taken many prisoners and much other booty, besides the three galleys from the fort of Budorus, went back in all haste to Nisæa. And somewhat they feared the more, for that their galleys had lain long in the water, and were subject to leaking. And when they came to Megara, they went thence to Corinth again by land. The Athenians likewise, when they found not the enemy at Salamis, went home; and from that time forward looked better to Peiræus, both for the shutting of the ports and for their diligence otherwise.

The king of Thrace maketh war on the king of Macedon. year iii. A. C. 429. Ol. 87. 4.

95. About the same time in the beginning of the same winter, Sitalces an Odrysian, the son of Teres, king of Thrace, made war upon Perdiccas the son of Alexander, king of Macedonia, and upon the Chalcideans bordering on Thrace; upon two promises; one of which he required to be performed to him, and the other he was to perform himself. For Perdiccas had promised somewhat unto him, for reconciling him to the Athenians, who had formerly oppressed him with war; and for not restoring his brother Philip to

the kingdom, that was his enemy: which he never paid him. And Sitalces himself had covenanted with the Athenians, when he made league with them, that he would end the war which they had against the Chalcideans of Thrace. For these causes therefore he made this expedition; and took with him both Amyntas the son of Philip, (with purpose to make him king of Macedonia), and also the Athenian ambassadors then with him for that business, and Agnon the Athenian commander. For the Athenians ought also to have joined with him against the Chalcideans, both with a fleet, and with as great land forces as they could provide.

The description of Thrace. year iii. A. C. 429. Ol. 87. 4.

96. Beginning therefore with the Odrysians, he levied first those Thracians that inhabit on this side the mountains Hæmus and Rhodope, as many as were of his own dominion, down to the shore of the Euxine Sea and the Hellespont. Then beyond Hæmus he levied the Getes, and all the nations between Ister and the Euxine Sea. The Getes and the people of those parts, are borderers upon the Scythians, and furnished as the Scythians are; all archers on horseback. He also drew forth many of those Scythians that inhabit the mountains and are free states, all sword-men, and are called Dii; the greatest part of which are on the mountain Rhodope; whereof some he hired, and some went as voluntaries. He levied also the Agrianes and Lans, and all other the nations of Pæonia in his own dominion. These are the utmost bounds of his dominion, extending to the Graæans and Lans, nations of Pæonia, and to the river Strymon; which rising out of the mountain Scomius passeth through the territories of the Graæans and Lans, who make the bounds of his kingdom toward Pæonia, and are subject only to their own laws. But on the part that lieth to the Triballians, who are also a free people, the Treres make the bound of his dominion, and the Tilatæans. These dwell on the north side of the mountain Scomius, and reach westward as far as to

the river Oscius; which cometh out of the same hill Nestus and Hebrus doth; a great and desert hill, adjoining to Rhodope.

Year iii. A. C. 429. Ol. 87. 4. year iii. A. C. 429. Ol. 87. 4. The great power of the Scythians.

97. The dimensions of the dominion of the Odrysians by the sea-side, is from the city of the Abderites to the mouth of Ister in the Euxine Sea; and is, the nearest way, four days' and as many nights' sail for a round ship, with a continual fore wind. By land likewise the nearest way, it is from the city Abdera to the mouth of Ister eleven days' journey for an expedite footman. Thus it lay in respect of the sea. Now for the continent; from Byzantium to the Lans and to the river Strymon, (for it reacheth this way farthest into the main land), it is for the like footman thirteen days' journey. The tribute they received from all the barbarian nations and from the cities of Greece, in the reign of Seuthes, (who reigned after Sitalces, and made the most of it), was in gold and silver, by estimation, four hundred talents by year. And presents of gold and silver came to as much more: besides vestures, both wrought and plain, and other furniture, presented not only to him, but also to all the men of authority and Odrysian nobility about him. For they had a custom, which also was general to all Thrace, contrary to that of the kingdom of Persia, to receive rather than to give: and it was there a greater shame to be asked and deny, than to ask and go without. Nevertheless they held this custom long, by reason of their power: for without gifts, there was nothing to be gotten done amongst them. So that this kingdom arrived thereby to great power. For of all the nations of Europe that lie between the Ionian Gulf and the Euxine Sea, it was, for revenue of money and other wealth, the mightiest; though indeed for strength of an army and multitudes of soldiers, the same be far short of the Scythians. For there is no nation, not to say of Europe, but neither of Asia, that are comparable to this, or that as long as they agree, are able, one

nation to one, to stand against the Scythians. And yet in matter of counsel and wisdom in the present occasions of life, they are not like to other men.

Year iii. A. C. 429. Ol. 87. 4.

98. Sitalces therefore, king of this great country, prepared his army, and when all was ready, set forward and marched towards Macedonia: first, through his own dominion; then over Cercine, a desert mountain dividing the Sintians from the Pæonians, over which he marched the same way himself had formerly made with timber, when he made war against the Pæonians. Passing this mountain out of the country of the Odrysians, they had on their right hand the Pæonians, and on the left the Sintians and Medes; and beyond it they came to the city of Doberus in Pæonia. His army, as he marched, diminished not any way, except by sickness; but increased by the accession of many free nations of Thrace, that came in uncalled in hope of booty. Insomuch as the whole number is said to have amounted to no less than a hundred and fifty thousand men: whereof the most were foot; the horse being a third part, or thereabouts. And of the horse, the greatest part were the Odrysians themselves; and the next most, the Getes. And of the foot, those sword-men, a free nation that came down to him out of the mountain Rhodope, were the most warlike. The rest of the promiscuous multitude were formidable only for their number.

The beginning of the kingdom of Macedonia. The Macedonian kings descended of the Temenidæ, a family in Argos of the Peloponnesians. year iii. A. C. 429. Ol. 87. 4.

99. Being all together at Doberus, they made ready to fall in from the hill's side into the lower Macedonia, the dominion of Perdiccas. For there are in Macedonia, the Lyncestians and the Elimeiotæ, and other highland nations, who though they be confederates and in subjection to the other, yet have their several kingdoms by themselves. But of that part of the now

Macedonia which lieth toward the sea, Alexander, the father of this Perdiccas, and his ancestors the Temenidæ, who came out of Argos, were the first possessors and reigned in the same; having first driven out of Pieria the Pierians, which afterwards seated themselves in Phagres, and other towns beyond Strymon, at the foot of Pangæum; (from which cause that country is called the Gulf of Pieria to this day, which lieth at the foot of Pangæum and bendeth toward the sea); and out of that which is called Bottia, the Bottiæans, that now border upon the Chalcideans. They possessed besides a certain narrow portion of Pæonia near unto the river Axius, reaching from above down to Pella and to the sea. Beyond Axius, they possess the country called Mygdonia as far as to Strymon, from whence they have driven out the Edonians. Furthermore, they drave the Eordians out of the territory now called Eordia; (of whom the greatest part perished, but there dwell a few of them yet about Physca); and the Almopians out of Almopia. The same Macedonians subdued also other nations, and hold them yet; as Anthemus, Crestonia, and Bisaltia, and a great part of the Macedonians themselves. But the whole is called Macedonia; and was the kingdom of Perdiccas the son of Alexander, when Sitalces came to invade it.

The Macedonians retire into their walled towns. Archelaus the son of Perdiccas, the ninth king of Macedon, of the family of the Temenidæ. year iii. A C. 429. Ol. 87. 4.

100. The Macedonians unable to stand in the field against so huge an army, retired all within their strongholds and walled towns, as many as the country afforded: which were not many then; but were built afterwards by Archelaus the son of Perdiccas, when he came to the kingdom, who then also laid out the highways straight, and took order both for matter of war, as horses and arms and for other provision, better than all the other eight kings that were before him. The Thracian army arising from Doberus, invaded

that territory first which had been the principality of Philip, and took Eidomene by force; but Gortynia, Atalanta, and some other towns he had yielded to him for the love of Amyntas the son of Philip, who was then in the army. They also assaulted Europus, but could not take it. Then they went on further into Macedonia, on the part that lies on the right hand of Pella and Cyrrhus; but within these, into Bottiæa and Pieria they entered not, but wasted Mygdonia, Crestonia, and Anthemus. Now the Macedonians had never any intention to make head against them with their foot, but sending out their horsemen, which they had procured from their allies of the higher Macedonia, they assaulted the Thracian army in such places where, few against many, they thought they might do it with most convenience. And where they charged, none was able to resist them, being both good horsemen and well armed with breastplates; but enclosed by the multitude of the enemies, they fought against manifest odds of number: so that in the end they gave it over, esteeming themselves too weak to hazard battle against so many.

Year iii. A. C. 429. Ol. 87. Sitalces and Perdiccas come to a conference about the motives of the war. The Grecians, at the coming of this army, stand upon their guard, fearing they were called in by the Athenians to subdue them. year iii. A. C. 429. Ol. 87. 4. Seuthes corrupted by Perdiccas, persuadeth Sitalces to return.

101. After this, Sitalces gave way to a conference with Perdiccas, touching the motives of this war. And forasmuch as the Athenians were not arrived with their fleet, (for they thought not that Sitalces would have made the journey, but had sent ambassadors to him with presents), he sent a part of his army against the Chalcideans and Bottiæans, wherewith having compelled them within their walled towns, he wasted and destroyed their territory. Whilst he stayed in these parts, the Thessalians southward, and the Magnetians, and the rest of the nations subject to the Thessalians, and all the Grecians as far as to Thermopylæ, were afraid he would have turned his

forces upon them; and stood upon their guard. And northward, those Thracians that inhabit the champaign country beyond Strymon, namely the Panæans, Odomantians, Droans, and Dersæans, all of them free states, were afraid of the same. He gave occasion also to a rumour, that he meant to lead his army against all those Grecians that were enemies to the Athenians, as called in by them to that purpose by virtue of their league. But whilst he stayed, he wasted the Chalcidean, Bottiæan, and Macedonian territories; and when he could not effect what he came for, and his army both wanted victual, and was afflicted with the coldness of the season, Seuthes the son of Spardocus, his cousin-german, and of greatest authority next himself, persuaded him to make haste away. Now Perdiccas had dealt secretly with Seuthes, and promised him his sister in marriage, and money with her: and Sitalces at the persuasion of him, after the stay of full thirty days, whereof he spent eight in Chalcidea, retired with his army with all speed into his own kingdom. And Perdiccas shortly after gave to Seuthes his sister Stratonica in marriage, as he had promised. This was the issue of this expedition of Sitalces.

C. 428. Ol. 87. 4. Phormio putteth suspected persons out of Stratus and Coronta. year iii. A. C 428. Ol. 87. 4. The course of the river Achelons. The fable of Alcmaëon. year iii. A. C. 428. Ol. 87. 4. Acarnania whence so called.

102. The same winter, after the fleet of the Peloponnesians was dissolved, the Athenians that were at Naupactus, under the conduct of Phormio, sailed along the coast to Astacus, and disembarking marched into the inner parts of Acarnania. He had in his army four hundred men of arms that he brought with him in his galleys, and four hundred more Messenians. With these he put out of Stratus, Coronta, and other places, all those whose fidelity he thought doubtful. And when he had restored Cynes the son of Theolytus to Coronta, they returned again to their galleys. For they thought

they should not be able to make war against the Ceniades (who only of all Acarnania are the Athenians' enemies) in respect of the winter. For the river Achelöus, springing out of the mountain Pindus, and running through Dolopia, and through the territories of the Agræans and the Amphilochians, and through most part of the champaign of Acarnania, passing above by the city of Stratus, and falling into the sea by the city of the Ceniades, which also it moateth about with fens, by the abundance of water maketh it hard lying there for an army in time of winter. Also most of the islands Echinades lie just over against Cenia, hard by the mouth of Achelöus. And the river, being a great one, continually heapeth together the gravel, insomuch that some of those islands are become continent already, and the like in short time is expected by the rest. For not only the stream of the river is swift, broad, and turbidous, but also the islands themselves stand thick, and because the gravel cannot pass, are joined one to another; lying in and out, not in a direct line, nor so much as to give the water his course directly forward into the sea. These islands are all desert, and but small ones. It is reported that Apollo by his oracle did assign this place for an habitation to Alcmaeon the son of Amphiareus, at such time as he wandered up and down for the killing of his mother; telling him, "that he should never be free from the terrors that haunted him, till he had found out and seated himself in such a land, as when he slew his mother, the sun had never seen nor was then land, because all other lands were polluted by him." Hereupon being at a nonplus, as they say, with much ado he observed this ground congested by the river Achelöus, and thought there was enough cast up to serve his turn, already, since the time of the slaughter of his mother, after which it was now a long time that he had been a wanderer. Therefore seating himself in the places about the Ceniades, he reigned there, and named the country after the name of his son Acarnas. Thus goes the report, as we have heard it concerning Alcmaeon.

The end of the third year of the war.

103. But Phormio and the Athenians leaving Acarnania, and returning to Naupactus, in the very beginning of the spring came back to Athens; and brought with them such galleys as they had taken, and the freemen they had taken prisoners in their fights at sea, who were again set at liberty by exchange of man for man. So ended that winter, and the third year of the war written by Thucydides.

THE THIRD BOOK OF THE HISTORY OF THUCYDIDES.

THE PRINCIPAL CONTENTS.

ATTICA INVADED BY the Peloponnesians. — The Mytilenæans revolt, and are received by the Peloponnesians at Olympia into their league. — The Athenians send Paches to Mytilene, to besiege it. — Part of the besieged Platæans escape through the fortifications of the enemy. — The commons of Mytilene armed by the nobility for a sally on the enemy, deliver the town to the Athenians. — The residue of the Platæans yield to the besiegers, and are put to the sword. — The proceedings upon the Mytilenæans, and their punishment. — The sedition in Corcyra. — Laches is sent by the Athens into Sicily: and Nicias into Melos. — Demosthenes fighteth against the Ætolians unfortunately; and afterwards against the Ambraciotes fortunately. — Pythadorus is sent into Sicily, to receive the fleet from Laches. — This in other three years of this war.

Year iv. A. C. 428. Ol. 88. 1. The Peloponnesians invade Attica. year iv. A C. 428. Ol. 88. 1.

The summer following, the Peloponnesians and their confederates, at the time when corn was at the highest, entered with their army into Attica under the conduct of Archidamus, the son of Zeuxidamus, king of the Lacedæmonians; and there set them down and wasted the territory about. And the Athenian horsemen, as they were wont, fell upon the enemy where they thought fit, and kept back the multitude of light-armed soldiers from going out before the men of arms, and infesting the places near the city. And when they had stayed as long as their victual lasted, they returned; and were dissolved according to their cities.

The revolt of Lesbos. The intention of the Lesbians to revolt discovered to the Athenians. year iv. A. C. 428. Ol. 88. 1.

After the Peloponnesians were entered Attica, Lesbos immediately, all but Methymne, revolted from the Athenians; which though they would have done before the war, and the Lacedæmonians would not then receive them, yet even now they were forced to revolt sooner than they had intended to do. For they stayed to have first straitened the mouth of their haven with dams of earth, to have finished their walls and their galleys then in building, and to have gotten in all that was to come out of Pontus, as archers, and victual, and whatsoever else they had sent for. But the Tenedians, with whom they were at odds, and the Methymnæans, and of the Mytilenæans themselves certain particular men upon faction, being hosts to the Athenians, made known unto them that the Lesbians were forced to go all into Mytilene; that by the help of the Lacedæmonians and their kindred the Bœotians, they hastened all manner of provision necessary for a revolt; and that unless it were presently prevented, all Lesbos would be lost.

The Athenians send forty galleys to Lesbos. year iv. A. C. 428. Ol. 88. 1.
The Athenians imprison such of Mytilene as were at Athens, and stay their galleys

The Athenians, afflicted with the disease, and with the war now on foot and at the hottest, thought it a dangerous matter that Lesbos, which had a navy and was of strength entire, should thus be added to the rest of their enemies; and at first received not the accusations, holding them therefore the rather feigned because they would not have them true. But after, when they had sent ambassadors to Mytilene, and could not persuade them to dissolve themselves and undo their preparation, they then feared the worst, and would have prevented them: and to that purpose suddenly sent out the forty galleys made ready for Peloponnesus, with Cleïppedes and two other commanders. For they had been advertised that there was a holiday of

Apollo Maloeis to be kept without the city, and that to the celebration thereof the Mytilenæans were accustomed to come all out of the town; and they hoped, making haste, to take them there unawares. And if the attempt succeeded, it was well; if not, they might command the Mytilenæans to deliver up their galleys, and to demolish their walls; or they might make war against them, if they refused. So these galleys went their way. And ten galleys of Mytilene which then chanced to be at Athens, by virtue of their league, to aid them, the Athenians stayed; and cast into prison the men that were in them. In the meantime a certain man went from Athens into Eubœa by sea, and then by land to Geræstus; and finding there a ship ready to put off, having the wind favourable, arrived in Mytilene three days after he set forth from Athens, and gave them notice of the coming of the fleet. Hereupon they not only went not out to Maloeis, as was expected, but also stopped the gaps of their walls and ports, where they were left unfinished, and placed guards to defend them.

The Athenians give the Mytilenæans time to purge themselves at Athens.

When the Athenians not long after arrived and saw this, the commanders of the fleet delivered to the Mytilenæans what they had in charge: which not hearkened unto, they presently fell to the war. The Mytilenæans, unprovided and compelled to a war on such a sudden, put out some few galleys before the haven to fight: but being driven in again by the galleys of Athens, they called to the Athenian commanders to parley; desiring, if they could upon reasonable conditions, to get the galleys for the present sent away. And the Athenian commander allowed the conditions, he also fearing they should be too weak to make war against the whole island.

Year iv. A. C. 428. Ol. 88. 1. The Mytilenæans sent to Lacedæmon for aid. The Mytilenæan ambassadors speed not at Athens.

They sally out upon the Athenians, but without success. They lie still, expecting help from Peloponnesus. year iv. A. C. 428. Ol.

88. 1. The Athenians send for the aids of their confederates.

When a cessation of arms was granted, the Mytilenæans amongst others sent to Athens one of those that had given intelligence there of their design, and had repented him after of the same, to try if they could persuade them to withdraw their fleet from them, as not intending any innovation. Withal they sent ambassadors at the same time to Lacedæmon, undiscovered of the fleet of the Athenians, which was riding at anchor in Malea to the north of the city; being without any confidence of their success at Athens. And these men, after an ill voyage through the wide sea, arriving at Lacedæmon, negotiated the sending of aid from thence. 5. But when their ambassadors were come back from Athens without effect, the Mytilenæans and the rest of Lesbos, save only Methymne, (for these together with the Imbrians, Lemnians, and some few other their confederates, aided the Athenians), prepared themselves for the war. And the Mytilenæans with the whole strength of the city made a sally upon the Athenian camp, and came to a battle: wherein though the Mytilenæans had not the worse, yet they lay not that night without the walls, nor durst trust to their strength; but retiring into the town, lay quiet there, expecting to try their fortune with the accession of such forces, as (if any came) they were to have from Peloponnesus. For there were now come into the city one Meleas a Laconian and Hermiondas a Theban, who having been sent out before the revolt, but unable to arrive before the coming of the Athenian fleet, secretly after the end of the battle entered the haven in a galley, and persuaded them to send another galley along with them, with other ambassadors to Sparta; which they did. 6. But the Athenians much confirmed by this the Mytilenæans' cessation, called in their confederates: (who, because they saw no assurance on the part of the Lesbians, came much sooner in than was thought they would have done): and riding at anchor to the south of the city, fortified two camps, on either side one, and brought their galleys before both the ports, and so quite excluded the Mytilenæans from the use of the sea. As for the land, the

Athenians held so much only as lay near their camps, which was not much; and the Mytilenæans and other Lesbians, that were now come to aid them, were masters of the rest. For Malea served the Athenians for a station only for their galleys, and to keep their market in. And thus proceeded the war before Mytilene.

The Athenians send Asopius the son of Phormio, with twenty galleys about Peloponnesus. year iv. A. C. 428. Ol. 88. 1. Asopius slain.

7. About the same time of the same summer, the Athenians sent likewise thirty galleys into Peloponnesus, under the conduct of Asopius the son of Phormio. For the Acarnanians had desired them to send some son or kinsman of Phormio, for general, into those parts. These, as they sailed by, wasted the maritime country of Laconia; and then sending back the greatest part of his fleet to Athens, Asopius himself with twelve galleys went on to Naupactus. And afterwards having raised the whole power of Acarnania, he made war upon the Cœniades, and both entered with his galleys into the river of Achelöus, and with his land forces wasted the territory. But when the Cœniades would not yield, he disbanded his land forces, and sailed with his galleys to Leucas, and landed his soldiers of the territory of Neritum; but in going off was by those of the country that came out to defend it, and by some few of the garrison soldiers there, both himself and part of his company slain. And having upon truce received from the Leucadians their dead bodies, they went their ways.

The Mytilenæan ambassadors sent to Lacedæmon, are appointed to attend the general assembly of the Grecians at Olympia. year iv. A. C. 428. Ol. 88. 1.

8. Now the ambassadors of the Mytilenæans, that went out in the first galley, having been referred by the Lacedæmonians to the general meeting of the Grecians at Olympia, to the end they might determine of them together with the rest of the confederates, went to Olympia accordingly. It

was that Olympiad wherein Dorieus of Rhodes was the second time victor. And when after the solemnity they were set in council, the ambassadors spake unto them in this manner:

oration of the ambassadors of mytilene.

9. “Men of Lacedæmon and confederates, we know the received custom of the Grecians. For they that take into league such as revolt in the wars and relinquish a former league, though they like them as long as they have profit by them, yet accounting them but traitors to their former friends, they esteem the worse of them in their judgment. And to say the truth, this judgment is not without good reason, when they that revolt, and they from whom the revolt is made, are mutually like-minded and affected, and equal in provision and strength, and no just cause of their revolt given. But now between us and the Athenians it is not so. Nor let any man think the worse of us, for that having been honoured by them in time of peace, we have now revolted in time of danger. 10. For the first point of our speech, especially now we seek to come into league with you, shall be to make good the justice and honesty of our revolt. For we know there can be neither firm friendship between man and man, nor any communion between city and city to any purpose whatsoever, without a mutual opinion of each other’s honesty, and also a similitude of customs otherwise: for in the difference of minds is grounded the diversity of actions.

Year iv. A. C. 428. Ol. 88. 1. Oration of the Mytilenæans. year iv. A. C. 428. Ol. 88. 1. Oration of the Mytilenæans. year iv. A. C. 428. Ol. 88. 1. Oration of the Mytilenæans.

“As for our league with the Athenians, it was first made when you gave over the Medan war, and they remained to prosecute the relics of that business. Yet we entered not such a league, as to be their helpers in bringing the Grecians into the servitude of the Athenians, but to set free the Grecians from the servitude of the Medes. And as long as they led us as equals, we

followed them with much zeal: but when we saw they remitted their enmity against the Medes, and led us to the subjugation of the confederates, we could not then but be afraid. And the confederates, through the multitude of distinct counsels unable to unite themselves for resistance, fell all but ourselves and the Chians into their subjection. And we having still our own laws, and being in name a free state, followed them to the wars; but so, as by the examples of their former actions, we held them not any longer for faithful leaders. For it was not probable, when they had subdued those whom together with us they took into league, but that, when they should be able, they would do the like also by the rest. 11. It is true that if we were now in liberty all, we might be the better assured that they would forbear to innovate; but since they have under them the greatest part already, in all likelihood they will take it ill, to deal on equal terms with us alone, and the rest yielding, to let us only stand up as their equals. Especially when by how much they are become stronger by the subjection of their confederates, by so much the more are we become desolate. But the equality of mutual fear is the only band of faith in leagues. For he that hath the will to transgress, yet when he hath not the odds of strength, will abstain from coming on. Now the reason why they have left us yet free, is no other, but that they may have a fair colour to lay upon their domination over the rest; and because it hath seemed unto them more expedient to take us in by policy, than by force. For therein they made use of us for an argument, that having equal vote with them we would never have followed them to the wars, if those against whom they led us, had not done the injury: and thereby also they brought the stronger against the weaker, and reserving the strongest to the last, made them the weaker by removing the rest. Whereas if they had begun with us, when the confederates had had both their own strength and a side to adhere to, they had never subdued them so easily. Likewise our navy kept them in some fear; lest united and added to yours or to any other, it

might have created them some danger. Partly also we escaped by our observance toward their commons, and most eminent men from time to time. But yet we still thought we could not do so long, considering the examples they have showed us in the rest, if this war should not have fallen out. 12. What friendship then or assurance of liberty was this, when we received each other with alienated affections: when whilst they had wars, they for fear courted us; and when they had peace, we for fear courted them: and whereas in others good will assureth loyalty, in us it was the effect of fear? So it was more for fear than love, that we remained their confederates; and whomsoever security should first embolden, he was first likely by one means or other to break the league. Now if any man think we did unjustly, to revolt upon the expectation of evil intended without staying to be certain whether they would do it or not, he weigheth not the matter aright. For if we were as able to contrive evil against them, and again to defer it, as they can against us, being thus equal, what needed us to be at their discretion? But seeing it is in their hands to invade at pleasure, it ought to be in ours to anticipate.

Year iv. A. C. 428. Ol. 88. 1. Oration of the Mytilenæans. year iv. A. C. 428. Ol. 88. 1. Oration of the Mytilenæans.

13. Upon these pretensions therefore and causes, Men of Lacedæmon and confederates, we have revolted; the which are both clear enough for the hearers to judge upon, that we had reason for it, and weighty enough to affright, and compel us to take some course for our own safety: which we would have done before, when before the war we sent ambassadors to you about our revolt, but could not, because you would not then admit us into your league. And now when the Bœotians invited us to it, we presently obeyed. Wherein we thought we made a double revolt one from the Grecians, in ceasing to do them mischief with the Athenians, and helping to set them free; and another from the Athenians, in breaking first, and not

staying to be destroyed by them hereafter. But this revolt of ours hath been sooner than was fit, and before we were provided for it. For which cause also the confederates ought so much the sooner to admit us into the league, and send us the speedier aid; thereby the better, at once both to defend those you ought to defend, and to annoy your enemies. Whereof there was never better opportunity than at present. For the Athenians being both with the sickness and their great expenses consumed, and their navy divided, part upon your own coasts and part upon ours; it is not likely they should have many galleys spare, in case you again this summer invade them both by sea and land; but that they should either be unable to resist the invasion of your fleet, or be forced to come off from both our coasts. And let not any man conceive, that you shall herein at your own danger defend the territory of another. For though Lesbos seem remote, the profit of it will be near you. For the war will not be, as a man would think, in Attica; but there, from whence cometh the profit to Attica. This profit is the revenue they have from the confederates; which if they subdue us, will still be greater. For neither will any other revolt; and all that is ours will accrue unto them; and we shall be worse handled besides, than those that were under them before. But aiding us with diligence, you shall both add to your league a city that hath a great navy, the thing you most stand in need of; and also easily overthrow the Athenians by subduction of their confederates, because every one will then be more confident to come in, and you shall avoid the imputation of not assisting such as revolt unto you. And if it appear that your endeavour is to make them free, your strength in this war will be much the more confirmed. In reverence therefore of the hopes which the Grecians have reposed in you, and of the presence of Jupiter Olympius, in whose temple here we are in a manner suppliants to you, receive the Mytilenæans into league, and aid us. And do not cast us off, who (though, as to the exposing of our persons, the danger be our own) shall bring a common

profit to all Greece, if we prosper, and a more common detriment to all the Grecians, if through your inflexibleness we miscarry. Be you therefore men such as the Grecians esteem you, and our fears require you to be.”

Year iv. A. C. 428. Ol. 88. 1. The Mytilenæans taken into the Lacedæmonian league. The Lacedæmonians prepare for the invasion of Attica, both by sea and land.

15. In this manner spake the Mytilenæans. And the Lacedæmonians and their confederates, when they had heard and allowed their reasons, decreed not only a league with the Lesbians, but also again to make an invasion into Attica. And to that purpose, the Lacedæmonians appointed their confederates there present, to make as much speed as they could with two parts of their forces into the isthmus; and they themselves being first there, prepared engines in the isthmus for the drawing up of galleys, with intention to carry the navy from Corinth to the other sea that lieth towards Athens, and to set upon them both by sea and land. And these things diligently did they. But the rest of the confederates assembled but slowly, being busied in the gathering in of their fruits, and weary of warfare.

The Athenians to make show of their power, and to deter the enemy from their enterprize, send 100 galleys, not so much to waste Peloponnesus, as to confute the opinion which the Lesbian ambassadors had put into the Lacedæmonians of their weakness. year iv. A. C. 428. Ol. 88. 1. year iv. A. C. 428. Ol. 88. 1.

16. The Athenians perceiving all this preparation to be made upon an opinion of their weakness, and desirous to let them see they were deceived, as being able, without stirring the fleet at Lesbos, easily to master the fleet that should come against them out of Peloponnesus, manned out a hundred galleys, and embarked therein generally, both citizens (except those of the degree of Pentacosiomedimni and Horsemen) and also strangers that dwelt amongst them: and sailing to the isthmus, made a show of their strength,

and landed their soldiers in such parts of Peloponnesus as they thought fit. When the Lacedæmonians saw things so contrary to their expectation, they thought it false which was spoken by the Lesbian ambassadors; and esteeming the action difficult, seeing their confederates were not arrived, and that news was brought of the wasting of the territory near their city by the thirty galleys formerly sent about Peloponnesus by the Athenians, went home again; and afterwards prepared to send a fleet to Lesbos, and intimated to the cities rateably to furnish forty galleys, and appointed Alcidas, who was to go thither with them, for admiral. And the Athenians, when they saw the Peloponnesians gone, went likewise home with their hundred galleys.

The greatness of the Athenian navy, and occasion of their great expense of money

17. About the time that this fleet was out, they had surely the most galleys (besides the beauty of them) together in action in these employments; yet in the beginning of the war, they had both as good, and more in number. For a hundred attended the guard of Attica, Eubœa, and Salamis; and another hundred were about Peloponnesus; besides those that were at Potidæa and other places: so that in one summer, they had in all two hundred and fifty sail. And this, together with Potidæa, was it that most exhausted their treasure. For the men of arms that besieged the city, had each of them two drachmes a day, one for himself and another for his man: and were three thousand in number that were sent thither at first and remained to the end of the siege; besides sixteen hundred more, that went with Phormio and came away before the town was won. And the galleys had all the same pay. In this manner was their money consumed, and so many galleys employed, the most indeed that ever they had manned at once.

Year iv. A. C. 428. Ol. 88. 1. The Mytilenæans go with a power to Methymne, hoping to have it betrayed. The Athenians send

Paches with 1000 men of arms to Mytilene. year iv. A. C. 428. Ol. 88. 1.

18. About the same time that the Lacedæmonians were in the isthmus, the Mytilenæans marched by land, both they and their auxiliaries, against Methymne, in hope to have had it betrayed unto them: and having assaulted the city, when it succeeded not the way they looked for, they went thence to Antissa, Pyrrha, and Eressus: and after they had settled the affairs of those places, and made strong their walls, returned speedily home. When these were gone, the Methymnæans likewise made war upon Antissa; but beaten by the Antisæans and some auxiliaries that were with them, they made haste again to Methymne, with the loss of many of their soldiers. But the Athenians being advertised hereof, and understanding that the Mytilenæans were masters of the land, and that their own soldiers there were not enough to keep them in, sent thither, about the beginning of autumn, Paches, the son of Epicurus, with a thousand men of arms of their own city: who, supplying the place of rowers themselves, arrived at Mytilene, and ingirt it with a single wall: save that in some places, stronger by nature than the rest, they only built turrets, and placed guards in them. So that the city was every way strongly besieged, both by sea and land; and the winter began.

The end of the fourth summer.

19. The Athenians standing in need of money for the siege, both contributed themselves, and sent thither two hundred talents of this their first contribution, and also dispatched Lysicles and four others with twelve galleys, to levy money amongst the confederates. But Lysicles, after he had been to and fro and gathered money in divers places, as he was going up from Myus through the plains of Mæander in Caria as far as to the hill Sandius, was set upon there by the Carians and Anæitans; and himself with a great part of his soldiers slain.

C. 427. Ol. 88. 1. The escape of 212 men out of Plataea, through the works of the enemy. year iv. A. C. 427. Ol. 88. 1. They make the length of their ladders by conjecture upon counting the lays of brick. The description

of the fortification of the Peloponnesians about Plataea. year iv. A. C. 427. Ol. 88. 1. The description of the Plataeans going over the enemy's walls. year iv. A. C. 427. Ol. 88. 1. year iv. A. C. 427. Ol. 88. 1.

20. The same winter the Plataeans, (for they were besieged by the Peloponnesians and Boeotians), pressed now with want of victual and hopeless of relief from Athens, and no other means of safety appearing, took counsel, both they and the Athenians that were besieged with them, at first all to go out, and if they could, to pass over the wall of the enemy by force. The authors of this attempt, were Theaenetus the son of Tolmidas, a soothsayer, and Eupompidas the son of Daïmachus, one of their commanders. But half of them afterwards, by one means or other, for the greatness of the danger shrunk from it again: but two hundred and twenty or thereabouts voluntarily persisted to go out in this manner. They made them ladders, fit for the height of the enemy's wall; the wall they measured by the lays of brick, on the part toward the town where it was not plastered over; and divers men at once numbered the lays of bricks, whereof though some missed, yet the greatest part took the reckoning just; especially, numbering them so often, and at no great distance, but where they might easily see the part to which their ladders were to be applied; and so by guess of the thickness of one brick, took the measure of their ladders. 21. As for the wall of the Peloponnesians, it was thus built. It consisted of a double circle, one towards Plataea, and another outward, in case of an assault from Athens. These two walls were distant one from the other about sixteen foot: and that sixteen foot of space which was betwixt them, was disposed and built into cabins for the watchmen, which were so joined and continued one to another, that the whole appeared to be one thick wall with battlements on either side. At every ten battlements stood a great tower, of a just breadth to comprehend both walls, and reach from the outmost to the inmost front of the whole; so that there was no passage by the side of a tower, but through

the midst of it. And such nights as there happened any storm of rain, they used to quit the battlements of the wall, and to watch under the towers: as being not far asunder, and covered beside overhead. Such was the form of the wall wherein the Peloponnesians kept their watch. 22. The Plataëans, after they were ready, and had attended a tempestuous night, and withal moonless, went out of the city; and were conducted by the same men that were the authors of the attempt. And first they passed the ditch that was about the town, and then came up close to the wall of the enemy, who, because it was dark, could not see them coming; and the noise they made as they went could not be heard for the blustering of the wind. And they came on besides at a good distance one from the other, that they might not be betrayed by the clashing of their arms; and were but lightly armed, and not shod but on the left foot, for the more steadiness in the wet. They came thus to the battlements in one of the spaces between tower and tower, knowing that there was now no watch kept there. And first came they that carried the ladders, and placed them to the wall: then twelve lightly armed, only with a dagger and a breastplate, went up, led by Ammeas the son of Corœbus, who was the first that mounted; and they that followed him, went up into either tower six. To these succeeded others lightly armed, that carried the darts, for whom they that came after carried targets at their backs, that they might be the more expedite to get up; which targets they were to deliver to them, when they came to the enemy. At length, when most of them were ascended, they were heard by the watchmen that were in the towers. For one of the Plataëans taking hold of the battlements, threw down a tile, which made a noise in the fall. And presently there was an alarm; and the army ran to the wall. For in the dark and stormy night, they knew not what the danger was; and the Plataëans that were left in the city, came forth withal, and assaulted the wall of the Peloponnesians on the opposite side to that where their men went over. So that though they were all in a tumult in their several

places, yet not any of them that watched durst stir to the aid of the rest, nor were able to conjecture what had happened. But those three hundred that were appointed to assist the watch upon all occasions of need, went without the wall and made towards the place of the clamour. They also held up the fires by which they used to make known the approach of enemies, towards Thebes. But then the Platæans likewise held out many other fires from the wall of the city, which for that purpose they had before prepared, to render the fires of the enemy insignificant; and that the Thebans apprehending the matter otherwise than it was, might forbear to send help till their men were over and had recovered some place of safety. 23. In the meantime those Platæans, which having scaled the wall first and slain the watch were now masters of both the towers, not only guarded the passages by standing themselves in the entries, but also applying ladders from the wall to the towers, and conveying many men to the top, kept the enemies off with shot both from above and below. In the mean space, the greatest number of them having reared to the wall many ladders at once, and beaten down the battlements, passed quite over between the towers. And ever as any of them got to the other side, they stood still upon the brink of the ditch without, and with arrows and darts kept off those that came by the outside of the wall to hinder their passage. And when the rest were over, then last of all, and with much ado, came they also down to the ditch which were in the two towers. And by this time, the three hundred that were to assist the watch, came and set upon them, and had lights with them; by which means the Platæans that were on the further brink of the ditch, discerned them the better from out of the dark, and aimed their arrows and darts at their most disarmed parts: for standing in the dark, the lights of the enemy made the Platæans the less discernible; insomuch as these last passed the ditch, though with difficulty and force. For the water in it was frozen over, though not so hard as to bear, but watery, and such as when the wind is at east rather than at north. And

the snow which fell that night, together with so great a wind as that was, had very much increased the water; which they waded through with scarce their heads above. But yet the greatness of the storm was the principal means of their escape.

Year iv. A. C. 427. Ol. 88. 1.

24. From the ditch the Platæans in troop took the way towards Thebes, leaving on the left hand the temple of Juno built by Androcrates, both for that they supposed they would least suspect the way that led to their enemies, and also because they saw the Peloponnesians with their lights pursue that way, which by Mount Cithæron and the Oak-heads led to Athens, The Platæans, when they had gone six or seven furlongs, forsook the Theban way, and turned into that which led towards the mountain to Erythræ and Hysiaë; and having gotten the hills, escaped through to Athens, being two hundred and twelve persons of a greater number. For some of them returned into the city before the rest went over; and one of their archers was taken upon the ditch without. And so the Peloponnesians gave over the pursuit, and returned to their places. But the Platæans that were within the city, knowing nothing of the event, and those that turned back having told them that not a man escaped, as soon as it was day sent a herald to entreat a truce for the taking up of their dead bodies; but when they knew the truth, they gave it over. And thus these men of Plataea passed through the fortification of their enemies, and were saved.

Salæthus a Lacedæmonian, entereth secretly into Mytilene, and confirmeth them with hope of speedy aid. year iv. A. C. 427. Ol. 88. 1.

25. About the end of the same winter Salæthus, a Lacedæmonian, was sent in a galley to Mytilene; and coming first to Pyrrha, and thence going to Mytilene by land, entered the city by the dry channel of a certain torrent which had a passage through the wall of the Athenians, undiscovered. And

he told the magistrates that Attica should again be invaded, and that the forty galleys which were to aid them were coming; and that himself was sent afore, both to let them know it, and withal to give order in the rest of their affairs. Hereupon the Mytilenæans grew confident, and hearkened less to composition with the Athenians. And the winter ended, and the fourth year of this war written by Thucydides.

Year v. A. C. 427. Ol. 88. 1. 2. Attica the fourth time invaded. Pausanias king of Lacedæmon.

26. In the beginning of the summer, after they had sent Alcidas away with the forty-two galleys, whereof he was admiral, unto Mytilene, both they and their confederates invaded Attica; to the end that the Athenians, troubled on both sides, might the less send supply against the fleet now gone to Mytilene. In this expedition Cleomenes was general instead of Pausanias, the son of Pleistoanax, who being king was yet in minority, and Cleomenes was his uncle by the father. And they now cut down both what they had before wasted and began to grow again, and also whatsoever else they had before pretermitted: and this was the sharpest invasion of all but the second. For whilst they stayed to hear news from their fleet at Lesbos, which by this time they supposed to have been arrived, they went abroad and destroyed most part of the country. But when nothing succeeded according to their hopes, and seeing their corn failed, they retired again, and were dissolved according to their cities.

Year v. A. C. 427. Ol. 88. 1. 2. Salæthus arms the commons for a sally. They mutiny, and give up the town. Some of the Mytilenæans fearing the worst take sanctuary: whom Paches persuadeth to rise: year v. A. C. 427. Ol. 88. 1. 2. and sendeth them to be in custody at Tenedos.

27. The Mytilenæans in the meantime, seeing the fleet came not from Peloponnesus, but delayed the time, and their victuals failed, were constrained to make their composition with the Athenians upon this

occasion. Salæthus, when he also expected these galleys no longer, armed the commons of the city, who were before unarmed, with intention to have made a sally upon the Athenians. But they, as soon as they had gotten arms, no longer obeyed the magistrates; but holding assemblies by themselves, required the rich men either to bring their corn to light and divide it amongst them all, or else, they said, they would make their composition by delivering up the city to the Athenians. 28. Those that managed the state perceiving this and unable to hinder it, knowing also their own danger in case they were excluded out of the composition, they all jointly agreed to yield the city to Paches and his army with these conditions: “to be proceeded withal at the pleasure of the people of Athens, and to receive the army into the city; and that the Mytilenæans should send ambassadors to Athens about their own business: and that Paches, till their return, should neither put in bonds, nor make slave of, nor slay any Mytilenæan”. This was the effect of that composition. But such of the Mytilenæans as had principally practised with the Lacedæmonians, being afraid of themselves, when the army was entered the city durst not trust to the conditions agreed on, but took sanctuary at the altars. But Paches having raised them upon promise to do them no injury, sent them to Tenedos, to be in custody there till the people of Athens should have resolved what to do. After this he sent some galleys to Antissa, and took in that town; and ordered the affairs of his army as he thought convenient.

The voyage of Alcidas with forty galleys into Ionia. Alcidas with his fleet, at Embatus is assured of the loss of Mytilene. The advice of Teutiaplus in the council of war. year v. A. C. 427. Ol. 88. 1. 2. The advice of certain outlaws of Ionia and Lesbos. The cowardly resolution of Alcidas. He killeth his prisoners. The Samians sharply reprehend him. year v. A. C. 427. Ol. 88. 1. 2. Alcidas maketh haste from Ephesus homeward. year v. A.

C. 427. Ol. 88. 1. 2. Paches pursueth the Peloponnesians, and is glad he overtaketh them not.

29. In the meantime those forty galleys of Peloponnesus, which should have made all possible haste, trifled away the time about Peloponnesus; and making small speed in the rest of their navigation, arrived at Delos unknown to the Athenians at Athens. From thence sailing to Icarus and Myconus, they got first intelligence of the loss of Mytilene. But to know the truth more certainly, they went thence to Embatus in Erythræa. It was about the seventh day after the taking of Mytilene, that they arrived at Embatus; where understanding the certainty, they went to council about what they were to do upon the present occasion; and Teutiaplus, an Eleian, delivered his opinion to this effect: 30. “Alcidas, and the rest that have command of the Peloponnesians in this army, it were not amiss, in my opinion, to go to Mytilene as we are, before advice be given of our arrival. For in all probability we shall find the city, in respect they have but lately won it, very weakly guarded, and to the sea (where they expect no enemy, and we are chiefly strong) not guarded at all. It is also likely that their land soldiers are dispersed, some in one house and some in another, carelessly as victors. Therefore if we fall upon them suddenly and by night, I think, with the help of those within, if any be left there that will take our part, we may be able to possess ourselves of the city. And we shall never fear the danger, if we but think this: that all stratagems of war whatsoever are no more but such occasions as this, which if a commander avoid in himself, and take the advantage of them in the enemy, he shall for the most part have good success.” 31. Thus said he; but prevailed not with Alcidas. And some others, fugitives of Ionia and those Lesbians that were with him in the fleet, gave him counsel, that seeing he feared the danger of this, he should seize some city of Ionia, or Cume in Æolia; that having some town for the seat of the war, they might from thence force Ionia to revolt; whereof there was

hope, because the Ionians would not be unwilling to see him there: and if they could withdraw from the Athenians this their great revenue, and withal put them to maintain a fleet against them, it would be a great exhausting of their treasure. They said besides, that they thought they should be able to get Pissuthnes to join with them in the war. But Alcidas rejected this advice likewise, inclining rather to this opinion, that since they were come too late to Mytilene, they were best to return speedily into Peloponnesus. 32. Whereupon putting off from Embatus, he sailed by the shore to Myonnesus of the Teians, and there slew most of the prisoners he had taken by the way. After this he put in at Ephesus: and thither came ambassadors to him from the Samians of Anæa, and told him that it was but an ill manner of setting the Grecians at liberty, to kill such as had not lift up their hands against him, nor were indeed enemies to the Peloponnesians, but confederates to the Athenians by constraint; and that unless he gave over that course, he would make few of the enemies his friends, but many now friends to become his enemies. Wherefore upon these words of the ambassadors he set the Chians and some others, all that he had left alive, at liberty. For when men saw their fleet, they never fled from it, but came unto them as to Athenians; little imagining that the Athenians being masters of the sea, the Peloponnesians durst have put over to Ionia. 33. From Ephesus Alcidas went away in haste, indeed fled; for he had been descried by the Salaminia and the Paralus, (which by chance were then in their course for Athens), whilst he lay at anchor about Claros; and fearing to be chased, kept the wide sea; meaning by his good will to touch no land till he came into Peloponnesus. But the news of them came to Paches from divers places, especially from Erythræa. For the cities of Ionia being unwall'd, were afraid extremely lest the Peloponnesians sailing by, without intention to stay, should have pillaged them as they passed. But the Salaminia and the Paralus having seen him at Claros, brought the news themselves. And Paches thereupon made great

haste after, and followed him as far as Latmos the island. But when he saw he could not reach him, he came back again; and thought he had a good turn, seeing he could not overtake those galleys upon the wide sea, that the same were not compelled, by being taken in some place near land, to fortify themselves, and so to give him occasion with guards and galleys to attend them.

Paches restoreth Notium to the Colophonians, driven out by sedition. year v. A. C. 427. Ol. 88. 1. 2. Paches parleyeth with Hippias: his equivocation with Hippias, whom he put to death contrary to promise.

34. As he came by in his return, he put in at Notium, a city of the Colophonians, into which the Colophonians came and inhabited, after the town above, through their own sedition, was taken by Itamanes and the barbarians. (This town was taken at the time when Attica was the second time invaded by the Peloponnesians). They then that came down and dwelt in Notium, falling again into sedition, the one part having procured some forces, Arcadians and barbarians, of Pissuthnes, kept them in a part of the town which they had severed from the rest with a wall; and there, with such of the Colophonians of the high town as being of the Medan faction entered with them, they governed the city at their pleasure: and the other part, which went out from these and were the fugitives, brought in Paches. He, when he had called out Hippias, captain of the Arcadians that were within the said wall, with promise, if they should not agree, to set him safe and sound within the wall again; and Hippias was thereupon come to him: committed him to custody, but without bonds; and withal assaulting the wall on a sudden, when they expected not, took it, and slew as many of the Arcadians and barbarians as were within: and when he had done, brought Hippias in again, according as he had promised; but after he had him there, laid hold on him and caused him to be shot to death: and restored Notium to the Colophonians, excluding only such as had medized. Afterwards the

Athenians sent governors to Notium of their own; and having gathered together the Colophonians out of all cities whatsoever, seated them there under the law of the Athenians.

Paches taketh Pyrrha, and Eressus: he apprehendeth Salæthus in Mytilene. year v. A. C. 427. Ol. 88. 1. 2. The Athenians slay Salæthus, though he offer to withdraw the Peloponnesians from the siege of Plataea. The cruel decree of the Athenians in their passion against the Mytilenæans. The Athenians repent of their decree, and consult anew. year v. A. C. 427. Ol. 88. 1. 2. Cleon most popular and most violent.

35. Paches, when he came back to Mytilene, took in Pyrrha and Eressus: and having found Salæthus the Lacedæmonian hidden in Mytilene, apprehended him, and sent him, together with those men he had put in custody at Tenedos, and whomsoever else he thought author of the revolt, to Athens. He likewise sent away the greatest part of his army; and with the rest stayed and settled the state of Mytilene and the rest of Lesbos, as he thought convenient. 36. These men, and Salæthus with them, being arrived at Athens, the Athenians slew Salæthus presently; though he made them many offers, and amongst other, to get the army of the Peloponnesians to rise from before Plataea; for it was yet besieged. But upon the rest they went to council; and in their passion decreed to put them to death, not only those men there present, but also all the men of Mytilene that were of age; and to make slaves of the women and children: laying to their charge the revolt itself, in that they revolted not being in subjection as others were: and withal the Peloponnesian fleet, which durst enter into Ionia to their aid, had not a little aggravated that commotion. For by that it seemed that the revolt was not made without much premeditation. They therefore sent a galley to inform Paches of their decree, with command to put the Mytilenæans presently to death. But the next day they felt a kind of repentance in themselves; and began to consider what a great and cruel decree it was, that

not the authors only, but the whole city should be destroyed. Which when the ambassadors of the Mytilenæans that were there present, and such Athenians as favoured them, understood, they wrought with those that bare office, to bring the matter again into debate; wherein they easily prevailed, forasmuch as to them also it was well known, that the most of the city were desirous to have means to consult of the same anew. The assembly being presently met, amongst the opinions of divers others Cleon also, the son of Cleænetus, who in the former assembly had won to have them killed, being of all the citizens most violent and with the people at that time far the most powerful, stood forth and said in this manner:

the oration of cleon. year v. A. C. 427. Ol. 88. 1. 2. Oration of Cleon.

37. "I have often on other occasions thought a democracy incapable of dominion over others; but most of all now for this your repentance concerning the Mytilenæans. For through your own mutual security and openness, you imagine the same also in your confederates; and consider not, that when at their persuasion you commit an error or relent upon compassion, you are softened thus to the danger of the commonwealth, not to the winning of the affections of your confederates: nor do you consider, that your government is a tyranny, and those that be subject to it are against their wills so, and are plotting continually against you; and obey you not for any good turn, which to your own detriment you shall do them, but only for that you exceed them in strength, and for no good will. But the worst mischief of all is this, that nothing we decree shall stand firm, and that we will not know, that a city with the worse laws, if immoveable, is better than one with good laws, when they be not binding; and that a plain wit accompanied with modesty, is more profitable to the state than dexterity with arrogance; and that the more ignorant sort of men do, for the most part, better regulate a commonwealth than they that are wiser. For these love to appear wiser than the laws, and in all public debatings to carry the victory,

as the worthiest things wherein to show their wisdom; from whence most commonly proceedeth the ruin of the states they live in. Whereas the other sort, mistrusting their own wits, are content to be esteemed not so wise as the laws, and not able to carp at what is well spoken by another: and so making themselves equal judges rather than contenders for mastery, govern a state for the most part well. We therefore should do the like; and not be carried away with combats of eloquence and wit, to give such counsel to your multitude as in our own judgments we think not good.

Year v. A. C. 427. Ol. 88. 1. 2. Oration of Cleon. The nature of the multitude in council, lively set forth. year v. A. C. 427. Ol. 88.

1. 2. Oration of of Cleon. Aggravation of the revolt of the Mytilenæans. year v. A. C. 427. Ol. 88. 1. 2. Oration of Cleon. year v.

A. C. 427. Ol. 88. 1. 2. Oration of Cleon.

38. “For my own part, I am of the opinion I was before; and I wonder at these men that have brought this matter of the Mytilenæans in question again, and thereby caused delay, which is the advantage only of them that do the injury. For the sufferer by this means comes upon the doer with his anger dulled; whereas revenge, the opposite of injury, is then greatest when it follows presently. I do wonder also, what he is that shall stand up now to contradict me, and shall think to prove that the injuries done us by the Mytilenæans are good for us, or that our calamities are any damage to our confederates. For certainly he must either trust in his eloquence, to make you believe that that which was decreed, was not decreed; or moved with lucre, must with some elaborate speech endeavour to seduce you. Now of such matches [of eloquence] as these, the city giveth the prizes to others; but the danger that hence proceedeth, she herself sustaineth. And of all this you yourselves are the cause, by the evil institution of these matches, in that you use to be spectators of words, and hearers of actions; beholding future actions in the words of them that speak well, as possible to come to pass; and actions already past in the orations of such as make the most of them,

and that with such assurance, as if what you saw with your eyes were not more certain than what you hear related. You are excellent men for one to deceive with a speech of a new strain, but backward to follow any tried advice; slaves to strange things, contemners of things usual. You would every one chiefly give the best advice, but if you cannot, then you will contradict those that do. You would not be thought to come after with your opinion; but rather if any thing be acutely spoken, to applaud it first, and to appear ready apprehenders of what is spoken, even before it be out; but slow to preconceive the sequel of the same. You would hear, as one may say, somewhat else than what our life is conversant in; and yet you sufficiently understand not that that is before your eyes. And to speak plainly, overcome with the delight of the ear, you are rather like unto spectators sitting to hear the contentions of sophisters, than to men that deliberate of the state of a commonwealth. 39. To put you out of this humour, I say unto you, that the Mytilenæans have done us more injury than ever did any one city. For those that have revolted through the over-hard pressure of our government, or that have been compelled to it by the enemy, I pardon them. But they that were islanders and had their city walled, so as they needed not fear our enemies but only by sea; in which case also they were armed for them with sufficient provision of galleys; and they that were permitted to have their own laws and whom we principally honoured, and yet have done thus; what have they done but conspired against us, and rather warred upon us than revolted from us, (for a revolt is only of such as suffer violence), and joined with our bitterest enemies to destroy us? This is far worse than if they had warred against us for increasing of their own power. But these men would neither take example by their neighbour's calamity, who are, all that revolted, already subdued by us; nor could their own present felicity make them afraid of changing it into misery: but being bold against future events, and aiming at matters above their strength,

though below their desires, have taken arms against us, and preferred force before justice. For no sooner they thought they might get the victory, but immediately, though without injury done them, they rose against us. But with cities that come to great and unexpected prosperity, it is usual to turn insolent: whereas most commonly that prosperity which is attained according to the course of reason, is more firm than that which cometh unhopd for; and such cities, as one may say, do more easily keep off an adverse, than maintain a happy fortune. Indeed we should not formerly have done any honour more to the Mytilenæans than to the rest of our confederates; for then they had never come to this degree of insolence. For it is natural to men to condemn those that observe them, and to have in admiration such as will not give them way. Now therefore let them be punished according to their wicked dealing; and let not the fault be laid upon a few, and the people be absolved. For they have all alike taken arms against us: and the commons, if they had been constrained to it, might have fled hither, and have recovered their city afterwards again. But they, esteeming it the safer adventure to join with the few, are alike with them culpable of the revolt. Have also in consideration your confederates: and if you inflict the same punishment on them that revolt upon compulsion of the enemy, that you do on them that revolt of their own accord, who, think you, will not revolt, though on light pretence; seeing that speeding they win their liberty, and failing their case is not incurable? Besides, that against every city we must be at a new hazard, both of our persons and fortunes. Wherein with the best success, we recover but an exhausted city, and lose that wherein our strength lieth, the revenue of it; but miscarrying, we add these enemies to our former, and must spend that time in warring against our own confederates, which we needed to employ against the enemies we have already.

40. "We must not therefore give our confederates hope of pardon, either impetrable by words or purchaseable by money, as if their errors were but such as are commonly incident to humanity. For these did us not an injury unwillingly, but wittingly conspired against us; whereas it ought to be involuntary whatsoever is pardonable. Therefore both then at first, and now again I maintain, that you ought not to alter your former decree, nor to offend in any of these three most disadvantageous things to empire, pity, delight in plausible speeches, and lenity. As for pity, it is just to show it on them that are like us, and will have pity again; but not upon such as not only would not have had pity upon us, but must also of necessity have been our enemies for ever hereafter. And for the rhetoricians that delight you with their orations, let them play their prizes in matters of less weight, and not in such wherein the city for a little pleasure must suffer a great damage, but they for their well speaking must well have. Lastly for lenity, it is to be used towards those that will be our friends hereafter, rather than towards such, as being suffered to live, will still be as they are, not a jot the less our enemies. In sum I say only this, that if you follow my advice, you shall do that which is both just in respect of the Mytilenæans, and profitable for yourselves: whereas if you decree otherwise, you do not gratify them, but condemn yourselves. For if these have justly revolted, you must unjustly have had dominion over them. Nay though your dominion be against reason, yet if you resolve to hold it, you must also, as a matter conducing thereunto, against reason punish them; or else you must give your dominion over, that you may be good without danger. But if you consider what was likely they would have done to you, if they had prevailed, you cannot but think them worthy the same punishment; nor be less sensible, you that have escaped, than they that have conspired; especially they having done the injury first. For such as do an injury without precedent cause, persecute most, and even to the death, him they have done it to; as jealous of the danger his remaining

enemy may create him: for he that is wronged without cause, and escapeth, will commonly be more cruel than if it were against any enemy on equal quarrel. Let us not therefore betray ourselves, but in contemplation of what you were near suffering, and how you once prized above all things else to have them in your power, requite them now accordingly. Be not softened at the sight of their present estate, nor forget the danger that hung over our own heads so lately. Give not only unto these their deserved punishment, but also unto the rest of our confederates a clear example, that death is their sentence whensoever they shall rebel. Which when they know, you shall the less often have occasion to neglect your enemies, and fight against your own confederates.”

41. To this purpose spake Cleon. After him Diodotus the son of Eucrates, who also in the former assembly opposed most the putting of the Mytilenæans to death, stood forth and spake as followeth.

the oration of diodotus. year v. A. C. 427. Ol. 88. 1. 2. Oration of Diodotus. year v. A. C. 427. Ol. 88. 1 2. Oration of Diodotus. year v. A. C. 427. Ol. 88. 1. 2. Oration of Diodotus.

42. “I will neither blame those who have propounded the business of the Mytilenæans to be again debated, nor commend those that find fault with often consulting in affairs of great importance. But I am of opinion that nothing is so contrary to good counsel as these two, haste and anger: whereof the one is ever accompanied with madness, and the other with want of judgment. And whosoever maintaineth that words are not instructors to deeds, either he is not wise, or doth it upon some private interest of his own. Not wise, if he think that future, and not apparent things, may be demonstrated otherwise than by words: interested, if desiring to carry an ill matter, and knowing that a bad cause will not bear a good speech, he go about to deter his opposers and hearers by a good calumnation. But they of all others are most intolerable, that when men give public advice, will

accuse them also of bribery. For if they charged a man with no more but ignorance, when he had spoken in vain, he might yet depart with the opinion of a fool. But when they impute corruption also, if his counsel take place he is still suspected; and if it do not take place, he shall be held not only a fool, but also void of honesty. The commonwealth gets no good by such courses: for through fear hereof it will want counsellors. And the state would do their business for the most part well, if this kind of citizens were they that had least ability in speaking; for they should then persuade the city to the fewer errors. For a good statesman should not go about to terrify those that contradict him, but rather to make good his counsel upon liberty of speech. And a wise state ought not either to add unto, or on the other side, to derogate from the honour of him that giveth good advice; nor yet punish, nay nor disgrace the man whose counsel they receive not. And then, neither would he that lighteth on good advice, deliver anything against his own conscience, out of ambition of further honour and to please the auditory; nor he that doth not, covet thereupon, by gratifying the people some way or other, that he also may endear them. 43. But we do here the contrary: and besides, if any man be suspected of corruption, though he give the best counsel that can be given, yet through envy, for this uncertain opinion of his gain, we lose a certain benefit to the commonwealth. And our custom is to hold good counsel, given suddenly, no less suspect then bad: by which means, as he that gives the most dangerous counsel, must get the same received by fraud; so also he that gives the most sound advice, is forced by lying to get himself believed. So that the commonwealth is it alone, which by reason of these suspicious imaginations, no man can possibly benefit by the plain and open way without artifice. For if any man shall do a manifest good unto the commonwealth, he shall presently be suspected of some secret gain unto himself in particular. We therefore, that in the most important affairs and amidst these jealousies do give our advice,

have need to foresee further than you, that look not far; and the rather, because we stand accountable for our counsel, and you are to render no account of your hearing it. For if the persuader and the persuaded had equal harm, you would be the more moderate judges. But now, according to the passion that takes you, when at any time your affairs miscarry, you punish the sentence of that one only that gave the counsel, not the many sentences of your own that were in fault as well as his.

Year v. A. C. 427. Ol. 88. 1. 2. Oration of Diodotus. year v. A. C. 427. Ol. 88. 1. 2. Oration of Diodotus

44. "For my own part, I stood not forth with any purpose of contradiction in the business of the Mytilenæans, nor to accuse any man. For we contend not now, if we be wise, about the injury done by them, but about the wisest counsel for ourselves. For how great soever be their fault, yet I would never advise to have them put to death, unless it be for our profit; [nor yet would I pardon them,] though they were pardonable, unless it be good for the commonwealth. And in my opinion, our deliberation now is of the future, rather than of the present. And whereas Cleon contendeth, that it will be profitable for the future, to put them to death, in that it will keep the rest from rebelling: I contending likewise for the future, affirm the contrary. And I desire you not to reject the profit of my advice for the fair pretexts of his; which agreeing more with your present anger against the Mytilenæans, may quickly perhaps win your consent. We plead not judicially with the Mytilenæans so as to need arguments of equity, but we consult of them, which way we may serve ourselves of them to our most advantage hereafter. 45. I say therefore, that death hath been in states ordained for a punishment of many offences, and those not so great, but far less than this. Yet encouraged by hope, men hazard themselves: nor did any man ever yet enter into a practice, which he knew he could not go through with. And a city when it revolteth, supposeth itself to be better furnished, either of

themselves or by their confederates, than it is, or else it would never take the enterprise in hand. They have it by nature, both men and cities, to commit offences; nor is there any law that can prevent it. For men have gone over all degrees of punishment, augmenting them still, in hope to be less annoyed by malefactors. And it is likely that gentler punishments were inflicted of old, even upon the most heinous crimes; but that in tract of time, men continuing to transgress, they were extended afterwards to the taking away of life; and yet they still transgress. And therefore either some greater terror than death must be devised, or death will not be enough for coercion. For poverty will always add boldness to necessity; and wealth, covetousness to pride and contempt. And the other [middle] fortunes, they also through human passion, according as they are severally subject to some insuperable one or other, impel men to danger. But hope and desire work this effect in all estates. And this as the leader, that as the companion; this contriving the enterprize, that suggesting the success, are the cause of most crimes that are committed: and being least discerned, are more mischievous than evils seen. Besides these two, fortune also puts men forward as much as anything else. For presenting herself sometimes unlooked for, she provoketh some to adventure, though not provided as they ought for the purpose; and specially cities, because they venture for the greatest matters, as liberty and dominion over others; and amongst a generality, every one, though without reason, somewhat the more magnifies himself in particular. In a word, it is a thing impossible, and of great simplicity to believe, when human nature is earnestly bent to do a thing, that by force of law or any other danger it can be diverted.

Year v. A. C. 427. Ol. 88. 1. 2. Oration of Diodotus. year v. A. C. 427. Ol. 88. 1. 2. Oration of Diodotus.

46. "We must not therefore, relying on the security of capital punishment, decree the worst against them, nor make them desperate, as if

there were no place to repent, and as soon as they can, to cancel their offence. For observe: if a city revolted should know it could not hold out, it would now compound, whilst it were able both to pay us our charges for the present and our tribute for the time to come. But the way that Cleon prescribeth, what city, think you, would not provide itself better than this did; and endure the siege to the very last, if to compound late and soon be all one? And how can it be but detriment to us, to be at charge of long sieges through their obstinacy, and when we have taken a city, to find it exhausted, and to lose the revenue of it for the future? And this revenue is the only strength we have against our enemies. We are not then to be exact judges in the punishment of offenders, but to look rather how by their moderate punishment we may have our confederate cities, such as they may be able to pay us tribute; and not think to keep them in awe by the rigour of laws, but by the providence of our own actions. But we to the contrary, when we recover a city, which having been free and held under our obedience by force hath revolted justly, think now that we ought to inflict some cruel punishment upon them. Whereas we ought rather, not mightily to punish a free city revolted, but mightily to look to it before it revolt, and to prevent the intention of it; but when we have overcome them, to lay the fault upon as few as we can. 47. Consider also, if you follow the advice of Cleon, how much you shall offend likewise in this other point. For in all your cities the commonalty are now your friends, and either revolt not with the few, or if they be compelled to it by force, they presently turn enemies to them that caused the revolt: whereby when you go to war, you have the commons of the adverse city on your side. But if you shall destroy the commonalty of the Mytilenæans, which did neither partake of the revolt, and as soon as they were armed presently delivered the city into your hands: you shall first do unjustly, to kill such as have done you service; and you shall effect a work besides, which the great men do everywhere most desire. For when

they have made a city to revolt, they shall have the people presently on their side; you having foreshewn them by the example, that both the guilty and not guilty must undergo the same punishment. Whereas indeed though they were guilty, yet we ought to dissemble it; to the end that the only party now our friend, may not become our enemy. And for the assuring of our dominion, I think it far more profitable voluntarily to put up an injury, than justly to destroy such as we should not. And that same both justice and profit of revenge, alleged by Cleon, can never possibly be found together in the same thing.

48. “You therefore, upon knowledge that this is the best course, not upon compassion or lenity, (for neither would I have you won by that), but upon consideration of what hath been advised, be ruled by me, and proceed to judgment at your own leisure against those whom Paches hath sent hither as guilty, and suffer the rest to enjoy their city. For that will be both good for the future, and also of present terror to the enemy. For he that consulteth wisely, is a sorer enemy than he that assaulteth with the strength of action unadvisedly.”

Year v. A. C. 427. Ol. 88. 1. 2. The sentence of Diodotus taketh place. A galley sent out after the former, with a sentence of mercy. The speed of this latter galley to overtake the former that carried the decree of death. The commons of Mytilene very near destruction

49. Thus spake Diodotus. After these two opinions were delivered, the one most opposite to the other, the Athenians were at contention which they should decree; and at the holding up of hands they were both sides almost equal: but yet the sentence of Diodotus prevailed. Whereupon they presently in haste sent away another galley, lest not arriving before the former they should find the city already destroyed. The first galley set forth before the second a day and a night. But the Mytilenæan ambassadors having furnished this latter with wine and barley cakes, and promised them

great rewards if they overtook the other galley, they rowed diligently, at one and the same time both plying their oars, and taking their refecton of the said barley cakes steeped in wine and oil; and by turns part of them slept, and the other part rowed. It happened also that there blew no wind against them; and the former galley making no great haste, as going on so sad an errand, whereas the former proceeded in the manner before mentioned, arrived indeed first, but only so much as Paches had read the sentence, and prepared to execute what they had decreed. But presently after came in the other galley, and saved the city from being destroyed. So near were the Mytilenæans to the danger.

About a thousand principal authors of the revolt executed. year v. A. C. 427. Ol. 88. 1. 2.

50. But those whom Paches had sent home as most culpable of the revolt, the Athenians, as Cleon had advised, put to death; being in number somewhat above a thousand. They also razed the walls of Mytilene, and took from them all their galleys. After which they imposed on the Lesbians no more tribute, but having divided their land (all but that of the Methymnæans) into three thousand parts, three hundred of those parts [of the choicest land] they consecrated to the gods. And for the rest, they sent men by lot out of their own city to possess it; of whom the Lesbians at the rent of two minæ of silver yearly upon a lot, had the land again to be husbanded by themselves. The Athenians took in all such towns also, as the Mytilenæans were masters of in the continent; which were afterwards made subjects to the people of Athens. Thus ended the business touching Lesbos.

Nicias taketh Minoa, an island adjacent to Megara. year v. A. C. 427. Ol. 88. 1. 2.

51. The same summer, after the recovery of Lesbos, the Athenians, under the conduct of Nicias the son of Niceratus, made war on Minoa, an island adjacent to Megara. For the Megareans had built a tower in it, and served

themselves of the island for a place of garrison. But Nicias desired that the Athenians might keep their watch upon Megara in that island, as being nearer, and no more at Budorum and Salamis; to the end that the Peloponnesians might not go out thence with their galleys undescried, nor send out pirates, as they had formerly done, and to prohibit the importation of all things to the Megareans by sea. Wherefore when he had first taken two towers that stood out from Nisæa, with engines applied from the sea, and so made a free entrance for his galleys between the island and the firm land, he took it in with a wall also from the continent, in that part where it might receive aid by a bridge over the marshes; for it was not far distant from the main land. And, that being in few days finished, he built a fort in the island itself, and leaving there a garrison, carried the rest of his army back.

The Platæans yield the city. The Lacedæmonians refuse to take Plataea by force, but will have it by voluntary surrender. year v. A. C. 427. Ol. 88. 1. 2. Unjust proceedings of the Lacedæmonians.

52. It happened also about the same time of this summer, that the Platæans, having spent their victual and being unable longer to hold out, yielded their city in this manner to the Peloponnesians. The Peloponnesians assaulted the walls, but they within were unable to fight. Whereupon the Lacedæmonian commander, perceiving their weakness, would not take the place by force; (for he had command to that purpose from Lacedæmon, to the end that if they should ever make peace with the Athenians, with conditions of mutual restitution of such cities as on either side had been taken by war, Plataea, as having come in of its own accord, might not be thereby recoverable); but sent a herald to them, who demanded whether or no they would give up their city voluntarily into the hands of the Lacedæmonians, and take them for their judges, with power to punish the offenders, but none without form of justice. So said the herald: and they (for

they were now at the weakest) delivered up the city accordingly. So the Peloponnesians gave the Plataeans food for certain days, till the judges, which were five, should arrive from Lacedæmon. And when they were come, no accusation was exhibited; but calling them man by man, they asked of every one only this question: whether they had done to the Lacedæmonians and their confederates in this war any good service. But the Plataeans having sued to make their answer more at large, and having appointed Astymachus the son of Asopolaus, and Lacon the son of Aeimnestus (who had been heretofore the host of the Lacedæmonians) for their speakers, said as followeth:

the oration of the plataeans. year v. A. C. 427. Ol. 88. 1. 2. Oration of the Plataeans. year v. A. C. 427. Ol. 88. 1. 2. Oration of the Plataeans. year v. A. C. 427. Ol. 88. 1. 2. Oration of the Plataeans. year v. A. C. 427. Ol. 88. 1. 2. Oration of the Plataeans.

53. “Men of Lacedæmon, relying upon you we yielded up our city, not expecting to undergo this, but some more legal manner of proceeding; and we agreed not to stand to the judgment of others, (as now we do), but of yourselves only; conceiving we should so obtain the better justice. But now we fear we have been deceived in both. For we have reason to suspect, both that the trial is capital, and you the judges partial: gathering so much both from that, that there hath not been presented any accusation to which we might answer; and also from this, that the interrogatory is short, and such, as if we answer to it with truth, we shall speak against ourselves, and be easily convinced, if we lie. But since we are on all hands in a strait, we are forced (and it seems our safest way) to try what we can obtain by pleading. For, for men in our case, the speech not spoken may give occasion to some to think, that spoken it had preserved us. But besides other inconveniences, the means also of persuasion go ill on our side. For if we had not known one another, we might have helped ourselves by producing testimony in

things you knew not. Whereas now, all that we shall say, will be before men that know already what it is. And we fear, not that you mean, because you know us inferior in virtue to yourselves, to make that a crime; but lest you bring us to a judgment already judged, to gratify somebody else. 54. Nevertheless, we will produce our reasons of equity against the quarrel of the Thebans, and withal make mention of our services done both to you and to the rest of Greece; and make trial, if by any means we can persuade you. As to that short interrogatory, whether we have any way done good in this present war to the Lacedæmonians and their confederates, or not: if you ask us as enemies, we say, that if we have done them no good, we have also done them no wrong: if you ask us as friends, then we say, that they rather have done us the injury, in that they made war upon us. But in the time of the peace, and in the war against the Medes, we behaved ourselves well: for the one we brake not first, and in the other, we were the only Bœotians that joined with you for the delivery of Greece. For though we dwell up in the land, yet we fought by sea at Artemisium; and in the battle fought in this our own territory, we were with you; and whatsoever dangers the Grecians in those times underwent, we were partakers of all, even beyond our strength. And unto you, Lacedæmonians, in particular, when Sparta was in greatest affright after the earthquake, upon the rebellion of the Helotes and seizing of Ithome, we sent the third part of our power to assist you; which you have no reason to forget. 55. Such then we showed ourselves in those ancient and most important affairs. It is true, we have been your enemies since; but for that, you are to blame yourselves. For when oppressed by the Thebans we sought league of you, you rejected us; and bade us go to the Athenians that were nearer hand, yourselves being far off. Nevertheless, you neither have in this war, nor were to have suffered at our hands any thing that misbecame us. And if we denied to revolt from the Athenians when you bade us, we did you no injury in it. For they both aided us against

the Thebans, when you shrunk from us; and it was now no more any honesty to betray them; especially having been well used by them, and we ourselves having sought their league, and being made denizens also of their city. Nay, we ought rather to have followed them in all their commands with alacrity. When you or the Athenians have the leading of the confederates, if evil be done, not they that follow are culpable, but you that lead to the evil.

Year v. A. C. 427. Ol. 88. 1. 2. Oration of the Plataeans. year v. A. C. 427. Ol. 88. 1. 2. Oration of the Plataeans. year v. A. C. 427. Ol. 88. 1. 2. Oration of the Plataeans. year v. A. C. 427. Ol. 88. 1. 2. Oration of the Plataeans.

56. "The Thebans have done us many other injuries; but this last, which is the cause of what we now suffer, you yourselves know what it was. For we avenged us but justly of those that in time of peace, and upon the day of our novilunial sacrifice, had surprised our city; and by the law of all nations it is lawful to repel an assailing enemy; and therefore there is no reason you should punish us now for them. For if you shall measure justice by your and their present benefit in the war, it will manifestly appear, that you are not judges of the truth, but respecters only of your profit. And yet if the Thebans seem profitable to you now, we and the rest of the Grecians were more profitable to you then, when you were in greater danger. For though the Thebans are now on your side, when you invade others; yet at that time when the barbarian came in to impose servitude on all, they were on his. It is but justice, that with our present offence (if we have committed any) you compare our forwardness then; which you will find both greater than our fault, and augmented also by the circumstance of such a season, when it was rare to find any Grecian that durst oppose his valour to Xerxes' power; and when they were most commended, not that with safety helped to further his invasion, but that adventured to do what was most honest, though with danger. But we being of that number, and honoured for it amongst the first, are afraid lest the same shall be now a cause of our destruction; as having

chosen rather to follow the Athenians justly, than you profitably. But you should ever have the same opinion in the same case; and think this only to be profitable, that doing what is useful for the present occasion, you reserve withal a constant acknowledgment of the virtue of your good confederates.

57. Consider also, that you are an example of honest dealing to the most of the Grecians. Now if you shall decree otherwise than is just, (for this judgment of yours is conspicuous, you that be praised, against us that be not blamed), take heed that they do not dislike that good men should undergo an unjust sentence, though at the hands of better men; or that the spoil of us that have done the Grecians service, should be dedicated in their temples. For it will be thought a horrible matter, that Plataea should be destroyed by Lacedaemonians; and that you, whereas your fathers in honour of our valour inscribed the name of our city on the tripod at Delphi, should now blot it out of all Greece, to gratify the Thebans. For we have proceeded to such a degree of calamity, that if the Medes had prevailed, we must have perished then; and now the Thebans have overcome us again in you, who were before our greatest friends; and have put us to two great hazards, one before, of famishing if we yielded not, and another now, of a capital sentence. And we Plataeans, who even beyond our strength have been zealous in the defence of the Grecians, are now abandoned and left unrelieved by them all.

58. But we beseech you for those gods' sakes, in whose names once we made mutual league, and for our valour's sake shown in the behalf of the Grecians, to be moved towards us; and, if at the persuasion of the Thebans you have determined aught against us, to change your minds, and reciprocally to require at the hands of the Thebans this courtesy, that whom you ought to spare, they would be contented not to kill, and so receive an honest benefit in recompense of a wicked one; and not to bestow pleasure upon others, and receive wickedness upon yourselves in exchange. For though to take away our lives be a matter quickly done, yet

to make the infamy of it cease will be work enough. For being none of your enemies, but well-willers, and such as have entered into the war upon constraint, you cannot put us to death with justice. Therefore if you will judge uncorruptly, you ought to secure our persons; and to remember that you received us by our own voluntary submission, and with hands upheld, (and it is the law among Grecians, not to put such to death), besides that we have from time to time been beneficial to you. For look upon the sepulchres of your fathers, whom, slain by the Medes and buried in this territory of ours, we have yearly honoured at the public charge both with vestments and other rites, and of such things as our land hath produced, we have offered unto them the first fruits of it all, as friends in an amicable land, and confederates, use to do to those that have formerly been their fellows in arms. But now by a wrong sentence, you shall do the contrary of this. For consider this. Pausanias, as he thought, interred these men in amicable ground, and amongst their friends. But you, if you slay us, and of Plataeis make Thebais, what do you but leave your fathers and kindred, deprived of the honours they now have, in an hostile territory and amongst the very men that slew them? And moreover, put into servitude that soil whereon the Grecians were put into liberty? And make desolate the temples wherein they prayed when they prevailed against the Medes? And destroy the patrial sacrifices which were instituted by the builders and founders of the same?

Year v. A. C. 427. Ol. 88. 1. 2. Oration of the Plataeans.

“These things are not for your glory, men of Lacedæmon; nor to violate the common institutions of Greece and wrong your progenitors, nor to destroy us that have done you service for the hatred of another, when you have received no injury from us yourselves: but to spare our lives, to relent, to have a moderate compassion, in contemplation not only of the greatness of the punishment, but also of who we are that must suffer, and of the

uncertainty where calamity may light, and that undeservedly. Which we, as becometh us and our need compelleth us to do, cry aloud unto the common gods of Greece to persuade you unto; producing the oath sworn by your fathers, to put you in mind; and also we become here sanctuary men at the sepulchres of your fathers, crying out upon the dead, not to suffer themselves to be in the power of the Thebans, nor to let their greatest friends be betrayed into the hands of their greatest enemies; remembering them of that day, upon which though we have done glorious acts in their company, yet we are in danger at this day of most miserable suffering. But to make an end of speaking, (which is, as necessary, so most bitter to men in our case, because the hazard of our lives cometh so soon after), for a conclusion we say, that it was not to the Thebans that we rendered our city, (for we would rather have died of famine, the most base perdition of all other), but we came out on trust in you. And it is but justice, that if we cannot persuade you, you should set us again in the estate we were in, and let us undergo the danger at our own election. Also we require you, men of Lacedæmon, not only not to deliver us Plataëans, who have been most zealous in the service of the Grecians, especially being sanctuary men, out of your own hands and your own trust into the hands of our most mortal enemies the Thebans, but also to be our saviours, and not to destroy us utterly, you that set at liberty all other Grecians.”

Thus spake the Plataëans. But the Thebans, fearing lest the Lacedæmonians might relent at their oration, stood forth and said, that since the Plataëans had had the liberty of a longer speech, (which they thought they should not), than for answer to the question was necessary, they also desired to speak; and being commanded to say on, spake to this effect:

the oration of the thebans. year v. A. C. 427. Ol. 88. 1. 2. Oration of the Thebans. year v. A. C. 427. Ol. 88. 1. 2. Oration of the Thebans. year v. A. C. 427. Ol. 88. 1. 2. Oration of the Thebans.

“If these men had answered briefly to the question, and not both turned against us with an accusation, and also out of the purpose, and wherein they were not charged, made much apology and commendation of themselves in things unquestioned, we had never asked leave to speak. But as it is, we are to the one point to answer, and to confute the other, that neither the fault of us, nor their own reputation may do them good; but your sentence may be guided by hearing of the truth of both. The quarrel between us and them arose at first from this; that when we had built Plataea last of all the cities of Bœotia, together with some other places which, having driven out the promiscuous nations, we had then in our dominion, they would not (as was ordained at first) allow us to be their leaders, but being the only men of all the Bœotians that transgressed the common ordinance of the country, when they should have been compelled to their duty they turned unto the Athenians, and together with them did us many evils; for which they likewise suffered as many from us. 62. But when the barbarian invaded Greece, then, say they, that they of all the Bœotians only also medized not. And this is the thing wherein they both glory most themselves, and most detract from us. Now we confess they medized not; because also the Athenians did not. Nevertheless, when the Athenians afterwards invaded the rest of the Grecians, in the same kind then of all the Bœotians they only Atticized. But take now into your consideration withal, what form of government we were in both the one and the other, when we did this. For then had we our city governed, neither by an oligarchy with laws common to all, nor by a democracy; but the state was managed by a few with authority absolute, than which there is nothing more contrary to laws and moderation, nor more approaching unto tyranny. And these few, hoping yet further, if the Medes prevailed, to increase their own power, kept the people under and furthered the coming in of the barbarian. And so did the whole city, but it was not then master of itself; nor doth it deserve to be upbraided

with what it did when they had no laws [but were at the will of others]. But when the Medes were gone and our city had laws, consider now, when the Athenians attempted to subdue all Greece, and this territory of ours with the rest, wherein through sedition they had gotten many places already, whether by giving them battle at Coroneia and defeating them, we delivered not Bœotia from servitude then, and do not also now with much zeal assist you in the asserting of the rest, and find not more horses and more provision of war than any of the confederates besides. And so much be spoken by way of apology to our medizing.

Year v. A. C. 427. Ol. 88. 1. 2. Oration of the Thebans. year v. A. C. 427. Ol. 88. 1. 2. Oration of the Thebans.

“And we will endeavour to prove now, that the Grecians have been rather wronged by you, and that you are more worthy of all manner of punishment. You became, you say, confederates and denizens of Athens, for to be righted against us. Against us then only the Athenians should have come with you, and not you with them have gone to the invasion of the rest; especially when if the Athenians would have led you whither you would not, you had the league of the Lacedæmonians made with you against the Medes, which you so often object, to have resorted unto; which was sufficient not only to have protected you from us, but, which is the main matter, to have secured you to take what course you had pleased. But voluntarily, and without constraint, you rather chose to follow the Athenians. And you say, it had been a dishonest thing to have betrayed your benefactors. But it is more dishonest, and more unjust by far, to betray the Grecians universally, to whom you have sworn, than to betray the Athenians alone; especially when these go about to deliver Greece from subjection, and the other to subdue it. Besides, the requital you make the Athenians is not proportionable, nor free from dishonesty. For you, as you say yourselves, brought in the Athenians to right you against injuries; and

you cooperate with them in injuring others. And howsoever, it is not so dishonest to leave a benefit unrequited, as to make such a requital, as though justly due cannot be justly done. 64. But you have made it apparent, that even then it was not for the Grecians' sake that you alone of all the Bœotians medized not, but because the Athenians did not; yet now you that would do as the Athenians did, and contrary to what the Grecians did, claim favour of these, for what you did for the others' sake. But there is no reason for that: but as you have chosen the Athenians, so let them help you in this trial. And produce not the oath of the former league, as if that should save you now. For you have relinquished it: and contrary to the same, have rather helped the Athenians to subdue the Æginetæ and others, than hindered them from it. And this you not only did voluntarily, and having laws the same you have now, and none forcing you to it, as there did us; but also rejected our last invitation, a little before the shutting up of your city, to quietness and neutrality. Who can therefore more deservedly be hated of the Grecians in general, than you, that pretend honesty to their ruin? And those acts wherein formerly, as you say, you have been beneficial to the Grecians, you have now made apparent to be none of yours, and made true proof of what your own nature inclines you to. For with Athenians you have walked in the way of injustice. And thus much we have laid open touching our involuntary medizing, and your voluntary atticizing.

Year v. A. C. 427. Ol. 88. 1. 2. Oration of the Thebans. year v. A. C. 427. Ol. 88. 1. 2. Oration of the Thebans.

“And for this last injury you charge us with, namely, the unlawful invading of your city in time of peace and of your new-moon sacrifice, we do not think, no not in this action, that we have offended so much as you yourselves. For though we had done unjustly, if we had assaulted your city or wasted your territory as enemies, of our own accord; yet when the prime men of your own city, both for wealth and nobility, willing to discharge you

of foreign league, and conform you to the common institutions of all Bœotia, did of their own accord call us in, wherein lieth the injury then? For they that lead transgress, rather than they that follow. But as we conceive, neither they nor we have transgressed at all. But being citizens as well as you, and having more to hazard, they opened their own gates and took us into the city as friends, not as enemies, with intention to keep the ill-affected from being worse, and to do right to the good: taking upon them to be moderators of your councils; and not to deprive the city of your persons, but to reduce you into one body with the rest of your kindred; and not to engage you in hostility with any, but to settle you in peace with all. 66. And for an argument that we did not this as enemies; we did harm to no man, but proclaimed, that if any man were willing to have the city governed after the common form of all Bœotia, he should come to us. And you came willingly at first, and were quiet. But afterwards, when you knew we were but few, though we might seem to have done somewhat more than was fit to do without the consent of your multitude, you did not by us as we did by you, first innovate nothing in fact, and then with words persuade us to go forth again; but contrary to the composition, assaulted us. And for those men you slew in the affray, we grieve not so much; for they suffered by a kind of law. But to kill those that held up their hands for mercy, whom taken alive you afterwards had promised to spare, was not this a horrible cruelty? You committed in this business three crimes, one in the neck of another; first the breach of the composition, then the death that followed of our men, and thirdly the falsifying of your promise to save them, if we did no hurt to any thing of yours in the fields. And yet you say that we are the transgressors; and that you for your parts deserve not to undergo a judgment. But it is otherwise. And if these men judge aright, you shall be punished now for all your crimes at once.

67. “We have herein, men of Lacedæmon, been thus large both for your sakes and ours: for yours, to let you see, that if you condemn them, it will be no injustice; for ours, that the equity of our revenge may the better appear. Be not moved with the recital of their virtues of old, if any they had; which though they ought to help the wronged, should double the punishment of such as commit wickedness, because their offence doth not become them. Nor let them fare ever the better for their lamentation or your compassion, when they cry out upon your fathers’ sepulchres and their own want of friends. For we on the other side affirm, that the youth of our city suffered harder measure from them: and their fathers, partly slain at Coroneia in bringing Bœotia to your confederation, and partly alive and now old and deprived of their children, make far juster supplication to you for revenge. And pity belongeth to such as suffer undeservedly; but on the contrary, when men are worthily punished, as these are, it is to be rejoiced at. And for their present want of friends, they may thank themselves. For of their own accord they rejected the better confederates. And the law hath been broken by them, without precedent wrong from us, in that they condemned our men spitefully rather than judicially; in which point we shall now come short of requiting them: for they shall suffer legally, and not, as they say they do, with hands upheld from battle, but as men that have put themselves upon trial by consent. Maintain therefore, ye Lacedæmonians, the law of the Grecians against these men that have transgressed it; and give unto us, that have suffered contrary to the law, the just recompense of our alacrity in your service. And let not the words of these give us a repulse from you; but set up an example to the Grecians, by presenting [unto these men] a trial, not of words, but of facts; which, if they be good, a short narration of them will serve the turn; if ill, compt orations do but veil them. But if such as have the authority, as you have now, would collect the matter to a head, and according as any man should make answer

thereunto, so proceed to sentence, men would be less in the search of fair speeches, wherewith to excuse the foulness of their actions.”

The Lacedæmonians proceed with their question. year v. A. C. 427. Ol. 88. 1. 2. The Plataëans are put to death: twenty–five Athenians slain with them. Plataëa pulled down. The Lacedæmonians in their sentence upon the Plataëans have more respect to their own profit, than to the merit of the cause. year v. A. C. 427. Ol. 88. 1. 2.

68. Thus spake the Thebans. And the Lacedæmonian judges, conceiving their interrogatory to stand well, namely, whether they had received any benefit by them or not, in this present war: for they had indeed intreated them both at other times, according to the ancient league of Pausanias after the Medan war, to stand neutral; and also a little before the siege the Plataëans had rejected their proposition, of being common friends to both sides according to the same league: taking themselves, in respect of these their just offers, to be now discharged of the league, and to have received evil at their hands, caused them one by one to be brought forth, and having asked them again the same question, whether they had any way benefited the Lacedæmonians and their confederates in this present war or not; as they answered Not, led them aside and slew them, not exempting any. Of the Plataëans themselves they slew no less than two hundred; of the Athenians who were besieged with them, twenty–five. The women they made slaves; and the Thebans assigned the city for a year, or thereabouts, for a habitation to such Megareans as in sedition had been driven from their own, and to all those Plataëans which, living, were of the Theban faction. But afterwards, pulling it all down to the very foundation, they built a hospital in the place, near the temple of Juno, of two hundred foot diameter, with chambers on every side in circle both above and below; using therein the roofs and doors of the Plataëans’ buildings. And of the rest of the stuff that was in the city–wall, as brass and iron, they made bedsteads, and

dedicated them to Juno; to whom also they built a stone chapel of a hundred foot over. The land they confiscated, and set it to farm afterwards for ten years to the Thebans. So far were the Lacedæmonians alienated from the Plataeans, especially, or rather altogether for the Thebans' sake, whom they thought useful to them in the war now on foot. So ended the business at Plataea, in the fourscore and thirteenth year after their league made with the Athenians.

Year v. A. C. 427. Ol. 88. 1. 2. The 40 galleys, with Alcidas, come weather-beaten home.

69. The forty galleys of Peloponnesus, which having been sent to aid the Lesbians fled, as hath been related, through the wide sea, chased by the Athenians and tossed by storms on the coast of Crete, came thence dispersed into Peloponnesus: and found thirteen galleys, Leucadians and Ambraciotes, in the haven of Cyllene, with Brasidas the son of Tellis, come hither to be of council with Alcidas. For the Lacedæmonians, seeing they failed of Lesbos, determined with their fleet augmented to sail to Corcyra, which was in sedition; (there being but twelve Athenian galleys about Naupactus); to the end they might be there before the supply of a greater fleet should come from Athens. So Brasidas and Alcidas employed themselves in that.

The sedition of Corcyra occasioned by the captives that come from Corinth: who persuade the renouncing of their league with Athens. year v. A. C. 427. Ol. 88. 1. 2. Peithias, one of the Athenian faction, accused and absolved, accuseth some of the other faction. year v. A. C. 427. Ol. 88. 1. 2. Peithias and others slain in the senate. year v. A. C. 427. Ol. 88. 1. 2.

70. The sedition in Corcyra began upon the coming home of those captives, which were taken in the battles by sea at Epidamnus, and released afterwards by the Corinthians, at the ransom, as was voiced, of eighty talents, for which they had given security to their hosts; but in fact, for that

they had persuaded the Corinthians, that they would put Corcyra into their power. These men going from man to man, solicited the city to revolt from the Athenians. And two galleys being now come in, one of Athens, another of Corinth, with ambassadors from both those states, the Corcyræans upon audience of them both, decreed to hold the Athenians for their confederates on articles agreed on; but withal to remain friends to the Peloponnesians, as they had formerly been. There was one Peithias, voluntary host of the Athenians, and that had been principal magistrate of the people. Him these men called into judgment, and laid to his charge a practice to bring the city into the servitude of the Athenians. He again, being acquit, called in question five of the wealthiest of the same men, saying, they had cut certain stakes in the ground belonging to the temples both of Jupiter and of Alcino; upon every of which there lay a penalty of a stater. And the cause going against them, they took sanctuary in the temples, to the end, the sum being great, they might pay it by portions [as they should be taxed]. But Peithias (for he was also of the senate) obtained that the law should proceed. These five being by the law excluded the senate, and understanding that Peithias, as long as he was a senator, would cause the people to hold for friends and foes the same that were so to the Athenians, conspired with the rest, and armed with daggers suddenly brake into the senate-house, and slew both Peithias and others, as well private men as senators, to the number of about sixty persons; only a few of those of Peithias his faction, escaped in the Athenian galley that lay yet in the harbour. 71. When they had done this, and called the Corcyræans to an assembly, they told them, that what they had done was for the best, and that they should not be now in bondage to the Athenians: and for the future they advised them to be in quiet, and to receive neither party with more than one galley at once, and to take them for enemies if they were more. And when they had spoken, forced them to decree it accordingly. They also presently

sent ambassadors to Athens, both to show that it was fit for them to do what they had done, and also to dissuade such Corcyræans as were fled thither of the other faction, from doing any thing to their prejudice, for fear the matter should fall into a relapse.

The Lacedæmonian faction assail the commons The commons overcome the oligarchicals. year v. A. C. 427. Ol. 88. 1. 2.

72. When these arrived, the Athenians apprehended both the ambassadors themselves, as seditious persons, and also all those Corcyræans whom they had there prevailed with; and sent them to custody in Ægina. In the meantime, upon the coming in of a galley of Corinth with ambassadors from Lacedæmon, those that managed the state assailed the commons, and overcame them in fight. And night coming on, the commons fled into the citadel and the higher parts of the city; where they rallied themselves and encamped, and made themselves masters of the haven called the Hillaique haven. But the nobility seized on the marketplace, (where also the most of them dwelt), and on the haven on the side toward the continent. 73. The next day they skirmished a little with shot; and both parts sent abroad into the villages to solicit the slaves with promise of liberty, to take their parts. And the greatest part of the slaves took part with the commons; and the other side had an aid of eight hundred men from the continent. 74. The next day but one they fought again, and the people had the victory, having the odds both in strength of places and in number of men. And the women also manfully assisted them, throwing tiles from the houses, and enduring the tumult even beyond the condition of their sex. The few began to fly about twilight, and fearing lest the people should even with their shout take the arsenal, and so come on and put them to the sword, to stop their passage set fire on the houses in circle about the market-place and upon others near it. Much goods of merchants was hereby burnt, and the whole city, if the wind had risen and carried the flame that way, had

been in danger to have been destroyed. When the people had gotten the victory, the Corinthian galley stole away; and most of the auxiliaries gat over privily into the continent.

Year v. A. C. 427. Ol. 88. 1. 2.

75. The next day Nicostratus, the son of Diitrephes, an Athenian commander, came in with twelve galleys and five hundred Messenian men of arms from Naupactus; and both negociated a reconciliation, and induced them (to the end they might agree) to condemn ten of the principal authors of the sedition, (who presently fled), and to let the rest alone, with articles both between themselves and with the Athenians, to esteem friends and enemies the same the Athenians did. When he had done this, he would have been gone; but the people persuaded him before he went, to leave behind him five of his galleys, the better to keep their adversaries from stirring, and to take as many of theirs, which they would man with Corcyræans and send with him. To this he agreed; and they made a list of those that should embark, consisting altogether of their enemies. But these, fearing to be sent to Athens, took sanctuary in the temple of Castor and Pollux. But Nicostratus endeavoured to raise them, and spake to them to put them into courage. But when he could not prevail, the people, arming themselves, on pretence that their diffidence to go along with Nicostratus proceeded from some evil intention, took away their arms out of their houses; and would also have killed some of them such as they chanced on, if Nicostratus had not hindered them. Others also when they saw this, took sanctuary in the temple of Juno; and they were in all above four hundred. But the people fearing some innovation, got them by persuasion to rise: and conveying them into the island that lieth over against the temple of Juno, sent them their necessities thither.

Alcidas and the Peloponnesians arrive and fight at sea against the Corcyraeans. year v. A. C. 427. Ol. 88. 1. 2. year v. A. C. 427. Ol. 88. 1. 2.

76. The sedition standing in these terms, the fourth or fifth day after the putting over of these men into the island arrived the Peloponnesian fleet from Cyllene, where since their voyage of Ionia they had lain at anchor, to the number of three and fifty sail. Alcidas had the command of these, as before; and Brasidas came with him as a counsellor. And having first put in at Sybota, a haven of the continent, they came on the next morning by break of day toward Corcyra. 77. The Corcyraeans, being in great tumult and fear both of the seditious within and of the invasion without, made ready threescore galleys; and still as any of them were manned, sent them out against the enemy: whereas the Athenians had advised them to give leave to them to go forth first, and then the Corcyraeans to follow after with the whole fleet together. When their galleys came forth thus thin, two of them presently turned to the enemy; and in others, they that were aboard were together by the ears amongst themselves: and nothing was done in due order. The Peloponnesians seeing their confusion, opposed themselves to the Corcyraeans with twenty galleys only; the rest they set in array against the twelve galleys of Athens, whereof the Salaminia and the Paralus were two. 78. The Corcyraeans having come disorderly up, and by few at once, were on their part in much distress; but the Athenians, fearing the enemy's number, and doubting to be environed, would never come up to charge the enemy where they stood thick, nor would set upon the galleys that were placed in the midst, but charged one end of them, and drowned one of their galleys. And when the Peloponnesians afterwards had put their fleet into a circular figure, they then went about and about it, endeavouring to put them into disorder. Which they that were fighting against the Corcyraeans perceiving, and fearing such another chance as befel them formerly at Naupactus, went to their aid; and uniting themselves, came upon the

Athenians all together. But they retiring rowed astern, intending that the Corcyraeans should take that time to escape in; they themselves in the meantime going as leisurely back as was possible, and keeping the enemy still a-head. Such was this battle, and it ended about sunset.

Alcidas a coward

79. The Corcyraeans, fearing lest the enemy in pursuit of their victory should have come directly against the city, or take aboard the men which they had put over into the island, or do them some other mischief, fetched back the men into the temple of Juno again, and guarded the city. But the Peloponnesians, though they had won the battle, yet durst not invade the city; but having taken thirteen of the Corcyraean galleys, went back into the continent from whence they had set forth. The next day they came not unto the city, no more than before, although it was in great tumult and affright, and though also Brasidas (as it is reported) advised Alcidas to it, but had not equal authority; but only landed soldiers at the promontory of Leucimna, and wasted their territory.

Year v. A. C. 427. Ol. 88. 1. 2. Threescore sail of Athenians come to aid the Corcyraean commons. The Peloponnesians depart with their fleet. The people, upon the coming in of the Athenians, most cruelly put to death whomsoever they can of the contrary faction. year v. A. C. 427. Ol. 88. 1. 2. Description of the behaviour of the people in this sedition. year v. A. C. 427. Ol. 88. 1. 2. The manners of the seditious. year v. A. C. 427. Ol. 88. 1. 2. year v. A. C. 427. Ol. 88. 1. 2.

80. In the meantime the people of Corcyra, fearing extremely lest those galleys should come against the city, not only conferred with those in sanctuary and with the rest, about how the city might be preserved, but also induced some of them to go aboard. For notwithstanding the sedition they manned thirty galleys, in expectation that the fleet of the enemy should have entered. But the Peloponnesians, having been wasting of their fields till it was about noon, went their ways again. Within night the Corcyraeans had notice by fires of threescore Athenian galleys coming toward them

from Leucas; which the Athenians, upon intelligence of the sedition and of the fleet to go to Corcyra under Alcidas, had sent to aid them, under the conduct of Eurymedon the son of Thucles. 81. The Peloponnesians therefore, as soon as night came, sailed speedily home, keeping still the shore, and causing their galleys to be carried over at the isthmus of Leucas, that they might not come in sight as they went about. But the people of Corcyra hearing of the Attic galleys coming in, and the going off of the Peloponnesians, brought into the city those Messenians which before were without, and appointing the galleys which they had furnished, to come about into the Hillaïque haven, whilst accordingly they went about, slew all the contrary faction they could lay hands on; and also afterwards threw overboard, out of the same galleys, all those they had before persuaded to embark, and so went thence. And coming to the temple of Juno, they persuaded fifty of those that had taken sanctuary, to refer themselves to a legal trial; all which they condemned to die. But the most of the sanctuary men, that is, all those that were not induced to stand to trial by law, when they saw what was done, killed one another there—right in the temple; some hanged themselves on trees, every one as he had means made himself away. And for seven days together that Eurymedon stayed there with his sixty galleys, the Corcyraeans did nothing but kill such of their city as they took to be their enemies; laying to their charge a practice to have everted the popular government. Amongst whom, some were slain upon private hatred, and some by their debtors, for the money which they had lent them. All forms of death were then seen; and (as in such cases it usually falls out) whatsoever had happened at any time, happened also then, and more. For the father slew his son; men were dragged out of the temples, and then slain hard by; and some immured in the temple of Bacchus, died within it. So cruel was this sedition; and seemed so the more, because it was of these the first. 82. For afterwards all Greece, as a man may say, was in commotion;

and quarrels arose everywhere between the patrons of the commons, that sought to bring in the Athenians, and the few, that desired to bring in the Lacedæmonians. Now in time of peace, they could have had no pretence, nor would have been so forward to call them in; but being war, and confederates to be had for either party, both to hurt their enemies and strengthen themselves, such as desired alteration easily got them to come in. And many and heinous things happened in the cities through this sedition, which though they have been before, and shall be ever as long as human nature is the same, yet they are more calm, and of different kinds, according to the several conjunctures. For in peace and prosperity, as well cities as private men are better minded, because they be not plunged into necessity of doing any thing against their will. But war, taking away the affluence of daily necessities, is a most violent master, and conformeth most men's passions to the present occasion. The cities therefore being now in sedition, and those that fell into it later having heard what had been done in the former, they far exceeded the same in newness of conceit, both for the art of assailing and for the strangeness of their revenges. The received value of names imposed for signification of things, was changed into arbitrary. For inconsiderate boldness, was counted true-hearted manliness: provident deliberation, a handsome fear: modesty, the cloak of cowardice: to be wise in every thing, to be lazy in every thing. A furious suddenness was reputed a point of valour. To re-advise for the better security, was held for a fair pretext of tergiversation. He that was fierce, was always trusty; and he that contraried such a one, was suspected. He that did insidiate, if it took, was a wise man; but he that could smell out a trap laid, a more dangerous man than he. But he that had been so provident as not to need to do the one or the other, was said to be a dissolver of society, and one that stood in fear of his adversary. In brief, he that could outstrip another in the doing of an evil act, or that could persuade another thereto that never meant it, was

commended. To be kin to another, was not to be so near as to be of his society: because these were ready to undertake any thing, and not to dispute it. For these societies were not made upon prescribed laws of profit, but for rapine, contrary to the laws established. And as for mutual trust amongst them, it was confirmed not so much by divine law, as by the communication of guilt. And what was well advised of their adversaries, they received with an eye to their actions, to see whether they were too strong for them or not, and not ingenuously. To be revenged was in more request than never to have received injury. And for oaths (when any were) of reconciliation, being administered in the present for necessity, were of force to such as had otherwise no power; but upon opportunity, he that first durst thought his revenge sweeter by the trust, than if he had taken the open way. For they did not only put to account the safeness of that course, but having circumvented their adversary by fraud, assumed to themselves withal a mastery in point of wit. And dishonest men for the most part are sooner called able, than simple men honest: and men are ashamed of this title, but take a pride in the other.

Year v. A. C. 427. Ol. 88. 1. 2.

The cause of all this is desire of rule, out of avarice and ambition; and the zeal of contention from those two proceeding. For such as were of authority in the cities, both of the one and the other faction, preferring under decent titles, one the political equality of the multitude, the other the moderate aristocracy; though in words they seemed to be servants of the public, they made it in effect but the prize of their contention: and striving by whatsoever means to overcome, both ventured on most horrible outrages, and prosecuted their revenges still farther, without any regard of justice or the public good, but limiting them, each faction, by their own appetite: and stood ready, whether by unjust sentence, or with their own hands, when they should get power, to satisfy their present spite. So that

neither side made account to have any thing the sooner done for religion [of an oath], but he was most commended, that could pass a business against the hair with a fair oration. The neutrals of the city were destroyed by both factions; partly because they would not side with them, and partly for envy that they should so escape.

In seditions and confusion, they that distrust their wits, suddenly use their hands, and defeat the stratagems of the more subtle sort.

83. Thus was wickedness on foot in every kind throughout all Greece by the occasion of their sedition. Sincerity (whereof there is much in a generous nature) was laughed down: and it was far the best course, to stand diffidently against each other, with their thoughts in battle array, which no speech was so powerful, nor oath terrible enough to disband. And being all of them, the more they considered, the more desperate of assurance, they rather contrived how to avoid a mischief than were able to rely on any man's faith. And for the most part, such as had the least wit had the best success: for both their own defect, and the subtlety of their adversaries, putting them into a great fear to be overcome in words, or at least in pre-insidiation, by their enemies' great craft, they therefore went roundly to work with them with deeds. Whereas the other, not caring though they were perceived, and thinking they needed not to take by force what they might do by plot, were thereby unprovided, and so the more easily slain.

Year v. A. C. 427. Ol. 88. 1. 2. year v. A. C. 427. Ol. 88. 1. 2.

84. In Corcyra then were these evils for the most part committed first; and so were all other, which either such men as have been governed with pride rather than modesty by those on whom they take revenge, were like to commit in taking it; or which such men as stand upon their delivery from long poverty, out of covetousness, chiefly to have their neighbours' goods, would contrary to justice give their voices to: or which men, not for

covetousness, but assailing each other on equal terms, carried away with the unruliness of their anger would cruelly and inexorably execute. And the common course of life being at that time confounded in the city, the nature of man, which is wont even against law to do evil, gotten now above the law, showed itself with delight to be too weak for passion, too strong for justice, and enemy to all superiority. Else they would never have preferred revenge before innocence, nor lucre (whensoever the envy of it was without power to do them hurt) before justice. And for the laws common to all men in such cases, (which, as long as they be in force, give hope to all that suffer injury), men desire not to leave them standing against the need a man in danger may have of them, but by their revenges on others to be beforehand in subverting them.

The Athenian fleet goes away. Five hundred of the nobility that escaped, seize on such places as belonged to the Corcyræans in the continent. They come over and fortify themselves in Istone. year v. A. C. 427. Ol. 88. 1. 2.

85. Such were the passions of the Corcyræans, first of all other Grecians, towards one another in the city: and Eurymedon and the Athenians departed with their galleys. Afterwards, such of the Corcyræans as had fled, (for there escaped about five hundred of them), having seized on the forts in the continent, impatronized themselves of their own territory on the other side, and from thence came over and robbed the islanders and did them much hurt; and there grew a great famine in the city. They likewise sent ambassadors to Lacedæmon and Corinth, concerning their reduction; and when they could get nothing done, having gotten boats and some auxiliary soldiers, they passed, awhile after, to the number of about six hundred into the island. Where when they had set fire on their boats, that they might trust to nothing but to make themselves masters of the field, they went up into the hill Istone; and having there fortified themselves with a wall, infested those within, and were masters of the territory.

C. 427. Ol. 88. 2. The Athenians send twenty galleys into Sicily, in pretence to aid the Leontines, but with intention to hinder the coming of corn from thence into Peloponnesus, and to spy out the possibility of subduing that island. year v. A. C. 427. Ol. 88. 2. The end of the fifth summer.

86. In the end of the same summer the Athenians sent twenty galleys into Sicily, under the command of Laches the son of Melanopus, and Charœadas the son of Euphiletus: for the Syracusians and the Leontines were now warring against each other. The confederates of the Syracusians were all the Doric cities, except the Camarinæans; which also in the beginning of this war were reckoned in the league of the Lacedæmonians, but had not yet aided them in the war. The confederates of the Leontines, were the Chalcidique cities together with Camarina. And in Italy, the Locrians were with the Syracusians; but the Rhegians, according to their consanguinity, took part with the Leontines. Now the confederates of the Leontines, in respect of their ancient alliance with the Athenians, as also for that they were Ionians, obtained of the Athenians to send them galleys; for that the Leontines were deprived by the Syracusians of the use both of the land and sea. And so the people of Athens sent aid unto them, pretending propinquity, but intending both to hinder the transportation of corn from thence into Peloponnesus, and also to test the possibility of taking the states of Sicily into their own hands. These arriving at Rhegium in Italy, joined with the confederates and began the war. And so ended this summer.

The plague again at Athens.

88. The next winter, the sickness fell upon the Athenians again, (having indeed never totally left the city, though there was some intermission); and continued above a year after; but the former lasted two years: insomuch as nothing afflicted the Athenians, or impaired their strength more than it. For the number that died of it, of men of arms enrolled were no less than four

thousand four hundred; and horsemen, three hundred; of the other multitude, innumerable. There happened also at the same time many earthquakes, both in Athens and Eubœa, and also amongst the Bœotians; and in Bœotia, chiefly at Orchomenus.

The Athenians invade the Liparæans, and islands called the isles of Æolus. year v. A. C. 427. Ol. 88. 2.

88. The Athenians and Rhegians that were now in Sicily, made war the same winter on the islands called the islands of Æolus, with thirty galleys. For in summer, it was impossible to war upon them for the shallowness of the water. These islands are inhabited by the Liparæans, who are a colony of the Cnidians, and dwell in one of the same islands, no great one, called Lipara; and thence they go forth and husband the rest, which are Didyme, Strongyle, and Hiera. The inhabitants of those places have an opinion, that in Hiera Vulcan exerciseth the craft of a smith. For it is seen to send forth abundance of fire in the day time, and of smoke in the night. These islands are adjacent to the territory of the Siculi and Messanians, but were confederates of the Syracusians. When the Athenians had wasted their fields, and saw they would not come in, they put off again and went to Rhegium. And so ended this winter, and the fifth year of this war written by Thucydides.

Year vi. A. C. 426. Ol. 88.2. 3. Earthquakes about Eubœa, and inundations. year vi. A. C. 426. Ol. 88. 2. 3. The natural cause of inundations given by the author.

89. The next summer the Peloponnesians and their confederates came as far as the isthmus, under the conduct of Agis the son of Archidamus, intending to have invaded Attica; but by reason of the many earthquakes that then happened they turned back, and the invasion proceeded not. About the same time, (Eubœa being then troubled with earthquakes), the sea came in at Orobiæ on the part which then was land, and being impetuous withal,

overflowed most part of the city, whereof part it covered, and part it washed down, and made lower in the return; so that it is now sea which before was land. And the people, as many as could not prevent it by running up into the higher ground, perished. Another inundation like unto this happened in the isle of Atalanta, on the coast of Locris of the Opuntians, and carried away part of the Athenians' fort there; and of two galleys that lay on dry land, it brake one in pieces. Also there happened at Peparethus a certain rising of the water, but it brake not in: and a part of the wall, the town-house, and some few houses besides, were overthrown by the earthquakes. The cause of such inundation, for my part, I take to be this: that the earthquake, where it was very great, did there send off the sea; and the sea returning on a sudden, caused the water to come on with greater violence. And it seemeth unto me, that without an earthquake such an accident could never happen.

90. The same summer divers others, as they had several occasions, made war in Sicily: so also did the Sicilians amongst themselves, and the Athenians with their confederates. But I will make mention only of such most memorable things, as were done either by the confederates there with the Athenians, or against the Athenians by the enemy.

Year vi. A. C. 426. Ol. 88. 2. 3. The Athenians win Mylæ. and Messana.

Charœades the Athenian general being slain by the Syracusians, Laches, who was now sole commander of the fleet, together with the confederates made war on Mylæ, a town belonging to Messana. There were in Mylæ two companies of Messanians in garrison, the which also laid a certain ambush for those that came up from the fleet. But the Athenians and their confederates both put to flight those that were in ambush, with the slaughter of the most of them; and also assaulting their fortification, forced them on composition both to render the citadel, and to go along with them against Messana. After this, upon the approach of the Athenians and their

confederates, the Messanians compounded likewise; and gave them hostages, and such other security as was requisite.

The Athenians send Demosthenes with thirty galleys about Peloponnesus: and Nicias with sixty galleys into the island of Melos. The army of Nicias, and another army from the city of Athens, meet upon a sign given at Tanagra in Bœotia. They overcome the Tanagrians in battle. year vi. A. C. 426. Ol. 88. 2. 3.

91. The same summer the Athenians sent thirty galleys about Peloponnesus, under the command of Demosthenes the son of Alkisthenes, and Proclus the son of Theodorus; and sixty galleys more with two thousand men of arms, commanded by Nicias the son of Niceratus, into Melos. For the Athenians, in respect that the Melians were islanders, and yet would neither be their subjects nor of their league, intended to subdue them. But when upon the wasting of their fields they still stood out, they departed from Melos, and sailed to Oropus in the opposite continent. Being there arrived within night, the men of arms left the galleys, and marched presently by land to Tanagra in Bœotia. To which place, upon a sign given, the Athenians that were in the city of Athens came also forth with their whole forces, led by Hipponnicus the son of Callias, and Eurymedon the son of Thucles, and joined with them; and pitching their camp, spent the day in wasting the territory of Tanagra, and lay there the night following. The next day, they defeated in battle such of the Tanagrians as came out against them, and also certain succours sent them from Thebes; and when they had taken up the arms of those that were slain and erected a trophy, they returned back; the one part to Athens, the other to their fleet. And Nicias with his sixty galleys, having first sailed along the coast of Locris and wasted it, came home likewise.

The Lacedæmonians build the city Heracleia. The commodious seat of this new city for the war. year vi. A. C. 426. Ol. 88. 2. 3.

92. About the same time, the Peloponnesians erected the colony of Heracleia in Trachinia, with this intention. The Melians in the whole contain these three parts: Paralians, Hierans, and Trachinians. Of these the Trachinians being afflicted with war from the Cætæans their borderers, thought at first to have joined themselves to the Athenians; but fearing that they would not be faithful unto them, they sent to Lacedæmon; choosing for their ambassador Tisamenus. And the Dorians, who are the mother nation to the Lacedæmonians, sent their ambassadors likewise with him with the same requests: for they also were infested with war from the same Cætæans. Upon audience of these ambassadors the Lacedæmonians concluded to send out a colony, both intending the reparation of the injuries done to the Trachinians and to the Dorians; and conceiving withal, that the town would stand very commodiously for their war with the Athenians; inasmuch as they might thereby have a navy ready, where the passage was but short, against Eubœa; and it would much further their conveyance of soldiers into Thrace. And they had their mind wholly bent to the building of the place.

First therefore they asked counsel of the oracle in Delphi. And the oracle having bidden them do it, they sent inhabitants thither, both of their own people and of the neighbours about them; and gave leave also to any that would, to go thither, out of the rest of Greece, save only to the Ionians, Achæans, and some few other nations. The conductors of the colony were three Lacedæmonians; Leon, Alcidas, and Damagon. Who taking it in hand, built the city which is now called Heracleia, from the very foundation; being distant from Thermopylæ forty furlongs, and from the sea twenty. Also they made houses for galleys to lie under, beginning close to Thermopylæ against the very strait, to the end to have them the more defensible.

The Thessalians infest the new city with continual war, for fear they should be too great. year vi. A. C. 426. Ol. 88. 2. 3. The severity of of the

Lacedæmonian government dispeopled the city of Heracleia, and frightened men from it. The Lacedæmonians always severe, not always just.

93. The Athenians, when this city was peopled, were at first afraid, and thought it to be set up especially against Eubœa; because from thence to Cenæum, a promontory of Eubœa, the passage is but short. But it fell out afterwards otherwise than they imagined; for they had no great harm by it: the reason whereof was this. That the Thessalians who had the towns of those parts in their power, and upon whose ground it was built, afflicted these new planters with a continual war, till they had worn them out: though they were many indeed in the beginning. For being the foundation of the Lacedæmonians, every one went thither boldly, conceiving the city to be an assured one. And chiefly the governors themselves sent hither from Lacedæmon, undid the business, and dispeopled the city by frightening most men away; for that they governed severely, and sometimes also unjustly: by which means their neighbours more easily prevailed against them.

Demosthenes warreth on Leucas. year vi. A. C. 426. Ol. 88. 2. 3. Demosthenes invadeth Ætolia at the persuasion of the Messenians. year vi. A. C. 426. Ol. 88. 2. 3. The ambition of Demosthenes the chief cause of his unfortunate enterprise in Ætolia. year vi. A. C. 426. Ol. 88. 2. 3.

94. The same summer, and about the same time that the Athenians stayed in Melos, those other Athenians that were in the thirty galleys about Peloponnesus, slew first certain garrison-soldiers in Ellomenus, a place of Leucadia, by ambushment. But afterwards with a greater fleet, and with the whole power of the Acarnanians; who followed the army, all (but the Æniades) that could bear arms; and with the Zacynthians, and Cephalonians, and fifteen galleys of the Corcyræans, made war against the city itself of Leucas. The Leucadians, though they saw their territory wasted by them, both without the isthmus and within, where the city of Leucas standeth and the temple of Apollo; yet they durst not stir, because the

number of the enemy was so great. And the Acarnanians entreated Demosthenes, the Athenian general, to wall them up, conceiving that they might easily be expugned by a siege, and desiring to be rid of a city their continual enemy. But Demosthenes was persuaded at the same time by the Messenians, that seeing so great an army was together, it would be honourable for him to invade the Ætolians; principally, as being enemies to Naupactus: and that if these were subdued, the rest of the continent thereabouts would easily be added to the Athenian dominion. For they alleged, that though the nation of the Ætolians were great and warlike, yet their habitation was in villages unwall'd, and those at great distances; and were but light-armed, and might therefore, with no great difficulty, be all subdued before they could unite themselves for defence. And they advised him to take in hand first the Apodotians, next the Ophionians, and after them the Eurytians; (which are the greatest part of Ætolia, of a most strange language, and that are reported to eat raw flesh); for these being subdued, the rest would easily follow. 95. But he, induced by the Messenians, whom he favoured, but especially because he thought, without the forces of the people of Athens, with the confederates only of the continent and with the Ætolians to invade Bœotia by land, going first through the Locri Ozolæ, and so to Cytinium of Doris, having Parnassus on the right hand till the descent thereof into the territory of the Phœceans; which people, for the friendship they ever bore to the Athenians, would, he thought, be willing to follow his army, and if not, might be forced; and upon the Phœceans bordereth Bœotia: putting off therefore with his whole army, against the minds of the Acarnanians, from Leucas, he sailed unto Solium by the shore. And there having communicated his conceit with the Acarnanians, when they would not approve of it because of his refusal to besiege Leucas, he himself with the rest of his army, Cephælonians, Zacynthians, and three hundred Athenians the soldiers of his own fleet, (for

the fifteen galleys of Corcyra were now gone away) warred on the Ætolians; having Æneon, a city of Locris, for the seat of his war. Now these Locrians called Ozolæ, were confederates of the Athenians; and were to meet them with their whole power in the heart of the country. For being confiners on the Ætolians, and using the same manner of arming, it was thought it would be a matter of great utility in the war to have them in their army; for that they knew their manner of fight, and were acquainted with the country.

Hesiod the poet said to have died in this temple of Jupiter Nemeius. The Ætolians unite against the invasion of Demosthenes.

96. Having lain the night with his whole army in the temple of Jupiter Nemeius, (wherein the poet Hesiodus is reported by them that dwell thereabout to have died, foretold by an oracle, that he should die in Nemea), in the morning betimes he dislodged, and marched into Ætolia. The first day he took Potidania; the second day, Crocyleium; the third, Teichium. There he stayed, and sent the booty he had gotten to Eupalium in Locris. For he purposed, when he had subdued the rest, to invade the Ophionians afterwards (if they submitted not) in his return to Naupactus. But the Ætolians knew of this preparation when it was first resolved on. And afterwards, when the army was entered, they were united into a mighty army to make head: insomuch as that the farthest off of the Ophionians, that reach out to the Melian Gulf, the Bomians and Callians, came in with their aids.

Year vi. A. C. 426. Ol. 88. 2. 3. The Ætolians give Demosthenes a great overthrow.

97. The Messenians gave the same advice to Demosthenes that they had done before; and alleging that the conquest of the Ætolians would be but easy, willed him to march with all speed against them, village after village, and not to stay till they were all united and in order of battle against him,

but to attempt always the place which was next to hand. He, persuaded by them and confident of his fortune, because nothing had crossed him hitherto, without tarrying for the Locrians that should have come in with their aids, (for his greatest want was of darters light-armed), marched to Ægitium: which approaching he won by force, the men having fled secretly out, and encamped themselves on the hills above it: for it stood in a mountainous place, and about eighty furlongs from the sea. But the Ætolians (for by this time they were come with their forces to Ægitium) charged the Athenians and their confederates; and running down upon them, some one way and some another, from the hills, plied them with their darts. And when the army of the Athenians assaulted them, they retired; and when it retired, they assaulted. So that the fight, for a good while, was nothing but alternate chase and retreat; and the Athenians had the worst in both.

Year vi. A. C. 426. Ol. 88. 2. 3. Demosthenes afraid to come home.

98. Nevertheless, as long as their archers had arrows, and were able to use them, (for the Ætolians, by reason they were not armed, were put back still with the shot), they held out. But when upon the death of their captain the archers were dispersed, and the rest were also wearied, having a long time continued the said labour of pursuing and retiring, and the Ætolians continually afflicting them with their darts, they were forced at length to fly; and lighting into hollows without issue, and into places they were not acquainted withal, were destroyed. For Chromon a Messenian, who was their guide for the ways, was slain. And the Ætolians pursuing them still with darts, slew many of them quickly whilst they fled, being swift of foot and without armour. But the most of them missing their way and entering into a wood which had no passage through, the Ætolians set it on fire and burnt it about them. All kinds of shifts to fly, and all kinds of destruction were that day in the army of the Athenians. Such as remained, with much

ado got to the sea and to Ceneon, a city of Locris, from whence they first set forth. There died very many of the confederates, and a hundred and twenty men of arms of the Athenians; that was their number, and all of them able men: these men of the very best died in this war. Procles also was there slain, one of the generals. When they had received the bodies of their dead from the Ætolians under truce, and were gotten again to Naupactus, they returned with the fleet to Athens. But they left Demosthenes about Naupactus and those parts; because he was afraid of the Athenian people for the loss that had happened.

The Athenian fleet in Sicily sail to Locris and take Peripolium.

99. About the same time, the Athenians that were on the coast of Sicily, sailed unto Locris, and landing overcame such as made head; and took in Peripolium, situate on the river Halex.

Year vi. A. C. 426. Ol. 88. 2. 3. The Ætolians and Peloponnesians make a journey against Naupactus.

100. The same summer, the Ætolians having sent their ambassadors, Tolophus an Ophionian, Boryades an Eurytanian, and Tisander an Apodotian, to Corinth and Lacedæmon, persuaded them to send an army against Naupactus: for that it harboured the Athenians against them. And the Lacedæmonians, towards the end of autumn, sent them three thousand men of arms of their confederates; of which five hundred were of Heracleia, the new-built city of Trachinia. The general of the army was Eurylochus a Spartan; with whom Macarius and Menedæus went also along, Spartans likewise. 101. When the army was assembled at Delphi, Eurylochus sent a herald to the Locrians of Ozolæ, both because their way lay through them to Naupactus, and also because he desired to make them revolt from the Athenians. Of all the Locrians, the Amphissians co-operated with him most, as standing most in fear for the enmity of the Phoceans. And they first giving hostages, induced others who likewise were afraid of the coming in

of the army, to do the like: the Myoneans first, being their neighbours; for this way is Locris of most difficult access: then the Ipneans, Messapians, Tritæans, Chalæans, Tolophonians, Hessians, and the Ceantheans. All these went with them to the war. The Olpæans gave them hostages, but followed not the army. But the Hyæans would give them no hostages, till they had taken a village of theirs called Polis.

Year vi. A. C. 426. Ol. 88. 2. 3. Demosthenes relieveth Naupactus. year vi. A. C. 426. Ol. 88. 2. 3. The end of the sixth summer.

102. When every thing was ready, and he had sent the hostages away to Cytinium in Doris, he marched with his army towards Naupactus, through the territory of the Locrians. And as he marched, he took Ceneon, a town of theirs, and Eupalium; because they refused to yield unto him. When they were come into the territory of Naupactus, the Ætolians being there already to join with them, they wasted the fields about; and took the suburbs of the city, being unfortified. Then they went to Molycreium, a colony of the Corinthians, but subject to the people of Athens, and took that. Now Demosthenes the Athenian, (for ever since the Ætolian business he abode about Naupactus), having been pre-advertised of this army and being afraid to lose the city, went amongst the Acarnanians, and with much ado, because of his departure from before Leucas, persuaded them to relieve Naupactus; and they sent along with him in his galleys a thousand men of arms. Which entering, were the preservation of the city; for there was danger, the walls being of a great compass and the defendants few, that else they should not have been able to make them good. Eurylochus and those that were with him, when they perceived that those forces were entered and that it was impossible to take the city by assault, departed thence, not into Peloponnesus, but to Æolis, now called Calydon, and to Pleuron and other places thereabouts, and also to Proschion in Ætolia. For the Ambraciotes coming to them, persuaded them to undertake, together with themselves, the

enterprise against Argos and the rest of Amphilochia, and Acarnania; saying withal, that if they could overcome these, the rest of that continent would enter into the league of the Lacedæmonians. Whereunto Eurylochus assented; and dismissing the Ætolians lay quiet in those parts with his army, till such time as the Ambraciotes being come with their forces before Argos he should have need to aid them. And so this summer ended.

C. 426. Ol. 88. 3. The Athenians in Sicily assault Nessa.

103. The Athenians that were in Sicily, in the beginning of winter, together with the Grecians of their league, and as many of the Siculi, as having obeyed the Syracusans by force, or being their confederates before, had now revolted, warred jointly against Nessa, a town of Sicily, the citadel whereof was in the hands of the Syracusans. And they assaulted the same; but when they could not win it, they retired. In the retreat, the Syracusans that were in the citadel, sallied out upon the confederates that retired later than the Athenians; and charging, put a part of the army to flight, and killed not a few. After this, Laches and the Athenians landed some time at Locris; and overcame in battle by the river Caicinus about three hundred Locrians, who with Proxenus the son of Capaton came out to make resistance; and when they had stripped them of their arms, departed.

Delos hallowed. year vi. A. C. 426. Ol. 88. 3. An edict, that none should be suffered to be born or die in Delos. Rheneia an island, tied to Delos with a chain, and dedicated to Apollo of Delos. The Athenians institute the quinquennial games at Delos.

104. The same winter also the Athenians hallowed the isle of Delos, by the admonition indeed of a certain oracle. For Pisistratus also, the tyrant, hallowed the same before; not all, but only so much as was within the prospect of the temple. But now they hallowed it all over in this manner. They took away all sepulchres whatsoever of such as had died there before; and for the future, made an edict that none should be suffered to die, nor

any woman to bring forth child in the island; but [when they were near the time, either of the one or the other] they should be carried over into Rheneia. This Rheneia is so little a way distant from Delos, that Polycrates, the tyrant of Samos, who was once of great power by sea and had the dominion of the other islands, when he won Rheneia dedicated the same to Apollo of Delos, tying it unto Delos with a chain. And now after the hallowing of it, the Athenians instituted the keeping, every fifth year, of the Delian games.

There had also in old time been great concourse in Delos, both of Ionians and of the islanders round about. For they then came to see the games, with their wives and children, as the Ionians do now the games at Ephesus. There were likewise matches set of bodily exercise and of music; and the cities did severally set forth dances. Which things to have been so, is principally declared by Homer in these verses of his hymn to Apollo:

But thou, Apollo, takest most delight
In Delos. There assemble in thy sight
The long-coat Ions, with their children dear
And venerable bedfellows; and there
In matches set of buffets, song, and dance,
Both show thee pastime and thy name advance.

Year vi. A. C. 426. Ol. 88. 3.

That there were also matches of music, and that men resorted thither to contend therein, he again maketh manifest in these verses of the same hymn. For after he hath spoken of the Delian dance of the women, he endeth their praise with these verses, wherein also he maketh mention of himself:

But well: let Phœbus and Diana be
Propitious; and farewell you, each one.

But yet remember me when I am gone:
And if of earthly men you chance to see
Any toil'd pilgrim, that shall ask you, Who,
O damsels, is the man that living here
Was sweet'st in song, and that most had your ear?
Then all, with a joint murmur, thereunto
Make answer thus: A man deprived of seeing;
In the isle of sandy Chios is his being.

Year vi. A. C. 426. Ol. 88. 3.

So much hath Homer witnessed touching the great meeting and solemnity celebrated of old in the isle of Delos. And the islanders and the Athenians, since that time, have continued still to send dancers along with their sacrificers; but the games and things of that kind were worn out, as is likely, by adversity: till now that the Athenians restored the games, and added the horse race, which was not before.

The Ambraciotes and Peloponnesians make war against the Acarnanians and Amphilochians unfortunately. They take Olpæ. year vi. A. C. 426. Ol. 88. 3. The Acarnanians make Demosthenes their general. The Ambraciotes at Olpæ send to the Ambraciotes at home, to come to their aid. year vi. A. C. 426. Ol. 88. 3. year vi. A. C. 426. Ol. 88. 3. Demosthenes chosen general. year vi. A. C. 426. Ol. 88. 3. The battle between the Ambraciotes and Acarnanians. The Ambraciotes and Peloponnesians fly. year vi. A. C. 426. Ol. 88. 3.

105. The same winter the Ambraciotes, according to their promise made to Eurylochus when they retained his army, made war upon Argos in Amphilochia with three thousand men of arms: and invading Argeia they took Olpæ, a strong fort on a hill by the sea-side, which the Acarnanians had fortified and used for the place of their common meetings for matters of

justice, and is distant from the city of Argos, which stands also on the sea-side, about twenty-five furlongs. The Acarnanians, with part of their forces, came to relieve Argos; and with the rest they encamped in that part of Amphilochia which is called Crenæ, to watch the Peloponnesians that were with Eurylochus, that they might not pass through to the Ambraciotes without their knowledge; and sent to Demosthenes, who had been leader of the Athenians in the expedition against the Ætolians, to come to them and be their general. They sent also to the twenty Athenian galleys, that chanced to be then on the coast of Peloponnesus, under the conduct of Aristoteles the son of Timocrates, and Hierophon the son of Antimnestus. In like manner the Ambraciotes that were at Olpæ sent a messenger to the city of Ambracia, willing them to come to their aid with their whole power; as fearing that those with Eurylochus would not be able to pass by the Acarnanians, and so they should be either forced to fight alone, or else have an unsafe retreat. 106. But the Peloponnesians that were with Eurylochus, as soon as they understood that the Ambraciotes were come to Olpæ, dislodging from Proschion went with all speed to assist them: and passing over the river Achelöus, marched through Acarnania, which, by reason of the aids sent to Argos, was now disfurnished. On their right hand they had the city of Stratus, and that garrison; on the left, the rest of Acarnania. Having passed the territory of the Stratians, they marched through Phytia, and again by the utmost limits of Medeon; then through Limnæa; then they went into the territory of the Agræans, which are out of Acarnania, and their friends: and getting to the hill Thiamus, which is a desert hill, they marched over it, and came down into Argeia when it was now night; and passing between the city of the Argives and the Arcarnanians that kept watch at [the] Wells, came unseen and joined with the Ambraciotes at Olpæ. 107. When they were altogether, they sat down about break of day at a place called Metropolis, and there encamped. And the Athenians not long after

with their twenty galleys arrived in the Ambracian gulf, to the aid of the Argives: to whom also came Demosthenes, with two hundred Messenian men of arms and threescore Athenian archers. The galleys lay at sea, before the hill upon which the fort of Olpæ standeth. But the Acarnanians, and those few Amphilochians (for the greatest part of them the Ambraciotes kept back by force) that were come already together at Argos, prepared themselves to give the enemy battle; and chose Demosthenes, with their own commanders, for general of the whole league. He, when he had brought them up near unto Olpæ, there encamped. There was between them a great hollow. And for five days together they stirred not; but the sixth day both sides put themselves into array for the battle. The army of the Peloponnesians reached a great way beyond the other, for indeed it was much greater; but Demosthenes, fearing to be encompassed, placed an ambush in a certain hollow way and fit for such a purpose, of armed and unarmed soldiers, in all to the number of four hundred; which, in that part where the number of the enemies overreached, should in the heat of the battle rise out of ambush and charge them on their backs. When the battles were in order on either side, they came to blows. Demosthenes, with the Messenians and those few Athenians that were there, stood in the right wing; and the Acarnanians (as they could one after another be put in order) and those Amphilochian darters which were present, made up the other. The Peloponnesians and Ambraciotes were ranged promiscuously, except only the Mantineans, who stood together most of them in the left wing, but not in the utmost part of it; for Eurylochus and those that were with him made the extremity of the left wing, against Demosthenes and the Messenians. 108. When they were in fight, and that the Peloponnesians with that wing overreached and had encircled the right wing of their enemies, those Acarnanians that lay in ambush coming in at their backs, charged them and put them to flight: in such sort as they endured not the first brunt; and

besides, caused the greatest part of the army through affright to run away. For when they saw that part of it defeated which was with Eurylochus, which was the best of their army, they were a great deal the more afraid. And the Messenians that were in that part of the army with Demosthenes, pursuing them, dispatched the greatest part of the execution. But the Ambraciotes that were in the right wing, on that part had the victory, and chased the enemy unto the city of Argos. But in their retreat, when they saw that the greatest part of the army was vanquished, the rest of the Acarnanians setting upon them, they had much ado to recover Olpæ in safety. And many of them were slain, whilst they ran into it out of array and in disorder; save only the Mantineans: for these made a more orderly retreat than any part of the army. And so this battle ended, having lasted till the evening.

Demosthenes suffereth the principal Peloponnesians to retire from Olpæ secretly; to disguard the Ambraciotes of their aid, and procure the Peloponnesians the hatred of the nations thereabouts. year vi. A. C. 426. Ol. 88. 3.

109. The next day, Menedaius (Eurylochus and Macarius being now slain) taking the command upon him, and not finding how, if he stayed, he should be able to sustain a siege, wherein he should both be shut up by land and also with those Attic galleys by sea, or if he should depart, how he might do it safely, had speech with Demosthenes and the Acarnanian captains, both about a truce for his departure and for the receiving of the bodies of the slain. And they delivered unto them their dead; and having erected a trophy took up their own dead, which were about three hundred. But for their departure they would make no truce openly [nor] to all: but secretly Demosthenes with his Acarnanian fellow-commanders made a truce with the Mantineans, and with Menedaius and the rest of the Peloponnesian captains and men of most worth, to be gone as speedily as

they could; with purpose to disguard the Ambraciotes and multitude of mercenary strangers, and withal to use this as a means to bring the Peloponnesians into hatred with the Grecians of those parts, as men that had treacherously advanced their particular interest. Accordingly they took up their dead, and buried them as fast as they could; and such as had leave, consulted secretly touching how to be gone.

Demosthenes sendeth part of his army to lie in ambush by the ways by which the Ambraciote supplies were to come from the city.

110. Demosthenes and the Acarnanians had now intelligence that the Ambraciotes from the city of Ambracia, according to the message sent to them before from Olpæ [which was that they should bring their whole power through Amphilochia to their aid], were already on their march (ignorant of what had passed here) to join with those at Olpæ. And hereupon he sent a part of his army presently forth, to beset the ways with ambushment, and to pre-occupate all places of strength; and prepared withal to encounter with the rest of his army.

The Mantineans retire from Olpæ. The Ambraciotes go after them, and are slain to the number of two hundred. year vi. A. C. 426. Ol. 88. 3. The rest escape to Salynthius, king of the Agræans.

111. In the meantime, the Mantineans and such as had part in the truce, going out on pretence to gather potherbs and firewood, stole away by small numbers: and as they went, did indeed gather such things as they pretended to go forth for; but when they were gotten far from Olpæ, they went faster away. But the Ambraciotes and others that came forth in the same manner, but in greater troops, seeing the others go quite away, were eager to be gone likewise, and ran outright, as desiring to overtake those that were gone before. The Acarnanians at first thought they had gone all without a truce alike, and pursued the Peloponnesians: and threw darts at their own captains for forbidding them and for saying that they went away under truce, as

thinking themselves betrayed. But at last they let go the Mantineans and Peloponnesians, and slew the Ambraciotes only. And there was much contention and ignorance, of which was an Ambraciote and which a Peloponnesian. So they slew about two hundred of them; and the rest escaped into Agraïs, a bordering territory, where Salynthius, king of the Agræans and their friend, received them.

Demosthenes goeth out to meet the supply of Ambraciotes that came from the city. The Ambraciotes surprised in their lodgings. year vi. A. C. 426. Ol. 88. 3. The Ambraciotes put to flight.

112. The Ambraciotes out of the city of Ambracia were come as far as Idomene. Idomene are two high hills; to the greater whereof, came first undiscovered that night they whom Demosthenes had sent afore from the camp, and seized it: but the Ambraciotes got first to the lesser, and there encamped the same night. Demosthenes after supper, in the twilight, marched forward with the rest of the army, one half whereof himself took with him for the assault of the camp, and the other half he sent about through the mountains of Amphilochia. And the next morning before day, he invaded the Ambraciotes whilst they were yet in their lodgings and knew not what was the matter, but thought rather that they had been some of their own company. For Demosthenes had placed the Messenians on purpose in the foremost ranks, and commanded them to speak unto them as they went in the Doric dialect, and to make the sentinels secure; especially, seeing their faces could not be discerned, for it was yet night. Wherefore they put the army of the Ambraciotes to flight at the first onset, and slew many upon the place: the rest fled as fast as they could towards the mountains. But the ways being beset, and the Amphilochians being well acquainted with their own territory and armed but lightly, against men in armour unacquainted and utterly ignorant which way to take; they lit into hollow ways and to the places forelaid with ambushes, and perished. And having been put to all

manner of shifts for their lives, some fled towards the sea; and when they saw the galleys of Athens sailing by the shore, (this accident concurring with their defeat), swam to them, and chose rather in their present fear, to be killed of those in the galleys, than by the barbarians and their most mortal enemies the Amphilocheians. The Ambraciotes with this loss came home, a few of many, in safety to their city. And the Acarnanians, having taken the spoil of the dead and erected their trophies, returned unto Argos.

Year vi. A. C. 426. Ol. 88. 3. The conference of the herald from the Ambraciotes in Agraïs, with one of Demosthenes his army, about the number of the slain. The Acarnanians will not let the Athenians subdue the Ambraciotes utterly, because they thought the Ambraciotes better neighbours than the Athenians. year vi. A. C. 426. Ol. 88. 3.

113. The next day there came a herald from those Ambraciotes which fled from Olpæ into Agraïs, to demand leave to carry away the bodies of those dead which were slain after the first battle, when without truce they went away together with the Mantineans, and with those that had truce. But when the herald saw the armours of those Ambraciotes that came from the city, he wondered at the number: for he knew nothing of this last blow, but thought they had been armours of those with them. Then one asked him, what he wondered at, and how many he thought were slain: for he that asked him the question, thought, on the other side, that he had been a herald sent from those at Idomene. And he answered, about two hundred. Then he that asked, replied and said: “then these are not the armours of them; but of above a thousand”.— “Then,” said he again, “they belong not to them that were in battle with us”. The other answered: “yes, if you fought yesterday in Idomene.”— “But we fought not yesterday at all, but the other day in our retreat.”— “But we yet fought yesterday with those Ambraciotes that came from the city to aid the rest.” When the herald heard that, and knew that the aid from the city was defeated, he burst out into Aimees: and astonished with the greatness of the present loss, forthwith went his way without his

errand, and required the dead bodies no farther. For this loss was greater than, in the like number of days, happened to any one city of Greece in all this war. I have not written the number of the slain; because it was said to be such as is incredible for the quantity of the city. But this I know: that if the Acarnanians and Amphilochians, as Demosthenes and the Athenians would have had them, would have subdued Ambracia, they might have done it even with the shout of their voices. But they feared now, that if the Athenians possessed it, they would prove more troublesome neighbours unto them than the other.

114. After this, having bestowed the third part of the spoils upon the Athenians, they distributed the other two parts according to the cities. The Athenians' part was lost by sea. For those three hundred complete armours which are dedicated in the temples in Attica, were picked out for Demosthenes [himself]; and he brought them away with him. His return was withal the safer for this action, after his defeat in Ætolia. And the Athenians that were in the twenty galleys returned to Naupactus.

League for a hundred years between the Ambraciotes and Acarnanians. year vi. A. C. 426. Ol. 88. 3.

The Acarnanians and Amphilochians, when the Athenians and Demosthenes were gone, granted truce at the city of the Cœniades to those Ambraciotes and Peloponnesians that were fled to Salynthius and the Agræans, to retire; the Cœniades being gone over to Salynthius, and the Agræans likewise. And for the future, the Acarnanians and Amphilochians made a league with the Ambraciotes for a hundred years, upon these conditions: "That neither the Ambraciotes with the Acarnanians should make war against the Peloponnesians; nor the Acarnanians with the Ambraciotes against the Athenians: that they should give mutual aid to one another's country: that the Ambraciotes should restore whatsoever towns or bordering fields they held of the Amphilochians: and that they should at no

time aid Anactorium, which was in hostility with the Acarnanians". And upon this composition, the war ended. After this, the Corinthians sent a garrison of about three hundred men of arms of their own city to Ambracia, under the conduct of Xenocleides the son of Euthycles; who with much difficulty passing through Epirus, at length arrived. Thus passed the business in Ambracia.

C. 425. Ol. 88. 3. The Athenian fleet in Sicily invade Himeræa. Pythodorus sent to take the fleet from Laches. year vi. A. C. 425. Ol. 88. 3.

115. The same winter the Athenians that were in Sicily, invaded Himeræa by sea, aided by the Sicilians that invaded the skirts of the same by land. They sailed also to the islands of Æolus. Returning afterwards to Rhegium, they found there Pythodorus, the son of Isolochus, [with certain galleys], come to receive charge of the fleet commanded by Laches. For the Sicilian confederates had sent to Athens, and persuaded the people to assist them with a greater fleet. For though the Syracusans were masters by land, yet seeing they hindered them but with few galleys from the liberty of the sea, they made preparation, and were gathering together a fleet with intention to resist them. And the Athenians furnished out forty galleys to send into Sicily, conceiving that the war there would the sooner be at an end, and desiring withal to train their men in naval exercise. Therefore Pythodorus, one of the commanders, they sent presently away with a few of those galleys, and intended to send Sophocles the son of Sostratides, and Eurymedon the son of Thucles, with the greatest number afterwards. But Pythodorus having now the command of Laches his fleet, sailed in the end of winter unto a certain garrison of the Locrians which Laches had formerly taken; and overthrown in a battle there by the Locrians, retired.

The fire breaketh out of Ætna, and burneth the fields of Catana.

116. The same spring, there issued a great stream of fire out of the mountain Ætna, as it had also done in former times; and burned part of the

territory of the Catanæans, that dwell at the foot of Ætna, which is the highest mountain of all Sicily. From the last time that the fire brake out before, to this time, it is said to be fifty years. And it hath now broken out thrice in all, since Sicily was inhabited by the Grecians. These were the things that came to pass this winter. And so ended the sixth year of this war written by Thucydides.

THE FOURTH BOOK OF THE HISTORY OF THUCYDIDES.

THE PRINCIPAL CONTENTS.

THE ATHENIANS TAKE and fortify Pylus in Messenia. — The Lacedæmonians, to recover it, put over four hundred of their best men into the island Sphacteria: whom the Athenians, having overcome the Lacedæmonian fleet, do there besiege. — The Athenians and Syracusans fight in the Strait of Messana. — Cleon engageth himself rashly to take or kill the Lacedæmonians in Sphacteria within twenty days: and by good fortune performeth it. — The sedition ceaseth in Corcyra. — Nicias invadeth Peloponnesus. — The Sicilians agreeing, take from the Athenians their pretence of sailing upon that coast with their fleet. — The Athenians take Nisæa, but fail of Megara. — The overthrow of the Athenians at Delium. — The cities on the confines of Thrace, upon the coming of Brasidas, revolt to the Lacedæmonians. — Truce for a year. — And this in three years more of the same war.

Year vii. A. C. 425. Ol. 88. 3. Messana revolteth from the Athenians. year vii. A. C. 425. Ol. 88. 3. The Locrians waste the territory of Rhegium.

The spring following, when corn began to be in the ear, ten galleys of Syracuse and as many of Locris went to Messana in Sicily, called in by the citizens themselves, and took it; and Messana revolted from the Athenians. This was done by the practice chiefly of the Syracusans, that saw the place to be commodious for invasion of Sicily, and feared lest the Athenians, some time or other hereafter making it the seat of their war, might come with greater forces into Sicily and invade them from thence; but partly also of the Locrians, as being in hostility with the Rhegians and desirous to

make war upon them on both sides. The Locrians had now also entered the lands of the Rhegians with their whole power; both because they would hinder them from assisting the Messanians, and because they were solicited thereunto by the banished men of Rhegium that were with them. For they of Rhegium had been long in sedition, and were unable for the present to give them battle: for which cause they the rather also now invaded them. And after they had wasted the country, the Locrians withdrew their landforces; but their galleys lay still at the guard of Messina, and more were setting forth, to lie in the same harbour, to make the war on that side.

The fifth invasion of Attica. The Athenians send forty galleys into Sicily: year vii. A. C. 425. Ol. 88. 3. who are to put in by the way at Corcyra, being still in sedition, the outlaws holding the field, and the commons the city.

About the same time of the spring, and before corn was at full growth, the Peloponnesians and their confederates, under the conduct of Agis the son of Archidamus, king of the Lacedæmonians, invaded Attica; and there lay and wasted the country about. And the Athenians sent forty galleys into Sicily, the same which they had provided before for that purpose; and with them the other two generals, Eurymedon and Sophocles. For Pythodorus, who was the third in that commission, was arrived in Sicily before. To these they gave commandment also to take order, as they went by, for the state of those Corcyræans that were in the city, and were pillaged by the outlaws in the mountain; and threescore galleys of the Peloponnesians were gone out to take part with those in the mountain; who because there was a great famine in the city, thought they might easily be masters of that state. To Demosthenes also, who ever since his return out of Acarnania had lived privately, they gave authority, at his own request, to make use of the same galleys, if he thought good so to do, about Peloponnesus.

Demosthenes urgeth to put in at Pylus. The fleet driven into Pylus by weather. The commodity of Pylus. year vii. A. C. 425. Ol. 88. 3. The

Athenians build the fort of Pylus.

As they sailed by the coast of Laconia, and had intelligence that the Peloponnesian fleet was at Corcyra already, Eurymedon and Sophocles hasted to Corcyra; but Demosthenes willed them to put in first at Pylus, and when they had done what was requisite there, then to proceed in their voyage. But whilst they denied to do it, the fleet was driven into Pylus by a tempest that then arose by chance. And presently Demosthenes required them to fortify the place, alleging that he came with them for no other purpose, and showing how there was great store of timber and stone, and that the place itself was naturally strong, and desert, both it and a great deal of the country about. For it lieth from Sparta about four hundred furlongs, in the territory that, belonging once to the Messenians, is called by the Lacedæmonians Coryphasion. But they answered him, that there were many desert promontories in Peloponnesus, if they were minded to put the city to charges in taking them in. But there appeared unto Demosthenes a great difference between this place and other places; because there was here a haven, and the Messenians, the ancient inhabitants thereof, speaking the same language the Lacedæmonians did, would both be able to annoy them much by excursions thence, and be also faithful guardians of the place. 4. When he could not prevail, neither with the generals nor with the soldiers, having also at last communicated the same to the captains of companies, he gave it over; till at last, the weather not serving to be gone, there came upon the soldiers lying idle a desire, occasioned by dissension, to wall in the place of their own accord. And falling in hand with the work, they performed it, not with iron tools to hew stone, but picked out such stones as they thought good, and afterwards placed them as they would severally fit. And for mortar, where it needed, for want of vessels they carried it on their backs, with their bodies inclining forward so as it might best lie, and their hands clasped behind to stay it from falling; making all possible haste to

prevent the Lacedæmonians, and to finish the most assailable parts before they came to succour it. For the greatest part of the place was strong by nature, and needed no fortifying at all.

Year vii. A. C. 425. Ol. 88. 3. The Lacedæmonians at home regard the taking of Pylus but lightly. The Lacedæmonian army and Agis take it more to heart.

The Lacedæmonians were [that day] celebrating a certain holiday, and when they heard the news, did set lightly by it; conceiving, that whensoever it should please them to go thither, they should find them either already gone, or easily take the place by force. Somewhat also they were retarded, by reason that their army was in Attica. The Athenians having in six days finished the wall to the land and in the places where was most need, left Demosthenes with five galleys to defend it, and with the rest hastened on in their course for Corcyra and Sicily. 6. The Peloponnesians that were in Attica, when they were advertised of the taking of Pylus, returned speedily home: for the Lacedæmonians and Agis their king took this accident of Pylus to concern their own particular. And the invasion was withal so early, corn being yet green, that the most of them were scanted with victual. The army was also much troubled with the weather, which was colder than for the season. So as for many reasons it fell out, that they returned sooner now than at other times they had done, and this invasion was the shortest: for they continued in Attica in all but fifteen days.

The Athenians take Eion in Thrace, and lose it again.

7. About the same time, Simonides an Athenian commander, having drawn a few Athenians together out of the garrisons and a number of the confederates of those parts, took the city of Eion in Thrace, a colony of the Mendæans, that was their enemy, by treason: but was presently again driven out by the Chalcideans and Bottiæans, that came to succour it: and lost many of his soldiers.

Year vii. A. C. 425. Ol. 88. 3. The Lacedæmonians by sea and land seek to recover Pylus. Demosthenes sends to call back the fleet to help him. The Lacedæmonians prepare themselves to assault the fort. year vii. A. C. 425. Ol. 88. 3. The situation of the isle of Sphacteria. The Lacedæmonians put over four hundred and twenty men of arms, besides their servants, into the isle of Sphacteria over against Pylus. year vii. A. C. 425. Ol. 88. 3.

8. When the Peloponnesians were returned out of Attica, they of the city of Sparta, and of other the neighbouring towns, went presently to the aid of Pylus; but [the rest of] the Lacedæmonians came slower on, as being newly come from the former expedition. Nevertheless they sent about to the cities of the Peloponnesus, to require their assistance with all speed at Pylus; and also to their threescore galleys that were at Corcyra: which, transported over the isthmus of Leucas, arrived at Pylus unseen of the Athenian galleys lying at Zacynthus. And by this time their army of foot was also there. Whilst the Peloponnesian galleys were coming toward Pylus, Demosthenes sent two galleys secretly to Eurymedon and the Athenian fleet at Zacynthus, in all haste, to tell them that they must come presently to him, for as much as the place was in danger to be lost. And according as Demosthenes his message imported, so the fleet made haste. The Lacedæmonians in the mean time prepared themselves to assault the fort both by sea and land; hoping easily to win it, being a thing built in haste and not many men within it. And because they expected the coming of the Athenian fleet from Zacynthus, they had a purpose, if they took not the fort before, to bar up the entries of the harbour. For the island called Sphacteria, lying just before and very near to the place, maketh the haven safe, and the entries straight; one of them, nearest to Pylus and to the Athenian fortification, admitting passage for no more but two galleys in front; and the other, which lieth against the other part of the continent, for not above eight or nine. The island, by being desert, was all wood and untrodden; in bigness, about fifteen furlongs over. Therefore they determined with their galleys thick set, and with the beak-heads outward, to stop up the entries of

the haven. And because they feared the island, lest the Athenians [putting men into it] should make war upon them from thence, they carried over men of arms into the same, and placed others likewise along the shore of the continent. For by this means the Athenians at their coming should find the island their enemy, and no means of landing in the continent. For the coast of Pylus itself without these two entries, being to the sea harbourless, would afford them no place from whence to set forth to the aid of their fellows: and they in all probability might by siege, without battle by sea or other danger, win the place; seeing there was no provision of victual within it, and that the enemy took it but on short preparation. Having thus resolved, they put over into the island their men of arms, out of every band by lot. Some also had been sent over before by turns: but they which went over now last and were left there, were four hundred and twenty, besides the Helotes that were with them. And their captain was Epitadas the son of Molobrus.

Demosthenes prepareth himself to keep the Lacedæmonians from landing on the shore. year vii. A. C. 425. Ol. 88. 3.

9. Demosthenes, when he saw the Lacedæmonians bent to assault him both from their galleys and with their army by land, prepared also to defend the place. And when he had drawn up his galleys, all that were left him, unto the land, he placed them athwart the fort; and armed the mariners that belonged to them with bucklers, though bad ones, and for the greatest part made of osiers. For they had no means in a desert place to provide themselves of arms. Those they had, they took out of a piratical boat of thirty oars and a light-horseman of the Messenians, which came by chance. And the men of arms of the Messenians were about forty, which he made use of amongst the rest. The greatest part therefore, both of armed and unarmed, he placed on the parts of the wall toward the land which were of most strength, and commanded them to make good the place against the landforces, if they assaulted it. And he himself, with sixty men of arms

chosen out of the whole number, and a few archers, came forth of the fort to the sea-side, in that part where he most expected their landing; which part was of troublesome access, and stony, and lay to the wide sea. But because their wall was there the weakest, he thought they would be drawn to adventure for that. For neither did the Athenians think they should ever have been mastered with galleys, which caused them to make the place [to the seaward] the less strong; and if the Peloponnesians should by force come to land, they made no other account but the place would be lost. Coming therefore in this part to the very brink of the sea, he put in order his men of arms; and encouraged them with words to this effect:

the oration of demosthenes. year vii. A. C. 425. Ol. 88. 3. Oration of Demosthenes.

10. “You that participate with me in the present danger, let not any of you in this extremity go about to seem wise, and reckon every peril that now besetteth us; but let him rather come up to the enemy with little circumspection and much hope, and look for his safety by that. For things that are come once to a pinch, as these are, admit not debate, but a speedy hazard. And [yet] if we stand it out, and betray not our advantages with fear of the number of the enemy, I see well enough that most things are with us. For I make account, the difficulty of their landing makes for us: which, as long as we abide ourselves, will help us: but if we retire, though the place be difficult, yet when there is none to impeach them they will land well enough. For whilst they are in their galleys, they are most easy to be fought withal; and in their disbarking being but on equal terms, their number is not greatly to be feared; for though they be many, yet they must fight but by few, for want of room to fight in. And for an army to have odds by land, is another matter than when they are to fight from galleys, where they stand in need of so many accidents to fall out opportunely from the sea. So that I think their great difficulties do but set them even with our small number.

And for you, that be Athenians, and by experience of disembarking against others know, that if a man stand it out, and do not for fear of the sowsing of a wave or the menacing approach of a galley give back of himself, he can never be put back by violence; I expect that you should keep your ground, and by fighting it out upon the very edge of the water preserve both yourselves and the fort.”

The Athenians take heart. The Lacedæmonians assault the fort by land, and seek to force landing from their galleys. year vii. A. C. 425. Ol. 88. 3. The valour of Brasidas. Brasidas swooneth by reason of his wounds. year vii. A. C. 425. Ol. 88. 3.

11. Upon this exhortation of Demosthenes the Athenians took better heart, and went down and arranged themselves close by the sea. And the Lacedæmonians came and assaulted the fort, both with their army by land, and with their fleet, consisting of three-and-forty galleys; in which was admiral Thrasymelidas the son of Cratesicles, a Spartan. And he made his approach where Demosthenes had before expected him. So the Athenians were assaulted on both sides, both by sea and by land. The Peloponnesians dividing their galleys into small numbers, because they could not come near with many at once, and resting between, assailed them by turns; using all possible valour and mutual encouragement, to put the Athenians back and gain the fort. Most eminent of all the rest was Brasidas. For having the command of a galley, and seeing other captains of galleys and steersmen, (the place being hard of access), when there appeared sometimes possibility of putting ashore, to be afraid and tender of breaking their galleys; he would cry out unto them, saying, “they did not well, for sparing of wood to let the enemy fortify in their country”: and [to the Lacedæmonians] he gave advice to force landing with the breaking of their galleys; and prayed the confederates, that in requital of many benefits they would not stick to bestow their galleys at this time upon the Lacedæmonians, and running

them ashore to use any means whatsoever to land, and to get into their hands both the men [in the isle] and the fort. 12. Thus he urged others; and having compelled the steersman of his own galley to run her ashore, he came to the ladders, but attempting to get down was by the Athenians put back; and after he had received many wounds, swooned; and falling upon the ledges of the galley, his buckler tumbled over into the sea. Which brought to land, the Athenians took up, and used afterwards in the trophy which they set up for this assault. Also the rest endeavoured with much courage to come aland; but the place being ill to land in, and the Athenians not budging, they could not do it. So that at this time fortune came so much about, that the Athenians fought from the land, Laconique land, against the Lacedæmonians in galleys; and the Lacedæmonians from their galleys fought against the Athenians, to get landing in their own now hostile territory. For at that time there was an opinion far spread, that these were rather landmen and expert in a battle of foot; and that in maritime and naval actions the other excelled.

The Lacedæmonians, after three days' assault without effect, give over that course. The Athenian fleet return from Zacynthus to aid the Athenians in Pylus. year vii. A. C. 425. Ol. 88. 3. The Athenians overcome the Peloponnesian fleet in the haven of Pylus. year vii. A. C. 425. Ol. 88. 3. The Athenians getting the victory besiege the men cut off from the army in the island.

13. This day then and a part of the next, they made sundry assaults; and after that gave over. And the third day they sent out some galleys to Asine, for timber wherewith to make engines: hoping with engines to take that part of the wall that looketh into the haven; which, though it were higher, yet the landing to it was easier. In the meantime arrive the forty Athenian galleys from Zacynthus; for there were joined with them certain galleys of the garrison of Naupactus, and four of Chios. And when they saw both the

continent and the island full of men of arms, and that the galleys that were in the haven would not come forth; not knowing where to cast anchor they sailed for the present to the isle Prote, being near and desert; and there lay for that night. The next day, after they had put themselves in order, they put to sea again with purpose to offer them battle, if the other would come forth into the wide sea against them; if not, to enter the haven upon them. But the Peloponnesians neither came out against them, nor had stopped up the entries of the haven, as they had before determined; but lying still on the shore manned out their galleys, and prepared to fight, if any entered, in the haven itself, which was no small one. 14. The Athenians understanding this, came in violently upon them at both the mouths of the haven, and most of the Lacedæmonian galleys, which were already set out and opposed them, they charged and put to flight: and in following the chase, which was but short, they brake many of them, and took five, whereof one with all her men in her: and they fell in also with them that fled to the shore. And the galleys which were but in manning out, were torn and rent before they could put off from the land. Others they tied to their own galleys, and towed them away empty. Which the Lacedæmonians perceiving, and extremely grieved with the loss, because their fellows were hereby intercepted in the island, came in with their aid [from the land]; and entering armed into the sea took hold of the galleys with their hands, to have pulled them back again: every one conceiving the business to proceed the worse, wherein himself was not present. So there arose a great affray about the galleys, and such as was contrary to the manner of them both. For the Lacedæmonians, out of eagerness and out of fear, did (as one may say) nothing else but make a sea-fight from the land; and the Athenians, who had the victory and desired to extend their present fortune to the utmost, made a land-fight from their galleys. But at length, having wearied and wounded each other, they fell asunder; and the Lacedæmonians recovered all their galleys, save only

those which were taken at the first onset. When they were on both sides retired to their camps, the Athenians erected a trophy, delivered to the enemy their dead, and possessed the wreck; and immediately went round the island with their galleys, keeping watch upon it as having intercepted the men within it. The Peloponnesians in the meantime, that were in the continent and were by this time assembled there with their succours from all parts of Peloponnesus, remained upon the place at Pylus.

The magistrates of Sparta come to view the state of the camp, and conclude there to send to Athens about peace. Truce between the armies, till ambassadors might be sent to Athens. year vii. A. C. 425. Ol. 88. 3.

15. As soon as the news of what had passed was related at Sparta, they thought fit, in respect the loss was great, to send the magistrates down to the camp, to determine, upon view of the state of their present affairs there, what they thought requisite to be done. These, when they saw there was no possibility to relieve their men, and were not willing to put them to the danger either of suffering by famine or of being forced by multitude, concluded amongst themselves to take truce with the Athenian commanders, as far as concerned the particulars of Pylus, if they also would be content; and to send ambassadors to Athens about agreement, and to endeavour to fetch off their men as soon as they could. 16. The Athenian commanders accepting the proposition, the truce was made in this manner:

the articles of the truce. year vii. A. C. 425. Ol. 88. 3. The articles of the truce.

That the Lacedæmonians should deliver up, not only those galleys wherein they fought, but also bring to Pylus and put into the Athenians' hands whatsoever vessels of the long form of building were anywhere else in Laconia: that they should not make any assault upon the fort, neither by sea nor land. — That the Athenians should permit the Lacedæmonians that were in the continent, to send over to those in the island a portion of ground

corn agreed on, to wit, to every one two Attic chœnicks of meal, and two cotyles of wine, and a piece of flesh; and to every of their servants, half that quantity: that they should send this the Athenians looking on; and not send over any vessel by stealth. — That the Athenians should nevertheless continue guarding of the island, provided that they landed not in it; and should not invade the Peloponnesian army neither by land nor sea. — That if either side transgressed in any part thereof, the truce was then immediately to be void; otherwise to hold good till the return of the Lacedæmonian ambassadors from Athens. — That the Athenians should convoy them in a galley unto Athens and back. — That at their return the truce should end, and the Athenians should restore them their galleys in as good estate as they had received them.

Thus was the truce made, and the galleys were delivered to the Athenians, to the number of about three score: and the ambassadors were sent away; who arriving at Athens, said as followeth:

the oration of the lacedæmonians. year vii. A. C. 425. Ol. 88. 3. Oration of the Lacedæmonians. year vii. A. C. 425. Ol. 88. 3. Oration of the Lacedæmonians.

17. “Men of Athens, the Lacedæmonians have sent us hither concerning our men in the island, to see if we can persuade you to such a course, as being most profitable for you, may, in this misfortune, be the most honourable for us that our present condition is capable of. We will not be longer in discourse than standeth with our custom, being the fashion with us, where few words suffice, there indeed not to use many; but yet to use more, when the occasion requireth that by words we should make plain that which is to be done in actions of importance. But the words we shall use, we pray you to receive not with the mind of an enemy, nor as if we went about to instruct you as men ignorant; but for a remembrance to you of what you know, that you may deliberate wisely therein. It is now in your power

to assure your present good fortune with reputation, holding what you have, with the addition of honour and glory besides: and to avoid that which befalleth men upon extraordinary success; who through hope aspire to greater fortune, because the fortune they have already came unhopd for. Whereas they that have felt many changes of both fortunes, ought indeed to be most suspicious of the good. So ought your city, and ours especially, upon experience in all reason to be. 18. Know it, by seeing this present misfortune fallen on us; who being of greatest dignity of all the Grecians, come to you to ask that, which before we thought chiefly in our own hands to give. And yet we are not brought to this through weakness, nor through insolence upon addition of strength; but because it succeeded not with the power we had as we thought it should; which may as well happen to any other as to ourselves. So that you have no reason to conceive, that for your power and purchases, fortune also must be therefore always yours. Such wise men as safely reckon their prosperity in the account of things doubtful, do most wisely also address themselves towards adversity; and not think that war will so far follow and no further, as one shall please more or less to take it in hand, but rather so far as fortune shall lead it. Such men also seldom miscarrying, because they be not puffed up with the confidence of success, choose then principally to give over, when they are in their better fortune. And so it will be good for you, men of Athens, to do with us; and not, if rejecting our advice you chance to miscarry, (as many ways you may), to have it thought hereafter that all your present successes were but mere fortune: whereas, on the contrary, it is in your hands without danger to leave a reputation to posterity both of strength and wisdom.

Year vii. A. C. 425. Ol. 88. 3. Oration of the Lacedæmonians. year vii. A. C. 425. Ol. 88. 3.

19. “The Lacedæmonians call you to a peace and end of the war; giving you peace, and alliance, and much other friendship and mutual familiarity;

requiring for the same [only] those their men that are in the island; though also we think it better for both sides, not to try the chance of war, whether it fall out that by some occasion of safety offered they escape by force, or being expugned by siege should be more in your power than they be. For we are of this mind, that great hatred is most safely cancelled, not when one that having beaten his enemy and gotten much the better in the war, brings him through necessity to take an oath, and to make peace on unequal terms; but when having it in his power lawfully so to do if he please, he overcome him likewise in goodness, and, contrary to what he expects, be reconciled to him on moderate conditions. For in this case, his enemy being obliged, not to seek revenge as one that had been forced, but to requite his goodness, will, for shame, be the more inclined to the conditions agreed on. And naturally, to those that relent of their own accord, men give way reciprocally with content; but against the arrogant, they will hazard all, even when in their own judgments they be too weak. 20. But for us both, if ever it were good to agree, it is surely so at this present, and before any irreparable accident be interposed. Whereby we should be compelled, besides the common, to bear you a particular eternal hatred; and you be deprived of the commodities we now offer you. Let us be reconciled while matters stand undecided, and whilst you have gained reputation and our friendship, and we not suffered dishonour, and but indifferent loss. And we shall not only ourselves prefer peace before war, but also give a cessation of their miseries to all the rest of the Grecians; who will acknowledge it rather from you, than us. For they make war, not knowing whether side begun; but if an end be made, which is now for the most part in your own hands, the thanks will be yours. And by decreeing the peace, you may make the Lacedæmonians your sure friends, inasmuch as they call you to it, and are therein not forced, but gratified. Wherein consider how many commodities

are like to ensue. For if we and you go one way, you know the rest of Greece, being inferior to us, will honour us in the highest degree.”

The insolent demand of the people of Athens, by the advice of Cleon. year vii. A. C. 425. Ol. 88. 3.

21. Thus spake the Lacedæmonians; thinking that in times past the Athenians had coveted peace, and been hindered of it by them; and that being now offered, they would gladly accept of it. But they, having these men intercepted in the island, thought they might compound at pleasure, and aspired to greater matters. To this they were set on for the most part by Cleon the son of Cleænetus, a popular man at that time, and of greatest sway with the multitude. He persuaded them to give this answer: “That they in the island ought first to deliver up their arms, and come themselves to Athens; and when they should be there, if the Lacedæmonians would make restitution of Nisæa, and Pegæ, and Trœzen, and Achaia”, — the which they had not won in war, but had received by former treaty, when the Athenians being in distress, and at that time in more need of peace than now [yielded them up into their hands]— “then they should have their men again, and peace should be made for as long as they both should think good”.

The Lacedæmonians desire to speak before a private committee.

22. To this answer they replied nothing; but desired that commissioners might be chosen to treat with them, who by alternate speaking and hearing, might quietly make such an agreement as they could persuade each other unto. But then Cleon came mightily upon them, saying, he knew before that they had no honest purpose; and that the same was now manifest, in that they refused to speak before the people, but sought to sit in consultation only with a few: and willed them, if they had aught to say that was real, to speak it before them all. But the Lacedæmonians finding that although they had a mind to make peace with them upon this occasion of adversity, yet it

would not be fit to speak in it before the multitude, lest speaking and not obtaining they should incur calumny with their confederates; and seeing withal that the Athenians would not grant what they sued for upon reasonable conditions, they went back again without effect.

The ambassadors return without effect, and the truce endeth. The Athenians cavil, and keep the galleys of the Lacedæmonians. year vii. A. C. 425. Ol. 88. 3. The war at Pylus goes on.

23. Upon their return, presently the truce at Pylus was at an end; and the Lacedæmonians, according to agreement, demanded restitution of their galleys. But the Athenians, laying to their charge an assault made upon the fort, contrary to the articles, and other matters of no great importance, refused to render them: standing upon this, that it was said that the accord should be void upon whatsoever the least transgression of the same. But the Lacedæmonians denying it, and protesting this detention of their galleys for an injury, went their ways and betook themselves to the war. So the war at Pylus was on both sides renewed with all their power: the Athenians went every day about the island with two galleys, one going one way, another another way, and lay at anchor about it every night with their whole fleet, except on that part which lieth to the open sea; and that, only when it was windy; (from Athens also there came a supply of thirty galleys more, to guard the island; so that they were in the whole threescore and ten): and the Lacedæmonians made assaults upon the fort, and watched every opportunity that should present itself to save their men in the island.

The Syracusians and Athenians fight in the strait between Messana and Rhegium. year vii. A. C. 425. Ol. 88. 3.

24. Whilst these things passed, the Syracusians and their confederates in Sicily, adding to those galleys that lay in garrison at Messana the rest of the fleet which they had prepared, made war out of Messana; instigated thereto chiefly by the Locrians, as enemies to the Rhegians, whose territory they

had also invaded with their whole forces by land: and seeing the Athenians had but a few galleys present, and hearing that the greater number which were to come to them were employed in the siege of the island, desired to try with them a battle by sea. For if they could get the better with their navy, they hoped, lying before Rhegium both with their land-forces on the field side and with their fleet by sea, easily to take it into their hands, and thereby strengthen their affairs. For Rhegium a promontory of Italy, and Messina in Sicily lying near together, they might both hinder the Athenians from lying at anchor there against them, and make themselves masters of the strait. This strait is the sea between Rhegium and Messina, where Sicily is nearest to the continent; and is that which is called Charybdis, where Ulysses is said to have passed through. Which, for that it is very narrow, and because the sea falleth in there from two great mains, the Tyrrhene and Sicilian, and is rough, hath therefore not without good cause been esteemed dangerous.

The Syracusians and Athenians fight at sea. year vii. A. C. 425. Ol. 88. 3.

25. In this strait then the Syracusians and their confederates, with somewhat more than thirty galleys, were constrained in the latter end of the day to come to a sea-fight, having been drawn forth about the passage of a certain boat to undertake sixteen galleys of Athens and eight of Rhegium: and being overcome by the Athenians, fell off with the loss of one galley, and went speedily each [side] to their own camp at Messina and Rhegium; and the night overtook them in the action. After this the Locrians departed out of the territory of the Rhegians; and the fleet of the Syracusians and their confederates came together to an anchor at Peloris, and had their land-forces by them. But the Athenians and Rhegians came up to them, and finding their galleys empty of men fell in amongst them; and by means of a grapnel cast into one of their galleys they lost that galley, but the men swam out. Upon this the Syracusians went aboard, and whilst they were towed

along the shore towards Messana, the Athenians came up to them again; and the Syracusians opening themselves, charged first and sunk another of their galleys. So the Syracusians passed on to the port of Messana, having had the better in their passage by the shore and in the sea-fight, which were both together in such manner as is declared.

The Messanians war on the city of Naxos, and receive a great loss. year vii. A. C. 425. Ol. 88. 3. The Athenians and Leontines attempt to take Messana.

The Athenians, upon news that Camarina should by Archias and his complices be betrayed to the Syracusians, went thither. In the meantime the Messanians, with their whole power by land and also with their fleet, warred on Naxos, a Chalcidique city and their borderer. The first day having forced the Naxians to retire within their walls, they spoiled their fields; the next day they sent their fleet about into the river Acesine, which spoiled the country [as it went up the river]; and with their landforces assaulted the city. In the meantime many of the Siculi, mountaineers, came down to their assistance against the Messanians: which when they of Naxos perceived, they took heart, and encouraging themselves with an opinion that the Leontines, and all the rest of the Grecians their confederates, had come to succour them, sallied suddenly out of the city and charged upon the Messanians, and put them to flight with the slaughter of a thousand of their soldiers; and the rest hardly escaping home. For the barbarians fell upon them, and slew the most part of them in the highways. And the galleys that lay at Messana, not long after divided themselves, and went to their several homes. Hereupon the Leontines and their confederates, together with the Athenians, marched presently against Messana, as being now weakened; and assaulted it, the Athenians with their fleet by the haven, and the land-forces at the wall to the field. But the Messanians, and certain Locrians with Demoteles, who after this loss had been left there in garrison, issuing forth

and falling suddenly upon them, put a great part of the Leontines' army to flight, and slew many. But the Athenians seeing that, disembarked and relieved them; and coming upon the Messanians now in disorder, chased them again into the city. Then they erected a trophy, and put over to Rhegium. After this, the Grecians of Sicily warred one upon another without the Athenians.

The Athenians much troubled to watch the island. year vii. A. C. 425. Ol. 88. 3. The shift of the Lacedæmonians to relieve the besieged with victual. year vii. A. C. 425. Ol. 88. 3.

26. All this while the Athenians at Pylus besieged the Lacedæmonians in the island; and the army of the Peloponnesians in the continent remained still upon the place. This keeping of watch was exceedingly painful to the Athenians, in respect of the want they had both of corn and water: for there was no well but one, and that was in the fort itself of Pylus, and no great one. And the greatest number turned up the gravel, and drank such water as they were like to find there. They were also scant of room for their camp; and their galleys not having place to ride in, they were forced by turns, some to stay ashore, and others to take their victual and lie off at anchor. But their greatest discouragement was, the time which they had stayed there longer than they had thought to have done; for they thought to have famished them out in a few days, being in a desert island and having nothing to drink but salt water. The cause hereof were the Lacedæmonians, who had proclaimed that any man that would, should carry in meal, wine, cheese, and all other esculents necessary for a siege, into the island, appointing for the same a great reward of silver: and if any Helot should carry in any thing, they promised him liberty. Hereupon divers with much danger imported victual; but especially the Helotes, who putting off from all parts of Peloponnessus, wheresoever they chanced to be, came in at the parts of the island that lay to the wide sea. But they had a care above all to take such a time as to be brought in with the wind. For when it blew from

the sea, they could escape the watch of the galleys easily: for they could not then lie round about the island at anchor. And the Helotes were nothing tender in putting ashore; for they ran their galleys on ground, valued at a price in money: and the men of arms also watched at all the landing places of the island. But as many as made attempt when the weather was calm, were intercepted. There were also such as could dive, that swam over into the island through the haven, drawing after them in a string bottles filled with poppy tempered with honey, and pounded linseed: whereof some at the first passed unseen, but were afterwards watched. So that on either part they used all possible art: one side to send over food, the other to apprehend those that carried it.

C. 425. Ol. 88. 4. The Athenians are angry that their army is detained so long in the siege of the island. year vii. A. C. 425. Ol. 88. 4. Cleon to avoid the envy of hindering the peace, engageth himself, ere he was aware, to fetch those that were besieged in the island home to Athens. Cleon undertaketh to fetch those in the island prisoners to Athens. year vii. A. C. 425. Ol. 88. 4. Cleon taken at his word, would have declined the employment, but cannot. A glorious boast of Cleon well taken. year vii. A. C. 425. Ol. 88. 4.

27. The people of Athens being advertised of the state of their army, how it was in distress, and that victual was transported into the island, knew not what they should do to it, and feared lest winter should overtake them in their siege; fearing not only that to provide them of necessaries about Peloponnesus, and in a desert place withal, would be a thing impossible, but also that they should be unable to send forth so many things as were requisite, though it were summer; and again, that the parts thereabout being without harbour, there would be no place to lie at anchor in against them; but that the watch there ceasing of itself, the men would by that means escape, or in some foul weather be carried away in the same boats that

brought them meat. But that which they feared most was, that the Lacedæmonians seemed to have some assurance of them already, because they sent no more to negotiate about them. And they repented now that they had not accepted of the peace. But Cleon knowing himself to be the man suspected for hindering the agreement, said, that they who brought the news reported not the truth. Whereupon, they that came thence advising them, if they would not believe it, to send to view the estate of the army, he and Theogenes were chosen by the Athenians to view it. But when he saw that he must of force either say as they said whom he before calumniated, or saying the contrary be proved a liar: he advised the Athenians, seeing them inclined of themselves to send thither greater forces than they had before thought to do, that it was not fit to send to view the place, nor to lose their opportunity by delay; but if the report seemed unto them to be true, they should make a voyage against those men: and glanced at Nicias the son of Niceratus, then general, upon malice and with language of reproach: saying it was easy, if the leaders were men, to go and take them there in the island; and that himself, if he had the command, would do it. 28. But Nicias, seeing the Athenians to be in a kind of tumult against Cleon, for that when he thought it so easy a matter he did not presently put it in practice; and seeing also he had upbraided him, willed him to take what strength he would that they could give him, and undertake it. Cleon supposing at first that he gave him this leave but in words, was ready to accept it; but when he knew he would give him the authority in good earnest, then he shrunk back; and said, that not he, but Nicias was general; being now indeed afraid, and hoping that he durst not have given over the office to him. But then Nicias again bade him do it, and gave over his command [to him] for so much as concerned Pylus; and called the Athenians to witness it. They, (as is the fashion of the multitude), the more Cleon declined the voyage and went back from his word, pressed Nicias so much the more to resign his power to

him, and cried out upon Cleon to go. Insomuch as not knowing how to disengage himself of his word, he undertook the voyage; and stood forth, saying, that he feared not the Lacedæmonians, and that he would not carry any man with him out of the city, but only the Lemnians and Imbrians that then were present, and those targettiers that were come to them from Ænus, and four hundred archers out of other places: and with these he said, added to the soldiers that were at Pylus already, he would within twenty days either fetch away the Lacedæmonians alive, or kill them upon the place. This vain speech moved amongst the Athenians some laughter, and was heard with great content of the wiser sort. For of two benefits, the one must needs fall out; either to be rid of Cleon, (which was their greatest hope), or if they were deceived in that, then to get those Lacedæmonians into their hands.

The reason why Demosthenes durst not land in the island to subdue the besieged by fight. year vii. A. C. 425. Ol. 88. 4. The wood of the island burnt by accident. Cleon arriveth at Pylus.

29. Now when he had dispatched with the assembly, and the Athenians had by their voices decreed him the voyage, he joined unto himself Demosthenes, one of the commanders at Pylus, and presently put to sea. He made choice of Demosthenes for his companion, because he heard that he also of himself had a purpose to set his soldiers aland in the isle. For the army having suffered much by the straitness of the place, and being rather the besieged than the besieger, had a great desire to put the matter to the hazard of a battle: confirmed therein the more, for that the island had been burnt. For having been for the most part wood, and (by reason it had lain ever desert) without path, they were before [the more] afraid, and thought it the advantage of the enemy; for assaulting them out of sight, they might annoy a very great army that should offer to come aland. For their errors being in the wood, and their preparation could not so well have been

discerned: whereas all the faults of their own army should have been in sight: so that the enemy might have set upon them suddenly, in what part soever they had pleased; because the onset had been in their own election. Again, if they should by force come up to fight with the Lacedæmonians at hand in the thick woods, the fewer and skilful of the ways, he thought, would be too hard for the many and unskilful. Besides, their own army being great it might receive an overthrow before they could know of it; because they could not see where it was needful to relieve one another. 30. These things came into his head especially from the loss he received in Ætolia; which in part also happened by occasion of the woods. But the soldiers, for want of room, having been forced to put in at the outside of the island to dress their dinners with a watch before them, and one of them having set fire on the wood, [it burnt on by little and little], and the wind afterwards rising, the most of it was burnt before they were aware. By this accident, Demosthenes the better discerning that the Lacedæmonians were more than he had imagined, having before by victual sent unto them thought them not so many, did now prepare himself for the enterprise, as a matter deserving the Athenians' utmost care, and as having better commodity of landing in the island than before he had; and both sent for the forces of such confederates as were near, and put in readiness every other needful thing. And Cleon, who had sent a messenger before to signify his coming, came himself also with those forces which he had required unto Pylus.

Year vii. A. C. 425. Ol. 88. 4. The Athenians invade the island:

When they were both together, first they sent a herald to the camp in the continent, to know if they would command those in the island to deliver up themselves and their arms without battle, to be held with easy imprisonment till some agreement were made touching the main war. 31. Which when

they refused, the Athenians for one day held their hands; but the next day, having put aboard upon a few galleys all their men of arms, they put off in the night, and landed a little before day on both sides of the island, both from the main and from the haven, to the number of about eight hundred men of arms; and marched upon high speed towards the foremost watch of the island. For thus the Lacedæmonians lay quartered. In this foremost watch, were about thirty men of arms: the middest and evenest part of the island, and about the water, was kept by Epitadas their captain with the greatest part of the whole number: and another part of them, which were not many, kept the last guard towards Pylus, which place to the seaward was on a cliff, and least assailable by land. For there was also a certain fort which was old, and made of chosen [not of hewn] stones; which they thought would stand them in stead in case of violent retreat. Thus they were quartered.

and kill those that were in the first and most remote watch from Pylus. year vii. A. C. 425. Ol. 88. 4. The Athenians divide themselves into many troops against the main body of the Lacedæmonian soldiers. year vii. A. C. 425. Ol. 88. 4. The fight between the Athenians and the Lacedæmonians in the middle of the island.

32. Now the Athenians presently killed those of the foremost guard, which they so ran to, in their cabins, and as they were taking arms. For they knew not of their landing; but thought those galleys had come thither to anchor in the night according to custom, as they had been wont to do. As soon as it was morning, the rest of the army also landed, out of somewhat more than seventy galleys, every one with such arms as he had, being all [that rowed] except only the Thalamii; eight hundred archers; targetiers as many; all the Messenians that came to aid them; and as many of them besides as held any place about Pylus, except only the garrison of the fort itself. Demosthenes then disposing his army by two hundred and more in a

company, and in some less, [at certain distances], seized on all the higher grounds; to the end that the enemies, compassed about on every side, might the less know what to do, or against what part to set themselves in battle, and be subject to the shot of the multitude from every part; and when they should make head against those that fronted them, be charged behind; and when they should turn to those that were opposed to their flanks, be charged at once both behind and before. And which way soever they marched, the light-armed and such as were meanliest provided of arms followed them at the back with arrows, darts, stones, and slings; who have courage enough afar off, and could not be charged, but would overcome flying, and also press the enemies when they should retire. With this design Demosthenes both intended his landing at first, and afterwards ordered his forces accordingly in the action. 33. Those that were about Epitadas, who were the greatest part of those in the island, when they saw that the foremost guard was slain and that the army marched towards them, put themselves in array, and went towards the men of arms of the Athenians with intent to charge them: for these were opposed to them in front, and the light-armed soldiers on their flanks and at their backs. But they could neither come to join with them, nor any way make use of their skill. For both the light-armed soldiers kept them off with shot from either side, and the men of arms advanced not. Where the light-armed soldiers approached nearest, they were driven back; but returning, they charged them afresh, being men armed lightly, and that easily got out of their reach by running, especially the ground being uneasy and rough by having been formerly desert; so that the Lacedæmonians in their armour could not follow them.

Year vii. A. C. 425. Ol. 88. 4. The Lacedæmonians retire to the fort, where the last guard was placed. year vii. A. C. 425. Ol. 88. 4.

The Athenians assault them there. Some of the Athenians climb up behind the Lacedæmonians unseen, and appear at their backs.

year vii. A. C. 425. Ol. 88. 4.

34. Thus for a little while they skirmished one against another afar off. But when the Lacedæmonians were no longer able to run out after them where they charged, these light-armed soldiers seeing them less earnest in chasing them, and taking courage chiefly from their sight, as being many times their number, and having also been used to them so much as not to think them now so dangerous as they had done, for that they had not received so much hurt at their hands as their subdued minds, because they were to fight against the Lacedæmonians, had at their first landing prejudged, contemned them; and with a great cry ran all at once upon them, casting stones, arrows, and darts, as to every man came next to hand. Upon this cry and assault they were much terrified, as not accustomed to such kind of fight; and withal a great dust of the woods lately burnt mounted into the air; so that by reason of the arrows and stones, that together with the dust flew from such a multitude of men, they could hardly see before them. Then the battle grew sore on the Lacedæmonians' side: for their jacks now gave way to the arrows, and the darts that were thrown stuck broken in them; so as they could not handle themselves, as neither seeing before them, nor hearing any direction given them for the greater noise of the enemy; but danger being on all sides, were hopeless to save themselves upon any side by fighting. 35. In the end, many of them being now wounded, for that they could not shift their ground, they made their retreat in close order to the last guard of the island, and to the watch that was there. When they once gave ground, then were the light-armed soldiers much more confident than before, and pressed upon them with a mighty noise: and as many of the Lacedæmonians as they could intercept in their retreat, they slew; but the most of them recovered the fort, and together with the watch of the same put themselves in order to defend it in all parts that were subject to assault. The Athenians following could not now encompass and hem them in, for the strong situation of the place; but assaulting them in the face, sought only

how to put them from the wall. And thus they held out a long time, the better part of a day, either side tired with the fight, and with thirst, and with the sun: one endeavouring to drive the enemy from the top, the other to keep their ground. And the Lacedæmonians defended themselves easilier now than before, because they were not now encompassed upon their flanks. 36. When there was no end of the business, the captain of the Messenians said unto Cleon and Demosthenes, that they spent their labour there in vain: and that if they would deliver unto him a part of the archers and light-armed soldiers, to get up by such a way as he himself should find out, and come behind upon their backs, he thought the entrance might be forced. And having received the forces he asked, he took his way from a place out of sight to the Lacedæmonians, that he might not be discovered; making his approach under the cliffs of the island, where they were continual; in which part, trusting to the natural strength thereof, they kept no watch; and with much labour and hardly unseen, came behind them: and appearing suddenly from above at their backs, both terrified the enemies with the sight of what they expected not, and much confirmed the Athenians with the sight of what they expected. And the Lacedæmonians, being now charged with their shot both before and behind, were in the same case (to compare small matters with great) that they were in at Thermopylæ. For then they were slain by the Persians, shut up on both sides in a narrow path: and these now being charged on both sides, could make good the place no longer; but fighting few against many, and being weak withal for want of food, were at last forced to give ground: and the Athenians by this time were also masters of all the entrances.

The Lacedæmonians yield. year vii. A. C. 425. Ol. 88 4. The Lacedæmonians yield up their arms, and are carried prisoners to Athens. The number of the slain, and of the prisoners. year vii. A. C. 425. Ol. 88. 4.

37. But Cleon and Demosthenes, knowing that the more they gave back, the faster they would be killed by their army, staid the fight and held in the soldiers: with desire to carry them alive to Athens, in case their spirits were so much broken and their courage abated by this misery, as upon proclamation made they would be content to deliver up their arms. So they proclaimed, that they should deliver up their arms and themselves to the Athenians, to be disposed of as to them should seem good. 38. Upon hearing hereof the most of them threw down their bucklers, and shook their hands above their heads; signifying their acceptation of what was proclaimed. Whereupon a truce was made, and they came to treat, Cleon and Demosthenes of one side, and Styphon the son of Pharax on the other side. For of them that had command there, Epitadas, who was the first, was slain; and Hippagretes, who was chosen to succeed him, lay amongst the dead, though yet alive; and this man was the third to succeed in the command by the law, in case the others should miscarry. Styphon, and those that were with him, said they would send over to the Lacedæmonians in the continent, to know what they there would advise them to. But the Athenians letting none go thence, called for heralds out of the continent: and the question having been twice or thrice asked, the last of the Lacedæmonians that came over from the continent brought them this answer: The Lacedæmonians bid you take advice touching yourselves, such as you shall think good; provided you do nothing dishonourably. Whereupon having consulted, they yielded up themselves and their arms. And the Athenians attended them that day and the night following with a watch: but the next day, after they had set up their trophy in the island, they prepared to be gone; and committed the prisoners to the custody of the captains of the galleys. And the Lacedæmonians sent over a herald, and took up the bodies of their dead. The number of them that were slain and taken alive in the island, was thus. There went over into the island in all, four hundred and

twenty men of arms; of these were sent away alive, three hundred wanting eight; and the rest slain. Of those that lived, there were of the city itself of Sparta, one hundred and twenty. Of the Athenians there died not many; for it was no standing fight.

39. The whole time of the siege of these men in the island, from the fight of the galleys to the fight in the island, was seventy-two days; of which for twenty days victual was allowed to be carried to them, that is to say, in the time that the ambassadors were away that went about the peace; in the rest, they were fed by such only as put in thither by stealth; and yet there was both corn and other food left in the island. For their captain Epitadas had distributed it more sparingly than he needed to have done. So the Athenians and the Peloponnesians departed from Pylus, and went home both of them with their armies. And the promise of Cleon, as senseless as it was, took effect: for within twenty days he brought home the men as he had undertaken.

The yielding of the Lacedæmonians was contrary to the opinion had of their virtue. year vii. A. C. 425. Ol. 88. 4.

40. Of all the accidents of this war, this same fell out the most contrary to the opinion of the Grecians. For they expected that the Lacedæmonians should never, neither by famine nor whatsoever other necessity, have been constrained to deliver up their arms, but have died with them in their hands, fighting as long as they had been able: and would not believe that those that yielded, were like to those that were slain. And when one afterwards of the Athenian confederates asked one of the prisoners, by way of insulting, if they which were slain were valiant men: he answered, that a spindle (meaning an arrow) deserved to be valued at a high rate, if it could know what was a good man; signifying that the slain were such as the stones and arrows chanced to light on.

The Lacedæmonian prisoners kept in bonds at Athens to be made use of in making the peace, or else upon the first invasion of Attica to be slain. year vii. A. C. 425. Ol. 88. 4.

41. After the arrival of the men, the Athenians ordered that they should be kept in bonds till there should be made some agreement; and if before that the Peloponnesians should invade their territory, then to bring them forth and kill them. They took order also [in the same assembly] for the settling of the garrison at Pylus. And the Messenians of Naupactus, having sent thither such men of their own as were fittest for the purpose, as to their native country; (for Pylus is in that country which belonged once to the Messenians); infested Laconia with robberies, and did them much other mischief, as being of the same language. The Lacedæmonians, not having in times past been acquainted with robberies and such war as that, and because their Helotes ran over to the enemy, fearing also some greater innovation in the country, took the matter much to heart; and though they would not be known of it to the Athenians, yet they sent ambassadors, and endeavoured to get the restitution both of the fort of Pylus and of their men. But the Athenians aspired to greater matters; and the ambassadors, though they came often about it, yet were always sent away without effect. These were the proceedings at Pylus.

Nicias warreth in the territory of Corinth with good fortune. year vii. A. C. 425. Ol. 88. 4. The Corinthians hearing of their coming, assemble their forces to hinder their landing. year vii. A. C. 425. Ol. 88. 4. The Athenians and Corinthians fight. year vii. A. C. 425. Ol. 88. 4. The Corinthians are put to flight. year vii. A. C. 425. Ol. 88. 4.

42. Presently after this, the same summer, the Athenians with eighty galleys, two thousand men of arms of their own city, and two hundred horse in boats built for transportation of horses, made war upon the territory of Corinth. There went also with them Milesians, Andrians, and Carystians, of

their confederates. The general of the whole army was Nicias the son of Niceratus, with two others in commission with him. Betimes in a morning they put in at a place between Chersonesus and Rheitus, on that shore above which standeth the hill Solygeius, whereon the Dorians in old time sat down to make war on the Corinthians in the city of Corinth, that were then Æolians, and upon which there standeth now a village, called also Solygeia. From the shore where the galleys came in, this village is distant twenty furlongs, and the city of Corinth sixty, and the isthmus twenty. The Corinthians, having long before from Argos had intelligence that an army of the Athenians was coming against them, came all of them with their forces to the isthmus, save only such as dwelt without the isthmus and five hundred garrison soldiers absent in Ambracia and Leucadia: all the rest of military age came forth to attend the Athenians, where they should put in. But when the Athenians had put to shore in the night unseen, and that advertisement thereof was given them by signs put up into the air, they left the one half of their forces in Cenchreia, lest the Athenians should go against Crommyon: and with the other half made haste to meet them. 43. Battus, one of their commanders, (for there were two of them present at the battle), with one squadron went toward the village of Solygeia, being an open one, to defend it; and Lycophron with the rest charged the enemy. And first they gave the onset on the right wing of the Athenians, which was but newly landed, before Chersonesus: and afterwards they charged likewise the rest of the army. The battle was hot, and at hand-strokes. And the right wing of the Athenians and Carystians (for of these consisted their utmost files) sustained the charge of the Corinthians: and with much ado drave them back. But as they retired they came up (for the place was all rising ground) to a dry wall, and from thence, being on the upper ground, threw down stones at them; and after having sung the Pæan, came again close to them; whom when the Athenians abode, the battle was again at handstrokes.

But a certain band of Corinthians that came in to the aid of their own left wing, put the right wing of the Athenians to flight, and chased them to the sea-side: but then from their galleys they turned head again, both the Athenians and the Carystians. The other part of their army continued fighting on both sides, especially the right wing of the Corinthians, where Lycophron fought against the left wing of the Athenians: for they expected that the Athenians would attempt to go to Solygeia. 44. So they held each other to it a long time, neither side giving ground. But in the end (for that the Athenians had horsemen, which did them great service, seeing the other had none) the Corinthians were put to flight, and retired to the hill: where they laid down their arms and descended no more, but there rested. In this retreat, the greatest part of their right wing was slain, and amongst others Lycophron, one of the generals. But the rest of the army being in this manner neither much urged, nor retiring in much haste, when they could do no other, made their retreat up the hill and there sat down. The Athenians seeing them come no more down to battle, rifled the dead bodies of the enemy, and took up their own; and presently erected a trophy on the place. That half of the Corinthians that lay at Cenchreia, to watch the Athenians that they went not against Crommyon, saw not this battle for the hill Oneius; but when they saw the dust, and so knew what was in hand, they went presently to their aid. So did also the old men of Corinth from the city, when they understood how the matter had succeeded. The Athenians, when all these were coming upon them together, imagining them to have been the succours of the neighbouring cities of Peloponnesus, retired speedily to their galleys; carrying with them the booty, and the bodies of their dead; all save two, which not finding they left. Being aboard, they crossed over to the islands on the other side: and from thence sent a herald, and fetched away those two dead bodies which they left behind. There were slain in this

battle, Corinthians, two hundred and twelve; and Athenians, somewhat under fifty.

The Athenians waste other parts of the same coast. year vii. A. C. 425. Ol. 88. 4.

45. The Athenians putting off from the islands, sailed the same day to Crommyon in the territory of Corinth, distant from the city a hundred and twenty furlongs: where anchoring, they wasted the fields and stayed all that night. The next day they sailed along the shore, first to the territory of Epidaurus, whereinto they made some little incursion from their galleys: and then went to Methone, between Epidaurus and Trœzen; and there took in the isthmus of Chersonesus with a wall, and placed a garrison in it, which afterwards exercised robberies in the territories of Trœzen, Halias, and Epidaurus. And when they had fortified this place, they returned home with their fleet.

The execution of the Corcyræan banished men, and end of that sedition. Truce granted to the banished men, with condition that the same should be void if any of them offered to make an escape. The fraud of the Corcyræans to entrap the banished men. year vii. A. C. 425. Ol. 88. 4. The truce broken and the outlaws put into the hands of the commons. The Corcyræans take the outlaws out by scores, and make them pass the pikes. The outlaws refuse to go out to execution. year vii. A. C. 425. Ol. 88. 4. They kill themselves. The miserable end of the banished men, which was also the end of the sedition.

46. About the same time that these things were in doing, Eurymedon and Sophocles, after their departure from Pylus with the Athenian fleet towards Sicily, arriving at Corcyra, joined with those of the city, and made war upon those Corcyræans which lay encamped upon the hill Istone, and which after the sedition had come over, and both made themselves masters of the field and much annoyed the city: and having assaulted their fortification, took it.

But the men all in one troop escaped to a certain high ground, and thence made their composition; which was this: that they should deliver up the strangers that aided them; and that they themselves, having rendered their arms, should stand to the judgment of the people of Athens. Hereupon the generals granted them truce, and transported them to the island of Ptychia, to be there in custody till the Athenians should send for them; with this condition, that if any one of them should be taken running away, then the truce to be broken for them all. But the patrons of the commons of Corcyra, fearing lest the Athenians would not kill them when they came thither, devise against them this plot. To some few of those in the island they secretly send their friends, and instruct them to say, as if forsooth it were for good will, that it was their best course with all speed to get away; and withal, to offer to provide them of a boat; for that the Athenian commanders intended verily to deliver them to the Corcyræan people. 47. When they were persuaded to do so, and that a boat was treacherously prepared, as they rowed away they were taken; and the truce being now broken, were all given up into the hands of the Corcyræans. It did much further this plot, that to make the pretext seem more serious and the agents in it less fearful, the Athenian generals gave out that they were nothing pleased that the men should be carried home by others, whilst they themselves were to go into Sicily, and the honour of it be ascribed to those that should convoy them. The Corcyræans having received them into their hands, imprisoned them in a certain edifice: from whence afterwards they took them out by twenty at a time, and made them pass through a lane of men of arms, bound together and receiving strokes and thrusts from those on either side, according as any one espied his enemy. And to hasten the pace of those that went slowliest on, others were set to follow them with whips. 48. They had taken out of the room in this manner, and slain, to the number of three-score, before they that remained knew it; who thought they were but removed, and carried to

some other place. But when they knew the truth, some or other having told them, they then cried out to the Athenians, and said, that if they would themselves kill them they should do it; and refused any more to go out of the room: nor would suffer, they said, as long as they were able, any man to come in. But neither had the Corcyræans any purpose to force entrance by the door: but getting up to the top of the house uncovered the roof, and threw tiles and shot arrows at them. They in prison defended themselves as well as they could, but many also slew themselves with the arrows shot by the enemy, by thrusting them into their throats, and strangled themselves with the cords of certain beds that were in the room, and with ropes made of their own garments rent in pieces. And having continued most part of the night (for night overtook them in the action) partly strangling themselves by all such means as they found, and partly shot at from above, they [all] perished. When day came, the Corcyræans laid them one across another in carts, and carried them out of the city. And of their wives, as many as were taken in the fortification, they made bondwomen. In this manner were the Corcyræans that kept the hill, brought to destruction by the commons. And thus ended this far-spread sedition, for so much as concerned this present war: for of other seditions there remained nothing worth the relation. And the Athenians being arrived in Sicily, whither they were at first bound, prosecuted the war there together with the rest of their confederates of those parts.

Year vii. A. C. 425. Ol. 88. 4. The Athenians take Anactorium from the Corinthians, and put it into the hands of the Acarnanians.

The end of the seventh summer.

49. In the end of this summer, the Athenians that lay at Naupactus, went forth with an army and took the city of Anactorium, belonging to the Corinthians and lying at the mouth of the Ambracian gulf, by treason. And when they had put forth the Corinthians, the Acarnanians held it with a

colony sent thither from all parts of their own nation. And so this summer ended.

Artaphernes, an ambassador from the king of Persia to the Lacedæmonians, intercepted, and brought to Athens, and his letters read. The king of Persia's letters to the Lacedæmonians translated into Greek, and read at Athens.

50. The next winter, Aristides the son of Archippus, one of the commanders of a fleet which the Athenians had sent out to gather tribute from their confederates, apprehended Artaphernes, a Persian, in the town of Eion upon the river Strymon, going from the king to Lacedæmon. When he was brought to Athens, the Athenians translated his letters out of the Assyrian language into Greek, and read them: wherein, amongst many other things that were written to the Lacedæmonians, the principal was this: "that he knew not what they meant; for many ambassadors came, but they spake not the same thing: if therefore they had any thing to say certain, they should send somebody to him with this Persian". But Artaphernes they send afterwards away in a galley, with ambassadors of their own, to Ephesus. And there encountering the news, that king Artaxerxes, the son of Xerxes, was lately dead, (for about that time he died), they returned home.

Year vii. A. C. 425. Ol. 88. 4. The Chians are suspected and forced to pull down their new-built walls.

51. The same winter also, the Chians demolished their new wall by command of the Athenians, upon suspicion that they intended some innovation; notwithstanding they had given the Athenians their faith and the best security they could, to the intent they should let them be as they were. Thus ended this winter; and the seventh year of this war written by Thucydides.

Year viii. A. C. 424. Ol. 88. 4.

52. The next summer, in the very beginning, at a change in the moon the sun was eclipsed in part; and in the beginning of the same month, happened an earthquake.

The Lesbian outlaws make war upon the Athenian dominions in the continent near Lesbos. year viii. A. C. 424. Ol. 88. 4.

At this time the Mytilenæan and other Lesbian outlaws, most of them residing in the continent, with mercenary forces out of Peloponnesus and some which they levied where they were, seize on Rhæteium; and for two thousand Phocæan staters render it again, without doing them other harm. After this they came with their forces to Antander, and took that city also by treason. They had likewise a design to set free the rest of the cities called Act, which were in the occupation formerly of the Mytilenæans, but subject to the Athenians: but above all the rest Antander, which when they had once gotten, (for there they might easily build galleys, because there was store of timber; and Mount Ida was above their heads), they might issue from thence with other their preparation and infest Lesbos, which was near, and bring into their power the Æolic towns in the continent. And this were those men preparing.

The Athenians led by Nicias, subdue Cythera, an island over against Laconia and inhabited by Lacedæmonians. year viii. A. C. 424. Ol. 88. 4. The Cythereans yield to Nicias, referring themselves to the people of Athens for any thing but death. year viii. A. C. 424. Ol. 88. 4. The Athenians remove them from their seats. The Lacedæmonians begin to be dejected with their great losses. year viii. A. C. 424. Ol. 88. 4. The Athenians waste the coast of Laconia. year viii. A. C. 424. Ol. 88. 4. The Athenians burn Thyrea, slay and make prisoners of all the inhabitants being Æginetæ. year viii. A. C. 424. Ol. 88. 4. Tantalus a Lacedæmonian captain carried prisoner to Athens. The decree of the Athenian people concerning

the Cythereans, the Æginetæ taken in Thyrea, and Tantalus a Lacedæmonian that was amongst them. The Æginetæ put to death.

53. The Athenians the same summer, with sixty galleys, two thousand men of arms, and a few horsemen, taking with them also the Milesians and some other of their confederates, made war upon Cythera, under the conduct of Nicias the son of Niceratus, Nicostratus the son of Diotrephe, and Autocles the son of Tolmæus. This Cythera is an island upon the coast of Laconia, over against Malea. The inhabitants be Lacedæmonians, of the same that dwell about them. And every year there goeth over unto them from Sparta a magistrate called Cytherodikes. They likewise sent over men of arms from time to time, to lie in the garrison there; and took much care of the place. For it was the place where their ships used to put in from Egypt and Libya, and by which Laconia was the less infested by thieves from the sea, being that way only subject to that mischief. For the island lieth wholly out into the Sicilian and Cretic seas. 54. The Athenians arriving with their army, with ten of their galleys and two thousand men of arms of the Milesians took a town lying to the sea, called Scandeia; and with the rest of their forces, having landed in the parts of the island towards Malea, marched into the city itself of the Cythereans, lying likewise to the sea. The Cythereans they found standing all in arms prepared for them. And after the battle began, the Cythereans for a little while made resistance; but soon after turned their backs, and fled into the higher part of the city; and afterwards compounded with Nicias and his fellow-commanders, that the Athenians should determine of them whatsoever they thought good, but death. Nicias had had some conference with certain of the Cythereans before; which was also a cause that those things which concerned the accord both now and afterwards, were both the sooner and with the more favour dispatched. For the Athenians did but remove the Cythereans, and that also because they were Lacedæmonians, and because the island lay in

that manner upon the coast of Laconia. After this composition, having as they went by received Scandeia, a town lying upon the haven, and put a guard upon the Cythereans, they sailed to Asine and most of the towns upon the sea-side. And going sometimes aland, and staying where they saw cause, wasted the country for about seven days together. 55. The Lacedæmonians, though they saw the Athenians had Cythera, and expected withal that they would come to land in the same manner in their own territory, yet came not forth with their united forces to resist them; but distributed a number of men of arms into sundry parts of their territory, to guard it wheresoever there was need: and were otherwise also exceedingly watchful, fearing lest some innovation should happen in the state; as having received a very great and unexpected loss in the island, and the Athenians having gotten Pylus and Cythera, and as being on all sides encompassed with a busy and unavoidable war. In so much that contrary to their custom they ordained four hundred horsemen, and some archers. And if ever they were fearful in matter of war, they were so now: because it was contrary to their own way to contend in a naval war, and against Athenians, who thought they lost whatsoever they not attempted. Withal, their so many misfortunes in so short a time, falling out so contrary to their own expectation, exceedingly affrighted them. And fearing lest some such calamity should again happen as they had received in the island, they durst the less to hazard battle; and thought that whatsoever they should go about would miscarry, because their minds, not used formerly to losses, could now warrant them nothing. 56. As the Athenians therefore wasted the maritime parts of the country, and disbarked near any garrison, those of the garrison for the most part stirred not, both as knowing themselves singly to be too small a number, and as being in that manner dejected. Yet one garrison fought about Cortyta and Aphrodisia, and frighted in the straggling rabble of light-armed soldiers; but when the men of arms had received

them, it retired again with the loss of a few; whom they also rifled of their arms: and the Athenians, after they had erected a trophy, put off again and went to Cythera. From thence they sailed about to Epidaurus, called Limera; and having wasted some part of that territory, came to Thyrea; which is of the territory called Cynuria, but is nevertheless the middle border between Argeia and Laconia. The Lacedæmonians, possessing this city, gave the same for an habitation to the Æginetæ, after they were driven out of Ægina; both for the benefit they had received from them about the time of the earthquake and of the insurrection of the Helotes, and also for that, being subject to the Athenians, they had nevertheless gone ever the same way with the Lacedæmonians. 57. When the Athenians were coming towards them, the Æginetæ left the wall which they happened to be then building toward the sea-side; and retired up into the city above where they dwelt, and which was not above ten furlongs from the sea. There was also with them one of those garrisons, which the Lacedæmonians had distributed into the several parts of the country: and these, though they helped them to build the fort below, yet would not now enter with them into the town, though the Æginetæ entreated them; apprehending danger in being cooped up within the walls; and therefore retiring into the highest ground, lay still there, as finding themselves too weak to give them battle. In the meantime the Athenians came in, and marching up presently with their whole army, won Thyrea; and burnt it, and destroyed whatsoever was in it. The Æginetæ, as many as were not slain in the affray, they carried prisoners to Athens; amongst whom Tantalus also, the son of Patroclus, captain of such Lacedæmonians as were amongst them, was wounded and taken alive. They carried likewise with them some few men of Cythera, whom for safety's sake they thought good to remove into some other place. These therefore, the Athenians decreed, should be placed in the islands: and that the rest of the Cythereans at the tribute of four talents should inhabit their own

territory: that the Æginetæ, as many as they had taken, (out of former inveterate hatred), should be put to death: and that Tantalus should be put in bonds, amongst those Lacedæmonians that were taken in the island.

C. 424. Ol. 89. 1. The Sicilians make a general peace by advice of Hermocrates, and so dismiss the Athenians, that waited to take advantage of their discord.

58. In Sicily the same summer was concluded a cessation of arms, first between the Camarinæans and the Geloans: but afterwards the rest of the Sicilians, assembling by their ambassadors out of every city at Gela, held a conference amongst themselves for making of a peace. Wherein, after many opinions delivered by men disagreeing and requiring satisfaction, every one as he thought himself prejudiced, Hermocrates the son of Hermon, a Syracusian, who also prevailed with them the most, spake unto the assembly to this effect:

Year viii. A. C. 424. Ol. 89. 1. the oration of hermocrates for peace. year viii. A. C. 424. Ol. 89. 1. Oration of Hermocrates. year viii. A. C. 424. Ol. 89. 1. Oration of Hermocrates.

59. “Men of Sicily, I am neither of the least city nor of the most afflicted with war, that am now to speak, and to deliver the opinion which I take to conduce most to the common benefit of all Sicily. Touching war, how calamitous a thing it is, to what end should a man, particularising the evils thereof, make a long speech before men that already know it? For neither doth the not knowing of them necessitate any man to enter into war; nor the fear of them divert any man from it, when he thinks it will turn to his advantage. But rather it so falls out, that the one thinks the gain greater than the danger; and the other prefers danger before present loss. But lest they should both the one and the other do it unseasonably, exhortations unto peace are profitable; and will be very much worth to us, if we will follow them at this present. For it was out of a desire that every city had to assure

their own, both that we fell ourselves into the war, and also that we endeavour now, by reasoning the matter, to return to mutual amity. Which if it succeed not so well, that we may depart satisfied every man with reason, we will be at wars again. 60. Nevertheless you must know that this assembly, if we be wise, ought not to be only for the commodity of the cities in particular, but how to preserve Sicily in general, now sought to be subdued (at least in my opinion) by the Athenians. And you ought to think, that the Athenians are more urgent persuaders of the peace than any words of mine; who having of all the Grecians the greatest power, lie here with a few galleys to observe our errors, and by a lawful title of alliance, handsomely to accommodate their natural hostility to their best advantage. For if we enter into a war, and call in these men, who are apt enough to bring their army in uncalled, and if we weaken ourselves at our own charges, and withal cut out for them the dominion here; it is likely, when they shall see us spent, they will sometime hereafter come upon us with a greater fleet, and attempt to bring all these states into their subjection. 61. Now, if we were wise, we ought rather to call in confederates and undergo dangers for the winning of somewhat that is none of ours, than for the impairing of what we already have: and to believe that nothing so much destroys a city as sedition, and that Sicily, though we the inhabitants thereof be insidiated by the Athenians as one body, is nevertheless city against city in sedition within itself. In contemplation whereof, we ought, man with man, and city with city, to return again into amity; and with one consent, to endeavour the safety of all Sicily: and not to have this conceit, that though the Dorians be the Athenians' enemies, yet the Chalcideans are safe, as being of the race of the Ionians. For they invade not these divided races upon hatred of a side, but upon a covetous desire of those necessities which we enjoy in common. And this they have proved themselves, in their coming hither to aid the Chalcideans. For though they never received any

aid by virtue of their league from the Chalcideans, yet have they on their part been more forward to help them than by the league they were bound unto. Indeed the Athenians, that covet and meditate these things, are to be pardoned. I blame not those that are willing to reign, but those that are most willing to be subject: for it is the nature of man everywhere to command such as give way, and to be shy of such as assail. We are to blame, that know this and do not provide accordingly, and make it our first care of all, to take good order against the common fear. Of which we should soon be delivered, if we would agree amongst ourselves: (for the Athenians come not amongst us out of their own country, but from theirs here that have called them in); and so, not war by war, but all our quarrels shall be ended by peace without trouble: and those that have been called in, as they came with fair pretence to injure us, so shall they with fair reason be dismissed by us without their errand.

Year viii. A. C. 424. Ol. 89. 1. Oration of Hermocrates. year viii. A. C. 424. Ol. 89. 1. Oration of Hermocrates.

62. “And thus much for the profit that will be found, by advising wisely concerning the Athenians. But when peace is confessed by all men to be the best of things, why should we not make it also in respect of ourselves? Or do you think perhaps, if any of you possess a good thing or be pressed with an evil, that peace is not better than war, to remove the latter or preserve the former, to both: or that it hath not honours and eminence more free from danger, or whatsoever else one might discourse at large concerning war? Which things considered, you ought not to make light of my advice, but rather make use of it, every one to provide for his own safety. Now if some man be strongly conceited to go through with some design of his, be it by right or by violence, let him take heed that he fail not, so much the more to his grief as it is contrary to his hope: knowing that many men ere now, hunting after revenge on such as had done them injury, and others trusting,

by some strength they have had, to take away another's right; have, the first sort, instead of being revenged been destroyed, and the other, instead of winning from others, left behind them what they had of their own. For revenge succeeds not according to justice, as that because an injury hath been done, it should therefore prosper; nor is strength therefore sure, because hopeful. It is the instability of fortune, that is most predominant in things to come; which though it be the most deceivable of all things, yet appears to be the most profitable. For whilst every one fear it alike, we proceed against each other with the greater providence. 63. Now therefore terrified doubly, both with the implicit fear of the uncertainty of events, and with the terror of the Athenians present, and taking these for hindrances sufficient to have made us come short of what we had severally conceived to effect, let us send away our enemies that hover over us; and make an eternal peace amongst ourselves, or if not that, then a truce at least for as long as may be, and put off our private quarrels to some other time. In sum, let us know this: that following my counsel, we shall every of us have our cities free; whereby being masters of ourselves, we shall be able to remunerate according to their merit such as do us good or harm: whereas rejecting it and following the counsel of others, our contention shall no more be how to be revenged, or at the best, [if it be], we must be forced to become friends to our greatest enemies, and enemies to such as we ought not.

Year viii. A. C. 424. Ol. 89. 1. Oration of Hermocrates.

“For my part, as I said in the beginning, I bring to this the greatest city, and which is rather an assailant than assailed; and yet foreseeing these things, I hold it fit to come to an agreement, and not so to hurt our enemies, as to hurt ourselves more. Nor yet through foolish spite will I look to be followed as absolute in my will, and master of fortune, which I cannot

command; but will also give way where it is reason. And so I look the rest should do as well as I; and that of yourselves, and not forced to it by the enemy. For it is no dishonour to be overcome kinsmen of kinsmen, one Dorian of another Dorian; and one Chalcidean of another of his own race; or in sum, any one by another of us, being neighbours and cohabiters of the same region, encompassed by the sea, and all called by one name, Sicilians. Who, as I conceive, will both war when it happens, and again by common conferences make peace by our own selves. But when foreigners invade us, we shall, if wise, unite all of us to encounter them; inasmuch as being weakened singly, we are in danger universally. As for confederates, let us never hereafter call in any, nor arbitrators. For so shall Sicily attain these two benefits, to be rid of the Athenians and of domestic war, for the present; and to be inhabited by ourselves with liberty, and less insidiated by others, for the time to come.”

The substance of the conditions of the peace in Sicily. The Athenians depart Sicily, and their commanders punished as suspected to have left Sicily for a bribe. year viii. A. C. 424. Ol. 89. 1.

65 Hermocrates having thus spoken, the Sicilians followed his advice; and agreed amongst themselves, that the war should cease, every one retaining what they then presently enjoyed; and that the Camarinæans should have Morgantina, paying for the same unto the Syracusians a certain sum of money then assessed. They that were confederates with the Athenians, calling such of the Athenians unto them as were in authority, told them that they also were willing to compound, and be comprehended in the same peace. And the Athenians approving it, they did so; and hereupon the Athenians departed out of Sicily. The people of Athens, when their generals came home, banished two, namely Pythodorus and Sophocles; and laid a fine upon the third, which was Eurymedon: as men that might have subdued the estates of Sicily, but had been bribed to return. So great was

their fortune at that time, that they thought nothing could cross them; but that they might have achieved both easy and hard enterprises, with great and slender forces alike. The cause whereof was the unreasonable prosperity of most of their designs, subministering strength unto their hope.

The Athenians attempt to take Megara by treason. year viii. A. C. 424. Ol. 89. 1. The heads of the commons, to hinder the return of the outlaws, plot the betraying of the city to the Athenians. The plot laid by the traitors for the putting of the Athenians into the town. year viii. A. C. 424. Ol. 89. 1. The plot of the traitors, to give the Athenians the long walls. year viii. A. C. 424. Ol. 89. 1. The Athenians win the long walls. year viii. A. C. 424. Ol. 89. 1. The traitors give advice to open the gates and give battle. The treason discovered.

66. The same summer the Megareans in the city of Megara: pinched both by the war of the Athenians, who invaded their territory with their whole forces every year twice, and by their own outlaws from Pegæ, who in a sedition driven out by the commons grievously afflicted them with robberies: began to talk one to another, how it was fit to call them home again, and not to let their city by both these means to be ruined. The friends of those without perceiving the rumour, they also, more openly now than before, required to have it brought to council. But the patrons of the commons, fearing that they with the commons, by reason of the miseries they were in, should not be able to carry it against the other side, made an offer to Hippocrates, the son of Aripbron, and Demosthenes, the son of Alcisthenes, commanders of the Athenian army, to deliver them the city; as esteeming that course less dangerous for themselves than the reduction of those whom they had before driven out. And they agreed, that first the Athenians should possess themselves of the long-walls, (these were about eight furlongs in length, and reached from the city to Nisæa their haven); thereby to cut off the aid of the Peloponnesians in Nisæa, in which (the

better to assure Megara to their side) there lay no other soldiers in garrison but they: and then afterwards, that these men would attempt to deliver them the city above; which would the more easily succeed, if that were effected first. 67. The Athenians therefore, after all was done and said on both sides, and every thing ready, sailed away by night to Minoa, an island of the Megareans, with six hundred men of arms led by Hippocrates; and sat down in a certain pit, out of which bricks had been made for the walls, and which was not far off. But they that were with the other commander Demosthenes, light-armed Plataeans and others called peripoli, lay in ambush at the temple of Mars, not so far off as the former. And none of the city perceived any thing of this, but only such as had peculiar care to know the passages of this same night. When it was almost day, the Megarean traitors did thus. They had been accustomed long, as men that went out for booty, with leave of the magistrates, of whom they had obtained by good offices the opening of the gates, to carry out a little boat, such as wherein the watermen used an oar in either hand; and to convey it by night down the ditch to the sea-side in a cart, and in a cart to bring it back again and set it within the gates: to the end that the Athenians which lay in Minoa, might not know where to watch for them, no boat being to be seen in the haven. At this time was that cart at the gates, which were opened according to custom as for the boat. And the Athenians seeing it, (for so it was agreed on), arose from their ambush, and ran with all speed to get in before the gates should be shut again, and to be there whilst the cart was yet in the gates and kept them open. And first those Plataeans and peripoli that were with Demosthenes, ran in, in that same place where the trophy is now extant; and fighting presently within the gates, (for those Peloponnesians that were nearest heard the stir), the Plataeans overcame those that resisted; and made good the gates for the Athenian men of arms that were coming after. 68. After this the Athenian soldiers, as they entered, went up every one to the wall. And a few of the

Peloponnesians that were of the garrison, made head at first and fought, and were some of them slain; but the most of them took their heels; fearing in the night, both the enemy that charged them, and also the traitors of the Megareans that fought against them, apprehending that all the Megareans in general had betrayed them. It chanced also that the Athenian herald of his own discretion made proclamation, that if any Megarean would take part with the Athenians, he should come and lay down his arms. When the Peloponnesians heard this, they stayed no longer: but seriously believing that they jointly warred upon them, fled into Nisæa. As soon as it was day, the walls being now taken and the Megareans being in a tumult within the city, they that had treated with the Athenians, and with them the rest, as many as were conscious, said it was fit to have the gates opened, and to go out and give the enemy battle. Now it was agreed on between them, that when the gates were open, the Athenians should rush in: and that themselves would be easily known from the rest, to the end they might have no harm done them; for that they would besmear themselves with some ointment. And the opening of the gates would be for their greater safety: for the four thousand men of arms of Athens and six hundred horsemen, which according to the appointment were to come to them, having marched all night were already arrived. When they had besmeared themselves and were now about the gates, one of those who were privy discovered the conspiracy to the rest that were not. These joining their strength came all together to the gates, denying that it was fit to go out to fight; for that neither in former times when they were stronger than now, durst they do so: or to put the city into so manifest danger: and said, that if they would not be satisfied, the battle should be thereright. Yet they discovered not that they knew of the practice, but only, as having given good advice, meant to maintain it. And they stayed at the gates, insomuch as the traitors could not perform what they intended.

Year viii. A. C. 424. Ol. 89. 1. The Athenians failing of Megara take Nisæa, and demolish the long walls.

69. The Athenian commanders, knowing some cross accident had happened, and that they could not take the city by assault, fell to enclosing of Nisæa with a wall: which if they could take before aid came, they thought Megara would the sooner yield. Iron was quickly brought unto them from Athens, and masons, and whatsoever else was necessary. And beginning at the wall they had won, when they had built cross over to the other side, from thence both ways they drew it on to the sea on either side Nisæa: and having distributed the work amongst the army, as well the wall as the ditch, they served themselves of the stones and bricks of the suburbs, and having felled trees and timber, they supplied what was defective with a strong palisado. The houses also themselves of the suburbs, when they had put on battlements, served them for a fortification. All that day they wrought: the next day about evening they had within very little finished. But then they that were in Nisæa, seeing themselves to want victual, (for they had none but what came day by day from the city above), and without hope that the Peloponnesians could quickly come to relieve them; conceiving also that the Megareans were their enemies; compounded with the Athenians on these terms: to be dismissed every one at a certain ransom in money; to deliver up their arms; and the Lacedæmonians, both the captain and whosoever of them else was within, to be at discretion of the Athenians. Having thus agreed, they went out. And the Athenians, when they had broken off the long walls from the city of Megara, and taken in Nisæa, prepared for what was further to be done.

Year viii A. C. 424. Ol. 89. 1. Brasidas saveth Megara from being rendered to the Athenians. Brasidas desireth to put himself into the city. year viii. A. C. 424. Ol. 89. 1. Brasidas goeth back to Tripodiscus. The Bœotians come with their forces, and join with Brasidas. The Bœotian and Athenian horse skirmish. year viii. A. C. 424. Ol. 89. 1.

70. Brasidas the son of Tellus, a Lacedæmonian, happened at this time to be about Sicyon and Corinth, preparing of an army to go into Thrace. And when he heard of the taking of the long walls, fearing what might become of the Peloponnesians in Nisæa, and lest Megara should be won, sent unto the Bœotians, willing them to meet him speedily with their forces at Tripodiscus, a village of Megaris so called at the foot of the hill Geraneia; and marched presently himself with two thousand seven hundred men of arms of Corinth, four hundred of Phlius, six hundred of Sicyon, and those of his own all that he had yet levied; thinking to have found Nisæa yet untaken. When he heard the contrary, (for he set forth towards Tripodiscus in the night), with three hundred men chosen out of the whole army, before news should arrive of his coming, he came unseen of the Athenians that lay by the sea-side to the city of Megara; pretending in word, and intending also in good earnest if he could have done it, to attempt upon Nisæa; but desiring to get into Megara to confirm it; and required to be let in, for that he was, he said, in hope to recover Nisæa. 71. But the Megarean factions being afraid, one, lest he should bring in the outlaws and cast out them, the other, lest the commons out of this very fear should assault them; whereby the city being at battle within itself, and the Athenians lying in wait so near, would be lost: received him not, but resolved on both sides to sit still and attend the success. For both the one faction and the other expected, that the Athenians and these that came to succour the city would join battle: and then they might with more safety, such as were the favoured side, turn unto them that had the victory. And Brasidas, not prevailing, went back to the rest of the army. 72. Betimes in the morning arrived the Bœotians, having also intended to come to the aid of Megara before Brasidas sent, as esteeming the danger to concern themselves, and were then with their whole forces come forward as far as Plataea. But when they had received also this message, they were a great deal the more encouraged: and sent two

thousand two hundred men of arms and two hundred horse to Brasidas, but went back with the greater part of their army. The whole army being now together of no less than six thousand men of arms; and the Athenian men of arms lying indeed in good order about Nisæa and the sea-side, but the light-armed straggling in the plains: the Bœotian horsemen came unexpectedly upon the light-armed soldiers, and drove them towards the sea; for in all this time till now, there had come no aid at all to the Megareans from any place. But when the Athenian horse went likewise out to encounter them, they fought, and there was a battle between the horsemen of either side that held long; wherein both sides claimed the victory. For the Athenians slew the general of the Bœotian horse and some few others, and rifled them, having themselves been first chased by them to Nisæa: and having these dead bodies in their power they restored them upon truce, and erected a trophy. Nevertheless, in respect of the whole action, neither side went off with assurance; but parting asunder, the Bœotians went to the army, and the Athenians to Nisæa.

The whole army on either side face one another, but neither side willing to begin. year viii. A. C. 424. Ol. 89. 1. The Megareans receive Brasidas and his army. The Megarean outlaws recalled, and sworn to forget former quarrel. year viii. A C. 424. Ol. 89. 1. The outlaws being in authority, put to death a hundred of the adverse faction.

73. After this, Brasidas with his army came down nearer to the sea and to the city of Megara: and having seized on a place of advantage, set his army in battle array and stood still. For they thought the Athenians would be assailants, and knew the Megareans stood observing whether side should have the victory: and that it must needs fall out well for them both ways; first, because they should not be the assailant, and voluntarily begin the battle and danger; since having showed themselves ready to fight, the victory must also justly be attributed to them without their labour: and next

it must fall out well in respect of the Megareans; for if they should not have come in sight, the matter had not been any longer in the power of fortune, but they had without all doubt been presently deprived of the city, as men conquered: whereas now, if haply the Athenians declined battle likewise, they should obtain what they came for without stroke stricken: which also indeed came to pass. For the Megareans — when the Athenians went out and ordered their army without the long walls, but yet, because the enemy charged not, stood also still: their commanders likewise considering, that if they should begin the battle against a number greater than their own, after the greatest part of their enterprise was already achieved, the danger would be unequal; for if they should overcome, they could win but Megara, and if they were vanquished, must lose the best part of their men of arms; whereas the enemy, who out of the whole power and number that was present in the field did adventure but every one a part, would in all likelihood put it to the hazard: and so for a while affronted each other, and, neither doing any thing, withdrew again, the Athenians first into Nisæa, and afterwards the Peloponnesians to the place from whence they had set forth — then, I say, the Megareans, such as were the friends of the outlaws, taking heart because they saw the Athenians were unwilling to fight, set open the gates to Brasidas as victor, and to the rest of the captains of the several cities; and when they were in, (those that had practised with the Athenians being all the while in a great fear), they went to council. 74. Afterwards Brasidas, having dismissed his confederates to their several cities, went himself to Corinth in pursuit of his former purpose to levy an army for Thrace. Now the Megareans that were in the city, (when the Athenians also were gone home), all that had chief hand in the practice with the Athenians, knowing themselves discovered, presently slipt away: but the rest, after they had conferred with the friends of the outlaws, recalled them from Pegæ, upon great oaths administered unto them, no more to remember former quarrels,

but to give the city their best advice. These, when they came into office, took a view of the arms; and disposing bands of soldiers in divers quarters of the city, picked out of their enemies, and of those that seemed most to have co-operated in the treason with the Athenians, about a hundred persons; and having constrained the people to give their sentence upon them openly, when they were condemned slew them; and established in the city the estate almost of an oligarchy. And this change of government, made by a few upon sedition, did nevertheless continue for a long time after.

The Mytilenæan outlaws lose the city of Antandros: which they had intended to fortify and make the seat of their war. year viii. A. C. 424. Ol. 89. 1. Lamachus loseth his ten galleys by a sudden landflood in Pontus.

75. The same summer, when Antandros was to be furnished by the Mytilenæans as they intended, Demodicus and Aristides, captains of certain galleys set forth by the Athenians to fetch in tribute, being then about Hellespont, (for Lamachus that was the third in that commission, was gone with ten galleys into Pontus), having notice of the preparation made in that place; and thinking it would be dangerous to have it happen there as it had done in Anæa over against Samos, in which the Samian outlaws having settled themselves, aided the Peloponnesians in matters of the sea by sending them steersmen, and both bred trouble within the city and entertained such as fled out of it, levied an army amongst the confederates, and marched to it: and having overcome in fight those that came out of Antandros against them, recovered the place again. And not long after, Lamachus that was gone into Pontus, as he lay at anchor in the river Calix in the territory of Heracleia, much rain having fallen above in the country and the stream of a land flood coming suddenly down, lost all his galleys; and came himself and his army through the territory of the Bithynians (who are Thracians dwelling in Asia on the other side) to Chalcedon, a colony of the Megareans in the mouth of Pontus Euxinus, by land.

Demosthenes goeth to Naupactus upon design against the Bœotians. year viii. A. C. 424. Ol. 89. 1. The plot laid between certain Bœotians and the Athenians, how to bring Bœotia into the power of the Athenians. year viii. A. C. 424. Ol. 89. 1.

76. The same summer likewise Demosthenes, general of the Athenians, with forty galleys, presently after his departure out of Megaris, sailed to Naupactus. For certain men in the cities thereabouts, desiring to change the form of the Bœotian government, and to turn it into a democracy according to the government of Athens, practised with him and Hippocrates to betray unto him the estates of Bœotia; induced thereunto principally by Ptœodorus, a Theban outlaw: and they ordered the design thus. Some had undertaken to deliver up Siphæ: (Siphæ is a city of the territory of Thespiæ, standing upon the sea-side in the Crissæan gulf): and Chæroneia, which was a town that paid duties to Orchomenus, (called heretofore Orchomenus in Minyeia, but now Orchomenus in Bœotia), some others of Orchomenus were to surrender into their hands. And the Orchomenian outlaws had a principal hand in this, and were hiring soldiers to that end out of Peloponnesus. This Chæroneia is the utmost town of Bœotia towards Phanotis in the country of Phocis; and some Phoceans also dwelt in it. [On the other side], the Athenians were to seize on Delium, a place consecrated to Apollo in the territory of Tanagra, on the part toward Eubœa. All this ought to have been done together upon a day appointed, to the end that the Bœotians might not oppose them with their forces united, but might be troubled every one to defend his own. And if the attempt succeeded, and that they once fortified Delium, they easily hoped, though no change followed in the state of the Bœotians for the present, yet being possessed of those places, and by that means continually fetching in prey out of the country, because there was for every one a place at hand to retire unto, that it could not stand long at a stay; but that the Athenians joining with such of them as rebelled, and the

Bœotians not having their forces united, they might in time order the state to their own liking. Thus was the plot laid. 77. And Hippocrates himself, with the forces of the city, was ready when time should serve to march; but sent Demosthenes before with forty galleys to Naupactus, to the end that he should levy an army of Acarnanians and other their confederates in these quarters, and sail to Siphæ to receive it by treason. And a day was set down betwixt them, on which these things should have been done together. Demosthenes, when he arrived and found the Æniades by compulsion of the rest of Acarnania entered into the Athenian confederation, and had himself raised all the confederates thereabouts, made war first upon Salynthius and the Agræans; and having taken in other places thereabouts, stood ready, when the time should require, to go to Siphæ.

Brasidas passeth through Thessaly with seventeen hundred men of arms, to aid the Chalcideans that deliberated a revolt. year viii. A. C. 424. Ol. 89. 1. year viii. A. C. 424. Ol. 89. 1. The soft answer of Brasidas, notwithstanding he was resolved to pass. year viii. A. C. 424. Ol. 89. 1. Brasidas goeth apace through Thessaly. The cause why Perdiccas and the Chalcideans called in the Lacedæmonians into those parts. year viii. A. C. 424. Ol. 89. 1. The cause why the Lacedæmonians so willingly sent an army to them. An impious policy of the Lacedæmonians in destroying their Helotes. year viii. A. C. 424. Ol. 89. 1. year viii. A. C. 424. Ol. 89. 1. The praise of Brasidas.

78. About the same time of this summer, Brasidas marching towards the cities upon Thrace with seventeen hundred men of arms, when he came to Heracleia in Trachinia sent a messenger before him to his friends at Pharsalus, requiring them to be guides unto him and to his army. And when there were come unto him Panærus and Dorus and Hippolochidas and Torylaus and Strophacus, who was the public host of the Chalcideans; all which met him at Melitia, a town of Achaia; he marched on. There were

other of the Thessalians also that convoyed him; and from Larissa he was convoyed by Niconidas, a friend of Perdiccas. For it had been hard to pass Thessaly without a guide howsoever, but especially with an army. And to pass through a neighbour territory without leave, is a thing that all Grecians alike are jealous of. Besides, that the people of Thessaly had ever borne good affection to the Athenians. Insomuch, as if by custom the government of that country had not been lordly rather than a commonwealth, he could never have gone on. For also now as he marched forward, there met him at the river Enipeus others of a contrary mind to the former, that forbade him; and told him that he did unjustly to go on without the common consent of all. But those that convoyed him answered, that they would not bring him through against their wills: but that coming to them on a sudden, they conducted him as friends. And Brasidas himself said, he came thither a friend both to the country and to them; and that he bore arms, not against them, but against the Athenians their enemies; and that he never knew of any enmity between the Thessalians and Lacedæmonians, whereby they might not use one another's ground; and that even now he would not go on without their consent; for neither could he; but [only] entreated them not to stop him. When they heard this, they went their ways. And he, by the advice of his guides, before any greater number should unite to hinder him, marched on with all possible speed, staying nowhere by the way. And the same day he set forth from Melitia, he reached Pharsalus, and encamped by the river Apidanus: from thence he went to Phacium: from thence into Peræbia. The Peræbians, though subject to the Thessalians, set him at Dion in the dominion of Perdiccas, a little city of the Macedonians situate at the foot of Olympus on the side towards Thessaly. 79. In this manner Brasidas ran through Thessaly before any there could put in readiness to stop him; and came into the territory of the Chalcideans, and to Perdiccas. For Perdiccas and the Chalcideans, all that had revolted from the Athenians,

when they saw the affairs of the Athenians prosper, had drawn this army out of Peloponnesus for fear: the Chalcideans, because they thought the Athenians would make war on them first, as having been also incited thereto by those cities amongst them that had not revolted; and Perdiccas, not that he was their open enemy, but because he feared the Athenians for ancient quarrels; but principally because he desired to subdue Arrhibæus, king of the Lyncestians. And the ill success which the Lacedæmonians in these times had, was a cause that they obtained an army from them the more easily. 80. For the Athenians vexing Peloponnesus, and their particular territory Laconia most of all, they thought the best way to divert them was to send an army to the confederates of the Athenians, so to vex them again. And the rather because Perdiccas and the Chalcideans were content to maintain the army; having called it thither to help the Chalcideans in their revolt. And because also they desired a pretence to send away part of their Helotes; for fear they should take the opportunity of the present state of their affairs, the enemies lying now in Pylus, to innovate. For they did also this further, fearing the youth and multitude of their Helotes: for the Lacedæmonians had ever many ordinances concerning how to look to themselves against the Helotes. They caused proclamation to be made, that as many of them as claimed the estimation to have done the Lacedæmonians best service in their wars, should be made free; feeling them in this manner, and conceiving that, as they should every one out of pride deem himself worthy to be first made free, so they would soonest also rebel against them. And when they had thus preferred about two thousand, which also with crowns on their heads went in procession about the temples as to receive their liberty, they not long after made them away: and no man knew how they perished. And now at this time, with all their hearts, they sent away seven hundred men of arms more of the same men along with Brasidas. The rest of the army were mercenaries, hired by Brasidas out of

Peloponnesus. [But] Brasidas himself the Lacedæmonians sent out, chiefly because it was his own desire: 81. notwithstanding the Chalcideans also longed to have him, as one esteemed also in Sparta every way an active man. And when he was out, he did the Lacedæmonians very great service. For by showing himself at that present just and moderate towards the cities, he caused the most of them to revolt; and some of them he also took by treason. Whereby it came to pass, that if the Lacedæmonians pleased to come to composition, (as also they did), they might have towns to render and receive reciprocally. And also long after, after the Sicilian war, the virtue and wisdom which Brasidas showed now, to some known by experience, by others believed upon from report, was the principal cause that made the Athenian confederates affect the Lacedæmonians. For being the first that went out, and esteemed in all points for a worthy man, he left behind him an assured hope that the rest also were like him.

Brasidas joined with Perdiccas marcheth towards Lyncus. year viii. A. C. 424. Ol. 89. 1. Brasidas refusing to make war on Arrhibæus: for the offer of Arrhibæus: and through the advice of the Chalcideans: giveth therein distaste to Perdiccas. year viii. A. C. 424. Ol. 89. 1. Brasidas cometh before Acanthus:

82. Being now come into Thrace, the Athenians upon notice thereof declared Perdiccas an enemy, as imputing to him this expedition; and reinforced the garrisons in the parts thereabouts. 83. Perdiccas with Brasidas and his army, together with his own forces, marched presently against Arrhibæus the son of Bromerus, king of the Lyncestians, a people of Macedonia, confining on Perdiccas his dominion; both for a quarrel they had against him, and also as desiring to subdue him. When he came with his army, and Brasidas with him, to the place where they were to have fallen in, Brasidas told him that he desired, before he made war, to draw Arrhibæus by parley, if he could, to a league with the Lacedæmonians. For Arrhibæus

had also made some proffer by a herald, to commit the matter to Brasidas' arbitrement. And the Chalcidean ambassadors being present, gave him likewise advice not to thrust himself into danger in favour of Perdiccas, to the end they might have him more prompt in their own affairs. Besides, the ministers of Perdiccas, when they were at Lacedæmon, had spoken there, as if they had meant to bring [as] many of the places about him [as they could] into the Lacedæmonian league. So that Brasidas favoured Arrhibæus for the public good of their own state. But Perdiccas said, that he brought not Brasidas thither to be a judge of his controversies, but to destroy those enemies which he should show him: and that it will be an injury, seeing he pays the half of his army, for Brasidas to parley with Arrhibæus. Nevertheless Brasidas, whether Perdiccas would or not, and though it made a quarrel, had conference with Arrhibæus; by whom also he was induced to withdraw his army. But from that time forward Perdiccas instead of half, paid but a third part of his army; as conceiving himself to have been injured.

Founded A. C. 656. and is received without his army

84. The same summer, a little before the vintage, Brasidas having joined to his own the forces of the Chalcideans, marched to Acanthus, a colony of the Andrians. And there arose sedition about receiving him, between such as had joined with the Chalcideans in calling him thither, and the common people. Nevertheless for fear of their fruits, which were not yet gotten in, the multitude was won by Brasidas to let him enter alone, and then after he had said his mind, to advise what to do amongst themselves. And presenting himself before the multitude, (for he was not uneloquent, though a Lacedæmonian), he spake to this effect:

the oration of brasidas. year viii. A. C. 424. Ol. 89. 1. Oration of Brasidas. year viii. A. C. 424. Ol. 89. 1. Oration of Brasidas. year viii. A. C. 424. Ol. 89. 1. Oration of Brasidas.

85. “Men of Acanthus, the reason why the Lacedæmonians have sent me and this army abroad, is to make good what we gave out in the beginning for the cause of our war against the Athenians: which was, that we meant to make a war for the liberties of Greece. But if we be come late, as deceived by the war there in the opinion we had, that we ourselves should soon have pulled the Athenians down without any danger of yours, no man hath reason therefore to blame us. For we are come as soon as occasion served, and with your help will do our best to bring them under. But I wonder why you shut me forth of your gates, and why I was not welcome. For we Lacedæmonians have undergone this great danger, of passing many days’ journey through the territory of strangers, and showed all possible zeal, because we imagined that we went to such confederates, as before we came had us present in their hearts and were desirous of our coming. And therefore it were hard that you should now be otherwise minded, and withstand your own and the rest of the Grecians’ liberty; not only in that yourselves resist us, but also because others whom I go to will be the less willing to come in; making difficulty, because you to whom I came first, having a flourishing city and being esteemed wise, have refused us. For which I shall have no sufficient excuse to plead, but must be thought either to pretend to set up liberty unjustly, or to come weak and without power to maintain you against the Athenians. And yet against this same army I now have, when I went to encounter the Athenians at Nisæa, though more in number they durst not hazard battle. Nor is it likely that the Athenians will send forth so great a number against you, as they had in their fleet there at Nisæa. 86. I come not hither to hurt, but to set free the Grecians: and I have the Lacedæmonian magistrates bound unto me by great oaths, that whatsoever confederates shall be added to their side, at least by me, shall still enjoy their own laws; and that we shall not hold you as confederates to us brought in either by force or fraud, but on the contrary, be confederates

to you that are kept in servitude by the Athenians. And therefore I claim not only that you be not jealous of me, (especially having given you so good assurance), or think me unable to defend you; but also that you declare yourselves boldly with me. And if any man be unwilling so to do through fear of some particular man, apprehending that I would put the city into the hands of a few, let him cast away that fear: for I came not to side, nor do I think I should bring you an assured liberty, if neglecting the ancient use here I should enthrall either the multitude to the few, or the few to the multitude. For to be governed so, were worse than the domination of a foreigner: and there would result from it to us Lacedæmonians, not thanks for our labours; but instead of honour and glory, an imputation of those crimes for which we make war amongst the Athenians, and which would be more odious in us, than in them, that never pretended the virtue. For it is more dishonourable, at least to men in dignity, to amplify their estate by specious fraud, than by open violence. For the latter assaileth with a certain right of power given us by fortune; but the other, with the treachery of a wicked conscience. 87. But besides the oath which they have sworn already, the greatest further assurance you can have, is this: that our actions weighed with our words, you must needs believe that it is to our profit to do as I have told you. But if after these promises of mine you shall say, you cannot; and yet, forasmuch as your affection is with us, will claim impunity for rejecting us; or shall say, that this liberty I offer you seems to be accompanied with danger, and that it were well done to offer it to such as can receive it, but not to force it upon any: then will I call to witness the gods and heroes of this place, that my counsel which you refuse was for your good; and will endeavour, by wasting of your territory, to compel you to it. Nor shall I think I do you therein any wrong; but have reason for it for two necessities: one of the Lacedæmonians, lest whilst they have your affections and not your society, they should receive hurt from your contributions of money to

the Athenians; another of the Grecians, lest they should be hindered of their liberty by your example. For otherwise indeed we could not justly do it; nor ought we Lacedæmonians to set any at liberty against their wills, if it were not for some common good. We covet not dominion [over you]; but seeing we haste to make others lay down the same, we should do injury to the greater part, if bringing liberty to the other states in general we should tolerate you to cross us. Deliberate well of these things: strive to be the beginners of liberty in Greece; to get yourselves eternal glory; to preserve every man his private estate from damage, and to invest the whole city with a most honourable title.”

The revolt of Acanthus. year viii. A. C. 424. Ol. 89. 1. The revolt of Stageirus. The end of the eighth summer.

88. Thus spake Brasidas. The Acanthians, after much said on either side, partly for that which Brasidas had effectually spoken, and partly for fear of their fruits abroad, the most of them decreed to revolt from the Athenians; having given their votes in secret. And when they had made him take the same oath which the Lacedæmonian magistrates took when they sent him out, namely, that what confederates soever he should join to the Lacedæmonians should enjoy their own laws, they received his army into the city. And not long after revolted Stageirus, another colony of the Andrians. And these were the acts of this summer.

Demosthenes approacheth Siphæ by sea to take it by treason, but failed. The treason detected. Hippocrates marcheth to Delium: year viii. A. C. 424. Ol. 89. 1. he fortifieth Delium. The army of the Athenians, having taken Delium, begin to retire.

89. In the very beginning of the next winter, when the Bœotian cities should have been delivered to Hippocrates and Demosthenes, generals of the Athenians; and Demosthenes should have gone to Siphæ, and Hippocrates to Delium: having mistaken the days on which they should

have both set forward, Demosthenes went to Siphæ first, and having with him the Acarnans and many confederates of those parts in his fleet, [yet] lost his labour. For the treason was detected by one Nicomachus, a Phocæan of the town of Phanotis, who told it unto the Lacedæmonians, and they again unto the Bœotians. Whereby the Bœotians concurring universally to relieve those places, (for Hippocrates was not yet gone to trouble them in their own several territories), preoccupied both Siphæ and Chæroneia. And the conspirators knowing the error, attempted in those cities no further. 90. But Hippocrates having raised the whole power of the city of Athens, both citizens and others that dwelt amongst them, and all strangers that were then there, arrived afterwards at Delium when the Bœotians were now returned from Siphæ; and there stayed and took in Delium, a temple of Apollo, with a wall in this manner. Round about the temple and the whole consecrated ground they drew a ditch; and out of the ditch, instead of a wall they cast up the earth; and having driven down piles on either side, they cast thereinto the matter of the vineyard about the temple, which to that purpose they cut down, together with the stones and bricks of the ruined buildings: and by all means heightened the fortification, and in such places as would give leave, erected turrets of wood upon the same. There was no edifice of the temple standing, for the cloister that had been was fallen down. They began the work the third day after they set forth from Athens; and wrought all the same day and all the fourth, and the fifth day till dinner. And then being most part of it finished, the camp came back from Delium about ten furlongs homewards. And the light-armed soldiers went most of them presently away; but the men of arms laid down their arms there, and rested. Hippocrates stayed yet behind, and took order about the garrison, and about the finishing of the remainder of the fortification.

The Bœotians follow them. year viii. A. C. 424. Ol. 89. 1.

91. The Bœotians took the same time to assemble at Tanagra: and when all the forces were come in that from every city were expected, and when they understood that the Athenians drew homewards; though the rest of the Bœotian commanders, which were eleven, approved not giving battle, because they were not now in Bœotia, (for the Athenians, when they laid down their arms, were in the confines of Oropia); yet Pagondas the son of Aioladas, being the Bœotian commander for Thebes, whose turn it was to have the leading of the army, was, together with Arianthidas the son of Lysimachidas, of opinion to fight, and held it the best course to try the fortune of a battle; wherefore calling them unto him every company by itself, that they might not be all at once from their arms, he exhorted the Bœotians to march against the Athenians and to hazard battle, speaking in this manner:

the oration of pagondas to his soldiers. year viii. A. C. 424. Ol. 89. 1.
Oration of Pagondas. year viii. A. C. 424. Ol. 89. 1. Oration of Pagondas.

92. “Men of Bœotia, it ought never to have so much as entered into the thought of any of us the commanders, that because we find not the Athenians now in Bœotia, it should therefore be unfit to give them battle. For they out of a bordering country have entered Bœotia and fortified in it, with intent to waste it: and are indeed enemies in whatsoever ground we find them, or whencesoever they come doing the acts of hostility. But now if any man think it also unsafe, let him henceforth be of another opinion. For providence in them that are invaded, endureth not such deliberation concerning their own, as may be used by them, who retaining their own, out of desire to enlarge voluntarily invade the estate of another. And it is the custom of this country of yours, when a foreign enemy comes against you, to fight with him both on your own and on your neighbour’s ground alike; but much more you ought to do it against the Athenians, when they be borderers. For liberty with all men, is nothing else but to be a match for the

cities that are their neighbours. With these then, that attempt the subjugation not only of their neighbours, but of estates far from them, why should we not try the utmost of our fortune? We have for example the estate that the Eubœans over against us, and also the greatest part of the rest of Greece, do live in under them. And you must know, that though others fight with their neighbours about the bounds of their territories, we, if we be vanquished, shall have but one bound amongst us all: so that we shall no more quarrel about limits. For if they enter, they will take all our several states into their own possession by force. So much more dangerous is the neighbourhood of the Athenians, than of other people. And such as upon confidence in their strength invade their neighbours, as the Athenians now do, use to be bold in warring on those that sit still, defending themselves only in their own territories: whereas they be less urgent to those that are ready to meet them without their own limits, or [also] to begin the war when opportunity serveth. We have experience hereof in these same men. For after we had overcome them at Coroneia, at what time through our own sedition they held our country in subjection, we established a great security in Bœotia: which lasted till this present. Remembering which, we ought now, the elder sort to imitate our former acts there; and the younger sort, who are the children of those valiant fathers, to endeavour not to disgrace the virtue of their houses: but rather with confidence that the god, whose temple fortified they unlawfully dwell in, will be with us, the sacrifices we offered him appearing fair, to march against them; and let them see, that though they may gain what they covet when they invade such as will not fight, yet men that have the generosity to hold their own in liberty by battle, and not invade the state of another unjustly, will never let them go away unfoughten.”

Year viii. A. C. 424. Ol. 89. 1. The order of the army of the Bœotians. The order of the army of the Athenians. year viii. A. C. 424.

Ol. 89. 1.

93. Pagondas with this exhortation persuaded the Bœotians to march against the Athenians, and making them rise led them speedily on; for it was drawing towards night. And when he was near to their army, in a place from whence by the interposition of a hill they saw not each other, making a stand he put his army into order and prepared to give battle. When it was told Hippocrates, who was then at Delium, that the Bœotians were marching after them, he sends presently to the army, commanding them to be put in array. And not long after he came himself: having left some three hundred horse about Delium, both for a guard to the place if it should be assaulted, and withal to watch an opportunity to come upon the Bœotians when they were in fight. But for these, the Bœotians appointed some forces purposely to attend them. And when all was as it should be, they showed themselves from the top of the hill, where they sat down with their arms in the same order they were to fight in: being about seven thousand men of arms, of light-armed soldiers above ten thousand, a thousand horsemen, and five hundred targetiers. Their right wing consisting of the Thebans, and their partakers; in the middle battle were the Haliartians, Coronæans, Copæans, and the rest that dwell about the lake; in the left were the Thespians, Tanagræans, and Orchomenians. The horsemen and light-armed soldiers were placed on either wing. The Thebans were ordered by twenty-five in file; but the rest, every one as it fell out. This was the preparation and order of the Bœotians. 94. The Athenian men of arms, in number no fewer than the enemy, were ordered by eight in file throughout: their horse they placed on either wing. But for light-armed soldiers armed as was fit, there were none; nor was there any in the city. Those that went out, followed the camp for the most part without arms, as being a general expedition both of citizens and strangers; and after they once began to make homeward, there stayed few behind. When they were now in their order and

ready to join battle, Hippocrates the general came into the army of the Athenians, and encouraged them, speaking to this effect:

the oration of hippocrates to his soldiers.

95. “Men of Athens, my exhortation shall be short, but with valiant men it hath as much force as a longer; and is for a remembrance rather than a command. Let no man think, because it is in the territory of another, that we therefore precipitate ourselves into a great danger that did not concern us. For in the territory of these men, you fight for your own. If we get the victory, the Peloponnesians will never invade our territories again, for want of the Bœotian horsemen. So that in one battle, you shall both gain this territory, and free your own. Therefore march on against the enemy, every one as becometh the dignity, both of his natural city, which he glorieth to be chief of all Greece; and of his ancestors, who having overcome these men at Cænophyta under the conduct of Myronides, were in times past masters of all Bœotia.”

The Bœotians interrupt the year viii. A. C. 424. Ol. 89. 1. year viii. A. C. 424. Ol. 89. 1. The Athenians fly. Dispute about giving leave to the Athenians to take up their dead. the message of the bœotians to the athenians. year viii. A. C. 424. Ol. 89. 1. the message of the athenians to the bœotians by a friend of their own. year viii. A. C. 424. Ol. 89. 1. the reply of the bœotians. year viii. A. C. 424. Ol. 89. 1.

96. Whiles Hippocrates was making this exhortation, and had gone with it over half the army, but [could proceed] no further, the Bœotians (for Pagondas likewise made but a short exhortation and had there sung the Pæan) came down upon them from the hill. And the Athenians likewise went forward to meet them, [so fast that] they met together running. The utmost parts of both the armies never came to join, hindered both, by one and the same cause: for certain currents of water kept them asunder. But the rest made sharp battle; standing close, and striving to put by each others’

bucklers. The left wing of the Bœotians, to the very middle of the army, were overthrown by the Athenians: who in this part had to deal, amongst others, principally with the Thespians. For whilst they that were placed within the same wing, gave back, and were circled in by the Athenians in a narrow compass, those Thespians that were slain were hewed down in the very fight. Some also of the Athenians themselves, troubled with inclosing them, through ignorance slew one another. So that the Bœotians were overcome in this part; and fled to the other part where they were yet in fight. But the right wing wherein the Thebans stood, had the better of the Athenians; and by little and little forced them to give ground, and followed upon them from the very first. It happened also that Pagondas, whilst the left wing of his army was in distress, sent two companies of horse secretly about the hill; whereby that wing of the Athenians which was victorious, apprehending upon their sudden appearing that they had been a fresh army, was put into affright: and the whole army of the Athenians, now doubly terrified by this accident and by the Thebans that continually won ground and brake their ranks, betook themselves to flight. Some fled toward Delium and the sea; and some towards Oropus; others toward the mountain Parnethus; and others other ways, as to each appeared hope of safety. The Bœotians, especially their horse and those Locrians that came in after the enemy was already defeated, followed killing them. But night surprising them, the multitude of them that fled was the easier saved. The next day those that were gotten to Oropus and Delium went thence by sea to Athens, having left a garrison in Delium: which place, notwithstanding this defeat, they yet retained. 97. The Bœotians, when they had erected their trophy, taken away their own dead, rifled those of the enemy, and left a guard upon the place, returned back to Tanagra; and there entered into consultation for an assault to be made on Delium. In the meantime, a herald sent from the Athenians to require the bodies, met with a herald by the way sent by the

Bœotians: which turned him back, by telling him he could get nothing done till himself was returned from the Athenians. This herald, when he came before the Athenians, delivered unto them what the Bœotians had given him in charge: namely, “that they had done unjustly to transgress the universal law of the Grecians; being a constitution received by them all, that the invader of a another’s country should abstain from all holy places in the same: that the Athenians had fortified Delium and dwelt in it, and done whatsoever else men use to do in places profane; and had drawn that water to the common use, which was unlawful for themselves to have touched, save only to wash their hands for the sacrifice: that therefore the Bœotians, both in the behalf of the god and of themselves, invoking Apollo and all the interested spirits, did warn them to be gone and to remove their stuff out of the temple.” 98. After the herald had said this, the Athenians sent a herald of their own to the Bœotians: “denying that either they had done any wrong to the holy place already, or would willingly do any hurt to it hereafter: for neither did they at first enter into it to such intent; but to requite the greater injuries which had been done unto them: as for the law which the Grecians have, it is no other but that they which have the dominion of any territory, great or small, have ever the temples also; and besides the accustomed rites, may superinduce what other they can: for also the Bœotians, and most men else, all that having driven out another nation possess their territory, did at first invade the temples of others and make them their own: that therefore, if they could win from them more of their land, they would keep it; and for the part they were now in, they were in it with a good will and would not out of it, as being their own: that for the water, they meddled with it upon necessity; which was not to be ascribed to insolence, but to this, that fighting against the Bœotians that had invaded their territory first, they were forced to use it; for whatsoever is forced by war or danger, hath in reason a kind of pardon even with the god himself: for the altars, in cases of

involuntary offences, are a refuge; and they are said to violate laws that are evil without constraint, not they that are a little bold upon occasion of distress: that the Bœotians themselves, who require restitution of the holy places for a redemption of the dead, are more irreligious by far than they, who, rather than let their temples go, are content to go without that which were fit for them to receive: and they bade him say plainly: that they would not depart out of the Bœotian territory, for that they were not now in it; but in a territory which they had made their own by the sword: and nevertheless, required truce according to the ordinances of the country, for the fetching away of the dead.” 99. To this the Bœotians answered: “that if the dead were in Bœotia, they should quit the ground and take with them whatsoever was theirs: but if the dead were in their own territory, the Athenians themselves knew best what to do.” For they thought that though Oropia, wherein the dead lay, (for the battle was fought in the border between Attica and Bœotia), by subjection belonged to the Athenians, yet they could not fetch them off by force; and for truce that the Athenians might come safely on Athenian ground, they would give none: but conceived it was a handsome answer, to say, “that if they would quit the ground they should obtain whatsoever they required.” Which when the Athenian herald heard, he went his way without effect.

The form of an engine, wherewith they set the wall on fire. year viii. A. C. 424. Ol. 89. 1. Delium recovered by the Bœotians.

100. The Bœotians presently sent for darters and slingers from [the towns on] the Melian gulf; and with these, and with two thousand men of arms of Corinth, and with the Peloponnesian garrison that was put out of Nisæa, and with the Megareans, all which arrived after the battle, they marched forthwith to Delium and assaulted the wall. And when they had attempted the same many other ways, at length they brought to it an engine, wherewith they also took it, made in this manner. Having slit in two a great

mast, they made hollow both the sides, and curiously set them together again in the form of a pipe. At the end of it in chains they hung a cauldron: and into the cauldron from the end of the mast they conveyed a snout of iron; having with iron also armed a great part of the rest of the wood. They carried it to the wall, being far off, in carts; to that part, where it was most made up with the matter of the vineyard and with wood. And when it was to, they applied a pair of great bellows to the end next themselves, and blew. The blast passing narrowly through into the cauldron, in which were coals of fire, brimstone, and pitch, raised an exceeding great flame, and set the wall on fire: so that no man being able to stand any longer on it, but abandoning the same and betaking themselves to flight, the wall was by that means taken. Of the defendants, some were slain, and two hundred taken prisoners: the rest of the number recovered their galleys, and got home.

The Bœotians deliver to the Athenians their dead.

101. Delium thus taken on the seventeenth day after the battle, and the herald, which not long after was sent again about the fetching away of the dead, not knowing it: the Bœotians let him have them, and answered no more as they had formerly done. In the battle there died, Bœotians, few less than five hundred: the Athenians, few less than a thousand, with Hippocrates the general; but of light-armed soldiers and such as carried the provisions of the army, a great number.

Demosthenes landing in Sicyonia, is beaten back by the inhabitants. year viii. A. C. 424. Ol. 89. 1. Sitalces king of Thrace, dieth: and Seuthes his brother's son succeedeth him.

Not long after this battle, Demosthenes, that had been with his army at Siphæ, seeing the treason succeeded not, having aboard his galleys his army of Acarnanians and Agræans and four hundred men of arms of Athens, landed in Sicyonia. But before all his galleys came to shore, the Sicyonians, who went out to defend their territory, put to flight such as were already

landed, and chased them back to their galleys; having also slain some, and taken some alive. And when they had erected a trophy, they gave truce to the Athenians for the fetching away of their dead. About the time that these things passed at Delium, died Sitalces, king of the Odrysians, overcome in battle in an expedition against the Triballians. And Seuthes the son of Spardocus, his brother's son, succeeded him in the kingdom, both of the Odrysians, and of the rest of Thrace as much as was before subject to Sitalces.

Brasidas goeth to Amphipolis. The original of Amphipolis. A. C. 498. Ol. 70. 3. Agnon founder of Amphipolis. year viii. A. C. 424. Ol. 89. 1.

102. The same winter, Brasidas with the confederates in Thrace made war upon Amphipolis; a colony of the Athenians, situated on the river Strymon. The place whereon the city now standeth, Aristagoras of Miletus had formerly attempted to inhabit, when he fled from king Darius: but was beaten away by the Edonians. Two-and-thirty years after this, the Athenians assayed the same; and sent thither ten thousand of their own city, and of others as many as would go: and these were destroyed all by the Thracians at Drabescus. In the twenty-ninth year after, conducted by Agnon the son of Nicias, the Athenians came again; and having driven out the Edonians, became founders of this place, formerly called the Nine-ways. His army lay then at Eion, a town of traffic by the seaside subject to the Athenians, at the mouth of the river Strymon; five-and-twenty furlongs from the city. Agnon named this city Amphipolis, because it was surrounded by the river Strymon, that runs on either side it. When he had taken it in with a long wall from river to river, he put inhabitants into the place, being conspicuous round about both to the sea and land.

The Argilians conspire to betray Amphipolis. year viii. A. C. 424. Ol. 89. 1. Argilus revolteth Brasidas winneth the bridge, and is master of all

between it and the city. The Amphipolitans send for aid to Thucydides, the author of this history. year viii. A. C. 424. Ol. 89. 1.

103. Against this city marched Brasidas with his army, dislodging from Arnæ in Chalcidea. Being about twilight come as far as Aulon and Bromiscus, where the lake Bolbe entereth into the sea, he caused his army to sup, and then marched forward by night. The weather was foul, and a little it snowed; which also made him to march the rather, as desiring that none of Amphipolis, but only the traitors, should be aware of his coming. For there were both Argilians that dwelt in the same city, (now Argilus is a colony of the Andrians), and others, that contrived this, induced thereunto some by Perdiccas, and some by the Chalcideans. But above all the Argilians, being of a city near unto it, and ever suspected by the Athenians, and secret enemies to the place, as soon as opportunity was offered and Brasidas arrived, (who had also long before dealt underhand with as many of them as dwelt in Amphipolis, to betray it), both received him into their own city, and revolting from the Athenians, brought the army forward the same night as far as to the bridge of the river. The town stood not close to the river, nor was there a fort at the bridge then, as there is now; but they kept it only with a small guard of soldiers. Having easily forced this guard, both in respect of the treason and of the weather, and of his own unexpected approach, he passed the bridge, and was presently master of whatsoever the Amphipolitans had that dwelt without. 104. Having thus suddenly passed the bridge, and many of those without being slain, and some fled into the city, the Amphipolitans were in very great confusion at it: and the rather, because they were jealous one of another. And it is said, that if Brasidas had not sent out his army to take booty, but had marched presently to the city, he had in all likelihood taken it then. But so it was, that he pitched there, and fell upon those without; and seeing nothing succeeded by those within, lay still upon the place. But the contrary faction to the traitors being superior in

number, whereby the gates were not opened presently, both they and Eucles the general, who was then there for the Athenians to keep the town, sent unto the other general, Thucydides the son of Olorus, the writer of this history, who had charge in Thrace, and was now about Thasos, (which is an island, and a colony of the Parians, distant from Amphipolis about half a day's sail), requiring him to come and relieve them. When he heard the news, he went thitherwards in all haste with seven galleys, which chanced to be with him at that time. His purpose principally was, to prevent the yielding up of Amphipolis; but if he should fail of that, then to possess himself of Eion [before Brasidas his coming].

Brasidas, fearing to be prevented by Thucydides, hasteth by easy conditions to procure the town to yield. year viii. A. C. 424. Ol. 89. 1. Amphipolis yielded. Thucydides cometh too late to relieve Amphipolis, and putteth himself into Eion:

105. Brasidas in the meantime, fearing the aid of the galleys to come from Thasos, and having also been informed that Thucydides possessed mines of gold in the parts of Thrace thereabouts, and was thereby of ability amongst the principal men of the continent, hasted by all means to get Amphipolis before he should arrive; lest otherwise at his coming the commons of Amphipolis, expecting that he would levy confederates both from the sea-side and in Thrace, and relieve them, should thereupon refuse to yield. And to that end offered them a moderate composition: causing to be proclaimed, "that whosoever, Amphipolitan or Athenian, would, might continue to dwell there and enjoy his own, with equal and like form of government; and that he that would not, should have five days' respite to be gone and carry away his goods." 106. When the commons heard this, their minds were turned; and the rather, because the Athenians amongst them were but few, and the most were a promiscuous multitude; and the kinsmen of those that were taken without, flocked together within. And in respect of

their fear, they all thought the proclamation reasonable: the Athenians thought it so, because they were willing to go out, as apprehending their own danger to be greater than that of the rest; and withal, not expecting aid in haste: and the rest of the multitude, as being thereby both delivered of the danger, and withal to retain their city with the equal form of government. Insomuch that they which conspired with Brasidas now openly justified the offer to be reasonable: and seeing the minds of the commons were now turned, and that they gave ear no more to the words of the Athenian general, they compounded, and upon the conditions proclaimed received him. Thus did these men deliver up the city: Thucydides with his galleys arrived in the evening of the same day at Eion. Brasidas had already gotten Amphipolis, and wanted but a night of taking Eion also: for if these galleys had not come speedily to relieve it, by next morning it had been had.

and defendeth it against Brasidas. year viii. A. C. 424. Ol. 89. 1. Great inclination of the people of those parts to come in to Brasidas.

107. After this Thucydides assured Eion, so as it should be safe both for the present, though Brasidas should assault it, and for the future; and took into it such as, according to the proclamation made, came down from Amphipolis. Brasidas with many boats came suddenly down the river to Eion, and attempted to seize on the point of the ground lying out from the wall into the sea, and thereby to command the mouth of the river: he assayed also the same at the same time by land, and was in both beaten off; but Amphipolis he furnished with all things necessary. Then revolted to him Myrcinus, a city of the Edonians; Pittacus, the king of the Edonians, being slain by the sons of Goaxis, and by Braures his own wife. And not long after Gapselus also, and Cæsyme, colonies of the Thasians. Perdiccas also, after the taking of these places, came to him, and helped him in assuring of the same.

The Athenians begin to fear. year viii. A. C. 424. Ol. 89. 1. The Athenians send garrisons to the places thereabouts. Brasidas envied at home.

108. After Amphipolis was taken, the Athenians were brought into great fear; especially, for that it was a city that yielded them much profit, both in timber which is sent them for the building of galleys, and in revenue of money; and because also, though the Lacedæmonians had a passage open to come against their confederates, the Thessalians convoying them, as far as to Strymon, yet if they had not gotten that bridge, the river being upwards nothing but a vast fen, and towards Eion well guarded with their galleys, they could have gone no further: which now they thought they might easily do; and therefore feared lest their confederates should revolt. For Brasidas both showed himself otherwise very moderate, and also gave out in speech, that he was sent forth to recover the liberty of Greece. And the cities which were subject to the Athenians, hearing of the taking of Amphipolis, and what assurance he brought with him, and of his gentleness besides, were extremely desirous of innovation; and sent messengers privily to bid him draw near, every one striving who should first revolt. For they thought they might do it boldly, falsely estimating the power of the Athenians to be less than afterwards it appeared, and making a judgment of it according to [blind] wilfulness rather than safe forecast: it being the fashion of men, what they wish to be true to admit even upon an ungrounded hope, and what they wish not, with a magistral kind of arguing to reject. Withal, because the Athenians had lately received a blow from the Bœotians, and because Brasidas had said, (not as was the truth, but as served best to allure them), that when he was at Nisæa the Athenians durst not fight with those forces of his alone, they grew confident thereon, and believed not that any man would come against them. But the greatest cause of all was, that for the delight they took at this time to innovate, and for that they were to make

trial of the Lacedæmonians, not till now angry, they were content by any means to put it to the hazard. Which being perceived, the Athenians sent garrison soldiers into those cities, as many as the shortness of the time and the season of winter would permit. And Brasidas sent unto Lacedæmon, to demand greater forces; and in the meantime prepared to build galleys on the river Strymon. But the Lacedæmonians, partly through envy of the principal men, and partly because they more affected the redemption of their men taken in the island and the ending of the war, refused to furnish him.

C. 423. Ol. 89. 1. The Megareans demolish their long walls.

109. The same winter the Megareans, having recovered their long walls holden by the Athenians, razed them to the very ground.

Year viii. A. C. 423. Ol. 89. 1. Brasidas invadeth the territory of Acte, where Athos standeth. Torone revolteth to Brasidas. The manner how the town was betrayed. year viii. A. C. 423. Ol. 89. 1. year viii. A. C. 423. Ol. 89. 1. The town taken.

Brasidas, after the taking of Amphipolis, having with him the confederates, marched with his army into the territory called Acte. This Acte is that prominent territory, which is disjoined from the continent by a ditch made by the king: and Athos a high mountain in the same, determineth at the Ægean sea. Of the cities it hath, one is Sane, a colony of the Andrians, by the side of the said ditch on the part which looketh to the sea towards Eubœa: the rest are Thyssus, Cleone, Acrothoi, Olophyxus, and Dion; and are inhabited by promiscuous barbarians of two languages. Some few there are also of the Chalcidean nation; but the most are Pelasgic, of those Tyrrhene nations that once inhabited Athens and Lemnos; and of the Bisaltic and Chrestonic nations, and Edonians; and dwell in small cities. The most of which yielded to Brasidas: but Sane and Dion held out; for which cause he stayed with his army and wasted their territories. 110. But seeing they would not hearken unto him, he led his army presently against Torone of Chalcidea, held by the Athenians. He was called in by the few,

who were ready withal to deliver him the city: and arriving there a little before break of day, he sat down with his army at the temple of Castor and Pollux, distant about three furlongs from the city. So that to the rest of the city and to the Athenian garrison in it, his coming was unperceived. But the traitors knowing he was to come, (some few of them being also privily gone to him), attended his approach: and when they perceived he was come, they took in unto them seven men armed only with daggers; (for of twenty appointed at first to that service, seven only had the courage to go in; and were led by Lysistratus of Olynthus); which getting over the wall towards the main sea unseen, went up (for the town standeth on a hill's side) to the watch that kept the upper end of the town, and having slain the watchmen brake open the postern gate towards Canastræa. 111. Brasidas this while with the rest of his army lay still, and then coming a little forward, sent a hundred targetiers before, who when the gates should be opened and sign agreed on be set up, should run in first. These men, expecting long and wondering at the matter, by little and little were at length come up close to the city. Those Toronæans within, which helped the men that entered to perform the enterprise, when the postern gate was broken open, and the gate leading to the market-place opened likewise by cutting asunder the bar, went first and fetched some of them about to the postern, to the end that they might suddenly affright such of the town as knew not the matter, both behind and on either side: and then they put up the sign appointed, which was fire, and received the rest of the targetiers by the gate that leadeth to the market-place. 112. Brasidas, when he saw the sign, made his army rise; and with a huge cry of all at once, to the great terror of those within, entered into the city running. Some went directly in by the gate, and some by certain squared timber-trees, which lay at the wall (which having been lately down was now again in building) for the drawing up of stone. Brasidas therefore, with the greatest number, betook himself to the highest

places of the city, to make sure the winning of it by possessing the places of advantage. But the rest of the rabble ran dispersed here and there without difference.

The Athenians escape into a castle of the same, called Lecythus. year viii. A. C. 423. Ol. 89. 1. Brasidas his speech to the toronæans. year viii. A. C. 423. Ol. 89. 1. Brasidas taketh Lecythus. year viii. A. C. 423. Ol. 89. 1.

113. When the town was taken, the most of the Toronæans were much troubled, because they were not acquainted with the matter; but the conspirators, and such as were pleased with it, joined themselves presently with those that entered. The Athenians, (of which there were about fifty men of arms asleep in the market-place), when they knew what had happened, fled all, except some few that were slain upon the place, some by land, some by water in two galleys that kept watch there, and saved themselves in Lecythus; which was a fort which they themselves held, cut off from the rest of the city to the seaward in a narrow isthmus. And thither also fled all such Toronæans as were affected to them. 114. Being now day, and the city strongly possessed, Brasidas caused a proclamation to be made, that those Toronæans which were fled with the Athenians might come back, as many as would, to their own, and inhabit there in security. To the Athenians he sent a herald, bidding them depart out of Lecythus under truce with all that they had, as a place that belonged to the Chalcideans. The Athenians denied to quit the place; but the truce they desired for one day, for the taking up of their dead. And Brasidas granted it for two: in which two days he fortified the buildings near; and so also did the Athenians theirs. He also called an assembly of the Toronæans, and spake unto them as he had done before to the Acanthians: adding, “that there was no just cause, why either they that had practised to put the city into his hands should be the worse thought of, or accounted traitors for it; seeing that they did it with no intent to bring the city into servitude, nor were hired

thereunto with money, but for the benefit and liberty of the city: or that they which were not made acquainted with it, should think that themselves were not to reap as much good by it as the others; for he came not to destroy either city or man: but had therefore made that proclamation touching those that fled with the Athenians, because he thought them never the worse for that friendship, and made account when they had made trial of the Lacedæmonians, they would show as much good will also unto them, or rather more, inasmuch as they would behave themselves with more equity; and that their present fear was only upon want of trial. Withal he wished them to prepare themselves to be true confederates for the future; and from henceforward, to look to have their faults imputed: for, for what was past he thought they had not done any wrong, but suffered it rather from other men that were too strong for them; and therefore were to be pardoned, if they had in aught been against him.” 115. When he had thus said and put them again into heart, the truce being expired, he made divers assaults upon Lecythus. The Athenians fought against them from the wall, though a bad one, and from the houses such as had battlements: and for the first day kept them off. But the next day, when the enemies were to bring to the wall a great engine, out of which they intended to cast fire upon their wooden fences; and that the army was now coming up to the place where they thought they might best apply the engine, and which was easiest to be assaulted: the Athenians, having upon the top of the building erected a turret of wood, and carried up many buckets of water, and many men being also gone up into it, the building overcharged with weight fell suddenly to the ground; and that with so huge a noise, that though those which were near and saw it were grieved more than afraid, yet such as stood further off, especially the furthest of all, supposing the place to be in that part already taken, fled as fast as they could towards the sea and went aboard their galleys. 116. Brasidas, when he perceived the battlements to be abandoned

and saw what had happened, came on with his army and presently got the fort; and slew all that he found within it. But the rest of the Athenians, which before abandoned the place, with their boats and galleys put themselves into Pallene.

There was in Lecythus a temple of Minerva. And when Brasidas was about to give the assault, he had made proclamation, that whosoever first scaled the wall, should have thirty minæ of silver for a reward. Brasidas now conceiving that the place was won by means not human, gave those thirty minæ to the goddess to the use of the temple. And then pulling down Lecythus, he built it anew, and consecrated unto her the whole place.

The rest of this winter he spent in assuring the places he had already gotten, and in contriving the conquest of more. Which winter ending, ended the eighth year of this war.

Year ix. Truce for a year, the motives to truce on either side. year ix. A. C. 423. Ol. 89. 1.

117. The Lacedæmonians and Athenians, in the spring of the summer following, made a cessation of arms presently for a year: having reputed with themselves, the Athenians, that Brasidas should by this means cause no more of their cities to revolt, but that by this leisure they might prepare to secure them; and that if this suspension liked them, they might afterwards make some agreement for a longer time: the Lacedæmonians, that the Athenians fearing what they feared, would upon the taste of this intermission of their miseries and weary life, be the willinger to compound, and with the restitution of their men to conclude a peace for a longer time. For they would fain have recovered their men, whilst Brasidas his good fortune continued; and whilst, if they could not recover them, they might yet (Brasidas prospering, and setting them equal with the Athenians) try it out upon even terms, and get the victory. Whereupon a suspension of arms

was concluded, comprehending both themselves and their confederates, in these words:

the articles of the truce.

118. “Concerning the temple and oracle of Apollo Pythius, it seemeth good unto us, that whosoever will, may without fraud and without fear ask counsel thereat, according to the laws of his country. The same also seemeth good to the Lacedæmonians and their confederates here present; and they promise moreover to send ambassadors to the Bœotians and Phoceans, and do their best to persuade them to the same. That concerning the treasure belonging to the god, we shall take care to find out those that have offended therein, both we and you, proceeding with right and equity, according to the laws of our several states: and that whosoever else will, may do the same, every one according to the law of his own country.

“If the Athenians will accord that each side shall keep within their own bounds, retaining what they now possess, the Lacedæmonians and the rest of the confederates touching the same think good thus:

Year ix. A. C. 423. Ol. 89. 1. The articles of the truce.

“That the Lacedæmonians in Coryphasium stay within the mountains of Buphras and Tomeus; and the Athenians in Cythera without joining together in any league, either we with them or they with us. That those in Nisæa and Minoa pass not the highway, which from the gate of Megara near the temple of Nisus leadeth to the temple of Neptune, and so straightforward to the bridge that lies over into Minoa: that the Megareans pass not the same highway, nor into the island which the Athenians have taken; neither having commerce with other. That the Megareans keep what they now possess in Trœzen, and what they had before by agreement with the Athenians, and have free navigation, both upon the coasts of their own territories and their confederates.

“That the Lacedæmonians and their confederates shall pass the seas not in a long ship, but in any other boat rowed with oars of burden not exceeding five hundred talents.

“That the heralds and ambassadors, that shall pass between both sides for the ending of the war or for trials of judgment, may go and come without impeachment, with as many followers as they shall think good, both by sea and land.

Year ix. A. C. 423. Ol. 89. 1. The articles of the truce.

“That during this time of truce, neither we nor you receive one another’s fugitives, free nor bond.

“That you to us, and we to you shall afford law according to the use of our several states; to the end our controversies may be decided judicially without war.

“This is thought good by the Lacedæmonians and their confederates. But if you shall conceive any other articles more fair or of more equity than these, then shall you go and declare the same at Lacedæmon. For neither shall the Lacedæmonians nor their confederates refuse anything, that you shall make appear to be just. But let those that go, go with full authority, even as you do now require it of us. — That this truce shall be for a year.”

Year ix. A. C. 423. Ol. 89. 1.

“The people decreed it. Acamantis was president of the assembly. Phænippus the scribe. Niciades overseer, and Laches pronounced these words: ‘With good fortune to the people of Athens, a suspension of arms is concluded, according as the Lacedæmonians and their confederates have agreed’. And they consented before the people, ‘that the suspension should continue for a year, beginning that same day, being the fourteenth of the month Elaphebolion: in which time the ambassadors and heralds, going

from one side to the other, should treat about a final end of the wars: and that the commanders of the army and the presidents of the city calling an assembly, the Athenians should hold a council, touching the manner of embassy for ending of the war, first: and the ambassadors there present should now immediately swear this truce for a year’ “.

Year ix. A. C. 423. Ol. 89. 1.

119. The same articles the Lacedæmonians propounded, and the confederates agreed unto, with the Athenians and their confederates in Lacedæmon, on the twelfth day of the month Gerastion. The men that agreed upon these articles, and sacrificed, were these, viz. Of the Lacedæmonians, Taurus the son of Echetimidas, Athenæus the son of Pericleidas, and Philocharidas the son of Eryxidaidas. Of the Corinthians, Æneas the son of Ocytes, and Euphamidas the son of Aristonymus. Of the Sicyonians, Damotimos the son of Naucrates, and Onasimus the son of Megacles. Of the Megareans, Nicasus the son of Cecalus, and Menecrates the son of Amphidorus. Of the Epidaurians, Amphias the son of Eupaidas. Of the Athenians, the generals [themselves], Nicostratus the son of Diotrephes, Nicias the son of Niceratus, and Autocles the son of Tolmæus. This was the truce: and during the same they were continually in treaty about a longer peace.

The revolt of Scione. Brasidas goeth over in a boat, but with a galley before him: and his reason. year ix. A. C. 423. Ol. 89. 1. brasidas his speech to the scionæans. The honour done to Brasidas by the Scionæans. year ix. A. C. 423. Ol. 89. 1. Brasidas receiveth news of the suspension of arms. Difference between the Athenians and the Lacedæmonians about the restitution of Scione, which revolted after the truce made, but before the Lacedæmonians knew of it. The Athenians prepare to war on Scione. year ix. A. C. 423. Ol. 89. 1. Decree of the Athenians against Scione.

120. About the same time, whilst they were going to and fro, Scione, a city in Pallene, revolted from the Athenians to Brasidas. The Scionæans say, that they be Pallenians descended of those of Peloponnesus; and that their ancestors passing the seas from Troy, were driven in by a tempest, which tossed the Achæans up and down, and planted themselves in the place they now dwell in. Brasidas, upon their revolt, went over into Scione by night: and though he had a galley with him that went before, yet he himself followed aloof in a light-horseman. His reason was this: that if his light-horseman should be assaulted by some greater vessel, the galley would defend it; but if he met with a galley equal to his own, he made account that such a one would not assault his boat, but rather the galley, whereby he might in the meantime go through in safety. When he was over and had called the Scionæans to assemble, he spake unto them as he had done before to them of Acanthus and Torone: adding, “that they of all the rest were most worthy to be commended, inasmuch as Pallene, being cut off in the isthmus by the Athenians that possess Potidæa, and being no other than islanders, did yet of their own accord come forth to meet their liberty, and stayed not through cowardliness till they must of necessity have been compelled to their own manifest good: which was an argument, that they would valiantly undergo any other great matter, to have their state ordered to their minds: and that he would verily hold them for most faithful friends to the Lacedæmonians, and also otherwise do them honour.” 121. The Scionæans were erected with these words of his; and now every one alike encouraged, as well they that liked not what was done as those that liked it, entertained a purpose stoutly to undergo the war: and received Brasidas both otherwise honourably, and crowned him with a crown of gold in the name of the city, as the deliverer of Greece. And private persons honoured him with garlands and came to him, as they use to do to a champion that hath won a prize. But he leaving there a small garrison for the present, came back; and not long

after carried over a greater army, with design by the help of those of Scione to make an attempt upon Mende and Potidæa. For he thought the Athenians would send succours to the place, as to an island; and desired to prevent them. Withal, he had in hand a practice with some within to have those cities betrayed. So he attended, ready to undertake that enterprise. 122. But in the meantime came unto him in a galley, Aristonymus for the Athenians, and Athenæus for the Lacedæmonians, that carried about the news of the truce. Whereupon he sent away his army again to Torone: and these men related unto Brasidas the articles of the agreement. The confederates of the Lacedæmonians in Thrace approved of what was done: and Aristonymus had in all other things satisfaction. But for the Scionæans, whose revolt by computation of the days he had found to be after the making of the truce, he denied that they were comprehended therein. Brasidas said much in contradiction of this, and that the city revolted before the truce: and refused to render it. But when Aristonymus had sent to Athens to inform them of the matter, the Athenians were ready presently to have sent an army against Scione. The Lacedæmonians in the meantime sent ambassadors to the Athenians, to tell them that they could not send an army against it without breach of the truce; and, upon Brasidas his word, challenged the city to belong unto them, offering themselves to the decision of law. But the Athenians would by no means put the matter to judgment; but meant with all the speed they could make to send an army against it: being angry at the heart that it should come to this pass, that even islanders durst revolt, and trust to the unprofitable help of the strength of the Lacedæmonians by land. Besides, touching [the time of] the revolt, the Athenians had more truth on their side than themselves alleged: for the revolt of the Scionæans was after the truce two days. Whereupon, by the advice of Cleon, they made a decree, to take them by force and to put them all to the sword. And, forbearing war in all places else, they prepared themselves only for that.

The revolt of Mende.

123. In the meantime revolted also Mende in Pallene, a colony of the Eretrians. These also Brasidas received into protection: holding it for no wrong, because they came in openly in time of truce: and somewhat there was also which he charged the Athenians with, about breach of the truce. For which cause the Mendæans had also been the bolder, as sure of the intention of Brasidas: which they might guess at by Scione, inasmuch as he could not be gotten to deliver it. Withal, the few were they which had practised the revolt, who being once about it, would by no means give it over; but fearing lest they should be discovered, forced the multitude contrary to their own inclination to the same. The Athenians being hereof presently advertised, and much more angry now than before, made preparation to war upon both: and Brasidas expecting that they would send a fleet against them, received the women and children of the Scionæans and Mendæans into Olynthus in Chalcidea, and sent over thither five hundred Peloponnesian men of arms and three hundred Chalcidean targetiers, and for commander of them all Polydamidas. And those that were left in Scione and Mende joined in the administration of their affairs, as expecting to have the Athenian fleet immediately with them.

Year ix. A. C. 423. Ol. 89. 1. Perdiccas and Brasidas jointly invade Arrhibæus. The Lyncestians fly. Perdiccas expecteth mercenary aid out of Illyris. year ix. A. C. 423. Ol. 89. 1. The Illyrians come: and turn to Arrhibæus. The Macedonians upon a sudden fear run away, and desert Brasidas. Brasidas his retreat. year ix. A. C. 423. Ol. 89. 1.

124. In the meantime Brasidas and Perdiccas, with joint forces, march into Lynceus against Arrhibæus the second time. Perdiccas led with him the power of the Macedonians his subjects, and such Grecian men of arms as dwelt among them. Brasidas, besides the Peloponnesians that were left him, led with him the Chalcideans, Acanthians, and the rest, according to the forces they could severally make. The whole number of the Grecian men of

arms were about three thousand. The horsemen, both Macedonians and Chalcideans, somewhat less than a thousand; but the other rabble of barbarians was great. Being entered the territory of Arrhibæus, and finding the Lyncestians encamped in the field, they also sat down opposite to their camp. And the foot of each side being lodged upon a hill, and a plain lying betwixt them both, the horsemen ran down into the same, and a skirmish followed, first between the horse only of them both. But afterwards, the men of arms of the Lyncestians coming down to aid their horse from the hill, and offering battle first, Brasidas and Perdiccas drew down their army likewise, and charging, put the Lyncestians to flight: many of which being slain, the rest retired to the hill-top and lay still. After this they erected a trophy, and stayed two or three days, expecting the Illyrians who were coming to Perdiccas upon hire: and Perdiccas meant afterwards to have gone on against the villages of Arrhibæus one after another, and to have sitten still there no longer. But Brasidas having his thoughts on Mende, lest if the Athenians came thither before his return it should receive some blow; seeing withal that the Illyrians came not; had no liking to do so, but rather to retire. 125. Whilst they thus varied, word was brought that the Illyrians had betrayed Perdiccas, and joined themselves with Arrhibæus. So that now it was thought good to retire by them both, for fear of these who were a warlike people; but yet for the time when to march, there was nothing concluded, by reason of their variance. The next night, the Macedonians and multitude of barbarians (as it is usual with great armies, to be terrified upon causes unknown) being suddenly affrighted, and supposing them to be many more in number than they were, and even now upon them, betook themselves to present flight and went home. And Perdiccas, who at first knew not of it, they constrained when he knew, before he had spoken with Brasidas, (their camps being far asunder), to be gone also. Brasidas betimes in the morning, when he understood that the Macedonians were gone away

without him, and that the Illyrians and Arrhibæans were coming upon him, putting his men of arms into a square form, and receiving the multitude of his light-armed into the midst, intended to retire likewise. The youngest men of his soldiers he appointed to run out upon the enemy, when they charged the army anywhere [with shot]; and he himself with three hundred chosen men marching in the rear, intended, as he retired, to sustain the foremost of the enemy fighting, if they came close up. But before the enemy approached, he encouraged his soldiers, as the shortness of time gave him leave, with words to this effect:

the oration of brasidas to his soldiers. year ix. A. C. 423. Ol. 89. 1.
Oration of Brasidas. year ix. A. C. 423. Ol. 89. 1. Oration of Brasidas. year ix. A. C. 423. Ol. 89. 1.

126. “Men of Peloponnesus, if I did not mistrust, in respect you are thus abandoned by the Macedonians, and that the barbarians which come upon you are many, that you were afraid, I should not [at this time] instruct you and encourage you as I do. But now against this desertion of your companions and the multitude of your enemies, I will endeavour with a short instruction and hortative to give you encouragement to the full. For to be good soldiers is unto you natural, not by the presence of any confederates, but by your own valour; and not to fear others for the number, seeing you are not come from a city where the many bear rule over the few, but the few over the many; and have gotten this for power by no other means than by overcoming in fight. And as to these barbarians, whom through ignorance you fear, you may take notice, both by the former battles fought by us against them before, in favour of the Macedonians, and also by what I myself conjecture and have heard by others, that they have no great danger in them. For when any enemy whatsoever maketh show of strength, being indeed weak, the truth once known doth rather serve to embolden the other side: whereas against such as have valour indeed, a man will be the

boldest when he knoweth the least. These men here, to such as have not tried them, do indeed make terrible offers: for the sight of their number is fearful, the greatness of their cry intolerable, and the vain shaking of their weapons on high is not without signification of menacing. But they are not answerable to this, when with such as stand them they come to blows. For fighting without order they will quit their place without shame, if they be once pressed; and seeing it is with them honourable alike to fight or run away, their valours are never called in question: and a battle wherein every one may do as he list, affords them a more handsome excuse to save themselves. But they trust rather in their standing out of danger and terrifying us afar off, than in coming to hands with us: for else they would rather have taken that course than this. And you see manifestly, that all that was before terrible in them, is in effect little; and serves only to urge you to be going with their show and noise. Which if you sustain at their first coming on, and again withdraw yourselves still, as you shall have leisure, in your order and places, you shall not only come the sooner to a place of safety, but shall learn also against hereafter, that such a rabble as this, to men prepared to endure their first charge, do but make a flourish of valour with threats from afar before the battle: but to such as give them ground, they are eager enough to seem courageous where they may do it safely.”

Brasidas draweth away his army, and the barbarians follow him. The Illyrians pursue the Macedonians, leaving part of their army to follow Brasidas.

127. When Brasidas had made his exhortation, he led away his army. And the barbarians seeing it, pressed after them with great cries and tumult, as supposing he fled. But seeing that those who were appointed to run out upon them [did so, and] met them which way soever they came on; and that Brasidas himself, with his chosen band, sustained them where they charged close, and endured the first brunt beyond their expectation; and seeing also

that afterwards continually when they charged, the other received them and fought, and when they ceased the other retired: then at length the greatest part of the barbarians forbore the Grecians, that with Brasidas were in the open field, and leaving a part to follow them with shot, the rest ran with all speed after the Macedonians which were fled, of whom as many as they overtook they slew; and withal prepossessed the passage, which is a narrow one between two hills, giving entrance into the country of Arrhibæus, knowing that there was no other passage by which Brasidas could get away. And when he was come to the very strait, they were going about him to have cut him off.

Brasidas seizeth the top of the hill by which he was to pass. year ix. A. C. 423. Ol. 89. 1. The spite of Brasidas' soldiers against the Macedonians for abandoning them. Perdiccas and Brasidas fall out.

128. He, when he saw this, commanded the three hundred that were with him, to run every man as fast as he could to one of the tops, which of them they could easliest get up to, and try if they could drive down those barbarians that were now going up to the same, before any greater number was above to hem them in. These accordingly fought with and overcame those barbarians upon the hill, and thereby the rest of the army marched the more easily to the top. For this beating of them from the vantage of the hill, made the barbarians also afraid; so that they followed them no further, conceiving withal that they were now at the confines, and already escaped through. Brasidas, having now gotten the hills and marching with more safety, came first the same day to Arnissa, of the dominion of Perdiccas. And the soldiers of themselves, being angry with the Macedonians for leaving them behind, whatsoever teams of oxen, or fardles fallen from any man, (as was likely to happen in a retreat made in fear and in the night), they lighted on by the way, the oxen they cut in pieces, and took the fardles to themselves. And from this time did Perdiccas first esteem Brasidas as his

enemy, and afterwards hated the Peloponnesians, not with ordinary hatred for the Athenians' sake; but being utterly fallen out with him about his own particular interest, sought means as soon as he could to compound with these, and be disleagued from the other.

Year ix. A. C. 423. Ol. 89. 1. 2. The Mendæans encamp without the city. Nicias wounded. year ix. A. C. 423. Ol. 89. 1. 2. Sedition in Mende. The gates opened to the Athenians upon sedition. year ix. A. C. 423. Ol. 89. 1. 2. Mende pillaged by the Athenians. The Athenians lead their army against Scione.

129. Brasidas, at his return out of Macedonia to Torone, found that the Athenians had already taken Mende: and therefore staying there, (for he thought it impossible to pass over into Pallene and to recover Mende), he kept good watch upon Torone. For about the time that these things passed amongst the Lyncestians, the Athenians, after all was in readiness, set sail for Mende and Scione with fifty galleys, (whereof ten were of Chios), and a thousand men of arms of their own city, six hundred archers, a thousand Thracian mercenaries, and other targetiers of their own confederates thereabouts, under the conduct of Nicias the son of Niceratus, and Nicostratus the son of Diotrepes. These launching from Potidæa with their galleys, and putting in at the temple of Neptune, marched presently against the Mendæans. The Mendæans with their own forces, three hundred of Scione that came to aid them, and the aids of the Peloponnesians, in all seven hundred men of arms, and Polydamidas their commander, were encamped upon a strong hill without the city. Nicias with a hundred and twenty light-armed soldiers of Methone, and sixty chosen men of arms of Athens, and all his archers, attempting to get up by a path that was in the hill's side, was wounded in the attempt, and could not make his way by force. And Nicostratus with all the rest of the army, going another way further about, as he climbed the hill, being hard of access, was quite disordered; and the whole army wanted little of being utterly discomfited.

So for this day, seeing the Mendæans and their confederates stood to it, the Athenians retired and pitched their camp: and at night the Mendæans retired into the city. 130. The next day the Athenians sailing about unto that part of the city which is towards Scione, seized on the suburbs; and all that day wasted their fields, no man coming forth to oppose them: (for there was also sedition in the city): and the three hundred Scionæans the night following went home again. The next day Nicias, with the one half of the army, marched to the confines and wasted the territory of the Scionæans; and Nicostratus at the same time, with the other half, sat down against the city before the higher gates towards Potidæa. Polydamidas (for it fell out that the Mendæans and their aids had their arms lying within the wall in this part) set his men in order for the battle, and encouraged the Mendæans to make a sally. But when one of the faction of the commons in sedition said to the contrary, that they would not go out, and that it was not necessary to fight; and was upon this contradiction by Polydamidas pulled and molested: the commons in passion presently took up their arms, and made towards the Peloponnesians and such other with them as were of the contrary faction; and falling upon them put them to flight, partly with the suddenness of the charge, and partly through the fear they were in of the Athenians, to whom the gates were at the same time opened. For they imagined that this insurrection was by some appointment made between them. So they fled into the citadel, as many as were not presently slain; which was also in their own hands before. But the Athenians (for now was Nicias also come back, and at the town-side) rushed into the city with the whole army, and rifled it; not as opened to them by agreement, but as taken by force; and the captains had much ado to keep them that they also killed not the men. After this, they bade the Mendæans use the same form of government they had done before, and to give judgment upon those they thought the principal authors of the revolt, amongst themselves. Those that were in the citadel, they shut

up with a wall reaching on both sides to the sea; and left a guard to defend it. And having thus gotten Mende, they led their army against Scione. 131. The Scionæans and the Peloponnesians, coming out against them, possessed themselves of a strong hill before the city: which if the enemy did not win, he should not be able to enclose the city with a wall. The Athenians having strongly charged them [with shot] and beaten the defendants from it, encamped upon the hill: and after they had set up their trophy, prepared to build their wall about the city. Not long after, whilst the Athenians were at work about this, those aids that were besieged in the citadel of Mende, forcing the watch by the sea-side, came by night: and escaping most of them through the camp before Scione, put themselves into that city.

Perdiccas maketh peace with the Athenians. year ix. A. C. 423. Ol. 89. 1.
2. The Lacedæmonians make young men governors of cities.

132. As they were enclosing of Scione, Perdiccas sent a herald to the Athenian commanders and concluded a peace with the Athenians, upon hatred to Brasidas about the retreat made out of Lyncus: having then immediately begun to treat of the same. For it happened also at this time that Ischagoras a Lacedæmonian was leading an army of foot unto Brasidas. And Perdiccas, partly because Nicias advised him, seeing the peace was made, to give some clear token that he would be firm, and partly because he himself desired not that the Peloponnesians should come any more into his territories, wrought with his hosts in Thessaly, having in that kind ever used the prime men, and so stopped the army and munition as they would not so much as try the Thessalians [whether they would let them pass or not]. Nevertheless Ischagoras, and Ameinias, and Aristeus themselves went on to Brasidas, as sent by the Lacedæmonians to view the state of affairs there: and also took with them from Sparta, contrary to the law, such men as were but in the beginning of their youth, to make them governors of cities, rather than commit the cities to the care of such as were there before. And

Clearidas the son of Cleonymus, they made governor of Amphipolis; and Epitelidas the son of Hegesander, governor of Torone.

C. 423. Ol. 89. 2. The walls of Thespiæ demolished by the Thebans. The temple of Juno in Argos burnt by negligence of an old woman priest. year ix. A. C. 423. Ol. 89. 2. Phaeinis priest of Juno in the place of Chrysis. Siege laid to Scione. The end of the ninth summer.

133. The same summer, the Thebans demolished the walls of the Thespians, laying Atticism to their charge. And though they had ever meant to do it, yet now it was easier, because the flower of their youth was slain in the battle against the Athenians. The temple of Juno in Argos was also burnt down the same summer, by the negligence of Chrysis the priest, who having set a burning torch by the garlands, fell asleep: insomuch as all was on fire and flamed out before she knew. Chrysis the same night for fear of the Argives fled presently to Phlius: and they, according to the law formerly used, chose another priest in her room, called Phaeinis. Now when Chrysis fled, was the eighth year of this war ended, and half of the ninth. Scione, in the very end of this summer, was quite enclosed; and the Athenians having left a guard there, went home with the rest of their army.

Battle between the Mantineans and the Tegeatæ.

134. The winter following nothing was done between the Athenians and Lacedæmonians, because of the truce. But the Mantineans and the Tegeatæ, with the confederates of both, fought a battle at Laodicium, in the territory of Orestis, wherein the victory was doubtful: for either side put to flight one wing of their enemies, both sides set up trophies, and both sides sent of their spoils unto Delphi. Nevertheless, after many slain on either side, and equal battle which ended by the coming of night, the Tegeatæ lodged all night in the place, and erected their trophy then presently; whereas the Mantineans turned to Bucolion, and set up their trophy afterwards.

C. 422. Ol. 89. 2. Brasidas attempteth Potidæa. year ix. A. C. 422. Ol. 89. 2. The end of the ninth year.

135. The same winter ending and the spring now approaching, Brasidas made an attempt upon Potidæa. For coming by night, he applied his ladders: and was thitherto undiscerned. He took the time to apply his ladders when the bell passed by, and before he that carried it to the next returned. Nevertheless being discovered he scaled not the wall, but presently again withdrew his army with speed, not staying till it was day. So ended this winter: and the ninth year of this war written by Thucydides.

THE FIFTH BOOK OF THE HISTORY OF THUCYDIDES

THE PRINCIPAL CONTENTS.

THE FORMER YEAR'S truce ended, Cleon warreth on the Chalcidic cities, and recovereth Torone. — Phæax is sent by the Athenians to move a war amongst the Sicilians. — Cleon and Brasidas, who were on both sides the principal maintainers of the war, are both slain at Amphipolis. — Presently after their death a peace is concluded: and after that again, a league between the Lacedæmonians and Athenians. — Divers of the Lacedæmonian confederates hereat discontented, seek the confederacy of the Argives. These make league, first with the Corinthians, Eleians, and Mantineans: then with the Lacedæmonians: and then again, by the artifice of Alcibiades, with the Athenians. — After this the Argives make war upon the Epidaurians: and the Lacedæmonians upon the Argives. — The Athenian captains and the Melians treat by way of dialogue touching the yielding of Melos: which the Athenians afterwards besiege and win. — These are the acts of almost six years more of the same war.

Year x. A. C. 422. Ol. 89. 2. 3. The truce for a year expired. year x. A. C. 422. Ol. 89. 2. 3. The Delians removed out of Delos upon superstition. The Delians seat themselves in Adramyttium.

The summer following, the truce for a year, which was to last till the Pythian holidays, expired. During this truce, the Athenians removed the Delians out of Delos, because [though they were consecrated, yet] for a certain crime committed of old they esteemed them polluted persons: because also they thought there wanted this part to make perfect the purgation of the island; in the purging whereof, as I declared before, they thought they did well to take up the sepulchres of the dead. These Delians

seated themselves afterwards, every one as he came, in Adramyttium in Asia, a town given unto them by Pharnaces.

Cleon goeth out with an army into the parts upon Thrace: he assaulteth Torone. year x. A. C. 422. Ol. 89. 2. 3. Pasitelidas with the garrison of the town endeavoureth to defend it. Cleon taketh Torone. Pasitelidas, a Lacedæmonian captain, taken alive. Seven hundred men sent prisoners to Athens. year x. A. C. 422. Ol. 89. 2. 3. Panactum taken by the Bœotians.

After the truce was expired, Cleon prevailed with the Athenians to be sent out with a fleet against the cities lying upon Thrace. He had with him of Athenians twelve hundred men of arms and three hundred horsemen; of confederates more; and thirty galleys. And first arriving at Scione, which was yet besieged, he took aboard some men of arms of those that kept the siege; and sailed into the haven of the Colophonians, not far distant from the city of Torone. And there having heard by fugitives that Brasidas was not in Torone, nor those within sufficient to give him battle, he marched with his army to the city, and sent ten of his galleys about into the haven. And first he came to the new wall, which Brasidas had raised about the city to take in the suburbs: making a breach in the old wall, that the whole might be one city. 3. And Pasitelidas, a Lacedæmonian, captain of the town, with the garrison there present came to the defence, and fought with the Athenians that assaulted it. But being oppressed, and the galleys which were before sent about being by this time come into the haven, Pasitelidas was afraid lest those galleys should take the town, unfurnished of defendants, before he could get back, and that the Athenians on the other side should win the wall, and he be intercepted between them both: and thereupon abandoned the wall, and ran back into the city. But the Athenians that were in the galleys having taken the town before he came, and the land-army following in after him without resistance and entering the city by the breach of the old wall, slew some of the Peloponnesians and Toronæans

on the place, and some others, amongst whom was the captain Pasitelidas, they took alive. Brasidas was now coming with aid towards Torone: but advertised by the way that it was already lost, went back again; being about forty furlongs short of preventing it. Cleon and the Athenians erected two trophies, one at the haven, another at the wall. The women and children of the Toronæans, they made slaves; but the men of Torone and the Peloponnesians, and such Chalcideans as were amongst them, in all about seven hundred, they sent away prisoners to Athens. The Peloponnesians were afterwards at the making of the peace dismissed; the rest were redeemed by the Olynthians, by exchange of man for man.

About the same time the Bœotians took Panactum, a fort of the Athenians standing in their confines, by treason.

Cleon goeth to Amphipolis.

Cleon, after he had settled the garrison in Torone, went thence by sea about the mountain Athos [to make war] against Amphipolis.

Phæax sent ambassador to the Sicilians. The Leontine commons driven out of the city by the Syracusians. The Leontine nobility become Syracusians, and go to Syracuse to dwell. The Leontines make war on the Syracusians. year x. A. C. 422. Ol. 89. 2. 3. Phæax moveth the Sicilians to war upon the Syracusians. The Gelans stop the motion made by Phæax. Phæax maketh peace with the Locrians.

About the same time Phæax the son of Erasistratus, who with two others was sent ambassador into Italy and Sicily, departed from Athens with two galleys. For the Leontines, after the Athenians upon the making of the peace were gone out of Sicily, received many strangers into the freedom of their city: and the commons had a purpose also to have made division of the land. But the great men perceiving it, called in the Syracusians, and drave the commons out: and they wandered up and down, every one as he chanced; and the great men, upon conditions agreed on with the

Syracusians, abandoning and deserting that city, went to dwell with the privilege of free citizens in Syracuse. After this again, some of them upon dislike relinquished Syracuse, and seized on Phoceæ, a certain place part of the city of the Leontines, and upon Bricinniaë, a castle in the Leontine territory. Thither also came unto them most of the commons that had before been driven out: and settling themselves, made war from those places of strength. Upon intelligence hereof the Athenians sent Phæax thither, to persuade their confederates there, and, if they could, all the Sicilians jointly, to make war upon the Syracusians, that were now beginning to grow great; to try if they might thereby preserve the common people of the Leontines. Phæax arriving, prevailed with the Camarinæans and Agrigentines: but the business finding a stop at Gela, he went unto no more, as conceiving he should not be able to persuade them. So he returned through the cities of the Siculi unto Catana, having been at Bricinniaë by the way and there encouraged them to hold out: and from Catana he set sail and departed. 5. In his voyage to Sicily, both going and coming, he dealt as he went by with sundry cities also of Italy, to enter into friendship with the Athenians. He also lighted on those Locrians, which having dwelt once in Messina, were afterwards driven out again; being the same men, which after the peace in Sicily, upon a sedition in Messina, wherein one of the factions called in the Locrians, had been then sent to inhabit there, [and now were sent away again]: for the Locrians held Messina for a while. Phæax therefore chancing to meet with these as they were going to their own city, did them no hurt: because the Locrians had been in speech with him about an agreement with the Athenians. For when the Sicilians made a general peace, these only of all the confederates refused to make any peace at all with the Athenians. Nor indeed would they have done it now, but that they were constrained thereunto by the war they had with the Itoneans and Melæans, their own colonies and borderers. And Phæax after this returned to Athens.

Year x. A. C. 422. Ol. 89. 2. 3. Cleon maketh war on Amphi polis. Galepsus taken by Cleon. Brasidas sitteth down over against Cleon at Cerdylum The forces of Brasidas. year x. A. C. 422. Ol. 89. 3. Cleon goeth up to Amphipolis against his own mind.

6. Cleon, who was now gone from Torone and come about to Amphipolis, making Eion the seat of the war, assaulted the city of Stageirus, a colony of the Andrians; but could not take it: but Galepsus, a colony of the Thasians, he took by assault. And having sent ambassadors to Perdiccas, to will him to come to him with his forces according to the league, and other ambassadors into Thrace unto Polles, king of the Odomantians, to take up as many mercenary Thracians as he could; he lay still in Eion to expect their coming. Brasidas upon notice hereof, sat down over against him at Cerdylum. This is a place belonging to the Argilians, standing high and beyond the river, not far from Amphipolis; and from whence he might discern all that was about him. So that Cleon could not but be seen, if he should rise with his army to go against Amphipolis; which he expected he would do, and that in contempt of his small number he would go up with the forces he had then present. Withal he furnished himself with fifteen hundred mercenary Thracians, and took unto him all his Edonians, both horsemen and targetiers. He had also of Myrcinians and Chalcideans a thousand targetiers, besides them in Amphipolis. But for men of arms, his whole number was at the most two thousand, and of Grecian horsemen three hundred. With fifteen hundred of these came Brasidas and sat down at Cerdylum: the rest stood ready ordered with Clearidas their captain, within Amphipolis.

Cleon, not expecting a sally, vieweth the situation of the town. year x. A. C. 422. Ol. 89. 3. Brasidas putteth himself into Amphipolis. A stratagem of Brasidas.

7. Cleon for a while lay still; but was afterwards forced to do as was expected by Brasidas. For the soldiers being angry with their stay there, and recounting with themselves what a command his would be, and with what

ignorance and cowardice against what skill and boldness of the other, and how they came forth with him against their wills: he perceived their muttering, and being unwilling to offend them with so long a stay in one place, dislodged and led them forward. And he took the same course there, which having succeeded well before at Pylus gave him cause to think himself to have some judgment. For he thought not that any body would come forth to give him battle, and gave out he went up principally to see the place: and stayed for greater forces, not to secure him in case he should be compelled to fight, but that he might therewith environ the city on all sides at once, and in that manner take it by force. So he went up and set his army down on a strong hill before Amphipolis, standing himself to view the fens of the river Strymon and the situation of the city towards Thrace: and thought he could have retired again at his pleasure, without battle. For neither did any man appear upon the walls, nor come out of the gates: which were all fast shut. Insomuch as he thought he had committed an error in coming without engines: because he thought he might by such means have won the city, as being without defendants. 8. Brasidas, as soon as he saw the Athenians remove, came down also from Cerdylum and put himself into Amphipolis. He would not suffer them to make any sally, nor to face the Athenians in order of battle, mistrusting his own forces, which he thought inferior, not in number (for they were in a manner equal) but in worth: (for such Athenians as were there were pure, and the Lemnians and Imbrians which were amongst them were of the very ablest): but prepared to set upon them by a wile. For if he should have showed to the enemy both his number and their armour, such as for the present they were forced to use, he thought that thereby he should not so soon get the victory, as by keeping them out of sight and out of their contempt till the very point. Wherefore choosing to himself a hundred and fifty men of arms, and committing the charge of the rest to Clearidas, he resolved to set suddenly

upon them before they should retire: as not expecting to take them so alone another time, if their succours chanced to arrive. And when he had called his soldiers together to encourage them and to make known unto them his design, he said as followeth:

the oration of brasidas to his soldiers. year x. A. C. 422. Ol. 89. 3.
Oration of Brasidas. year x. A. C. 422. Ol. 89. 3. Oration of Brasidas.

9. “Men of Peloponnesus, as for your country, how by valour it hath ever retained her liberty, and that being Dorians you are now to fight against Ionians, of whom you were ever wont to get the victory, let it suffice that I have touched it thus briefly. But in what manner I intend to charge, that I am now to inform you of: lest the venturing by few at once, and not altogether, should seem to proceed from weakness, and so dishearten you. I do conjecture that it was in contempt of us, and as not expecting to be fought withal, that the enemy both came up to this place, and that they have now betaken themselves carelessly and out of order to view the country. But he that best observing such errors in his enemies, shall also to his strength give the onset, not always openly and in ranged battle, but as is best for his present advantage, shall for the most part attain his purpose. And these wiles carry with them the greatest glory of all, by which, deceiving most the enemy, a man doth most benefit his friends. Therefore whilst they are secure without preparation, and intend, for aught I see, to steal away rather than to stay: I say, in this their looseness of resolution, and before they put their minds in order, I for my part with those I have chosen will, if I can, before they get away fall in upon the midst of their army running. And you, Clearidas, afterwards, as soon as you shall see me to have charged and, as it is probable, to have put them into affright, take those that are with you, both Amphipolitans and all the rest of the confederates, and setting open the gates run out upon them, and with all possible speed come up to stroke of hand. For there is great hope this way to terrify them; seeing they which

come after, are ever of more terror to the enemy than those that are already present and in fight. And be valiant, as is likely you should that are a Spartan: and you, confederates, follow manfully, and believe that the parts of a good soldier are willingness, sense of shame, and obedience to his leaders; and that this day you shall either gain yourselves liberty by your valour, and to be called confederates of the Lacedæmonians, or else not only to serve the Athenians yourselves, and at the best, if you be not led captives, nor put to death, to be in greater servitude than before, but also to be the hinderers of the liberty of the rest of the Grecians. But be not you cowards, seeing how great a matter is at stake: and I, for my part, will make it appear that I am not more ready to persuade another, than to put myself into action.”

Brasidas prepareth to assault the army of the Athenians. year x. A. C. 422. Ol. 89. 3. Cleon is admonished of a sally towards: and leadeth his army back. Brasidas taketh this opportunity for his sally. year x. A. C. 422. Ol. 89. 3. Brasidas is wounded and falleth. Cleon flieth, and is slain. Brasidas his army getteth the victory. year x. A. C. 422. Ol. 89. 3. Brasidas liveth only so long as to know he had the victory.

10. When Brasidas had thus said, he both prepared to go out himself, and also placed the rest that were with Clearidas before the gates called the Thracian gates, to issue forth afterwards as was appointed. Now Brasidas having been in sight when he came down from Cerdylum, and again when he sacrificed in the city, by the temple of Pallas, which place might be seen from without; it was told Cleon [whilst Brasidas was ordering of his men] (for he was at this time gone off a little to look about him), that the whole army of the enemies was plainly to be discerned within the town, and that the feet of many men and horses, ready to come forth, might be discerned from under the gate. Hearing this, he came to the place: and when he saw it was true, being not minded to fight until his aids arrived, and yet making no

other account but that his retreat would be discovered, he commanded at once to give the signal of retreat, and that as they went the left wing should march foremost, which was the only means they had to withdraw towards Eion. But when he thought they were long about it, causing the right wing to wheel about and lay open their disarmed parts to the enemy, he led away the army himself. Brasidas at the same time, having spied his opportunity and that the army of the Athenians removed, said to those about him and the rest: “these men stay not for us; it is apparent by the wagging of their spears and of their heads: for where such motion is, they use not to stay for the charge of the enemy: therefore open me some body the gates appointed, and let us boldly and speedily sally forth upon them”. Then he went out himself at the gate towards the trench, and which was the first gate of the long wall, which then was standing; and at high speed took the straight way, in which, as one passeth by the strongest part of the town, there standeth now a trophy: and charging upon the midst of the Athenian army, which was terrified both with their own disarray and the valour of the man, forced them to fly. And Clearidas, as was appointed, having issued out by the Thracian gates, was withal coming upon them. And it fell out that the Athenians, by this unexpected and sudden attempt, were on both sides in confusion: and the left wing which was next to Eion, and which indeed was marching away before, was immediately broken off from the rest of the army and fled. When that was gone, Brasidas coming up to the right wing, was there wounded. The Athenians saw not when he fell: and they that were near took him up and carried him off. The right wing stood longer to it: and though Cleon himself presently fled, (as at first he intended not to stay), and was intercepted by a Myrcinian targetier and slain, yet his men of arms casting themselves into a circle on the [top of a little] hill, twice or thrice resisted the charge of Clearidas: and shrunk not at all, till begirt with the Myrcinian and Chalcidean horse and with the targetiers, they were put to

flight by their darts. Thus the whole army of the Athenians, getting away with much ado over the hills and by several ways, all that were not slain upon the place or by the Chalcidean horse and targetiers, recovered Eion. The other side taking up Brasidas out of the battle, and having so long kept him alive, brought him yet breathing into the city: and he knew that his side had gotten the victory, but expired shortly after. When Clearidas with the rest of the army were returned from pursuit of the enemy, they rifled those that were slain, and erected a trophy.

The honour done to Brasidas after his death. year x. A. C. 422. Ol. 89. 3.

11. After this the confederates, following the corpse of Brasidas all of them in their arms, buried him in the city at the public charge; in the entrance of that which is now the market-place. And the Amphipolitans afterwards, having taken in his monument with a wall, killed unto him as to a hero, honoured him with games and anniversary sacrifice, and attributed their colony unto him as to the founder; pulling down the edifices of Agnon, and defacing whatsoever monument might maintain the memory of his foundation. This they did both for that they esteemed Brasidas for their preserver; and also because at this time, through fear of the Athenians, they courted the Lacedæmonians for a league. As for Agnon, because of their hostility with the Athenians, they thought it neither expedient for them to give him honours, nor that they would be acceptable unto him if they did. The dead bodies they rendered to the Athenians: of whom there were slain about six hundred, and but seven of the other side, by reason that it was no set battle, but fought upon such an occasion and precedent affright. After the dead were taken up, the Athenians went home by sea; and Clearidas and those with him stayed to settle the estate of Amphipolis.

Supplies going to Brasidas stay by the way at Heracleia. The end of the tenth summer.

12. About the same time of the summer now ending, Ramphias, Autocharidas, and Epicydidas, Lacedæmonians, were leading a supply towards the parts upon Thrace of nine hundred men of arms: and when they were come to Heracleia in Trachinia, they stayed there to amend such things as they thought amiss. Whilst they stayed, this battle was fought: and the summer ended.

The supplies going to Brasidas, hearing of his death, return to Lacedæmon. year x. A. C. 422. Ol. 89. 3. The Athenians and Lacedæmonians incline to peace. The causes why the Athenians desired peace. The causes why the Lacedæmonians desired peace. year x. A. C. 422. Ol. 89. 3.

13. The next winter, they that were with Ramphias went presently forward, as far as [the hill] Pierium in Thessaly. But the Thessalians forbidding them to go on, and Brasidas, to whom they were carrying this army, being dead, they returned homewards: conceiving that the opportunity now served not, both because the Athenians were upon this overthrow gone away, and for that they themselves were unable to perform any of those designs which the other had intended. But the principal cause of their return was this: that they knew at their coming forth, that the Lacedæmonians had their minds more set upon a peace than war. 14. Presently after the battle of Amphipolis and return of Rhamphias out of Thessaly, it fell out that neither side did any act of war, but were inclined rather to a peace: the Athenians for the blow they had received at Delium, and this other a little after at Amphipolis; and because they had no longer that confident hope in their strength, on which they relied when formerly they refused the peace, as having conceived upon their present success that they should have had the upper hand; also they stood in fear of their own confederates, lest emboldened by these losses of theirs they should more and more revolt; and repented that they made not the peace after their happy

success at Pylus, when occasion was offered to have done it honourably: and the Lacedæmonians on the other side did desire peace, because the war had not proceeded as they expected; for they had thought they should in a few years have warred down the power of Athens, by wasting their territory; and because they were fallen into that calamity in the island, the like whereof had never happened unto Sparta before; because also their country was continually ravaged by those of Pylus and Cythera, and their Helotes continually fled to the enemy; and because they feared lest those which remained, trusting in them that were run away, should in this estate of theirs raise some innovation, as at other times before they had done. Withal it happened, that the thirty years' peace with the Argives was now upon the point of expiring; and the Argives would not renew it without restitution made them of Cynuria: so that to war against the Argives and the Athenians, both at once, seemed impossible. They suspected also that some of the cities of Peloponnesus would revolt to the Argives: as indeed it came afterwards to pass.

15. These things considered, it was by both parts thought good to conclude a peace; but especially by the Lacedæmonians, for the desire they had to recover their men taken in the island. For the Spartans that were amongst them, were both of the prime men of the city, and their kinsmen. And therefore they began to treat presently after they were taken: but the Athenians, by reason of their prosperity, would not lay down the war at that time on equal terms. But after their defeat at Delium, the Lacedæmonians, knowing they would be apter now to accept it, made that truce for a year, during which they were to meet and consult about a longer time.

Year x. A. C. 422. Ol. 89. 3. Cleon and Brasidas opposers of the peace for several ends. Pleistoanax and Nicias persuaders to peace. Nicias his ends in seeking peace. The reason why Pleistoanax desired the peace. year x. A. C. 422. Ol. 89. 3. year x. A. C. 422. Ol. 89. 3. Pleistoanax banished for withdrawing his army out of Attica.

16. But when also this other overthrow happened to the Athenians at Amphipolis, and that both Cleon and Brasidas were slain: the which on either side were most opposite to the peace; the one, for that he had good success and honour in the war; the other, because in quiet times his evil actions would more appear and his calumniation be the less believed: those two that in the two states aspired most to be chief, Pleistoanax the son of Pausanias, and Nicias the son of Niceratus, who in military charges had been the most fortunate of his time, did most of all other desire to have the peace go forward. Nicias, because he was desirous, having hitherto never been overthrown, to carry his good fortune through, and to give both himself and the city rest from their troubles for the present; and for the future to leave a name, that in all his time he had never made the commonwealth miscarry; which he thought might be done by standing out of danger, and by putting himself as little as he might into the hands of fortune; and to stand out of danger is the benefit of peace. Pleistoanax had the same desire, because of the imputation laid upon him about his return from exile by his enemies, that suggested unto the Lacedæmonians upon every loss they received, that the same befel them for having, contrary to the law, repealed his banishment. For they charged him further, that he and his brother Aristocles had suborned the prophetess of Delphi, to answer the deputies of the Lacedæmonians, when they came thither, most commonly with this: “that they should bring back the seed of the semigod, the son of Jupiter, out of a strange country into his own: and that if they did not, they should plough their land with a silver plough”: and so at length to have made the Lacedæmonians nineteen years after, with such dances and sacrifices as they who were the first founders of Lacedæmon had ordained to be used at the enthroning of their kings, to fetch him home again; who lived in the meantime in exile in the mountain Lycæum, in a house whereof the one half was part of the temple of Jupiter, for fear of the

Lacedæmonians, as being suspected to have taken a bribe to withdraw his army out of Attica. 17. Being troubled with these imputations, and considering with himself, there being no occasion of calamity in time of peace, and the Lacedæmonians thereby recovering their men, that he also should cease to be obnoxious to the calumniations of his enemies; whereas in war, such as had charge could not but be quarrelled upon their losses: he was therefore forward to have the peace concluded.

The Lacedæmonians desiring the peace, make show of war. Peace concluded year x. A. C. 421. Ol. 89. 3. The Bœotians, Corinthians, Eleians, and Megareans, refuse to be comprehended.

And this winter they fell to treaty, and withal the Lacedæmonians braved them with a preparation already making against the spring, sending to the cities about for that purpose, as if they meant to fortify in Attica: to the end that the Athenians might give them the better ear. When after many meetings and many demands on either side, it was at last agreed that peace should be concluded, each part rendering what they had taken in the war, save that the Athenians should hold Nisæa: (for when they [likewise] demanded Plataea, and the Thebans answered that it was neither taken by force nor by treason, but rendered voluntarily, the Athenians said that they also had Nisæa in the same manner): the Lacedæmonians calling together their confederates; and all but the Bœotians, Corinthians, Eleians, and Megareans, (for these disliked it), giving their votes for the ending of the war; they concluded the peace, and confirmed it to the Athenians with sacrifice, and swore it, and the Athenians again unto them, upon these articles:

the articles of the peace between the athenians and the lacedæmonians.

18. “The Athenians, and Lacedæmonians, and their confederates, have made peace, and sworn it city by city, as followeth:

“Touching the public temples, it shall be lawful to whomsoever will, to sacrifice in them, and to have access unto them, and to ask counsel of the oracles in the same, and to send their deputies unto them, according to the custom of his country, securely both by sea and land.

“The whole place consecrate and temple of Apollo in Delphi, and Delphi itself, shall be governed by their own law, taxed by their own state, and judged by their own judges, both city and territory, according to the institution of the place.

Year x. A. C. 421. Ol. 89. 3. Articles of the peace between the Athenians and the Lacedæmonians.

“ The peace shall endure between the Athenians with their confederates, and the Lacedæmonians with their confederates, for fifty years, both by sea and land, without fraud and without harmdoing.

“It shall not be lawful to bear arms with intention of hurt, neither for the Lacedæmonians and their confederates against the Athenians, nor for the Athenians and their confederates against the Lacedæmonians, by any art or machination whatsoever: if any controversy shall arise between them, the same shall be decided by law and by oath, in such manner as they shall agree on.

“The Lacedæmonians and their confederates shall render Amphipolis to the Athenians: the inhabitants of whatsoever city the Lacedæmonians shall render unto the Athenians, shall be at liberty to go forth whither they will with bag and baggage.

Year x. A. C. 421. Ol. 89. 3. Articles of the peace between the Athenians and the Lacedæmonians.

“ Those cities which paid the tribute taxed in the time of Aristides, continuing to pay it, shall be governed by their own laws. And now that the peace is concluded, it shall be unlawful for the Athenians or their confederates to bear arms against them, or to do them any hurt, as long as

they shall pay the said tribute: the cities are these: Argilus, Stageirus, Acanthus, Scolus, Olynthus, Spartolus; and they shall be confederates of neither side, neither of the Lacedæmonians nor of the Athenians; but if the Athenians can persuade these cities unto it, then it shall be lawful for the Athenians to have them for confederates, having gotten their consent.

“The Mecybernæans, Sanæans, and Singæans, shall inhabit their own cities on the same conditions with the Olynthians and Acanthians.

“The Lacedæmonians and their confederates shall render Panactum unto the Athenians.

Year x. A. C. 421. Ol. 89. 3. Articles of the peace between the Athenians and the Lacedæmonians.

“ And the Athenians shall render to the Lacedæmonians Coryphasium, Cythera, Methone, Pteleum, and Atalante: they shall likewise deliver whatsoever Lacedæmonians are in the prison of Athens, or in any prison of what place soever in the Athenian dominion: and dismiss all the Peloponnesians besieged in Scione, and all that Brasidas did there put in, and whatsoever confederates of the Lacedæmonians are in prison, either at Athens or in the Athenian state.

“And the Lacedæmonians and their confederates shall deliver whomsoever they have in their hands of the Athenians or their confederates, in the same manner.

Year x. A. C. 421. Ol. 89. 3. Articles of the peace between the Athenians and the Lacedæmonians.

“Touching the Scionæans, Toronæans, and Sermylans, and whatsoever other city belonging to the Athenians, the Athenians shall do with them what they think fit.

“The Athenians shall take an oath to the Lacedæmonians and their confederates, city by city; and that oath shall be the greatest that in each city is in use. The thing that they shall swear shall be this: I stand to these

articles and to this peace, truly and sincerely. And the Lacedæmonians and their confederates shall take the same oath to the Athenians. This oath they shall on both sides every year renew, and shall erect pillars [inscribed with this peace] at Olympia, Pythia, and in the Isthmus; at Athens, within the citadel; and at Lacedæmon, in the Amyclæum.

“And if anything be on either side forgotten, or shall be thought fit upon good deliberation to be changed; it shall be lawful for them to do it, in such manner as the Lacedæmonians and Athenians shall think fit, jointly.

19. “This peace shall take beginning from the 24th of the month Artemisium, Pleistolas being ephore at Sparta, and the 15th of Elaphebolium, after the account of Athens, Alcæus being archon.

Year x. A. C. 421. Ol. 89. 3.

“They that took the oath and sacrificed, were these. Of the Lacedæmonians: Pleistolas, Damagetus, Chionis, Metagenes, Acanthus, Daidus, Ischagoras, Philocaridas, Zeuxidas, Anthippus, Tellis, Alcinidas, Empedias, Menas, Laphilus. Of the Athenians these: Lampon, Isthmionicus, Nicias, Laches, Euthydemus, Procles, Pythodorus, Hagnon, Myrtilus, Thrasycles, Theagenes, Aristocrates, Iolcius, Timocrates, Leon, Lamachus, Demosthenes.”

The true way of accounting the years of this war.

20. This peace was made in the very end of winter, and the spring then beginning, presently after the City Bacchanals, and [full] ten years and some few days over, after the first invasion of Attica and the beginning of this war. But now for the certainty hereof, let a man consider the times themselves: and not trust to the account of the names of such as in the several places bare chief offices, or for some honour to themselves had their names ascribed for marks to the actions foregoing. For it is not exactly known who was in the beginning of his office, or who in the midst, or how

he was, when anything fell out. But if one reckon the same by summers and winters, according as they are written, he shall find by the two half years which make the whole, that this first war was of ten summers and as many winters continuance.

Year x. A. C. 421. Ol. 89. 3. The Lacedæmonians begin to perform the articles, and presently deliver their prisoners. The Amphipolitans refuse to render themselves under the Athenians. Clearidas endeavoureth to dissolve the peace. year x. A. C. 421. Ol. 89. 3. The Lacedæmonians make league with the Athenians.

21. The Lacedæmonians (for it fell unto them by lot to begin the restitution) both dismissed presently those prisoners they had then in their hands, and also sent ambassadors, Ischagoras, Menas, and Philocharidas, into the parts upon Thrace, with command to Clearidas to deliver up Amphipolis to the Athenians, and requiring the rest of their confederates there to accept of the peace in such manner as was for every of them accorded. But they would not do it, because they thought it was not for their advantage: and Clearidas also, to gratify the Chalcideans, surrendered not the city, alleging that he could not do it whether they would or not. And coming away soon after with those ambassadors to Lacedæmon, both to purge himself, if he should be accused by those with Ischagoras for disobeying the state's command, and also to try if the peace might by any means be shaken: when he found it firm, he himself being sent back by the Lacedæmonians with command principally to surrender the place, and if he could not do that, then to draw thence all the Peloponnesians that were in it, immediately took his journey. 22. But the confederates chanced to be present themselves in Lacedæmon: and the Lacedæmonians required such of them as formerly refused, that they would accept the peace. But they, upon the same pretence on which they had rejected it before, said, that unless it were more reasonable they would not accept it. And the Lacedæmonians, seeing they refused, dismissed them, and by themselves

entered with the Athenians into a league: because they imagined that the Argives would not renew their peace, (because they had refused it before when Ampelidas and Lichas went to Argos, and held them for no dangerous enemies without the Athenians): and also conceived, that by this means the rest of Peloponnesus would not stir; for if they could, they would turn to the Athenians. Wherefore the ambassadors of Athens being then present, and conference had, they agreed; and the oath and league was concluded on in the terms following:

the articles of the league between the lacedæmonians and the athenians.

23. “The Lacedæmonians shall be confederates with the Athenians for fifty years.

“If any enemy invade the territory of the Lacedæmonians and do the Lacedæmonians any harm, the Athenians shall aid the Lacedæmonians against them in the strongest manner they can possibly: but if the enemy, after he hath spoiled the country, shall be gone away, then that city shall be held as enemy both to the Lacedæmonians and to the Athenians, and shall be warred upon by them both; and both cities shall again lay down the war jointly: and this is to be done justly, readily, and sincerely.

“And if any enemy shall invade the territories of the Athenians, and do the Athenians any harm, then the Lacedæmonians shall aid the Athenians against them in the strongest manner they can possibly: but if the enemy, after he hath spoiled the country, shall be gone away, then shall that city be held for enemy both to the Lacedæmonians and to the Athenians, and shall be warred upon by both; and both the cities shall again lay down the war together: and this to be done justly, readily, and sincerely.

Year x. A. C. 421. Ol. 89. 3. Articles of the league between the Lacedæmonians and the Athenians.

“If their slaves shall rebel, the Athenians shall assist the Lacedæmonians with all their strength possible.

“These things shall be sworn unto by the same men on either side that swore the peace, and shall be every year renewed by the Lacedæmonians [at their] coming to the Bacchanals at Athens; and by the Athenians [at their] going to the Hyacinthian feast at Lacedæmon; and either side shall erect a pillar, [inscribed with this league], one at Lacedæmon, near unto Apollo in the Amyclæum, another at Athens, near Minerva in the citadel.

“If it shall seem good to the Lacedæmonians and Athenians to add or take away anything touching the league, it shall be lawful for them to do it jointly.”

“24. Of the Lacedæmonians took the oath, these: Pleistoanax, Agis, Pleistolas, Damagetus, Chionis, Metagenes, Acanthus, Daidus, Ischagoras, Philocharidas, Zeuxidas, Anthippus, Alcinadas, Tellis, Empedias, Menas, Laphilus. Of the Athenians: Lampon, Isthmionicus, Laches, Nicias, Euthydemus, Procles, Pythodorus, Hagnon, Myrtilus, Thrasyclus, Theagenes, Aristocrates, Iolcius, Timocrates, Leon, Lamachus, and Demosthenes.”

The Athenians deliver the prisoners taken at Pylus. year xi. A. C. 421. Ol. 89. 3.

This league was made not long after the peace: and the Athenians delivered to the Lacedæmonians the men they had taken in the island; and by this time began the summer of the eleventh year. And hitherto hath been written these ten years, which this first war continued without intermission.

The Lacedæmonians slack in performance of the articles of the peace.

25. After the peace and league made between the Lacedæmonians and Athenians, after the ten years' war, Pleistolas being ephore at Lacedæmon and Alcæus archon of Athens; though there were peace to those that had accepted it; yet the Corinthians and some cities of Peloponnesus endeavoured to overthrow what was done, and presently arose another stir by the confederates against Lacedæmon. And the Lacedæmonians also after

a while became suspect unto the Athenians, for not performing somewhat agreed on in the articles. And for six years and ten months they abstained from entering into each other's territories with their arms: but the peace being weak, they did each other abroad what harm they could; and in the end were forced to dissolve the peace made after those ten years, and fell again into open war.

From the beginning to this end of the war, twenty—seven years. year xi. A. C. 421. Ol. 89. 3. The time of this peace not to be esteemed peace. The number of years which the whole war lasted. Thucydides, for his ill success at Amphipolis, banished Athens for twenty years.

26. This also hath the same Thucydides of Athens written from point to point, by summers and winters, as everything came to pass, until such time as the Lacedæmonians and their confederates had made an end of the Athenian dominion, and had taken their long walls and Pieræus. To which time from the beginning of the war, it is in all twenty—seven years. As for the composition between, if any man shall think it not to be accounted with the war, he shall think amiss. For let him look into the actions that passed as they are distinctly set down; and he shall find that that deserveth not to be taken for a peace, in which they neither rendered all, nor accepted all, according to the articles. Besides, in the Mantinean and Epidaurian wars, and in other actions, it was on both sides infringed: moreover, the confederates on the borders of Thrace continued in hostility as before: and the Bœotians had but a truce from one ten days to another. So that with the first ten years' war, and with this doubtful cessation, and the war that followed after it, a man shall find, counting by the times, that it came to just so many years and some few days: and that those who built upon the prediction of the oracles, have this number only to agree. And I remember yet, that from the very beginning of this war and so on till the end, it was uttered by many that it should be of thrice nine years' continuance. And for

the time thereof I lived in my strength, and applied my mind to gain an accurate knowledge of the same. It happened also that I was banished my country for twenty years, after my charge at Amphipolis: whereby being present at the affairs of both, and especially of the Lacedæmonians by reason of my exile, I could at leisure the better learn the truth of all that passed. The quarrels therefore, and perturbations of the peace, after those ten years, and that which followed, according as from time to time the war was carried, I will now pursue.

Year xi. A. C. 421. Ol. 89. 3. The Corinthians contrive with the Argives to make a league in Peloponnesus without the Lacedæmonians.

27. After the concluding of the fifty years' peace and the league which followed, and when those ambassadors which were sent for out of the rest of Peloponnesus to accept the said peace were departed from Lacedæmon, the Corinthians (the rest going all to their own cities) turning first to Argos, entered into treaty with some of the Argive magistrates to this purpose: — that the Lacedæmonians having made a peace and league with the Athenians, their hitherto mortal enemies, tending not to the benefit, but to the enslaving of Peloponnesus, it behoved them to consider of a course for the safety of the same: and to make a decree, that any city of the Grecians that would, and were a free city, and admitted the like and equal trials of judgment with theirs, might make a league with the Argives for the one mutually to aid the other: and to assign them a few men with absolute authority from the state, to treat with: and that it should not be motioned to the people, to the end, that if the multitude would not agree to it, it might be unknown that ever they had made such a motion: — affirming, that many would come into this confederacy upon hatred to the Lacedæmonians. And the Corinthians, when they had made this overture, went home.

Year xi. A. C. 421. Ol. 89. 3. Twelve men chosen at Argos to treat about a league.

28. These men of Argos having heard them, and reported their proposition both to the magistrates and to the people, the Argives ordered the same accordingly: and elected twelve men, with whom it should be lawful for any Grecian to make the league that would, except the Lacedæmonians and Athenians, with neither of which they were to enter into any league without the consent of the Argive people. And this the Argives did the more willingly admit, as well for that they saw the Lacedæmonians would make war upon them; (for the truce between them was now upon expiring); as also because they hoped to have the principality of Peloponnesus. For about this time Lacedæmon had but a bad report, and was in contempt for the losses it had received. And the Argives in all points were in good estate, as not having concurred in the Attic war, but rather been at peace with both, and thereby gotten in their revenue. Thus the Argives received into league all such Grecians as came unto them.

Year xi. A. C. 421. Ol. 89. 3. The rest of Peloponnesus incline to the same league. year xi. A. C. 421. Ol. 89. 3. The article of adding and altering misliked.

29. First of all therefore, came in the Mantineans and their confederates: which they did for fear of the Lacedæmonians. For a part of Arcadia, during the war of Athens, was come under the obedience of the Mantineans; over which they thought the Lacedæmonians, now they were at rest, would not permit them any longer to command: and therefore they willingly joined with the Argives, as being, they thought, a great city, ever enemy to the Lacedæmonians, and governed as their own by democracy. When the Mantineans had revolted, the rest of Peloponnesus began also to mutter amongst themselves, that it was fit for them to do the like: conceiving that there was somewhat in it more than they knew, that made the Mantineans to

turn; and were also angry with the Lacedæmonians, amongst many other causes, for that it was written in the articles of the Attic peace, that it should be lawful to add unto or take away from the same, whatsoever should seem good to the two cities of the Lacedæmonians and the Athenians. For this was the article that the most troubled the Peloponnesians, and put them into a jealousy that the Lacedæmonians might have a purpose, joining with the Athenians, to bring them into subjection: for in justice, the power of changing the articles ought to have been ascribed to all the confederates in general. Whereupon, many fearing such an intention, applied themselves to the Argives, every one severally striving to come into their league.

The Lacedæmonians expostulate with the Corinthians about this league with Argos. year xi. A. C. 421. Ol. 89. 3. The apology of the Corinthians, for their refusing the peace. Their answer touching their league with Argos. year xi. A. C. 421. Ol. 89. 3. The Eleians make a league first with Corinth, then with Argos. Quarrel of the Eleians against the Lacedæmonians. year xi. A. C. 421. Ol. 89. 3. The Corinthians and the towns upon Thrace enter into the league with Argos.

30. The Lacedæmonians perceiving this stir to begin in Peloponnesus, and that the Corinthians were both the contrivers of it, and entered themselves also into the league with Argos, sent ambassadors unto Corinth, with intention to prevent the sequel of it: and accused them, both for the whole design, and for their own revolt in particular, which they intended to make from them to the league of the Argives; saying that they should therein infringe their oath, and that they had already done unjustly, to refuse the peace made with the Athenians; forasmuch as it is an article of their league, that what the major part of the confederates should conclude, unless it were hindered by some god or hero, the same was to stand good. But the Corinthians, those confederates which had refused the peace as well as they being now at Corinth, (for they had sent for them before), in their answer to

the Lacedæmonians did not openly allege the wrongs they had received; as that the Athenians had not restored Solium nor Anactorium, nor anything else they had in this war lost: but pretended not to betray those of Thrace; for that they had in particular taken an oath to them, both when together with Potidæa they first revolted, and also another afterwards. And therefore, they said, they did not break the oath of their league by rejecting the peace with Athens. For having sworn unto them by the gods, they should in betraying them offend the gods. And whereas it is said, unless some god or hero hinder it, this appeareth to be a divine hindrance. Thus they answered for their old oath. Then, for their league with the Argives, they gave this answer: that when they had advised with their friends, they would do afterwards what should be just. And so the ambassadors of Lacedæmon went home. At the same time were present also in Corinth the ambassadors of Argos, to invite the Corinthians to their league, and that without delay. But the Corinthians appointed them to come again at their next sitting. 31. Presently after this came unto them an ambassage also from the Eleians: and first they made a league with the Corinthians; and going thence to Argos, made a league with the Argives, according to the declaration before mentioned. The Eleians had a quarrel with the Lacedæmonians concerning Lepreum. For the Lepreates having heretofore warred on certain of the Arcadians, and for their aid called the Eleians into their confederacy with condition to give the moiety of the land [to be won from them], when the war was ended, the Eleians gave unto the Lepreates the whole land to be enjoyed by themselves, with an imposition thereon of a talent to be paid to Jupiter Olympian: which they continued to pay till the beginning of the Athenian war. But afterwards upon pretence of that war giving over the payment, the Eleians would have forced them to it again. The Lepreates for help having recourse to the Lacedæmonians: and the cause being referred to their decision, the Eleians afterwards, upon suspicion that the

Lacedæmonians would not do them right, renounced the reference, and wasted the territory of the Lepreates. The Lacedæmonians nevertheless gave sentence, that the Lepreates should be at liberty to pay it or not, and that the Eleians did the injury: and because the Eleians had not stood to the reference, the Lacedæmonians put into Lepreum a garrison of men at arms. The Eleians taking this as if the Lacedæmonians had received their revolted city, and producing the article of their league, “that what every one possessed when they entered into the Attic war, the same they should possess when they gave it over”; revolted to the Argives as wronged, and entered league with them as is before related. After these came presently into the Argive league the Corinthians, and the Chalcideans upon Thrace. The Bœotians also and Megareans threatened as much: but because they thought the Argive democracy would not be so commodious for them, who were governed according to the government of the Lacedæmonians, by oligarchy, they stirred no further in it.

The Athenians recover Scione. The Delians replanted in Delos. Phocis and Locris in war.

32. About the same time of this summer the Athenians expugned Scione, slew all that were within it at man’s estate, made slaves of the women and children, and gave their territory to the Plataeans. They also replanted the Delians in Delos, both in consideration of the defeats they had received after their expulsion, and also because the oracle at Delphi had commanded it. The Phoceans and Locrians also began a war at that time against each other.

The Corinthians seek to turn the cities of Pelopon— year xi. A. C. 421. Ol. 89. 3. nesus and other confederates from the Lacedæmonians to the Argives. The Corinthians seek the ten days’ truce with Athens, as the Bœotians had it. The Bœotians take time to answer concerning a league

with Argos. year xi. A. C. 421. Ol. 89. 3. 4. The Athenians deny the ten days' truce to the Corinthians.

And the Corinthians and Argives, being now leagued, went to Tegea to cause it to revolt from the Lacedæmonians, conceiving it to be an important piece [of Peloponnesus], and making account, if they gained it to their side, they should easily obtain the whole. But when the Tegeates refused to become enemies to the Lacedæmonians, the Corinthians, who till then had been very forward, grew less violent: and were afraid that no more of the rest would come in. Nevertheless they went to the Bœotians, and solicited them to enter into league with them and the Argives, and to do as they did. And the Corinthians further desired the Bœotians to go along with them to Athens, and to procure for them the like ten days' truce, to that which was made between the Athenians and Bœotians presently after the making of the fifty years' peace, on the same terms as the Bœotians had it: and if the Athenians refused, then to renounce theirs, and make no more truces hereafter without the Corinthians. The Corinthians having made this request, the Bœotians willed them, touching the league with the Argives, to stay a while longer, and went with them to Athens, but obtained not the ten days' truce: the Athenians answering, that if the Corinthians were confederates with the Lacedæmonians, they had a peace already. Nevertheless the Bœotians would not relinquish their ten days' truce, though the Corinthians both required the same, and affirmed that it was so before agreed on. Yet the Athenians granted the Corinthians a cessation of arms, but without solemn ratification.

The Lacedæmonians demolish the fort of Cypsela.

33. The same summer the Lacedæmonians with their whole power, under the conduct of Pleistoanax the son of Pausanias, king of the Lacedæmonians, made war upon the Parrhasians of Arcadia, subjects of the Mantineans; partly as called in by occasion of sedition, and partly because

they intended, if they could, to demolish a fortification which the Mantineans had built and kept with a garrison in Cypsela, in the territory of the Parrhasians towards Sciritis of Laconia. The Lacedæmonians therefore wasted the territory of the Parrhasians. And the Mantineans, leaving their own city to the custody of the Argives, came forth to aid the Parrhasians their confederates: but being unable to defend both the fort of Cypsela and the cities of the Parrhasians too, they went home again. And the Lacedæmonians, when they had set the Parrhasians at liberty, and demolished the fortification, went home likewise.

The Lacedæmonians put a garrison into Lepreum of men newly enfranchised. year xi. A. C. 421. Ol. 89. 3. 4. The Lacedæmonians disable those that were taken in Sphacteria to bear office or to make bargain. year xi. A. C. 421. Ol. 89. 4.

34. The same summer, when those soldiers which went out with Brasidas, and of which Clearidas after the making of the peace had the charge, were returned from the parts upon Thrace: the Lacedæmonians made a decree, that those Helotes which had fought under Brasidas should receive their liberty, and inhabit where they thought good. But not long after they placed them, together with such others as had been newly enfranchised, in Lepreum; a city standing in the confines between Laconia and the Eleians, with whom they were now at variance. Fearing also lest those citizens of their own, which had been taken in the island and had delivered up their arms to the Athenians, should upon apprehension of disgrace for that calamity, if they remained capable of honours, make some innovation in the state, they disabled them [though] some of them were in office already. And their disablement was this: “that they should neither bear office, nor be capable to buy and sell”. Yet in time they were again restored to their former honours.

The Dictideans take Thyssus from the Athenians. Jealousy between the Athenians and Lacedæmonians. Amphipolis not yet rendered, nor the peace accepted in the parts about Thrace, nor by the Bœotians and Corinthians. The Athenians refuse to render Pylus. year xi. A. C. 421. Ol. 89. 4. The apology of the Lacedæmonians for not performing the articles. The Athenians draw the Messenians and Helotes out of Pylus. The end of the eleventh summer

35. The same summer also the Dictideans took Thyssus, a town in Mount Athos, and confederate of the Athenians. This whole summer there was continual commerce between the Athenians and the Peloponnesians: nevertheless they began, both the Athenians and the Lacedæmonians, to have each other in suspicion immediately after the peace, in respect of the places not yet mutually surrendered. For the Lacedæmonians, to whose lot it fell to make restitution first, had not rendered Amphipolis and the other cities, nor had caused the peace to be accepted by the confederates upon Thrace, nor by the Bœotians nor Corinthians: though they had ever professed, that in case they refused they would join with the Athenians to bring them to it by force; and had prefixed a time, (though not by writing), within the which such as entered not into this peace were to be held as enemies unto both. The Athenians therefore, when they saw none of this really performed, suspected that they had no sincere intention, and thereupon refused to render Pylus when they required it: nay, they repented that they had delivered up the prisoners they took in the island; and detained the rest of the towns they then held, till the Lacedæmonians should have performed the conditions on their part also. The Lacedæmonians to this alleged, “that they had done what they were able to do; for they had delivered the Athenian prisoners that were in their hands, and had withdrawn their soldiers from the parts upon Thrace, and whatsoever else was in their own power to perform: but Amphipolis, they said, was not in

their power to surrender: that they would endeavour to bring the Bœotians and Corinthians to accept the peace, and to get Panactum restored, and all the Athenian prisoners in Bœotia to be sent home: and therefore desired them to make restitution of Pylus, or, if not so, at least to draw out of it the Messenians and Helotes, as they for their part had drawn their garrisons out of the towns upon Thrace; and if they thought good, to keep it with a garrison of Athenians”. After divers and long conferences had this summer, they so far prevailed with the Athenians at the last, as they drew thence all the Messenians and Helotes, and all other Laconian fugitives: and placed them in Cranii, a city of Cephallenia. So for this summer there was peace, and free passage from one to another.

The Lacedæmonian ephores endeavour to dissolve the peace. year xi. A. C. 421. Ol. 89. 4. A proposition of a league between the Lacedæmonians, Argives, Bœotians, and Corinthians.

36. In the beginning of winter, (for now there were other ephores in office; not those in whose time the peace was made, but some of them that opposed it), ambassadors being come from the confederates, and the Athenian, Bœotian, and Corinthian ambassadors being [already] there, and having had much conference together but concluded nothing, Cleobulus and Xenares, ephores that most desired the dissolution of the peace, when the rest of the ambassadors were gone home, entered into private conference with the Bœotians and Corinthians, exhorting them to run both the same course: and advised the Bœotians to endeavour first to make a league themselves with the Argives, and then to get the Argives together with themselves into a league with the Lacedæmonians: for that they might by this means avoid the necessity of accepting the peace with Athens: for the Lacedæmonians would more regard the friendship and league of the Argives, than the enmity and dissolution of the peace with the Athenians: for they knew the Lacedæmonians had ever desired to have Argos their

friend upon any reasonable conditions; because they knew that their war without Peloponnesus would thereby be a great deal the easier. Wherefore they entreated the Bœotians to put Panactum into the hands of the Lacedæmonians: to the end, that if they could get Pylus for it in exchange, they might make war against the Athenians the more commodiously.

The Argives propound a league to the Bœotians and Corinthians: year xi. A. C. 421. Ol. 89. 4. and promise to send ambassadors into Bœotia to that purpose. The Bœotians propound an oath between themselves, the Corinthians, Chalcideans, and Megareans, of mutual assistance. year xi. A. C. 421. Ol. 89. 4. The Argive league with the Bœotians falleth off. year xi. A. C. 421. Ol. 89. 4.

37. The Bœotians and Corinthians being dismissed by Xenares and Cleobulus, and all the other Lacedæmonians of that faction, with these points to be delivered to their commonwealths, went to their several cities. And two men of Argos, of principal authority in that city, having waited for and met with them by the way, entered into a treaty with them about a league between the Argives and the Bœotians, as there was between them and the Corinthians and the Eleians and Mantineans already: “for they thought, if it succeeded, they might [the more] easily have either war or peace, (forasmuch as the cause would now be common), either with the Lacedæmonians or whomsoever else it should be needful”. When the Bœotian ambassadors heard this, they were well pleased. For as it chanced, the Argives requested the same things of them, that they by their friends in Lacedæmon had been sent to procure of the Argives. These men therefore of Argos, when they saw that the Bœotians accepted of the motion, promised to send ambassadors to the Bœotians about it; and so departed. When the Bœotians were come home, they related there what they had heard both at Lacedæmon and by the way from the Argives. The governors of Bœotia were glad thereof; and much more forward in it now than

formerly they had been; seeing that not only their friends in Lacedæmon desired, but the Argives themselves hastened to have done the self-same thing. Not long after this the ambassadors came to them from Argos, to solicit the dispatch of the business before propounded: but the governors of Bœotia commended [only] the proposition, and dismissed them with promise to send ambassadors about the league to Argos. 38. In the meantime the governors of Bœotia thought fit, that an oath should first be taken by themselves, and by the ambassadors from Corinth, Megara, and the confederates upon Thrace, to give mutual assistance upon any occasion to them that should require it, and neither to make war nor peace without the common consent: and next that the Bœotians and Megareans (for these two ran the same course) should make a league with the Argives. But before this oath was [to be] taken, the governors of Bœotia communicated the business to the four Bœotian councils, in the which the whole authority of the state consisteth: and withal presented their advice, that any city that would, might join with them in the like oath for mutual assistance. But they that were of these councils approved not the proposition; because they feared to offend the Lacedæmonians, in being sworn to the Corinthians that had revolted from their confederacy. For the governors of Bœotia had not reported unto them what had passed at Lacedæmon, how Cleobulus and Xenares, the ephores, and their friends there, had advised them to enter first into league with the Argives and Corinthians, and then afterwards to make the same league with the Lacedæmonians: for they thought that the councils, though this had never been told them, would have decreed it no otherwise than they upon premeditation should advise. So the business was checked: and the ambassadors from Corinth and from the cities upon Thrace departed without effect. And the governors of Bœotia, that were before minded, if they had gotten this done, to have leagued themselves also with the Argives, made no mention of the Argives in the councils at all, nor

sent the ambassadors to Argos, as they had before promised: but a kind of carelessness and delay possessed the whole business.

C. 421. 0. Ol. 89. 4. Mecerberne taken from the Athenians by assault.

39. The same winter the Olynthians took Mecerberne, held with a garrison of the Athenians, by assault.

Year xi. A. C. 421. 0. Ol. 89. 4. The Lacedæmonians enter into a league with the Bœotians, knowing it to be against justice. A. C. 420. Ol. 89. 4.

After this the Lacedæmonians, (for the conferences between the Athenians and Lacedæmonians about restitution reciprocal continued still), hoping that if the Athenians should obtain from the Bœotians Panactum, that then they also should recover Pylus, sent ambassadors to the Bœotians, with request that Panactum and the Athenian prisoners might be put into the hands of the Lacedæmonians, that they might get Pylus restored in exchange. But the Bœotians answered, that unless the Lacedæmonians would make a particular league with them as they had done with the Athenians, they would not do it. The Lacedæmonians, though they knew they should therein wrong the Athenians; for that it was said in the articles, that neither party should make either league or war without the other's consent; yet such was their desire to get Panactum to exchange it for Pylus, and withal they that longed to break the peace with Athens were so eager in it, that at last they concluded a league with the Bœotians, winter then ending and the spring approaching: and Panactum was presently pulled down to the ground. So ended the eleventh year of this war.

Year xii. The Argives seek peace with the Lacedæmonians. year xii. A. C. 420. Ol. 89. 4. The territory of Cynuria, ground of the quarrels between Lacedæmon and Greece. year xii. A. C. 420. Ol. 89. 4. An odd condition of a truce. year xii. A. C. 420. Ol. 89. 4.

40. In the spring following, the Argives, when they saw that the ambassadors which the Bœotians promised to send unto them came not, and

that Panactum was razed, and that also there was a private league made between the Bœotians and the Lacedæmonians, were afraid lest they should on all hands be abandoned, and that the confederates would all go to the Lacedæmonians. For they apprehended that the Bœotians had been induced both to raze Panactum, and also to enter into the Athenians peace, by the Lacedæmonians; and that the Athenians were privy to the same: so that now they had no means to make league with the Athenians neither; whereas before they made account, that if their truce with the Lacedæmonians continued not, they might upon these differences have joined themselves to the Athenians. The Argives being therefore at a stand, and fearing to have war all at once with the Lacedæmonians, Tegeats, Bœotians, and Athenians, [as] having formerly refused the truce with the Lacedæmonians, and imagined to themselves the principality of all Peloponnesus, they sent ambassadors with as much speed as might be, Eustrophus and Æson, persons as they thought most acceptable unto them, with this cogitation, that by compounding with the Lacedæmonians as well as for their present estate they might, howsoever the world went, they should at least live at quiet. 41. When these ambassadors were there, they fell to treat of the articles upon which the agreement should be made. And at first the Argives desired to have the matter referred, either to some private man or to some city, concerning the territory of Cynuria: about which they have always differed, as lying on the borders of them both; (it containeth the cities of Thyrea and Anthena, and is possessed by the Lacedæmonians). But afterwards, the Lacedæmonians not suffering mention to be made of that, but that if they would have the truce go on as it did before, they might, the Argive ambassadors got them to yield to this: “that for the present an accord should be made for fifty years; but withal, that it should be lawful nevertheless, if one challenged the other thereunto, both for Lacedæmon and Argos to try their titles to this territory by battle, so that there were in

neither city a plague nor a war to excuse them”: as once before they had done, when, as both sides thought, they had the victory: “and that it should not be lawful for one part to follow the chace of the other, further than to the bounds either of Lacedæmon or Argos.” And though this seemed to the Lacedæmonians at first to be but a foolish proposition, yet afterwards, because they desired by all means to have friendship with the Argives, they agreed unto it, and put into writing what they required. Howsoever, before the Lacedæmonians would make any full conclusion of the same, they willed them to return first to Argos, and to make the people acquainted with it; and then, if it were accepted, to return at the Hyacinthian feast and swear it. So these departed.

The Lacedæmonian ambassadors require Pylus in exchange for Panactum. year xii. A. C. 420. Ol. 89. 4. The Athenians take in evil part, both the razing of Panactum, and the league made with the Bœotians.

42. Whilst the Argives were treating about this, the Lacedæmonian ambassadors, Andromedes and Phædimus and Antimenidas, commissioners for receiving of Panactum and the prisoners from the Bœotians to render them to the Athenians, found that Panactum was demolished, and that their pretext was this: that there had been anciently an oath, by occasion of difference between the Athenians and them, that neither part should inhabit the place solely, but jointly both. But for the Athenian prisoners, as many as the Bœotians had, they that were with Andromedes received, convoyed, and delivered them unto the Athenians: and withal told them of the razing of Panactum, alleging it as rendered, in that no enemy of Athens should dwell in it hereafter. But when this was told them, the Athenians made it a heinous matter: for that they conceived that the Lacedæmonians had done them wrong, both in the matter of Panactum, which was pulled down and should have been rendered standing; and because also they had heard of the private league made with the Bœotians, whereas they had promised to join with the

Athenians in compelling such to accept of the peace as had refused it. Withal they weighed whatsoever other points the Lacedæmonians had been short in, touching the performance of the articles; and thought themselves abused: so that they answered the Lacedæmonian ambassadors roughly, and dismissed them.

The Argives make league with Athens by means of Alcibiades. The cause why Alcibiades desireth to break with the Lacedæmonians. year xii. A. C. 420. Ol. 89. 4. Alcibiades sendeth for the Argives to Athens to make a league.

43. This difference arising between the Lacedæmonians and the Athenians, it was presently wrought upon by such also of Athens as desired to have the peace dissolved. Amongst the rest was Alcibiades, the son of Clinias, a man, though young in years, yet in the dignity of his ancestors honoured as much as any man of what city soever. Who was of opinion, that it was better to join with the Argives; not only for the matter itself, but also out of stomach labouring to cross the Lacedæmonians: because they had made the peace by the means of Nicias and Laches, without him; whom for his youth they had neglected, and not honoured as for the ancient hospitality between his house and them had been requisite: which his father had indeed renounced, but he himself, by good offices done to those prisoners which were brought from the island, had a purpose to have renewed. But supposing himself on all hands disparaged, he both opposed the peace at first; alleging that the Lacedæmonians would not be constant, and that they had made the peace only to get the Argives by that means away from them, and afterwards to invade the Athenians again when they should be destitute of their friends: and also as soon as this difference was on foot, he sent presently to Argos of himself, willing them with all speed to come to Athens, as being thereunto invited, and to bring with them the Eleians and

Mantineans to enter with the Athenians into a league, the opportunity now serving, and promising that he would help them all he could.

Year xii. A. C. 420. Ol. 89. 4. The Lacedæmonian ambassadors come in haste to Athens, to prevent their league with the Argives.

44. The Argives having heard the message, and knowing that the Athenians had made no league with the Bœotians, and that they were at great quarrel with the Lacedæmonians, neglected the ambassadors they had then in Lacedæmon, whom they had sent about the truce, and applied themselves to the Athenians, with this thought: that if they should have war, they should by this means be backed with a city that had been their ancient friend, governed like their own by democracy, and of greatest power by sea. Whereupon they presently sent ambassadors to Athens to make a league: and together with theirs went also the ambassadors of the Eleians and Mantineans. Thither also with all speed came the Lacedæmonian ambassadors, Philocharidas, Leon, and Endius, persons accounted most gracious with the Athenians; for fear, lest in their passion they should make a league with the Argives, and withal to require the restitution of Pylus for Panactum; and to excuse themselves concerning their league with the Bœotians, as not made for any harm intended to the Athenians.

Alcibiades persuadeth the Lacedæmonian ambassadors to deny before the people that they had power to conclude. year xii. A. C. 420. Ol. 89. 4. Alcibiades inveigheth against the Lacedæmonians.

45. Now speaking of these things before the council, and how that they were come thither with full power to make agreement concerning all controversies betwixt them, they put Alcibiades into fear: lest, if they should say the same before the people, the multitude would be drawn unto their side, and so the Argive league fall off. But Alcibiades deviseth against them this plot. He persuaded the Lacedæmonians not to confess their plenary power before the people: and giveth them his faith, that then Pylus

should be rendered, (for he said he would persuade the Athenians to it as much as he now opposed it), and that the rest of their differences should be compounded. This he did to alienate them from Nicias: and that by accusing them before the people as men that had no true meaning nor ever spake one and the same thing, he might bring on the league with the Argives, Eleians, and Mantineans. And it came to pass accordingly. For when they came before the people, and to the question, whether they had full power of concluding, had, contrary to what they had said in council, answered No, the Athenians would no longer endure them; but gave ear to Alcibiades, that exclaimed against the Lacedæmonians far more now than ever: and were ready then presently to have the Argives and those others with them brought in, and to make the league: but an earthquake happening before anything was concluded, the assembly was adjourned.

Nicias endeavoureth to have the peace go on with the Lacedæmonians. Nicias is sent ambassador to Lacedæmon to get satisfaction about performance of the articles. year xii. A. C. 420. Ol. 89. 4.

46. In the next day's meeting, Nicias, though the Lacedæmonians had been abused, and he himself also deceived, touching their coming with full power to conclude; yet he persisted to affirm, that it was their best course to be friends with the Lacedæmonians, and to defer the Argives' business till they had sent to the Lacedæmonians again to be assured of their intention: saying, that it was honour unto themselves, and dishonour to the Lacedæmonians to have the war put off. For, for themselves, being in estate of prosperity, it was best to preserve their good fortune as long as they might: whereas to the other side, who were in evil estate, it should be in place of gain to put things as soon as they could to the hazard. So he persuaded them to send ambassadors, whereof himself was one: to require the Lacedæmonians, if they meant sincerely, to render Panactum standing, and also Amphipolis; and if the Bœotians would not accept of the peace,

then to undo their league with them; according to the article, that the one should not make league with any without the consent of the other. They willed him to say further; “that they themselves also, if they had had the will to do wrong, had ere this made a league with the Argives, who were present then at Athens for the same purpose.” And whatsoever they had to accuse the Lacedæmonians of besides, they instructed Nicias in it: and sent him and the other his fellow–ambassadors away. When they were arrived, and had delivered what they had in charge, and this last of all; “that the Athenians would make league with the Argives, unless the Lacedæmonians would renounce their league with the Bœotians, if the Bœotians accepted not the peace”: the Lacedæmonians denied to renounce their league with the Bœotians; for Xenares the ephore, and the rest of that faction, carried it: but at the request of Nicias they renewed their former oath. For Nicias was afraid he should return with nothing done, and be carped at (as after also it fell out) as author of the Lacedæmonian peace.

At his return, when the Athenians understood that nothing was effected at Lacedæmon, they grew presently into choler: and apprehending injury, (the Argives and their confederates being there present, brought in by Alcibiades), they made a peace and a league with them in these words:

the articles of the league between the athenians and the argives.

47. “The Athenians and Argives and Mantineans and Eleians, for themselves and for the confederates commanded by every of them, have made an accord for one hundred years, without fraud or damage, both by sea and land. It shall not be lawful for the Argives nor Eleians nor Mantineans, nor their confederates, to bear arms against the Athenians, or the confederates under the command of the Athenians, or their confederates, by any fraud or machination whatsoever.

“ And the Athenians, Argives, and Mantineans, have made league with each other for one hundred years on these terms:

“If any enemy shall invade the territory of the Athenians, then the Argives, Eleians, and Mantineans shall go unto Athens to assist them, according as the Athenians shall send them word to do, in the best manner they possibly can. But if the enemy after he have spoiled the territory, shall be gone back, then their city shall be held as an enemy to the Argives, Eleians, Mantineans, and Athenians, and war shall be made against it by all those cities: and it shall not be lawful for any of those cities to give over the war, without the consent of all the rest.

“And if an enemy shall invade the territory, either of the Argives, or of the Eleians, or of the Mantineans, then the Athenians shall come unto Argos, Elis, and Mantinea, to assist them, in such sort as those cities shall send them word to do, in the best manner they possibly can. But if the enemy after he hath wasted their territory, shall be gone back; then their city shall be held as an enemy both to the Athenians, and also to the Argives, Eleians, and Mantineans, and war shall be made against it by all those cities; and it shall not be lawful for any of them to give over the war against that city, without the consent of all the rest.

Year xii. A. C. 420. Ol. 89. 4. The articles of the league between the Athenians and the Argives.

“There shall no armed men be suffered to pass through the dominions either of themselves, or of any the confederates under their several commands, to make war in any place whatsoever, unless by the suffrage of all the cities, Athens, Argos, Elis, and Mantinea, their passage be allowed.

“To such as come to assist any of the other cities, that city which sendeth them, shall give maintenance for thirty days after they shall arrive in the city that sent for them; and the like at their going away: but if they will use the army for a longer time, then the city that sent for them shall find them

maintenance, at the rate of three oboles of Ægina a day for a man of arms, and of a drachma of Ægina for a horseman.

“The city which sendeth for the aids, shall have the leading and command of them, whilst the war is in their own territory: but if it shall seem good unto these cities to make a war in common, then all the cities shall equally participate of the command.

Year xii. A. C. 420. Ol. 89. 4. The articles of the league between the Athenians and the Argives.

“ The Athenians shall swear unto the articles, both for themselves and for their confederates: and the Argives, Eleians, and Mantineans, and the confederates of these, shall every one swear unto them city by city. And their oath shall be the greatest that by custom of the several cities is used, and with most perfect hosts, and in these words: I will stand to this league according to the articles thereof, justly, innocently, and sincerely, and not transgress the same by any art or machination whatsoever.

Year xii. A. C. 420. Ol. 89. 4. The articles of the league between the Athenians and the Argives.

“This oath shall be taken at Athens by the senate and the officers of the commons; and administered by the Prytanes. At Argos it shall be taken by the senate and the council of eighty, and by the Artynæ; and administered by the council of eighty. At Mantinea it shall be taken by the procurators of the people, and by the senate, and by the rest of the magistrates; and administered by the theori and by the tribunes of the soldiers. At Elis it shall be taken by the procurators of the people, and by the officers of the treasury, and by the council of six hundred; and administered by the procurators of the people, and by the keepers of the law.

“This oath shall be renewed by the Athenians, who shall go to Elis, and to Mantinea, and to Argos, thirty days before the Olympic games; and by

the Argives, Eleians, and Mantineans, who shall come to Athens, ten days before the Panathenæan holydays.

“The articles of this league and peace and the oath shall be inscribed in a pillar of stone by the Athenians in the citadel: by the Argives in their market-place within the precincts of the temple of Apollo: and by the Mantineans in their market-place within the precinct of the temple of Jupiter. And at the Olympian games now at hand, there shall be jointly erected by them all, a brazen pillar in Olympia [with the same inscription].

“If it shall seem good to any of these cities to add anything to these articles; whatsoever shall be determined by them all in common council, the same shall stand good.”

The Corinthians still refuse the peace with Athens, and incline again to the Lacedæmonians. year xii. A. C. 420. Ol. 89. 4.

48. Thus was the league and the peace concluded: and that which was made before between the Lacedæmonians and the Athenians, was notwithstanding by neither side renounced. But the Corinthians, although they were the confederates of the Argives, yet would they not enter into this league: nay, though there were made a league before this between [them and] the Argives, Eleians, and Mantineans, that where one, there all, should have war or peace, yet they refused to swear to it; but said that their league defensive was enough, whereby they were bound to defend each other, but not to take part one with another in invading. So the Corinthians fell off from their confederates, and inclined again to the Lacedæmonians.

The Olympian games Ol. 90. 1. The Lacedæmonians forbidden the exercises: and why. year xii. A. C. 420. Ol. 90. 1. Contention between the Lacedæmonians and Eleians before the Grecians at Olympia, about a mulct set upon the Lacedæmonians by the Eleians, for breaking the Olympic truce.

49. This summer were celebrated the Olympian games; in which Androstheneſ, an Arcadian, was the firſt victor in the exerciſe called Pancratiſm. And the Lacedæmonians were by the Eleians prohibited the temple there; ſo as they might neither ſacrifice, nor contend for the prizes amongſt the reſt: for that they had not paid the fine ſet upon them, according to an Olympic law, by the Eleians; that laid to their charge, that they had put ſoldiers into the fort of Phyrcon, and into Lepreum, in the time of the Olympic truce. The fine amounted unto two thouſand minæ, which was two minæ for every man of arms, according to the law. But the Lacedæmonians, by their ambaffadors which they ſent thither, made answer, that they had been unjuſtly condemned; alleging that the truce was not publiſhed in Lacedæmon when their ſoldiers were ſent out. To this the Eleians ſaid again, that the truce was already begun amongſt themſelves; who uſed to publiſh it firſt in their own dominion: and thereupon, whiſt they lay ſtill and expected no ſuch matter, as in time of truce, the Lacedæmonians did them the injury unawares. The Lacedæmonians hereunto replied, that it was not neceſſary to proceed to the publiſhing of the truce in Lacedæmon at all, if they thought themſelves wronged already: but rather, if they thought themſelves not wronged yet, then to do it by way of prevention, that they ſhould not arm againſt them afterwards. The Eleians ſtood ſtiffly in their firſt argument, that they would never be perſuaded but injury had been done them: but were nevertheless contented, if they would render Lepreum, both to remit their own part of the money, and alſo to pay that part for them which was due unto the god.

Year xii. A. C. 420. Ol. 90. 1. Lichas a Lacedæmonian whipped upon the Olympic race. year xii. A. C. 420. Ol. 90. 1.

50. When this would not be agreed unto, they then required this: not that they ſhould render Lepreum, unleſs they would; but that then they ſhould come to the altar of Jupiter Olympian, ſeeing they deſired to have free uſe

of the temple, and there before the Grecians to take an oath to pay the fine at least hereafter. But when the Lacedæmonians refused that also, they were excluded the temple, the sacrifices, and the games; and sacrificed at home: but the rest of the Grecians, except the Lepreates, were all admitted to be spectators. Nevertheless, the Eleians fearing lest they would come and sacrifice there by force, kept a guard there of their youngest men in arms: to whom were added Argives and Mantineans, of either city one thousand, and certain Athenian horsemen, who were then at Argos waiting the celebration of the feast. For a great fear possessed all the assembly, lest the Lacedæmonians should come upon them with an army: and the rather, because Lichas the son of Arcesilaus, a Lacedæmonian, had been whipped by the serjeants upon the race: for that when his chariot had gotten the prize, after proclamation made that the chariot of the Bœotian state had won it, (because he himself was not admitted to run), he came forth into the race and crowned his charioteer, to make it known that the chariot was his own. This added much unto their fear, and they verily expected some accident to follow. Nevertheless the Lacedæmonians stirred not: and the feast passed over.

Year xii. A. C. 420. Ol. 90. 1. The twelfth summer.

After the Olympian games, the Argives and their confederates went to Corinth, to get the Corinthians into their league. And the Lacedæmonian ambassadors chanced to be there also: and after much conference, and nothing concluded, upon occasion of an earthquake they brake off the conference, and returned every one to his own city. And so this summer ended.

51. The next winter, the men of Heracleia in Trachinia fought a battle against the Ænianians, Dolopians, Melians, and certain Thessalians. For the neighbour cities were enemies to this city, as built to the prejudice only of

them; and both opposed the same from the time it was first founded, annoying it what they could; and also in this battle overcame them, and slew Xenares a Lacedæmonian, their commander, with some others, Heracleots. Thus ended this winter, and the twelfth year of this war.

Year xiii. A. C. 419. Ol. 90. 1. year xiii. A. C. 419. Ol. 90. 1.

52. In the very beginning of the next summer, the Bœotians took Heracleia, miserably afflicted, into their own hands, and put Hegesippidas, a Lacedæmonian, out of it for his evil government. They took it, because they feared, lest whilst the Lacedæmonians were troubled about Peloponnesus, it should have been taken in by the Athenians. Nevertheless the Lacedæmonians were offended with them for doing it. The same summer Alcibiades the son of Clinias, being general of the Athenians, by the practice of the Argives and their confederates, went into Peloponnesus, and having with him a few men at arms and archers of Athens, and some of the confederates which he took up there, as he passed through the country with his army, both ordered such affairs by the way concerning the league as was fit; and coming to the Patreans, persuaded them to build their walls down to the sea-side, and purposed to raise another wall himself towards Rhium in Achaia. But the Corinthians, Sicyonians, and such others as this wall would have prejudiced, came forth and hindered him.

War between the Epidaurians and Argives.

53. The same summer fell out a war between the Epidaurians and the Argives; the pretext thereof was about a beast for sacrifice, which the Epidaurians ought to have sent in consideration of their pastures to Apollo Pythius, and had not done it: the Argives being the principal owners of the temple. But Alcibiades and the Argives had indeed determined to take in the city, though without pretence at all; both that the Corinthians might not stir, and also that they might bring the Athenian succours from Ægina into those

parts, a nearer way than by compassing the promontory of Scyllæum. And therefore the Argives prepared, as of themselves, to exact the sacrifice by invasion.

Year xiii. A. C. 419. Ol. 90. 1. year xiii. A. C. 419. Ol. 90. 1.

54. About the same time also the Lacedæmonians, with their whole forces, came forth as far as Leuctra, in the confines of their own territory towards Lycæum, under the conduct of Agis, the son of Archidamus, their king. No man knew against what place they intended the war; no not the cities themselves, out of which they were levied. But when in the sacrifices which they made for their passage the tokens observed were unlucky, they went home again; and sent word about to their confederates, (being now the month Carneius), to prepare themselves after the next feast of the new moon, (kept by the Dorians), to be again upon their march. The Argives, who set forth the twenty–sixth day of the month before Carneius, though they celebrated the same day, yet all the time they continued invading and wasting Epidauria. And the Epidaurians called in their confederates to help them: whereof some excused themselves upon the quality of the month; and others came but to the confines of Epidauria, and there stayed.

C. 419. Ol. 90. 2. Ambassadors meet about peace, but cannot agree.

55. Whilst the Argives were in Epidauria, the ambassadors of divers cities, solicited by the Athenians, met together at Mantinea, where in a conference amongst them Euphamidas of Corinth said: “that their actions agreed not with their words; forasmuch as whilst they were sitting there to treat of a peace, the Epidaurians with their confederates and the Argives stood armed, in the meantime, against each other in order of battle: that it was therefore fit, that somebody should go first unto the armies from either side, and dissolve them; and then come again and dispute of peace”. This advice being approved, they departed, and withdrew the Argives from

Epidauria. And meeting afterwards again in the same place, they could not for all that agree: and the Argives again invaded and wasted Epidauria.

The end of the thirteenth summer.

The Lacedæmonians also drew forth their army against Caryæ: but then again their sacrifice for passage being not to their mind, they returned. And the Argives, when they had spoiled about the third part of Epidauria, went home likewise. They had the assistance of one thousand men of arms of Athens, and Alcibiades their commander: but these hearing that the Lacedæmonians were in the field, and seeing now there was no longer need of them, departed. And so ended this summer.

Year xiii. A. C. 419. 8. Ol. 90. 2. The Argives acknowledge the sea on their own coast to be of the dominion of Athens.

56. The next winter the Lacedæmonians, unknown to the Athenians, put three hundred garrison soldiers under the command of Agesippidas into Epidaurus by sea. For which cause the Argives came and expostulated with the Athenians, that whereas it was written in the articles of the league, that no enemy should be suffered to pass through either of their dominions, yet had they suffered the Lacedæmonians to pass by sea: and said they had wrong, unless the Athenians would again put the Messenians and Helotes into Pylus against the Lacedæmonians. Hereupon the Athenians, at the persuasion of Alcibiades, wrote upon the Laconian pillar, [under the inscription of the peace], that the Lacedæmonians had violated their oath: and they drew the Helotes out of Cranii, and put them again into Pylus, to infest the territory with driving off booties; but did no more.

C. 418. Ol. 90. 2. year xiii. A. C. 418. Ol. 90. 2.

All this winter, though there was war between the Argives and Epidaurians, yet was there no set battle: but only ambushes and skirmishes, wherein were slain on both sides such as it chanced. But in the end of winter, and the spring now at hand, the Argives came to Epidaurus with

ladders, as destitute of men by reason of the war, thinking to have won it by assault: but returned again with their labour lost. And so ended this winter; and the thirteenth year of this war.

Year xiv. A. C. 418. Ol. 90. 2. 3. Preparation of the Lacedæmonians against Argos.

57. In the middle of the next summer, the Lacedæmonians seeing that the Epidaurians their confederates were tired, and that of the rest of the cities of Peloponnesus, some had already revolted, and others were but in evil terms; and apprehending that if they prevented it not, the mischief would spread still further: put themselves into the field with all their own forces, both of themselves and their Helotes, to make war against Argos, under the conduct of Agis, the son of Archidamus, their king. The Tegeats went also with them, and of the rest of Arcadia all that were in the Lacedæmonian league. But the rest of their confederates, both within Peloponnesus and without, were to meet together at Phlius: that is to say, of the Bœotians five thousand men of arms and as many light-armed, five hundred horse, and to every horseman another man on foot, [which holding the horse's mane ran by with equal speed]: of Corinthians two thousand men of arms, and of the rest more or less as they were: but the Phliasians, because the army was assembled in their own territory, put forth their whole power.

Year xiv. A. C. 418. Ol. 90. 2. 3. The Lacedæmonians and their confederates meet at Phlius. The Argives go to meet them at the forest of Nemea. The Lacedæmonians come into the plains before Argos. year xiv. A. C. 418. Ol. 90. 2. 3. The Argives enclosed between the Lacedæmonians and the Bœotians: and the Lacedæmonians enclosed between the army of the Argives and their city.

58. The Argives, having had notice both formerly of the preparation of the Lacedæmonians, and afterward of their marching on to join with the rest at Phlius, brought their army likewise into the field. They had with them the aids of the Mantineans and their confederates, and three thousand men of arms of the Eleians: and marching forward, met the Lacedæmonians at

Methydrium, a town of Arcadia, each side seizing on a hill. And the Argives prepared to give battle to the Lacedæmonians, whilst they were single. But Agis, dislodging his army by night, marched on to Phlius to the rest of the confederates, unseen. Upon knowledge hereof, the Argives betimes in the morning retired first to Argos, and afterwards to the forest of Nemea, by which they thought the Lacedæmonians and their confederates would fall in. But Agis came not the way which they expected: but with the Lacedæmonians, Arcadians, and Epidaurians, whom he acquainted with his purpose, took another more difficult way to pass, and came down into the Argive plains. The Corinthians also, and Pellenians and Phliasians, marched another troublesome way. [Only] the Bœotians, Megareans, and Sicyonians were appointed to come down by the way of the forest of Nemea, in which the Argives were encamped; to the end that if the Argives should turn head against the Lacedæmonians, these might set upon them at the back with their horse. Thus ordered, Agis entered into the plains, and spoiled Saminthus and some other towns thereabouts. 59. Which when the Argives understood, they came out of the forest somewhat after break of day to oppose them; and lighting among the Phliasians and Corinthians, slew some few of the Phliasians, but had more slain of their own by the Corinthians, though not many. The Bœotians, Megareans, and Sicyonians, marched forward towards Nemea, and found that the Argives were departed: for when they came down and saw their country wasted, they put themselves into order of battle. And the Lacedæmonians on the other side did the same; and the Argives stood intercepted in the midst of their enemies. For in the plain between them and the city, stood the Lacedæmonians and those with them; above them, were the Corinthians, Phliasians, and Pellenians; and towards Nemea, were the Bœotians, Sicyonians, and Megareans. And horsemen they had none: for the Athenians alone of all their confederates were not yet come.

Propositions of peace made by two private men of Argos:

Now the generality of the army of the Argives and their confederates did not think the danger present so great as indeed it was; but rather that the advantage in the battle would be their own: and that the Lacedæmonians were intercepted, not only in the Argives' territory, but also hard by the city. But two men of Argos, Thrasyllus, one of the five commanders of the army, and Alciphron, entertainer of the Lacedæmonians, when the armies were even ready to join, went unto Agis, and dealt with him to have the battle put off: forasmuch as the Argives were content and ready both to propound and accept of equal arbitrators, in whatsoever the Lacedæmonians should charge them withal; and in the meantime to have peace with them solemnly confirmed.

Year xiv. A. C. 418. Ol. 90. 2. 3. and accepted by Agis, without the knowledge of the rest of the commanders. Agis withdraweth his army, and is censured for it by the confederates. year xiv. A. C. 418. Ol. 90. 2. 3.

60. This these Argives said of themselves, without the command of the generality. And Agis, of himself likewise, accepting their proposition without deliberation had with the major part, and having communicated it only to some one or more of those that had charge in the army, made truce with them for four months; in which space they were to perform the things agreed upon betwixt them: and then presently he withdrew his army without giving account to any of the rest of the league why he did so. The Lacedæmonians and the confederates followed Agis, according to the law, as being their general; but among themselves taxed him exceedingly: for that having a very fair occasion of battle, the Argives being inclosed on all sides both by their horse and foot, he yet went his way doing nothing worthy the great preparation they had made. For this was, in very truth, the fairest army that ever the Grecians had in the field unto this day. But it was most to be seen, when they were all together in the forest of Nemea: where

the Lacedæmonians were with their whole forces, besides the Arcadians, Bœotians, Corinthians, Sicyonians, Pellenians, Phliasians, and Megareans; and these all chosen men of their several cities, and such as were thought a match, not only for the league of the Argives, but for such another added to it. The army thus offended with Agis, departed; and were dissolved every man to his home.

Thrasyllus punished for propounding the peace.

The Argives were much more offended with those of their city, which without the consent of the multitude had made the truce: they also supposing, that the Lacedæmonians had escaped their hands in such an advantage as they never had the like before; in that the battle was to have been fought under the city walls, and with the assistance of many and good confederates. And in their return they began to stone Thrasyllus at the Charadrum; the place where the soldiers, before they enter into the city from warfare, use to have their military causes heard. But he flying to the altar saved himself: nevertheless they confiscated his goods.

The Athenians instigate the Argives to break the truce. year xiv. A. C. 418. Ol. 90. 3. The Argives break the truce, and besiege Orchomenus. Orchomenus yielded. The Argives go next against year xiv. A. C. 418. Ol. 90. 3. Tegea: which displeaseth the Eleians, and they go home.

61. After this, the Athenians coming in with the aid of one thousand men of arms and three hundred horse under the conduct of Laches and Nicostratus, the Argives (for they were afraid for all this to break the truce with the Lacedæmonians) willed them to be gone again: and when they desired to treat, would not present them to the people till such time as the Mantineans and Eleians, who were not yet gone, forced them unto it by their importunity. Then the Athenians, in the presence of Alcibiades that was ambassador there, spake unto the Argives and their confederates; saying “that the truce was unduly made without the assent of the rest of

their confederates, and that now (for they were come time enough) they ought to fall again to the war”: and did by their words so prevail with the confederates, that they all, save the Argives, presently marched against Orchomenus of Arcadia. And these, though satisfied, stayed behind at first, but afterwards they also went; and sitting down before Orchomenus, jointly besieged and assaulted the same; desiring to take it in as well for other causes, as chiefly for that the hostages which the Arcadians had given to the Lacedæmonians were there in custody. The Orchomenians, fearing the weakness of their walls, and the greatness of the army, and lest they should perish before any relief could arrive, yielded up the town on conditions: “to be received into the league, give hostages for themselves, and to surrender the hostages held there by the Lacedæmonians into the hands of the Mantineans”. 62. The confederates after this, having gotten Orchomenus, sat in council about what town they should proceed against next. The Eleians gave advice to go against Lepreum: but the Mantineans against Tegea. And the Argives and Athenians concurred in opinion with the Mantineans. But the Eleians, taking it in evil part that they did not decree to go against Lepreum, went home. But the rest prepared themselves at Mantinea to go against Tegea, which also some within had a purpose to put into their hands.

The Lacedæmonians question their king for suffering the Argives to go off unfoughten.

63. The Lacedæmonians, after their return from Argos with their four months’ truce, severely questioned Agis, for that upon so fair an opportunity as they never had before, he subdued not Argos to the state: for so many and so good confederates would hardly be gotten together again at one time. But when also the news came of the taking of Orchomenus, then was their indignation much greater: and they presently resolved, contrary to their own custom, in their passion, to raze his house, and fine him in the

sum of ten thousand drachmes. But he besought them that they would do neither of these things yet: and promised that, leading out the army again, he would by some valiant action cancel those accusations; or, if not, they might proceed afterwards to do with him whatsoever they thought good. So they forbore both the fine and the razing of his house: but made a decree for that present, such as had never been before: that ten Spartans should be elected and joined with him as councillors, without whom it should not be lawful for him to lead the army into the field.

Year xiv. A. C. 418. Ol. 90. 3. The Lacedæmonians put their army into the field to rescue Tegea. The Lacedæmonians waste the territory of Mantinea.

64. In the meantime came news from their side in Tegea; that, unless they came presently with aid, the Tegeans would revolt to the Argives and their confederates; and that they wanted little of being revolted already. Upon this, the Lacedæmonians with speed levied all their forces, both of themselves and their Helotes, in such number as they had never done before, and marched unto Oresteium in Mænalia: and appointed the Arcadians, such as were of their league, to assemble and follow them at the heels to Tegea. The Lacedæmonians being come entire to Oresteium, from thence sent back the sixth part of their army, in which they put both the youngest and the eldest sort, for the custody of the city; and with the rest marched on to Tegea: and not long after arrived also their confederates of Arcadia. They also sent to Corinth, and to the Bœotians, Phoceans, and Locrians, to come with their aids with all speed to Mantinea. But these had too short a warning; nor was it easy for them, unless they came all together and stayed for one another, to come through the enemy's country, which lay between and barred them of passage. Nevertheless, they made what haste they could. And the Lacedæmonians, taking with them their Arcadian

confederates present, entered into the territory of Mantinea; and pitching their camp by the temple of Hercules, wasted the territory about.

Year xiv. A. C. 418. Ol. 90. 3. year xiv. A. C. 418. Ol. 90. 3. The Argives come down from their advantage to seek the enemy. year xiv. A. C. 418. Ol. 90. 3. The Lacedæmonians put themselves in order hastily.

65. The Argives and their confederates, as soon as they came in sight, seized on a certain place fortified by nature and of hard access, and put themselves into battle array. And the Lacedæmonians marched presently towards them; and came up within a stone or a dart's cast. But then one of the ancient men of the army cried out unto Agis, (seeing him to go on against a place of that strength), that he went about to amend one fault with another: signifying, that he intended to make amends for his former retreat from Argos, which he was questioned for, with his now unseasonable forwardness. But he, whether it were upon that increpation, or some other sudden apprehension of his own, presently withdrew his army before the fight began; and marching unto the territory of Tegea, turned the course of the water into the territory of Mantinea: touching which water, because into what part soever it had his course it did much harm to the country, the Mantineans and Tegeans were at wars. Now his drift was, by the turning of that water to provoke those Argives and their confederates which kept the hill, when they should hear of it, to come down and oppose them; that so they might fight with them in the plain. And by that time he had stayed about the water a day, he had diverted the stream. The Argives and their confederates were at first amazed at this their sudden retreat from so near them: and knew not what to make of it. But when after the retreat they returned no more in sight, and that they themselves, lying still on the place, did not pursue them: then began they anew to accuse their commanders, both for suffering the Lacedæmonians to depart formerly, when they had them inclosed at so fair an advantage before Argos; and now again, for not

pursuing them when they ran away, but giving them leave to save themselves, and betraying the army. The commanders for the present were much troubled hereat: but afterwards they drew down the army from the hill, and coming forth into the plain, encamped as to go against the enemy. 66. The next day, the Argives and their confederates put themselves into such order as, if occasion served, they meant to fight in: and the Lacedæmonians returning from the water to the temple of Hercules, the same place where they had formerly encamped, perceived the enemies to be all of them in order of battle hard by them, come down already from the hill. Certainly the Lacedæmonians were more affrighted at this time, than ever they had been to their remembrance before. For the time they had to prepare themselves, was exceedingly short: and such was their diligence that every man fell immediately into his own rank, Agis the king commanding all according to the law. For whilst the king hath the army in the field, all things are commanded by him: and he signifieth what is to be done to the polemarchi, they to the lochagi, these to the pentecontateres, and these again to the enomotarchi; who lastly make it known, every one to his own enomotia. In this manner, when they would have anything to be done, their commands pass through the army, and are quickly executed. For almost all the Lacedæmonian army, save a very few, are captains of captains: and the care of what is to be put in execution lieth upon many.

Year xiv. A. C. 418. Ol. 90. 3. The order of the battle of the Argives. year xiv. A. C. 418. Ol. 90. 3.

67. Now their left wing consisted of the Sciritæ, which amongst the Lacedæmonians have ever alone that place. Next to these were placed the Brasideian soldiers lately come out of Thrace, and with them those that had been newly made free. After them in order the rest of the Lacedæmonians, band after band; and by them Arcadians, first the Heræans, after these the Mænalians. In the right wing were the Tegeats, and a few Lacedæmonians

in the point of the same wing. And upon the outside of either wing, the horsemen. So stood the Lacedæmonians. Opposite to them, in the right wing stood the Mantineans; because it was upon their own territory; and with them such Arcadians as were of their league. Then the thousand chosen Argives, which the city had for a long time caused to be trained for the wars at the public charge: and next to them the rest of the Argives. After these, the Cleonæans and Orneates, their confederates. And lastly, the Athenians, with the horsemen (which were also theirs) had the left wing. 68. This was the order and preparation of both the armies. The army of the Lacedæmonians appeared to be the greater. But what the number was, either of the particulars of either side or in general, I could not exactly write. For the number of the Lacedæmonians, agreeable to the secrecy of that state, was unknown; and of the other side, for the ostentation usual with all men touching the number of themselves, was unbelieved. Nevertheless, the number of the Lacedæmonians may be attained by computing thus. Besides the Sciritæ, which were six hundred, there fought in all seven regiments, in every regiment were four companies, in each company were four enomotia, and of every enomotia there stood in front four: but they were not ranged all alike in file, but as the captains of bands thought it necessary; but the army in general was so ordered, as to be eight men in depth. And the first rank of the whole, besides the Sciritæ, consisted of four hundred and forty-eight soldiers.

Year xiv. A. C. 418. Ol. 90. 3. The hortative to the Argives and their confederates. The Lacedæmonians encourage one another.

year xiv. A. C. 418. Ol. 90. 3. The fight.

69. Now when they were ready to join, the commanders made their hortatives, every one to those that were under his own command. To the Mantineans it was said, “that they were to fight for their territory, and concerning their liberty and servitude; that the former might not be taken

from them, and that they might not again taste of the latter.” The Argives were admonished, “that whereas anciently they had the leading of Peloponnesus, and in it an equal share, they should not now suffer themselves to be deprived of it for ever; and that withal, they should now revenge the many injuries of a city, their neighbour and enemy.” To the Athenians, it was remembered, “how honourable a thing it would be for them, in company of so many and good confederates, to be inferior to none of them; and that if they had once vanquished the Lacedæmonians in Peloponnesus, their own dominion would become both the more assured, and the larger by it; and that no other would invade their territory hereafter.” Thus much was said to the Argives and their confederates. But the Lacedæmonians encouraged one another, both of themselves, and also by the manner of their discipline in the wars; taking encouragement, being valiant men, by the commemoration of what they already knew; as being well acquainted, that a long actual experience conferred more to their safety than any short verbal exhortation, though never so well delivered. 70. After this followed the battle. The Argives and their confederates marched to the charge with great violence and fury. But the Lacedæmonians slowly and with many flutes, according to their military discipline; not as a point of religion, but that, marching evenly and by measure, their ranks might not be distracted; as the greatest armies, when they march in the face of the enemy, use to be.

Year xiv. A. C. 418. Ol. 90. 3. The Lacedæmonians have the disadvantage for order, but advantage of valour year xiv. A. C. 418.

Ol. 90. 3. The Lacedæmonians have the victory.

71. Whilst they were yet marching up, Agis the king thought of this course. All armies do thus. In the conflict they extend their right wing, so as it cometh in upon the flank of the left wing of the enemy: and this happeneth, for that every one, through fear, seeketh all he can to cover his

unarmed side with the shield of him that standeth next to him on his right hand; conceiving, that to be so locked together is their best defence. The beginning hereof, is in the leader of the first file on the right hand: who ever striving to shift his unarmed side from the enemy, the rest upon like fear follow after. And at this time, the Mantineans in the right wing had far encompassed the Sciritæ: and the Lacedæmonians on the other side, and the Tegeats, were come in yet further upon the flank of the Athenians, by as much as they had the greater army. Wherefore Agis, fearing lest his left wing should be encompassed, and supposing the Mantineans to be come in far, signified unto the Sciritæ and Brasideians to draw out part of their bands, and therewith to equalise their left wing to the right wing of the Mantineans; and into the void space, he commanded to come up Hipponoidas and Aristocles, two colonels, with their bands out of the right wing, and to fall in there and make up the breach: conceiving that more than enough would still be remaining in their right wing, and that the left wing opposed to the Mantineans would be the stronger. 72. But it happened, (for he commanded it in the very onset and on the sudden), both that Aristocles and Hipponoidas refused to go to the place commanded; (for which they were afterwards banished Sparta, as thought to have disobeyed out of cowardice); and that the enemy had in the meantime also charged: and when those which he commanded to go to the place of the Sciritæ went not, they could no more reunite themselves nor close again the empty space. But the Lacedæmonians, though they had the worst at this time in every point for skill, yet in valour they manifestly showed themselves superior. For after the fight was once begun, notwithstanding that the right wing of the Mantineans did put to flight the Sciritæ and Brasideians, and that the Mantineans together with their confederates and those thousand chosen men of Argos, falling upon them in flank by the breach not yet closed up, killed many of the Lacedæmonians, and put to flight and chased them to their

carriages, slaying also certain of the elder sort left there for a guard; so as in this part the Lacedæmonians were overcome: yet with the rest of the army, and especially the middle battle where Agis was himself, and those which are called the three hundred horsemen about him, they charged upon the eldest of the Argives, and upon those which are named the five cohorts, and upon the Cleonæans and Orneates, and certain Athenians arranged amongst them; and put them all to flight: in such sort as many of them never struck stroke, but as soon as the Lacedæmonians charged gave ground presently; and some for fear to be overtaken were trodden under foot.

Year xiv. A. C. 418. Ol. 90. 3. The Lacedæmonians pursue not the enemy far.

73. As soon as the army of the Argives and their confederates had in this part given ground, they began also to break on either side. The right wing of the Lacedæmonians and Tegeats had now with their surplusage of number hemmed the Athenians in, so as they had the danger on all hands; being within the circle, pent up, and without it, already vanquished. And they had been the most distressed part of all the army, had not their horsemen come in to help them. Withal it fell out that Agis, when he perceived the left wing of his own army to labour, namely, that which was opposed to the Mantineans and to those thousand Argives, commanded the whole army to go and relieve the part overcome. By which means the Athenians and such of the Argives as, together with them, were overlaid, whilst the army passed by and declined them, saved themselves at leisure. And the Mantineans with their confederates, and those chosen Argives, had no more mind now of pressing upon their enemies: but seeing their side was overcome and the Lacedæmonians approaching them, presently turned their backs. Of the Mantineans the greatest part were slain; but of those chosen Argives, the most were saved; by reason the flight and going off was neither hasty nor

long. For the Lacedæmonians fight long and constantly, till they have made the enemy to turn his back: but that done, they follow him not far.

Year xiv. A. C. 418. Ol. 90. 3. Number of the dead.

74. Thus, or near thus, went the battle; the greatest that had been of a long time between Grecians and Grecians; and of two the most famous cities. The Lacedæmonians laying together the arms of their slain enemies, presently erected a trophy, and rifled their dead bodies. Their own dead they took up, and carried them to Tegea, where they were also buried: and delivered to the enemy theirs under truce. Of the Argives, and Orneates, and Cleonæans were slain seven hundred: of the Mantineans, two hundred: and of the Athenians with the Æginetæ, likewise two hundred, and both the captains. The confederates of the Lacedæmonians were never pressed, and therefore their loss was not worth mentioning: and of the Lacedæmonians themselves, it is hard to know the certainty; but it is said, there were slain three hundred.

The Lacedæmonians recover their reputation.

75. When it was certain they would fight, Pleistoanax the other king of the Lacedæmonians, and with him both old and young, came out of the city to have aided the army: and came forth as far as Tegea, but being advertised of the victory they returned. And the Lacedæmonians sent out to turn back also those confederates of theirs, which were coming to them from Corinth and from without the isthmus. And then they also went home themselves; and having dismissed their confederates, (for now were the Carneian holidays), celebrated that feast. Thus in this one battle they wiped off their disgrace with the Grecians: for they had been taxed both with cowardice for the blow they received in the island, and with imprudence and slackness on other occasions. But after this, their miscarriage was imputed to fortune,

and for their minds they were esteemed to have been ever the same they had been.

Year xiv. A. C. 418. Ol. 90. 3. The Epidaurians enter the territory of Argos. The Athenians build a fort before Epidaurus The end of the twelfth summer.

The day before this battle it chanced also that the Epidaurians with their whole power invaded the territory of Argos, as being emptied much of men: and whilst the Argives were abroad, killed many of those that were left behind to defend it. Also three thousand men of Elis and a thousand Athenians, besides those which had been sent before, being come after the battle to aid the Mantineans, marched presently all to Epidaurus; and lay before it all the while the Lacedæmonians were celebrating the Carneian holidays: and assigning to every one his part, began to take in the city with a wall. But the rest gave over: only the Athenians quickly finished a fortification, (which was their task), wherein stood the temple of Juno. In it amongst them all they left a garrison; and went home every one to his own city. And so this summer ended.

Peace concluded between the Argives and Lacedæmonians. year xiv. A. C. 418. Ol. 90. 3.

76. In the beginning of the winter following, the Lacedæmonians, presently after the end of the Carneian holidays, drew out their army into the field: and being come to Tegea, sent certain propositions of agreement before to Argos. There were, before this time, many citizens in Argos well affected to the Lacedæmonians, and that desired the deposing of the Argive people: and now after the battle they were better able by much to persuade the people to composition than they formerly were. And their design was, first, to get a peace made with the Lacedæmonians, and after that a league; and then at last to set upon the commons.

There went thither Lichas the son of Archesilaus, entertainer of the Argives in Lacedæmon, and brought to Argos two propositions: one of war, if the war were to proceed; another of peace, if they were to have peace. And after much contradiction, (for Alcibiades was also there), the Lacedæmonian faction, that boldly now discovered themselves, prevailed with the Argives to accept the proposition of peace; which was this.

the articles.

77. “It seemeth good to the council of the Lacedæmonians to accord with the Argives on these articles:

“The Argives shall redeliver unto the Orchomenians their children, and unto the Mænalians their men, and unto the Lacedæmonians those men that are at Mantinea: they shall withdraw their soldiers from Epidaurus, and raze the fortification there.

“And if the Athenians depart not from Epidaurus [likewise], they shall be held as enemies both to the Argives and to the Lacedæmonians, and also to the confederates of them both.

Year xiv. A. C. 418. Ol. 90. 3. The Articles.

“ If the Lacedæmonians have any men of theirs in custody, they shall deliver them every one to his own city.

“And for so much as concerneth the god, the Argives shall accept composition with the Epidaurians, upon an oath which they shall swear, touching that controversy; and the Argives shall give the form of that oath.

“All the cities of Peloponnesus, both small and great, shall be free according to their patril laws.

“If any without Peloponnesus shall enter into it to do it harm, the Argives shall come forth to defend the same, in such sort as in a common council shall by the Peloponnesians be thought reasonable.

“The confederates of the Lacedæmonians without Peloponnesus, shall have the same conditions which the confederates of the Argives and of the Lacedæmonians have; every one holding his own.

“This composition is to hold from the time, that they shall both parts have showed the same to their confederates, and obtained their consent.

Year xiv. A. C. 418. Ol. 90. 3.

“ And if it shall seem good to either part to add or alter anything, their confederates shall be sent unto, and made acquainted therewith.”

78. These propositions the Argives accepted at first; and the army of the Lacedæmonians returned from Tegea to their own city. But shortly after, when they had commerce together, the same men went further; and so wrought, that the Argives renouncing their league with the Mantineans, Eleians, and Athenians, made league and alliance with the Lacedæmonians in this form.

the league between the argives and lacedæmonians.

79. “It seemeth good to the Lacedæmonians and Argives to make league and alliance for fifty years on these articles:

“That either side shall allow unto the other equal and like trials of judgment, after the form used in their cities.

“That the rest of the cities of Peloponnesus (this league and alliance comprehending also them) shall be free both from the laws and payments of any other city than their own; holding what they have, and affording equal and like trials of judgment according to the form used in their several cities.

“That every of the cities confederate with the Lacedæmonians, without Peloponnesus, shall be in the same condition with the Lacedæmonians: and the confederates of the Argives, in the same with the Argives: every one holding his own.

“That if at any time there shall need an expedition to be taken in common, the Lacedæmonians and the Argives shall consult thereof, and decree as shall stand most with equity towards the confederates. And that if any controversy arise between any of the cities, either within or without Peloponnesus, about limits or other matter, they also shall decide it.

“That if any confederate city be at contention with another, it shall have recourse to that city which they both shall think most indifferent: but the particular men of any one city shall be judged according to the law of the same.”

The Argives and Lacedæmonians make an order that the Athenians shall quit the fort. They solicit the towns upon Thrace to revolt from the Athenians. year xiv. A. C. 418. Ol. 90. 3. Demosthenes being sent to fetch their soldiers from the fort, delivereth the same by a wile to the Epidaurians.

80. Thus was the peace and league concluded: and whatsoever one had taken from the other in the war, or whatsoever one had against another otherwise, was all acquitted. Now, when they were together settling their business, they ordered that the Argives should neither admit herald nor ambassage from the Athenians till they were gone out of Peloponnesus, and had quit the fortification: nor should make peace or war with any without consent of the rest. And amongst other things which they did in this heat, they sent ambassadors from both their cities to the towns lying upon Thrace and unto Perdiccas: whom they also persuaded to swear himself of the same league. Yet he revolted not from the Athenians presently, but intended it: because he saw the Argives had done so; and was himself also anciently descended out of Argos. They likewise renewed their old oath with the Chalcideans; and took another besides it. The Argives sent ambassadors also to Athens, requiring them to abandon the fortification they had made against Epidaurus. And the Athenians considering that the soldiers they had

in it were few in respect to the many others that were with them in the same, sent Demosthenes to fetch them away. He, when he was come, and had exhibited for a pretence a certain exercise of naked men without the fort, when the rest of the garrison were gone forth to see it, made fast the gates: and afterwards having renewed the league with the Epidaurians, the Athenians by themselves put the fort into their hands.

C. 417. Ol. 90. 3. The Mantineans forsake the league of Athens. year xiv.
A. C. 417. Ol. 90. 3. Sicyon and Argos reduced to oligarchies.

81. After the revolt of the Argives from the league, the Mantineans also, though they withstood it at first, yet being too weak without the Argives, made their peace with the Lacedæmonians; and laid down their command over the other cities. And the Lacedæmonians and Argives with a thousand men of either city having joined their arms, the Lacedæmonians first, with their single power, reduced the government of Sicyon to a smaller number; and then they both together dissolved the democracy at Argos. And the oligarchy was established conformable to the state of Lacedæmon.

These things passed in the end of winter, and near the spring. And so ended the fourteenth year of this war.

Year xv. The Dictideans revolt from Athens: Achaia oligarchized: Argos relapseth into a democracy

82. The next summer the Dictideans seated in Mount Athos, revolted from the Athenians to the Chalcideans.

Year xv. A. C. 417. Ol. 90. 4. The Argives come again to the league of Athens, and with long walls take in a way from their city to the sea. The end of the fifteenth summer.

And the Lacedæmonians ordered the state of Achaia after their own form, which before was otherwise. But the Argives, after they had by little and little assembled themselves and recovered heart, taking the time when the Lacedæmonians were celebrating their exercises of the naked youth,

assaulted the few; and in a battle fought within the city, the commons had the victory; and some they slew, others they drave into exile. The Lacedæmonians, though those of their faction in Argos sent for them, went not a long time after: yet at last they adjourned the exercises, and came forth with intention of giving them aid. But hearing by the way at Tegea, that the few were overcome, they could not be entreated by such as had escaped thence, to go on: but returning, went on with the celebration of their exercises. But afterwards, when there came ambassadors unto them, both from the Argives in the city, and from them that were driven out, there being present also their confederates, and much alleged on either side: they concluded at last, that those in the city had done the wrong, and decreed to go against Argos with their army; but many delays passed, and much time was spent between. In the meantime the common people of Argos, fearing the Lacedæmonians, and regaining the league with Athens, as conceiving the same would turn to their very great advantage, raise long walls from their city down to the sea-shore: to the end, that if they were shut up by land, they might yet with the help of the Athenians bring things necessary into the city by sea. And with this their building, some other cities of Peloponnesus were also acquainted. And the Argives universally, themselves and wives and servants, wrought at the wall: and had workmen and hewers of stone from Athens. So this summer ended.

The Lacedæmonian army comes to Argos, and razeth the walls which they were building. year xv. A. C. 417. Ol. 90. 4. They take Hysiaë, a town in Argeia. The Argives spoil the territory of Phliasia.

83. The next winter the Lacedæmonians, understanding that they were fortifying, came to Argos with their army, they and their confederates all but the Corinthians: and some practice they had beside within the city itself of Argos. The army was commanded by Agis, the son of Archidamus, king of the Lacedæmonians. But those things which were practising in Argos and

supposed to have been already mature, did not then succeed. Nevertheless they took the walls that were then in building, and razed them to the ground: and then, after they had taken Hysiaë, a town in the Argive territory, and slain all the freemen in it, they went home, and were dissolved every one to his own city. After this, the Argives went with an army into Phliasia: which when they had wasted, they went back. They did it, because the men of Phlius had received their outlaws: for there the greatest part of them dwelt.

The Athenians quarrel Perdiccas, and bar him the use of the sea.

The same winter the Athenians shut up Perdiccas in Macedonia [from the use of the sea]: objecting, that he had sworn the league of the Argives and Lacedæmonians; and that when they had prepared an army, under the command of Nicias the son of Niceratus, to go against the Chalcideans upon Thrace and against Amphipolis, he had broken the league made betwixt them and him, and by his departure was the principal cause of the dissolution of that army; and was therefore an enemy. And so this winter ended, and the fifteenth year of this war.

Year xvi. Alcibiades fetcheth away three hundred citizens of Argos for Lacedæmonism.

84. The next summer went Alcibiades to Argos with twenty galleys; and took thence the suspected Argives, and such as seemed to savour of the Lacedæmonian faction, to the number of three hundred; and put them into the nearest of the islands subject to the Athenian state.

Year xvi. A. C. 416. Ol. 90. 4. The Athenians war against the island of Melos.

The Athenians made war also against the isle of Melos, with thirty galleys of their own, six of Chios, and two of Lesbos. Wherein were of their own, twelve hundredmen of arms, three hundred archers, and twenty archers on horseback: and of their confederates and islanders, about fifteen

hundred men of arms. The Melians are a colony of the Lacedæmonians, and therefore refused to be subject, as the rest of the islands were, unto the Athenians; but rested at the first neutral; and afterwards, when the Athenians put them to it by wasting of their land, they entered into open war.

Now the Athenian commanders, Cleomedes the son of Lycomedes, and Tisias the son of Tisimachus, being encamped upon their land with these forces, before they would hurt the same sent ambassadors to deal with them first by way of conference. These ambassadors the Melians refused to bring before the multitude; but commanded them to deliver their message before the magistrates and the few: and they accordingly said as followeth:

dialogue between the athenians and melians. year xvi. A. C. 416. Ol. 90.
4. Dialogue between the Athenians and Melians.

85. Athenians. “Since we may not speak to the multitude, for fear lest when they hear our persuasive and unanswerable arguments all at once in a continued oration, they should chance to be seduced; (for we know that this is the scope of your bringing us to audience before the few); make surer yet that point, you that sit here: answer you also to every particular, not in a set speech, but presently interrupting us, whensoever anything shall be said by us which shall seem unto you to be otherwise. And first answer us, whether you like this motion or not?”

86. Whereunto the council of the Melians answered: “The equity of a leisurely debate is not to be found fault withal; but this preparation of war, not future but already here present, seemeth not to agree with the same. For we see that you are come to be judges of the conference: and that the issue of it, if we be superior in argument and therefore yield not, is likely to bring us war; and if we yield, servitude.”

87. Ath. “Nay, if you be come together to reckon up suspicions of what may be, or to any other purpose than to take advice upon what is present

and before your eyes, how to save your city from destruction, let us give over. But if this be the point, let us speak to it.”

88. Mel. “It is reason, and pardonable for men in our cases, to turn both their words and thoughts upon divers things. Howsoever, this consultation being held only upon the point of our safety, we are content, if you think good, to go on with the course you have propounded.”

Year xvi. A. C. 416. Ol. 90. 4. Dialogue between the Athenians and Melians.

89. Ath. “As we therefore will not, for our parts, with fair pretences; as, that having defeated the Medes, our reign is therefore lawful, or, that we come against you for injury done; make a long discourse without being believed: so would we have you also not expect to prevail by saying, either that you therefore took not our parts because you were a colony of the Lacedæmonians, or that you have done us no injury. But out of those things which we both of us do really think, let us go through with that which is feasible; both you and we knowing, that in human disputation justice is then only agreed on when the necessity is equal; whereas they that have odds of power exact as much as they can, and the weak yield to such conditions as they can get.”

Year xvi. A. C. 416. Ol. 90. 4. Dialogue between the Athenians and Melians.

90. Mel. “Well then, (seeing you put the point of profit in the place of justice), we hold it profitable for ourselves, not to overthrow a general profit to all men, which is this: that men in danger, if they plead reason and equity, nay, though somewhat without the strict compass of justice, yet it ought ever to do them good. And the same most of all concerneth you: forasmuch as you shall else give an example unto others of the greatest revenge that can be taken, if you chance to miscarry.”

91. Ath. “As for us, though our dominion should cease, yet we fear not the sequel. For not they that command, as do the Lacedæmonians, are cruel to those that are vanquished by them; (yet we have nothing to do now with the Lacedæmonians); but such as having been in subjection, have assaulted those that commanded them and gotten the victory. But let the danger of that be to ourselves. In the meantime we tell you this: that we are here now both to enlarge our own dominion, and also to confer about the saving of your city. For we would have dominion over you without oppressing you, and preserve you to the profit of us both.”

92. Mel. “But how can it be profitable for us to serve; though it be so for you to command?”

93. Ath. “Because you by obeying, shall save yourselves from extremity; and we not destroying you, shall reap profit by you.”

94. Mel. “But will you not accept, that we remain quiet and be your friends, (whereas before we were your enemies), and take part with neither?”

95. Ath. “No. For your enmity doth not so much hurt us, as your friendship will be an argument of our weakness, and your hatred of our power, amongst those we have rule over.”

Year xvi. A. C. 416. Ol. 90. 4. Dialogue between the Athenians and Melians.

96. Mel. “Why? Do your subjects measure equity so, as to put those that never had to do with you, and themselves, who for the most part have been your own colonies, and some of them after revolt conquered, into one and the same consideration?”

97. Ath. “Why not? For they think they have reason on their side, both the one sort and the other; and that such as are subdued, are subdued by force, and such as are forborne, are so through our fear. So that by subduing you, besides the extending of our dominion over so many more subjects, we

shall assure it the more over those we had before; especially being masters of the sea, and you islanders, and weaker (except you can get the victory) than others whom we have subdued already.”

Year xvi. A. C. 416. Ol. 90. 4. Dialogue between the Athenians and Melians.

98. Mel. “Do you think then, that there is no assurance in that which we propounded? For here again, (since driving us from the plea of equity you persuade us to submit to your profit), when we have shewed you what is good for us, we must endeavour to draw you to the same, as far forth as it shall be good for you also. As many therefore as now are neutral, what do you but make them your enemies, when, beholding these your proceedings, they look that hereafter you will also turn your arms upon them? And what is this, but to make greater the enemies you have already, and to make others your enemies, each against their wills, that would not else have been so?”

99. Ath. “We do not think that they shall be ever the more our enemies, who inhabiting anywhere in the continent, will be long ere they so much as keep guard upon their liberty against us. But islanders unsubdued, as you be, or islanders offended with the necessity of subjection which they are already in: these may indeed, by unadvised courses, put both themselves and us into apparent danger.”

100. Mel. “If you then to retain your command, and your vassals to get loose from you, will undergo the utmost of danger: would it not in us, that be already free, be great baseness and cowardice, if we should not encounter anything whatsoever rather than suffer ourselves to be brought into bondage?”

101. Ath. “No; if you advise rightly. For you have not in hand a match of valour upon equal terms, wherein to forfeit your honour; but rather a

consultation upon your safety, that you resist not such as be so far your overmatches.”

102. Mel. “But we know that, in matter of war, the event is sometimes otherwise than according to the difference of number in sides: and that if we yield presently, all our hope is lost; whereas if we hold out, we have yet a hope to keep ourselves up.”

Year xvi. A. C. 416. Ol. 90. 4. Dialogue between the Athenians and Melians.

103. Ath. “Hope, the comfort of danger, when such use it as have to spare, though it hurt them, yet it destroys them not. But to such as set their rest upon it, (for it is a thing by nature prodigal), it at once by failing maketh itself known; and known, leaveth no place for future caution. Which let not be your own case, you that are but weak, and have no more but this one stake. Nor be you like unto many men: who though they may presently save themselves by human means, will yet, when upon pressure of the enemy their most apparent hopes fail them, betake themselves to blind ones; as divination, oracles, and other such things which with hopes destroy men.”

104. Mel. “We think it, you well know, a hard matter for us to combat your power and fortune, unless we might do it on equal terms. Nevertheless we believe that, for fortune, we shall be nothing inferior; as having the gods on our side, because we stand innocent against men unjust: and for power, what is wanting in us will be supplied by our league with the Lacedæmonians, who are of necessity obliged, if for no other cause, yet for consanguinity’s sake and for their own honour, to defend us. So that we are confident, not altogether so much without reason as you think.”

Year xvi. A. C. 416. Ol. 90. 4. Dialogue between the Athenians and Melians.

105. Ath. “As for the favour of the gods, we expect to have it as well as you: for we neither do, nor require anything contrary to what mankind hath decreed, either concerning the worship of the gods, or concerning themselves. For of the gods we think according to the common opinion; and of men, that for certain by necessity of nature they will every where reign over such as they be too strong for. Neither did we make this law, nor are we the first that use it made: but as we found it, and shall leave it to posterity for ever, so also we use it: knowing that you likewise, and others that should have the same power which we have, would do the same. So that forasmuch as toucheth the favour of the gods, we have in reason no fear of being inferior. And as for the opinion you have of the Lacedæmonians, in that you believe they will help you for their own honour: we bless your innocent minds, but affect not your folly. For the Lacedæmonians, though in respect of themselves and the constitutions of their own country they are wont for the most part to be generous; yet in respect of others, though much might be alleged, yet the shortest way one might say it all thus: that most apparently of all men, they hold for honourable that which pleaseth, and for just that which profiteth. And such an opinion maketh nothing for your now absurd means of safety.”

Year xvi. A. C. 416. Ol. 90. 4. Dialogue between the Athenians and Melians.

106. Mel. “Nay, for this same opinion of theirs, we now the rather believe that they will not betray their own colony, the Melians; and thereby become perfidious to such of the Grecians as be their friends, and beneficial to such as be their enemies.”

107. Ath. “You think not then, that what is profitable must be also safe, and that which is just and honourable must be performed with danger; which commonly the Lacedæmonians are least willing of all men to undergo [for others].”

108. Mel. “But we suppose that they will undertake danger for us, rather than for any other; and that they think that we will be more assured unto them, than unto any other: because for action, we lie near to Peloponnesus, and for affection, are more faithful than others for our nearness of kin.”

109. Ath. “The security of such as are at wars, consisteth not in the good will of those that are called to their aid, but in the power of those means they excel in. And this the Lacedæmonians themselves use to consider more than any; and therefore, out of diffidence in their own forces, they take many of their confederates with them, though to an expedition but against their neighbours. Wherefore it is not likely, we being masters of the sea, that they will ever pass over into an island.”

Year xvi. A. C. 416. Ol. 90. 4. Dialogue between the Athenians and Melians.

110. Mel. “Yea, but they may have others to send: and the Cretic sea is wide, wherein to take another is harder for him that is master of it, than it is for him that will steal by, to save himself. And if this course fail, they may turn their arms against your own territory, or those of your confederates not invaded by Brasidas. And then you shall have to trouble yourselves, no more about a territory that you have nothing to do withal, but about your own and your confederates.”

Year xvi. A. C. 416. Ol. 90. 4. Dialogue between the Athenians and Melians.

111. Ath. “Let them take which course of these they will, that you also may find by experience, and not be ignorant, that the Athenians never yet gave over siege for fear of any diversion upon others. But we observe that, whereas you said you would consult of your safety, you have not yet in all this discourse said anything, which a man relying on could hope to be preserved by: the strongest arguments you use are but future hopes; and your present power is too short to defend you against the forces already

arranged against you. You shall therefore take very absurd counsel, unless excluding us you make amongst yourselves some more discreet conclusion: for [when you are by yourselves], you will no more set your thoughts upon shame; which, when dishonour and danger stand before men's eyes, for the most part undoeth them. For many, when they have foreseen into what dangers they were entering, have nevertheless been so overcome by that forcible word, dishonour, that that which is but called dishonour, hath caused them to fall willingly into immedicable calamities; and so to draw upon themselves really, by their own madness, a greater dishonour than could have befallen them by fortune. Which you, if you deliberate wisely, will take heed of; and not think shame to submit to a most potent city, and that upon so reasonable conditions, as of league and of enjoying your own under tribute: and seeing choice is given you of war or safety, do not out of peevishness take the worse. For such do take the best course, who though they give no way to their equals, yet do fairly accommodate to their superiors; and towards their inferiors use moderation. Consider of it therefore, whilst we stand off; and have often in your mind, that you deliberate of your country; which is to be happy or miserable in and by this one consultation."

Year xvi. A. C. 416. Ol. 90. 4. Dialogue between the Athenians and Melians.

112. So the Athenians went aside from the conference; and the Melians, after they had decreed the very same things which before they had spoken, made answer unto them in this manner: "Men of Athens, our resolution is no other than what you have heard before; nor will we, in a small portion of time, overthrow that liberty, in which our city hath remained for the space of seven hundred years since it was first founded. But trusting to the fortune by which the gods have preserved it hitherto, and unto the help of men, that is, of the Lacedæmonians, we will do our best to maintain the same. But

this we offer: to be your friends; enemies to neither side; and you to depart out of our land, after agreement such as we shall both think fit.”

The Athenians and Melians agree not. The city of Melos besieged.

113. Thus the Melians answered. To which the Athenians, the conference being already broken off, replied thus: “You are the only men, as it seemeth to us, by this consultation, that think future things more certain than things seen; and behold things doubtful, through desire to have them true, as if they were already come to pass. As you attribute and trust the most unto the Lacedæmonians, and to fortune and hopes, so will you be the most deceived”. 114. This said, the Athenian ambassadors departed to their camp. And the commanders, seeing that the Melians stood out, fell presently to the war: and dividing the work among the several cities, encompassed the city of the Melians with a wall. The Athenians afterwards left some forces of their own and of their confederates, for a guard both by sea and land: and with the greatest part of their army went home. The rest that were left, besieged the place.

The Argives lose eighty men by an ambushment of the Phliasians. The Athenians in Pylus infest Laconia. year xvi. A. C. 416. Ol. 91. 1. The Corinthians war on the Athenians.

115. About the same time the Argives, making a road into Phlipsis, lost about eighty of their men, by ambush laid for them by the men of Phlius and the outlaws of their own city. And the Athenians that lay in Pylus, fetched in thither a great booty from the Lacedæmonians. Notwithstanding which, the Lacedæmonians did not war upon them, [as] renouncing the peace: but gave leave by edict only, to any of their people that would to take booties reciprocally in the territory of the Athenians. The Corinthians also made war upon the Athenians: but it was for certain controversies of their own: and the rest of Peloponnesus stirred not.

The Melians relieve their town. The end of the fifteenth summer

The Melians also took that part of the wall of the Athenians by an assault in the night, which looked towards the market-place: and having slain the men that guarded it, brought into the town both corn and other provision, whatsoever they could buy for money: and so returned and lay still. And the Athenians from thenceforth kept a better watch. And so this summer ended.

116. The winter following, the Lacedæmonians being about to enter with their army into the territory of the Argives, when they perceived that the sacrifices which they made on the border for their passage were not acceptable, returned. And the Argives, having some of their own city in suspicion in regard of this design of the Lacedæmonians, apprehended some of them; and some escaped.

Year xvi. A. C. 416. Ol. 91. 1.

About the same time the Melians took another part of the wall of the Athenians; they that kept the siege being then not many. But this done, there came afterwards some fresh forces from Athens, under the conduct of Philocrates the son of Demeas. And the town being now strongly besieged, there being also within some that practised to have it given up, they yielded themselves to the discretion of the Athenians: who slew all the men of military age, made slaves of the women and children; and inhabited the place with a colony sent thither afterwards of five hundred men of their own.

THE SIXTH BOOK OF THE HISTORY OF THUCYDIDES.

THE PRINCIPAL CONTENTS.

SICILY DESCRIBED. — The causes and pretences of the Sicilian war: with the consultation and preparation for the same. — Alcibiades, one of the generals of the army, accused of defacing the images of Mercury, is suffered for that present to depart with the army. — The Athenian army cometh to Rhegium: thence to Catana. — From thence Alcibiades is sent for home to make answer to his accusations: and by the way escaping, goeth to Lacedæmon. — Nicias encampeth near Syracuse: and having overcome the army of the Syracusians in battle, returneth to Catana. — The Syracusians procure aids amongst the rest of the Sicilians. — Alcibiades instigateth and instructeth the Lacedæmonians against his country. — Nicias returneth from Catana to Syracuse: and encamping in Epipolæ, besiegeth the city: and beginneth to enclose them with a double wall, which was almost brought to perfection in the beginning of the eighteenth year of this war.

Year xvi. A. C. 416. Ol. 91. 1. The Athenians resolve to invade Sicily. year xvi. A. C. 416. Ol. 91. 1. The greatness of Sicily and the inhabitants.

The same winter the Athenians, with greater forces than they had before sent out with Laches and Eurymedon, resolved to go again into Sicily; and if they could, wholly to subdue it: being for the most part ignorant both of the greatness of the island, and of the multitude of people, as well Greeks as barbarians, that inhabited the same; and that they undertook a war not much less than the war against the Peloponnesians. For the compass of Sicily is little less than eight days' sail for a ship; and though so great, is yet divided with no more than twenty furlongs, sea measure, from the continent.

Cyclopes and Læstrigones. Sicanians. Sicania, Trinacria. Trojans. Siculi.

It was inhabited in old time, thus; and these were the nations that held it. The most ancient inhabitants in a part thereof, are said to have been the Cyclopes and Læstrigones: of whose stock, and whence they came or to what place they removed, I have nothing to say. Let that suffice which the poets have spoken, and which every particular man hath learned of them. After them, the first that appear to have dwelt therein, are the Sicanians, as they say themselves; nay, before the other, as being the natural breed of the island. But the truth is, they were Iberians; and driven away by the Ligyans from the banks of Sicanus, a river on which they were seated in Iberia. And the island from them came to be called Sicania, which was before Trinacria. And these [two] inhabit yet in the western parts of Sicily. After the taking of Ilium certain Trojans, escaping the hands of the Grecians, landed with small boats in Sicily: and having planted themselves on the borders of the Sicanians, both the nations in one were called Elymi; and their cities were Eryx and Egesta. Hard by these came and dwelled also certain Phoceans, who coming from Troy, were by tempest carried first into Afric, and thence into Sicily. But the Siculi passed out of Italy, (for there they inhabited), flying from the Opici, having, as is most likely and as it is reported, observed the strait, and with a fore wind gotten over in boats which they made suddenly on the occasion, or perhaps by some other means.

There is at this day a people in Italy called Siculi. And Italy itself got that name after the same manner, from a king of Arcadia called Italus. Of these a great army crossing into Sicily, overthrew the Sicanians in battle, and drave them into the south and west parts of the same; and instead of Sicania, caused the island to be called Sicilia: and held and inhabited the best of the land for near three hundred years after their going over, and before any of the Grecians came thither. And till now they possess the midland and north parts of the island.

Phœnicians.

Also the Phœnicians inhabited the coast of Sicily on all sides, having taken possession of certain promontories and little islands adjacent, for trade's sake with the Sicilians. But after that many Grecians were come in by sea, the Phœnicians abandoned most of their former habitations: and uniting themselves dwelt in Motya and Soloeis and Panormus, upon the borders of the Elymi; as relying upon their league with the Elymi, and because also from thence lay the shortest cut over unto Carthage. These were the barbarians, and thus they inhabited Sicily.

Chalcideans. About A. C. 759. Ol. 5. 2. Corinthians.

Now for Grecians, first a colony of Chalcideans, under Thucles their conductor, going from Eubœa, built Naxos, and the altar of Apollo Archegetes, now standing without the city: upon which the ambassadors employed to the oracles, as often as they launch from Sicily, are accustomed to offer their first sacrifice. The next year Archias, a man of the Herculean family, carried a colony from Corinth, and became founder of Syracuse: where first he drave the Siculi out of that island in which the inner part of the city now standeth; not now environed wholly with the sea, as it was then. And in process of time, when the city also that is without was taken in with a wall, it became a populous city. In the fifth year after the building of Syracuse, Thucles and the Chalcideans, going from Naxos, built Leontium, expelling thence the Siculi; and after that Catana: but they that went to Catana, chose Euarchus for their founder.

Megareans. A. C. 728. Ol. 13. 1. A. C. 628. Ol. 38. 1. A. C. 713. Ol. 16. 4. Rhodians and Cretans. Zanc first built by pirates of Cume. Eubœans. Samians and other Ionians.

About the same time in Sicily arrived also Lamis, with a colony from Megara; and first built a certain town called Trotilus, upon the river Pantacius; where for a while after he governed the estate of his colony in

common with the Chalcideans of Leontium. But afterwards, when he was by them thrust out, and had builded Thapsus, he died; and the rest going from Thapsus, under the conduct of Hyblon, a king of the Siculi, built Megara, called Megara-Hyblæa. And after they had there inhabited two hundred and forty-five years, they were by Gelon, a tyrant of Syracuse, put out both of the city and territory. But before they were driven thence, namely one hundred years after they had built it, they sent out Pammilus and built the city of Selinus. This Pammilus came to them from Megara, their own metropolitan city: and so together with them founded Selinus. Gela was built in the forty-fifth year after Syracuse, by Antiphemus, that brought a colony out of Rhodes, and by Entymus, that did the like out of Crete, jointly. This city was named after the name of the river Gela; and the place where now the city standeth, and which at first they walled in, was called Lindii. And the laws which they established were the Doric. About one hundred and eight years after their own foundation, they of Gela built the city of Acragante, calling the city after the name of the river: and for their conductors chose Aristonous and Pystilus, and gave unto them the laws of Gela. Zancle was first built by pirates that came from Cume, a Chalcidean city in Opicia: but afterwards there came a multitude, and helped to people it, out of Chalcis and the rest of Eubœa; and their conductors were Perieres and Cratæmenes; one of Cume, the other of Chalcis. And the name of the city was at first Zancle, so named by the Sicilians because it hath the form of a sickle; and the Sicilians call a sickle zancalon. But these inhabitants were afterwards chased thence by the Samians and other people of Ionia; that in their flight from the Medes, fell upon Sicily. After this, Anaxilas, tyrant of Rhegium, drave out the Samians; and peopling the city with a mixed people of them and his own, instead of Zancle called the place by the name of his own country from whence he was anciently descended, Messana.

Acræ, Casmenæ. Camarina. A. C. 483. Ol. 74. 2. A. C. 461. Ol. 79. 4.

After Zancle was built Himera, by Eucleides, Simus, and Sacon; the most of which colony were Chalcideans; but there were also amongst them certain outlaws of Syracuse, the vanquished part of a sedition, called the Myletidæ. Their language grew to a mean between the Chalcidean and Doric: but the laws of the Chalcidean prevailed. Acræ and Casmenæ were built by the Syracusians: Acræ, twenty years after Syracuse; and Casmenæ, almost twenty after Acræ. Camarina was at first built by the Syracusians, very near the hundred and thirty-fifth year of their own city; Dascon and Menecolus being the conductors. But the Camarinæans having been by the Syracusians driven from their seat by war for revolt, Hippocrates, tyrant of Gela, in process of time, taking of the Syracusians that territory for ransom of certain Syracusian prisoners, became their founder, and placed them in Camarina again. After this again, having been driven thence by Gelon, they were planted the third time in the same city.

The cause and pretence of the Athenians to invade it. year xvi. A. C. 416. Ol. 91. 1.

These were the nations, Greeks and barbarians, that inhabited Sicily. And though it were thus great, yet the Athenians longed very much to send an army against it, out of a desire to bring it all under their subjection; which was the true motive; but as having withal this fair pretext, of aiding their kindred and new confederates. But principally they were instigated to it by the ambassadors of Egesta, who were at Athens and earnestly pressed them thereto. For bordering on the territory of the Selinuntians, they had begun a war about certain things concerning marriage, and about a piece of ground that lay doubtfully between them. And the Selinuntians having leagued themselves with the Syracusians, infested them with war both by sea and by land. Insomuch as the Egestæans, putting the Athenians in mind of their former league with the Leontines made by Laches, prayed them to send a

fleet thither in their aid; alleging, amongst many other things, this as principal: that if the Syracusians, who had driven the Leontines from their seat, should pass without revenge taken on them, and so proceed, by consuming the rest of the allies of the Athenians there, to get the whole power of Sicily into their hands, it would be dangerous lest hereafter some time or other, being Dorians, they should with great forces aid the Dorians for affinity, and being a colony of the Peloponnesians join with the Peloponnesians that sent them out, to pull down the Athenian empire: that it were wisdom, therefore, with those confederates they yet retain, to make head against the Syracusians; and the rather, because for the defraying of the war the Egestæans would furnish money sufficient of themselves. Which things when the Athenians had often heard in their assemblies from the mouths of the Egestæan ambassadors and of their advocates and patrons, they decreed to send ambassadors to Egesta; to see first, whether there were in their treasury and temples so much wealth as they said there was, and to bring word in what terms the war stood between that city and the Selinuntians. And ambassadors were sent into Sicily accordingly.

C. 415. Ol. 91. 1. The Lacedæmonians waste part of Argolica, and put the outlaws of Argos into Orneæ. The Athenians war upon Macedonia. year xvi. A. C. 415. Ol. 91. 1.

The same winter the Lacedæmonians and their confederates, all but the Corinthians, having drawn out their forces into the territory of the Argives, wasted a small part of their fields, and carried away certain cart-loads of their corn. Thence they went to Orneæ, and having placed there the Argive outlaws, left with them a few others of the rest of the army: and then making a composition for a certain time, that they of Orneæ and those Argives should not wrong each other, they carried their army home. But the Athenians arriving not long after with thirty galleys and six hundred men of arms, the people of Argos came also forth with their whole power, and

joining with them, sat down betimes in the morning before Orneæ. But when at night the army went somewhat far off to lodge, they within fled out; and the Argives the next day perceiving it, pulled Orneæ to the ground, and went home. And so also did the Athenians not long after with their galleys. Also the Athenians transported certain horsemen by sea, part of their own, and part Macedonian fugitives that lived with them, into Methone, and ravaged the territory of Perdiccas. And the Lacedæmonians sent unto the Chalcideans upon Thrace, who held peace with the Athenians from ten days to ten days, appointing them to aid Perdiccas. But they refused. And so ended the winter, and the sixteenth year of this war written by Thucydides.

Year xvii. The Athenians decree the voyage of Sicily: and Alcibiades, Nicias, and Lamachus for generals. year xvii. A. C. 415. Ol.

91. 1.

The next summer, early in the spring, the Athenian ambassadors returned from Sicily, and the ambassadors of Egesta with them: and brought in silver uncoined sixty talents, for a month's pay of sixty galleys, which they would entreat the Athenians to send thither. And the Athenians having called an assembly, and heard both from the Egestæan and their own ambassadors, amongst other persuasive but untrue allegations, touching their money, how they had great store ready both in their treasury and temples, decreed the sending of sixty galleys into Sicily, and Alcibiades the son of Cleinias, Nicias the son of Niceratus, and Lamachus the son of Xenophanes, for commanders with authority absolute: the which were to aid the people of Egesta against the Selinuntians, and withal, if they had time to spare, to plant the Leontines anew in their city; and to order all other the affairs of Sicily as they should think most for the profit of the Athenians. Five days after this the people assembled again, to consult of the means how most speedily to put this armada in readiness; and to decree such things as the

generals should further require for the expedition. But Nicias having heard that himself was chosen for one of the generals, and conceiving that the state had not well resolved, but affected the conquest of all Sicily, a great matter, upon small and superficial pretences, stood forth, desiring to have altered this the Athenians' purpose, and spake as followeth:

the oration of nicias. year xvii. A. C. 415. Ol. 91. 1. Oration of Nicias. year xvii. A. C. 415. Ol. 91. 1. Oration of Nicias. year xvii. A. C. 415. Ol. 91. 1. Oration of Nicias. year xvii. A. C. 415. Ol. 91. 1. Oration of Nicias. year xvii. A. C. 415. Ol. 91. 1. Oration of Nicias.

9. "Though this assembly was called to deliberate of our preparation, and of the manner how to set forth our fleet for Sicily: yet to me it seemeth, that we ought rather once again to consult, whether it be not better not to send it at all; than upon a short deliberation in so weighty an affair, and upon the credit of strangers, to draw upon ourselves an impertinent war. For my own part, I have honour by it: and for the danger of my person, I esteem it the least of all men: (not but that I think him a good member of the commonwealth, that hath regard also to his own person and estate; for such a man especially will desire the public to prosper for his own sake): but as I have never spoken heretofore, so nor now will I speak anything that is against my conscience, for gaining to myself a pre-eminence of honour: but that only which I apprehend for the best. And although I am sure, that if I go about to persuade you to preserve what you already hold, and not to hazard things certain for uncertain and future, my words will be too weak to prevail against your humour: yet this I must needs let you know, that neither your haste is seasonable, nor your desires easy to be achieved. 10. For I say, that going thither you leave many enemies here behind you, and more you endeavour to draw hither. You perhaps think that the league will be firm, that you have made with the Lacedæmonians; which, though as long as you

stir not, may continue a league in name, (for so some have made it of their own side), yet if any considerable forces of ours chance to miscarry, our enemies will soon renew the war, as having made the peace constrained by calamities, and upon terms of more dishonour and necessity than ourselves: besides, in the league itself we have many things controverted. And some there be that refuse utterly to accept it, and they none of the weakest: whereof some are now in open war against us, and others, because the Lacedæmonians stir not, maintain only a truce with us from ten to ten days, and so are contented yet to hold their hands. But peradventure, when they shall hear that our power is distracted, which is the thing we now hasten to do, they will be glad to join in the war with the Sicilians against us; the confederacy of whom they would heretofore have valued above many other. It behoveth us therefore to consider of these things, and not to run into new dangers, when the state of our own city hangeth unsettled, nor seek a new dominion before we assure that which we already have. For the Chalcideans of Thrace, after so many years' revolt, are yet unreduced: and from others in divers parts of the continent, we have but doubtful obedience. But the Egestæans, being forsooth our confederates and wronged, they in all haste must be aided: though to right us on those by whom we have a long time ourselves been wronged, that we defer. 11. And yet if we should reduce the Chalcideans into subjection, we could easily also keep them so: but the Sicilians, though we vanquish them, yet being many and far off, we should have much ado to hold them in obedience. Now it were madness to invade such, whom conquering you cannot keep; and failing, should lose the means for ever after to attempt the same again. As for the Sicilians, it seemeth unto me, at least as things now stand, that they shall be of less danger to us if they fall under the dominion of the Syracusians, than they are now: and yet this is it that the Egestæans would most affright us with. For now the states of Sicily, in several, may perhaps be induced, in favour of the

Lacedæmonians, to take part against us: whereas then, being reduced into one, it is not likely they would hazard with us state against state. For by the same means that they, joining with the Peloponnesians, may pull down our dominion, by the same it would be likely that the Peloponnesians would subvert theirs. The Grecians there will fear us most, if we go not at all; next, if we but show our forces and come quickly away. But if any misfortune befall us, they will presently despise us, and join with the Grecians here to invade us. For we all know, that those things are most admired which are farthest off, and which least come to give proof of the opinion conceived of them. And this, Athenians, is your own case with the Lacedæmonians and their confederates: whom because beyond your hope you have overcome in those things for which at first you feared them, you now in contempt of them turn your arms upon Sicily. But we ought not to be puffed up upon the misfortunes of our enemies: but to be confident then only, when we have mastered their designs. Nor ought we to think that the Lacedæmonians set their minds on anything else, but how they may yet for the late disgrace repair their reputation, if they can, by our overthrow: and the rather, because they have so much and so long laboured to win an opinion in the world of their valour. The question with us therefore, if we be well advised, will not be of the Egestæans in Sicily, but how we may speedily defend our city against the insidiation of them that favour the oligarchy. 12. We must remember also that we have had now some short recreation from a late great plague and great war, and thereby are improved both in men and money; which it is most meet that we should spend here upon ourselves, and not upon those outlaws which seek for aid: seeing it maketh for them, to tell us a specious lie; who contributing only words whilst their friends bear all the danger, if they speed well, shall be disobliged of thanks, if ill, undo their friends for company. Now if there be any man here, that for ends of his own, as being glad to be general, especially being yet too young to

have charge in chief, shall advise the expedition, to the end he may have admiration for his expense upon horses, and help from his place to defray that expense: suffer him not to purchase his private honour and splendour with the danger of the public fortune. Believe rather that such men, though they rob the public, do nevertheless consume also their private wealth. Besides, the matter itself is full of great difficulties, such as it is not fit for a young man to consult of, much less hastily to take in hand. 13. And I seeing those now sit by and abet the same man, am fearful of them: and do on the other side exhort the elder sort, (if any of them sit near those other), not to be ashamed to deliver their minds freely, as fearing that if they gave their voice against the war they should be esteemed cowards; nor to doat (as they do) upon things absent; knowing that by passion the fewest actions, and by reason the most do prosper: but rather for the benefit of their country, which is now cast into greater danger than ever before, to hold up their hands on the other side, and decree: “that the Sicilians, within the limits they now enjoy, not misliked by you, and with liberty to sail by the shore in the Ionian gulf, and in the main of the Sicilian sea, shall possess their own, and compound their differences between themselves”. And for the Egestæans, to answer them in particular, thus: “that as without the Athenians they had begun the war against the Selinuntians, so they should without them likewise end it: and that we shall no more hereafter, as we have used to do, make such men our confederates, as when they do injury, we must maintain it, and when we require their assistance, cannot have it”. 14. And you the president, if you think it your office to take care of the commonwealth, and desire to be a good member of the same, put these things once more to the question, and let the Athenians speak to it again. Think (if you be afraid to infringe the orders of the assembly) that before so many witnesses, it will not be made a crime: but that you shall be rather thought a physician of your country, that hath swallowed down evil counsel. And he truly

dischargeth the duty of a president, who laboureth to do his country the most good, or at least will not willingly do it hurt.”

Motives of Alcibiades to further his voyage. year xvii. A. C. 415. Ol. 91. 1.

15. Thus spake Nicias. But the most of the Athenians that spake after him, were of opinion that the voyage ought to proceed, the decree already made not to be reversed: yet some there were that said to the contrary. But the expedition was most of all pressed by Alcibiades the son of Cleinias, both out of desire he had to cross Nicias, with whom he was likewise at odds in other points of state, and also for that he had glanced at him invidiously in his oration: but principally for that he affected to have charge, hoping that himself should be the man to subdue both Sicily and Carthage to the state of Athens: and withal, if it succeeded, to increase his own private wealth and glory. For being in great estimation with the citizens, his desires were more vast than for the proportion of his estate, both in maintaining of horses and other his expenses, was meet: which proved afterwards none of the least causes of the subversion of the Athenian commonwealth. For most men fearing him, both for his excess in things that concerned his person and form of life, and for the greatness of his spirit in every particular action he undertook, as one that aspired to the tyranny, they became his enemy. And although for the public he excellently managed the war, yet every man, privately displeased with his course of life, gave the charge of the wars to others, and thereby not long after overthrew the state. Alcibiades at this time stood forth, and spake to this effect.

the oration of alcibiades. year xvii. A. C. 415. Ol. 91. 1. Oration of Alcibiades. year xvii. A. C. 415. Ol. 91. 1. Oration of Alcibiades.

16. “Men of Athens, it both belongeth unto me more than to any other to have this charge: and withal I think myself (for I must needs begin with this, as having been touched by Nicias) to be worthy of the same. For those

things for which I am so much spoken of, do indeed purchase glory to my progenitors and myself: but to the commonwealth they confer both glory and profit. For the Grecians have thought our city a mighty one, even above the truth, by reason of my brave appearance at the Olympic games: whereas before they thought easily to have warred it down. For I brought thither seven chariots, and not only won the first, second, and fourth prize, but carried also in all other things a magnificence worthy the honour of the victory. And in such things as these, as there is honour to be supposed according to the law; so is there also a power conceived upon sight of the thing done. As for my expenses in the city upon setting forth of shows, or whatsoever else is remarkable in me, though naturally it procure envy in other citizens, yet to strangers this also is an argument of our greatness. Now, it is no unprofitable course of life, when a man shall at his private cost not only benefit himself, but also the commonwealth. Nor doth he that beareth himself high upon his own worth, and refuseth to make himself fellow with the rest, wrong the rest: for if he were in distress, he should not find any man that would share with him in his calamity. Therefore, as we are not so much as saluted when we be in misery; so let them likewise be content to be contemned of us when we flourish; or if they require equality, let them also give it. I know that such men, or any man else that excelleth in the glory of anything whatsoever, shall as long as he liveth be envied, principally of his equals, and then also of others amongst whom he converseth: but with posterity they shall have kindred claimed of them, though there be none; and his country will boast of him, not as of a stranger or one that had been a man of lewd life, but as their own citizen and one that had achieved worthy and laudable acts. This being the thing I aim at, and for which I am renowned, consider now whether I administer the public the worse for it or not. For having reconciled unto you the most potent states of Peloponnesus without much either danger or cost, I compelled the

Lacedæmonians to stake all that ever they had upon the fortune of one day of Mantinea.

Year xvii. A. C. 415. Ol. 91. 1. Oration of Alcibiades. year xvii. A. C. 415. Ol. 91. 1. Oration of Alcibiades.

17. And this hath my youth and madness, supposed to have been very madness, with familiar and fit words wrought upon the power of the Peloponnesians: and shewing reason for my passion, made my madness now no longer to be feared. But as long as I flourish with it, and Nicias is esteemed fortunate, make you use of both our services. And abrogate not your decree touching the voyage into Sicily, as though the power were great you are to encounter withal. For the number wherewith their cities are populous, is but of promiscuous nations, easily shifting and easily admitting new comers; and consequently not sufficiently armed, any of them, for the defence of their bodies, nor furnished, as the custom of the place appointeth, to fight for their country. But what any of them thinks he may get by fair speech, or snatch from the public by sedition, that only he looks after; with purpose, if he fail, to run the country. And it is not likely, that such a rabble should either with one consent give ear to what is told them, or unite themselves for the administration of their affairs in common: but if they hear of fair offers, they will one after one be easily induced to come in; especially if there be seditions amongst them, as we hear there are. And the truth is, there are neither so many men of arms as they boast of; nor doth it appear that there are so many Grecians there in all, as the several cities have every one reckoned for their own number. Nay, even Greece hath much belied itself, and was scarce sufficiently armed in all this war past. So that the business there, for all that I can by fame understand, is even as I have told you, and will yet be easier. For we shall have many of the barbarians, upon hatred of the Syracusians, to take our parts against them there: and if we consider the case aright, there will be nothing to hinder us at home. For

our ancestors having the same enemies, which they say we leave behind us now in our voyage to Sicily, and the Persian besides, did nevertheless erect the empire we now have by our only odds of strength at sea. And the hope of the Peloponnesians against us was never less than now it is, though their power were also as great as ever: for they would be able to invade our land, though we went not into Sicily; and by sea they can do us no harm though we go, for we shall leave a navy sufficient to oppose theirs behind us.

Year xvii. A. C. 415. Ol. 91. 1. Oration of Alcibiades.

18. "What therefore can we allege with any probability for our backwardness: or what can we pretend unto our confederates, for denying them assistance? Whom we ought to defend, were it but because we have sworn it to them, without objecting that they have not reciprocally aided us. For we took them not into league, that they should come hither with their aids: but that by troubling our enemies there, they might hinder them from coming hither against us. And the way whereby we, and whosoever else hath dominion, hath gotten it, hath ever been the cheerful succouring of their associates that required it, whether they were Greeks or barbarians. For if we should all sit still, or stand to make choice which were fit to be assisted and which not, we should have little under our government of the estates of other men, but rather hazard our own. For when one is grown mightier than the rest, men use not only to defend themselves against him when he shall invade, but to anticipate him, that he invade not at all. Nor is it in our power to be our own carvers, how much we will have subject to us; but considering the case we are in, it is as necessary for us to seek to subdue those that are not under our dominion, as to keep so those that are: lest if others be not subject to us, we fall in danger of being subjected unto them. Nor are we to weigh quietness in the same balance that others do, unless also the institution of this state were like unto that of other states. Let us

rather make reckoning, by enterprising abroad to increase our power at home, and proceed on our voyage; that we may cast down the haughty conceit of the Peloponnesians, and show them the contempt and slight account we make of our present ease, by undertaking this our expedition into Sicily. Whereby, either conquering those states we shall become masters of all Greece, or weaken the Syracusians, to the benefit of ourselves and our confederates. And for our security to stay, if any city shall come to our side, or to come away if otherwise, our galleys will afford it. For in that we shall be at our own liberty, though all the Sicilians together were against it.

Year xvii. A. C. 415. Ol. 91. 1. Oration of Alcibiades.

“Let not the speech of Nicias, tending only to laziness, and to the stirring of debate between the young men and the old, avert you from it: but with the same decency wherewith your ancestors, consulting young and old together, have brought our dominion to the present height, endeavour you likewise to enlarge the same. And think not that youth or age, one without the other, is of any effect, but that the simplest, the middle sort, and the exactest judgments tempered together, is it that doth the greatest good; and that a state as well as any other thing will, if it rest, wear out of itself; and all men’s knowledge decay; whereas by the exercise of war experience will continually increase, and the city will get a habit of resisting the enemy, not with words, but action. In sum, this is my opinion: that a state accustomed to be active, if it once grow idle, will quickly be subjected by the change: and that they of all men are most surely planted, that with most unity observe the present laws and customs, though not always of the best.”

19. Thus spake Alcibiades. The Athenians, when they had heard him together with the Egestæans and Leontine outlaws, who being then present entreated, and objecting to them their oath begged their help in form of

suppliants, were far more earnestly bent upon the journey than they were before. But Nicias, when he saw he could not alter their resolution with his oration, but thought he might perhaps put them from it by the greatness of the provision, if he should require it with the most, stood forth again and said in this manner.

the oration of nicias. year xvii. A. C. 415. Ol. 91. 1. Oration of Nicias. year xvii. A. C. 415. Ol. 91. 1. Oration of Nicias. year xvii. A. C. 415. Ol. 91. 1. Oration of Nicias.

20. “Men of Athens, forasmuch as I see you violently bent on this expedition, such effect may it take as is desired. Nevertheless I shall now deliver my opinion upon the matter as it yet standeth. As far as we understand by report, we set out against great cities, not subject one to another, nor needing innovation, whereby they should be glad, out of hard servitude, to admit of easier masters; nor such as are likely to prefer our government before their own liberty; but many, (as for one island), and those Greek cities. For besides Naxos and Catana, (which too I hope will join with us for their affinity with the Leontines), there are other seven, furnished in all respects after the manner of our own army; and especially those two against which we bend our forces most, Selinus and Syracuse. For there are in them many men of arms, many archers, many darters, besides many galleys and a multitude of men to man them. They have also store of money, both amongst private men and in their temples. This have the Selinuntians. The Syracusians have a tribute beside, coming in from some of the barbarians. But that wherein they exceed us most, is this: that they abound in horses, and have corn of their own, not fetched in from other places. 21. Against such a power we shall therefore need not a fleet only, and with it a small army; but there must great forces go along of land soldiers, if we mean to do anything worthy of our design, and not to be kept by their many horsemen from landing; especially if the cities there, terrified

by us, should now hold all together, and none but the Egestæans prove our friends and furnish us with a cavalry to resist them. And it would be a shame either to come back with a repulse, or to send for a new supply afterwards, as if we had not wisely considered our enterprise at first. Therefore we must go sufficiently provided from hence, as knowing that we go far from home, and are to make war in a place of disadvantage, and not as when we went as confederates to aid some of our subjects here at home, where we had easy bringing in of necessaries to the camp from the territories of friends. But we go far off, and into a country of none but strangers, and from whence in winter there can hardly come a messenger unto us in so little as four months. 22. Wherefore I am of opinion that we ought to take with us many men of arms, of our own, of our confederates, and of our subjects: and also out of Peloponnesus as many as we can get, either for love or money: and also many archers and slingers, whereby to resist their cavalry; and much spare shipping, for the more easy bringing in of provision. Also our corn, I mean, wheat and barley parched, we must carry with us from hence in ships; and bakers from the mills, hired, and made to work by turns, that the army, if it chance to be weather-bound, may not be in want of victual. For being so great, it will not be for every city to receive it. And so for all things else, we must as much as we can provide them ourselves, and not rely on others. Above all, we must take hence as much money as we can: for as for that which is said to be ready at Egesta, think it ready in words, but not in deeds. 23. For although we go thither with an army not only equal unto theirs, but also (excepting their men of arms for battle) in everything exceeding it: yet so shall we scarce be able both to overcome them, and withal to preserve our own. We must also make account, that we go to inhabit some city in that foreign and hostile country, and either the first day we come thither to be presently masters of the field, or failing, be assured to find all in hostility against us. Which fearing, and

knowing that the business requires much good advice and more good fortune, (which is a hard matter, being we are but men), I would so set forth as to commit myself to fortune as little as I may, and take with me an army that in likelihood should be secure. And this I conceive to be both the surest course for the city in general, and the safest for us that go the voyage. If any man be of a contrary opinion, I resign him my place.”

The Athenians upon this speech, made to desire them from the. year xvii. A. C. 415. Ol. 91. 1. enterprise, are the more encouraged to it. year xvii. A. C. 415. Ol. 91. 1.

24. Thus spake Nicias, imagining that either the Athenians would, upon the multitude of the things required, abandon the enterprise; or if he were forced to go, he might go with the more security. But the Athenians gave not over the desire they had of the voyage for the difficulty of the preparation, but were the more inflamed thereby to have it proceed; and the contrary fell out of that which he before expected. For they approved his counsel, and thought now there would be no danger at all. And every one alike fell in love with the enterprise: the old men, upon hope to subdue the place they went to, or that at least so great a power could not miscarry; and the young men, upon desire to see a foreign country, and to gaze, making little doubt but to return with safety. As for the common sort and the soldiers, they made account to gain by it not only their wages for the time, but also so to amplify the state in power, as that their stipend should endure for ever. So that through the vehement desire thereunto of the most, they also that liked it not, for fear if they held up their hands against it to be thought evil affected to the state, were content to let it pass. 25. And in the end a certain Athenian stood up, and calling upon Nicias, said he ought not to shift off nor delay the business any longer; but to declare there before them all, what forces he would have the Athenians to decree him. To which unwillingly he answered and said, he would consider of it first with his

fellow-commanders. Nevertheless, for so much as he could judge upon the sudden, he said there would need no less than one hundred galleys; whereof for transporting of men of arms, so many of the Athenians' own as they themselves should think meet, and the rest to be sent for to their confederates: and that of men of arms in all, of their own and of their confederates, there would be requisite no less than five thousand; but rather more, if they could be gotten, and other provision proportionable. As for archers, both from hence and from Crete, and slingers, and whatsoever else should seem necessary, they would provide it themselves and take it with them.

26. When the Athenians had heard him, they presently decreed that the generals should have absolute authority, both touching the greatness of the preparation and the whole voyage, to do therein as should seem best unto them for the commonwealth. And after this, they went in hand with the preparation accordingly; and both sent unto the confederates, and enrolled soldiers at home. The city had by this time recovered herself from the sickness and from their continual wars, both in number of men fit for the wars, grown up after the ceasing of the plague, and in store of money gathered together by means of the peace: whereby they made their provisions with much ease. And thus were they employed in preparation for the voyage.

The faces of all the images of Mercury. year xvii. A. C. 415. Ol. 91. 1. throughout Athens pared plain.

27. In the meantime the Mercuries of stone throughout the whole city of Athens, (now there were many of these of square stone set up by the law of the place, and many in the porches of private houses and in the temples), had in one night most of them their faces pared. And no man knew who had done it: and yet great rewards out of the treasury had been propounded to the discoverers; and a decree made, that if any man knew of any other

profanation, he might boldly declare the same, were he citizen, stranger, or bondman. And they took the fact exceedingly to heart, as ominous to the expedition, and done withal upon conspiracy for alteration of the state and dissolution of the democracy.

Alcibiades accused for having in mockery acted the celebration of the mysteries of their religion. year xvii. A. C. 415. Ol. 91. 1. He desires to come to his trial before his going forth: but is not suffered. year xvii. A. C. 415. Ol. 91. 1.

28. Hereupon, certain strangers dwelling in the city, and certain serving-men, revealed something, not about the Mercuries, but of the paring of the statues of some other of the gods, committed formerly through wantonness and too much wine by young men; and withal, how they had in private houses acted the mysteries of their religion in mockery: amongst whom they also accused Alcibiades. This they that most envied Alcibiades, because he stood in the way that they could not constantly bear chief sway with the people, making account to have the primacy if they could thrust him out, took hold of and exceedingly aggravated; exclaiming, that both the mockery of the mysteries and the paring of the Mercuries tended to the deposing of the people, and that nothing therein was done without him; alleging for argument his other excess in the ordinary course of his life, not convenient in a popular estate. 29. He at that present made his apology, and was there ready, if he had done any such thing, to answer it before he went the voyage, (for by this time all their preparation was in readiness), and to suffer justice if he were guilty, and if absolved to resume his charge: protesting against all accusations to be brought against him in his absence, and pressing to be put to death then presently if he had offended; and saying, that it would not be discreetly done, to send away a man accused of so great crimes with the charge of such an army before his trial. But his enemies, fearing lest if he came then to his trial he should have had the

favour of his army, and lest the people, which loved him because the Argives and some of the Mantineans served them in this war only for his sake, should have been mollified, put the matter off and hastened his going out, by setting on other orators to advise, that for the present he should go, and that the setting forward of the fleet should not be retarded, and that at his return he should have a day assigned him for his trial: their purpose being, upon further accusation, which they might easily contrive in his absence, to have him sent for back to make his answer. And thus it was concluded that Alcibiades should go.

The Athenian fleet putteth to sea. The description of the setting forth of the fleet. year xvii. A. C. 415. Ol. 91. 1.

30. After this, the summer being now half spent, they put to sea for Sicily. The greatest part of the confederates, and the ships that carried their corn, and all the lesser vessels, and the rest of the provision that went along, they before appointed to meet [upon a day set] at Corcyra, thence all together to cross over the Ionian gulf to the promontory of Iapygia. But the Athenians themselves, and as many of their confederates as were at Athens, upon the day appointed, betimes in the morning came down into Peiræus and went aboard to take sea. With them came down in a manner the whole multitude of the city, as well inhabitants as strangers: the inhabitants to follow after such as belonged unto them, some their friends, some their kinsmen, and some their children, filled both with hope and lamentations; hope of conquering what they went for, and lamentation, as being in doubt whether ever they should see each other any more, considering what a way they were to go from their own territory: (and now when they were to leave one another to danger, they apprehended the greatness of the same more than they had done before when they decreed the expedition: nevertheless their present strength, by the abundance of everything before their eyes prepared for the journey, gave them heart again in beholding it): but the

strangers and other multitude came only to see the shew, as of a worthy and incredible design.

Year xvii. A. C. 415. Ol. 91. 1. year xvii. A. C. 415. Ol. 91. 1. year xvii. A. C. 415. Ol. 91. 1.

31. For this preparation, being the first Grecian power that ever went out of Greece from one only city, was the most sumptuous and the most glorious of all that ever had been sent forth before it to that day. Nevertheless for number of galleys and men of arms, that which went forth with Pericles to Epidaurus, and that which Agnon carried with him to Potidæa, was not inferior to it. For there went four thousand men of arms, three hundred horse, and one hundred galleys, out of Athens itself; and out of Lesbos and Chios fifty galleys, besides many confederates that accompanied him in the voyage. But they went not far, and were but meanly furnished. Whereas this fleet, as being to stay long abroad, was furnished for both kinds of service, in which of them soever it should have occasion to be employed, both with shipping and land-soldiers. For the shipping, it was elaborate with a great deal of cost, both of the captains of galleys and of the city. For the state allowed a drachma a day to every mariner: the empty galleys which they sent forth, being of nimble ones sixty, and of such as carried their men of arms forty more: and the captains of galleys both put into them the most able servants; and besides the wages of the state, unto the [uppermost bank of oars, called the] Thranitæ, and to the servants, gave somewhat of their own; and bestowed great cost otherwise every one upon his own galley, both in the badges and other rigging, each one striving to the utmost to have his galley, both in some ornament and also in swiftness, to exceed the rest. And for the land forces, they were levied with exceeding great choice, and every man endeavoured to excel his fellow in the bravery of his arms and utensils that belonged to his person. Insomuch as amongst themselves, it begat quarrel about precedence: but amongst other Grecians,

a conceit that it was an ostentation rather of their power and riches, than a preparation against an enemy. For if a man enter into account of the expense, as well of the public, as of private men that went the voyage; namely, of the public, what was spent already in the business, and what was to be given to the commanders to carry with them; and of private men, what every one had bestowed upon his person, and every captain on his galley, besides what every one was likely, over and above his allowance from the state, to bestow on provision for so long a warfare, and what the merchant carried with him for traffic, he will find the whole sum carried out of the city to amount to a great many talents. And the fleet was no less noised amongst those against whom it was to go, for the strange boldness of the attempt and gloriousness of the show, than it was for the excessive report of their number, for the length of the voyage, and for that it was undertaken with so vast future hopes in respect of their present power.

32. After they were all aboard, and all things laid in that they meant to carry with them, silence was commanded by the trumpet; and after the wine had been carried about to the whole army, and all, as well the generals as the soldiers, had drunk a health to the voyage, they made their prayers, such as by the law were appointed for before their taking sea, not in every galley apart, but all together, the herald pronouncing them. And the company from the shore, both of the city and whosoever else wished them well, prayed with them. And when they had sung the Pæan and ended the health, they put forth to sea: and having at first gone out in a long file, galley after galley, they after went a vie by Ægina. Thus hasted these to be at Corcyræ: to which place also the other army of the confederates were assembling.

Year xvii. A. C. 415. Ol. 91. 1. The Syracusians, upon the fame of their coming, do some believe it, and some not.

At Syracuse they had advertisement of the voyage from divers places: nevertheless it was long ere anything would be believed. Nay, an assembly

being there called, orations were made such as follow on both parts: as well by them that believed the report touching the Athenian army to be true, as by others that affirmed the contrary. And Hermocrates the son of Hermon, as one that thought he knew the certainty, stood forth and spake to this effect:

the oration of hermocrates. year xvii. A. C. 415. Ol. 91. 1. Oration of Hermocrates.

33. “Concerning the truth of this invasion, though perhaps I shall be thought, as well as other men, to deliver a thing incredible; and though I know, that such as be either the authors or relaters of matter incredible, shall not only not persuade, but be also accounted fools: nevertheless, I will not for fear thereof hold my tongue, as long as the commonwealth is in danger; being confident that I know the truth hereof somewhat more certainly than others do. The Athenians are bent to come even against us, (which you verily wonder at), and that with great forces both for the sea and land: with pretence indeed to aid their confederates the Egestæans and replant the Leontines; but in truth they aspire to the dominion of all Sicily, and especially of this city of ours; which obtained, they make account to get the rest with ease. Seeing then they will presently be upon us, advise with your present means, how you may with most honour make head against them; that you may not be taken unprovided through contempt, nor be careless through incredulity; and that such as believe it, may not be dismayed with their audaciousness and power. For they are not more able to do hurt unto us, than we be unto them. Neither indeed is the greatness of their fleet without some advantage unto us: nay, it will be much the better for us, in respect of the rest of the Sicilians. For being terrified by them, they will the rather league with us. And if we either vanquish, or repulse them without obtaining what they came for, (for I fear not at all the effecting of their purpose); verily it will be a great honour to us, and in my opinion not

unlikely to come to pass. For in truth there have been few great fleets, whether of Grecians or barbarians, sent far from home, that have not prospered ill. Neither are these that come against us, more in number than ourselves and the neighbouring cities: for surely we shall all hold together upon fear. And if for want of necessities in a strange territory they chance to miscarry, the honour of it will be left to us against whom they bend their councils, though the greatest cause of their overthrow should consist in their own errors. Which was also the case of these very Athenians, who raised themselves by the misfortune of the Medes; (though it happened for the most part contrary to reason); because in name they went only against the Athenians. And that the same shall now happen unto us, is not without probability.

Year xvii. A. C. 415. Ol. 91. 1. Oration of Hermocrates. year xvii. A. C. 415. Ol. 91. 1. Oration of Hermocrates. year xvii. A. C. 415. Ol. 91. 1. Oration of Hermocrates.

34. "Let us therefore with courage put in readiness our own forces; let us send to the Siculi, to confirm those we have, and to make peace and league with others; and let us send ambassadors to the rest of Sicily, to show them that it is a common danger; and into Italy, to get them into our league, or at least that they receive not the Athenians. And in my judgment it were our best course to send also to Carthage: for even they are not without expectation of the same danger. Nay, they are in a continual fear that the Athenians will bring war upon them also, even to their city. So that upon apprehension that if they neglect us the trouble will come home to their own door, they will perhaps, either secretly or openly, or some way assist us. And of all that now are, they are the best able to do it, if they please. For they have the most gold and silver: by which the wars and all things else are the best expedited. Let us also send to Lacedæmon and to Corinth, praying them not only to send their succours hither with speed, but also to set on

foot the war there. But that which I think the best course of all, though through an habit of sitting still you will hardly be brought to it, I will nevertheless now tell you what it is. If the Sicilians all together, or if not all yet if we and most of the rest, should draw together our whole navy, and with two months' provision go and meet the Athenians at Tarentum and the promontory of Iapygia; and let them see, that they must fight for their passage over the Ionian gulf before they fight for Sicily: it would both terrify them the most, and also put them into a consideration, that we, as the watchmen of our country, come upon them out of an amicable territory, (for we shall be received at Tarentum), whereas they themselves have a great deal of sea to pass with all their preparations, and cannot keep themselves in their order for the length of the voyage: and that for us, it will be an easy matter to assail them, coming up slowly as they do and thin. Again, if lightening their galleys, they shall come up to us more nimbly and more close together, we shall charge upon them already wearied, or we may, if we please, retire again into Tarentum. Whereas they, if they come over but with a part of their provisions, as to fight at sea, shall be driven into want of victuals in those desert parts; and either staying be there besieged, or, attempting to go by, leave behind them the rest of their provision, and be dejected, as not assured of the cities whether they will receive them or not. I am therefore of opinion, that dismayed with this reckoning they will either not put over at all from Corcyra, or whilst they spend time in deliberating, and in sending out to explore how many and in what place we are, the season will be lost and winter come; or deterred with our unlooked-for opposition, they will give over the voyage. And the rather, for that as I hear the man of most experience amongst their commanders hath the charge against his will; and would take a light occasion to return, if he saw any considerable stop made by us in the way. And I am very sure, we should be voiced amongst them to the utmost. And as the reports are, so are men's

minds; and they fear more such as they hear will begin with them, than such as give out that they will no more but defend themselves: because then they think the danger equal. Which would be now the case of the Athenians. For they come against us with an opinion that we will not fight: deservedly contemning us, because we joined not with the Lacedæmonians to pull them down. But if they should see us once bolder than they looked for, they would be terrified more with the unexpectedness than with the truth of our power itself. Be persuaded therefore, principally to dare to do this; or if not this, yet speedily to make yourselves otherwise ready for the war; and every man to remember, that though to show contempt of the enemy be best in the heat of fight, yet those preparations are the surest, that are made with fear and opinion of danger. As for the Athenians, they come; and I am sure are already in the way, and want only that they are not now here.”

Year xvii. A. C. 415. Ol. 91. 1.

35. Thus spake Hermocrates. But the people of Syracuse were at much strife amongst themselves: some contending, that the Athenians would by no means come, and that the reports were not true; and others, that if they came they would do no more harm than they were likely again to receive. Some contemned and laughed at the matter: but some few there were that believed Hermocrates, and feared the event. But Athenagoras, who was chief magistrate of the people, and at that time most powerful with the commons, spake as followeth:

the oration of athenagoras. year xvii. A. C. 415. Ol. 91. 1. Oration of Athenagoras. year xvii. A. C. 415. Ol. 91. 1. Oration of Athenagoras. year xvii. A. C. 415. Ol. 91. 1. Oration of Athenagoras.

36. “He is either a coward or not well affected to the state, whosoever he be, that wishes the Athenians not to be so mad as coming hither to fall into our power. As for them that report such things as these and put you into

fear, though I wonder not at their boldness, yet I wonder at their folly, if they think their ends not seen. For they that are afraid of anything themselves, will put the city into affright, that they may shadow their own with the common fear. And this may the reports do at this time, not raised by chance, but framed on purpose by such as always trouble the state. But if you mean to deliberate wisely, make not your reckoning by the reports of these men, but by that which wise men and men of great experience, such as I hold the Athenians to be, are likely to do. For it is not probable, that leaving the Peloponnesians and the war there not yet surely ended, they should willingly come hither to a new war no less than the former: seeing, in my opinion, they may be glad that we invade not them, so many and so great cities as we are. 37. And if indeed they come, as these men say they will: I think Sicily more sufficient to dispatch the war than Peloponnesus, as being in all respects better furnished; and that this our own city is much stronger than the army which they say is now coming, though it were twice as great as it is. For I know they neither bring horses with them nor can they get any here, save only a few from the Egestæans, nor have men of arms so many as we, in that they are to bring them by sea. For it is a hard matter to come so far as this by sea, though they carried no men of arms in their galleys at all, if they carry with them all other their necessities; which cannot be small against so great a city. So that I am so far from the opinion of these others, that I think the Athenians, though they had here another city as great as Syracuse, and confining on it, and should from thence make their war, yet should not be able to escape from being destroyed, every man of them; much less now, when all Sicily is their enemy. For in their camp, fenced with their galleys, they shall be cooped up, and from their tents, and forced munition, never be able to stir far abroad without being cut off by our horsemen. In short, I think they shall never be able to get landing: so much above theirs do I value our own forces.

38. “But these things, as I said before, the Athenians considering, I am very sure will look unto their own; and our men talk here of things that neither are, or ever will be: who I know have desired, not only now but ever, by such reports as these or by worse, or by their actions, to put the multitude in fear, that they themselves might rule the state. And I am afraid, lest attempting it often, they may one day effect it: and for us, we are too poor-spirited either to foresee it ere it be done, or foreseeing to prevent it. By this means our city is seldom quiet, but subject to sedition and contention, not so much against the enemy as within itself; and sometimes also to tyranny and usurpation. Which I will endeavour (if you will second me) so to prevent hereafter, as nothing more of this kind shall befall you: which must be done, first by gaining you the multitude, and then by punishing the authors of these plots, not only when I find them in the action, (for it will be hard to take them so), but also for those things which they would and cannot do. For one must not only take revenge upon an enemy for what he hath already done, but strike him first for his evil purpose; for if a man strike not first, he shall first be stricken. And as for the few, I shall in somewhat reprove them, in somewhat have an eye to them, and in somewhat advise them. For this, I think, will be the best course to avert them from their bad intentions. Tell me forsooth, (I have asked this question often), you that are the younger sort, What would you have? Would you now bear office? The law allows it not: and the law was made because ye are not [now] sufficient for government, not to disgrace you when you shall be sufficient. But forsooth, you would not be ranked with the multitude! But what justice is it, that the same men should not have the same privileges?

39. Some will say, that the democracy is neither a well-governed nor a just state: and that the most wealthy are aptest to make the best government. But I answer first, democracy is a name of the whole; oligarchy, but of a part.

Next, though the rich are indeed fittest to keep the treasure: yet the wise are the best counsellors, and the multitude upon hearing the best judge. Now in a democracy all these, both jointly and severally, participate equal privileges. But in the oligarchy, they allow indeed to the multitude a participation of all dangers: but in matters of profit, they not only encroach upon the multitude, but take from them and keep the whole. Which is the thing that you the rich and the younger sort affect: but in a great city cannot possibly embrace. But yet, O ye the most unwise of all men, unless you know that what you affect is evil, and if you know not that, you are the most ignorant of all the Grecians I know; or, ye most wicked of all men, if knowing it you dare do this: 40. yet I say, inform yourselves better, or change your purpose and help to amplify the common good of the city, making account that the good amongst you shall not only have an equal, but a greater share therein than the rest of the multitude; whereas if you will needs have all, you shall run the hazard of losing all. Away therefore with these rumours, as discovered and not allowed. For this city, though the Athenians come, will be able to defend itself with honour. And we have generals to look to that matter. And if they come not, (which I rather believe), it will not, upon the terror of your reports, make choice of you for commanders, and cast itself into voluntary servitude: but taking direction of itself, it both judgeth your words virtually as facts, and will not upon words let go her present liberty, but endeavour to preserve it by not committing the same actually to your discretion.”

41. Thus said Athenagoras. Then one of their generals rising up, forbade any other to stand forth, and spake himself to the matter in hand to this effect:

“It is no wisdom, neither for the speakers to utter such calumnies one against another, nor for the hearers to receive them. We should rather consider, in respect of these reports, how we may in the best manner, both every one in particular and the city in general, be prepared to resist them when they come. And if there be no need, yet to furnish the city with horses and arms and other habiliments of war, can do us no hurt. As for the care hereof and the musters, we will look to it: and will send men abroad both to the cities and for spials: and do whatsoever else is requisite. Somewhat we have done already: and what more we shall hereafter find meet, we will from time to time report unto you.”

Which when the general had said, the Syracusians dissolved the assembly.

The Athenians put out from Corcyra. year xvii. A. C. 415. Ol. 91. 1. The quantity of the army. year xvii. A. C. 415. Ol. 91. 1.

42. The Athenians were now all in Corcyra, both they and their confederates. And first the generals took a view of the whole army, and put them into the order wherein they were to anchor and make their naval camp: and having divided them into three squadrons, to each squadron they assigned a captain by lot, to the end that being at sea they might not come into want of water, or harbours, or any other necessities, where they chanced to stay; and that they might otherwise be the more easy to be governed, when every squadron had his proper commander. After this they sent before them three galleys into Italy and Sicily, to bring them word what cities in those parts would receive them: whom they appointed to come back and meet them, that they might know whether they might be received or not before they put in. 43. This done, the Athenians with all their provisions put out from Corcyra towards Sicily; having with them in all one hundred and thirty-four galleys, and two Rhodian long-boats of fifty oars a-piece. Of these, a hundred were of Athens itself: whereof sixty were

expedite, the other forty for transportation of soldiers: the rest of the navy belonged to the Chians and other the confederates. Of men of arms, they had in all five thousand one hundred. Of these, there were of the Athenians themselves fifteen hundred enrolled, and seven hundred more [of the poorer sort, called] Thetes, hired for defence of the galleys. The rest were of their confederates, some of them being their subjects: of Argives there were five hundred: of Mantineans and mercenaries, two hundred and fifty. Their archers in all, four hundred and eighty: of which eighty were Cretans. Rhodian slingers they had seven hundred. Of light-armed Megarean fugitives, one hundred and twenty: and in one vessel made for transportation of horses, thirty horsemen.

Year xvii. A. C. 415. Ol. 91. 1.

44. These were the forces that went over to the war at first. With these went also thirty ships carrying necessities, wherein went also the bakers, and masons, and carpenters, and all tools of use in fortification: and with these thirty ships went one hundred boats by constraint; and many other ships and boats that voluntarily followed the army for trade: which then passed all together from Corcyra over the Ionian gulf. And the whole fleet being come to the promontory of Iapygia and to Tarentum, and such other places as every one could recover, they went on by the coast of Italy, neither received of the states there into any city nor allowed any market, having only the liberty of anchorage and water, (and that also at Tarentum and Locri denied them), till they were at Rhegium, where they all came together again, and settled their camp in the temple of Diana (for neither there were they suffered to come in) without the city, where the Rhegians allowed them a market. And when they had drawn their galleys to land, they lay still. Being here, they dealt with the Rhegians, who were Chalcideans, to aid the Leontines, Chalcideans likewise. To which was answered, that they would

take part with neither; but what the rest of the Italians should conclude, that also they would do. So the Athenians lay still, meditating on their Sicilian business, how they might carry it the best; and withal expected the return from Egesta of the three galleys which they had sent before them, desiring to know if so much money were there or not, as was reported by their messengers at Athens.

The Syracusians certainly knowing of their coming, prepare for their defence.

45. The Syracusians in the meantime from divers parts, and also from their spies, had certain intelligence that the fleet was now at Rhegium: and therefore made their preparations with all diligence, and were no longer incredulous; but sent unto the Siculi, to some cities men to keep them from revolting; to others, ambassadors; and into such places as lay upon the sea, garrisons: and examined the forces of their own city by a view taken of the arms and horse, whether they were complete or not; and ordered all things as for a war at hand, and only not already present.

Year xvii. A. C. 415. Ol. 91. 1. The hope of the Athenians of money from Egesta frustrated. The fraud of the Egestæans. year xvii.

A. C. 415. Ol. 91. 1. The several opinions of the generals, touching how to proceed.

46. The three galleys sent before to Egesta returned to the Athenians at Rhegium; and brought word, that for the rest of the money promised there was none, only there appeared thirty talents. At this the generals were presently discouraged; both because this first hope was crossed; and because also the Rhegians, whom they had already begun to persuade to their league, and whom it was most likely they should have won, as being of kin to the Leontines and always heretofore favourable to the Athenian state, now refused. And though to Nicias this news from the Egestæans was no more than he expected, yet to the other two it was extreme strange. But the Egestæans, when the first ambassadors from Athens went to see their

treasure, had thus deceived them. They brought them into the temple of Venus in Eryx, and showed them the holy treasure, goblets, flagons, censers, and other furniture, in no small quantity; which being but silver, appeared to the eye a great deal above their true value in money. Then they feasted such as came with them, in their private houses; and at those feastings exhibited all the gold and silver vessels they could get together, either in the city of Egesta itself, or could borrow in other as well Phœnician as Grecian cities, for their own. So all of them in a manner making use of the same plate, and much appearing in every of those houses, it put those which came with the ambassadors into a very great admiration: insomuch as at their return to Athens, they strove who should first proclaim what wealth they had seen. These men, having both been abused themselves and having abused others, when it was told that there was no such wealth in Egesta, were much taxed by the soldiers. But the generals went to counsel upon the business in hand.

The opinion of Nicias.

47. Nicias was of this opinion: that it was best to go presently with the whole fleet to Selinus, against which they were chiefly set forth; and if the Egestæans would furnish them with money for the whole army, then to deliberate further upon the occasion; if not, then to require maintenance for the sixty galleys set forth at their own request, and staying with them by force or composition to bring the Selinuntians and them to a peace: and thence passing along by other of those cities, to make a show of the power of the Athenian state, and of their readiness to help their friends and confederates; and so to go home, unless they could light on some quick and unthought-of means to do some good for the Leontines, or gain some of the other cities to their own league: and not to put the commonwealth in danger at her own charges.

The opinion of Alcibiades. year xvii. A. C. 415. Ol. 91. 1.

48. Alcibiades said, it would not do well to have come out from Athens with so great a power, and then dishonourably without effect to go home again: but rather to send heralds to every city but Selinus and Syracuse, and assay to make the Siculi revolt from the Syracusians, and others to enter league with the Athenians, that they might aid them with men and victual: and first to deal with the Messanians, as being seated in the passage, and most opportune place of all Sicily for coming in, and having a port and harbour sufficient for their fleet: and when they had gained those cities, and knew what help they were to have in the war, then to take in hand Syracuse and Selinus, unless these would agree with the Egestæans and the other suffer the Leontines to be replanted.

The opinion of Lamachus. year xvii. A. C. 415. Ol. 91. 1.

49. But Lamachus was of opinion, that it was best to go directly to Syracuse, and to fight with them as soon as they could at their city, whilst they were yet unfurnished and their fear at the greatest. For that an army is always most terrible at first: but if it stay long ere it come in sight, men recollect their spirits, and contemn it the more when they see it. Whereas if it come upon them suddenly while they expect it with fear, it would the more easily get the victory, and everything would affright them; as the sight of it (for then they would appear most for number) and the expectation of their sufferings, but especially the danger of a present battle. And that it was likely that many men might be cut off in the villages without, as not believing they would come; and though they should be already gotten in, yet the army, being master of the field and sitting down before the city, could want no money: and the other Sicilians would then neglect leaguings with the Syracusians, and join with the Athenians, no longer standing off and spying who should have the better. And for a place to retire unto and anchor in, he thought Megara most fit: being desert, and not far from Syracuse neither by sea nor land.

Alcibiades seeketh league with the Messanians, but is denied. The Athenians go with part of their fleet to Naxos: and to Catana. They send ten galleys to view Syracuse and the havens. year xvii. A. C. 415. Ol. 91. 1.

50. Lamachus said this: but came afterwards to the opinion of Alcibiades. After this, Alcibiades with his own galley having passed over to Messana, and propounded to them a league and not prevailed, they answering that they would not let the army in but allow them only a market without the walls, returned back to Rhegium. And presently the generals having out of the whole fleet manned threescore galleys, and taken provision aboard, went along the shore to Naxos, having left the rest of the army with one of the generals at Rhegium. The Naxians having received them into the city, they went on by the coast to Catana. But the Catanæans receiving them not, (for there were some within that favoured the Syracusians), they entered the river of Terias; and having stayed there all that night, went the next day towards Syracuse leisurely with the rest of their galleys; but ten they sent before into the great haven, [not to stay, but] to discover if they had launched any fleet there, and to proclaim from their galleys, that the Athenians were come to replant the Leontines on their own, according to league and affinity, and that therefore such of the Leontines as were in Syracuse, should without fear go forth to the Athenians as to their friends and benefactors. And when they had thus proclaimed, and well considered the city, and the havens, and the region where they were to seat themselves for the war, they returned to Catana.

Catana surprised.

51. An assembly being called at Catana, though they refused to receive the army they admitted the generals, and willed them to speak their minds. And whilst Alcibiades was in his oration and the citizens at the assembly, the soldiers having secretly pulled down a little gate which was but weakly built, entered the city, and were walking up and down in the market. And

the Catanæans, such as favoured the Syracusians, seeing the army within, for fear stole presently out of the town, being not many. The rest concluded the league with the Athenians, and willed them to fetch in the rest of the army from Rhegium. After this, the Athenians went back to Rhegium: and rising from thence, came to Catana with their whole army together.

The Athenians go to Camarina, but are not received. year xvii. A. C. 415. Ol. 91. 1.

52. Now they had news from Camarina, that if they would come thither, the Camarinæans would join with them; and that the Syracusians were manning their navy. Whereupon with the whole army they went along the coast, first to Syracuse; where not finding any navy manned, they went on to Camarina. And being come close up to the shore, they sent a herald unto them. But the Camarinæans would not receive the army; alleging that they had taken an oath, not to receive the Athenians with more than one galley, unless they should have sent for more of their own accord. Having lost their labour, they departed; and landed in a part of the territory of Syracuse, and had gotten some booty. But the Syracusian horsemen coming out, and killing some stragglers of the light-armed, they returned again to Catana.

Alcibiades called home to answer about the Mercuries. year xvii. A. C. 415. Ol. 91. 1. A. C. 510. Ol. 67. 2.

53. Here they find the galley called Salaminia, come thither from Athens, both for Alcibiades, who was commanded to come home to purge himself of such things as were laid to his charge by the state, and also for other soldiers that were with him, whereof some were accused for profanation of the mysteries, and some also for the Mercuries. For the Athenians, after the fleet was put to sea, proceeded nevertheless in the search of those that were culpable, both concerning the mysteries and the Mercuries. And making no inquiry into the persons of the informers, but through jealousy admitting of all sorts, upon the reports of evil men

apprehended very good citizens and cast them into prison: choosing rather to examine the fact and find the truth by torments, than that any man, how good soever in estimation, being once accused should escape unquestioned. For the people, having by fame understood that the tyranny of Peisistratus and his sons was heavy in the latter end; and withal, that neither themselves nor Harmodius, but the Lacedæmonians overthrew it: were ever fearful, and apprehended every thing suspiciously.

Digression touching the deposing of the tyranny of Peisistratus and his sons. A. C. 514. Ol. 66. 3. A. C. 514. Ol. 66. 3.

54. For the fact of Aristogeiton and Harmodius was undertaken upon an accident of love: which unfolding at large, I shall make appear that neither any other, nor the Athenians themselves, report any certainty either of their own tyrants or of the fact. For the old Peisistratus dying in the tyranny, not Hipparchus, as the most think, but Hippias, who was his eldest son, succeeded in the government. Now Harmodius, a man in the flower of his youth, of great beauty, was in the power of one Aristogeiton, a citizen of a middle condition that was his lover. This Harmodius having been solicited by Hipparchus the son of Peisistratus, and not yielding, discovered the same unto Aristogeiton. He apprehending it (as lovers use) with a great deal of anguish, and fearing the power of Hipparchus, lest he should take him away by force, fell presently, as much as his condition would permit, to contriving how to pull down the tyranny. In the meantime Hipparchus, having again attempted Harmodius and not prevailed, intended, though not to offer him violence, yet in secret, as if forsooth he did it not for that cause, to do him some disgrace. For neither was the government otherwise heavy till then, but carried without their evil will. And to say the truth, these tyrants held virtue and wisdom in great account for a long time, and taking of the Athenians but a twentieth part of their revenues, adorned the city, managed their wars, and administered their religion worthily. In other points

they were governed by the laws formerly established, save that these took a care ever to prefer to the magistracy men of their own adherence. And amongst many that had the annual office of archon, Peisistratus also had it, the son of Hippias, of the same name with his grandfather; who also, when he was archon, dedicated the altar of the twelve gods in the market-place, and that other in the temple of Apollo Pythius. And though the people of Athens, amplifying afterwards that altar which was in the market-place, thereby defaced the inscription: yet that upon the altar that is in the temple of Apollo Pythius, is to be seen still, though in letters somewhat obscure, in these words:

Peisistratus the son of Hippias
Erected this to stand
I'th' Temple of Apollo Pythius,
Witness of his command.
C. 514. Ol. 66. 3.

55. And that Hippias, being the elder brother, had the government, I can affirm, as knowing it by a more exact relation than other men: and it may be known also by this. It appears that of all the legitimate brethren, this only had children: as is both signified by the altar, and also by that pillar, which for a testimony of the injustice of the tyrants was erected in the Athenian citadel. In which there is no mention of any son of Thessalus or of Hipparchus, but of five sons of Hippias, which he had by Myrrhine, the daughter of Callias the son of Hyperechidas: for it is probable that the eldest was first married. And in the forepart of the pillar, his name after his father's was the first: not without reason, as being both next him in age, and having also enjoyed the tyranny. Nor indeed could Hippias have easily taken on him the government on a sudden, if his brother had died seised of the tyranny, and he been the same day to settle it on himself. Whereas he retained the same with abundant security, both for the customary fear in the

people and diligence in the guard; and was not to seek like a younger brother, to whom the government had not continually been familiar. But Hipparchus came to be named for his misfortune, and thereby grew an opinion afterwards that he was also tyrant.

C. 514. Ol. 66. 3.

56. This Harmodius therefore that denied his suit, he disgraced as he before intended. For when some had warned a sister of his, a virgin, to be present to carry a little basket in a procession, they rejected her again when she came: and said that they had never warned her at all, as holding her unworthy the honour. This was taken heavily by Harmodius; but Aristogeiton, for his sake, was far more exasperated than he. Whereupon, with the rest of the conspirators, he made all things ready for the execution of the design. Only they were to stay the time of the holiday called the Great Panathenæa, upon which day only such citizens as lead the procession might, without suspicion, be armed in good number. And they were to begin the fact themselves; but the rest were to help them against the halberdiers. Now the conspirators, for their better security, were not many; for they hoped that such also as were not privy to it, if they saw it once undertaken, being upon this occasion armed, would assist in the recovery of their own liberty.

C. 514. Ol. 66. 3.

57. When this holiday was come, Hippias was gone out of the city into the place called Cerameicum with his guard of halberdiers, and was ordering the procession how it was to go. And Harmodius and Aristogeiton, with each of them a dagger, proceeded to the fact. But when they saw one of the conspirators familiarly talking with Hippias, (for Hippias was very affable to all men), they were afraid, and believed that they were discovered and must presently have been apprehended. They resolved therefore (if it were possible) to be revenged first upon him that had done them the wrong,

and for whose sake they had undergone all this danger; and, furnished as they were, ran [furiously] into the city, and finding Hipparchus at a place called Leocorium, without all regard of themselves fell upon him, and with all the anger in the world, one upon jealousy, the other upon disgrace, struck and slew him. Aristogeiton, for the present, by means of the great confluence of people, escaped through the guard; but taken afterwards, was ungently handled; but Harmodius was slain upon the place. 58. The news being brought to Hippias in the Cerameicum, he went not towards the place where the fact was committed, but presently unto those that were armed for the solemnity of the shows and were far off, that he might be with them before they heard of it: and composing his countenance [as well as he could] to dissemble the calamity, pointed to a certain place, and commanded them to repair thither without their arms. Which they did accordingly, expecting that he would have told them somewhat. But having commanded his guard to take those arms away, he then fell presently to picking out of such as he meant to question, and whosoever else was found amongst them with a dagger. For with shields and spears to be in [the head of] the procession, was of custom.

C. 514–10.

59. Thus was the enterprise first undertaken upon quarrel of love, and then upon a sudden fear followed this unadvised adventure of Harmodius and Aristogeiton. And after this time the tyranny grew sorer to the Athenians than it had been before. And Hippias standing more in fear, not only put many of the citizens to death, but also cast his eye on the states abroad, to see if he might get any security from them in this alteration at home. He therefore afterwards (though an Athenian and to a Lampsacen) gave his daughter Archedice unto Æantidas the son of Hippocles, tyrant of Lampsacus; knowing that the Lampsacens were in great favour with King Darius. And her sepulchre is yet to be seen with this inscription:

Archedice, the daughter of King Hippias,
Who in his time
Of all the potentates of Greece was prime,
This dust doth hide.
Daughter, wife, sister, mother unto kings she was,
Yet free from pride.

C. 510. A. C. 490. Ol. 72. 2.

And Hippias, after he had reigned three years more in Athens, and was in the fourth deposed by the Lacedæmonians and the exiled Alcmaeonides, went under truce to Sigeium, and to Æantidas at Lampsacus, and thence to King Darius: from whence, twenty years after in his old age, he came to Marathon with the Medan army.

C. 415. Ol. 91. 1. The jealousy and passionate fury of the people in inquiry after the authors of the offences touching the mysteries and Mercuries. year xvii. A. C. 415. Ol. 91. 1. One of the prisoners is persuaded by a fellow-prisoner to appeach some man, whether true or not true: and doth so. Divers men accused of the paring of the Mercuries. year xvii. A. C. 415. Ol. 91. 1.

60. The people of Athens bearing this in mind, and remembering all they had heard concerning them, were extremely bitter and full of jealousy towards those that had been accused of the mysteries: and thought all to have been done upon some oligarchical or tyrannical conspiracy. And whilst they were passionate upon this surmise, many worthy men had already been cast in prison: and yet they were not likely so to give over, but grew daily more savage, and sought to apprehend more still. Whilst they were at this pass, a prisoner that seemed most to be guilty, was persuaded by one of his fellow prisoners to accuse somebody, whether it were true or not true: (for it is but conjectural on both sides; nor was there ever, then or after, any man that could say certainly who it was that did the deed): who

brought him to it by telling him, that though he had not done it, yet he might be sure to save his own life, and should deliver the city from the present suspicion: and that he should be more certain of his own safety by a free confession than by coming to his trial if he denied it. Hereupon, he accused both himself and others for the Mercuries. The people of Athens, gladly receiving the certainty (as they thought) of the fact, and having been much vexed before to think that the conspirators should never [perhaps] be discovered to their multitude, presently set at liberty the accuser, and the rest with him whom he had not appeached: but for those that were accused, they appointed judges, and all they apprehended they executed: and having condemned to die such as fled, they ordained a sum of money to be given to those that should slay them. And though it were all this while uncertain whether they suffered justly or unjustly, yet the rest of the city had a manifest ease for the present.

Presumptions against Alcibiades. Alcibiades sent for home. year xvii. A. C. 415. Ol. 91. 1. 2. Alcibiades flieth. year xvii. A. C. 415. Ol. 91. 1. 2.

61. But touching Alcibiades, the Athenians took it extreme ill through the instigation of his enemies, the same that had opposed him before he went. And seeing it was certain, as they thought, for the Mercuries; the other crime also concerning the mysteries, whereof he had been accused, seemed a great deal the more to have been committed by him upon the same reason and conspiracy against the people. For it fell out withal, whilst the city was in a tumult about this, that an army of the Lacedæmonians was come as far as the isthmus upon some design against the Bœotians. These therefore they thought were come thither, not against the Bœotians, but by appointment of him; and that if they had not first apprehended the persons appeached, the city had been betrayed. And one night they watched all night long in their arms in the temple of Theseus within the city. And the friends of Alcibiades in Argos were at the same time suspected of a purpose to set

upon the people there: whereupon the Athenians also delivered unto the Argive people those hostages which they held of theirs in the islands, to be slain. And there were presumptions against Alcibiades on all sides. Insomuch, as purposing by law to put him to death, they sent, as I have said, the galley called Salaminia into Sicily, both for him, and the rest with him that had been accused: but gave command to those that went, not to apprehend him, but to bid him follow them to make his purgation; because they had a care not to give occasion of stir either amongst their own or their enemy's soldiers; but especially, because they desired that the Mantineans and the Argives, who they thought followed the war by his persuasion, might not depart from the army. So he and the rest accused with him in his own galley, in company of the Salaminia, left Sicily and set sail for Athens. But being at Thurii they followed no further, but left the galley and were no more to be found: fearing indeed to appear to the accusation. They of the Salaminia made search for Alcibiades and those that were with him, for a while: but not finding him, followed on their course for Athens. Alcibiades, now an outlaw, passed shortly after in a small boat from Thurii into Peloponnesus; and the Athenians proceeding to judgment upon his not appearing, condemned both him and them to death.

The Athenian generals in Sicily go to Selinus and Egesta. They take Hyccara. year xvii. A. C. 415. Ol. 91. 1. 2. The end of the seventeenth summer.

62. After this, the Athenian generals that remained in Sicily, having divided the army into two, and taken each his part by lot, went with the whole towards Selinus and Egesta: with intention, both to see if the Egestæans would pay them the money, and withal to get knowledge of the designs of the Selinuntians and learn the state of their controversy with the Egestæans. And sailing by the coast of Sicily, having it on their left hand, on that side which lieth to the Tyrrhene gulf, they came to Himera, the only

Grecian city in that part of Sicily: which not receiving them, they went on, and by the way took Hyccara, a little town of the Sicanians enemy to the Egestæans, and a sea-town; and having made the inhabitants slaves, delivered the town to the Egestæans, whose horseforces were there with them. Thence the Athenians with their landsmen returned through the territory of the Siculi to Catana; and the galleys went about with the captives. Nicias going with the fleet presently from Hyccara to Egesta, when he had dispatched with them his other business, and received thirty talents of money, returned to the army. The captives they ransomed; of which they made one hundred and twenty talents more. Then they sailed about to their confederates of the Siculi, appointing them to send their forces: and with the half of their own they came before Hybla in the territory of Gela, an enemy city, but took it not. And so ended this summer.

C. 415. Ol. 91. 2. The Syracusians condemn the Athenians.

63. The next winter the Athenians fell presently to make preparation for their journey against Syracuse: and the Syracusians, on the other side, prepared to invade the Athenians. For seeing the Athenians had not presently, upon the first fear and expectation of their coming, fallen upon them, they got every day more and more heart. And because they went far from them into those other parts of Sicily, and assaulting Hybla could not take it, they contemned them more than ever: and prayed their commanders, (as is the manner of the multitude, when they be in courage), seeing that the Athenians came not unto them, to conduct them to Catana. And the Syracusian horsemen, which were ever abroad for scouts, spurring up to the camp of the Athenians, amongst other scorns asked them, whether they came not rather to dwell in the land of another than to restore the Leontines to their own.

64. The Athenian generals having observed this, and being desirous to draw forth the Syracusians' whole power as far as might be from the city, to be able in the meantime without impeachment, going thither in the night by sea, to seize on some convenient place to encamp in; for they knew they should not be able to do it so well in the face of an enemy prepared, nor if they were known to march by land, for that the Syracusian horsemen being many would greatly annoy the light-armed and other multitude, they themselves having no horsemen there: whereas thus they might possess themselves of a place, where the horse could not do them any hurt at all to speak of, (now the Syracusian outlaws that were with them, had told them of a place near the temple Olympieium, which also they seized): I say, the Athenian generals, to bring this their purpose to effect, contrived the matter thus. They send a man, of whose fidelity they were well assured, and in the opinion of the Syracusian commanders no less a friend of theirs. This man was a Catanæan, and said he came from Catana, from such and such, whose names they knew, and knew to be the remnant of their well-willers in that city. He told them that the Athenians lay every night within the town, and far from their arms; and that if with the whole power of their city, at a day appointed betimes in a morning they would come to their camp, those friends of the Syracusians would shut the Athenians in and set on fire their galleys; by which means, the Syracusians assaulting the pallisado, might easily win the camp: and that the Catanæans that were to help them herein were many, and those he came from already prepared for it.

Year xvii. A. C. 415. Ol. 91. 2. The Athenians land, pitch their camp, and entrench themselves, ere the Syracusians return. year

xvii. A. C. 415. Ol. 91. 2. The Syracusian army cometh back.

65. The Syracusian commanders, having been also otherwise encouraged, and having intended a preparation to go against Catana though this messenger had not come, did so much the more unadvisedly believe the

man; and straightways being agreed of the day on which they were to be there, sent him away. These commanders (for by this time the Selinuntians and some other their confederates were come in) appointed the Syracusians universally to set forwards by a day. And when all their necessities were in readiness, and the day at hand on which they were to be there, they set forwards towards Catana, and encamped the night following upon the banks of the river Simæthus in the territory of the Leontines. The Athenians upon advertisement that they were set forth, rising with their whole army, both themselves and such of the Siculi and others as went with them, and going aboard their galleys and boats in the beginning of the night set sail for Syracuse. In the morning betimes the Athenians disembarked over against Olympieium, to make their camp. And the Syracusian horsemen, who were at Catana before the rest, finding the camp risen, came back to the foot and told them: whereupon they went all together back to the aid of the city. 66. In the meantime, the way the Syracusians had to go being long, the Athenians had pitched their camp at leisure in a place of advantage: wherein it was in their own power to begin battle when they list, and where both in and before the battle the Syracusian horsemen could least annoy them. For on one side there were walls, and houses, and trees, and a lake that kept them off; on the other side steep rocks: and having felled trees hard by and brought them to the sea-side, they made a pallisado both before their galleys and towards Dascon. And on that part that was most accessible to the enemy, they made a fort with stone, (the best they could find, but unwrought), and with wood; and withal pulled down the bridge of the river Anapus. Whilst this was doing, there came none to impeach them from the city. The first that came against them were the Syracusian horsemen; and by and by after, all the foot together. And though at first they came up near unto the camp of the Athenians, yet after, seeing the Athenians came not out

against them, they retired again; and crossing to the other side of the Helorine highway, stayed there that night.

The Athenians and Syracusians prepare to fight. year xvii. A. C. 415. Ol. 91. 2.

67. The next day the Athenians and their confederates prepared to fight, and were ordered thus. The Argives and the Mantineans had the right wing, the Athenians were in the middle, and the rest of their confederates in the other wing. That half of the army which stood foremost, was ordered by eight in file: the other half towards their tents, ordered likewise by eights, was cast into the form of a long square, and commanded to observe diligently where the rest of the army was in distress, and to make specially thither. And in the midst of these so arranged, were received such as carried the weapons and tools of the army.

The Syracusians arranged their men of arms, who were Syracusians of all conditions and as many of their confederates as were present, by sixteens in file: (they that came to aid them, were chiefly the Selinuntians, and then the horsemen of the Geloans, about two hundred; and of the Camarinæans, about twenty horsemen and fifty archers): the cavalry they placed in the right point of the battle, being in all no less than a thousand two hundred, and with them the darters. But the Athenians intending to begin the battle, Nicias went up and down the army, from one nation to another: to whom and to all in general he spake to this effect:

the oration of nicias to his army. year xvii. A. C. 415. Ol. 91. 2. Oration of Nicias.

68. "What need I, sirs, to make a long exhortation, when this battle is the thing for which we all came hither? For in my opinion, the present preparation is more able to give you encouragement, than any oration how well soever made, if with a weak army. For where we are together, Argives, Mantineans, Athenians, and the best of the islanders, how can we choose

among so many and good confederates, but conceive great hope of the victory: especially against tag and rag, and not chosen men, as we are ourselves, and against Sicilians, who though they condemn us, cannot stand against us; their skill not being answerable to their courage? It must be remembered also that we be far from our own, and not near to any amicable territory but such as we shall acquire by the sword. My exhortation to you, I am certain, is contrary to that of the enemy. For they say to theirs, ‘You are to fight for your country’. I say to you, You are to fight out of your country, where you must either get the victory, or not easily get away; for many horsemen will be upon us. Remember therefore every man his own worth, and charge valiantly: and think the present necessity and strait we are in, to be more formidable than the enemy.”

The battle between the Athenians and Syracusians.

69. Nicias having thus exhorted the army, led it presently to the charge. The Syracusians expected not to have fought at that instant: and the city being near, some of them were gone away; and some for haste came in running; and though late, yet every one, as he came, put himself in where was the greatest number. For they wanted neither willingness nor courage, either in this or any other battle; being no less valiant, so far forth as they had experience, than the Athenians: but the want of this made them, even against their wills, to abate also somewhat of their courage. Nevertheless though they thought not the Athenians would have begun the battle, and were thereby constrained to fight upon a sudden, yet they resumed their arms, and came presently forward to the encounter.

Year xvii. A. C. 415. Ol. 91. 2.

And first, the casters of stones and slingers and archers of either side, skirmished in the midst between the armies, mutually chasing each other, as amongst the light-armed was not unlikely. After this, the soothsayers

brought forth their sacrifices according to the law of the place; and the trumpets instigated the men of arms to the battle. And they came on to fight, the Syracusians for their country and their lives for the present, and for their liberty in the future: on the other side, the Athenians to win the country of another and make it their own, and not to weaken their own by being vanquished: the Argives and other free confederates, to help the Athenians to conquer the country they came against, and to return to their own with victory: and their subject confederates came also on with great courage, principally for their better safety, as desperate if they overcame not; and withal upon the by, that by helping the Athenians to subdue the country of another, their own subjection might be the easier.

Year xvii. A. C. 415. Ol. 91. 2. The Athenians have the victory. year xvii. A. C. 415. Ol. 91. 2.

70. After they were come to hand-strokes, they fought long on both sides. But in the meantime there happened some claps of thunder and flashes of lightning, together with a great shower of rain: insomuch as it added to the fear of the Syracusians, that were now fighting their first battle and not familiar with the wars; whereas to the other side that had more experience, the season of the year seemed to expound that accident; and their greatest fear proceeded from the so long resistance of their enemies, in that they were not all this while overcome. When the Argives first had made the left wing of the Syracusians to give ground, and after them the Athenians had also done the like to those that were arranged against them: then the rest of the Syracusian army was presently broken and put to flight. But the Athenians pursued them not far; because the Syracusian horsemen, being many and unvanquished, whensoever any men of arms advanced far from the body of the army, charged upon them, and still drave them in again: but having followed as far as safely they might in great troops, they retired again and erected a trophy. The Syracusians having rallied

themselves in the Helorine way, and recovered their order as well as they could for that time, sent a guard into Olympieium, lest the Athenians should take the treasure there: and returned with the rest of the army into the city. 71. The Athenians went not to assault the temple; but gathering together their dead, laid them upon the funeral fire, and stayed that night upon the place. The next day they gave truce to the Syracusians to take up their dead, of whom and of their confederates were slain about two hundred and sixty: and gathered up the bones of their own. Of the Athenians and their confederates there died about fifty. And thus, having rifled the bodies of their dead enemies, they returned to Catana. For it was now winter; and to make war there, they thought it yet impossible before they had sent for horsemen to Athens, and levied other amongst their confederates there in Sicily, to the end they might not be altogether over-mastered in horse; and before they had also both levied money there and received more from Athens, and made league with certain cities, which they hoped after this battle would the more easily hearken thereunto; and before they had likewise provided themselves of victuals and other things necessary, as intending the next spring to undertake Syracuse again. 72. With this mind they went to winter at Naxos and Catana.

Hermocrates encourageth the Syracusians: year xvii. A. C. 415. Ol. 91. 2.

The Syracusians after they had buried their dead, called an assembly: and Hermocrates the son of Hermon, a man not otherwise second to any in wisdom, and in war both able for his experience and eminent for his valour, standing forth gave them encouragement, and would not suffer them to be dismayed with that which had happened. “Their courage,” he said, “was not overcome, though their want of order had done them hurt. And yet in that they were not so far inferior, as it was likely they would have been: especially being (as one may say) home-bred artificers, against the most

experienced in the war of all the Grecians. That they had also been hurt by the number of their generals and commanders,” — for there were fifteen that commanded in chief— “and by the many supernumerary soldiers under no command at all. Whereas if they would make but a few and skilful leaders, and prepare armour this winter for such as want it, to increase as much as might be the number of their men of arms, and compel them in other things to the exercise of discipline, in all reason they were to have the better of the enemy. For valour they had already, and to keep their order would be learnt by practice: and both of these would still grow greater; skill, by practising with danger; and their courage would grow bolder of itself, upon the confidence of skill. And for their generals, they ought to choose them few and absolute, and to take an oath unto them, to let them lead the army wheresoever they thought best. For by this means, both the things that require secrecy would the better be concealed, and all things would be put in readiness with order and less tergiversation.”

and is chosen general with two more. The Syracusians send for aid into Peloponnesus. year xvii. A. C. 415. Ol. 91. 2.

73. The Syracusians, when they had heard him, decreed all that he advised: and elected three generals, him, Heracleides the son of Lysimachus, and Sicanus the son of Exekestus. They sent also ambassadors to Corinth and Lacedæmon, as well to obtain a league with them, as also to persuade the Lacedæmonians to make a hotter war against the Athenians, and to declare themselves in the quarrel of the Syracusians: thereby either to withdraw them from Sicily, or to make them the less able to send supply to their army which was there already.

The Athenians attempt Messana, but fail.

74. The Athenian army at Catana sailed presently to Messana, to receive it by treason of some within: but the plot came not to effect. For Alcibiades, when he was sent for from his charge, being resolved to fly, and knowing

what was to be done, discovered the same to the friends of the Syracusians in Messana: who with those of their faction slew such as were accused, and being armed upon occasion of the sedition, obtained to have the Athenians kept out. And the Athenians, after thirteen days' stay, troubled with tempestuous weather, provision also failing and nothing succeeding, returned again to Naxos: and having fortified their camp with a pallisado, they wintered there; and dispatched a galley to Athens for money and horsemen, to be with them early in the spring.

C. 415. 4. Ol. 91. 2. The Syracusians enlarge the compass of their walls year xvii. A. C. 415 4. Ol. 91. 2. and burn the tents of the Athenians by Catana. Ambassadors both from the Athenians and Syracuse unto Camarina, for the friendship of that city.

75. The Syracusians this winter raised a wall before their city, all the length of the side towards Epipolæ including Temenites: to the end, if they chanced to be beaten, they might not be so easily enclosed as when they were in a narrower compass. And they put a guard into Megara, and another into Olympieium; and made pallisadoes on the seaside at all the places of landing. And knowing that the Athenians wintered at Naxos, they marched with all the power of the city unto Catana: and after they had wasted the territory, and burnt the cabins and camp where the Athenians had lodged before, returned home. And having heard that the Athenians had sent ambassadors to Camarina, according to a league made before in the time of Laches, to try if they could win them to their side, they also sent ambassadors to oppose it. For they suspected that the Camarinæans had sent those succours in the former battle, with no great good will: and that now they would take part with them no longer, seeing the Athenians had the better of the day, but would rather join with the Athenians upon the former league. Hermocrates therefore and others being come to Camarina from the Syracusians, and Euphemus and others from the Athenians, when the

assembly was met, Hermocrates desiring to increase their envy to the Athenians, spake unto them to this effect:

the oration of hermocrates. year xvii. A. C. 415–4. Ol. 91. 2. Oration of Hermocrates.

76. “Men of Camarina, we come not hither upon fear that the forces of the Athenians here present may affright you: but lest their speeches which they are about to make, may seduce you, before you have also heard what may be said by us. They are come into Sicily with that pretence indeed, which you hear given out, but with that intention which we all suspect: and to me they seem not to intend the replantation of the Leontines, but rather our supplantation. For surely it holdeth not in reason, that they who subvert the cities yonder, should come to plant any city here: nor that they should have such a care of the Leontines, because Chalcideans, for kindred’s sake, when they keep in servitude the Chalcideans themselves of Eubœa, of whom these here are but the colonies. But they both hold the cities there, and attempt those here, in one and the same kind. For when the Ionians, and the rest of the confederates their own colonies, had willingly made them their leaders in the war to avenge them of the Medes, the Athenians laying afterwards to their charge, to some the not sending of their forces, to some their war amongst themselves, and so to the rest the most colourable criminations they could get, subdued them all to their obedience. And it was not for the liberty of the Grecians that these men, nor for the liberty of themselves that the Grecians made head against the Medes: but the Athenians did it to make them serve, not the Medes, but them, and the Grecians to change their master, as they did, not for one less wise, but for one worse wise.

77. "But in truth we come not to accuse the Athenian state, though it be obnoxious enough, before you that know sufficiently the injuries they have done, but far rather to accuse ourselves: who though we have the examples before our eyes of the Grecians there brought into servitude for want of defending themselves, and though we see them now, with the same sophistry of replanting the Leontines and their kindred, and aiding of their confederates the Egestæans, prepare to do the like unto us, do not yet unite ourselves, and with better courage make them to know that we be not Ionians, nor Hellespontines, nor islanders, that changing serve always the Mede or some other master, but that we are Dorians and freemen, come to dwell here in Sicily out of Peloponnesus, a free country. Shall we stand still till we be taken city after city, when we know that that only way we are conquerable: and when we find them wholly bent to this, that by drawing some from our alliance with their words, and causing some to wear each other out with war upon hope of their confederacy, and winning others by other fit language, they may have the power to do us hurt? But we think, though one of the same island perish, yet if he dwell far off, the danger will not come to us; and before it arrive, we count unhappy only him that suffereth before us. 78. If any therefore be of this opinion, that it is not he, but the Syracusian that is the Athenian's enemy; and thinketh it a hard matter that he should endanger himself for the territory that is mine: I would have him to consider, that he is to fight not chiefly for mine, but equally for his own in mine, and with the more safety for that I am not destroyed before and he thereby destitute of my help, but stand with him in the battle. Let him also consider that the Athenians come not hither to punish the Syracusians for being enemies to you, but by pretence of me to make himself the stronger by your friendship. If any man here envieth, or also feareth us, (for the strongest are still liable unto both), and would therefore wish that the Syracusians might be weakened to make them more modest,

but not vanquished for their own safety's sake: that man hath conceived a hope beyond the power of man. For it is not reasonable that the same man should be the disposer both of his desires and of his fortune. And if his aim should fail him, he might, deploring his own misery, peradventure wish to enjoy my prosperity again. But this will not be possible to him that shall abandon me, and not undertake the same dangers, though not in title, yet in effect the same that I do. For though it be our power in title, yet in effect it is your own safety you defend. And you men of Camarina, that are borderers and likely to have the second place of danger, you should most of all have foreseen this, and not have aided us so dully. You should rather have come to us: and that which, if the Athenians had come first against Camarina, you should in your need have implored at our hands, the same you should now also have been seen equally to hearten us withal, to keep us from yielding. But as yet, neither you nor any of the rest have been so forward. 79. Perhaps upon fear, you mean to deal evenly between us both, and allege your league with the Athenians. You made no league against your friends, but against your enemies, in case any should invade you: and by it you are also tied to aid the Athenians, when others wrong them; but not when, as now, they wrong their neighbour. For even the Rhegians, who are also Chalcideans, refuse to help them in replanting the Leontines; though these also be Chalcideans. And then it were a hard case, if they suspecting a bad action under a fair justification, are wise without a reason; and you, upon pretence of reason, should aid your natural enemies, and help them that most hate you to destroy your more natural kindred.

Year xvii. A. C. 415–4. Ol. 91. 2. Oration of Hermocrates. year xvii. A. C. 415–4. Ol. 91. 2.

“But this is no justice; to fight with them is justice, and not to stand in fear of their preparation. Which, if we hold together, is not terrible: but is, if contrarily (which they endeavour) we be disunited. For neither when they

came against us, being none but ourselves, and had the upperhand in battle, could they yet effect their purpose; but quickly went their ways. 80. There is no reason therefore we should be afraid, when we are all together, but that we should have the better will to unite ourselves in a league: and the rather, because we are to have aid from Peloponnesus, who every way excel these men in military sufficiency. Nor should you think that your purpose to aid neither, as being in league with both, is either just in respect of us, or safe for yourselves: for it is not so just in substance, as it is in the pretence. For if through want of your aid, the assailed perish and the assailant become victor: what do you by your neutrality, but leave the safety of the one undefended, and suffer the other to do evil? Whereas it were more noble in you, by joining with the wronged and with your kindred, both to defend the common good of Sicily, and keep the Athenians, as your friends, from an act of injustice. To be short, we Syracusians say, that to demonstrate plainly, to you or to any other, the thing you already know, is no hard matter: but we pray you, and withal if you reject our words we protest, that whereas the Ionians, who have ever been our enemies, do take counsel against us, you, that are Dorians as well as we, betray us. And if they subdue us, though it be by your counsels that they do it, yet they only shall have the honour of it: and for the prize of their victory, they will have none other but even the authors of their victory: but if the victory fall unto us, even you also, the cause of this our danger, shall undergo the penalty. Consider therefore now and take your choice, whether you will have the servitude without the present danger: or saving yourselves with us, both avoid the dishonour of having a master, and escape our enmity, which is likely otherwise to be lasting.”

81. Thus spake Hermocrates. After him Euphemus, ambassador from the Athenians, spake thus:

the oration of euphemus. year xvii. A. C. 415–4. Ol. 91. 2. Oration of Euphemus. year xvii. A. C. 415–4. Ol. 91. 2. Oration of Euphemus.

82. “Though our coming were to renew our former league, yet seeing we are touched by the Syracusian, it will be necessary we speak something here of the right of our dominion. And the greatest testimony of this right he hath himself given; in that he said, the Ionians were ever enemies to the Dorians. And it is true. For being Ionians, we have ever endeavoured to find out some means or other, how best to free ourselves from subjection to the Peloponnesians that are Dorians, more in number than we and dwelling near us. After the Medan war, having gotten us a navy, we were delivered thereby from the command and leading of the Lacedæmonians: there being no cause why they should rather be leaders of us than we of them, save only that they were then the stronger. And when we were made commanders of those Grecians which before lived under the king, we took upon us the government of them: because we thought, that having power in our hands to defend ourselves, we should thereby be the less subject to the Peloponnesians. And to say truth, we subjected the Ionians and islanders (whom the Syracusians say we brought into bondage being our kindred) not without just cause: for they came with the Medes against ours, their mother city: and for fear of losing their wealth durst not revolt, as we did, that abandoned our very city. But as they were content to serve, so they would have imposed the same condition upon us. 83. For these causes, we took upon us our dominion over them; both as worthy of the same, in that we brought the greatest fleet and promptest courage to the service of the Grecians, whereas they, with the like promptness in favour of the Medes, did us hurt; and also as being desirous to procure ourselves a strength against the Peloponnesians. And follow any other we will not, seeing we alone have pulled down the barbarian, and therefore have right to command; or at least have put ourselves into danger more for the liberty of

the Peloponnesians, than of all the rest of Greece, and our own besides. Now to seek means for one's own preservation, is a thing unblameable. And as it is for our own safety's cause that we are now here, so also we find that the same will be profitable for you. Which we will make plain from those very things which they accuse, and you, as most formidable, suspect us of: being assured, that such as suspect with vehement fear, though they may be won for the present with the sweetness of an oration, yet when the matter comes to performance, will then do as shall be most for their turn.

Year xvii. A. C. 415–4. Ol. 91. 2. Oration of Euphemus.

“We have told you that we hold our dominion yonder upon fear; and that upon the same cause we come hither now, by the help of our friends to assure the cities here; and not to bring you into subjection, but rather to keep you from it. 84. And let no man object, that we be solicitous for those that are nothing to us: for as long as you be preserved, and able to make head against the Syracusians, we shall be the less annoyed by their sending of forces to the Peloponnesians. And in this point you are very much unto us. For the same reason, it is meet also that we replant the Leontines; not to subject them, as their kindred in Eubœa, but to make them as puissant as we can: that being near, they may from their own territory weaken the Syracusians in our behalf. For as for our wars at home, we are a match for our enemies without their help; and the Chalcidean (whom having made a slave yonder, the Syracusian said, we absurdly attempt to vindicate into liberty here) is most beneficial to us there without arms, paying money only; but the Leontines, and other our friends here, are the most profitable to us when they are most in liberty.

Year xvii. A. C. 415–4. Ol. 91. 2. Oration of Euphemus. year xvii. A. C. 415–4. Ol. 91. 2. Oration of Euphemus.

85. “Now to a tyrant or city that reigneth, nothing can be thought absurd if profitable; nor any man a friend, that may not be trusted to. Friend or enemy he must be, according to the several occasions. But here it is for our benefit not to weaken our friends, but by our friends’ strength to weaken our enemies. This you must needs believe, inasmuch as yonder also we so command over our confederates, as every of them may be most useful to us: the Chians and Methymnæans redeem their liberty with providing us some galleys; the most of the rest, with a tribute of money somewhat more pressing. Some again of our confederates are absolutely free, notwithstanding that they be islanders, and easy to be subdued: the reason whereof is this; they are situate in places commodious about Peloponnesus. It is probable therefore, that here also we will so order our affairs as shall be most for our own turn, and most according to our fear, as we told you, of the Syracusians. For they affect a dominion over you; and having by advantage of your suspicion of us drawn you to their side, will themselves by force, or (if we go home without effect) by your want of friends, have the sole command of Sicily: which, if you join with them, must of necessity come to pass. For neither will it be easy for us to bring so great forces again together: nor will the Syracusians want strength to subdue you, if we be absent. Him that thinketh otherwise, the thing itself convinceth. 86. For when you called us in to aid you at the first, the fear you pretended was only this: that if we neglected you, the Syracusians would subdue you, and we thereby should participate of the danger. And it were unjust, that the argument you would needs have to prevail then with us, should now have no effect with yourselves; or that you should be jealous of the much strength we bring against the power of the Syracusians, when much rather you should give the less ear unto them. We cannot so much as stay here without you: and if becoming perfidious we should subdue these states, yet we are unable to hold them: both in respect of the length of the voyage, and

for want of means of guarding them; because they be great, and provided after the manner of the continent. Whereas they, not lodged near you in a camp, but inhabiting near you in a city of greater power than this of ours, will be always watching their advantages against you: and when an opportunity shall be offered against any of your cities, will be sure not to let it slip. This they have already made to appear, both in their proceedings against the Leontines, and also otherwise. And yet have these the face to move you against us that hinder this, and that have hitherto kept Sicily from falling into their hands. But we, on the other side, invite you to a far more real safety; and pray you, not to betray that safety which we both of us hold from one another at this present, but to consider, that they by their own number have way to you always, though without confederates; whereas you shall seldom have so great an aid again to resist them. Which if through your jealousy you suffer to go away without effect, or if it miscarry, you will hereafter wish for the least part of the same, when their coming can no more do you good.

Year xvii. A. C. 415–4. Ol. 91. 2. Oration of Euphemus.

87. “But, Camarinæans, be neither you nor others moved with their calumnies. We have told you the very truth, why we are suspected: and summarily we will tell it you again, claiming to prevail with you thereby. We say, we command yonder, lest else we should obey; and we assert into liberty the cities here, lest else we should be harmed by them: many things we have to be doing, because many things we are forced to beware of: and both now and before, we came not uncalled; but called as confederates to such of you as suffer wrong. Make not yourselves judges of what we do, nor go about as censors (which were now hard to do) to divert us; but as far as this busy humour and fashion of ours may be for your own service, so far take and use it: and think not the same hurtful alike to all, but that the

greatest part of the Grecians have good by it. For in all places, though we be not of any side, yet both he that looketh to be wronged, and he that contriveth to do the wrong, by the obviousness of the hope that the one hath of our aid, and of the fear that the other hath of their own danger, if we should come, are brought by necessity, the one to moderation against his will, the other into safety without his trouble. Refuse not therefore the security now present, common both to us that require it, and to yourselves. But do as others use to do; come with us: and instead of defending yourselves always against the Syracusians, take your turn once, and put them to their guard as they have done you.”

The resolution of the Camarinæans for neutrality year xvii. A. C. 415–4. Ol. 91. 2.

88. Thus spake Euphemus. The Camarinæans stood thus affected. They bare good will to the Athenians, save that they thought they meant to subjugate Sicily: and were ever at strife with the Syracusians about their borders. Yet because they were afraid that the Syracusians, that were near them, might as well get the victory as the other, they had both formerly sent them some few horse, and also now resolved for the future to help the Syracusians, but underhand and as sparingly as possible: and withal that they might no less seem to favour the Athenians than the Syracusians, especially after they had won a battle, to give for the present an equal answer unto both. So after deliberation had, they answered thus: “That forasmuch as they that warred, were both of them their confederates, they thought it most agreeable to their oath for the present to give aid to neither”. And so the ambassadors of both sides went their ways.

And the Syracusians made preparations for the war by themselves.

The Athenians seek to win the Siculi: they bring their fleet to Catana: year xvii. A. C. 415–4. Ol. 91. 2. they send for aid to Carthage, and into Hetruria: year xvii. A. C. 415–4. Ol. 91. 2. and prepare to besiege Syracuse.

The Athenians being encamped at Naxos, treated with the Siculi, to procure as many of them as they might to their side. Of whom, such as inhabited the plain and were subject to the Syracusians, for the most part held off: but they that dwelt in the most inland parts of the island, being a free people, and ever before dwelling in villages, presently agreed with the Athenians; and brought corn into the army, and some of them also money. To those that held off, the Athenians went with their army: and some they forced to come in, and others they hindered from receiving the aids and garrisons of the Syracusians. And having brought their fleet from Naxos, where it had been all the winter till now, they lay the rest of the winter at Catana, and re-erected their camp formerly burnt by the Syracusians. They sent a galley also to Carthage, to procure amity and what help they could from thence: and into Hetruria, because some cities there had of their own accord promised to take their parts. They sent likewise to the Siculi about them and to Egesta, appointing them to send in all the horse they could: and made ready bricks, and iron, and whatsoever else was necessary for a siege, and every other thing they needed, as intending to fall in hand with the war early the next spring.

The Syracusians pray aid of the Corinthians and Lacedæmonians. year xvii. A. C. 415–4. Ol. 91. 2. Alcibiades at Lacedæmon instigateth the Lacedæmonians against his country.

The ambassadors of Syracuse which were sent to Corinth and Lacedæmon, as they sailed by endeavoured also to move the Italians to a regard of this action of the Athenians. Being come to Corinth, they spake unto them, and demanded aid upon the title of consanguinity. The Corinthians having forthwith, for their own part, decreed cheerfully to aid them, sent also ambassadors from themselves along with these to Lacedæmon: to help them to persuade the Lacedæmonians, both to make a more open war against the Athenians at home, and to send some forces also

into Sicily. At the same time that these ambassadors were at Lacedæmon from Corinth, Alcibiades was also there with his fellow-fugitives: who presently upon their escape passed over from Thurii first to Cyllene, the haven of the Eleians, in a ship, and afterwards went thence to Lacedæmon, sent for by the Lacedæmonians themselves, under public security. For he feared them for his doings about Mantinea. And it fell out, that in the assembly of the Lacedæmonians, the Corinthians, Syracusians, and Alcibiades made all of them the same request. Now the ephores and magistrates, though intending to send ambassadors to Syracuse to hinder them from compounding with the Athenians, being yet not forward to send them aid, Alcibiades stood forth and sharpened the Lacedæmonians: inciting them with words to this effect:

the oration of alcibiades. year xvii. A. C. 415–4. Ol. 91. 2. Oration of Alcibiades. year xvii. A. C. 415–4. Ol. 91. 2. Oration of Alcibiades.

89. “It will be necessary that I say something first concerning mine own accusation, lest through jealousy of me, you bring a prejudicate ear to the common business. My ancestors having on a certain quarrel renounced the office of receiving you, I was the man that restored the same again; and showed you all possible respect, both otherwise, and in the matter of your loss at Pylus. Whilst I persisted in my good will to you, being to make a peace at Athens, by treating the same with my adversaries you invested them with authority, and me with disgrace. For which cause, if in applying myself afterwards to the Mantineans and Argives, or in anything else I did you hurt, I did it justly: and if any man here were causelessly angry with me, then when he suffered, let him be now content again, when he knows the true cause of the same. Or if any man think the worse of me for inclining to the people, let him acknowledge that therein also he is offended without a cause. For we have been always enemies to tyrants; and what is contrary to a tyrant, is called the people: and from thence hath continued

our adherence to the multitude. Besides, in a city governed by democracy, it was necessary in most things to follow the present course; nevertheless we have endeavoured to be more moderate than suiteth with the now headstrong humour of the people. But others there have been, both formerly and now, that have incited the common people to worse things than I: and they are those that have also driven out me. But as for us, when we had the charge of the whole, we thought it reason, by what form it was grown most great and most free, and in which we received it, in the same to preserve it. For though such of us as have judgment, do know well enough what the democracy is, and I no less than another, (insomuch as I could inveigh against it; but of confessed madness nothing can be said that is new), yet we thought it not safe to change it, when you our enemies were so near us.

Year xvii. A. C. 415. 4. Ol. 91. 2. Oration of Alcibiades.

90. “Thus stands the matter touching my own accusation. And concerning what we are to consult of, both you and I, if I know anything which you yourselves do not, hear it now. We made this voyage into Sicily, first (if we could) to subdue the Sicilians; after them the Italians; after them, to assay the dominion of Carthage, and Carthage itself. If these or most of these enterprises succeeded, then next we should have undertaken Peloponnesus, with the accession both of the Greek forces there, and with many mercenary barbarians, Iberians and others of those parts, confessed to be the most warlike of the barbarians that are now. We should also have built many galleys besides these which we have already, (there being plenty of timber in Italy); with the which besieging Peloponnesus round, and also taking the cities thereof with our land forces, upon such occasions as should arise from the land, some by assault and some by siege, we hoped easily to have debelled it and afterwards to have gotten the dominion of all Greece. As for money and corn to facilitate some points of this, the places we

should have conquered there, besides what here we should have found, would sufficiently have furnished us.

Year xvii. A. C. 415–4. Ol. 91. 2. Oration of Alcibiades.

91. “Thus, from one that most exactly knoweth it, you have heard what is the design of the fleet now gone; and which the generals there, as far as they can, will also put in execution. Understand next, that unless you aid them, they yonder cannot possibly hold out. For the Sicilians, though inexpert, if many of them unite may well subsist: but that the Syracusians alone, with their whole power already beaten, and withal kept from the use of the sea, should withstand the forces of the Athenians already there, is a thing impossible. And if their city should be taken, all Sicily is had, and soon after Italy also: and the danger from thence which I foretold you, would not be long ere it fell upon you. Let no man therefore think that he now consulteth of Sicily only, but also of Peloponnesus, unless this be done with speed. Let the army you send be of such, as being aboard may row, and landing presently be armed: and (which I think more profitable than the army itself) send a Spartan for commander, both to train the soldiers already there, and to compel unto it such as refuse. For thus will your present friends be the more encouraged, and such as be doubtful come to you with the more assurance. It were also good to make war more openly upon them here: that the Syracusians seeing your care may the rather hold out, and the Athenians be less able to send supply to their army. You ought likewise to fortify Deceleia in the territory of Athens, a thing which the Athenians themselves most fear, and reckon for the only evil they have not yet tasted in this war. And the way to hurt an enemy most, is to know certainly what he most feareth, and to bring the same upon him. For in reason a man therefore feareth a thing most, as having the precisest knowledge of what will most hurt him. As for the commodities which yourselves shall reap,

and deprive the enemy of by so fortifying; letting much pass, I will sum you up the principal. Whatsoever the territory is furnished withal, will come most of it unto you, partly taken, and partly of its own accord. The revenue of the silver mines in Laurium, and whatsoever other profit they have from their land or from their courts of justice, will presently be lost: and, which is worse, their confederates will be remiss in bringing in their revenue: and will care little for the Athenians, if they believe once that you follow the war to the utmost. That any of these things be put in act speedily and earnestly, men of Lacedæmon, it resteth only in yourselves: for I am confident, and I think I err not, that all these things are possible to be done.

Year xvii. A. C. 415–4. Ol. 91. 2. Oration of Alcibiades. year xvii. A. C. 415–4. Ol. 91. 2. Oration of Alcibiades.

92. “Now I must crave this: that I be neither the worse esteemed, for that having once been thought a lover of my country, I go now amongst the greatest enemies of the same against it; nor yet mistrusted, as one that speaketh with the zeal of a fugitive. For though I fly from the malice of them that drave me out, I shall not, if you take my counsel, fly your profit. Nor are you enemies so much, who have hurt but your enemies, as they are, that have made enemies of friends. I love not my country, as wronged by it, but as having lived in safety in it. Nor do I think that I do herein go against any country of mine; but that I far rather seek to recover the country I have not. And he is truly a lover of his country, not that refuseth to invade the country he hath wrongfully lost: but that desires so much to be in it, as by any means he can he will attempt to recover it. I desire you therefore, Lacedæmonians, to make use of my service in whatsoever danger or labour confidently: seeing you know, according to the common saying, if I did hurt you much when I was your enemy, I can help you much when I am your friend. And so much the more, in that I know the state of Athens, and but conjectured at yours. And considering you are now in deliberation upon a

matter of so extreme importance, I pray you think not much to send an army both into Sicily and Attica: as well to preserve the great matters that are there with the presence of a small part of your force, as also to pull down the power of the Athenians both present and to come: and afterwards to dwell in safety yourselves, and to have the leading of all Greece; not forced, but voluntary and with their good affection.”

The Lacedæmonians resolve to send Gylippus into Sicily.

93. Thus spake Alcibiades. And the Lacedæmonians, though before this they had a purpose of their own accord to send an army against Athens, but had delayed and neglected it: yet when these particulars were delivered by him, they were a great deal the more confirmed in the same, conceiving that what they had heard was from one that evidently knew it. Insomuch as they had set their minds already upon the fortifying of Deceleia, and upon the sending of some succours into Sicily, for the present. And having assigned Gylippus the son of Cleandridas, unto the Syracusan ambassadors for chief commander, they willed him to consider, both with them and the Corinthians, how best for their present means, and with greatest speed, some help might be conveyed unto them in Sicily. He thereupon appointed the Corinthians to send him two galleys presently to Asine, and to furnish the rest they meant to send, and to have them ready to sail when occasion should serve. This agreed upon, they departed from Lacedæmon.

The Athenians resolve to send provision and horsemen. year xviii. A. C. 414. Ol. 91. 2.

In the meantime the galley arrived at Athens, which the generals sent home for money and horsemen. And the Athenians upon hearing, decreed to send both provision and horsemen to the army. So the winter ended: and the seventeenth year of this war written by Thucydides.

The Athenians burn the fields of certain towns of the Siculi and take Centoripa. They receive money and horsemen from Athens.

94. In the very beginning of the next spring the Athenians in Sicily departed from Catana, and sailed by the coast to Megara of Sicily. The inhabitants whereof, in the time of the tyrant Gelon, the Syracusians (as I mentioned before) had driven out, and now possess the territory themselves. Landing here, they wasted the fields: and having assaulted a certain small fortress of the Syracusians, not taking it, they went presently back, part by land and part by sea, unto the river Tereas. And landing again in the plain fields, wasted the same and burnt up their corn: and lighting on some Syracusians, not many, they slew some of them; and having set up a trophy, went all again on board their galleys. Thence they returned to Catana, and took in victual: then with their whole army they went to Centoripa, a small city of the Siculi; which yielding on composition, they departed, and in their way burnt up the corn of the Inessæans and the Hyblæans. Being come again to Catana, they find there two hundred and fifty horsemen arrived from Athens, without horses, though not without the furniture, supposing to have horses there: and thirty archers on horseback, and three hundred talents of silver.

The Lacedæmonians invade Argeia. year xviii. A. C. 414. Ol. 91. 2. The Argives take a great booty in Thyreatis. The commons of Thespiæ set upon the few, but with ill success.

95. The same spring the Lacedæmonians led forth their army against Argos, and went as far as to Cleonæ: but an earthquake happening, they went home again. But the Argives invaded the territory of Thyrea, confining on their own; and took a great booty from the Lacedæmonians, which they sold for no less than twenty-five talents.

Not long after, the commons of Thespiæ set upon them that had the government; but not prevailing, were part apprehended, and part escaped to Athens, the Athenians having also aided them.

Epipolæ a high ground before the city of Syracuse. year xviii. A. C. 414. Ol. 91. 2. year xviii. A. C. 414. Ol. 91. 2. Diomilus slain. The Athenians fortify Labdalum.

96. The Syracusians the same summer, when they heard that the Athenians had horsemen sent to them from Athens, and that they were ready now to come against them, conceiving that if the Athenians gat not Epipolæ, a rocky ground and lying just against the city, they would not be able, though masters of the field, to take in the city with a wall: intended therefore, lest the enemy should come secretly up, to keep the passages by which there was access unto it with a guard. For the rest of the place is to the outside high and steep, falling to the city by degrees, and on the inside wholly subject to the eye. And it is called by the Syracusians, Epipolæ, because it lieth above the level of the rest. The Syracusians, coming out of the city with their whole power into a meadow by the side of the river Anapus betimes in the morning, (for Hermocrates and his fellow-commanders had already received their charge), were there taking a view of their arms: but first they had set apart seven hundred men of arms, under the leading of Diomilus, an outlaw of Andros, both to guard Epipolæ, and to be ready together quickly upon any other occasion wherein there might be use of their service. 97. The Athenians the day following, having been already mustered, came from Catana with their whole forces, and landed their soldiers at a place called Leon, six or seven furlongs from Epipolæ, unperceived, and laid their navy at anchor under Thapsus. Thapsus is almost an island, lying out into the sea and joined to the land with a narrow isthmus; not far from Syracuse, neither by sea nor land. And the naval forces of the Athenians, having made a pallisado across the said isthmus, lay there quiet. But the land soldiers marched at high speed towards Epipolæ, and gat up by Euryelus before the Syracusians could come to them from out of the meadow, where they were mustering. Nevertheless they

came on, every one with what speed he could, not only Diomilus with his seven hundred, but the rest also. They had no less to go from the meadow than twenty-five furlongs, before they could reach the enemy. The Syracusians therefore coming up in this manner, and thereby defeated in battle at Epipolæ, withdrew themselves into the city. But Diomilus was slain, and three hundred of the rest. The Athenians after this erected a trophy, and delivered to the Syracusians the bodies of their dead under truce; and came down the next day to the city. But when none came out to give them battle, they retired again; and built a fort upon Labdalum, in the very brink of the precipices of Epipolæ, on the side that looketh towards Megara, for a place to keep their utensils and money in when they went out either to fight or to work.

Year xviii. A. C. 414. Ol. 91. 2.

98. Not long after, there came unto them from Egesta three hundred horsemen: and from the Siculi, namely the Naxians and some others, about one hundred: and the Athenians had of their own two hundred and fifty; for which they had horses, part from the Egestæans and Catanæans, and part they bought. So that they had together in the whole, six hundred and fifty horsemen. Having put a guard into Labdalum, the Athenians went down to Syca, and raised there a wall in circle very quickly; so that they struck a terror into the Syracusians with the celerity of the work. Who therefore coming forth, intended to have given them battle, and no longer to have neglected the matter. But when the armies were one set against the other, the Syracusian generals perceiving their own to be in disarray, and not easily to be embattled, led them again into the city, save only a certain part of their horsemen; which staying, kept the Athenians from carrying of stone and straggling far abroad from their camp. But the Athenians with one squadron of men of arms, together with their whole number of horse,

charged the horsemen of the Syracusians and put them to flight: of whom they slew a part, and erected a trophy for this battle of horse.

The Athenians begin to build on the north side of the fortification wherein they lay the wall wherewith to begirt the city. year xviii. A. C. 414. Ol. 91. 2. The Syracusians make a cross wall in their way.

99. The next day the Athenians fell to work upon their wall, to the north side of their circular wall: some building, and some fetching stone and timber, which they still laid down toward the place called Trogilus, in the way by which the wall should come with the shortest compass from the great haven to the other sea. The Syracusians, by the persuasion of their generals, and principally of Hermocrates, intended not to hazard battle with their whole power against the Athenians any more: but thought fit rather, in the way where the Athenians were to bring their wall, to raise a counter-wall; which, if they could but do before the wall of the Athenians came on, it would exclude their further building: and if the Athenians should set upon them as they were doing it, they might send part of the army to defend it, and pre-occupate the accesses to it with a pallisado: and if they would come with their whole army to hinder them, then must they also be forced to let their own work stand still. Therefore they came out; and beginning at their own city, drew a cross-wall beneath the circular fortifications of the Athenians; and set wooden turrets upon it, made of the olive trees which they felled in the ground belonging to the temple. The Athenian navy was not yet come about into the great haven from Thapsus, but the Syracusians were masters of the places near the sea; and the Athenians brought their provision to the army from Thapsus by land.

Year xviii. A. C. 414. Ol. 91. 2.

100. The Syrcusians, when they thought both their pallisado and wall sufficient; and considering that the Athenians came not to impeach them in

the work, as they that feared to divide their army and to be thereby the more easy to be fought withal, and that also hasted to make an end of their own wall wherewith to encompass the city, left one squadron for a guard of their works, and retired with the rest into the city. And the Athenians cut off the pipes of their conduits, by which their water to drink was conveyed under ground into the town. And having observed also, that about noon the Syracusians kept within their tents, and that some of them were also gone into the city, and that such as were remaining at the pallisado kept but negligent watch; they commanded three hundred chosen men of arms, and certain other picked out and armed from amongst the unarmed, to run suddenly to that counter-wall of the Syrasians. The rest of the army divided in two, went one part with one of the generals to stop the succour which might be sent from the city; and the other with the other general to the palisado next to the gate [of the counter-wall]. The three hundred assaulted and took the pallisado; the guard whereof forsaking it, fled within the wall into the temple ground: and with them entered also their pursuers; but after they were in were beaten out again by the Syracusians, and some slain, both of the Argives and Athenians, but not many. Then the whole army went back together, and pulled down the wall and plucked up the pallisado: the pales whereof they carried with them to their camp, and erected a trophy.

The Athenians build from their own fortification to the crags towards the great haven. year xviii. A. C. 414. Ol. 91. 2. The Athenians take their palisado again. Lamachus slain. year xviii. A. C. 414. Ol. 91. 2. Nicias, assaulted in his camp, defendeth it. year xviii. A. C. 414. Ol. 91. 2.

101. The next day, the Athenians beginning at their circular wall, built onwards to that crag over the marshes, which on that part of Epipolæ looketh to the great haven, and by which the way to the haven, for their wall to come through the plain and marsh, was the shortest. As this was doing, the Syracusians came out again and made another pallisado, beginning at

the city, through the middle of the marsh; and a ditch at the side of it, to exclude the Athenians from bringing their wall to the sea. But the Athenians, when they had finished their work as far as to the crag, assaulted the pallisado and trench of the Syracusians again. And having commanded their galleys to be brought about from Thapsus into the great haven of Syracuse, about break of day went straight down into the plain; and passing through the marsh, where the ground was clay and firmest, [and partly] upon boards and planks, won both the trench and pallisado, all but a small part, betimes in the morning; and the rest not long after. And here also they fought; and the victory fell to the Athenians: the Syracusians, those of the right wing, fled to the city; and they of the left, to the river. The three hundred chosen Athenians, desiring to cut off their passage, marched at high speed towards the bridge. But the Syracusians fearing to be prevented, (for most of the horsemen were in this number), set upon these three hundred: and putting them to flight, drave them upon the right wing of the Athenians, and following affrighted also the foremost guard of the wing. Lamachus seeing this, came to aid them with a few archers from the left wing of their own, and with [all] the Argives: and passing over a certain ditch, having but few with him, was deserted and slain with some six or seven more. These the Syracusians hastily snatched up, and carried into a place of safety beyond the river: and when they saw the rest of the Athenian army coming towards them, they departed. 102. In the meantime, they that fled at first to the city, seeing how things went, took heart again; and re-embattled themselves against the same Athenians that stood ranged against them before; and withal sent a certain portion of their army against the circular fortification of the Athenians upon Epipolæ; supposing to find it without defendants, and so to take it. And they took and demolished the outworks ten plethers in length: but the circle itself was defended by Nicias, who chanced to be left within it for infirmity. For he commanded his

servants to set fire on all the engines, and whatsoever wooden matter lay before the wall: knowing there was no other possible means to save themselves for want of men. And it fell out accordingly: for by reason of this fire they came no nearer, but retired. For the Athenians having by this time beaten back the enemy below, were coming up to relieve the circle: and their galleys withal (as is before mentioned) were going about from Thapsus into the great haven. Which they above perceiving, speedily made away, they and the whole army of the Syracusians, into the city: with opinion that they could no longer hinder them, with the strength they now had, from bringing their wall through unto the sea.

103. After this the Athenians erected a trophy, and delivered to the Syracusians their dead under truce: and they on the other side delivered to the Athenians the body of Lamachus and of the rest slain with him. And their whole army, both land and sea forces, being now together, they began to enclose the Syracusians with a double wall from Epipolæ and the rocks unto the sea-side. The necessities of the army were supplied from all parts of Italy. And many of the Siculi, who before stood aloof to observe the way of fortune, took part now with the Athenians; to whom came also three penteconteri [long boats of fifty oars a-piece] from Hetruria; and divers other ways their hopes were nourished. For the Syracusians also, when there came no help from Peloponnesus, made no longer account to subsist by war; but conferred, both amongst themselves and with Nicias, of composition: for Lamachus being dead, the sole command of the army was in him. And though nothing were concluded, yet many things (as was likely with men perplexed, and now more straitly besieged than before) were propounded unto Nicias, and more amongst themselves. And the present ill success had also spread some jealousy amongst them, one of another. And they discharged the generals under whose conduct this happened, as if their

harm had come either from their unluckiness or from their perfidiousness: and chose Heracleides, Eucles, and Tellias in their places.

Year xviii. A. C. 414. Ol. 91. 2. Gylippus despaireth of Sicily, and seeks to save Italy. year xviii. A. C. 414. Ol. 91. 2. Nicias despiseth the coming of Gylippus.

104. Whilst this passed, Gylippus of Lacedæmon and the Corinthian galleys were already at Leucas, purposing with all speed to go over into Sicily. But when terrible reports came unto them from all hands, agreeing in an untruth, that Syracuse was already quite enclosed, Gylippus had hope of Sicily no longer; but desiring to assure Italy, he and Pythen a Corinthian, with two Laconic and two Corinthian galleys, with all speed crossed the Ionic sea to Tarentum: and the Corinthians were to man ten galleys of their own, two of Leucas, and three of Ambracia, and come after. Gylippus went first from Tarentum to Thurii, as ambassador, by his father's right, who was free of the city of Tarentum: but not winning them to his side, he put out again, and sailed along the coast of Italy. Passing by the Terinæan gulf, he was put from the shore by a wind which in that quarter bloweth strongly against the north, and driven into the main sea; and after another extreme tempest brought in again into Tarentum: where he drew up such of his galleys as had been hurt by the weather, and repaired them. Nicias, hearing that he came, contemned the small number of his galleys, as also the Thurians had before, supposing them furnished as for piracy: and appointed no watch for them yet.

Year xviii. A. C. 414. Ol. 91. 2.

105. About the same time of this summer, the Lacedæmonians invaded the territory of Argos, they and their confederates: and wasted a great part of their land. And the Athenians aided the Argives with thirty galleys: which most apparently broke the peace between them and the

Lacedæmonians. For before, they went out from Pylus with the Argives and Mantineans, but in the nature of freebooters; and that also not into Laconia, but other parts of Peloponnesus. Nay, when the Argives have often entreated them but only to land with their arms in Laconia, and having wasted never so little of their territory to return, they would not. But now, under the conduct of Pythodorus, Læspodius, and Demaratus, they landed in the territory of Epidaurus Limera, and in Prasiæ, and there and in other places wasted the country: and gave unto the Lacedæmonians a most justifiable cause to fight against the Athenians. After this, the Athenians being departed from Argos with their galleys, and the Lacedæmonians gone likewise home, the Argives invaded Phliasia: and when they had wasted part of their territory, and killed some of their men, returned.

**THE SEVENTH BOOK OF THE HISTORY OF
THUCYDIDES.**

THE PRINCIPAL CONTENTS.

GYLIPPUS ARRIVETH AT Syracuse: checketh the fortune of the Athenians: and cutteth off their works with a counter-wall. — The Lacedæmonians invade Attica and fortify Deceleia. — The confederates of each side are solicited for supplies to be sent to Syracuse. — Two battles fought in the great haven: in the first of which the Syracusians are beaten, in the second superior. — Demosthenes arriveth with a new army: and attempting the works of the enemy in Epipolæ by night, is repulsed with great slaughter of his men. — They fight the third time: and the Syracusians having the victory, block up the haven with boats. — A catalogue of the confederates on each side. — They fight again at the bars of the haven: where the Athenians losing their galleys, prepare to march away by land. — In their march they are afflicted, beaten, and finally subdued by the Syracusians. — The death of Nicias and Demosthenes, and misery of the captives in the quarry. — Which happened in the nineteenth year of this war.

Year xviii. A. C. 414. Ol. 91. 3. year xviii. A. C. 414. Ol. 91. 3. Gylippus and Pythen resolve to go to Syracuse. They took the aid of the men of Himera. year xviii. A. C. 414. Ol. 91. 3.

Gylippus and Pythen, having repaired their galleys, from Tarentum went along the coast to Locri Epizephyrîi. And upon certain intelligence now, that Syracuse was not wholly enclosed, but coming with an army there was entrance still by Epipolæ; they consulted whether it were better to take Sicily on their right hand, and adventure into the town by sea; or on the left, and so first to go to Himera, and then taking along both them and as many other as they could get to their side, to go into it by land. And it was

resolved to go to Himera: the rather, because the four Attic galleys, which Nicias, though he contemned them before, had now when he heard they were at Locri sent to wait for them, were not arrived yet at Rhegium. Having prevented this guard, they crossed the strait: and touching at Rhegium and Messana by the way, came to Himera. Being there, they prevailed so far with the Himeræans, that they not only followed them to the war themselves, but also furnished with armour such of Gylippus and Pythen's mariners as wanted: for at Himera they had drawn their galleys to land. They likewise sent to the Selinuntians, to meet them at a place assigned with their whole army. The Geloans also, and other of the Siculi, promised to send them forces, though not many: being much the willingier to come to the side, both for that Archonidas was lately dead, (who reigning over some of the Siculi in those parts, and being a man of no mean power, was friend to the Athenians), and also for that Gylippus seemed to come from Lacedæmon with a good will to the business. Gylippus, taking with him of his own mariners and sea-soldiers, for whom he had gotten arms, at the most seven hundred, and Himeræans with armour and without in the whole one thousand, and one hundred horse, and some light-armed Selinuntians, with some few horse of the Geloans, and of the Siculi in all about one thousand, marched with these towards Syracuse.

The Corinthian galleys left by Gylippus, make haste after him: and Gongylus arriving first, keepeth the Syracusians from compounding. Gylippus arriveth at Syracuse year xviii. A. C. 414. Ol. 91. 3.

In the meantime, the Corinthians with the rest of their galleys putting to sea from Leucas, made after [as they were] every one with what speed he could: and Gongylus, one of the Corinthian commanders, though the last that set forth, arrived first at Syracuse with one galley, and but a little before the coming of Gylippus. And finding them ready to call an assembly about an end of the war, he hindered them from it, and put them into heart:

relating, how both the rest of the galleys were coming, and also Gylippus the son of Cleandridas for general, sent unto them by the Lacedæmonians. With this the Syracusians were re–confirmed, and went presently out with their whole army to meet him: for they understood now that he was near. He, having taken Iegas, a fort, in his way, as he passed through the territory of the Siculi, and embattled his men, cometh to Epipolæ: and getting up by Euryelus, where also the Athenians had gotten up before, marched together with the Syracusians towards the wall of the Athenians. At the time when he arrived, the Athenians had finished a double wall of seven or eight furlongs towards the great haven; save only a little next the sea, which they were yet at work on. And on the other side of their circle, towards Trogius and the other sea, the stones were for the most part laid ready upon the place: and the work was left in some places half, and in some wholly finished. So great was the danger that Syracuse was now brought into.

Gylippus offereth the Athenians five days' truce to be gone in. The Syracusians win Labdalum. year xviii. A. C. 414. Ol. 91. 3.

The Athenians, at the sudden coming on of Gylippus, though somewhat troubled at first, yet put themselves in order to receive him. And he, making a stand when he came near, sent a herald to them; saying, that if they would abandon Sicily within five days with bag and baggage, he was content to give them truce. Which the Athenians contemning, sent him away without any answer. After this, they were putting themselves into order of battle one against another: but Gylippus finding the Syracusians troubled, and not easily falling into their ranks, led back his army in a more open ground. Nicias led not the Athenians out against him, but lay still at his own fortification. And Gylippus seeing he came not up, withdrew his army into the top called Temenites; where he lodged all night. The next day, he drew out the greater part of his army, and embattled them before the fortification of the Athenians, that they might not send succour to any other place; but a

part also they sent to the fort of Labdalum, and took it, and slew all those they found within it: for the place was out of sight to the Athenians. The same day the Syracusians also took an Athenian galley, as it entered into the great haven.

The Syracusians build a wall upwards through Epipolæ, to stop the proceeding of the wall of the Athenians. The Athenians fortify Plemmyrium. year xviii. A. C. 414. Ol. 91. 3. Nicias sendeth twenty galleys to lie in wait for the aid coming from Peloponnesus.

After this, the Syracusians and their confederates began a wall through Epipolæ, from the city towards the single cross wall upwards: that the Athenians, unless they could hinder it, might be excluded from bringing their own wall any further on. And the Athenians by this time, having made an end of their wall to the sea, were come up again: and Gylippus (for some part of the wall was but weak) rising with his army by night, went to assault it. But the Athenians also knowing it, (for they lodged all night without the wall), went presently to relieve it: which Gylippus perceiving, again retired. And the Athenians, when they had built it higher, kept the watch in this part themselves: and divided the rest of the wall to the charge of their confederates. Also it seemed good to Nicias to fortify the place called Plemmyrium. It is a promontory over against the city, which shooting into the entrance of the great haven straiteneth the mouth of the same: which fortified, he thought would facilitate the bringing in of necessaries to the army. For by this means, their galleys might ride nearer to the haven of the Syracusians: and not upon every motion of the navy of the enemies, to be to come out against them, as they were before, from the bottom of the [great] haven. And he had his mind set chiefly now upon the war by sea: seeing his hopes by land diminished since the arrival of Gylippus. Having therefore drawn his army and galleys to that place, he built about it three fortifications, wherein he placed his baggage; and where now also lay at

road both his great vessels of carriage, and the nimblest of his galleys. Hereupon principally ensued the first occasion of the great loss of his sea soldiers. For having but little water, and that far to fetch, and his mariners going out also to fetch in wood, they were continually intercepted by the Syracusian horsemen, that were masters of the field. For the third part of the Syracusian cavalry were quartered in a little town called Olympieium, to keep those in Plemmyrium from going abroad to spoil the country. Nicias was advertised moreover of the coming of the rest of the Corinthian galleys: and sent out a guard of twenty galleys, with order to wait for them about Locri and Rhegium, and the passage there into Sicily.

Gylippus goeth on with his wall, and fighteth with the Athenians twice: and in the latter battle having the victory, he finished his wall, and utterly excluded the year xviii. A. C. 414. Ol. 91. 3. proceeding of the wall of the Athenians.

Gylippus in the meantime went on with the wall through Epipolæ, using the stones laid ready there by the Athenians; and withal drew out the Syracusians and their confederates beyond the point of the same, and ever as he brought them forth put them into their order; and the Athenians, on the other side, embattled themselves against them. Gylippus, when he saw his time, began the battle: and being come to hands, they fought between the fortifications of them both, where the Syracusians and their confederates had no use at all of their horsemen. The Syracusians and their confederates being overcome, and the Athenians having given them truce to take up their dead and erected a trophy, Gylippus assembled the army, and told them, that this was not theirs, but his own fault; who by pitching the battle so far within the fortifications, had deprived them of the use both of their cavalry and darters; and that therefore he meant to bring them on again: and wished them to consider, that for forces they were nothing inferior to the enemy; and for courage, it were a thing not to be endured, that being

Peloponnesians and Dorians, they should not master and drive out of the country Ionians, islanders, and a rabble of mixed nations.

Year xviii. A. C. 414. Ol. 91. 3.

After this, when he saw his opportunity, he brought out the army again. Nicias and the Athenians, who thought it necessary, if not to begin the battle, yet by no means to set light by the wall in hand: (for by this time it wanted but little of passing the point of theirs, and proceeding, would give the enemy advantage, both to win if he fought, and not to fight unless he listed): did therefore also set forth to meet the Syracusians. Gylippus, when he had drawn his men of arms farther without the walls than he had done before, gave the onset. His horsemen and darters he placed upon the flank of the Athenians, in ground enough, to which neither of their walls extended. And these horsemen, after the fight was begun, charging upon the left wing of the Athenians next them, put them to flight: by which means the rest of the army was by the Syracusians overcome likewise, and driven headlong within their fortifications. The night following, the Syracusians brought up their wall beyond the wall of the Athenians, so as they could no longer hinder them, but should be utterly unable, though masters of the field, to enclose the city.

The rest of the galleys come in from Peloponnesus, unseen of the Athenians that were set to watch them.

After this, the other twelve galleys of the Corinthians, Ambraciotes, and Leucadians, undescried of the Athenian galleys that lay in wait for them, entered the haven, under the command of Erasinides, a Corinthian: and helped the Syracusians to finish what remained to the cross wall.

Gylippus goeth about Sicily, and sendeth into Peloponnesus for more aid. year xviii. A. C. 414. Ol. 91. 3.

Now Gylippus went up and down Sicily, raising forces both for sea and land, and soliciting to his side all such cities as formerly either had not been forward, or had wholly abstained from the war. Other ambassadors also, both of the Syracusians and Corinthians, were sent to Lacedæmon and Corinth, to procure new forces to be transported either in ships or boats, or how they could; because the Athenians had also sent to Athens for the like. In the meantime, the Syracusians both manned their navy, and made trial of themselves, as intending to take in hand that part also: and were otherwise exceedingly encouraged.

Nicias writeth to Athens for supply, and to be eased of his charge.

Nicias perceiving this, and seeing the strength of the enemy and his own necessities daily increasing, he also sent messengers to Athens, both at other times and often, upon the occasion of every action that passed: and now especially, as finding himself in danger, and that unless they quickly sent for those away that were there already, or sent a great supply unto them, there was no hope of safety. And fearing lest such as he sent, through want of utterance or judgment, or through desire to please the multitude, should deliver things otherwise than they were, he wrote unto them a letter: conceiving that thus the Athenians should best know his mind, whereof no part could now be suppressed by the messenger, and might therefore enter into deliberation upon true grounds. With these letters, and other their instructions, the messengers took their journey. And Nicias in the meantime having a care to the well guarding of his camp, was wary of entering into any voluntary dangers.

The Athenians besiege Amphipolis. The end of the eighteenth summer.

In the end of this summer, Euetion, general for the Athenians, with Perdiccas, together with many Thracians warring against Amphipolis, took not the city; but bringing his galleys about into Strymon, besieged it from the river, lying at Imeræum. And so this summer ended.

The next winter, the messengers from Nicias arrived at Athens; and having spoken what they had in charge, and answered to such questions as they were asked, they presented the letter: which the clerk of the city, standing forth, read unto the Athenians, containing as followeth:

the letter of nicias to the people of athens. year xviii. A. C. 414. Ol. 91. 3. Letter of Nicias. year xviii. A. C. 414. Ol. 91. 3. Letter of Nicias. year xviii. A. C. 414. Ol. 91. 3. Letter of Nicias.

“Athenians, you know by many other my letters what hath passed formerly: nor is it less needful for you to be informed of the state we are in, and to take counsel upon it, at this present. When we had in many battles beaten the Syracusians, against whom we were sent, and had built the walls within which we now lie, came Gylippus a Lacedæmonian, with an army out of Peloponnesus, and also out of some of the cities of Sicily; and in the first battle was overcome by us: but in the second, forced by his many horsemen and darters, we retired within our works. Whereupon giving over our walling up of the city for the multitude of our enemies, we now sit still. Nor can we indeed have the use of our whole army, because some part of the men of arms are employed to defend our walls. And they have built a single wall up to us, so that now we have no more means to enclose it, except one should come with a great army and win that cross wall of theirs by assault. And so it is, that we who seemed to besiege others, are besieged ourselves for so much as concerneth the land: for we cannot go far abroad by reason of their cavalry. 12. They have also sent ambassadors for another army into Peloponnesus: and Gylippus is gone amongst the cities of Sicily, both to solicit such to join with him in the war as have not yet stirred, and of others to get, if he can, both more land—soldiers and more munition for their navy. For they intend, as I have been informed, both to assault our wall by land with their army, and to make trial what they are able to do with their

navy by sea. For though our fleet (which they also have heard) were vigorous at first, both for soundness of the galleys and entireness of the men: yet our galleys are now soaked with lying so long in the water, and our men consumed. For we want the means to haul a-land our galleys, and trim them: because the galleys of the enemy, as good as ours and more in number, do keep us in a continual expectation of assault, which they manifestly endeavour. And seeing it is in their own choice to attempt or not, they have therefore liberty to dry their galleys at their pleasure: for they lie not, as we, in attendance upon others. 13. Nay, we could hardly do it, though we had many galleys spare, and were not constrained, as now, to keep watch upon them with our whole number. For should we abate though but a little of our observance, we should want provision: which as we are, being to pass so near their city, is brought in with difficulty. And hence it is, that our mariners both formerly have been, and are now wasted. For our mariners, fetching wood and water and foraging far off, are intercepted by the horsemen: and our slaves, now we are on equal terms, run over to the enemy. As for strangers, some of them having come aboard by constraint, return presently to their cities; and others having been levied at first with great wages, thinking they came to enrich themselves rather than to fight, now they see the enemy make so strong resistance, both otherwise beyond their expectation and especially with their navy, partly take pretext to be gone that they may serve the enemy, and partly, Sicily being large, shift themselves away every one as he can. Some there are also, who having bought here Hyccarian slaves, have gotten the captains of galleys to accept of them in the room of themselves, and thereby destroyed the purity of our naval strength. 14. To you I write, who know how small a time any fleet continueth in the height of vigour: and how few of the mariners are skilful both how to hasten the course of a galley and how to contain the oar. But of all, my greatest trouble is this: that being general, I can neither make them

do better, (for your natures are hard to be governed), nor get mariners in any other place, (which the enemy can do from many places), and must of necessity have them from whence we brought both those we have and those we have lost. For our now confederate cities, Naxos and Catana, are not able to supply us. Had the enemy but that one thing more, that the towns of Italy that now send us provision, seeing what estate we are now in and you not help us, would turn to them, the war were at an end and we expugned without another stroke.

Year xviii. A. C. 414. Ol. 91. 3.

“I could have written to you other things more pleasing than these, but not more profitable: seeing it is necessary for you to know certainly the affairs here, when you go to council upon them. Withal, because I know your natures to be such, as though you love to hear the best, yet afterwards when things fall not out accordingly you will call in question them that write it, I thought best to write the truth for my own safety’s sake. 15. And now think thus: that though we have carried ourselves, both captains and soldiers, in that for which we came at first hither, unblameably; yet since all Sicily is united against us, and another army expected out of Peloponnesus, you must resolve (for those we have here are not enough for the enemy’s present forces) either to send for these away, or to send hither another army, both of land and sea-soldiers, no less than the former, and money not a little; and also a general to succeed me, who am able no longer to stay here, being troubled with the stone [in the kidneys]. I must crave your pardon. I have done you many good services in the conducts of your armies, when I had my health. What you will do, do in the very beginning of spring, and delay it not. For the enemy will soon have furnished himself of his Sicilian aids: and though those from Peloponnesus will be later, yet if you look not

to it, they will get hither partly unseen, as before, and partly by preventing you with speed.”

The Athenians conclude to send a new army to Syracuse.

16. These were the contents of the letter of Nicias. The Athenians, when they had heard it read, though they released not Nicias of his charge, yet for the present, till such time as others chosen to be in commission might arrive, they joined with him two of those that were already in the army, Menander and Euthydemon: to the end that he might not sustain the whole burthen alone in his sickness. They concluded likewise to send another army, as well for the sea as the land, both of Athenians enrolled and of their confederates. And for fellow-generals with Nicias, they elected Demosthenes the son of Alcisthenes, and Eurymedon the son of Thucles. Eurymedon they sent away presently for Sicily about the time of the winter solstice, with ten galleys and twenty talents of silver, to tell them there that aid was coming, and that there was care taken of them. 17. But Demosthenes staying, made preparation for the voyage to set out early the next spring: and sent unto the confederates, appointing what forces they should provide, and to furnish himself amongst them with money and galleys and men of arms.

They send twenty galleys to year xviii. A. C. 413. Ol. 91. 3. Naupactus, to keep the Corinthians from transporting their forces into Sicily.

The Athenians sent also twenty galleys about Peloponnesus, to watch that none should go over into Sicily from Corinth or Peloponnesus. For the Corinthians, after the ambassadors were come to them and had brought news of the amendment of the affairs in Sicily, thought it was well that they had sent thither those other galleys before: but now they were encouraged a great deal more, and prepared men of arms to be transported into Sicily in ships; and the Lacedæmonians did the like for the rest of Peloponnesus. The Corinthians manned five-and-twenty galleys, to present battle to the fleet

that kept watch at Naupactus: that the ships with the men of arms, whilst the Athenians attended these galleys so embattled against them, might pass by unhindered.

The Lacedæmonians prepare to invade Attica and fortify Deceleia, supposing the Athenians to have broken the peace. year xviii. A. C. 413. Ol. 91. 3.

18. The Lacedæmonians, as they intended before, and being also instigated to it by the Syracusians and Corinthians, upon advertisement now of the Athenians' new supply for Sicily prepared likewise to invade Attica; thereby to divert them. And Alcibiades also importunately urged the fortifying of Deceleia, and by no means to war remissly. But the Lacedæmonians were heartened thereunto principally, because they thought the Athenians having in hand a double war, one against them and another against the Sicilians, would be the easier pulled down: and because they conceived the breach of the last peace was in themselves. For in the former war, the injury proceeded from their own side: in that the Thebans had entered Plataea in time of peace; and because also, whereas it was inserted in the former articles, that arms should not be carried against such as would stand to trial of judgment, they had refused such trial when the Athenians offered it. And they thought all their misfortunes had deservedly befallen them for that cause: remembering amongst others, the calamity at Pylus. But when the Athenians with a fleet of thirty sail had spoiled part of the territory of Epidaurus, and of Prasiæ and other places, and their soldiers that lay in garrison in Pylus had taken booty in the country about; and seeing that as often as there arose any controversy touching any doubtful point of the articles, the Lacedæmonians offering trial by judgment, they refused it: then indeed, the Lacedæmonians conceiving the Athenians to be in the same fault that themselves had been in before, betook themselves earnestly to the war. And this winter, they sent about unto their confederates to make ready

iron, and all instruments of fortification. And for the aid they were to transport in ships to the Sicilians, they both made provision amongst themselves, and compelled the rest of Peloponnesus to do the like. So ended this winter, and the eighteenth year of the war written by Thucydides.

Year xix. The Peloponnesians invade Attica, and fortify Deceleia. year xix. A. C. 413. Ol. 91. 3. The Peloponnesians send away their men of arms for Sicily.

19. The next spring, in the very beginning, earlier than ever before, the Lacedæmonians and their confederates entered with their army into Attica, under the command of Agis the son of Archidamus, their king. And first they wasted the champagne country; and then went in hand with the wall at Deceleia, dividing the work amongst the army, according to their cities. This Deceleia is from the city of Athens, at the most, but one hundred and twenty furlongs: and about as much or a little more from Bœotia. This fort they made in the plain, and in the most opportune place that could be to annoy the Athenians, and in sight of the city. Now the Peloponnesians and their confederates in Attica, went on with their fortification. They in Peloponnesus, sent away their ships with the men of arms about the same time into Sicily: of which the Lacedæmonians, out of the best of their Helotes and men made newly free, sent in the whole six hundred, and Eccritus a Spartan for commander: and the Bœotians three hundred, under the conduct of Xenon and Nikon, Thebans, and Hegesander, a Thespian. And these set forth first, and put to sea at Tænarus in Laconia. After them a little, the Corinthians sent away five hundred more, part from the city itself of Corinth, and part mercenary Arcadians; and Alexarchus, a Corinthian, for captain. The Sicyonians also sent two hundred with them that went from Corinth, and Sargeus a Sicyonian for captain. Now the twenty-five Corinthian galleys that were manned in winter, lay opposite to the twenty galleys of Athens which were at Naupactus, till such time as the men of

arms in the ships from Peloponnesus might get away: for which purpose they were also set out at first, that the Athenians might not have their minds upon these ships so much as upon the galleys.

Year xix. A. C. 413. Ol. 91. 3. The Athenians send out Demosthenes towards Sicily.

20. In the meantime also the Athenians, whilst Deceleia was fortifying, in the beginning of the spring, sent twenty galleys about Peloponnesus under the command of Charicles the son of Apollodorus; with order when he came to Argos, to take aboard the men of arms which the Argives were to send them, according to league: and sent away Demosthenes (as they intended before) into Sicily, with threescore galleys of Athens and five of Chios, and one thousand two hundred men of arms of the roll of Athens, and as many of the islanders as they could get, provided by their subject confederates of all other necessities for the war. But he had order to join first with Charicles, and help him to make war first upon Laconia. So Demosthenes went to Ægina, and stayed there both for the remnant of his own army, if any were left behind, and for Charicles till he had taken aboard the Argives.

Gylippus persuadeth the Syracusians to fight by sea. year xix. A. C. 413. Ol. 91. 3.

21. In Sicily, about the same time of the spring, Gylippus also returned to Syracuse, bringing with him from the cities he had dealt withal as great forces as severally he could get from them. And having assembled the Syracusians, he told them that they ought to man as many galleys as they could, and make trial of a battle by sea: and that he hoped thereby to perform somewhat to the benefit of the war, which should be worthy the danger. Hermocrates also was none of the least means of getting them to undertake the Athenians with their navy: who told them, “that neither the Athenians had this skill by sea hereditary, or from everlasting; but were

more inland men than the Syracusians, and forced to become seamen by the Medes: and that to daring men, such as the Athenians are, they are most formidable that are as daring against them; for wherewith they terrify their neighbours, which is not always the advantage of power, but boldness of enterprizing, with the same shall they in like manner be terrified by their enemies". "He knew it," he said, "certainly, that the Syracusians by their unexpected daring to encounter the Athenian navy, would get more advantage in respect of the fear it would cause, than the Athenians should endamage them by their odds of skill." He bade them therefore to make trial of their navy, and to be afraid no longer. The Syracusians, on these persuasions of Gylippus and Hermocrates, and others if any were, became now extremely desirous to fight by sea: and presently manned their galleys.

The Syracusians win Plemmyrium, but are beaten by sea. year xix. A. C. 413. Ol. 91. 3. The Syracusians win the works of the Athenians in Plemmyrium. year xix. A. C. 413. Ol. 91. 3. The Athenians get the victory by water.

22. Gylippus, when the navy was ready, drew out his whole power of land soldiers in the beginning of night, meaning to go himself and assault the fortifications in Plemmyrium: withal the galleys of the Syracusians, by appointment, thirty-five of them came up towards it out of the great haven; and forty-five more came about out of the little haven, where also was their arsenal, with purpose to join with those within, and to go together to Plemmyrium, that the Athenians might be troubled on both sides. But the Athenians having quickly manned sixty galleys to oppose them; with twenty-five of them they fought with the thirty-five of the Syracusians in the great haven, and with the rest went to meet those that came about from the little haven. And these fought presently before the mouth of the great haven, and held each other to it for a long time; one side endeavouring to force, the other to defend the entrance. 23. In the meantime, Gylippus (the

Athenians in Plemmyrium being now come down to the water side, and having their minds busied upon the fight of the galleys) betimes in the morning, and on a sudden assaulted the fortifications before they could come back again to defend them; and possessed first the greatest, and afterwards the two lesser: for they that watched in these, when they saw the greatest so easily taken, durst stay no longer. They that fled upon the losing of the first wall, and put themselves into boats and into a certain ship, got hardly into the camp: for whilst the Syracusians in the great haven had yet the better in the fight upon the water, they gave them chase with one nimble galley. But by that time that the other two walls were taken, the Syracusians upon the water were overcome: and the Athenians which fled from those two walls got to their camp with more ease. For those Syracusian galleys that fought before the haven's mouth, having beaten back the Athenians, entered in disorder; and falling foul one on another, gave away the victory unto the Athenians: who put to flight not only them, but also those other by whom they had before been overcome within the haven, and sunk eleven galleys of the Syracusians and slew most of the men aboard them, save only the men of three galleys, whom they took alive. Of their own galleys they lost only three. When they had drawn to land the wreck of the Syracusian galleys, and erected a trophy in the little island over against Plemmyrium, they returned to their camp.

Year xix. A. C. 413. Ol. 91. 3.

24. The Syracusians, though such were their success in the battle by sea, yet they won the fortification in Plemmyrium; and set up three trophies, for every wall one. One of the two walls last taken, they demolished: but two they repaired, and kept with a garrison. At the taking of these walls, many men were slain, and many taken alive: and their goods, which altogether was a great matter, were all taken. For the Athenians using these works for

their storehouse, there was in them much wealth and victual belonging unto merchants, and much unto captains of galleys. For there were sails within it for forty galleys, besides other furniture; and three galleys drawn to land. And this loss of Plemmyrium, was it that most and principally impaired the Athenians' army. For the entrance of their provision was now no longer safe; for the Syracusians lying against them there with their galleys, kept them out, and nothing could be brought in unto them but by fight: and the army besides was thereby otherwise terrified and dejected.

Year xix. A. C. 413. Ol. 91. 3. year xix. A. C. 413. Ol. 91. 3.

25. After this the Syracusians sent out twelve galleys under the command of Agatharchus, a Syracusian. Of which one carried ambassadors into Peloponnesus, to declare what hope they had now of their business, and to instigate them to a sharper war in Attica. The other eleven went into Italy, upon intelligence of certain vessels laden with commodities coming to the Athenian army: which also they met with, and destroyed most of them; and the timber, which for building of galleys the Athenians had ready framed, they burned in the territory of Caulonia. After this they went to Locri: and riding here, there came unto them one of the ships that carried the men of arms of the Thespians, whom the Syracusians took aboard, and went homeward by the coast. The Athenians that watched for them with twenty galleys at Megara, took one of them, and the men that were in her; but could not take the rest: so that they escaped through to Syracuse. There was also a light skirmish in the haven of Syracuse, about the piles which the Syracusians had driven down before their old harbour, to the end that the galleys might ride within, and the Athenians not annoy them by assault. The Athenians having brought to the place a ship of huge greatness, fortified with wooden turrets and covered against fire, caused certain men with [little] boats to go and fasten cords unto the piles, and so broke them up

with craning. Some also the divers did cut up with saws. In the meantime the Syracusians from the harbour, and they from the great ship, shot at each other: till in the end the greatest part of the piles were by the Athenians gotten up. But the greatest difficulty was to get up those piles which lay hidden. For some of them they had so driven in, as that they came not above the water: so that he that should come near, was in danger to be thrown upon them as upon a rock. But these also for reward, the divers went down and sawed asunder. But the Syracusians continually drave down other in their stead. Other devices they had against each other, as was not unlikely between armies so near opposed: and many light skirmishes passed, and attempts of all kinds were put in execution. The Syracusians moreover sent ambassadors, some Corinthians, some Ambraciotes, and some Lacedæmonians, unto the cities about them: to let them know that they had won Plemmyrium; and that in the battle by sea, they were not overcome by the strength of the enemy, but by their own disorder; and also to show what hope they were in in other respects, and to entreat their aid both of sea and land forces: forsomuch as the Athenians expecting another army, if they would send aid before it came whereby to overthrow that which they had now there, the war would be at an end. Thus stood the affairs of Sicily.

Demosthenes in his way to Sicily fortifieth a neck of land in Laconia.

26. Demosthenes, as soon as his forces which he was to carry to the succour of those in Sicily were gotten together, put to sea from Ægina, and sailing into Peloponnesus joined with Charicles and the thirty galleys that were with him. And having taken aboard some men of arms of the Argives, came to Laconia; and first wasted part of the territory of Epidaurus Limera. From thence going to that part of Laconia which is over against the island Cythera, where there is a temple of Apollo, they wasted a part of the country: and fortified an isthmus there, both that the Helotes might have a refuge in it running away from the Lacedæmonians, and that freebooters

from thence, as from Pylus, might fetch in prizes from the territory adjoining. As soon as the place was taken in, Demosthenes himself went on to Corcyra, to take up the confederates there, with intent to go thence speedily into Sicily. And Charicles having stayed to finish and put a garrison into the fortification, went afterwards with his thirty galleys to Athens: and the Argives also went home.

Year xix. A. C. 413. Ol. 91. 3. The aids of the Thracians come too late to go into Sicily. The incommunities which befell the Athenians by the fortification in Deceleia. year xix. A. C. 413. Ol. 91. 3. year xix. A. C. 413. Ol. 91. 3.

27. The same winter also came to Athens a thousand and three hundred targetiers, of those called Machærophori of the race of them that are called Dii: and were to have gone with Demosthenes into Sicily. But coming too late, the Athenians resolved to send them back again into Thrace, as being too chargeable a matter to entertain them only for the war in Deceleia: for their pay was to have been a drachma a man by the day. For Deceleia being this summer fortified first by the whole army, and then by the several cities maintained with a garrison by turns, much endamaged the Athenians; and weakened their estate, both by destroying their commodities and consuming of their men, so as nothing more. For the former invasions, having been short, hindered them not from reaping the benefit of the earth for the rest of the time. But now, the enemy continually lying upon them, and sometimes with greater forces, sometimes of necessity with the ordinary garrison making incursions and fetching in booty, Agis the king of Lacedæmon being always there in person and diligently prosecuting the war: the Athenians were thereby very grievously afflicted. For they were not only deprived of the fruit of the land, but also above twenty thousand of their slaves fled over to the enemy, whereof the greatest part were artificers: besides they lost all their sheep and oxen. And by the continual going out of the Athenian horsemen, making excursions to Deceleia and defending the

country, their horses became partly lamed through incessant labour in rugged grounds, and partly wounded by the enemy. 28. And their provision, which formerly they used to bring in from Eubœa by Oropus the shortest way, through Deceleia by land, they were now forced to fetch in by sea at great cost about the promontory of Sunium. And whatsoever the city was wont to be served withal from without, it now wanted: and instead of a city was become as it were a fort. And the Athenians watching on the battlements of the wall, in the day time by turns, but in the night, both winter and summer, all at once (except the horsemen), part at the walls and part at the arms, were quite tired. But that which pressed them most, was that they had two wars at once. And yet their obstinacy was so great, as no man would have believed till now they saw it. For being besieged at home from the fortification of the Peloponnesians, no man would have imagined that they should not only not have recalled their army out of Sicily, but have also besieged Syracuse there, a city of itself no less than Athens: and therein so much have exceeded the expectation of the rest of the Grecians both in power and courage, (who in the beginning of this war conceived, that if the Peloponnesians invaded their territory, some of them, that they might hold out two years, others three, no man more), as that in the seventeenth year after they were first invaded they should have undertaken an expedition into Sicily, and being every way weakened already by the former war, have undergone another, not inferior to that which they had before with the Peloponnesians. Now their treasure being by these wars, and by the detriment sustained from Deceleia, and other great expenses that came upon them, at a very low ebb, about this time they imposed on such as were under their dominion, a twentieth part of all goods passing by sea for a tribute; by this means to improve their comings in. For their expenses were not now as before; but so much greater, by how much the war was greater: and their revenue besides cut off.

The Thracians sent back, in their way sack the city of Mycalessus. year xix. A. C. 413. Ol. 91. 3. The barbarous cruelty of the Thracians. year xix. A. C. 413. Ol. 91. 3.

29. The Thracians, therefore, that came too late to go with Demosthenes, they presently sent back, as being unwilling to lay out money in such a scarcity: and gave the charge of carrying them back to Diitrephes, with command as he went along those coasts, (for his way was through the Euripus), if occasion served, to do somewhat against the enemy. He accordingly landed them by Tanagra, and hastily fetched in some small booty. Then going over the Euripus from Chalcis in Eubœa, he disembarked again in Bœotia and led his soldiers towards Mycalessus; and lay all night at the temple of Mercury undiscovered, which is distant from Mycalessus about sixteen furlongs. The next day he cometh to the city, being a very great one, and taketh it: for they kept no watch, nor expected that any man would have come in and assaulted them so far from the sea. Their walls also were but weak, in some places fallen down, and in others low-built: and their gates open through security. The Thracians entering into Mycalessus, spoiled both houses and temples, slew the people, without mercy on old or young, but killed all they could light on, both women and children; yea, and the labouring cattle, and whatsoever other living thing they saw. For the nation of the Thracians, where they dare, are extreme bloody, equal to any of the barbarians. Insomuch as there was put in practice at this time, besides other disorder, all forms of slaughter that could be imagined: they likewise fell upon the school-house, which was in the city a great one, and the children newly entered into it; and killed them every one. And the calamity of the whole city, as it was as great as ever befell any, so also was it more unexpected and more bitter. 30. The Thebans hearing of it, came out to help them: and overtaking the Thracians before they had gone far, both recovered the booty, and chased them to the Euripus and to the sea, where

the galleys lay that brought them. Some of them they killed: of those most in their going aboard; for swim they could not; and such as were in the [small] boats, when they saw how things went a-land, had thrust off their boats, and lay without the Euripus. In the rest of the retreat, the Thracians behaved themselves not unhandsomely against the Theban horsemen, by whom they were charged first: but running out, and again rallying themselves in a circle, according to the manner of their country, defended themselves well, and lost but few men in that action. But some also they lost in the city itself, whilst they stayed behind for pillage. But in the whole of thirteen hundred there were slain [only] two hundred and fifty. Of the Thebans and others that came out to help the city, there were slain, horsemen and men of arms, one with another about twenty; and amongst them Scirphondas of Thebes, one of the governors of Bœotia: and of the Mycallesians there perished a part. Thus went the matter at Mycalessus: the loss which it received being, for the quantity of the city, no less to be lamented than any that happened in the whole war.

Year xix. A. C. 413. Ol. 91. 3. Eurymedon cometh to Demosthenes out of Sicily, and telleth him of the taking of Plemmyrium.

Demosthenes and Eurymedon levy forces for Sicily.

31. Demosthenes going from Corcyra after his fortifying in Laconia, found a ship lying in Pheia of Elis, and in her certain men of arms of Corinth, ready to go into Sicily. The ship he sunk: but the men escaped, and afterwards getting another ship went on in their voyage. After this, Demosthenes being about Zacynthus and Cephallenia, took aboard their men of arms, and sent to Naupactus for the Messenians. From thence he crossed over to the continent of Acarnania, to Alyzea and Anactorium, which belonged to the Athenians. Whilst he was in these parts, he met with Eurymedon out of Sicily, that had been sent in winter unto the army with commodities: who told him amongst other things, how he had heard by the

way after he was at sea, that the Syracusians had won Plemmyrium. Conon also, the captain of Naupactus, came to them, and related that the twenty-five galleys of Corinth that lay before Naupactus would not give over war and yet delayed to fight: and therefore desired to have some galleys sent him, as being unable with his eighteen to give battle to twenty-five of the enemy. Whereupon Demosthenes and Eurymedon sent ten galleys more to those at Naupactus, the nimblest of the whole fleet, by Conon himself: and went themselves about furnishing of what belonged to the army. Of whom Eurymedon went to Corcyra, and having appointed them there to man fifteen galleys, levied men of arms: for now giving over his course to Athens, he joined with Demosthenes, as having been elected with him in the charge of general: and Demosthenes took up slingers and darters in the parts about Acarnania.

Year xix. A. C. 413. Ol. 91. 3. Nicias overthroweth the new supply going to Syracuse from the neighbouring cities, and killeth eight hundred of them.

32. The ambassadors of the Syracusians, which after the taking of Plemmyrium had been sent unto the cities about, having now obtained and levied an army amongst them, were conducting the same to Syracuse. But Nicias, upon intelligence thereof, sent unto such cities of the Siculi as had the passages and were their confederates, the Centoripines, Halicyæans, and others, not to suffer the enemy to go by, but to unite themselves and stop them: for that they would not so much as offer to pass any other way, seeing the Agrigentines had already denied them. When the Sicilians were marching, the Siculi, as the Athenians had desired them, put themselves in ambush in three several places: and setting upon them unawares and on a sudden, slew about eight hundred of them, and all the ambassadors save only one, a Corinthian: which conducted the rest that escaped, being about fifteen hundred, to Syracuse. 33. About the same time came unto them also

the aid of the Camarinæans, five hundred men of arms, three hundred darters, and three hundred archers. Also the Geloans sent them men for five galleys, besides four hundred darters and two hundred horsemen. For now all Sicily, except the Agrigentines, who were neutral; but all the rest, who before stood looking on, came in to the Syracusian side against the Athenians. [Nevertheless], the Syracusians, after this blow received amongst the Siculi, held their hands; and assaulted not the Athenians for a while.

Year xix. A. C. 413. Ol. 91. 3. year xix. A. C. 413. Ol. 91. 3.

Demosthenes and Eurymedon having their army now ready, crossed over from Corcyra and the continent with the whole army to the promontory of Iapygia. From thence they went to the Chœrades, islands of Iapygia: and here took in certain Iapygian darters to the number of two hundred and fifty, of the Messapian nation. And having renewed a certain ancient alliance with Artas, who reigned there and granted them those darters, they went thence to Metapontum, a city of Italy. There by virtue of a league, they got two galleys and three hundred darters: which taken aboard, they kept along the shore till they came to the territory of Thurii. Here they found the adverse faction to the Athenians to have been lately driven out in a sedition. And because they desired to muster their army here, that they might see if any were left behind; and persuade the Thurians to join with them freely in the war, and, as things stood, to have for friends and enemies the same that were so to the Athenians: they stayed about that in the territory of the Thurians.

The battle by sea before Naupactus between the Corinthians and Athenians. year xix. A. C. 413. Ol. 91. 3. year xix. A. C. 413. Ol. 91. 4.

34. The Peloponnesians and the rest, who were at the same time in the twenty-five galleys that for safeguard of the ships lay opposite to the

galleys before Naupactus, having prepared themselves for battle, and with more galleys, so as they were little inferior in number to those of the Athenians, went to an anchor under Irineus of Achaia in Rhypica. The place where they rode was in form like a half moon; and their land forces they had ready on either side to assist them, both Corinthians and other their confederates of those parts, embattled upon the points of the promontory; and their galleys made up the space between, under the command of Polyanthes, a Corinthian. Against these the Athenians came up with thirty-three galleys from Naupactus, commanded by Diphilus. The Corinthians at first lay still; but afterwards when they saw their time, and the signal given, they charged the Athenians, and the fight began. They held each other to it long. The Athenians sunk three galleys of the Corinthians: and though none of their own were sunk, yet seven were made unserviceable, which having encountered the Corinthian galleys a-head, were torn on both sides between the beaks and the oars by the beaks of the Corinthian galleys, made stronger for the same purpose. After they had fought with equal fortune, and so as both sides challenged the victory; though yet the Athenians were masters of the wrecks, as driven by the wind into the main, and because the Corinthians came not out to renew the fight; they at length parted. There was no chasing of men that fled, nor a prisoner taken on either side; because the Peloponnesians and Corinthians fighting near the land easily escaped, nor was there any galley of the Athenians sunk. But when the Athenians were gone back to Naupactus, the Corinthians presently set up a trophy as victors; in regard that more of the Athenian galleys were made unserviceable, than of theirs; and thought themselves not to have had the worse, for the same reason that the others thought themselves not to have had the better. For the Corinthians think they have the better, when they have not much the worse: and the Athenians think they have the worse, when they have not much the better. And when the Peloponnesians were

gone and their army by land dissolved, the Athenians also set up a trophy in Achaia, as if the victory had been theirs; distant from Erineus, where the Peloponnesians rode, about twenty furlongs. This was the success of that battle by sea.

Demosthenes and Eurymedon come along the shore of Italy, and take up forces. year xix. A. C. 413. Ol. 91. 4.

35. Demosthenes and Eurymedon, after the Thurians had put in readiness to go with them seven hundred men of arms and three hundred darters, commanded their galleys to go along the coast to Croton; and conducted their land soldiers, having first taken a muster of them all upon the side of the river Sybaris, through the territory of the Thurians. But coming to the river Hylas, upon word sent them from the men of Croton, that if the army went through their territory it should be against their will, they marched down to the seaside and to the mouth of the river Hylas; where they stayed all that night, and were met by their galleys. The next day embarking, they kept along the shore and touched at every town saving Locri, till they arrived at Petra in the territory of Rhegium.

The Syracusians make ready their galleys to fight with the Athenians there before the supply came. Their manner of strengthening their galleys. year xix. A. C. 413. Ol. 91. 4. year xix. A. C. 413. Ol. 91. 4.

36. The Syracusians in the meantime, upon intelligence of their coming on, resolved to try again what they could do with their navy; and with their new supply of landmen, which they had gotten together on purpose to fight with the Athenians before Demosthenes and Eurymedon should arrive. And they furnished their navy, both otherwise and according to the advantages they had learnt in the last battle, and also made shorter the heads of their galleys, and thereby stronger; and made beaks to them of a great thickness, which they also strengthened with rafters fastened to the sides of the galleys, both within and without, of six cubits long: in such manner as the

Corinthians had armed their galleys a-head, to fight with those before Naupactus. For the Syracusians made account, that against the Athenian galleys not so built, but weak before, as not using so much to meet the enemy a-head as upon the side by fetching a compass, they could not but have the better; and that to fight in the great haven many galleys in not much room, was an advantage to them: for that using the direct encounter, they should break with their firm and thick beaks the hollow and infirm foreparts of the galleys of their enemies; and that the Athenians, in that narrow room, would want means both to go about and to go through them, which was the point of art they most relied on. For as for their passing through, they would hinder it themselves as much as they could: and for fetching compass, the straitness of the place would not suffer it. And that fighting a-head, which seemed before to be want of skill in the masters [to do otherwise], was it they would now principally make use of: for in this would be their principal advantage. For the Athenians, if overcome, would have no retiring but to the land, which was but a little way off and little in compass, near their own camp: and of the rest of the haven themselves should be masters. And the enemy being pressed, could not choose, thronging together into a little room and all into one and the same place, but disorder one another: which was indeed the thing, that in all their battles by sea did the Athenians the greatest hurt; having not, as the Syracusians had, the liberty of the whole haven to retire unto. And to go about into a place of more room, they having it in their power to set upon them from the main sea, and to retire again at pleasure, they should never be able; especially having Plemmyrium for enemy, and the haven's mouth not being large.

The Athenians and Syracusians fight. year xix. A. C. 413. Ol. 91. 4.

37. The Syracusians having devised thus much over and above their former skill and strength, and far more confident now since the former battle by sea, assaulted them both with their army and with their navy at

once. The landmen from the city Gylippus drew sooner out a little, and brought them to the wall of the Athenians' camp upon the side toward the city: and from Olympieium, the men of arms all that were there, and the horsemen and light armed of the Syracusians came up to the wall on the other side. And by and by after, came sailing forth also the galleys of the Syracusians and their confederates. The Athenians, that thought at first they would have made the attempt only with their landmen, seeing also the galleys on a sudden coming towards them, were in confusion; and some of them put themselves in order upon and before the walls, against those that came from the city: and others went out to meet the horsemen and darters, that were coming in great numbers and with speed from Olympieium and the parts without: others again went aboard, and withal came to aid those ashore. But when the galleys were manned they put off, being seventy-five in number; and those of Syracuse about eighty. 38. Having spent much of the day in charging and retiring and trying each other, and performed nothing worth the mentioning, save that the Syracusians sunk a galley or two of the Athenians, they parted again: and the land soldiers retired at the same time from the wall of the Athenian camp. The next day the Syracusians lay still, without showing any sign of what they meant to do. Yet Nicias seeing that the battle by sea was with equality, and imagining that they would fight again, made the captains to repair their galleys, such as had been torn: and two great ships to be moored without those piles which he had driven into the sea before his galleys, to be instead of a haven enclosed. These ships he placed about two acres' breadth asunder: to the end, if any galley chanced to be pressed, it might safely run in and again go safely out at leisure. In performing of this, the Athenians spent a whole day from morning until night.

The Athenians and Syracusians fight again. The stratagem of Ariston, a master of a galley. year xix. A. C. 413. Ol. 91. 4. year xix. A. C. 413. Ol.

91. 4.

39. The next day the Syracusians assaulted the Athenians again with the same forces, both by sea and land, that they had done before; but begun earlier in the morning; and being opposed fleet against fleet, they drew out a great part of the day, now again as before, in attempting upon each other without effect. Till at last Ariston the son of Pyrrhichus, a Corinthian, the most expert master that the Syracusians had in their fleet, persuaded the commanders in the navy to send to such in the city as it belonged to, and command that the market should be speedily kept at the sea-side, and to compel every man to bring thither whatsoever he had fit for meat, and there to sell it: that the mariners disembarking, might presently dine by the galleys' side, and quickly again unlooked-for assault the Athenians afresh the same day. 40. This advice being liked, they sent a messenger, and the market was furnished. And the Syracusians suddenly rowed astern towards the city; and disembarking, dined there right on the shore. The Athenians, supposing they had retired towards the city as vanquished, landed at leisure: and amongst other business went about the dressing of their dinner, as not expecting to have fought again the same day. But the Syracusians suddenly going aboard, came towards them again: and the Athenians, in great tumult and for the most part undined, embarking disorderly, at length with much ado went out to meet them. For a while they held their hands on both sides, and but observed each other. But anon after, the Athenians thought not fit, by longer dallying, to overcome themselves with their own labour, but rather to fight as soon as they could; and thereupon at once with a joint shout charged the enemy, and the fight began. The Syracusians received [and resisted] their charge; and fighting, as they had before determined, with their galleys head to head with those of the Athenians, and provided with beaks for the purpose, brake the galleys of the Athenians very much between the heads of the galleys and the oars. The Athenians were also

annoyed much by the darters from the decks; but much more by those Syracusians, who going about in small boats passed under the rows of the oars of the enemy's galleys, and coming close to their sides, threw their darts at the mariners from thence.

The Syracusians have the victory.

41. The Syracusians having fought in this manner with the utmost of their strength, in the end gat the victory: and the Athenians, between the [two] ships, escaped into their harbour. The Syracusian galleys chased them as far as to those ships: but the dolphins hanging from the masts over the entrance of the harbour, forbade them to follow any further. Yet there were two galleys, which upon a jollity after victory approached them, but both were lost: of which one with her men and all was taken. The Syracusians, after they had sunk seven galleys of the Athenians and torn many more, and of the men had taken some alive and killed others, retired, and for both the battles erected trophies: and had already an assured hope of being far superior by sea, and also made account to subdue the army by land. And they prepared to assault them again in both kinds.

Demosthenes and Eurymedon with a new army arrive at Syracuse. year xix. A. C. 413. Ol. 91. 4. Demosthenes attempteth to win the wall which the Syracusians had built through Epipolæ to exclude the proceeding of the wall of the Athenians. year xix. A. C. 413. Ol. 91. 4. year xix. A. C. 413. Ol. 91. 4. year xix. A. C. 413. Ol. 91. 4.

42. In the meantime Demosthenes and Eurymedon arrived with the Athenian supply; being about seventy-three galleys, and men of arms, of their own and of their confederates, about five thousand; besides darters, as well barbarians as Greeks, not a few, and slingers and archers, and all other provision sufficient. For the present it not a little daunted the Syracusians and their confederates, to see no end of their danger; and that, notwithstanding the fortifying in Deceleia, another army should come now

equal and like unto their former; and that their power should be so great in every kind. And on the other side, it was a kind of strengthening after weakness to the Athenian army that was there before. Demosthenes, when he saw how things stood, and thinking it unfit to loiter and fall into Nicias his case: — for Nicias, who was formidable at his first coming, when he set not presently upon Syracuse but wintered at Catana, both grew into contempt, and was prevented also by the coming of Gylippus thither with an army out of Peloponnesus: the which, if Nicias had gone against Syracuse at first, had never been so much as sent for: for supposing themselves to have been strong enough alone, they had at once both found themselves too weak, and the city been enclosed with a wall; whereby, though they had sent for it, it could not have helped them as it did: — Demosthenes, I say, considering this, and that he also even at the present and the same day was most terrible to the enemy, intended with all speed to make use of this present terribleness of the army. And having observed that the cross wall of the Syracusians, wherewith they hindered the Athenians from enclosing the city, was but single; and that if they could be masters of the ascent to Epipolæ, and again of the camp there, the same might easily be taken, (for none would have stood against them): hasted to put it to trial, and thought it his shortest way to the dispatching of the war. For either he should have success, he thought, and so win Syracuse, or he would lead away the army, and no longer without purpose consume both the Athenians there with him and the whole state. The Athenians therefore went out, and first wasted the territory of the Syracusians about the river Anapus; and were the stronger, as at first, both by sea and land. For the Syracusians durst neither way go out against them, but only with their horsemen and darters from Olympieium. 43. After this, Demosthenes thought good to try the wall which the Athenians had built to enclose the city withal, with engines. But seeing the engines were burnt by the defendants fighting from the wall, and

that having assaulted it in divers parts with the rest of his army, he was notwithstanding put back, he resolved to spend the time no longer; but having gotten the consent of Nicias and the rest in commission thereunto, to put in execution his design for Epipolæ, as was before intended. By day, it was thought impossible not to be discovered, either in their approach or in their ascent. Having therefore first commanded to take five days' provision of victual, and all the masons and workmen, as also store of casting weapons, and whatsoever they might need, if they overcame, for fortification: he and Eurymedon and Menander, with the whole army, marched about midnight to Epipolæ, leaving Nicias in the camp. Being come to Epipolæ at Euryelus, where also the army went up before, they were not only not discovered by the Syracusians that kept the watch, but ascending took a certain fortification of the Syracusians there, and killed part of them that kept it. But the greatest number escaping, ran presently to the camps, of which there were in Epipolæ three walled about without the city, one of Syracusians, one of other Sicilians, and one of confederates, and carried the news of their coming in, and told it to those six hundred Syracusians that kept this part of Epipolæ at the first; who presently went forth to meet them. But Demosthenes and the Athenians lighting on them, though they fought valiantly, put them to flight; and presently marched on, making use of the present heat of the army to finish what he came for before it were too late: and others [going on] in their first course took the cross-wall of the Syracusians, they flying that kept it, and were throwing down the battlements thereof. The Syracusians, and their confederates, and Gylippus and those with him, came out to meet them from their camps: but because the attempt was unexpected and in the night, they charged the Athenians timorously, and were even at first forced to retire. But as the Athenians advanced more out of order, [chiefly] as having already gotten the victory, but desiring also quickly to pass through all that remained yet

unfoughten with, lest through their remissness in following they might again rally themselves; the Bœotians withstood them first, and charging forced them to turn their backs.

Year xix. A. C. 413. Ol. 91. 4. The Athenians fly. year xix. A. C. 413. Ol. 91. 4.

44. And here the Athenians were mightily in disorder and perplexed: so that it hath been very hard to be informed of any side, in what manner each thing passed. For if in the day time, when things are better seen, yet they that are present cannot tell how all things go, save only what every man with much ado seeth near unto himself: how then in a battle by night, (the only one that happened between great armies in all this war), can a man know anything for certain? For though the moon shined bright, yet they saw one another no otherwise than as by the moonlight was likely: so as to see a body, but not be sure whether it were a friend or not. And the men of arms on both sides, being not a few in number, had but little ground to turn in. Of the Athenians, some were already overcome, others went on in their first way. Also a great part of the rest of the army was already, part gotten up, and part ascending, and knew not which way to march. For after the Athenians once turned their backs, all before them was in confusion; and it was hard to distinguish of anything for the noise. For the Syracusians and their confederates prevailing, encouraged each other and received the assailants with exceeding great shouts: (for they had no other means in the night to express themselves): and the Athenians sought each other, and took for enemies all before them, though friends and of the number of those that fled; and by often asking the word, there being no other means of distinction, all asking at once they both made a great deal of stir amongst themselves, and revealed the word to the enemy. But they did not in like manner know the word of the Syracusians; because these, being victorious and undistracted, knew one another better: so that when they lighted on any

number of the enemy, though they themselves were more, yet the enemy escaped as knowing the watchword; but they, when they could not answer, were slain. But that which hurt them most was the tune of the Pæan: which being in both armies the same, drave them to their wits' end. For the Argives and Corcyræans, and all other of the Doric race on the Athenians' part, when they sounded the Pæan, terrified the Athenians on one side: and the enemy terrified them with the like on the other side. Wherefore at the last, falling one upon another in divers parts of the army, friends against friends, and countrymen against countrymen, they not only terrified each other, but came to hand-strokes and could hardly again be parted. As they fled before the enemy, the way of the descent from Epipolæ by which they were to go back being but strait, many of them threw themselves down from the rocks, and died so. And of the rest that gat down safely into the plain, though the greatest part, and all that were of the old army by their knowledge of the country, escaped into the camp: yet of these that came last, some lost their way; and straying in the fields, when the day came on were cut off by the Syracusian horsemen that ranged the country about.

45. The next day the Syracusians erected two trophies; one in Epipolæ at the ascent, and another where the first check was given by the Bœotians. The Athenians received their dead under truce. And many there were that died, both of themselves and of their confederates: but the arms taken were more than for the number of the slain. For of such as were forced to quit their bucklers and leap down from the rocks, though some perished, yet some there also were that escaped.

The Syracusians send for more supplies, and hope to win the Athenian camp.

46. After this, the Syracusians having by such unlooked-for prosperity recovered their former courage, sent Sicanus with fifteen galleys to Agrigentum, being in sedition; to bring that city, if they could, to their

obedience. And Gylippus went again to the Sicilian cities by land, to raise yet another army, as being in hope to take the camp of the Athenians by assault, considering how the matter had gone in Epipolæ.

The Athenian year xix. A. C. 413. Ol. 91. 4. commanders take council what to do. The advice of Demosthenes.

47. In the meantime the Athenian generals went to council upon their late overthrow, and present general weakness of the army. For they saw not only that their designs prospered not, but that the soldiers also were weary of staying. For they were troubled with sickness, proceeding from a double cause; this being the time of the year most obnoxious to diseases, and the place where they lay moorish and noisome: and all things else appeared desperate. Demosthenes thought fit to stay no longer; and since the execution of his design at Epipolæ had failed, delivered his opinion for going out of the haven, whilst the seas were open, and whilst, at least with this addition of galleys, they were stronger than the army of the enemy. "For it was better," he said, "for the city to make war upon those which fortify against them at home, than against the Syracusians; seeing they cannot now be easily overcome: and there was no reason why they should spend much money in lying before the city." This was the opinion of Demosthenes.

The opinion of Nicias. year xix. A. C. 413. Ol. 91. 4. year xix. A. C. 413. Ol. 91. 4.

48. Nicias, though he also thought their estate bad, yet was unwilling to have their weakness discovered; and by decreeing of their departure openly with the votes of many, to make known the same to the enemy; for if at any time they had a mind to be gone, they should then be less able to do it secretly. Besides, the estate of the enemy, inasmuch as he understood it better than the rest, put him into some hope that it might yet grow worse than their own, in case they pressed the siege; especially being already

masters of the sea, far and near, with their present fleet. There was moreover a party for the Athenians in Syracuse, that desired to betray the state into their hands: and that sent messengers unto him, and suffered him not to rise and be gone. All which he knowing, though he were in truth doubtful what opinion to be of, and did yet consider; nevertheless openly in his speech, he was against the withdrawing of the army: and said, “that he was sure the people of Athens would take it ill, if he went thence without their order: for that they were not to have such judges as should give sentence upon their own sight of things done, rather than upon the report of calumniators; but such as would believe whatsoever some fine speaker should accuse them of. That many, nay most of the soldiers here, who now cry out upon their misery, will there cry out on the contrary; and say the generals have betrayed the state, and come away for a bribe. That he would not therefore, knowing the nature of the Athenians so well, choose to be put to death unjustly, and charged with a dishonourable crime by the Athenians, rather than, if he must needs do one, to suffer the same at the hand of the enemy by his own adventure. And yet,” he said, “the state of the Syracusians was still inferior to their own. For paying much money to strangers, and laying out much more on forts [without and about the city]; having also had a great navy a year already in pay; they must needs want money at last, and all these things fail them. For they have spent already two thousand talents, and are much in debt besides. And whensoever they shall give over this course and make pay no longer, their strength is gone; as being auxiliary, and not constrained to follow the war, as the Athenians are. Therefore it was fit,” he said, “to stay close to the city; and not to go away as if they were too weak in money, wherein they were much superior.”

49. Nicias, when he spake this, assured them of it, as knowing the state of Syracuse precisely and their want of money; and that there were some that desired to betray the city to the Athenians, and sent him word not to go. Withal he had now confidence in the fleet, which, as being before overcome, he had not. As for lying where they did, Demosthenes would by no means hear of it. But if the army might not be carried away without order from the Athenians, but must needs stay in Sicily; then, he said, they might go to Thapsus or Catana, from whence by their landmen they might invade and turn much of the country to them and wasting the fields of the enemies, weaken the Syracusians; and be to fight with their galleys in the main sea, and not in a narrow, (which is the advantage of the enemy), but in a wide place, where the benefit of skill should be theirs; and where they should not be forced, in charging and retiring, to come up and fall off in narrow and circumscribed limits. In sum he said, he by no means liked to stay where they were: but with all speed, no longer delaying the matter, to arise and be gone. Eurymedon also gave the like counsel. Nevertheless, upon the contradiction of Nicias, there grew a kind of sloth and procrastination in the business; and a suspicion withal, that the asseveration of Nicias was grounded on somewhat that he knew above the rest. And thereupon the Athenians deferred their going thence, and stayed upon the place.

Gylippus returneth with another army from the cities of Sicily. year xix. A. C. 413. Ol. 91. 4. The Athenians out of superstition forbear to remove, because of an eclipse of the moon. year xix. A. C. 413. Ol. 91. 4.

50. In the meantime Gylippus and Sicanus returned unto Syracuse. Sicanus without his purpose at Agrigentum; for whilst he was yet in Gela, the sedition which had been raised in the behalf of the Syracusians was turned into friendship: but Gylippus not without another great army out of Sicily, besides the men of arms, which having set forth from Peloponnesus

in ships the spring before, were then lately arrived at Selinus from out of Afric. For having been driven into Afric, and the Cyrenæans having given them two galleys with pilots, in passing by the shore they aided the Euesperitæ besieged by the Africans; and having overcome the Africans, they went over to Neapolis, a town of traffic belonging to the Carthagenians; where the passage into Sicily is shortest, and but two days and a night's sail over; and from thence they crossed the sea to Selinus. As soon as they were come, the Syracusians again presently prepared to set upon the Athenians, both by sea and land. The Athenian generals seeing them have another army, and their own not bettering, but every day growing worse than other, but especially as being pressed to it by the sickness of the soldiers, repented now that they removed not before: and Nicias being now no longer against it as he was, but desirous only that it might not be concluded openly, gave order unto all as secretly as was possible to put forth of the harbour, and to be ready when the sign should be given. But when they were about it, and everything was ready, the moon happened to be eclipsed: for it was full moon. And not only the greatest part of the Athenians called upon the generals to stay, but Nicias also (for he was addicted to superstition and observations of that kind somewhat too much) said that it should come no more into debate whether they should go or not, till the three times nine days were past, which the soothsayers appoint in that behalf. And the Athenians, though upon going, stayed still for this reason.

The Syracusians assault the Athenian camp with their landsoldiers. year xix. A. C. 413. Ol. 91. 4. The Syracusians overcome the Athenians again by sea.

51. The Syracusians also having intelligence of this, were encouraged unto the pressing of the Athenians much the more: for that they confessed themselves already too weak for them, both by sea and land; for else they

would never have sought to have run away. Besides, they would not have them sit down in any other part of Sicily, and become the harder to be warred on; but had rather thereright, and in a place most for their own advantage, compel them to fight by sea. To which end they manned their galleys; and after they had rested as long as was sufficient, when they saw their time, the first day they assaulted the Athenians' camp. And some small number of men of arms and horsemen of the Athenians sallied out against them by certain gates: and the Syracusians intercepting some of the men of arms, beat them back into the camp. But the entrance being strait, there were seventy of the horsemen lost; and men of arms some, but not many. 52. The next day they came out with their galleys, seventy-six in number, and the Athenians set forth against them with eighty-six; and being come together, they fought. Eurymedon had charge of the right wing of the Athenians; and desiring to encompass the galleys of the enemies, drew forth his own galleys in length more towards the shore; and was cut off by the Syracusians, that had first overcome the middle battle of the Athenians, from the rest, in the bottom and inmost part of the haven; and both slain himself, and the galleys that were with him lost. And that done, the rest of the Athenian fleet was also chased and driven ashore.

Year xix. A. C. 413. Ol. 91. 4.

53. Gylippus, when he saw the navy of the enemy vanquished, and carried past the piles and their own harbour, came with a part of his army to the pier to kill such as landed, and to cause that the Syracusians might the easier pull the enemy's galleys from the shore, whereof themselves were masters. But the Tuscans, who kept guard in that part for the Athenians, seeing them coming that way in disorder, made head: and charging these first, forced them into the marsh called Lysimeleia. But when afterwards a greater number of the Syracusians and their confederates came to help

them, then also the Athenians, to help the Tuscans, and for fear to lose their galleys, fought with them; and having overcome them, pursued them, and not only slew many of their men of arms, but also saved the most of their galleys, and brought them back into the harbour. Nevertheless the Syracusians took eighteen, and slew the men taken in them. And amongst the rest they let drive before the wind (which blew right upon the Athenians) an old ship full of faggots and brands set on fire, to burn them. The Athenians on the other side, fearing the loss of their navy, devised remedies for the fire: and having quenched the flame and kept the ship from coming near, escaped that danger.

54. After this the Syracusians set up a trophy, both for the battle by sea, and for the men of arms which they intercepted above before the camp, where also they took the horses. And the Athenians erected a trophy likewise, both for the flight of those footmen which the Tuscans drave into the marsh, and for those which they themselves put to flight with the rest of the army.

The Athenians dejected, repent of the voyage. year xix. A. C. 413. Ol. 91. 4.

55. When the Syracusians had now manifestly overcome their fleet; (for they feared at first the supply of galleys that came with Demosthenes); the Athenians were in good earnest utterly out of heart. And as they were much deceived in the event, so they repented more of the voyage. For having come against these cities, the only ones that were for institution like unto their own, and governed by the people as well as themselves, and which had a navy and horses and greatness; seeing they could create no dissension amongst them about change of government, to win them that way, nor could subdue it with the greatness of their forces when they were far the stronger, but misprospered in most of their designs; they were then at their wits' end:

but now, when they were also vanquished by sea, (which they would never have thought), they were much more dejected than ever.

The Syracusians intend to keep in the Athenians, and reckon upon the glory of a full victory. year xix. A. C. 413. Ol. 91. 4. The nations that were at the wars of Syracuse on the one side or other.

56. The Syracusians went presently about the haven without fear, and meditated how to shut up the same: that the Athenians might not steal away without their knowledge, though they would. For now they studied not only how to save themselves, but how to hinder the safety of the Athenians. For the Syracusians conceived, not untruly, that their own strength was at this present the greater; and that if they could vanquish the Athenians and their confederates both by sea and land, it would be a mastery of great honour to them amongst the rest of the Grecians. For all the rest of Greece should be one part freed by it, and the other part out of fear of subjection hereafter: for it would be impossible for the Athenians, with the remainder of their strength, to sustain the war that would be made upon them afterwards. And they being reputed the authors of it, should be had in admiration, not only with all men now living, but also with posterity. And to say truth, it was a worthy mastery; both for the causes shewn, and also for that they became victors not of the Athenians only, but many others their confederates; nor again they themselves alone, but their confederates also, having been in joint command with the Corinthians and Lacedæmonians, and both exposed their city to the first hazard, and of the business by sea performed the greatest part themselves. The greatest number of nations, except the general roll of those which in this war adhered to Athens and Lacedæmon, were together at this one city.

Athenians. Lemnians. Imbrians. Æginetæ. year xix. A. C. 413. Ol. 91. 4. Hestîæans of Eubœa. Eretrians. Chalcideans. Styrians. Carystians. Ceians. Andrians. Tenians. Milesians. Samians. Chians. Methymnæans. Tenedians.

Ænians. Plataëans. year xix. A. C. 413. Ol. 91. 4. Rhodians and Cythereans. Cephallenians. Zacynthians. Corcyræans. Messenians. Megareans. Argives. year xix. A. C. 413. Ol. 91. 4. Mantineans and other Arcadians. Cretans. Ætolians. Acarnanians. Thurians. Metapontians. Naxians. Catanæans. Egestæans. Tuscans. Iapygians.

57. And this number on both sides, against Sicily and for it, some to help win, and some to help save it, came to the war at Syracuse: not on any pretence of right, nor as kindred to aid kindred, but as profit or necessity severally chanced to induce them. The Athenians being Ionic, went against the Syracusians that be Doric, voluntarily. With these, as being their colonies, went the Lemnians and Imbrians, and the Æginetæ that dwelt in Ægina then, all of the same language and institutions with themselves: also the Hestîæans of Eubœa. Of the rest, some went with them as their subjects, and some as their free confederates; and some also hired. Subjects and tributaries: as the Eretrians, Chalcideans, Styrians, and Carystians, from Eubœa: Ceians, Andrians, Tenians, from out of the islands: Milesians, Samians, and Chians, from Ionia. Of these the Chians followed them as free, not as tributaries of money, but of galleys. And these were almost all of them Ionians, descended from the Athenians; except only the Carystians, that are of the nation of the Dryopes. And though they were subjects and went upon constraint, yet they were Ionians against Dorians. Besides these there went with them Æolians: namely, the Methymnæans, subjects to Athens, not tributaries of money but of galleys; and the Tenedians and Ænians, tributaries. Now here, Æolians were constrained to fight against Æolians; namely, against their founders the Bœotians, that took part with the Syracusians. But the Plataëans, and only they, being Bœotians, fought against Bœotians upon just quarrel. The Rhodians and Cythereans, Doric both, by constraint bore arms; one of them, namely the Cythereans, a colony of the Lacedæmonians, with the Athenians against the

Lacedæmonians that were with Gylippus; and the other, that is to say, the Rhodians, being by descent Argives, not only against the Syracusians, who were also Doric, but against their own colony, the Geloans, which took part with the Syracusians. Then of the islanders about Peloponnesus, there went with them the Cephallenians and Zacynthians: not but that they were free states, but because they were kept in awe as islanders by the Athenians, who were masters of the sea. And the Corcyræans, being not only Doric but Corinthians, fought openly against both Corinthians and Syracusians, though a colony of the one, and of kin to the other: which they did necessarily, (to make the best of it); but indeed no less willingly, in respect of their hatred to the Corinthians. Also the Messenians now so called, in Naupactus, were taken along to this war; and the Messenians at Pylus, then holden by the Athenians. Moreover the Megarean outlaws, though not many, by advantage taken of their misery, were fain to fight against the Selinuntians that were Megareans likewise. But now the rest of their army was rather voluntary. The Argives not so much for the league, as for their enmity against the Lacedæmonians and their present particular spleen, followed the Athenians to the war though Ionic, against Dorians. And the Mantineans and other Arcadian mercenaries went with them, as men accustomed ever to invade the enemy shewed them: and now for gain had for enemies, as much as any, those other Arcadians which went thither with the Corinthians. The Cretans and Ætolians were all mercenary: and it fell out, that the Cretans, who together with the Rhodians were founders of Gela, not only took not part with their colony, but fought against it willingly for their hire. And some Acarnanians also went with them for gain: but most of them went as confederates, in love to Demosthenes and for good will to the state of Athens. And thus many within the bound of the Ionian gulf. Then of Italians, fallen into the same necessity of seditious times, there went with them to this war the Thurians and Metapontians: of Greek

Sicilians, the Naxians and Catanæans. Of barbarian, the Egestæans, who also drew with them the most of those Greek Sicilians. Without Sicily, there went with them some Tuscans, upon quarrels between them and the Syracusians; and some Iapygian mercenaries. These were the nations that followed the army of the Athenians.

Year xix. A. C. 413. Ol. 91. 4. Syracusians. Camarinæans. Himeræans. Siculi. Lacedæmonians. Corinthians. Leucadians. Ambraciotes. Arcadian mercenaries. Sicyonians.

58. On the other side, there opposed them on the part of the Syracusians, the Camarinæans their borders: and beyond them again the Geloans: and then (the Agrigentines not stirring) beyond them again the same way, the Selinuntians. These inhabit the part of Sicily that lieth opposite to Afric. Then the Himeræans, on the side that lieth on the Tyrrhene sea, where they are the only Grecians inhabiting, and only aided them. These were their confederates of the Greek nation within Sicily; all Dorians and free states. Then of the barbarians there, they had the Siculi, all but what revolted to the Athenians. For Grecians without Sicily, the Lacedæmonians sent them a Spartan commander, with some Helotes and the rest freedmen. Then aided them both with galleys and with land-men, the Corinthians only; and for kindred's sake, the Leucadians and Ambraciotes: out of Arcadia, those mercenaries sent by the Corinthians: and Sicyonians on constraint: and from without Peloponnesus, the Bœotians. To the foreign aids the Sicilians themselves, as being great cities, added more in every kind than as much again: for they got together men of arms, galleys, and horses, great store, and other number in abundance. And to all these again the Syracusians themselves added, as I may say, about as much more, in respect of the greatness both of their city and of their danger.

Year xix. A. C. 413. Ol. 91. 4. The Syracusians shut up the haven.

59. These were the succours assembled on either part, and which were then all there: and after them came no more, neither to the one side nor the other. No marvel then, if the Syracusians thought it a noble mastery, if to the victory by sea already gotten they could add the taking of the whole Athenian army, so great as it was; and hinder their escape both by sea and land. Presently therefore they fall in hand with stopping up the mouth of the great haven, being about eight furlongs wide, with galleys laid cross and lighters and boats upon their anchors: and withal prepared whatsoever else was necessary in case the Athenians would hazard another battle; meditating on no small matters in anything.

Year xix. A. C. 413. Ol. 91. 4.

60. The Athenians, seeing the shutting up of the haven and the rest of the enemy's designs, thought good to go to council upon it. And the generals and commanders of regiments having met and considered their present want, both otherwise and in this, that they neither had provision for the present, (for upon their resolution to be gone, they had sent before to Catana to forbid the sending in of any more), nor were likely to have for the future unless their navy got the upper hand: they resolved to abandon their camp above, and to take in some place, no greater than needs they must, near unto their galleys, with a wall; and leaving some to keep it, to go aboard with the rest of the army, and to man every galley they had, serviceable and less serviceable: and having caused all sorts of men to go aboard and fight it out, if they gat the victory, to go to Catana; if not, to make their retreat in order of battle by land (having first set fire on their navy) the nearest way unto some amicable place, either barbarian or Grecian, that they should best be able to reach unto before the enemy.

As they had concluded, so they did. For they both came down to the shore from their camp above: and also manned every galley they had, and

compelled to go aboard every man of age of any ability whatsoever. So the whole navy was manned to the number of one hundred and ten galleys: upon which they had many archers and darters, both Acarnanians and other strangers, and all things else provided according to their means and purpose. And Nicias, when almost everything was ready, perceiving the soldiers to be dejected for being so far overcome by sea, contrary to their custom, and yet in respect of the scarcity of victual desirous as soon as could be to fight, called them together, and encouraged them then the first time with words to this effect:

the oration of nicias. year xix. A. C. 413. Ol. 91. 4. Oration of Nicias year xix. A. C. 413. Ol. 91. 4. Oration of Nicias year xix. A. C. 413. Ol. 91. 4. Oration of Nicias

61. "Soldiers, Athenians and other our confederates, [though] the trial at hand will be common to all alike, and will concern the safety and country no less of each of us than of the enemy: (for if our galleys get the victory, we may every one see his native city again): yet ought we not to be discouraged like men of no experience, who failing in their first adventures, ever after carry a fear suitable to their misfortunes. But you Athenians here present, having had experience already of many wars, and you our confederates, that have always gone along with our armies, remember how often the event falleth out otherwise in war than one would think: and in hope that fortune will once also be of our side, prepare yourselves to fight again in such manner as shall be worthy the number you see yourselves to be. 62. What we thought would be helps in the narrowness of the haven, against such a multitude of galleys as will be there, and against the provision of the enemy upon their decks, whereby we were formerly annoyed, we have with the masters now considered them all; and as well as our present means will permit, made them ready. For many archers and darters shall go aboard: and that multitude, which if we had been to fight in

the main sea we would not have used, because by slugging the galleys it would take away the use of skill, will nevertheless be useful here, where we are forced to make a landfight from our galleys. We have also devised, instead of what should have been provided for in the building of our galleys, against the thickness of the beaks of theirs, which did most hurt us, to lash their galleys unto ours with iron grapnels: whereby (if the men of arms do their part) we may keep the galleys which once come close up from falling back again. For we are brought to a necessity now, of making it a land-fight upon the water: and it will be the best for us neither to fall back ourselves, nor to suffer the enemy to do so; especially when, except what our men on land shall make good, the shore is altogether hostile. 63. Which you remembering, must therefore fight it out to the utmost, and not suffer yourselves to be beaten back unto the shore: but when galley to galley shall once be fallen close, never think any cause worthy to make you part, unless you have first beaten off the men of arms of the enemy from their decks. And this I speak to you rather that are the men of arms, than to the mariners: inasmuch as that part belongeth rather unto you that fight above; and in you it lieth even yet to achieve the victory for the most part with the landmen. Now for the mariners, I advise, and withal beseech them, not to be too much daunted with the losses past; having now both a greater number of galleys, and greater forces upon the decks. Think it a pleasure worth preserving, that being taken, by your knowledge of the language and imitation of our fashions, for Athenians (though you be not so), you are not only admired for it through all Greece, but also partake of our dominion in matter of profit, no less than ourselves; and for awfulness to the nations subject and protection from injury, more. You therefore that alone participate freely of our dominion, cannot with any justice betray the same. In despite therefore of the Corinthians, whom you have often vanquished, and of the Sicilians, who as long as our fleet was at the best durst never so

much as stand us, repel them: and make it appear that your knowledge even with weakness and loss, is better than the strength of another with fortune. 64. Again, to such of you as are Athenians, I must remember this: that you have no more such fleets in your harbours, nor such able men of arms; and that if aught happen to you but victory, your enemies here will presently be upon you at home; and those at home will be unable to defend themselves, both against those that shall go hence, and against the enemy that lieth there already. So one part of us shall fall into the mercy of the Syracusians, against whom you yourselves know with what intent you came hither: and the other part which is at home, shall fall into the hands of the Lacedæmonians. Being therefore in this one battle to fight both for yourselves and them, be therefore valiant now if ever: and bear in mind every one of you, that you that go now aboard, are the land forces, the sea forces, the whole estate and great name of Athens. For which, if any man excel others in skill or courage, he can never shew it more opportunely than now, when he may both help himself with it and the whole.”

Year xix. A. C. 413. Ol. 91. 4.

65. Nicias having thus encouraged them, commanded presently to go aboard. Gylippus and the Syracusians might easily discern that the Athenians meant to fight, by seeing their preparation. Besides, they had advertisement of their purpose to cast iron grapnels into their galleys; and as for everything else, so also for that they had made provision. For they covered the fore-part of their galleys, and also the decks for a great way, with hides: that the grapnels cast in might slip, and not be able to take hold. When all was ready, Gylippus likewise and the other commanders used unto their soldiers this hortative:

the oration of gylippus and the syracusian generals. year xix. A. C. 413. Ol. 91. 4. Oration of Gylippus and the Syracusian generals. year xix. A. C.

413. Ol. 91. 4. Oration of Gylippus and the Syracusan generals.

66. “That not only our former acts have been honourable, but that we are to fight now also for further honour, men of Syracuse and confederates, the most of you seem to know already; for else you never would so valiantly have undergone it: and if there be any man that is not so sensible of it as he ought, we will make it appear unto him better. For whereas the Athenians came into this country, with design first to enslave Sicily, and then if that succeeded, Peloponnesus and the rest of Greece; and whereas already they had the greatest dominion of any Grecians whatsoever, either present or past: you, the first that ever withstood their navy, wherewith they were everywhere masters, have in the former battles overcome them, and shall in likelihood overcome them again in this. For men that are cut short where they thought themselves to exceed, become afterwards further out of opinion with themselves than they would have been if they had never thought so: and when they come short of their hope in things they glory in, they come short also in courage of the true strength of their forces. And this is likely now to be the case of the Athenians. 67. Whereas with us it falleth out, that our former courage, wherewith though unexperienced we durst stand them, being now confirmed, and an opinion added of being the stronger, giveth to every one of us a double hope. And in all enterprises, the greatest hope conferreth for the most part the greatest courage. As for their imitation of our provisions, they are things we are acquainted withal, and we shall not in any kind be unprovided for them. But they, when they shall have many men of arms upon their decks, being not used to it; and many, as I may term them, land-darters, both Acarnanians and others, who would not be able to direct their darts though they should sit; how can they choose but put the galleys into danger, and be all in confusion amongst themselves, moving in a fashion not their own? As for the number of their galleys, it will help them nothing: if any of you fear also that, as being to fight against

odds in number. For many in little room are so much the slower to do what they desire, and easiest to be annoyed by our munition. But the very truth you shall now understand by these things, whereof we suppose we have most certain intelligence. Overwhelmed with calamities, and forced by the difficulties which they are in at this present, they are grown desperate; not trusting to their forces, but willing to put themselves upon the decision of fortune, as well as they may; that so they may either go out by force, or else make their retreat afterward by land, as men whose estates cannot change into the worse.

Year xix. A. C. 413. Ol. 91. 4.

68. “Against such confusion, therefore, and against the fortune of our greatest enemies now betraying itself into our hands, let us fight with anger: and with an opinion, not only that it is most lawful to fulfil our hearts’ desire upon those our enemies, that justified their coming hither as a righting of themselves against an assailant; but also, that to be revenged on an enemy, is both most natural, and, as is most commonly said, the sweetest thing in the world. And that they are our enemies, and our greatest enemies, you all well enough know; seeing them come hither into our dominion to bring us into servitude. Wherein if they had sped, they had put the men to the greatest tortures, the women and children to the greatest dishonesty, and the whole city to the most ignominious name in the world. In regard whereof, it is not fit that any of you should be so tender, as to think it gain if they go away without putting you to further danger; for so they mean to do, though they get the victory: but effecting (as it is likely we shall) what we intend, both to be revenged of these, and to deliver unto all Sicily their liberty, which they enjoyed before, but now is more assured. Honourable is that combat, and rare are those hazards, wherein the failing bringeth little loss, and the success a great deal of profit.”

1st September. Nicias encourageth his soldiers anew. year xix. A. C. 413. Ol. 91. 4. He prepareth to fight. year xix. A. C. 413. Ol. 91. 4. The Athenians and Syracusians fight. year xix. A. C. 413. Ol. 91. 4.

69. When Gylippus and the commanders of the Syracusians had in this manner encouraged their soldiers, they presently put their men on board; perceiving the Athenians to do the same. Nicias perplexed with this present estate, and seeing how great and how near the danger was, being now on the point to put forth from the harbour; and doubting, as in great battles it falleth out, that somewhat in every kind was still wanting, and that he had not yet sufficiently spoken his mind, called unto him again all the captains of galleys, and spake unto them every one by their fathers, their tribes, and their proper names, and entreated every one of them that had reputation in any kind, not to betray the same; and those whose ancestors were eminent, not to deface their hereditary virtues; remembering them of their country's liberty, and the uncontrolled power of all men to live as they pleased: and saying whatsoever else in such a pinch men are accustomed, not out of their store, to utter things stale, and in all occasions the same, touching their wives, children, and patrial gods, but such things as being thought by them available in the present discouragement, they use to cry into their ears. And when he thought he had admonished them, not enough, but as much as the time would permit him, he went his way, and drew out those forces that were to serve on land on the sea-side: and embattled them so as they might take up the greatest length of ground they were able, thereby so much the more to confirm the courage of them that were aboard. And Demosthenes, Menander, and Eudemus, (for those of the Athenian commanders went aboard), putting forth of the harbour, went immediately to the lock of the haven, and to the passage that was left open, with intention to force their way out. 70. But the Syracusians and their confederates, being out already with the same number of galleys they had before, disposed part of them to

the guard of the open passage, and the rest in circle about the haven; to the end they might fall upon the Athenians from all parts at once, and that their land-forces might withal be near to aid them wheresoever the galleys touched. In the Syracusian navy commanded Sicanus and Agatharchus, each of them over a wing; and Pythen, with the Corinthians, had the middle battle. After the Athenians were come to the lock of the haven, at the first charge they overcame the galleys placed there to guard it, and endeavoured to break open the bars thereof. But when afterwards the Syracusians and confederates came upon them from every side, they fought not at the lock only, but also in the haven itself: and the battle was sharp, and such as there had never before been the like. For the courage wherewith the mariners on both sides brought up their galleys to any part they were bidden, was very great, and great was the plotting and counterplotting, and contention one against another of the masters: also the soldiers, when the galleys boarded each other, did their utmost to excel each other in all points of skill that could be used upon the decks: and every man, in the place assigned him, put himself forth to appear the foremost. But many galleys falling close together in a narrow compass, (for they were the most galleys that in any battle they had used, and fought in the least room: being little fewer on the one side and the other than two hundred), they ran against each other but seldom, because there was no means of retiring nor of passing by, but made assaults upon each other oftener, as galley with galley, either flying or pursuing, chanced to fall foul. And as long as a galley was making up, they that stood on the decks used their darts and arrows and stones in abundance: but being once come close, the soldiers at hand-strokes attempted to board each other. And in many places it so fell out, through want of room, that they which ran upon a galley on one side, were run upon themselves on the other; and that two galleys, or sometimes more, were forced to lie aboard of one; and that the masters were at once to have a care, not in one place only,

but in many together, how to defend on the one side, and how to offend on the other: and the great noise of many galleys fallen foul of one another, both amazed them and took away their hearing of what their directors directed. For they directed thick and loud on both sides, not only as art required, but out of their present eagerness: the Athenians crying out to theirs to force the passage, and now if ever valiantly to lay hold upon their safe return to their country; and the Syracusians and their confederates to theirs, how. honourable a thing to every one of them it would be to hinder their escape, and by this victory to improve every man the honour of his own country. Moreover, the commanders of either side, where they saw any man without necessity to row a–stern, would call unto the captain of the galley by his name, and ask him, the Athenians, whether he retired because he thought the most hostile land to be more their friend than the sea, which they had so long been masters of: the Syracusians theirs, whether when they knew that the Athenians desired earnestly by any means to fly, they would nevertheless fly from the flyers.

The diversity of passion of them that beheld the year xix. A. C. 413. Ol. 91. 4. fight from the shore. year xix. A. C. 413. Ol. 91. 4. The Athenians fly.

71. Whilst the conflict was upon the water, the land–men had a conflict, and sided with them in their affections: they of the place, contending for increase of the honours they had already gotten; and the invaders, fearing a worse estate than they were already in. For the Athenians, who had their whole fortune at stake in their galleys, were in such a fear of the event as they had never been in the like: and were thereby of necessity to behold the fight upon the water with very different passions. For the sight being near, and not looking all of them upon one and the same part, he that saw their own side prevail took heart, and fell to calling upon the gods, that they would not deprive them of their safety: and they that saw them have the worse, not only lamented, but shrieked outright; and had their minds more

subdued by the sight of what was done, than they that were present in the battle itself. Others that looked on some part where the fight was equal, because the contention continued so as they could make no judgment on it, with gesture of body on every occasion agreeable to their expectation, passed the time in a miserable perplexity. For they were ever within a little either of escaping, or of perishing. And one might hear in one and the same army, as long as the fight upon the water was indifferent, at one and the same time lamentations, shouts that they won, that they lost: and whatsoever else a great army in great danger is forced differently to utter. They also that were aboard suffered the same: till at last the Syracusians and their confederates, after long resistance on the other side, put them to flight, and manifestly pressing, chased them with great clamour and encouragement of their own to the shore. And the sea-forces making to the shore, some one way and some another, except only such as were lost by being far from it, escaped into the harbour. And the army that was upon the land, no longer now of different passions, with one and the same vehemence, all with shrieks and sighs unable to sustain what befel, ran part to save the galleys, part to the defence of the camp: and the residue, who were far the greatest number, fell presently to consider every one of the best way to save himself. And this was the time wherein of all other they stood in greatest fear, and they suffered now the like to what they had made others to suffer before at Pylus. For the Lacedæmonians then, besides the loss of their fleet, lost the men which they had set over into the island: and the Athenians now, without some accident not to be expected, were out of all hope to save themselves by land.

Year xix. A. C. 413. Ol. 91. 4. The stratagem of Hermocrates, to hinder the escape of the Athenians. year xix. A. C. 413. Ol. 91. 4.

2d September. Gylippus goeth out with his forces, and besets the way. year xix. A. C. 413. Ol. 91. 4.

72. After this cruel battle, and many galleys and men on either side consumed, the Syracusians and their confederates, having the victory, took up the wreck and the bodies of their dead: and returning into the city, erected a trophy. But the Athenians, in respect of the greatness of their present loss, never thought upon asking leave to take up their dead or wreck: but fell immediately to consultation how to be gone the same night. And Demosthenes coming unto Nicias, delivered his opinion for going once again aboard, and forcing the passage, if it were possible, betimes the next morning, saying that their galleys which were yet remaining and serviceable were more than those of the enemy: for the Athenians had yet left them about sixty, and the Syracusians under fifty. But when Nicias approved the advice, and would have manned out the galleys, the mariners refused to go aboard: as being not only dejected with their defeat, but also without opinion of ever having the upperhand any more. Whereupon they now resolved all to make their retreat by land. 73. But Hermocrates of Syracuse suspecting their purpose, and apprehending it as a matter dangerous that so great an army, going away by land and sitting down in some part or other of Sicily, should there renew the war, repaired unto the magistrates: and admonished them, that it was not fit, through negligence, to suffer the enemy in the night time to go their ways, (alleging what he thought best to the purpose); but that all the Syracusians and their confederates should go out and fortify in their way, and prepossess all the narrow passages with a guard. Now they were all of them of the same opinion no less than himself, and thought it fit to be done: but they conceived withal, that the soldier now joyful and taking his ease after a sore battle, being also holiday, (for it was their day of sacrifice to Hercules), would not easily be brought to obey. For through excess of joy for the victory, they would most of them, being holiday, be drinking; and look for anything rather than to be persuaded at this time to take up arms again and go out. But seeing the magistrates upon

this consideration thought it hard to be done, Hermocrates not prevailing, of his own head contrived this. Fearing lest the Athenians should pass the worst of their way in the night, and so at ease out-go them, as soon as it grew dark he sent certain of his friends, and with them certain horsemen, to the Athenian camp: who approaching so near as to be heard speak, called to some of them to come forth, as if they had been friends of the Athenians; (for Nicias had some within that used to give him intelligence); and bade them to advise Nicias not to dislodge that night, for that the Syracusians had beset the ways; but that the next day, having had the leisure to furnish their army, they might march away. 74. Upon this advertisement they abode that night, supposing it had been without fraud. And afterwards, because they went not presently, they thought good to stay there that day also, to the end that the soldiers might pack up their necessities as commodiously as they could, and begone, leaving all things else behind them save what was necessary for their bodies. But Gylippus and the Syracusians, with their land forces, went out before them: and not only stopped up the ways in the country about by which the Athenians were likely to pass, and kept a guard at the fords of brooks and rivers, but also stood embattled to receive and stop their army in such places as they thought convenient. And with their galleys they rowed to the harbour of the Athenians, and towed their galleys away from the shore. Some few whereof they burnt, as the Athenians themselves meant to have done: but the rest at their leisure, as any of them chanced in any place to drive ashore, they afterwards hauled into the city.

3rd September. The Athenians march away from before Syracuse by land. year xix. A. C. 413. Ol. 91. 4. year xix. A. C. 413. Ol. 91. 4.

75. After this, when everything seemed unto Nicias and Demosthenes sufficiently prepared, they dislodged, being now the third day from their fight by sea. It was a lamentable departure, not only for the particulars, as that they marched away with the loss of their whole fleet, and that instead

of their great hopes they had endangered both themselves and the state: but also for the dolorous objects which were presented both to the eye and mind of every of them in particular, in the leaving of their camp. For their dead lying unburied, when any one saw his friend on the ground, it struck him at once both with fear and grief. But the living that were sick or wounded, both grieved them more than the dead, and were more miserable. For with entreaties and lamentations they put them to a stand, pleading to be taken along by whomsoever they saw of their fellows or familiars, and hanging on the necks of their comrades, and following as far as they were able: and when the strength of their bodies failed, that they could go no further, with ah—mes! and imprecations were there left. Insomuch as the whole army, filled with tears and irresolute, could hardly get away; though the place were hostile, and they had suffered already, and feared to suffer in the future, more than with tears could be expressed: but hung down their heads, and generally blamed themselves. For they seemed nothing else but even the people of some great city expugned by siege, and making their escape. For the whole number that marched, were no less one with another than forty thousand men. Of which not only the ordinary sort carried every one what he thought he should have occasion to use; but also the men of arms and horsemen, contrary to their custom, carried their victuals under their arms, partly for want and partly for distrust of their servants, who from time to time ran over to the enemy; but at this time went the greatest number. And yet what they carried was not enough to serve the turn: for not a jot more provision was left remaining in the camp. Neither were the sufferings of others, and that equal division of misery, which nevertheless is wont to lighten it, in that we suffer with many, at this time so much as thought light in itself. And the rather, because they considered from what splendour and glory which they enjoyed before, into how low an estate they were now fallen. For never Grecian army so differed from itself. For whereas they

came with a purpose to enslave others, they departed in greater fear of being made slaves themselves; and instead of prayers and hymns with which they put to sea, they went back again with the contrary maledictions; and whereas they came out seamen, they departed landmen, and relied not upon their naval forces but upon their men of arms. Nevertheless, in respect of the great danger yet hanging over them, these miseries seemed all [but] tolerable.

76. Nicias, perceiving the army to be dejected, and the great change that was in it, came up to the ranks, and encouraged and comforted them as far as for the present means he was able. And as he went from part to part he exalted his voice more than ever before, both as being earnest in his exhortation, and because also he desired that the benefit of his words might reach as far as might be.

the oration of nicias to his afflicted army year xix. A. C. 413. Ol. 91. 4.
Oration of Nicias year xix. A. C. 413. Ol. 91. 4. Oration of Nicias

77. "Athenians and confederates, we must hope still, even in our present estate. Men have been saved ere now from greater dangers than these are. Nor ought you too much to accuse yourselves, either for your losses past, or the undeserved miseries we are now in. Even I myself, that have the advantage of none of you in strength of body, (you see how I am in my sickness), nor am I thought inferior to any of you for prosperity past, either in respect of mine own private person or otherwise, am nevertheless now in as much danger as the meanest of you. And yet I have worshipped the gods frequently according to the law, and lived justly and unblameably towards men. For which cause my hope is still confident of the future: though these calamities, as being not according to the measure of our desert, do indeed make me fear. But they may perhaps cease. For both the enemies have already had sufficient fortune: and the gods, if any of them have been displeased with our voyage, have already sufficiently punished us. Others

have invaded their neighbours as well as we: and as their offence, which proceeded of human infirmity, so their punishment also hath been tolerable. And we have reason now, both to hope for more favour from the gods; (for our case deserveth their pity rather than their hatred); and also not to despair of ourselves, seeing how good and how many men of arms you are, marching together in order of battle. Make account of this, that wheresoever you please to sit down, there presently of yourselves you are a city: such as not any other in Sicily can either easily sustain, if you assault, or remove, if you be once seated. Now for your march, that it may be safe and orderly, look to it yourselves; making no other account any of you, but what place soever he shall be forced to fight in, the same, if he win it, must be his country and his walls. March you must with diligence, both night and day alike, for our victual is short: and if we can but reach some amicable territory of the Siculi, (for these are still firm to us for fear of the Syracusians), then you may think yourselves secure. Let us therefore send before to them, and bid them meet us, and bring us forth some supplies of victual. In sum, soldiers, let me tell you it is necessary that you be valiant; for there is no place near, where being cowards you can possibly be saved: whereas if you escape through the enemies at this time, you may every one see again whatsoever anywhere he most desires; and the Athenians may re-erect the great power of their city, how low soever fallen. For the men, not the walls nor the empty galleys, are the city.”

The Athenians march, and the year xix. A. C. 413. Ol. 91. 4. Syracusians assault them always as they go. 4th September. 5th September. year xix. A. C. 413. Ol. 91. 4. 6th September. 7th September. year xix. A. C. 413. Ol. 91. 4.

78. Nicias, as he used this hortative, went withal about the army, and where he saw any man straggle and not march in his rank, he brought him about and set him in his place. Demonsthenes having spoken to the same or

like purpose, did as much to those soldiers under him. And they marched forward, those with Nicias in a square battalion, and then those with Demosthenes in the rear. And the men of arms received those that carried the baggage, and the other multitude, within them. When they were come to the ford of the river Anapus, they there found certain of the Syracusians and their confederates embattled against them on the bank: but these they put to flight, and having won the passage marched forward. But the Syracusian horsemen lay still upon them, and their light-armed plied them with their darts, in the flank. This day the Athenians marched forty furlongs, and lodged that night at the foot of a certain hill. The next day, as soon as it was light, they marched forwards about twenty furlongs; and descending into a certain champaign ground, encamped there, with intent both to get victual at the houses, (for the place was inhabited), and to carry water with them thence: for before them in the way they were to pass, for many furlongs together there was but little to be had. But the Syracusians in the meantime got before them, and cut off their passage with a wall. This was at a steep hill, on either side whereof was the channel of a torrent with steep and rocky banks: and it is called Acræum Lepas. The next day the Athenians went on: and the horsemen and darters of the Syracusians and their confederates, being a great number of both, pressed them so with their horses and darts, that the Athenians after long fight were compelled to retire again into the same camp; but now with less victual than before, because the horsemen would suffer them no more to straggle abroad. 79. In the morning betimes they dislodged, and put themselves on their march again, and forced their way to the hill which the enemy had fortified; where they found before them the Syracusian foot embattled in great length above the fortification [on the hill's side]: for the place itself was but narrow. The Athenians coming up assaulted the wall: but the shot of the enemy, who were many, and the steepness of the hill, (for they could easily cast home

from above), making them unable to take it, they retired again and rested. There happened withal some claps of thunder and a shower of rain, as usually falleth out at this time of the year, being now near autumn: which further disheartened the Athenians, who thought that also this did tend to their destruction. Whilst they lay still, Gylippus and the Syracusians sent part of their army to raise a wall at their backs, in the way they had come: but this the Athenians hindered, by sending against them part of theirs. After this, the Athenians retiring with their whole army into a more champaign ground, lodged there that night: and the next day went forward again. And the Syracusians with their darts, from every part round about, wounded many of them; and when the Athenians charged, they retired, and when they retired, the Syracusians charged; and that especially upon the hindmost, that by putting to flight a few they might terrify the whole army. And for a good while the Athenians in this manner withstood them: and afterwards, being gotten five or six furlongs forward, they rested in the plain: and the Syracusians went from them to their own camp.

Nicias and Demosthenes rise in the night, and march a contrary way: Nicias foremost, and in order; but Demosthenes in the rear, slower and more in disorder. year xix. A. C. 413. Ol. 91. 4. 8th September.

80. This night it was concluded by Nicias and Demosthenes, seeing the miserable estate of their army, and the want already of all necessities, and that many of their men in many assaults of the enemy were wounded, to lead away the army as far as they possibly could: not the way they purposed before, but toward the sea; which was the contrary way to that which the Syracusians guarded. Now this whole journey of the army lay not towards Catana, but towards the other side of Sicily, Camarina and Gela, and the cities, as well Grecian as barbarian, that way. When they had made many fires accordingly, they marched in the night: and (as usually it falleth out in all armies, and most of all in the greatest, to be subject to affright and terror,

especially marching by night and in hostile ground, and the enemy near) were in confusion. The army of Nicias leading the way, kept together and got far afore; but that of Demosthenes, which was the greater half, was both severed from the rest and marched more disorderly. Nevertheless, by the morning betimes they got to the sea-side, and entering into the Helorine way they went on towards the river Cacyparis, to the end when they came thither to march upwards along the river's side through the heart of the country. For they hoped that this way the Siculi, to whom they had sent, would meet them. When they came to the river, here also they found a certain guard of the Syracusians stopping their passage with a wall and with piles. When they had quickly forced this guard, they passed the river, and again marched on to another river, called Erineus: for that was the way which the guides directed them.

Demosthenes overtaken by the enemy, resisteth as long as he can, and is taken. year xix. A. C. 413. Ol. 91. 4. year xix. A. C. 413. Ol. 91. 4. Demosthenes yieldeth.

81. In the meantime the Syracusians and their confederates, as soon as day appeared, and that they knew the Athenians were gone, most of them accusing Gylippus as if he had let them go with his consent, followed them with speed the same way, which they easily understood they were gone; and about dinner time overtook them. When they were come up to those with Demosthenes, who were the hindmost, and had marched more slowly and disorderly than the other part had done, as having been put into disorder in the night, they fell upon them and fought. And the Syracusian horsemen hemmed them in and forced them up into a narrow compass, the more easily now, because they were divided from the rest. Now the army of Nicias was gone by this time one hundred and fifty furlongs further on. For he led away the faster, because he thought not that their safety consisted in staying and fighting voluntarily; but rather in a speedy retreat, and then only

fighting when they could not choose. But Demosthenes was both in greater and more continual toil, in respect that he marched in the rear, and consequently was pressed by the enemy: and seeing the Syracusians pursuing him, he went not on, but put his men in order to fight, till by his stay he was encompassed, and reduced, he and the Athenians with him, into great disorder. For being shut up within a place enclosed round with a wall, and which on either side had a way [open] amongst abundance of olive trees; they were charged from all sides at once with the enemy's shot. For the Syracusians assaulted them in this kind, and not in close battle, upon very good reason. For to hazard battle against men desperate, was not so much for theirs, as for the Athenians' advantage. Besides, after so manifest successes, they spared themselves somewhat; because they were loth to wear themselves out before the end of the business; and thought by this kind of fight to subdue and take them alive. 82. Whereupon, after they had plied the Athenians and their confederates all day long from every side with shot, and saw that with their wounds and other annoyance they were already tired: Gylippus and the Syracusians and their confederates first made proclamation, that if any of the islanders would come over to them, they should be at liberty. And the men of some few cities went over. And by and by after, they made agreement with all the rest that were with Demosthenes; that they should deliver up their arms, and none of them be put to death, neither violently, nor by bonds, nor by want of the necessities of life. And they all yielded, to the number of six thousand men: and the silver they had, they laid it all down, casting it into the hollow of targets; and filled with the same four targets. And these men they carried presently into the city.

9th September. The offer of Nicias to redeem his army not accepted. year xix. A. C. 413. Ol. 91. 4. 10th September. year xix. A. C. 413. Ol. 91. 4. 10th September. year xix. A. C. 413. Ol. 91. 4.

Nicias, and those that were with him, attained the same day to the river Erineus; which passing, he caused his army to sit down upon a certain ground more elevate than the rest. 83. Where the Syracusians the next day overtook and told him, that those with Demosthenes had yielded themselves; and willed him to do the like. But he, not believing it, took truce for a horseman to enquire the truth. Upon return of the horseman, and word that they had yielded, he sent a herald to Gylippus and the Syracusians: saying, that he was content to compound on the part of the Athenians, to repay whatsoever money the Syracusians had laid out, so that his army might be suffered to depart; and that till payment of the money were made, he would deliver them hostages, Athenians, every hostage rated as a talent. But Gylippus and the Syracusians refusing the condition, charged them; and having hemmed them in, plied them with shot, as they had done the other army, from every side till evening. This part of the army was also pinched with the want both of victual and other necessaries. Nevertheless observing the quiet of the night, they were about to march. But no sooner took they their arms up, than the Syracusians perceiving it gave the alarm. Whereupon the Athenians finding themselves discovered, sat down again: all but three hundred, who breaking by force through the guards, marched as far as they could that night. 84. And Nicias, when it was day, led his army forward; the Syracusians and their confederates still pressing them in the same manner, shooting and darting at them from every side. The Athenians hasted to get the river Asinarus; not only because they were urged on every side by the assault of the many horsemen and other multitude, and thought to be more at ease when they were over the river, but out of weariness also and desire to drink. When they were come unto the river, they rushed in without any order, every man striving who should first get over. But the pressing of the enemy, made the passage now more difficult. For being forced to take the river in heaps, they fell upon and

trampled one another under their feet; and falling amongst the spears and utensils of the army, some perished presently; and others catching hold one of another, were carried away together down the stream. And [not only] the Syracusians standing along the farther bank, being a steep one, killed the Athenians with their shot from above, as they were many of them greedily drinking, and troubling one another in the hollow of the river: but the Peloponnesians came also down and slew them with their swords, and those especially that were in the river. And suddenly the water was corrupted: nevertheless they drunk it, foul as it was with blood and mire; and many also fought for it. 85. In the end, when many dead lay heaped in the river, and the army was utterly defeated, part at the river, and part (if any gat away) by the horsemen; Nicias yielded himself unto Gylippus, (having more confidence in him than in the Syracusians): to be for his own person at the discretion of him and the Lacedæmonians, and no further slaughter to be made of the soldiers. Gylippus from thenceforth commanded to take prisoners. So the residue, except such as were hidden from them, (which were many), they carried alive into the city. They sent also to pursue the three hundred which brake through their guards in the night; and took them. That which was left together of this army to the public, was not much; but they that were conveyed away by stealth were very many: and all Sicily was filled with them, because they were not taken, as those with Demosthenes were, by composition. Besides, a great part [of these] were slain; for the slaughter [at this time] was exceeding great, none greater in all the Sicilian war. They were also not a few that died in those other assaults in their march. Nevertheless many also escaped, some then presently, and some by running away after servitude; the rendezvous of whom was Catana.

86. The Syracusians and their confederates being come together, returned with their prisoners, all they could get, and with the spoil, into the city. As for all other the prisoners of the Athenians and their confederates, they put them into the quarries, as the safest custody. But Nicias and Demosthenes they killed, against Gylippus his will. For Gylippus thought the victory would be very honourable, if, over and above all his other success, he could carry home both the generals of the enemy to Lacedæmon. And it fell out that one of them, Demosthenes, was their greatest enemy, for the things he had done in the island and at Pylus; and the other, upon the same occasion, their greatest friend. For Nicias had earnestly laboured to have those prisoners which were taken in the island, to be set at liberty; by persuading the Athenians to the peace. For which cause the Lacedæmonians were inclined to love him: and it was principally in confidence of that, that he rendered himself to Gylippus. But certain Syracusians, as it is reported, some of them for fear (because they had been tampering with him) lest being put to the torture he might bring them into trouble, whereas now they were well enough; and others, especially the Corinthians, fearing he might get away by corruption of one or other, being wealthy, and work them some mischief afresh, having persuaded their confederates to the same, killed him. For these, or for causes near unto these, was he put to death: being the man that, of all the Grecians of my time, had least deserved to be brought to so great a degree of misery.

Year xix. A. C. 413. Ol. 91. 4. year xix. A. C. 413. Ol. 91. 4.

87. As for those in the quarries, the Syracusians handled them at first but ungently. For in this hollow place, first the sun and suffocating air (being without roof) annoyed them one way: and on the other side, the nights coming upon that heat, autumnal and cold, put them, by reason of the alteration, into strange diseases: especially doing all things, for want of

room, in one and the same place; and the carcasses of such as died of their wounds, or change [of air] or other like accident, lying together there on heaps. Also the smell was intolerable: besides that they were afflicted with hunger and thirst. For for eight months together, they allowed no more but to every man a cotyle of water by the day, and two cotyles of corn. And whatsoever misery is probable that men in such a place may suffer, they suffered. Some seventy days they lived thus thronged. Afterwards, retaining the Athenians, and such Sicilians and Italians as were of the army with them, they sold the rest. How many were taken in all, it is hard to say exactly: but they were seven thousand at the fewest. And this was the greatest action that happened in all this war, or at all, that we have heard of amongst the Grecians: being to the victors most glorious, and most calamitous to the vanquished. For being wholly overcome in every kind, and receiving small loss in nothing, their army, and fleet, and all [that ever they had], perished (as they use to say) with an universal destruction. Few of many returned home. And thus passed the business concerning Sicily.

THE EIGHTH BOOK OF THE HISTORY OF THUCYDIDES.

THE PRINCIPAL CONTENTS.

THE REVOLT OF the Athenian confederates and the offers made by Tissaphernes and Pharnabazus, the king's lieutenants of the lower Asia, draw the Lacedæmonians to the war in Ionia and Hellespont. — First in Ionia, and the provinces of Tissaphernes: who, by the counsel of Alcibiades and connivance of Astyochus, hindereth their proceedings. — Alcibiades in the meanwhile, to make way for his return into his country, giveth occasion of sedition about the government: whence ensued the authority of the four hundred, under the pretext of the five thousand: the recalling of Alcibiades by the army: and at length, by his countenance, the deposing again of the four hundred, and end of the sedition. — But in the meantime they lose Eubœa. — Mindarus, the successor of Astyochus, finding himself abused by Tissaphernes, carrieth the war to Pharnabazus into Hellespont: and there presently loseth a battle to the Athenians before Abydos, being then summer and the twenty-first year of the war.

Year xix. A. C. 413. Ol. 91. 4. year xix. A. C. 413. Ol. 91. 4. The fear and sorrow of the Athenians upon hearing of the news. The Athenians resolve to stand it out. year xix. A. C. 413. Ol. 91. 4. The end of the nineteenth summer.

When the news was told at Athens, they believed not a long time, though it were plainly related and by those very soldiers that escaped from the defeat itself, that all was so utterly lost as it was. When they knew it, they were mightily offended with the orators that furthered the voyage: as if they themselves had never decreed it. They were angry also with those that gave out prophecies, and with the soothsayers: and with whosoever else had at first by any divination put them into hope that Sicily should be subdued.

Every thing, from every place, grieved them; and fear and astonishment, the greatest that ever they were in, beset them round. For they were not only grieved for the loss which both every man in particular and the whole city sustained, of so many men of arms, horsemen, and serviceable men, the like whereof they saw was not left: but seeing they had neither galleys in their haven, nor money in their treasury, nor furniture in their galleys, were even desperate at that present of their safety; and thought the enemy out of Sicily would come forthwith with their fleet into Peiræus, especially after the vanquishing of so great a navy; and that the enemy here would surely now, with double preparation in every kind, press them to the utmost both by sea and land, and be aided therein by their revolting confederates. Nevertheless, as far as their means would stretch, it was thought best to stand it out; and getting materials and money where they could have it, to make ready a navy, and to make sure of their confederates, especially those of Eubœa; and to introduce a greater frugality in the city, and to erect a magistracy of the elder sort, as occasion should be offered to preconsult of the business that passed. And they were ready, in respect of their present fear, (as is the people's fashion), to order every thing aright. And as they resolved this, so they did it. And the summer ended.

The Grecians take part all of them against the Athenians. The hopes of the Lacedæmonians. year xix. A. C. 413. Ol. 91. 4.

The winter following, upon the great overthrow of the Athenians in Sicily, all the Grecians were presently up against them. Those who before were confederates of neither side, thought fit no longer, though uncalled, to abstain from the war, but to go against the Athenians of their own accord; as having not only every one severally this thought, that had the Athenians prospered in Sicily they would afterwards have come upon them also, but imagined withal that the rest of the war would be but short, whereof it would be an honour to participate. And such of them as were confederates

of the Lacedæmonians, longed now more than ever to be freed as soon as might be of their great toil. But above all, the cities subject to the Athenians were ready, even beyond their ability, to revolt; as they that judged according to their passion, without admitting reason in the matter, that the next summer they were to remain with victory. But the Lacedæmonians themselves took heart, not only from all this, but also principally from that, that their confederates in Sicily with great power, having another navy now necessarily added to their own, would in all likelihood be with them in the beginning of the spring. And being every way full of hopes, they purposed without delay to fall close to the war: making account, if this were well ended, both to be free hereafter from any more such dangers as the Athenians, if they had gotten Sicily, would have put them into; and also having pulled them down, to have the principality of all Greece now secure unto themselves.

Agis levieth money. year xix. A. C. 413. Ol. 91. 4. The Lacedæmonians appoint a fleet of a hundred galleys to be made ready amongst the cities of league.

Whereupon Agis their king went out with a part of his army the same winter from Deceleia, and levied money amongst the confederates for the building of a navy: and turning into the Melian gulf, upon an old grudge took a great booty from the Cætæans, which he made money of; and forced those of Pthiotis being Achaïans, and others in those parts subjects to the Thessalians, (the Thessalians complaining and unwilling), to give them hostages and money. The hostages he put into Corinth, and endeavoured to draw them into the league. And the Lacedæmonians imposed upon the states confederate, the charge of building one hundred galleys: that is to say, on their own state and on the Bœotians, each twenty-five; on the Phocéans and Locrians, fifteen; on the Corinthians, fifteen; on the Arcadians, Sicyonians, and Pellenians, ten; and on the Megareans, Trœzenians, and

Hermionians, ten. And put all things else in readiness presently with the spring to begin the war.

The Athenians build their navy, and contract their charges.

The Athenians also made their preparations, as they had designed; having gotten timber and built their navy this same winter, and fortified the promontory of Sunium that their cornboats might come about in safety. Also they abandoned the fort in Laconia, which they had built as they went by for Sicily. And generally where there appeared expense upon anything unuseful, they contracted their charge.

The Eubœans year xix. A. C. 413. Ol. 91. 4. offer to revolt to Agis. The Lesbians offer to revolt to Agis. The Chians and Erythræans desire to revolt. year xix. A. C. 413. Ol. 91. 4. Tissaphernes, lieutenant of the lower Asia, laboureth to have the Lacedæmonians come unto him.

Whilst they were on both sides doing thus, there came unto Agis about their revolt from the Athenians, first the ambassadors of the Eubœans. Accepting the motion, he sent for Alcamenes the son of Sthenelaidas and for Melanthus from Lacedæmon, to go commanders into Eubœa. Whom, when he was come to him with about three hundred freedmen, he was now about to send over. But in the meantime came the Lesbians, they also desiring to revolt: and by the means of the Bœotians Agis changed his former resolution, and prepared for the revolt of Lesbos, deferring that of Eubœa; and assigned them Alcamenes, the same that should have gone into Eubœa, for their governor: and the Bœotians promised them ten galleys, and Agis other ten. Now this was done without acquainting therewith the state of Lacedæmon. For Agis, as long as he was about Deceleia with the power he had, had the law in his own hands, to send what army and whither he listed, and to levy men and money at his pleasure. And at this time, the confederates of him (as I may call them) did better obey him, than the confederates of the Lacedæmonians did them at home: for having the power

in his hands, he was terrible wheresoever he came. And he was now for the Lesbians. But the Chians and Erythræans, they also desiring to revolt, went not to Agis, but to the Lacedæmonians in the city: and with them went also an ambassador from Tissaphernes, lieutenant to king Darius in the low countries of Asia. For Tissaphernes also instigated the Peloponnesians, and promised to pay their fleet. For he had lately begged of the king the tribute accruing in his own province; for which he was in arrearage, because he could receive nothing out of any of the Greek cities by reason of the Athenians. And therefore he thought by weakening the Athenians, to receive his tribute the better, and withal to draw the Lacedæmonians into a league with the king: and thereby, as the king had commanded, to kill or take alive Amorges, Pissuthnes his bastard son, who was in rebellion against him about Caria. The Chians therefore and Tissaphernes followed this business jointly.

Year xix. A. C. 413. Ol. 91. 4. Pharnabazus, lieutenant of Hellespont, laboureth the like for himself. year xix. A. C. 413. Ol. 91. 4.

Calligeitus the son of Laophon, a Magarean, and Timagoras the son of Athenagoras, a Cyzicene, both banished their own cities and abiding with Pharnabazus the son of Pharnaces, came also about the same time to Lacedæmon; sent by Pharnabazus to procure a fleet for the Hellespont, that he also, if he could, might cause the Athenian cities in his province to revolt for his tribute's sake, and be the first to draw the Lacedæmonians into league with the king: just the same things that were desired before by Tissaphernes. Now Pharnabazus and Tissaphernes treating apart, there was great canvassing at Lacedæmon, between the one side that persuaded to send to Ionia and Chios, and the other that would have the army and fleet go first into the Hellespont. But the Lacedæmonians indeed approved best by much of the business of the Chians and of Tissaphernes. For with these co-operated Alcibiades, hereditary guest and friend of Endius the ephore of

that year in the highest degree: insomuch as in respect of that guesthood, Alcibiades his family received a Laconic name. For Endius was called Endius Alcibiadis. Nevertheless the Lacedæmonians sent first one Phrynīs, a man of those parts, to Chios, to see if the galleys they had were so many as they reported, and whether the city were otherwise so sufficient as it was said to be. And when the messenger brought back word that all that had been said was true, they received both the Chians and the Erythræans presently into their league: and decreed to send them forty galleys, there being at Chios, from such places as the Chians named, no less than sixty already. And of these at first they were about to send out ten, with Melancrias for admiral: but afterwards, upon occasion of an earthquake, for Melancrias they sent Chalcideus, and instead of ten galleys they went about the making ready of five only in Laconia. So the winter ended: and nineteenth year of this war written by Thucydides.

Year xx. A. C. 412. Ol. 91. 4. The Lacedæmonians send to Corinth to hasten away the fleet to Chios. The confederates in council at Corinth set down year xx. A. C. 412. Ol. 91. 4. an order for the war following, with which to begin and which to follow. The Athenians understand the purpose of the Chians to revolt. year xx. A. C. 412. Ol. 91. 4.

In the beginning of the next summer, because the Chians pressed to have the galleys sent away, and feared lest the Athenians should get notice what they were doing; (for all their ambassadors went out by stealth); the Lacedæmonians send away to Corinth three Spartans, to will them with all speed to transport their galleys over the isthmus to the other sea towards Athens, and to go all to Chios, as well those which Agis had made ready to go to Lesbos as the rest: the number of the galleys of the league which were then there, being forty wanting one. 8. But Calligeitus and Timagoras, who came from Pharnabazus, would have no part in this fleet that went for Chios; nor would deliver the money, twenty-five talents, which they had brought with them, to pay for their setting forth, but made account to go out

with another fleet afterwards by themselves. When Agis saw that the Lacedæmonians meant to send first to Chios, he resolved not of any other course himself; but the confederates assembling at Corinth went to council upon the matter, and concluded thus: that they should go first to Chios under the command of Chalcideus, who was making ready the five galleys at Laconia; and then to Lesbos under the charge of Alcamenes, intended also to be sent thither by Agis; and lastly into Hellespont, in which voyage they ordained that Clearchus, the son of Rhamphias, should have the command; and concluded to carry over the isthmus first the one half of their galleys, and that those should presently put to sea, that the Athenians might have their minds more upon those, than on the other half to be transported afterwards. For they determined to pass that sea openly; contemning the weakness of the Athenians, in respect they had not any navy of importance yet appearing. As they resolved, so presently they carried over one and twenty galleys. 9. But when the rest urged to put to sea, the Corinthians were unwilling to go along before they should have ended the celebration of the Isthmian holidays, then come. Hereupon Agis was content, that they for their parts should observe the Isthmian truce; and he therefore to take the fleet upon himself as his own. But the Corinthians not agreeing to that, and the time passing away, the Athenians got intelligence the easier of the practice of the Chians: and sent thither Aristocrates, one of their generals, to accuse them of it. The Chians denying the matter, he commanded them for their better credit to send along with him some galleys for their aid due by the league: and they sent seven. The cause why they sent these galleys, was the many not acquainted with the practice; and the few and conscious not willing to undergo the enmity of the multitude without having strength first, and their not expecting any longer the coming of the Lacedæmonians, because they had so long delayed them.

The Athenians drive the Peloponnesian galleys into Peiræus, a desert haven, and there besiege them. year xx. A. C. 412. Ol. 91. 4.

In the meantime the Isthmian games were celebrating, and the Athenians (for they had word sent them of it) came and saw; and the business of the Chians grew more apparent. After they went thence, they took order presently that the fleet might not pass from Cenchreïæ undiscovered. And after the holidays were over, the Corinthians put to sea for Chios under the conduct of Alcamenes. And the Athenians at first with equal number came up to them, and endeavoured to draw them out into the main sea: but seeing the Peloponnesians followed not far, but turned another way, the Athenians went also from them. For the seven galleys of Chios, which were part of this number, they durst not trust. But afterwards having manned thirty-seven others, they gave chase to the enemy by the shore, and drave them into Peiræus in the territory of Corinth: (this Peiræus is a desert haven, and the utmost upon the confines of Epidauria). One galley that was far from land, the Peloponnesians lost; the rest they brought together into the haven. But the Athenians charging them by sea with their galleys, and withal setting their men a-land, mightily troubled and disordered them: brake their galleys upon the shore, and slew Alcamenes their commander. And some they lost of their own.

Year xx. A. C. 412. Ol. 91. 4. The voyage of Chalcideus and Alcibiades to Chios.

The fight being ended, they assigned a sufficient number of galleys to lie opposite to those of the enemy, and the rest to lie under a little island not far off: in which also they encamped, and sent to Athens for a supply. For the Peloponnesians had with them for aid of their galleys, the Corinthians the next day: and not long after, divers others of the inhabitants thereabouts. But when they considered that the guarding of them in a desert place would be painful, they knew not what course to take; and once they thought to

have set the galleys on fire: but it was concluded afterwards to draw them to the land, and guard them with their landmen till some good occasion should be offered for their escape. And Agis also, when he heard the news, sent unto them Thermon, a Spartan. The Lacedæmonians having been advertised of the departure of these galleys from the isthmus, (for the ephores had commanded Alcamenes, when he put to sea to send them word by a horseman), were minded presently to have sent away also the five galleys also that were in Laconia, and Chalcideus the commander of them, and with him Alcibiades. But afterwards, as they were ready to go out, came the news of the galleys chased into Periaëus: which so much discouraged them, in respect they stumbled in the very entrance of the Ionic war, that they purposed now, not only not to send away those galleys of their own, but also to call back again some of those that were already at sea.

When Alcibiades saw this, he dealt with Endius and the rest of the ephores again, not to fear the voyage: alleging that they would [make haste, and] be there before the Chians should have heard of the misfortune of the fleet; and that as soon as he should arrive in Ionia himself, he could easily make the cities there to revolt, by declaring unto them the weakness of the Athenians and the diligence of the Lacedæmonians; wherein he should be thought more worthy to be believed than any other. Moreover to Endius he said, that it would be an honour in particular to him, that Ionia should revolt and the king be made confederate to the Lacedæmonians by his own means, and not to have it the mastery of Agis: for he was at difference with Agis. So having prevailed with Endius and the other ephores, he took sea with five galleys, together with Chalcideus of Lacedæmon; and made haste.

Year xx. A. C. 412. Ol. 91. 4. Sixteen galleys of Peloponnesus, intercepted and hardly handled in their return from Sicily by the Athenians, arrive in Corinth. year xx. A. C. 412. Ol. 91. 4.

About the same time came back from Sicily those sixteen galleys of the Peloponnesians, which, having aided Gylippus in that war, were intercepted by the way about Leucadia and evil entreated by twenty–seven galleys of Athens, that watched thereabouts under the command of Hippocles, the son of Menippus, for such galleys as should return out of Sicily. For all the rest, saving one, avoiding the Athenians, were arrived in Corinth before.

Chios and Erythræ revolt. Clazomenæ revolteth. year xx. A. C. 412. Ol. 91. 4.

Chalcideus and Alcibiades, as they sailed, kept prisoner every man they met with by the way; to the end that notice might not be given of their passage. And touching first at Corycus in the continent, where also they dismissed those whom they had apprehended; after conference there with some of the conspirators of the Chians, that advised them to go to the city without sending them word before, they came upon the Chians suddenly and unexpected. It put the commons into much wonder and astonishment: but the few had so ordered the matter beforehand, that an assembly chanced to be holden at the same time. And when Chalcideus and Alcibiades had spoken in the same; and told them that many galleys were coming to them, but not that those other galleys were besieged in Peiræus; the Chians first, and afterwards the Erythræans, revolted from the Athenians. After this they went with three galleys to Clazomenæ, and made that city to revolt also. And the Clazomenians presently crossed over to the continent, and there fortified Polichna: lest they should need a retiring place from the little island wherein they dwelt. The rest also, all that had revolted, fell to fortifying, and making of preparation for the war.

The Athenians abrogate the decree touching the thousand talents reserved for the extremities of state, and furnish out a fleet with the money. year xx. A. C. 412. Ol. 91. 4.

This news of Chios was quickly brought to the Athenians; who conceiving themselves to be now beset with great and evident danger, and that the rest of the confederates, seeing so great a city to revolt, would be no longer quiet, in this their present fear decreed that those thousand talents, which through all this war they had affected to keep untouched, forthwith abrogating the punishment ordained for such as spake or gave their suffrages to stir it, should now be used, and therewith galleys not a few manned. They decreed also to send thither out of hand, under the command of Strombichides the son of Diotimus, eight galleys of the number of those that besieged the enemy at Peiræus; the which, having forsaken their charge to give chase to the galleys that went with Chalcideus, and not able to overtake them, were now returned: and shortly after also to send Thrasycles to help them with twelve galleys more, which also had departed from the same guard upon the enemy. And those seven galleys of Chios, which likewise kept watch at Peiræus with the rest, they fetched from thence, and gave the bondmen that served in them their liberty, and the chains to those that were free. And instead of all those galleys that kept guard upon the galleys of the Peloponnesians, they made ready other with all speed in their places; besides thirty more, which they intended to furnish out afterwards. Great was their diligence; and nothing was of light importance that they went about for the recovery of Chios.

Teos revolteth.

Strombichides in the meantime arrived at Samos: and taking into his company one Samian galley, went thence to Teos, and entreated them not to stir. But towards Teos was Chalcideus also coming with twenty-three galleys from Chios: and with him also the land forces of the Clazomenians and Erythræans. Whereof Strombichides having been advertised, he put forth again before his arrival; and standing off at sea, when he saw the many galleys that came from Chios, he fled towards Samos, they following him.

The land forces, the Teians would not at the first admit: but after this flight of the Athenians, they brought them in. And these for the most part held their hands for a while, expecting the return of Chalcideus from the chase: but when he stayed somewhat long, they fell of themselves to the demolishing of the wall built about the city of Teos by the Athenians towards the continent; wherein they were also helped by some few barbarians, that came down thither under the leading of Tages, deputy lieutenant of Tissaphernes.

Year xx. A. C. 412. Ol. 91. 4. Miletus revolteth.

Chalcideus and Alcibiades, when they had chased Strombichides into Samos, armed the mariners that were in the galleys of Peloponnesus, and left them in Chios; instead of whom they manned with mariners of Chios both those and twenty galleys more: and with this fleet they went to Miletus with intent to cause it to revolt. For the intention of Alcibiades, that was acquainted with the principal Milesians, was to prevent the fleet which was to come from Peloponnesus, and to turn these cities first; that the honour of it might be ascribed to the Chians, to himself, to Chalcideus, and (as he had promised) to Endius that set them out, as having brought most of the cities to revolt with the forces of the Chians only and of those galleys that came with Chalcideus. So these, for the greatest part of their way undiscovered, and arriving not much sooner than Strombichides and Thrasyacles, (who now chancing to be present with [those] twelve galleys from Athens followed them with Strombichides), caused the Milesians to revolt. The Athenians following them at the heels with nineteen galleys, being shut out by the Milesians, lay at anchor at Lada, an island over against the city.

Presently upon the revolt of Miletus was made the first league between the king and the Lacedæmonians by Tissaphernes and Chalcideus, as followeth:

Year xx. A. C. 412. Ol. 91. 4. League between Tissaphernes and the Lacedæmonians.

“The Lacedæmonians and their confederates have made a league with the king and Tissaphernes on these articles:

“Whatsoever territory or cities the king possesseth, and his ancestors have possessed, the same are to remain the king’s.

“Whatsoever money or other profit redounded to the Athenians from their cities, the king and the Lacedæmonians are jointly to hinder, so as the Athenians may receive nothing from thence, neither money nor other thing.

“The king, and the Lacedæmonians and their confederates, are to make joint war against the Athenians. And without consent of both parts it shall not be lawful to lay down the war against the Athenians, neither for the king, nor for the Lacedæmonians and their confederates.

“If any shall revolt from the king, they shall be enemies to the Lacedæmonians and their confederates: and if any shall revolt from the Lacedæmonians and their confederates, they shall in like manner be enemies to the king.”

Year xx. A. C. 412. Ol. 91. 4. Lebedos and Eræ revolt.

This was the league. Presently after this the Chians set out ten galleys more, and went to Anæa: both to hearken what became of the business at Miletus, and also to cause the cities thereabouts to revolt. But word being sent them from Chalcideus to go back, and that Amorges was at hand with his army, they went thence to the temple of Jupiter. [Being there] they descried sixteen galleys more, which had been sent out by the Athenians under the charge of Diomedon after the putting to sea of those with Thrasyclus: upon sight of whom they fled, one galley to Ephesus, the rest towards Teos. Four of them the Athenians took, but empty, the men having gotten on shore: the rest escaped into the city of Teos. And the Athenians

went away again towards Samos. The Chians putting to sea again with the remainder of their fleet and with the land forces, caused first Lebedos to revolt, and then Eræ: and afterwards returned, both with their fleet and landmen, every one to his own.

The Peloponnesians in Peiræus escape. Astyochus admiral of the Peloponnesians. year xx. A. C. 412. Ol. 91. 4. Tissaphernes razeth the remainder of the Athenian wall at Teos.

About the same time, the twenty galleys of Peloponnesus, which the Athenians had formerly chased into Peiræus, and against whom they now lay with a like number, suddenly forced their passage; and having the victory in fight, took four of the Athenian galleys; and going to Cenchreïæ, prepared afresh for their voyage to Chios and Ionia. At which time there came also unto them from Lacedæmon for commander, Astyochus; who was now admiral of the whole navy. When the landmen were gone from Teos, Tissaphernes himself came thither with his forces; and he also demolished the wall as much as was left standing, and went his way again. Not long after the going away of him, came thither Diomedon with ten galleys of Athens. And having made a truce with the Teians, that he also might be received, he put to sea again, and kept the shore to Eræ, and assaulted it; but failing to take it, departed.

It fell out about the same time that the commons of Samos, together with the Athenians who were there with three galleys, made an insurrection against the great men; and slew of them in all about two hundred. And having banished four hundred more, and distributed amongst themselves their lands and houses, (the Athenians having now, as assured of their fidelity, decreed them their liberty), they administered the affairs of the city from that time forward by themselves, no more communicating with the Geomori, nor permitting any of the common people to marry with them.

Year xx. A. C. 412. Ol. 92. 1. The Chians endeavour to turn Lesbos from the Athenians to the Lacedæmonians with their single power: and cause first Methymna, then Mytilene to revolt.

After this, the same summer, the Chians, as they had begun, persevering in their earnestness to bring the cities to revolt, even without the Lacedæmonians, [with their single forces], and desiring to make as many fellows of their danger as they were able, made war by themselves with thirteen galleys against Lesbos: which was according to what was concluded by the Lacedæmonians, namely, to go thither in the second place, and thence into the Hellespont. And withal the land forces, both of such Peloponnesians as were present and of their confederates thereabouts, went along by them to Clazomenæ and Cyme: these under the command of Eualas a Spartan, and the galleys, of Deiniades a man of the parts thereabouts. The galleys putting in at Methymna, caused that city to revolt first.

Year xx. A. C. 412. Ol. 92. 1. The Athenians recover Mytilene Astyochus seeing he could do no good at Lesbos, returned to Chios. year xx. A. C. 412. Ol. 92. 1. The Athenians recover Clazomenæ.

Now Astyochus the Lacedæmonian admiral, having set forth as he intended from Cenchreïæ, arrived at Chios. The third day after his coming thither, came Leon and Diomedon into Lesbos with twenty-five galleys of Athens: for Leon came with a supply of ten galleys more from Athens afterwards. Astyochus in the evening of the same day, taking with him one galley more of Chios, took his way toward Lesbos, to help it what he could: and put in at Pyrrha, and the next day at Eressos. Here he heard that Mytilene was taken by the Athenians, even with the shout of their voices. For the Athenians coming unexpected, entered the haven: and having beaten the galleys of the Chians, disembarked and overcame those that made head against them, and won the city. When Astyochus heard this, both from

the Eressians and from those Chian galleys that came from Methymna with Eubulus; which having been left there before, as soon as Mytilene was lost fled, and three of them chanced to meet with him, (for one was taken by the Athenians); he continued his course for Mytilene no longer: but having caused Eressos to revolt, and armed the soldiers he had aboard, made them to march toward Antissa and Methymna by land, under the conduct of Eteonicus; and he himself with his own galleys and those three of Chios, rowed thither along the shore, hoping that the Methymnæans, upon sight of his forces, would take heart and continue in their revolt. But when in Lesbos all things went against him, he re-embarked his army and returned to Chios. And the landmen that were aboard, and should have gone into Hellespont, went again into their cities. After this came to them six galleys to Chios, of those of the confederate fleet at Cenchreïæ. The Athenians, when they had reestablished the state of Lesbos, went thence and took Polichna, which the Clazomenians had fortified in the continent; and brought them all back again into the city which is in the island, save only the authors of the revolt; for these got away to Daphnus. And Clazomenæ returned to the obedience of the Athenians.

Chalcideus slain.

The same summer, those Athenians that with twenty galleys lay in the isle of Lada before Miletus, landing in the territory of Miletus at Panormus, slew Chalcideus the Lacedæmonian commander, that came out against them but with a few; and set up a trophy, and the third day after departed. But the Milesians pulled down the trophy, as erected where the Athenians were not masters.

The Athenians make sharp war upon Chios. year xx. A. C. 412. Ol. 92.
1. Praise of the Chians.

Leon and Diomedon, with the Athenian galleys that were at Lesbos, made war upon the Chians by sea from the isles called Cænussæ, which lie

before Chios, and from Sidussa and Pteleum (forts they held in Erythræa), and from Lesbos. They that were aboard were men of arms of the roll, compelled to serve in the fleet. With these they landed at Cardamyle; and having overthrown the Chians that made head in a battle at Bolissus, and slain many of them, they recovered from the enemy all the places of that quarter. And again they overcame them in another battle at Phanæ, and in a third at Leuconium. After this, the Chians went out no more to fight: by which means the Athenians made spoil of their territory, excellently well furnished. For except it were the Lacedæmonians, the Chians were the only men that I have heard of, that had joined advisedness to prosperity; and the more their city increased, had carried the more respect in the administration thereof to assure it. Nor ventured they now to revolt, (lest any man should think that, in this act at least, they regarded not what was the safest), till they had many and strong confederates with whose help to try their fortune; nor till such time as they perceived the people of Athens (as they themselves could not deny) to have their estate after the defeat in Sicily reduced to extreme weakness. And if through human misreckoning they miscarried in aught, they erred with many others: who in like manner had an opinion, that the state of the Athenians would quickly have been overthrown.

Being therefore shut up by sea, and having their lands spoiled, some within undertook to make the city return unto the Athenians. Which though the magistrates perceived, yet they themselves stirred not; but having received Astyochus into the city with four galleys that were with him from Erythræ, they took advice together, how by taking hostages, or some other gentle way, to make them give over the conspiracy. Thus stood the business with the Chians.

In the end of this summer a thousand five hundred men of arms of Athens, and a thousand of Argos, (for the Athenians had put armour upon five hundred light-armed of the Argives), and of other confederates a thousand more, with forty-eight galleys, reckoning those which were for transportation of soldiers, under the conduct of Phrynicus, Onomacles, and Scironides, came in to Samos, and crossing over to Miletus encamped before it. And the Milesians issued forth with eight hundred men of arms of their own, besides the Peloponnesians that came with Chalcideus and some auxiliar strangers with Tissaphernes (Tissaphernes himself being also there with his cavalry): and fought with the Athenians and their confederates. The Argives, who made one wing of themselves, advancing before the rest and in some disorder, in contempt of the enemy, as being Ionians and not likely to sustain their charge, were by the Milesians overcome: and lost no less than three hundred of their men. But the Athenians, when they had first overthrown the Peloponnesians, and then beaten back the barbarians and other multitude, and not fought with the Milesians at all, (for they, after they were come from the chase of the Argives and saw their other wing defeated, went into the town), sat down with their arms, as being now masters of the field, close under the wall of the city. It fell out in this battle, that on both sides the Ionics had the better of the Dorics. For the Athenians overcame the opposite Peloponnesians; and the Milesians, the Argives. The Athenians, after they had erected their trophy, the place being an isthmus, prepared to take in the town with a wall: supposing if they got Miletus, the other cities would easily come in.

The Athenians rise from Miletus upon the coming of fifty-five galleys from Peloponnesus. year xx. A. C. 412. Ol. 92. 1. year xx. A. C. 412. Ol. 92. 1.

In the meantime it was told them about twilight, that the five and fifty galleys from Peloponnesus and Sicily were hard by, and only not already

come. For there came into Peloponnesus out of Sicily, by the instigation of Hermocrates to help to consummate the subversion of the Athenian state, twenty galleys of Syracuse and two of Selinus: and the galleys that had been preparing in Peloponnesus being then also ready, they were, both these and the other, committed to the charge of Theramenes, to be conducted by him to Astyochus the admiral: and they put in first at Eleus, an island over against Miletus. And being advertised there that the Athenians lay before the town, they went from thence into the gulf of Iasus, to learn how the affairs of the Milesians stood. Alcibiades coming a horseback to Teichiussa of the territory of Miletus, in which part of the gulf the Peloponnesian galleys lay at anchor, they were informed by him of the battle: for Alcibiades was, with the Milesians and with Tissaphernes, present in it. And he exhorted them, unless they meant to lose what they had in Ionia and the whole business, to succour Miletus with all speed, and not to suffer it to be taken in with a wall. 27. According to this, they concluded to go the next morning and relieve it. Phrynichus, when he had certain word from Derus of the arrival of those galleys, his colleagues advising to stay and fight it out with their fleet, said that he would neither do it himself, nor suffer them to do it, or any other, as long as he could hinder it. For seeing he might fight with them hereafter, when they should know against how many galleys of the enemy, and with what additions to their own, sufficiently and at leisure made ready, they might do it; he would never, he said, for fear of being upbraided with baseness, (for it was no baseness for the Athenians to let their navy give way upon occasion; but by what means soever it should fall out, it would be a great baseness to be beaten), be swayed to hazard battle against reason, and not only to dishonour the state, but also to cast it into extreme danger; seeing that since their late losses it hath scarce been fit with their strongest preparation, willingly, no nor urged by precedent necessity, to undertake, how then without constraint to seek out voluntary,

dangers? Therefore he commanded them with all speed to take aboard those that were wounded, and their landmen and whatsoever utensils they brought with them; but to leave behind whatsoever they had taken in the territory of the enemy, to the end that their galleys might be the lighter: and to put off for Samos, and thence, when they had all their fleet together, to make out against the enemy as occasion should be offered. As Phrynichus advised this, so he put it in execution: and was esteemed a wise man, not then only, but afterwards; nor in this only, but in whatsoever else he had the ordering of. Thus the Athenians presently in the evening, with their victory unperfect, dislodged from before Miletus. From Samos the Argives, in haste and in anger for their overthrow, went home.

The Peloponnesians and Tissaphernes take Iasus: wherein was Amorges, rebel to the king, whom they take prisoner. year xx. A. C. 412. Ol. 92. 1. The end of the twentieth summer.

28. The Peloponnesians setting forth betimes in the morning from Teichiussa, put in at Miletus; and stayed there one day. The next day they took with them those galleys of Chios, which had formerly been chased together with Chalcideus; and meant to have returned to Teichiussa, to take aboard such necessities as they had left ashore. But as they were going, Tissaphernes came to them with his landmen, and persuaded them to set upon Iasus, where Amorges the king's enemy then lay. Whereupon they assaulted Iasus upon a sudden: and they within not thinking but they had been the fleet of the Athenians, took it. The greatest praise in this action was given to the Syracusians. Having taken Amorges, the bastard son of Pissuthnes, but a rebel to the king, the Peloponnesians delivered him to Tissaphernes, to carry him if he would to the king, as he had order to do. The city they pillaged; wherein, as being a place of ancient riches, the army got a very great quantity of money. The auxiliary soldiers of Amorges, they received without doing them hurt, into their own army; being for the most

part Peloponnesians. The town itself they delivered to Tissaphernes, with all the prisoners, as well free as bond; upon composition with him, at a Daric stater by the poll. And so they returned to Miletus. And from hence they sent Pedaritus the son of Leon, whom the Lacedæmonians had sent hither to be governor of Chios, to Erythræ; and with him, the bands that had aided Amorges by land; and made Philip governor there in Miletus. And so this summer ended.

Year xx. A. C. 412. Ol. 92. 1.

29. The next winter Tissaphernes, after he had put a garrison into Iasus, came to Miletus: and for one month's pay, which was promised on his part at Lacedæmon, he gave unto the soldiers through the whole fleet after an Attic drachma a man by the day. But for the rest of the time he would pay but three oboles, till he had asked the king's pleasure: and if the king commanded it, then he said he would pay them the full drachma. Nevertheless upon the contradiction of Hermocrates, general of the Syracusians, (for Theramenes was but slack in exacting pay, as not being general, but only to deliver the galleys that came with him to Astyochus), it was agreed that but for the five galleys that were over and above, they should have more than three oboles a man. For to fifty-five galleys he allowed three talents a month; and to as many as should be more than that number, after the same proportion.

The Athenians send part of the fleet against Chios, and part against Miletus. year xx. A. C. 412. Ol. 92. 1.

30. The same winter the Athenians that were at Samos, (for there were now come in thirty-five galleys more from home, with Charminus, Strombichides, and Euctemon, their commanders), having gathered together their galleys, as well those that had been at Chios as all the rest, concluded, distributing to every one his charge by lot, to go lie before Miletus with a

fleet; but against Chios, to send out both a fleet and an army of landmen. And they did so. For Strombichides, Onomacles, and Euctemon, with thirty galleys and part of those thousand men of arms that went to Miletus, which they carried along with them in vessels for transportation of soldiers, according to their lot went to Chios: and the rest remaining at Samos with seventy-four galleys, were masters of the sea, and went to Miletus.

Astyochus goeth from Chios to Clazomenæ: thence to Phocæa and Cume. year xx. A. C. 412. Ol. 92. 1. The Lesbians offer to turn to Astyochus.

31. Astyochus, who was now in Chios requiring hostages in respect of the treason, after he heard of the fleet that was come with Theramenes, and that the articles of the league with Tissaphernes were mended, gave over that business: and with ten galleys of Peloponnesus and ten of Chios, went thence and assaulted Pteleum; but not being able to take it, he kept by the shore to Clazomenæ. There he summoned those within to yield: with offer to such of them as favoured the Athenians, that they might go up and dwell at Daphnus. And Tamos the deputy lieutenant of Ionia, offered them the same. But they not hearkening thereunto, he made an assault upon the city, being unwallèd: but when he could not take it, he put to sea again, and with a mighty wind was himself carried to Phocæa and Cume; but the rest of the fleet put in at Marathusa, Pele, and Drimyssa, islands that lie over against Clazomenæ. After they had stayed there eight days in regard of the winds, spoiling and destroying, and partly taking aboard whatsoever goods of the Clazomenians lay without, they went afterwards to Phocæa and Cume to Astyochus. 32. While Astyochus was there, the ambassadors of the Lesbians came unto him, desiring to revolt from the Athenians. And as for him, they prevailed with him: but seeing the Corinthians and the other confederates were unwilling in respect of their former ill success there, he put to sea for Chios. Whither after a great tempest his galleys, some from

one place and some from another, at length arrived all. After this, Pedaritus, who was now at Erythræ, whither he was come from Miletus by land, came over with his forces into Chios. Besides those forces he brought over with him, he had the soldiers which were of the five galleys that came thither with Chalcideus and were left there, to the number of five hundred; and armour to arm them.

Astyochus and Pedaritus, the governor of Chios, disagree.

Now some of the Lesbians having promised to revolt, Astyochus communicated the matter with Pedaritus and the Chians, alleging how meet it would be to go with a fleet and make Lesbos to revolt; for that they should either get more confederates, or failing, they should at least weaken the Athenians. But they gave him no ear; and for the Chian galleys, Pedaritus told him [plainly] he should have none of them. 33. Whereupon Astyochus taking with him five galleys of Corinth, a sixth of Megara, one of Hermione, and those of Laconia which he brought with him, went towards Miletus to his charge: mightily threatening the Chians, in case they should need him, not to help them.

Year xx. A. C. 412. Ol. 92. 1.

When he was come to Corycus in Erythræa, he stayed there. And the Athenians from Samos lay on the other side of the point, the one not knowing that the other was so near. Astyochus, upon a letter sent him from Pedaritus, signifying that there were come certain Erythræan captives dismissed from Samos with design to betray Erythræ, went presently back to Erythræ: so little he missed of falling into the hands of the Athenians. Pedaritus also went over to him; and having narrowly enquired touching these seeming traitors, and found that the whole matter was but a pretence which the men had used for their escape from Samos, they acquitted them,

and departed one to Chios, the other, as he was going before, towards Miletus.

The Athenian galleys tossed with tempest. year xx. A. C. 412. Ol. 92. 1. The Athenians take the galleys of the Peloponnesians, sent to waft in the ships of corn from Ægypt to Cnidus.

34. In the meantime, the army of the Athenians being come about by sea from Corycus to Arginum, lighted on three long-boats of the Chians; which when they saw, they presently chased. But there arose a great tempest; and the long-boats of Chios with much ado recovered the harbour. But of the Athenian galleys, especially such as followed them furthest, there perished three, driven ashore at the city of Chios; and the men that were aboard them were part taken, and part slain. The rest of the fleet escaped into a haven called Phœnicus, under the hill Mimas: from whence they got afterwards to Lesbos, and there fortified.

Year xx. A. C. 412. Ol. 92. 1.

35. The same winter Hippocrates setting out from Peloponnesus with ten galleys of Thurium, commanded by Dorieus the son of Diogoras with two others, and with one galley of Laconia and one of Syracuse, went to Cnidus. This city was now revolted from Tissaphernes: and the Peloponnesians that lay at Miletus hearing of it, commanded that, the one half of their galleys remaining for the guard of Cnidus, the other half should go about Triopium, and help to bring in the ships which were to come from Ægypt. This Triopium is a promontory of the territory of Cnidus, lying out in the sea and consecrated to Apollo. The Athenians, upon advertisement hereof, setting forth from Samos, took those galleys that kept guard at Triopium: but the men that were in them escaped to land. After this they went to Cnidus, which they assaulted; and had almost taken, being without wall. And the next day they assaulted it again; but being less able to hurt it now than

before, because they had fenced it better this night, and the men also were gotten into it that fled from their galleys under Triopium, they invaded and wasted the Cnidian territory; and so went back to Samos.

They assault the city of Cnidus, but cannot win it.

36. About the same time, Astyochus being come to the navy at Miletus, the Peloponnesians had plenty of all things for the army. For they had not only sufficient pay, but the soldiers also had store of money yet remaining of the pillage of Iasus. And the Milesians underwent the war with a good will. Nevertheless the former articles of the league made by Chalcideus with Tissaphernes seemed defective, and not so advantageous to them as to him. Whereupon they agreed to new ones, in the presence of Tissaphernes, which were these:

37. “The agreement of the Lacedæmonians and their confederates with king Darius and his children, and with Tissaphernes, for league and amity according to the articles following:

Year xx. A. C. 412. Ol. 92. 1.

“Whatsoever territories and cities do belong unto king Darius, or were his father’s or his ancestors’, against these shall neither the Lacedæmonians go to make war, nor any way to annoy them: neither shall the Lacedæmonians nor their confederates exact tribute of any of those cities. Neither shall king Darius, nor any under his dominion, make war upon or any way annoy the Lacedæmonians, or any of the Lacedæmonian confederates.

“If the Lacedæmonians or their confederates shall need anything of the king, or the king of the Lacedæmonians or of their confederates: what they shall persuade each other to do, that if they do it, shall be good.

“They shall both of them make war jointly against the Athenians and their confederates: and when they shall give over the war, they shall also do

it jointly.

“Whatsoever army shall be in the king’s country, sent for by the king, the king shall defray.

“If any of the cities comprehended in the league made with the king, shall invade the king’s territories, the rest shall oppose them and defend the king to the utmost of their power. If any city of the king’s, or under his dominion, shall invade the Lacedæmonians or their confederates, the king shall make opposition and defend them to the utmost of his power.”

Year xx. A. C. 412. Ol. 92. 1. Theramenes goeth to sea in a light-horseman, and is cast away.

38. After this accord made, Theramenes delivered his galleys into the hands of Astyochus: and putting to sea in a light-horseman, is no more seen.

The Chians in distress, send for aid to Astyochus. Astyochus refuseth to aid them, and is complained of by Pedaritus his letters to the state.

The Athenians that were now come with their army from Lesbos to Chios, and were masters of the field and of the sea, fortified Delphinium, a place both strong to the land-ward, and that had also a harbour for shipping, and was not far from the city itself of Chios. And the Chians, as having been disheartened in divers former battles, and otherwise not only not mutually well affected, but jealous one of another; (for Tydeus and his accomplices had been put to death by Pedaritus for Atticism, and the rest of the city was kept in awe, but by force, and for a time); stirred not against them. And for the causes mentioned, not conceiving themselves, neither with their own strength nor with the help of those that Pedaritus had with him, sufficient to give them battle, they sent to Miletus to require aid from Astyochus. Which when he denied them, Pedaritus sent letters to Lacedæmon complaining of the wrong. Thus proceeded the affairs of the Athenians at Chios. Also their fleet at Samos went often out against the

fleet of the enemy at Miletus: but when theirs would never come out of the harbour to encounter them, they returned to Samos and lay still.

Year xx. A. C. 412. Ol. 92. 1. The galleys that were provided for Pharnabazus set forth toward Ionia. Antisthenes and eleven other Spartans sent with absolute authority into Ionia. They arrive at Caunus in Asia.

39. The same winter, about the solstice, went out from Peloponnesus towards Ionia those twenty–seven galleys, which at the procurement of Calligeitus of Megara and Timagoras of Cyzicus were made ready by the Lacedæmonians for Pharnabazus. The commander of them was Antisthenes a Spartan: with whom the Lacedæmonians sent eleven Spartans more to be of council with Astyochus; whereof Lichas the son of Arcesilaus was one. These had commission, that when they should be arrived at Miletus, besides their general care to order everything to the best, they should send away these galleys, either the same or more or fewer, into the Hellespont to Pharnabazus, if they so thought fit; and to appoint Clearchus the son of Rhamphias, that went along in them, for commander: and that the same eleven, if they thought it meet, should put Astyochus from his charge, and ordain Antisthenes in his place: for they had him in suspicion for the letters of Pedaritus. These galleys holding their course from Malea through the main sea, and arriving at Melos, lighted on ten galleys of the Athenians: whereof three they took, but without the men, and fired them. After this, because they feared lest those Athenian galleys that escaped from Melos should give notice of their coming to those in Samos, (as also it fell out), they changed their course and went towards Crete: and having made their voyage the longer that it might be the safer, they put in at Caunus in Asia. Now from thence, as being in a place of safety, they sent a messenger to the fleet at Miletus for a convoy.

Year xx. A. C. 412. Ol. 92. 1. The Chians desire help of Astyochus. year xx. A. C. 411. Ol. 92. 1.

40. The Chians and Pedaritus about the same time, notwithstanding [their former repulse, and] that Astyochus was still backward, sent messengers to him, desiring him to come with his whole fleet to help them, being besieged: and not to suffer the greatest of their confederate cities in all Ionia to be thus shut up by sea and ravaged by land, as it was. For the Chians having many slaves, more than any one state except that of the Lacedæmonians, whom for their offences they the more ungently punished because of their number; many of them, as soon as the Athenians appeared to be settled in their fortifications, ran over presently to them; and were they, that knowing the territory so well, did it the greatest spoil. Therefore the Chians said he must help them, whilst there was hope and possibility to do it: Delphinium being still in fortifying and unfurnished, and greater fences being in making both about their camp and fleet. Astyochus, though he meant it not before, because he would have made good his threats, yet when he saw the confederates were willing, he was bent to have relieved them.

Astyochus is diverted from helping the Chians, and goeth to waft in the twenty-seven galleys of Peloponnesus that lay at Caunus. year xx. A. C. 411. Ol. 92. 1.

41. But in the meantime came the messenger from the twenty-seven galleys, and from the Lacedæmonian counsellors, that were come to Caunus. Astyochus therefore esteeming the wafting in of these galleys, whereby they might the more freely command the sea, and the safe coming in of those Lacedæmonians, who were to look into his actions, a business that ought to be preferred above all other, presently gave over his journey for Chios, and went towards Caunus. As he went by the coast, he landed at Cos Meropidis, being unwall'd, and thrown down by an earthquake which had happened there, the greatest verily in man's memory; and rifled it, the inhabitants being fled into the mountains: and overrunning the country,

made booty of all that came in his way, saving of freemen; and those he dismissed. From Cos he went by night to Cnidus: but found it necessary, by the advice of the Cnidians, not to land his men there, but to follow as he was after those twenty galleys of Athens, wherewith Charminus, one of the Athenian generals gone out from Samos, stood watching for those twenty-seven galleys that were come from Peloponnesus, the same that Astyochus himself was going to convoy in. For they at Samos had had intelligence from Miletus of their coming: and Charminus was lying for them about Syme, Chalce, Rhodes, and the coast of Lycia: for by this time he knew that they were at Caunus. 42. Astyochus, therefore, desiring to outgo the report of his coming, went as he was to Syme; hoping to find those galleys out from the shore. But [a shower of] rain, together with the cloudiness of the sky, made his galleys to miss their course in the dark, and disordered them.

A fight between the Peloponnesian and Athenian fleets: wherein the Athenians had the worse.

The next morning, the fleet being scattered, the left wing was manifestly descried by the Athenians, whilst the rest wandered yet about the island. And thereupon Charminus and the Athenians put forth against them with twenty galleys, supposing they had been the same galleys they were watching for from Caunus: and presently charging, sunk three of them and hurt others, and were superior in the fight, till such time as, contrary to their expectation, the greater part of the fleet came in sight, and enclosed them about. They then betook themselves to flight: and with the loss of six galleys the rest escaped into the island of Teuglussa, and from thence to Halicarnassus. After this the Peloponnesians putting in at Cnidus, and joining with those seven-and-twenty galleys that came from Caunus, went all together to Syme: and having there erected a trophy, returned again and lay at Cnidus.

43. The Athenians, when they understood what had passed in this battle, went from Samos with their whole navy to Syme. But neither went they out against the navy in Cnidus, nor the navy there against them. Whereupon they took up the furniture of their galleys at Syme, and assaulted Loryma, a town in the continent; and so returned to Samos.

Tissaphernes and the Lacedæmonians disagree about the articles of their league. year xx. A. C. 411. Ol. 92. 1.

The whole navy of the Peloponnesians being at Cnidus, was [now] in repairing and refurnishing with such things as it wanted: and withal those eleven Lacedæmonians conferred with Tissaphernes (for he also was present) touching such things as they disliked in the articles before agreed on, and concerning the war, how it might be carried for the future in the best and most advantageous manner for them both. But Lichas was he that considered the business more nearly; and said, that neither the first league, nor yet the later by Theramenes, was made as it ought to have been: and that it would be a very hard condition, that whatsoever territories the king and his ancestors possessed before, he should possess the same now; for so he might bring again into subjection all the islands, and the sea, and the Locrians, and all as far as Bœotia; and the Lacedæmonians, instead of restoring the Grecians into liberty, should put them into subjection to the rule of the Medes. Therefore he required other and better articles to be drawn, and not to stand to these: as for pay, in the new articles they would require none. But Tissaphernes chafing at this, went his way in choler: and nothing was done.

Rhodes revolteth to the Peloponnesians. year xx. A. C. 411. Ol. 92. 1.

44. The Peloponnesians solicited by messengers from the great men of Rhodes, resolved to go thither: because they hoped it would not prove impossible, with their number of seamen and army of land soldiers, to bring that island into their power; and withal supposed themselves able, with their

present confederates, to maintain their fleet without asking money any more of Tissaphernes. Presently therefore, the same winter, they put forth from Cnidus: and arriving in the territory of Rhodes, at Cameirus, first frightened the commons out of it, that knew not of the business; and they fled. Then the Lacedæmonians called together both these, and the Rhodians of the two cities Lindus and Iëlysus; and persuaded them to revolt from the Athenians. And Rhodes turned to the Peloponnesians. The Athenians at the same time, hearing of their design, put forth with their fleet from Samos, desiring to have arrived before them: and were seen in the main sea, too late, though not much. For the present they went away to Chalce, and thence back to Samos; but afterwards they came forth with their galleys divers times, and made war against Rhodes, from Chalce, Cos, and Samos. Now the Peloponnesians did no more to the Rhodians, but levy money amongst them to the sum of thirty-two talents: and otherwise for fourscore days that they lay there, having their galleys hauled ashore, they meddled not.

C. 412. Alcibiades flieth to Tissaphernes, and crosseth the business of the Peloponnesians. He adviseth Tissaphernes to shorten their pay: year xx. A. C. 412. Ol. 92. 1. and to corrupt the captains. The integrity of Hermocrates. Alcibiades answereth in Tissaphernes' name to the cities that call upon him for money, and puts them off. He counselleth Tissaphernes to prolong the war, and afflict both sides. year xx. A. C. 412. Ol. 92. 1. He adviseth him, of the two, to favour the Athenians the rather, as fitter to help subdue the Grecians.

45. In this time, as also before the going of the Peloponnesians to Rhodes, came to pass the things that follow. Alcibiades, after the death of Chalcideus and battle at Miletus, being suspected by the Peloponnesians, and Astyochus having received letters from them from Lacedæmon to put him to death; (for he was an enemy to Agis, and also otherwise not well trusted): retired to Tissaphernes first, for fear; and afterwards to his power

hindered the affairs of the Peloponnesians. And being in everything his instructor, he not only cut shorter their pay, insomuch as from a drachma he brought it to three oboles, and those also not continually paid; advising Tissaphernes to tell them, how that the Athenians, men of a long continued skill in naval affairs, allowed but three oboles to their own, not so much for want of money, but lest the mariners, some of them growing insolent by superfluity, should disable their bodies by spending their money on such things as would weaken them, and others should quit the galleys with the arrear of their pay in their captains' hands for a pawn: but also gave counsel to Tissaphernes to give money to the captains of the galleys and to the generals of the several cities, save only those of Syracuse, to give way unto it. For Hermocrates [the general of the Syracusians] was the only man, that in the name of the whole league stood against it. And for the cities that came to require money, he would put them back himself, and answer them in Tissaphernes his name; and say, namely to the Chians, that they were impudent men, being the richest of the Grecian states and preserved by strangers, to expect nevertheless that others, for their liberty, should not only venture their persons, but maintain them with their purses: and to other states, that they did unjustly, having laid out their money before they revolted that they might serve the Athenians, not to bestow as much or more now upon themselves: and told them, that Tissaphernes, now he made war at his own charges, had reason to be sparing; but when money should come down from the king he would give them their full pay, and assist the cities as should be fit. 46. Moreover, he advised Tissaphernes not to be too hasty to make an end of the war, nor to fetch in the Phœnician fleet which was making ready, nor take more men into pay, whereby to put the whole power both by sea and land into the hands of one: but to let the dominion remain divided into two, that the king, when one side troubled him, might set upon it with the other: whereas the dominion both by sea and land being in one,

he will want by whom to pull down those that hold it, unless with great danger and cost he should come and try it out himself: but thus the danger would be less chargeable, he being but at a small part of the cost; and he should wear out the Grecians one against another, and himself in the meantime remain in safety. He said further, that the Athenians were fitter to partake dominion with him than the other; for that they were less ambitious of power by land; and that their speeches and actions tended more to the king's purpose: for that they would join with him to subdue the Grecians, that is to say, for themselves as touching the dominion by sea, and for the king as touching the Grecians in the king's territories: whereas the Lacedæmonians, on the contrary, were come to set them free: and it was not likely but that they that were come to deliver the Grecians from the Grecians, will, if they overcome the Athenians, deliver them also from the barbarians. He gave counsel therefore, first to wear them out both; and then, when he had clipped, as near as he could, the wings of the Athenians, to dismiss the Peloponnesians out of his country.

Tissaphernes, guided by the counsel of Alci— year xx. A. C. 412. Ol. 92. 1. biades, hindereth the success of the Peloponnesians.

And Tissaphernes had a purpose to do accordingly; as far as by his actions can be conjectured. For hereupon he gave himself to believe Alcibiades, as his best counsellor in these affairs: and neither paid the Peloponnesians their wages, nor would suffer them to fight by sea: but pretending the coming of the Phœnician fleet, whereby they might afterwards fight with odds, he overthrew their proceedings, and abated the vigour of their navy, before very puissant; and was in all things else more backward than he could possibly dissemble.

Alcibiades aimeth at his return to Athens by making show of his power with Tissaphernes. Motion made for the recalling of Alcibiades, and deposing of the people. year xx. A. C. 412. Ol. 92. 1.

47. Now Alcibiades advised the king and Tissaphernes to this, whilst he was with them, partly because he thought the same to be indeed the best course; but partly also, to make way for his own return into his country: knowing that if he destroyed it not, the time would one day come that he might persuade the Athenians to recall him. And the best way to persuade them to it, he thought, was this: to make it appear unto them that he was powerful with Tissaphernes. Which also came to pass. For after the Athenian soldiers at Samos saw what power he had with him, the captains of galleys and principal men there: partly upon Alcibiades his own motion, who had sent to the greatest amongst them, that they should remember him to the best sort, and say that he desired to come home, so the government might be in the hands of a few, not of evil persons nor yet of the multitude that cast him out; and that he would bring Tissaphernes to be their friend, [and to war on their side]: but chiefly of their own accords, had their minds inclined to the deposing of the popular government.

Conspiracy in the army at Samos against the democracy of Athens.

48. This business was set on foot first in the camp; and from thence proceeded afterwards into the city. And certain persons went over to Alcibiades out of Samos, and had conference with him. And when he had undertaken to bring to their friendship first Tissaphernes, and then the king, in case the government were taken from the people: for then, he said, the king might the better rely upon them: they that were of most power in the city, who also were the most toiled out, entered into great hope both to have the ordering of the state at home themselves, and victory also over the enemy. And when they came back to Samos, they drew all such as were for their purpose into an oath of conspiracy with themselves: and to the multitude gave it out openly, that if Alcibiades might be recalled and the people put from the government, the king would turn their friend and furnish them with money.

Though the multitude were grieved with this proceeding for the present, yet for the great hope they had of the king's pay they stirred not. But they that were setting up the oligarchy, when they had communicated thus much to the multitude, fell to consideration, anew and with more of their complices, of the things spoken by Alcibiades. And the rest thought the matter easy, and worthy to be believed: but Phrynichus, who yet was general of the army, liked it not; but thought, as the truth was, that Alcibiades cared no more for the oligarchy than the democracy, nor had any other aim in it, but only by altering the government that then was to be called home by his associates: and said, "they were especially to look to this, that they did not mutiny for the king, who could not very easily be induced (the Peloponnesians being now as much masters at sea as themselves, and having no small cities within his dominions) to join with the Athenians, whom he trusted not; and to trouble himself, when he might have the friendship of the Peloponnesians, that never did him hurt: as for the confederate cities to whom they promise oligarchy, in that they themselves do put down the democracy," he said, "he knew full well, that neither those which were already revolted would the sooner return to, nor those that remained be ever the more confirmed in their obedience thereby: for they would never be so willing to be in subjection either to the few or to the people, as they would be to have their liberty, which side soever it were that should give it them: but would think, that even those which are termed the good men, if they had the government, would give them as much to do as the people, being contrivers and authors to the people of doing those mischiefs against them, out of which they make most profit unto themselves: and that if the few had the rule, then they should be put to death unheard, and more violently than by the former; whereas the people is their refuge, and moderator of the others' insolence. This," he said, "he was

certain that the cities thought; in that they had learned the same by the actions themselves: and that therefore what was yet propounded by Alcibiades, he by no means approved.” 49. But those of the conspiracy there assembled, not only approved the present proposition, but also made preparation to send Pisander and others ambassadors to Athens: to negotiate concerning the reduction of Alcibiades, the dissolution of the democracy, and the procuring unto the Athenians the friendship of Tissaphernes.

The treason of Phrynichus against the state, for fear of Alcibiades. He writes secret letters to Astyochus. year xx. A. C. 412. Ol. 92. 1. Astyochus appeacheth him to Alcibiades. Phrynichus sends to Astyochus again, and offers to put the whole army into his hands. The device of Phrynichus to avoid the danger. year xx. A. C. 412. Ol. 92. 1.

50. Now Phrynichus knowing that an overture was to be made at Athens for the restoring of Alcibiades, and that the Athenians would embrace it; and fearing lest being recalled he should do him a mischief (in regard he had spoken against it) as one that would have hindered the same: betook himself to this course. He sends secret letters to Astyochus, the Lacedæmonian general, who was yet about Miletus, and advertised him that Alcibiades undid their affairs, and was procuring the friendship of Tissaphernes for the Athenians: writing in plain terms the whole business, and desiring to be excused if he rendered evil to his enemy with some disadvantage to his country. Astyochus had before this laid by the purpose of revenge against Alcibiades, especially when he was not in his own hands. And going to him to Magnesia and to Tissaphernes, related unto them what advertisement he had received from Samos, and made himself the appeacher. For he adhered, as was said, to Tissaphernes for his private lucre, both in this and in divers other matters: which was also the cause that concerning the pay, when the abatement was made, he was not so stout in

opposing it as he ought to have been. Hereupon Alcibiades sendeth letters presently to those that were in office at Samos, accusing Phrynichus of what he had done, and requiring to have him put to death. Phrynichus perplexed with this discovery, and brought into danger indeed, sends again to Astyochus, blaming what was past as not well concealed: and promised now to be ready to deliver unto him the whole army at Samos to be destroyed: writing from point to point, (Samos being unwall'd), in what manner he would do it; and saying, that since his life was brought in danger, they could not blame him though he did this or any other thing, rather than be destroyed by his most deadly enemies. This also Astyochus revealed unto Alcibiades. 51. But Phrynichus having had notice betimes how he abused him, and that letters of this from Alcibiades were in a manner come, he anticipates the news himself: and tells the army, that whereas Samos was unwall'd and the galleys rid not all within, the enemy meant to come and assault the harbour: that he had sure intelligence hereof, and that they ought therefore with all speed to raise a wall about the city, and to put garrisons into other places thereabouts. Now Phrynichus was general himself, and it was in his own power to see it done. They then fell to walling; whereby Samos (which they meant to have done howsoever) was so much the sooner wall'd in. Not long after came letters from Alcibiades, that the army was betrayed by Phrynichus, and that the enemy purposed to invade the harbour where they lay. But now they thought not Alcibiades worthy to be believed, but rather that having foreseen the design of the enemy, he went about, out of malice, to fasten it upon Phrynichus as conscious of it likewise. So that he did him no hurt by telling it, but bare witness rather of that which Phrynichus had told them of before.

Alcibiades endeavoureth to turn Tissaphernes to the part of the Athenians. year xx. A. C. 412. Ol. 92. 1.

52. After this Alcibiades endeavoured to incline and persuade Tissaphernes to the friendship of the Athenians. For though Tissaphernes feared the Peloponnesians, because their fleet was greater than that of the Athenians; yet if he had been able, he had a good will to have been persuaded by him; especially in his anger against the Peloponnesians, after the dissension at Cnidus, about the league made by Theramenes; (for they were already fallen out, the Peloponnesians being about this time in Rhodes). Wherein that which had been before spoken by Alcibiades, how that the coming of the Lacedæmonians was to restore all the cities to their liberty, was now verified by Lichas; in that he said, it was an article not to be suffered, that the king should hold those cities which he and his ancestors then or before had holden. Alcibiades therefore, as one that laboured for no trifle, with all his might applied himself to Tissaphernes.

Pisander getteth the Athenians to be content with the oligarchy, and to give him and others commission to treat with Alcibiades. year xx. A. C. 412. Ol. 92. 1. Phrynichus accused by Pisan— year xx. A. C. 412. Ol. 92. 1. der, and discharged of his command.

53. The Athenian ambassadors sent from Samos with Pisander, being arrived at Athens, were making their propositions to the people: and related unto them summarily the points of their business, and principally this; “that if they would call home Alcibiades, and not suffer the government to remain in the hands of the people in such manner as it did, they might have the king for their confederate, and get the victory of the Peloponnesians”. Now when many opposed that point touching the democracy; and the enemies of Alcibiades clamoured withal, that it would be a horrible thing he should return by forcing the government, when the Eumolpidæ and Ceryces bare witness against him concerning the mysteries for which he fled, and prohibited his return under their curse: Pisander, at this great opposition and querimony, stood out, and going amongst them took out one by one those

that were against it, and asked them; “whether, now that the Peloponnesians had as many galleys at sea to oppose them as they themselves had, and confederate cities more than they, and were furnished with money by the king and Tissaphernes, the Athenians being without, they had any other hope to save their state but by persuading the king to come about to their side”. And they that were asked having nothing to answer, then in plain terms he said unto them: “This you cannot now obtain, except we administer the state with more moderation, and bring the power into the hands of a few, that the king may rely upon us. And we deliberate at this time, not so much about the form, as about the preservation of the state; for if you mislike the form, you may change it again hereafter. And let us recall Alcibiades, who is the only man that can bring this to pass.” The people hearing of the oligarchy, took it very heinously at first: but when Pisander had proved evidently, that there was no other way of safety, in the end, partly for fear and partly because they hoped again to change the government, they yielded thereunto. So they ordered, that Pisander and ten others should go and treat both with Tissaphernes and Alcibiades, as to them should seem best. Withal, upon the accusation of Pisander against Phrynichus, they discharged both Phrynichus and Scironides, his fellow-commissioner, of their command: and made Diomedon and Leon generals of the fleet in their places. Now the cause why Pisander accused Phrynichus, and said he had betrayed Iasus and Amorges, was only this: he thought him a man unfit for the business now in hand with Alcibiades.

Pisander, after he had gone about to all those combinations, (which were in the city before, for obtaining of places of judicature and of command), exhorting them to stand together and advise about deposing the democracy; and when he had dispatched the rest of his business, so as there should be no more cause for him to stay there: took sea with those other ten to go to Tissaphernes.

C. 411. Leon and Diomedon war upon the Peloponnesian navy at Rhodes.

55. Leon and Diomedon arriving the same winter at the Athenian fleet, made a voyage against Rhodes; and finding there the Peloponnesian galleys drawn up to land, disembarked and overcame in battle such of the Rhodians as made head; and then put to sea again and went to Chalce. After this they made sharper war upon them from Cos. For from thence they could better observe the Peloponnesian navy when it should put off from the land.

Year xx. A. C. 411. Ol. 92. 1. Chios distressed, and Pedaritus the captain slain.

In this while there arrived at Rhodes Xenophontidas, a Laconian, sent out of Chios from Pedaritus, to advertise them that the fortification of the Athenians there was now finished: and that unless they came and relieved them with their whole fleet, the state of Chios must utterly be lost. And it was resolved to relieve them. But Pedaritus in the meantime, with the whole power both of his own auxiliary forces and of the Chians, made an assault upon the fortification which the Athenians had made about their navy: part whereof he won, and had gotten some galleys that were drawn a-land. But the Athenians issuing out upon them, first put to flight the Chians, and then overcame also the rest of the army about Pedaritus: and slew Pedaritus himself, and took many of the Chians prisoners and much armour. 56. After this the Chians were besieged both by sea and land more narrowly: and great famine was in the city.

Alcibiades unable to make good his word, about bringing Tissaphernes to the Athenians' side, demands excessive conditions, to make the breach ap— year xx. A. C. 411. Ol. 92. 1. pear to proceed from the Athenians, and to save his own credit. year xx. A. C. 411. Ol. 92. 1.

Pisander, and the other Athenian ambassadors that went with him, when they came to Tissaphernes, began to confer about the agreement. But

Alcibiades (for he was not sure of Tissaphernes, because he stood in fear too much of the Peloponnesians, and had a purpose besides, as Alcibiades himself had taught him, to weaken both sides [yet more]), betook himself to this shift: that Tissaphernes should break off the treaty by making to the Athenians exorbitant demands. And it seemed that Tissaphernes and he aimed at the same thing: Tissaphernes for fear; and Alcibiades, for that when he saw Tissaphernes not desirous to agree, [though the offers were never so great], he was unwilling to have the Athenians think he could not persuade him to it, but rather that he was already persuaded and willing, and that the Athenians came not to him with sufficient offers. For Alcibiades being the man that spake for Tissaphernes, though he were also present, made unto them such excessive demands, that though the Athenians should have yielded to the greatest part of them, yet it must have been attributed to them that the treaty went not on. For they demanded, first, that all Ionia should be rendered: then again, the adjacent islands and other things: which the Athenians stood not against. In fine, at the third meeting, when he feared now plainly to be found unable to make good his word, he required, that they should suffer the king to build a navy, and sail up and down by their coast wheresoever and with what number soever of galleys he himself should think good. Upon this the Athenians would treat no longer, esteeming the conditions intolerable and that Alcibiades had abused them, and so went away in a chafe to Samos.

Tissaphernes hearkeneth again to the Peloponnesians.

57. Presently after this, the same winter, Tissaphernes went to Caunus, with intent both to bring the Peloponnesians back to Miletus, and also, (as soon as he should have agreed unto new articles, such as he could get), to give the fleet their pay; and not to fall directly out with them: for fear lest so many galleys wanting maintenance, should either be forced by the Athenians to fight and so be overcome, or, emptied of men, the business

might succeed with the Athenians according to their own desire without him. Besides he was afraid, lest looking for maintenance they should make spoil in the continent. In consideration and foresight of all which things, he desired to counterpoise the Grecians. And sending for the Peloponnesians, he gave them their pay; and now made the third league, as followeth:

The third league between Tissa— year xx. A. C. 411. Ol. 92. 1. phernes and the Peloponnesians.

58. “In the thirteenth year of the reign of Darius, Alexippidas being ephor in Lacedæmon, agreement was made in the plain of Mæander, between the Lacedæmonians and their confederates on one part, and Tissaphernes and Hieramenes and the sons of Pharnaces on the other part, concerning the affairs of the king, and of the Lacedæmonians and their confederates.

“That whatsoever country in Asia belongeth to the king, shall be the king’s still: and that concerning his own countries, it shall be lawful for the king to do whatsoever he shall think meet.

“That the Lacedæmonians and their confederates shall not invade any the territories of the king to harm them; nor the king, the territories of the Lacedæmonians or their confederates.

“If any of the Lacedæmonians or their confederates shall invade the king’s country to do it hurt, the Lacedæmonians and their confederates shall oppose it: and if any of the king’s country shall invade the Lacedæmonians or their confederates to do them hurt, the king shall oppose it.

“That Tissaphernes shall, according to the rates agreed on, maintain the present fleet till the king’s fleet arrive.

Year xx. A. C. 411. Ol. 92. 1.

“That when the king’s navy shall be come, the Lacedæmonians and their confederates shall maintain their own navy themselves, if they please: or if

they will have Tissaphernes to maintain it, he shall do it; and that the Lacedæmonians and their confederates, at the end of the war, repay Tissaphernes whatsoever money they shall have received of him.

“When the king’s galleys shall be arrived, both they and the galleys of the Lacedæmonians and their confederates shall make the war jointly, according as to Tissaphernes and the Lacedæmonians and their confederates shall seem good: and if they will give over the war against the Athenians, they shall give it over in the same manner.”

59. Such were the articles. After this Tissaphernes prepared for the fetching in of the Phœnician fleet, according to the agreement, and to do whatsoever else he had undertaken: desiring to have it seen, at least, that he went about it.

Oropus taken by treason. year xx. A. C. 411. Ol. 92. 1.

60. In the end of this winter, the Bœotians took Oropus by treason. It had in it a garrison of Athenians. They that plotted it, were certain Eretrians and some of Oropus itself; who were then contriving the revolt of Eubœa. For the place being built to keep Eretria in subjection, it was impossible, as long as the Athenians held it, but that it would much annoy both Eretria and the rest of Eubœa. Having Oropus in their hands already, they came to Rhodes to call the Peloponnesians into Eubœa. But the Peloponnesians had a greater inclination to relieve Chios now distressed: and putting to sea, departed out of Rhodes with their whole fleet. When they were come about Triopium, they descried the Athenian fleet in the main sea going from Chalce. And neither side assaulting other, they put in, the one fleet at Samos, the other at Miletus: for the Peloponnesians saw they could not pass to relieve Chios without a battle. Thus ended this winter; and the twentieth year of this war written by Thucydides.

61. The next summer, in the beginning of the spring, Dercylidas a Spartan was sent by land into Hellespont with a small army, to work the revolt of Abydos, a colony of the Milesians. And the Chians at the same time, whilst Astyochus was at a stand how to help them, were compelled by the pressure of the siege to hazard a battle by sea. Now whilst Astyochus lay at Rhodes, they had received into the city of Chios, after the death of Pedaritus, one Leon a Spartan, that came along with Antisthenes as a private soldier: and with him twelve galleys that lay at the guard of Miletus, whereof five were Thurians, four Syracusians, one of Anæa, one of Miletus, and one of Leon's own. Whereupon the Chians issuing forth with the whole force of the city, seized a certain place of strength: and put forth thirty-six galleys against thirty-two of the Athenians, and fought. After a sharp fight, wherein the Chians and their associates had not the worst, and when it began to be dark, they retired again into the city.

Abydos and Lampsacus revolt. Strombichides recovereth Lampsacus.

62. Presently after this, Dercylidas being arrived now in Hellespont from Miletus by land, Abydos revolted to him and to Pharnabazus: and two days after revolted Lampsacus. Strombichides having intelligence of this, made haste thither from Chios with four-and-twenty sail of Athenians: those being also of that number which transported his men of arms. And when he had overcome the Lampsacenes that came out against him, and taken Lampsacus, being an open town, at the first shout of their voices, and made prize of all the goods they found and of the slaves, he placed the freemen there again: and went against Abydos. But when that city neither yielded nor could be taken by assault, he crossed over from Abydos to the opposite shore: and in Sestos, a city of Chersonesus, possessed heretofore by the Medes, he placed a garrison for the custody of the whole Hellespont.

63. In the meantime not only the Chians had the sea at more command, but Astyochus also and the army at Miletus, having been advertised of what passed in the fight by sea, and that Strombichides and those galleys with him were gone away, took heart. And Astyochus going to Chios with two galleys, fetched away the galleys that were there: and with the whole fleet now together went against Samos. But seeing they of Samos, by reason of their jealousy one towards another, came not against him, he went back again to Miletus. For it was about this time that the democracy was put down at Athens.

The democracy at Athens put down by Pisander and his fellows. The authors of the oligarchy resolve to leave out Alcibiades, and to govern the state with their private means for themselves. year xxi. A. C. 411. Ol. 92. 1.

For after that Pisander and his fellow-ambassadors that had been with Tissaphernes, were come to Samos, they both assured their affairs yet better in the army, and also provoked the principal men of the Samians to attempt with them the erecting of the oligarchy; though there were then an insurrection amongst them against the oligarchy. And withal the Athenians at Samos, in a conference amongst themselves, deliberated how, since Alcibiades would not, to let him alone; for indeed they thought him no fit man to come into an oligarchy: but for themselves, seeing they were already engaged in the danger, to take care both to keep the business from a relapse, and withal to sustain the war, and to contribute money and whatsoever else was needful with alacrity, out of their private estates; and no more to toil for other than themselves. 64. Having thus advised, they sent Pisander with half the ambassadors presently home, to follow the business there; with command to set up the oligarchy in all the cities they were to touch at by the way: the other half they sent about, some to one part [of the state] and some to another. And they sent away Diotrophes to his charge, who was now about Chios, chosen to go governor of the cities upon Thrace.

The Athenians having set up the oligarchy in Thasos, it presently revolteth from them.

He, when he came to Thasos, deposed the people. And within two months at most after he was gone, the Thasians fortified their city: as needing no longer an aristocracy with the Athenians, but expecting liberty every day by the help of the Lacedæmonians. For there were also certain of them with the Peloponnesians, driven out by the Athenians: and these practised with such in the city as were for their purpose, to receive galleys into it and to cause it to revolt. So that it fell out for them just as they would have it: that that estate of theirs was set up without their danger, and that the people was deposed that would have withstood it. Insomuch as at Thasos it fell out contrary to what those Athenians thought, which erected the oligarchy: and so, in my opinion, it did in many other places of their dominion. For the cities now grown wise, and withal resolute in their proceedings, sought a direct liberty; and preferred not before it that outside of a well-ordered government, introduced by the Athenians.

Year xxi. A. C. 411. Ol. 92. 1. The proceeding of Pisander in setting up the oligarchy. year xxi. A. C. 411. Ol. 92. 1. year xxi. A. C. 411. Ol. 92. 1.

65. They with Pisander, according to the order given them, entering into the cities as they went by, dissolved the democracies: and having in some places obtained also an aid of men of arms, they came to Athens: and found the business, for the greatest part, dispatched to their hands by their accomplices before their coming. For certain young men combining themselves, had not only murdered Androcles privily, a principal patron of the popular government, and one that had his hand the farthest in the banishment of Alcibiades: (whom they slew for two causes; for the sway he bare amongst the people; and to gratify Alcibiades, who they thought would return and get them the friendship of Tissaphernes): but had also made

away divers men unfit for their design in the same manner. They had withal an oration ready made, which they delivered in public, wherein they said, that there ought none to receive wages but such as served in the wars, nor to participate of the government more than five thousand; and those, such as by their purses and persons were best able to serve the commonwealth. 66. And this with the most carried a good shew: because they that would set forward the alteration of the state, were to have the managing of the same. Yet the people and the Council of the Bean met still; but debated nothing, save what the conspirators thought fit: nay, all that spake were of that number, and had considered before what they were to say. Nor would any of the rest speak against them, for fear, because they saw the combination was great: and if any man did, he was quickly made away by one convenient means or other; and no inquiry made after the deed-doers, nor justice prosecuted against any that was suspected. But the people were so quiet and so afraid, that every man thought it gain to escape violence, though he said never a word. Their hearts failed them, because they thought the conspirators more indeed than they were: and to learn their number, in respect of the greatness of the city and for that they knew not one another, they were unable. For the same cause also was it impossible for any man that was angry at it, to bemoan himself, whereby to be revenged on them that conspired: for he must have told his mind, either to one he knew not, or to one he knew and trusted not. For the populars approached each other, every one with jealousy, as if they thought him of the plot. For indeed there were such amongst them, as no man would have thought would ever have turned to the oligarchy: and those were they that caused in the many that diffidence; and by strengthening the jealousy of the populars one against another, conferred most to the security of the few.

67. During this opportunity, Pisander and they that were with him, coming in fell in hand presently with the remainder of the business. And first they assembled the people, and delivered their opinion, for ten men to be chosen with power absolute to make a draught of laws; and having drawn them, to deliver their opinion at a day appointed before the people, touching the best form of government for the city. Afterwards, when that day came, they summoned the assembly to Colonus: which is a place consecrated to Neptune without the city, about two furlongs off. And they that were appointed to write the laws, presented this, and only this: That it should be lawful for any Athenian to deliver whatsoever opinion he pleased; imposing of great punishments upon whosoever should either accuse any that so spake of violating the laws, or otherwise do him hurt. Now here indeed it was in plain terms propounded, “that not any magistracy of the form before used, might any longer be in force, nor any fee belong unto it: but that five Prytanes might be elected, and these five choose a hundred, and every one of this hundred take unto him three others: and these four hundred entering into the council-house, might have absolute authority to govern the state as they thought best, and to summon the five thousand as oft as to them it should seem good”.

Pisander a principal man of the oligarchs. Antiphon another setter up of the few. The praise of Antiphon. Phrynichus an— year xxi. A. C. 411. Ol. 92. 1. other author of the oligarchy.

68. He that delivered this opinion was Pisander: who was also otherwise openly the forwardest to put down the democracy. But he that contrived the whole business, how to bring it to this pass, and had long thought upon it, was Antiphon: a man for virtue not inferior to any Athenian of his time, and the ablest of any man both to devise well, and also to express well what he had devised: and though he came not into the assemblies of the people, nor willingly to any other debatings, because the multitude had him in jealousy

for the opinion they had of the power of his eloquence; yet when any man that had occasion of suit, either in the courts of justice or in the assembly of the people, came to him for his counsel, this one man was able to help him most. The same man, when afterwards the government of the four hundred went down and was vexed of the people, was heard plead for himself, when his life was in question for that business, the best of any man to this day. Phrynichus also shewed himself an earnest man for the oligarchy, and that more earnestly than any other; because he feared Alcibiades, and knew him to be acquainted with all his practices at Samos with Astyochus; and thought in all probability, that he would never return to live under the government of the few. And this man, in any matter of weight, appeared the most sufficient to be relied on. Also Theramenes the son of Agnon, an able man both for elocution and understanding, was another of the principal of those that overthrew the democracy.

So that it is no marvel if the business took effect, being by many and wise men conducted, though it were a hard one. For it went sore with the Athenian people, almost a hundred years after the expulsion of the tyrants, to be now deprived of their liberty: having not only not been subject to any, but also for the half of this time been inured to dominion over others.

The Four Hundred enter upon the senate and dismiss the senate of five hundred called. year xxi. A. C. 411. Ol. 92. 1. the Council of the Bean. year xxi. A. C. 411. Ol. 92. 1.

69. When the assembly, after it had passed these things no man contradicting, was dissolved; then afterwards they brought the four hundred into the council-house in this manner. The Athenians were evermore partly on the walls, and partly at their arms in the camp, in regard of the enemy that lay at Deceleia. Therefore on the day appointed, they suffered such as knew not their intent, to go forth as they were wont. But to such as were of the conspiracy, they quietly gave order not to go to the camp itself, but to

lag behind at a certain distance: and if any man should oppose what was in doing, to take arms and keep them back. They to whom this charge was given, were [the] Andrians, Tenians, three hundred Carystians, and such of the colony of Ægina which the Athenians had sent thither to inhabit, as came on purpose to this action with their own arms. These things thus ordered, the four hundred, with every man a secret dagger, accompanied with one hundred and twenty young men of Greece, whom they used for occasions of shedding of blood, came in upon the Counsellors of the Bean, as they sat in the councilhouse, and commanded them to take their salary and be gone: which also they brought ready with them, for the whole time they were behind, and paid it to them as they went out. 70. And the rest of the citizens mutinied not, but rested quiet.

Agis, in hope that the city was in sedition, cometh to assault it, but is repulsed. year xxi. A. C. 411. Ol. 92. 1. The Four Hundred send to Lacedæmon to procure a peace.

The four hundred being now entered into the council-house, created Prytanes amongst themselves by lot, and made their prayers and sacrifices to the gods, all that were before usual at the entrance upon the government. And afterwards receding far from that course which in the administration of the state was used by the people, saving that for Alcibiades his sake they recalled not the outlaws, in other things they governed the commonwealth imperiously: and not only slew some, though not many, such as they thought fit to be made away, and imprisoned some, and confined others to places abroad; but also sent heralds to Agis, king of the Lacedæmonians, who was then at Deceleia, signifying that they would come to composition with him; and that now he might better treat with them, than he might before with the unconstant people. 71. But he, not imagining that the city was yet in quiet nor willing so soon to deliver up their ancient liberty, but rather that if they saw him approach with great forces they would be in

tumult, not yet believing fully but that some stir or other would arise amongst them, gave no answer at all to those that came from the four hundred, touching the composition: but having sent for new and great forces out of Peloponnesus, came down himself not long after, both with the army at Deceleia and those new comers, to the Athenian walls: hoping that they would fall into his hands according to his desire, at least the more easily for their confusion, or perhaps at the very first shout of their voices, in respect of the tumult that in all likelihood was to happen both within and without the city. For, as for the long walls, in regard of the few defendants likely to be found upon them, he thought he could not fail to take them. But when he came near, and the Athenians were without any the least alteration within; and had with their horsemen which they sent out, and a part of their men of arms and of their light-armed and of their archers, overthrown some of his men that approached too near, and gotten some arms and bodies of the slain: rectified thus, he withdrew his army again. And himself, and such as were with him before, stayed in their places at Deceleia; but as for those that came last, after they had stayed awhile in the country, he sent them home again. After this the four hundred, notwithstanding their former repulse, sent ambassadors unto Agis anew: and he now receiving them better, by his advice they sent ambassadors also to Lacedæmon about an agreement, being desirous of peace.

They sent to Samos, to excuse their doings to the army. year xxi. A. C. 411. Ol. 92. 1.

72. They likewise sent ten men to Samos, to satisfy the army: and to tell them, “that the oligarchy was not set up to any prejudice of the city or citizens, but for the safety of the whole state: and that they which had their hands in it were five thousand, and not four hundred only; notwithstanding that the Athenians, by reason of warfare and employment abroad, never assembled, of how great consequence soever was the matter to be handled,

so frequent as to be five thousand there at once". And having in other things instructed them how to make the best of the matter, they sent them away immediately after the government was changed: fearing, as also it fell out, lest the seafaring multitude would not only not continue in this oligarchical form themselves, but the mischief beginning there would depose them also.

The oligarchy assaulted at Samos by the populars. year xxi. A. C. 411. Ol. 92. 1. year xxi. A. C. 411. Ol. 92. 1.

73. For in Samos there was a commotion about the oligarchy already: and this that followeth, happened about the same time that the four hundred were set up in Athens. Those Samians that had risen against the nobility, and were of the people's side, turning when Pisander came thither, at the persuasion of him and of those Athenians in Samos that were his accomplices, conspired together to the number of three hundred, and were to have assaulted the rest as populars. And one Hyperbolus, a lewd fellow, who, not for any fear of his power or for any dignity, but for wickedness of life and dishonour he did the city, had been banished by ostracism, they slew: abetted therein both by Charminus, one of the commanders, and by other Athenians that were amongst them, who had given them their faith. And together with these, they committed other facts of the same kind: and were fully bent to have assaulted the popular side. But they having gotten notice thereof, made known the design both to the generals, Leon and Diomedon; (for these being honoured by the people, endured the oligarchy unwillingly); and also to Thrasybulus and Thrasyllus, whereof one was captain of a galley, and the other captain of a band of men of arms, and to such others continually as they thought stood in greatest opposition to the conspirators: and required of them that they would not see them destroyed, and Samos alienated from the Athenians, by the only means of which their dominion had till this time kept itself in the state it is in. They hearing it, went to the soldiers, and exhorted them one by one not to suffer it;

especially to the Paralians, who were all Athenians and freemen, come thither in the galley called Paralus, and had always before been enemies to the oligarchy. And Leon and Diomedon, whensoever they went forth any whither, left them certain galleys for their guard: so that when the three hundred assaulted them, the commons of the Samians, with the help of all these, and especially of the Paralians, had the upperhand: and of the three hundred slew thirty. Three of the chief authors they banished: and burying in oblivion the fault of the rest, governed the state from that time forward as a democracy.

The army send to Athens to signify their doings against the oligarchy at Samos: not knowing that the oligarchy was then in authority at Athens. year xxi. A. C. 411. Ol. 92. 1. The democracy re-established in the army. year xxi. A. C. 411. Ol. 92. 1.

74. The Paralus, and in it Chæreas the son of Archestratus, a man of Athens, one that had been forward in the making of this change, the Samians and the soldiers dispatched presently away to Athens, to advertise them of what was done: for they knew not yet, that the government was in the hands of the four hundred. When they arrived, the four hundred cast some two or three of these of the Paralus into prison: the rest, after they had taken the galley from them and put them aboard another military galley, they commanded to keep guard about Eubœa. But Chæreas, by some means or other getting presently away, seeing how things went, came back to Samos; and related to the army all that the Athenians had done, aggravating it to the utmost: as that they punished every man with stripes, to the end that none should contradict the doings of those that bore rule; and that their wives and children at home were abused; and that they had an intention further to take and imprison all that were of kin to any of the army which was not of their faction, to the intent to kill them if they of Samos would not submit to their authority. And many other things he told them, adding lies of

his own. 75. When they heard this, they were ready at first to have fallen upon the chief authors of the oligarchy, and upon such of the rest as were partakers of it. Yet afterwards, being hindered by such as came between and advised them not to overthrow the state, the enemy lying so near with their galleys to assault them; they gave it over. After this, Thrasybulus the son of Lycus, and Thrasyllus, (for these were the principal authors of the change), determining now openly to reduce the state at Samos to a democracy, took oaths of all the soldiers, especially of the oligarchicals, the greatest they could devise: both that they should be subject to the democracy and agree together; and also that they should zealously prosecute the war against the Peloponnesians; and withal be enemies to the four hundred, and not to have to do with them by ambassadors. The same oath was taken by all the Samians that were of age; and the Athenian soldiers communicated with them their whole affairs, together with whatsoever should succeed of their dangers: for whom and for themselves, they made account there was no refuge of safety; but that if either the four hundred or the enemy at Miletus overcame them, they must needs perish.

The army encourageth itself against the city and state at home by comparison of their strength. year xxi. A. C. 411. Ol. 92. 1. year xxi. A C 411. Ol. 92. 1.

76. So there was a contention at this time: one side compelling the city to a democracy; the other, the army to an oligarchy. And presently there was an assembly of the soldiers called: wherein they deprived the former commanders, and such captains of galleys as they had in suspicion, of their charge; and chose others, both captains of galleys and commanders, in their places; of which Thrasybulus and Thrasyllus were two. And they stood up and encouraged one another, both otherwise, and with this: “that they had no cause to be dejected for the city’s revolting from them; for they at Athens, being the lesser part, had forsaken them, who were not only the

greater part, but also every way the better provided. For they having the whole navy, could compel the rest of the cities subject unto them to pay in their money as well now, as if they were to set out from Athens itself. And that they also had a city, namely Samos, no weak one; but even such a one, as when they were enemies, wanted little of taking the dominion of the sea from the Athenians. That the seat of the war, was the same it was before; and that they should be better able to provide themselves of things necessary, having the navy, than they should be that were at home in the city. And that they at Athens were masters of the entrance of Peiræus, both formerly by the favour of them at Samos: and that now also, unless they restore them the government, they shall again be brought to that pass, that those at Samos shall be better able to bar them the use of the sea, than they shall be to bar it them of Samos. That it was a trifle and worth nothing, which was conferred to the overcoming of the enemy by the city; and a small matter it would be to lose it, seeing they had neither any more silver to send them, (for the soldiers shifted for themselves), nor yet good direction, which is the thing for which the city hath the command of the armies. Nay, that in this point they erred which were at Athens; in that they had abrogated the laws of their country: whereas they at Samos did both observe the same themselves, and endeavour to constrain the other to do so likewise. So that such of them in the camp as should give good council, were as good as they in the city. And that Alcibiades, if they would decree his security and his return, would with all his heart procure the king to be their confederate. And that which is the main thing, if they failed of all other helps, yet with so great a fleet they could not fail of many places to retire to, in which they might find both city and territory.”

77. When they had thus debated the matter in the assembly and encouraged one another, they made ready, as at other times, whatsoever was necessary for the war. And the ten ambassadors which were sent to Samos

from the four hundred, hearing of this by the way at Delos, whither they were come already, stayed still there.

Upon the murmur of the soldiers against Astyochus, he goeth to Samos to offer the Athenians battle:

78. About the same time also, the soldiers of the Peloponnesian fleet at Miletus murmured amongst themselves, that Astyochus and Tissaphernes overthrew the state of their affairs. Astyochus in refusing to fight; both before, when their own fleet was stronger, and that of the Athenians but small; and also now, whilst they were said to be in sedition, and their fleet divided; and in expecting the Phœnician fleet, in fame, not in fact to come from Tissaphernes: and Tissaphernes, in that he not only brought not in that fleet of his, but also impaired theirs by not giving them their pay, neither fully nor continually: and that they therefore ought no longer to delay time, but to hazard battle. This was urged principally by the Syracusians.

Year xxi. A. C. 411. Ol. 92. 1. who refuse it. The Athenians offer battle to the Peloponnesians, and they refuse it.

79. Astyochus and the confederates, when they heard of the murmur, and had in council resolved to fight, especially after they were informed that Samos was in a tumult: putting forth with their whole fleet to the number of one hundred and twelve sail, with order given to the Milesians to march by land to the same place, went to Mycale. But the Athenians, being come out from Samos with their fleet of eighty-two galleys, and riding now at Glaucæ of the territory of Mycale, ([for] in this part [toward Mycale] Samos is but a little way from the continent), when they descried the Peloponnesian fleet coming against them, put in again to Samos: as not esteeming themselves a sufficient number, to hazard their whole fortune on the battle. Besides, they stayed for the coming of Strombichides from Hellespont to their aid (for they saw that they of Miletus had a desire to fight) with those galleys that went from Chios against Abydos: for they had sent unto him before. So

these retired into Samos. And the Peloponnesians putting in at Mycale, there encamped: as also did the land-forces of the Milesians, and others of the country thereabouts. The next day, when they meant to have gone against Samos, they received news that Strombichides with his galleys was arrived out of Hellespont: and thereupon returned presently to Miletus. Then the Athenians on the other side, with the addition of these galleys, went to Miletus, being now one hundred and eight sail, intending to fight: but when nobody came out against them, they likewise went back to Samos.

The Peloponnesians send part of their fleet to— year xxi. A. C. 411. Ol. 92. 1. wards the Hellespont, but there went through but only ten galleys.

80. Immediately after this, the same summer, the Peloponnesians, who refused to come out against the enemy, as holding themselves with their whole fleet too weak to give them battle, and were now at a stand how to get money for the maintenance of so great a number of galleys: sent Clearchus, the son of Rhamphias, with forty galleys, according to the order at first from Peloponnesus, to Pharnabazus. For not only Pharnabazus himself had sent for, and promised to pay them: but they were advertised besides by ambassadors, that Byzantium had a purpose to revolt. Hereupon these Peloponnesian galleys having put out into the main sea, to the end that they might not be seen as they passed by; and tossed with tempests, part of them, which were the greatest number, and Clearchus with them, got into Delos, and came afterwards to Miletus again; but Clearchus went thence again into the Hellespont by land, and had the command there: and part under the charge of Helixus, a Megarean, which were ten sail, went safely through into the Hellespont, and caused Byzantium to revolt. And after this, when they of Samos heard of it, they sent certain galleys into Hellespont to oppose them, and to be a guard to the cities thereabouts: and there followed a small fight between them of eight galleys to eight, before Byzantium.

Alcibiades is recalled and cometh to Samos. year xxi. A. C. 411. Ol. 92. 1. He manifesteth his power with Tissaphernes. Alcibiades general of the Athenian army. year xxi. A. C. 411. Ol. 92. 1.

81. In the meantime, they that were in authority at Samos, and especially Thrasybulus, who after the form of government changed was still of the mind to have Alcibiades recalled, at length in an assembly persuaded the soldiers to the same. And when they had decreed for Alcibiades both his return and his security, he went to Tissaphernes and fetched Alcibiades to Samos: accounting it their only means of safety, to win Tissaphernes from the Peloponnesians to themselves. An assembly being called, Alcibiades complained of and lamented the calamity of his own exile, and speaking much of the business of the state gave them no small hopes of the future time: hyperbolically magnifying his own power with Tissaphernes, to the end that both they which held the oligarchy at home might the more fear him, and so the conspiracies dissolve, and also those at Samos the more honour him and take better heart unto themselves; and withal, that the enemy might object the same to the utmost to Tissaphernes, and fall from their present hopes. Alcibiades therefore, with the greatest boast that could be, affirmed that Tissaphernes had undertaken to him, that as long as he had anything left, if he might but trust the Athenians they should never want for maintenance; no, though he should be constrained to make money of his own bed; and that he would fetch the Phœnician fleet, now at Aspendus, not to the Peloponnesians but to the Athenians: and that then only he would rely upon the Athenians, when Alcibiades called home should undertake for them. 82. Hearing this and much more, they chose him presently for general together with those that were before; and committed unto them the whole government of their affairs. And now there was not a man that would have sold his present hopes, both of subsisting themselves and being revenged of the four hundred, for any good in the world: and were ready even then,

upon those words of his, contemning the enemy there present, to set sail for Peiræus. But he, though many pressed it, by all means forbade their going against Peiræus, being to leave their enemies so near: but since they had chosen him general, he was, he said, to go to Tissaphernes first, and to dispatch such business with him as concerned the war. And as soon as the assembly brake up, he took his journey accordingly: to the end that he might seem to communicate everything with him, and for that he desired also to be in more honour with him, and to show that he was general, and a man capable to do him good or hurt. And it happened to Alcibiades, that he awed the Athenians with Tissaphernes, and Tissaphernes with the Athenians.

The Peloponnesians murmur against Tissaphernes and Astyochus. year xxi. A. C. 411. Ol. 92. 1. Mutiny against Astyochus. The Milesians take in the fort year xxi. A. C. 411. Ol. 92. 1. made in their city by Tissaphernes.

83. When the Peloponnesians that were at Miletus, heard that Alcibiades was gone home; whereas they mistrusted Tissaphernes before, now they much more accused him. For it fell out, that when at the coming of the Athenians with their fleet before Miletus they refused to give them battle, Tissaphernes became thereby a great deal slacker in his payment; and besides that he was hated by them before this for Alcibiades' sake, the soldiers now, meeting in companies apart, reckoned up one to another the same matters which they had noted before, and some also, men of value and not the common soldier alone, recounted this withal; how they had never had their full stipend; that the allowance was but small, and yet not continually paid; and that unless they either fought, or went to some other place where they might have maintenance, their men would abandon the fleet; and that the cause of all this was in Astyochus, who for private lucre gave way to the humour of Tissaphernes. 84. Whilst these were upon this consideration, there happened also a certain tumult about Astyochus. For

the mariners of the Syracusians and Thurians, by how much they were a multitude that had greater liberty than the rest, with so much the stouter importunity they demanded their pay. And he not only gave them somewhat an insolent answer, but also threatened Dorieus, that amongst the rest spake for the soldiers under himself, and lift up his staff against him. When the soldiers saw that, they took up a cry like seamen indeed, all at once; and were running upon Astyochus to have stricken him. But foreseeing it, he fled to an altar; and was not stricken, but they were parted again. The Milesians also took in a certain fort in Miletus, built by Tissaphernes, having privily assaulted it; and cast out the garrison that was within it. These things were by the rest of the confederates, and especially by the Syracusians, well approved of: but Lichas liked them not; saying, it behoved the Milesians, and the rest dwelling within the king's dominion, to have obeyed Tissaphernes in all moderate things, and till such time as the war should have been well dispatched to have courted him. And the Milesians, for this and other things of this kind, were offended with Lichas: and afterwards when he died of sickness, would not permit him to be buried in that place where the Lacedæmonians then present would have had him.

Mindarus successor to Astyochus, taketh charge of the army, and Astyochus goeth home. year xxi. A. C. 411. Ol. 92. 1.

85. Whilst they were quarrelling about their business with Astyochus and Tissaphernes, Mindarus cometh in from Lacedæmon to succeed Astyochus in his charge of the fleet: and as soon as he had taken the command upon him, Astyochus departed. But with him Tissaphernes sent a Carian, named Gauleites, one that spake both the languages, both to accuse the Milesians about the fort, and also to make an apology for himself: knowing that the Milesians went principally to exclaim upon him; and that Hermocrates went with them, and would bewray how Tissaphernes undid the business of the Peloponnesians with Alcibiades, and dealt on both hands. For he was

continually at enmity with him about the payment of the soldiers' wages: and in the end, when Hermocrates was banished from Syracuse, and other commanders of the Syracusan fleet, namely, Potamis, Myscon, and Demarchus, were arrived at Miletus, Tissaphernes lay more heavy upon him being an outlaw, than before; and accused him amongst other things, that he had asked him money, and because he could not have it became his enemy. So Astyochus and Hermocrates and the Milesians went their way to Lacedæmon.

The ambassadors from the Four Hundred to excuse the change at Athens year xxi. A. C. 411. Ol. 92. 1. Alcibiades saveth the Athenian state. year xxi. A. C. 411. Ol. 92. 1.

Alcibiades by this time was come back from Tissaphernes to Samos. 86. And those ambassadors of the four hundred, which had been sent out before to mollify and to inform those of Samos, came from Delos now, whilst Alcibiades was present. An assembly being called, they were offering to speak. But the soldiers at first would not hear them; but cried out to have them put to death, for that they had deposed the people: yet afterwards with much ado they were calmed, and gave them hearing. They declared, "that the change had been made for the preservation of the city, not to destroy it, nor to deliver it to the enemy; for they could have done that before now, when the enemy during their government assaulted it: that every one of the five thousand was to participate of the government in their turns: and their friends were not, as Chæreas had laid to their charge, abused; nor had any wrong at all, but remained every one quietly upon his own." Though they delivered this and much more, yet the soldiers believed them not, but raged still; and declared their opinions, some in one sort some in another, most agreeing in this to go against Peiræus. And now Alcibiades appeared to be the first and principal man in doing service to the commonwealth. For when the Athenians at Samos were carried headlong to invade themselves: in

which case most manifestly the enemy had presently possessed himself of Ionia and Hellespont: [it was thought that] he was the man that kept them from it. Nor was there any man at that time able to have held in the multitude, but himself. He both made them to desist from the voyage, and rated off from the ambassadors those that were in their own particular incensed against them. Whom also he sent away, giving them their answer himself: "That he opposed not the government of the five thousand, but willed them to remove the four hundred, and to establish the council that was before of five hundred: that if they had frugally cut off any expense, so that such as were employed in the wars might be the better maintained, he did much commend them for it." And withal he exhorted them to stand out, and give no ground to their enemies: for that as long as the city held out, there was great hope for them to compound; but if either part miscarry once, either this at Samos or the other at Athens, there would none be left for the enemy to compound withal.

There chanced to be present also the ambassadors of the Argives, sent unto the popular faction of the Athenians in Samos, to assist them. These Alcibiades commended, and appointed to be ready when they should be called for: and so dismissed them. These Argives came in with those of the Paralus, that had been bestowed formerly in the military galley by the four hundred, to go about Eubœa, and to convoy Læspodias, Aristophon, and Melesias, ambassadors from the four hundred, to Lacedæmon. These as they sailed by Argos, seized on the ambassadors, and delivered them as principal men in deposing of the people to the Argives: and returned no more to Athens, but came with the galley they then were in to Samos, and brought with them these ambassadors from the Argives.

Tissaphernes goeth to the Phœnician fleet at Aspendus. year xxi. A. C. 411. Ol. 92. 1.

87. The same summer, Tissaphernes, at the time that the Peloponnesians were offended with him most, both for the going home of Alcibiades and divers other things, as now manifestly Atticizing, with purpose, as indeed it seemed, to clear himself to them concerning his accusations, made ready for his journey to Aspendus for the Phœnician fleet, and willed Lichas to go along with him: saying that he would substitute Tamos his deputy lieutenant over the army, to pay the fleet whilst himself was absent.

Conjectures of divers upon his going.

This matter is diversly reported: and it is hard to know with what purpose he went to Aspendus, and yet brought not the fleet away with him. For it is known that one hundred and forty-seven sail of Phœnicians were come forward as far as Aspendus: but why they came not through, the conjectures are various. Some think it was upon design (as he formerly intended) to wear out the Peloponnesian forces: for which cause also Tamos, who had that charge, made no better, but rather worse payment than himself. Others, that having brought the Phœnicians as far as Aspendus, he might dismiss them for money: for he never meant to use their service. Some again said, it was because they exclaimed so against it at Lacedæmon: and that it might not be said he abused them, but that he went openly to a fleet really set out.

The opinion of the author. year xxi. A. C. 411. Ol. 92. 1.

For my own part, I think it most clear that it was to the end to consume and to balance the Grecians, that he brought not those galleys in: consuming them, in that he went thither and delayed the time; and equalizing them, in that bringing them to neither he made neither party the stronger. For if he had had a mind to end the war, it is manifest he might have been sure to have done it. For if he had brought them to the Lacedæmonians, in all reason he had given them the victory, who had a navy already rather equal than inferior to that of their enemies. But that which hurt them most, was

the pretence he alleged for not bringing the fleet in. For he said, they were not so many sail as the king had ordained to be gotten together. But sure he might have ingratiated himself more in this business, by dispatching it with less of the king's money, than by spending more. But whatsoever was his purpose, Tissaphernes went to Aspendus and was with the Phœnicians: and by his own appointment the Peloponnesians sent Philip, a Lacedæmonian, with him with two galleys, as to take charge of the fleet.

Alcibiades, knowing that Tissaphernes would never bring on the fleet, goeth after him, to make the Peloponnesians think the fleet was stayed for his and the Athenians' sakes

88. Alcibiades, when he heard that Tissaphernes was gone to Aspendus, goes after him with thirteen galleys, promising to those at Samos a safe and great benefit; which was, that he would either bring those Phœnician galleys to the service of the Athenians, or at least hinder their coming to the Peloponnesians: knowing, as is likely, the mind of Tissaphernes by long acquaintance, that he meant not to bring them on, and desiring, as much as he could, to procure him the ill will of the Peloponnesians for the friendship shown to himself and to the Athenians, that he might thereby the better engage him to take their part. So he presently put to sea, holding his course for Phaselis and Caunus upwards.

Year xxi. A. C. 411. Ol. 92. 1. Sedition at Athens about the change of the oligarchy into democracy again. Ambition of the oligarchicals amongst themselves over— year xxi. A. C. 411. Ol. 92. 1. throweth their government.

89. The ambassadors of the four hundred being returned from Samos to Athens, and having related what they had in charge from Alcibiades: how that he exhorted them to hold out, and not give ground to the enemy; and that he had great hopes to reconcile them to the army, and to overcome the Peloponnesians: whereas many of the sharers in the oligarchy were formerly discontented, and would gladly, if they could have done it safely,

have quitted the business, they were now a great deal more confirmed in that mind. And already they had their meetings apart, and did cast aspersions on the goverment; and had for their ringleaders some of the heads of the oligarchicals and such as bare office amongst them, as Theramenes the son of Agnon, and Aristocrates the son of Scellius, and others, who though they were partakers with the foremost in the affairs of state, yet feared, as they said, Alcibiades and the army at Samos; and joined in the sending of ambassadors to Lacedæmon, because they were loth, by singling themselves from the greater number, to hurt the state, not that they dismissed the state into the hands of a very few: but said, that the five thousand ought in fact to be assigned, and not in voice only, and the government to be reduced to a greater equality. And this was indeed the form pretended in words by the four hundred. But the most of them, through private ambition, fell upon that, by which an oligarchy made out of a democracy is chiefly overthrown. For at once they claimed every one, not to be equal, but to be far the chief. Whereas in a democracy, when election is made, because a man is not overcome by his equals, he can better brook it. But the great power of Alcibiades at Samos, and the opinion they had that the oligarchy was not like to last, was it that most evidently encouraged them: and thereupon they every one contended who should most eminently become the patron of the people.

The oligarchals year xxi. A. C. 411. Ol. 92. 1. fortify the mouth of the haven of Peiræus. year xxi. A. C 411. Ol. 92. 1.

90. But those of the four hundred that were most opposite to such a form of government, and the principal of them; both Phrynichus, who had been general at Samos and was ever since at difference with Alcibiades; and Aristarchus, a man that had been an adversary to the people both in the greatest manner and for the longest time; and Pisander and Antiphon, and others of the greatest power, not only formerly, as soon as they entered into

authority, and afterwards when the state at Samos revolted to the people, sent ambassadors to Lacedæmon and bestirred themselves for the oligarchy, and built a wall in the place called Eetioneia: but much more afterwards, when their ambassadors were come from Samos, and that they saw not only the populars, but also some others of their own party thought trusty before, to be now changed. And to Lacedæmon they sent Antiphon and Phrynichus with ten others with all possible speed, as fearing their adversaries both at home and at Samos, with commission to make a peace with the Lacedæmonians on any tolerable conditions, whatsoever or howsoever: and in this time went on with the building of the wall in Eetioneia with greater diligence than before. The scope they had in this wall, as it was given out by Theramenes [the son of Agnon], was not so much to keep out those of Samos, in case they should attempt by force to enter into Peiræus, as at their pleasure to be able to let in both the galleys and the land-forces of the enemies. For this Eetioneia is the pier of the Peiræus, close unto which is the mouth of the haven. And therefore they built this wall so to another wall that was built before to the continent, that a few men lying within it might command the entrance. For the end of each wall was brought to the tower upon the [very] mouth of the haven, as well of the old wall towards the continent as of the new which was built within it to the water. They built also an open ground-gallery, an exceeding great one and close to their new wall within Peiræus: and were masters of it, and constrained all men as well to bring thither their corn which they had already come in, as to unload there whatsoever should come in afterward; and to take and sell it from thence.

Theramenes murmureth against their fortifying in Eetioneia. year xxi. A. C. 411. Ol. 92. 1. The scope of the oligarchicals. Phrynichus murdered. year xxi. A. C. 411. Ol. 92. 1. Theramenes and his faction set themselves against

the rest of the Four Hundred. year xxi. A. C. 411. Ol. 92. 1. year xxi. A. C. 411. Ol. 92. 1. The soldiers pull down the wall they had built in Eetioneia.

91. These things Theramenes murmured at long before: and when the ambassadors returned from Lacedæmon without compounding for them all in general, he gave out that this wall would endanger the undoing of the city. For at this very instant there happened to be riding on the coast of Laconia forty-two galleys, amongst which were some of Tarentum, some of Locri, some Italians, and some Sicilians; set out from Peloponnesus at the instance of the Eubœans, bound for Eubœa and commanded by Hegesandridas the son of Hegesander, a Spartan. And these Theramenes said were coming, not so much towards Eubœa, as towards those that fortified in Eetioneia: and that if they were not looked to, they would surprise the city. Now some matter might indeed be gathered also from those that were accused: so that it was not a mere slander. For their principal design was, to retain the oligarchy with dominion over their confederates: but if they failed of that, yet being masters of the galleys and of the fortification, to have subsisted free themselves: if barred of that, then rather than to be the only men to suffer death under the restored democracy, to let in the enemy; and without either navy or fortification to have let what would have become of the city, and to have compounded for the safety of their own persons. 92. Therefore they went diligently on with the fortification, wherein were wickets and entries and backways for the enemy: and desired to have it finished in time. And though these things were spoken but amongst a few before and in secret, yet when Phrynichus, after his return from his Lacedæmonian ambassage, was by a certain watchman wounded treacherously in the market-place when it was full, as he went from the council-house, and not far from it fell instantly dead, and the murtherer gone; and that one of his complices, an Argive, taken by the four hundred and put to the torture, would confess no man of those named

to him, nor anything else saving this, that many men used to assemble at the house of the captain of the watch and at other houses: then at length, because this accident bred no alteration, Theramenes and Aristocrates, and as many other, either of the four hundred or out of that number, as were of the same faction, proceeded more boldly to assault the government. For now also the fleet being come about from Laconia, and lying upon the coast of Epidaurus, had made incursions upon Ægina. And Theramenes thereupon alleged, that it was improbable that those galleys holding their course for Eubœa, would have put in at Ægina and then have gone back again to lie at Epidaurus, unless they had been sent for by such men as he had ever accused of the same: and that therefore there was no reason any longer to sit still. And in the end, after many seditious and suspicious speeches, they fell upon the state in good earnest. For the soldiers that were in Peiræus employed in fortifying Eetioneia, (amongst whom was also Aristocrates, captain of a band of men, and his band with him), seized on Alexicles, principal commander of the soldiers under the four hundred, an eminent man of the other side: and carrying him into a house, kept him in hold. As soon as the news hereof was brought unto the four hundred, who chanced at the same time to be sitting in the council-house, they were ready all of them presently to have taken arms, threatening Theramenes and his faction. He to purge himself was ready to go with them and to help to rescue Alexicles: and taking with him one of the commanders who was also of his faction, went down into Peiræus. To help him went also Aristarchus, and certain horsemen of the younger sort. Great and terrible was the tumult. For in the city they thought Peiræus was already taken; and him that was laid in hold, slain: and in Peiræus, they expected every hour the power of the city to come upon them. At last the ancient men, stopping them that ran up and down the city to arm themselves; and Thucydides of Pharsalus, the city's host, being then there, going boldly and close up to every one he met,

and crying out unto them not to destroy their country when the enemy lay so near waiting for an advantage: with much ado quieted them, and held their hands from spilling their own blood. Theramenes coming into Peiræus, (for he also had command over the soldiers), made a shew by his exclaiming of being angry with them: but Aristarchus and those that were of the contrary side, were extremely angry in good earnest. Nevertheless the soldiers went on with their business, and repented not a jot of what they had done. Then they asked Theramenes, if he thought this fortification were made to any good end, and whether it were not better to have it demolished. And he answered, that if they thought good to demolish it, he also thought the same. At which word they presently got up, both the soldiers and also many others of Peiræus, and fell a digging down of the wall. Now the provocation that they used to the multitude, was in these words: “that whosoever desired that the sovereignty should be in the five thousand instead of the four hundred, ought also to set himself to the work in hand.” For notwithstanding all this, they thought fit as yet to veil the democracy with the name of the five thousand; and not to say plainly whosoever will have the sovereignty in the people: lest the five thousand should have been extant indeed, and so a man by speaking to some or other of them, might do hurt to the business through ignorance. And for this cause it was that the four hundred would neither let the five thousand be extant, nor yet let it be known that they were not. For to make so many participant of the affairs of state, they thought was a direct democracy: but to have it doubtful, would make them afraid of one another.

Year xxi. A. C. 411. Ol. 92. 1. A day appointed for an assembly, wherein to treat of agreement.

93. The next day, the four hundred, though out of order, yet met together in the councilhouse, and the soldiers in Peiræus, having enlarged Alexicles whom they had before imprisoned, and quite razed the fortification, came

into the theatre of Bacchus near to Munychia, and there sat down with their arms: and presently, according as they had resolved in an assembly then holden, marched into the city, and there sat down again in the temple of Castor and Pollux. To this place came unto them certain men elected by the four hundred, and man to man reasoned and persuaded with such as they saw to be of the mildest temper, both to be quiet themselves and to restrain the rest: saying, that not only the five thousand should be made known who they were, but that out of these such should be chosen in turns to be of the four hundred, as the five thousand should think good: and entreating them by all means that they would not in the meantime overthrow the city, and force it into the hand of the enemy. Hereupon the whole number of the men of arms, after many reasons alleged to many men, grew calmer: and feared most the loss of the whole city. And it was agreed betwixt them, that an assembly should be held for making of accord in the temple of Bacchus at a day assigned.

Year xxi. A. C. 411. Ol. 92. 1.

94. When they came to the temple of Bacchus, and wanted but a little of a full assembly, came news that Hegesandridas with his forty-two galleys came from Megara along the coast towards Salamis. And now there was not a soldier but thought it the very same thing that Theramenes and his party had before told them, “that those galleys were to come to the fortification”, and that it was now demolished to good purpose. But Hegesandridas, perhaps upon appointment, hovered upon the coast of Epidaurus and thereabouts: but it is likely that in respect of the sedition of the Athenians he stayed in those parts, with hope to take hold of some good advantage. Howsoever it was, the Athenians as soon as it was told them, ran presently with all the power of the city down to Peiræus: less esteeming their domestic war than that of the common enemy, which was not now far off,

but even in the haven. And some went aboard the galleys that were then ready, some launched the rest; and others ran to defend the walls and mouth of the haven.

The battle between the Athenians and the fleet of Hegesandridas at Eretria. year xxi. A. C. 411. Ol. 92. 1. The Athenians defeated. year xxi. A. C. 411. Ol. 92. 1.

95. But the Peloponnesian galleys being now gone by and gotten about the promontory of Sunium, cast anchor between Thoricus and Prasiæ, and put in afterwards at Oropus. The Athenians with all speed, constrained to make use of tumultuary forces, such as a city in time of sedition might afford, and desirous with all haste to make good their greatest stake, (for Eubœa, since they were shut out of Attica, was all they had), sent a fleet under the command of Timocharis to Eretria. Which arriving, with those galleys that were in Eubœa before, made up the number of six-and-thirty sail. And they were presently constrained to hazard battle: for Hegesandridas brought out his galleys from Oropus, when he had first there dined. Now Oropus is from Eretria about three-score furlongs of sea. Whereupon the Athenians also, as the enemy came towards them, began to embark: supposing that their soldiers had been somewhere near unto the galleys. But it fell out that they were gone abroad to get their dinner, not in the market; (for by set purpose of the Eretrians, to the end that the enemy might fall upon the Athenians that embarked slowly before they were ready, and force them to come out and fight, nothing was there to be sold); but in the utmost houses of the city. There was besides a sign set up at Eretria, to give them notice at Oropus at what time to set forward. The Athenians drawn out by this device, and fighting before the haven of Eretria, made resistance nevertheless for a while: but afterwards they turned their backs, and were chased ashore. Such as fled to the city of the Eretrians, taking it for their friend, were handled most cruelly, and slaughtered by them of the

town; but such as got to the fort in Eretria, holden by the Athenians, saved themselves: and so did so many of their galleys as got to Chalcis.

Eubœa revolteth

The Peloponnesians, after they had taken twenty-two Athenian galleys with the men, whereof some they slew and some they took prisoners, erected a trophy: and not long after having caused all Eubœa to revolt, save only Oreus, which the Athenians held with their own forces, they settled the rest of their business there.

The lamentable estate of the Athenians upon the loss of Eubœa. year xxi. A. C. 411. Ol. 92. 1. The Lacedæmonians let slip the advantage which they might have had, if in prosecution of the victory they had come to Peiræus. The Lacedæmonians commodious enemies to the Athenians.

96. When the news of that which had happened in Eubœa was brought to Athens, it put the Athenians into the greatest astonishment that ever they had been in before. For neither did their loss in Sicily, though then thought great, nor any other at any time so much affright them as this. For now when the army at Samos was in rebellion, when they had no more galleys nor men to put aboard, when they were in sedition amongst themselves and in continual expectation of falling together by the ears: then in the neck of all arrived this great calamity; wherein they not only lost their galleys, but also, which was worst of all, Eubœa, by which they [had] received more commodity than by Attica. How then could they choose but be dejected? But most of all they were troubled, and that for the nearness, with a fear lest upon this victory the enemy should take courage and come immediately into Peiræus, now empty of shipping: of which they thought nothing wanting, but that they were not there already. And had they been anything adventurous, they might easily have done it: and then, had they stayed there and besieged them, they had not only increased the sedition, but also compelled the fleet to come away from Ionia to the aid of their kindred and

of the whole city, though enemies to the oligarchy; and in the meantime gotten the Hellespont, Ionia, the Islands, and all places even to Eubœa, and, as one may say, the whole Athenian empire into their power. But the Lacedæmonians, not only in this but in many other things, were most commodious enemies to the Athenians to war withal. For being of most different humours; the one swift, the other slow; the one adventurous, the other timorous; the Lacedæmonians gave them great advantage, especially when their greatness was by sea. This was evident in the Syracusians: who being in condition like unto them, warred best against them.

The Athenians settle their government, and put an end to the sedition, by deposing the Four Hundred, and setting up the Five Thousand. year xxi. A. C. 411. Ol. 92. 1.

97. The Athenians upon this news made ready, notwithstanding, twenty galleys; and called an assembly, one then presently in the place called Pnyx, where they were wont to assemble at other times: in which having deposed the four hundred, they decreed the sovereignty to the five thousand; of which number were all such to be, as were charged with arms: and from that time forward to salariate no man for magistracy; with a penalty on the magistrate receiving the salary, to be held for an execrable person. There were also divers other assemblies held afterwards; wherein they elected law-makers, and enacted other things concerning the government. And now first (at least in my time) the Athenians seem to have ordered their state aright: which consisted now of a moderate temper, both of the few and of the many. And this was the first thing, that after so many misfortunes past made the city again to raise her head.

They recall Alcibiades.

They decreed also the recalling of Alcibiades, and those that were in exile with him: and sending to him and to the army at Samos, willed them to fall in hand with their business.

Most of the oligarchicals fly to the enemy. Aristarchus betrayeth CEnoe. year xxi. A. C. 411. Ol. 92. 1.

98. In this change Pisander and Alexicles, and such as were with them, and they that had been principal in the oligarchy, immediately withdrew themselves to Deceleia. Only Aristarchus (for it chanced that he had charge of the soldiers) took with him certain archers of the most barbarous, and went with all speed to CEnoe. This was a fort of the Athenians in the confines of Bœotia; and (for the loss that the Corinthians had received by the garrison of CEnoe) was by voluntary Corinthians, and by some Bœotians by them called in to aid them, now besieged. Aristarchus therefore having treated with these, deceived those in CEnoe: and told them, that the city of Athens had compounded with the Lacedæmonians, and that they were to render up the place to the Bœotians; for that it was so conditioned in the agreement. Whereupon, believing him as one that had authority over the soldiery, and knowing nothing because besieged, upon security for their pass they gave up the fort. So the Bœotians receive CEnoe: and the oligarchy and sedition at Athens cease.

C. 411. Ol. 92. 2. Mindarus with the Peloponnesian fleet, seeing Tissaphernes and the Phœnician fleet came not, resolves to go to Pharnabazus in the Hellespont. year xxi. A. C. 411. Ol. 92. 2.

99. About the same time of this summer, when none of those whom Tissaphernes at his going to Aspendus had substituted to pay the Peloponnesian navy at Miletus, did it; and seeing neither the Phœnician fleet nor Tissaphernes came to them; and seeing Philip, that was sent along with him, and also another, one Hippocrates a Spartan that was lying in Phaselis, had written to Mindarus the general, that the fleet was not to come at all and in every thing Tissaphernes abused them; seeing also that Pharnabazus had sent for them, and was willing, upon the coming to him of their fleet, for his own part also as well as Tissaphernes, to cause the rest of

the cities within his own province to revolt from the Athenians: then at length, Mindarus hoping for benefit by him, with good order and sudden warning, that the Athenians at Samos might not be aware of their setting forth, went into the Hellespont with seventy-three galleys, besides sixteen which the same summer were gone into the Hellespont before, and had overrun part of Chersonnesus. But tossed with the wind she was forced to put in at Icarus: and after he had stayed there through ill weather some five or six days, he arrived at Chios.

Mindarus stayeth by the way at Chios: Thrasyllus in the meantime outgoes him, and watches for his going by at Lesbos. year xxi. A. C. 411. Ol. 92. 2.

100. Thrasyllus having been advertised of his departure from Miletus, he also puts to sea from Samos with five and fifty sail; hasting to be in the Hellespont before him. But hearing that he was in Chios, and conceiving that he would stay there, he appointed spies to lie in Lesbos and in the continent over against it, that the fleet of the enemy might not remove without his knowledge: and he himself going to Methymna, commanded provision to be made of meal, and other necessities; intending, if they stayed there long, to go from Lesbos and invade them in Chios. Withal, because Eressos was revolted from Lesbos, he purposed to go thither with his fleet: if he could, to take it in. For the most potent of the Methymnæan exiles had gotten into their society about fifty men of arms out of Cume, and hired others out of the continent: and with their whole number in all three hundred, having for their leader Anaxarchus a Theban, chosen in respect of their descent from the Thebans, first assaulted Methymna. But beaten in the attempt by the Athenian garrison that came against them from Mytilene, and again in a skirmish without the city driven quite away, they passed by the way of the mountain to Eressos, and caused it to revolt. Thrasyllus therefore intended to go thither with his galleys, and to assault it.

At his coming he found Thrasybulus there also before him, with five galleys from Samos: for he had been advertised of the outlaws coming over; but being too late to prevent them, he went to Eressos and lay before it at anchor. Hither also came two galleys of Methymna, that were going home from the Hellespont: so that they were in all threescore and seven sail, out of which they made an army, intending with engines, or any other way they could, to take Eressos by assault.

Mindarus and his fleet steal by into the Hellespont unseen of those that watched their going in Lesbos. year xxi. A. C. 411. Ol. 92. 2.

101. In the meantime, Mindarus and the Peloponnesian fleet that was at Chios, when they had spent two days in victualling their galleys, and had received of the Chians three Chian tessaracostes a man, on the third day put speedily off from Chios: and kept far from the shore, that they might not fall amongst the galleys at Eressos. And leaving Lesbos on the left hand, went to the continent side: and putting in at a haven in Craterei, belonging to the territory of Phocæa, and there dining, passed along the territory of Cume, and came to Arginusæ in the continent over against Mytilene, where they supped. From thence they put forth late in the night, and came to Harmatus, a place in the continent over against Methymna: and after dinner going a great pace by Lectus, Larissa, Hamaxitus, and other the towns in those parts, came before midnight to Rhœteium; this now is in Hellespont. But some of his galleys put in at Sigeium, and other places thereabouts.

The Athenians at Sestos with eighteen galleys steal out of the Hellespont: but are met by Mindarus, and four of them taken. year xxi. A. C. 411. Ol. 92. 2.

102. The Athenians that lay with eighteen galleys at Sestos, knew that the Peloponnesians were entering into the Hellespont by the fires, both those which their own watchmen put up, and by the many which appeared on the enemies' shore: and therefore the same night in all haste, as they

were, kept the shore of Chersonnesus towards Elæus, desiring to get out into the wide sea and to decline the fleet of the enemy: and went out unseen of those sixteen galleys that lay at Abydos, though these had warning before from the fleet of their friends that came on, to watch them narrowly that they went not out. But in the morning, being in sight of the fleet with Mindarus and chased by him, they could not all escape, but the most of them got to the continent and into Lemnos; only four of the hindmost were taken near Elæus: whereof the Peloponnesians took one with the men in her, that had run herself aground at the temple of Protesilaus; and two other without the men; and set fire on a fourth, abandoned upon the shore of Imbros.

103. After this they besieged Elæus the same day, with those galleys of Abydos which were with them, and with the rest, being now altogether fourscore and six sail. But seeing it would not yield, they went away to Abydos.

The Athenians hasted from Lesbos after the Peloponnesians into Hellespont.

The Athenians, who had been deceived by their spies, and not imagining that the enemy's fleet could have gone by without their knowledge, and attended at leisure the assault of Eressos: when now they knew they were gone, immediately left Eressos and hasted to the defence of Hellespont. By the way they took two galleys of the Peloponnesians, that having ventured into the main more boldly in following the enemy than the rest had done, chanced to light upon the fleet of the Athenians. The next day they came to Elæus, and stayed: and thither from Imbros came unto them those other galleys that had escaped from the enemy. Here they spent five days in preparation for a battle.

104. After this, they fought in this manner. The Athenians went by the shore, ordering their galleys one by one, towards Sestos. The

Peloponnesians also, when they saw this, brought out their fleet against them from Abydos.

Year xxi. A. C. 411. Ol. 92. 2. The Athenians and Peloponnesians fight, and the Athenians get the victory.

Being sure to fight, they drew out their fleets in length, the Athenians along the shore of Chersonnesus, beginning at Idacus and reaching as far as Arrhiana, threescore and six galleys: and the Peloponnesians, from Abydos to Dardanum, fourscore and six galleys. In the right wing of the Peloponnesians, were the Syracusians: in the other, Mindarus himself, and those galleys that were nimblest. Amongst the Athenians, Thrasyllus had the left wing, and Thrasybulus the right: and the rest of the commanders, every one the place assigned him.

Now the Peloponnesians laboured to give the first onset, and with their left wing to over-reach the right wing of the Athenians and keep them from going out, and to drive those in the middle to the shore which was near. The Athenians, who perceived it, where the enemy went about to cut off their way out, put forth the same way that they did, and outwent them: the left wing of the Athenians was also gone forward by this time beyond the point called Cynos-sema. By means whereof that part of the fleet which was in the midst became both weak and divided, especially when theirs was the less fleet: and the sharp and angular figure of the place about Cynos-sema, took away the sight of what passed there from those that were on the other side.

Year xxi. A. C. 411. Ol. 92. 2.

105. The Peloponnesians therefore, charging this middle part, both drave their galleys to the dry land: and being far superior in fight, went out after them and assaulted them upon the shore. And to help them neither was Thrasybulus able who was in the right wing, for the multitude of the

enemies that pressed him; nor Thrasyllus in the left wing, both because he could not see what was done for the promontory of Cynos-sema, and because also he was kept from it by the Syracusians and others, lying upon his hands no fewer in number than themselves. Till at last the Peloponnesians, bold upon their victory, chasing some one galley some another, fell into some disorder in a part of their army. And then those about Thrasybulus, having observed that the opposite galleys sought now no more to go beyond them, turned upon them; and fighting put them presently to flight: and having also cut off from the rest of the fleet such galleys of the Peloponnesians, of that part that had the victory, as were scattered abroad, some they assaulted, but the greatest number they put into affright unfoughten. The Syracusians also, whom those about Thrasyllus had already caused to shrink, when they saw the rest fly fled outright.

The courage of the Athenians erected with this victory. year xxi. A C 411. Ol. 92. 2.

106. This defeat being given, and the Peloponnesians having for the most part escaped first to the river Pydus, and afterwards to Abydos: though the Athenians took but few of their galleys, (for the narrowness of the Hellespont afforded to the enemy a short retreat), yet the victory was the most seasonable to them that could be. For having till this day stood in fear of the Peloponnesian navy, both for the loss which they had received by little and little and also for their great loss in Sicily, they now ceased either to accuse themselves, or to think highly any longer of the naval power of their enemies. The galleys they took were these: eight of Chios, five of Corinth, of Ambracia two, of Leucas, Laconia, Syracuse, and Pellene, one a-piece. Of their own they lost fifteen.

When they had set up a trophy in the promontory of Cynos-sema, and taken up the wrecks, and given truce to the enemies to fetch away the bodies of their dead: they presently sent away a galley with a messenger to

carry news of the victory to Athens. The Athenians, upon the coming in of this galley hearing of their unexpected good fortune, were encouraged much after their loss in Eubœa and after their sedition: and conceived that their estate might yet keep up, if they plied the business courageously.

The Athenians recover Cyzicus, and take eight galleys of the Peloponnesians.

107. The fourth day after this battle, the Athenians that were in Sestos having hastily prepared their fleet, went to Cyzicus, which was revolted: and espying, as they passed by, the eight galleys come from Byzantium riding under Harpagium and Priapus, set upon them: and having also overcome those that came to their aid from the land, took them. Then coming to Cyzicus, being an open town, they brought it again into their own power; and levied a sum of money amongst them.

Year xxi. A. C. 411. Ol. 92. 2. The Peloponnesians recover some of their galleys taken, at Elæus. They send for the fleet with Hegesandridas out of Eubœa.

The Peloponnesians in the meantime going from Abydos to Elæus, recovered as many of their galleys [formerly] taken as remained whole: the rest, the Elæusians [had] burnt. They also sent Hippocrates and Epicles into Eubœa, to fetch away the fleet that was there.

Alcibiades returneth from Aspendus to Samos. Hefortifieth Cos.

108. About the same time also, returned Alcibiades to Samos with his thirteen galleys from Caunus and Phaselis: reporting that he had diverted the Phœnician fleet from coming to the Peloponnesians, and that he had inclined Tissaphernes to the friendship of the Athenians more than he was before. Thence manning out nine galleys more, he exacted a great sum of money of the Hallicarnasseans, and fortified Cos. Being now almost autumn, he returned to Samos.

The Antandrians put out the garrison of Tissaphernes out of their citadel. year xxi. A. C. 411. Ol. 92. 2.

The Peloponnesians being now in Hellespont, the Antandrians (who are Æolians) received into the city men of arms from Abydos by land through mount Ida, upon injury that had been done them by Arsaces, a deputy lieutenant of Tissaphernes. This Arsaces having feigned a certain war, not declared against whom, had formerly called out the chiefest of the Delians (the which in hallowing of Delos by the Athenians were turned out, and had planted themselves in Adramyttium) to go with him to this war: and when under colour of amity and confederacy he had drawn them out, he observed a time when they were at dinner, and having hemmed them in with his own soldiers murdered them with darts. And therefore, for this act's sake fearing lest he might do some unlawful prank against them also, and for that he had otherwise done them injury, they cast his garrison out of their citadel.

Tissaphernes goeth toward Hellespont, to recover the favour of the Peloponnesians.

109. Tissaphernes, hearing of this, being the act of the Peloponnesians as well as that at Miletus or that at Cnidus; (for in those cities his garrisons had also been cast out in the same manner); and conceiving that he was deeply charged to them, and fearing lest they should do him some other hurt; and withal not enduring that Pharnabazus should receive them, and with less time and cost speed better against the Athenians than he had done: resolved to make a journey to them in the Hellespont, both to complain of what was done at Antandros, and to clear himself of his accusations the best he could, as well concerning the Phœnician fleet as other matters. And first he put in at Ephesus, and offered sacrifices to Diana.

The end of the one-and-twentieth summer.

When the winter following this summer shall be ended, the one-and-twentieth year [of this war] shall be complete.

The Whole Art of Rhetoric

MOLESWORTH'S 1845 EDITION

In 1637 Hobbes anonymously published *A Brieft of the Art of Rhetorique*, an abridgement that contained “the most useful part of Aristotle’s Rhetoric”. The Preface to the work informs us:

“Mr. Hobbes chose to recommend by his Translation the Rhetoric of Aristotle, as being the most accomplish’d work on that Subject, which the World has yet seen, having been admir’d in all Ages, and in particular highly approv’d by the Father of the Roman Eloquence, a very competent Judge. To this he thought fit to add some small matter relating to that part which concern’s Tropes and Figures; as also a short discovery of some little trick of false and deceitful Reasoning.” (Preface).

Molesworth’s 1845 edition of the text, which is featured in this collection, also provided *The Art of Rhetoric Plainly Set Forth, with Pertinent Examples for the More Easy Understanding and Practice of the Same*, which was originally ascribed to Hobbes, though today it is generally agreed to be the work of Dudley Fenner (c. 1558-1587), an English puritan divine that helped popularise Ramist logic in the English language.

Roman copy in marble of a Greek bronze bust of Aristotle by Lysippos, c. 330 BC

CONTENTS

THE ART OF RHETORIC.

PREFACE

BOOK I.

CHAPTER I. THAT RHETORIC IS AN ART CONSISTING NOT ONLY
IN MOVING THE PASSIONS OF THE JUDGE, BUT CHIEFLY IN
PROOFS: AND THAT THIS ART IS PROFITABLE.

CHAPTER II. THE DEFINITION OF RHETORIC.

CHAPTER III. OF THE SEVERAL KINDS OF ORATIONS: AND OF
THE PRINCIPLES OF RHETORIC.

CHAPTER IV. OF THE SUBJECT OF DELIBERATIVES; AND THE
ABILITIES THAT ARE REQUIRED OF HIM THAT WILL
DELIBERATE OF BUSINESS OF STATE.

CHAPTER V. OF THE ENDS WHICH THE ORATOR IN
DELIBERATIVES PROPOUNDETH, WHEREBY TO EXHORT OR
DEHORT.

CHAPTER VI. OF THE COLOURS OR COMMON OPINIONS
CONCERNING GOOD AND EVIL.

CHAPTER VII. OF THE COLOURS OR COMMON OPINIONS
CONCERNING GOOD AND EVIL, COMPARATIVELY.

CHAPTER VIII. OF THE SEVERAL KINDS OF GOVERNMENTS.

CHAPTER IX. OF THE COLOURS OF HONOURABLE AND
DISHONOURABLE.

CHAPTER X. OF ACCUSATION AND DEFENCE, WITH THE
DEFINITION OF INJURY.

CHAPTER XI. OF THE COLOURS OR COMMON OPINIONS
CONCERNING PLEASURE.

CHAPTER XII. PRESUMPTIONS OF INJURY DRAWN FROM THE PERSONS THAT DO IT: OR COMMON OPINIONS CONCERNING THE APTITUDE OF PERSONS TO DO INJURY.

CHAPTER XIII. PRESUMPTIONS OF INJURY DRAWN FROM THE PERSONS THAT SUFFER, AND FROM THE MATTER OF THE INJURY.

CHAPTER XIV. OF THOSE THINGS WHICH ARE NECESSARY TO BE KNOWN FOR THE DEFINITION OF JUST AND UNJUST.

CHAPTER XV. OF THE COLOURS OR COMMON OPINIONS CONCERNING INJURIES, COMPARATIVELY.

CHAPTER XVI. OF PROOFS IN ARTIFICIAL.

BOOK II.

CHAPTER I. THE INTRODUCTION.

CHAPTER II. OF ANGER.

CHAPTER III. OF RECONCILING, OR PACIFYING ANGER.

CHAPTER IV. OF LOVE AND FRIENDS.

CHAPTER V. OF ENMITY AND HATRED.

CHAPTER VI. OF FEAR.

CHAPTER VII. OF ASSURANCE.

CHAPTER VIII. OF SHAME.

CHAPTER IX. OF GRACE OR FAVOUR.

CHAPTER X. OF PITY OR COMPASSION.

CHAPTER XI. OF INDIGNATION.

CHAPTER XII. OF ENVY.

CHAPTER XIII. OF EMULATION.

CHAPTER XIV. OF THE MANNERS OF YOUTH.

CHAPTER XV. OF THE MANNERS OF OLD MEN.

CHAPTER XVI. OF THE MANNERS OF MIDDLE-AGED MEN.

CHAPTER XVII. OF THE MANNERS OF THE NOBILITY.

CHAPTER XVIII. OF THE MANNERS OF THE RICH.

CHAPTER XIX. OF THE MANNERS OF MEN IN POWER, AND OF
SUCH AS PROSPER.

CHAPTER XX: COMMON PLACES OR PRINCIPLES CONCERNING
WHAT MAY BE DONE, WHAT HAS BEEN DONE, AND WHAT
SHALL BE DONE; OR OF FACT POSSIBLE, PAST AND FUTURE.
ALSO OF GREAT AND LITTLE.

CHAPTER XXI. OF EXAMPLE, SIMILITUDE, AND FABLES.

CHAPTER XXII. OF A SENTENCE.

CHAPTER XXIII. OF THE INVENTION OF ENTHYMEMES.

CHAPTER XXIV. OF THE PLACES OF ENTHYMEMES OSTENSIVE.

CHAPTER XXV. OF THE PLACES OF ENTHYMEMES THAT LEAD
TO IMPOSSIBILITY.

CHAPTER XXVI. OF THE PLACES OF SEEMING ENTHYMEMES.

CHAPTER XXVII. OF THE WAYS TO ANSWER THE ARGUMENTS
OF THE ADVERSARY.

CHAPTER XXVIII. AMPLIFICATION AND EXTENUATION ARE NOT
COMMON PLACES. ENTHYMEMES, BY WHICH ARGUMENTS ARE
ANSWERED, ARE THE SAME WITH THOSE BY WHICH THE
MATTER IN QUESTION IS PROVED OR DISPROVED. OBJECTIONS
ARE NOT ENTHYMEMES.

BOOK III.

CHAPTER I. OF THE ORIGINAL OF ELOCUTION AND
PRONUNCIATION.

CHAPTER II. OF THE CHOICE OF WORDS AND EPITHETS.

CHAPTER III. OF THE THINGS THAT MAKE AN ORATION FLAT.

CHAPTER IV. OF A SIMILITUDE.

Qui praeceptorem sancti voluere parentis
Esse loco.
Juvenal, VII. 207-210.

PREFACE

TO THE READER.

ALTHOUGH THESE PIECES may appear fully to express their own real intrinsic value, as bearing the image and inscription of that great man Mr. Hobbes; yet since common usage has rendered a preface to a book as necessary as a porch to a church, and that in all things some ceremonies cannot be avoided, mode and custom in this point is dutifully to be obeyed.

That they are genuine, credible testimony might be produced, did not the peculiar fineness of thought and expression, and a constant undaunted resolution of maintaining his own opinions, sufficiently ascertain their author. Besides which, they are now published from his own true copies; an advantage which some of his works have wanted.

The first of them, being an abridgment containing the most useful part of Aristotle's rhetoric, was written some thirty years since. Mr. Hobbes in his book of Human Nature had already described man, with an exactness almost equal to the original draught of nature; and in his Elements of Law laid down the constitution of government, and shown by what armed reason it is maintained: and having demonstrated in the state of nature the primitive art of fighting to be the only medium whereby men procured their ends, did in this design to show what power in societies has succeeded to reign in its stead, I mean the art of speaking; which by use of common places of probability, and knowledge in the manners and passions of mankind, through the working of belief is able to bring about whatsoever interest.

How necessary this art is to that of politic, is clearly evident from that mighty force whereby the eloquence of the ancient orators captivated the minds of the people. Mr. Hobbes chose to recommend by his translation the rhetoric of Aristotle, as being the most accomplished work on that subject which the world has yet seen; having been admired in all ages, and in particular highly approved by the father of the Roman eloquence, a very competent judge. To this he thought fit to add some small matter relating to that part which concerns tropes and figures; as also a short discovery of some little tricks of false and deceitful reasoning.

The other piece is a discourse concerning the laws of England, and has been finished many years. Herein he has endeavoured to accommodate the general notions of his politic to the particular constitution of the English monarchy: a design of no small difficulty; wherein to have succeeded deserves much honour; to have perchance miscarried, deserves easy pardon. It has had the good fortune to be much esteemed by the greatest men of the profession of the law, and therefore may be presumed to contain somewhat excellent. However it is not to be expected that all men should submit to his opinions, yet it is hoped none will be offended at the present publishing of these papers; since they will not find here any new fantastic notions, but only such things as have been already asserted with strength of argument by himself and other persons of eminent learning. To the public at least this benefit may accrue, that some able pen may undertake the controversy, being moved with the desire of that reputation which will necessarily attend victory over so considerable an adversary.

BOOK I.

CHAPTER I. THAT RHETORIC IS AN ART CONSISTING NOT ONLY IN MOVING THE PASSIONS OF THE JUDGE, BUT CHIEFLY IN PROOFS: AND THAT THIS ART IS PROFITABLE.

WE SEE THAT all men naturally are able in some sort to accuse and exsuse: some by chance; but some by method. This method may be discovered; and to discover method is all one with teaching an art. If this art consisted in criminations only, and the skill to stir up the judge's anger, envy, fear, pity, or other affections; a rhetorician in well ordered commonwealths and states, where it is forbidden to digress from the cause in hearing, could have nothing at all to say. For all these perversions of the judge are beside the question. And that which the pleader is to shew, and the judge to give sentence on, is this only: It is so, or not so. The rest hath been decided already by the law-maker; who judging of universals and future things, could not be corrupted. Besides, it is an absurd thing for a man to make crooked the ruler he means to use.

It consisteth therefore chiefly in proofs, which are inferences: and all inferences being syllogisms, a logician, if he would observe the difference between a plain syllogism and an enthymeme, which is a rhetorical syllogism, would make the best rhetorician. For all syllogisms and inferences belong properly to logic, whether they infer truth or probability. And because without this art it would often come to pass that evil men, by the advantage of natural abilities, would carry an evil cause against a good; it brings with it at least this profit, that making the pleaders even in skill, it leaves the odds only in the merit of the cause. Besides, ordinarily those that

are judges, are neither patient, nor capable of long scientific proofs drawn from the principles through many syllogisms; and therefore had need to be instructed by the rhetorical and shorter way. Lastly, it were ridiculous to be ashamed of being vanquished in exercises of the body, and not to be ashamed of being inferior in the virtue of well expressing the mind.

CHAPTER II. THE DEFINITION OF RHETORIC.

RHETORIC IS THAT faculty, by which we understand what will serve our turn concerning any subject to win belief in the hearer.

Of those things that beget belief, some require not the help of art, as witnesses, evidences, and the like, which we invent not, but make use of; and some require art, and are invented by us.

The belief that proceeds from our invention, comes partly from the behaviour of the speaker, partly from the passions of the hearer; but especially from the proofs of what we allege.

Proofs are, in rhetoric, either examples or enthymemes; as in logic, inductions or syllogisms. For an example is a short induction, and an enthymeme a short syllogism; out of which are left, as superfluous, that which is supposed to be necessarily understood by the hearer; to avoid prolixity, and not to consume the time of public business needlessly.

CHAPTER III. OF THE SEVERAL KINDS OF ORATIONS: AND OF THE PRINCIPLES OF RHETORIC.

IN ALL ORATIONS, the hearer does either hear only, or judge also.

If he hear only, that is one kind of oration, and is called demonstrative.

If he judge, he must judge either of that which is to come, or of that which is past.

If of that which is to come, there is another kind of oration, and is called deliberative.

If of that which is past, then it is a third kind of oration, called judicial.

So there are three kinds of orations; demonstrative, judicial, and deliberative.

To which belong their proper times. To the demonstrative, the present; to the judicial, the past; and to the deliberative, the time to come.

And their proper offices. To the deliberative, exhortation and dehortation. To the judicial, accusation and defence. And to the demonstrative, praising and dispraising.

And their proper ends. To the deliberative, to prove a thing profitable or unprofitable. To the judicial, just or unjust. To the demonstrative, honourable or dishonourable.

The principles of rhetoric out of which enthymemes are to be drawn, are the common opinions that men have concerning profitable and unprofitable; just and unjust; honourable and dishonourable; which are the points in the several kinds of orations questionable. For as in logic, where certain and infallible knowledge is the scope of our proof, the principles must be all infallible truths: so in rhetoric the principles must be common opinions,

such as the judge is already possessed with. Because the end of rhetoric is victory; which consists in having gotten belief.

And because nothing is profitable, unprofitable, just, unjust, honourable or dishonourable, but what has been done, or is to be done; and nothing is to be done, that is not possible; and because there be degrees of profitable, unprofitable, just, unjust, honourable and dishonourable; an orator must be ready in other principles, namely, of what is done and not done, possible and not possible, to come and not to come, and what is greater and what is lesser, both in general, and particularly applied to the thing in question; as what is more and less, generally; and what is more profitable and less profitable, &c. particularly.

CHAPTER IV. OF THE SUBJECT OF DELIBERATIVES; AND THE ABILITIES THAT ARE REQUIRED OF HIM THAT WILL DELIBERATE OF BUSINESS OF STATE.

IN DELIBERATIVES THERE are to be considered the subject wherein, and the ends whereto, the orator exhorteth, or from which he dehortheth.

The subject is always something in our own power, the knowledge whereof belongs not to rhetoric, but for the most part to the politics; and may be referred in a manner to these five heads.

Of levying of money. To which point he that will speak as he ought to do, ought to know beforehand the revenue of the state, how much it is, and wherein it consisteth, and also how great are the necessary charges and expenses of the same. This knowledge is gotten partly by a man's own experience, partly by relations and accounts in writing.

Of peace and war. Concerning which the counsellor or deliberator ought to know the strength of the commonwealth, how much it both now is, and hereafter may be, and wherein that power consisteth. Which knowledge is gotten, partly by experience and relations at home, and partly by the sight of wars and of their events abroad.

Of the safeguard of the country. Wherein he only is able to give counsel, that knows the forms, and number, and places of the garrisons.

Of provision. Wherein to speak well, it is necessary for a man to know what is sufficient to maintain the state, what commodities they have at home growing, what they must fetch in through need, and what they may carry out through abundance.

Of making laws. To which is necessary so much political or civil philosophy, as to know what are the several kinds of governments, and by what means, either from without or from within, each of those kinds is preserved or destroyed. And this knowledge is gotten, partly by observing the several governments in times past by history, and partly by observing the government of the times present in several nations, by travel.

So that to him that will speak in a council of state, there is necessary this; history, sight of wars, travel, knowledge of the revenue, expenses, forces, havens, garrisons, wares, and provisions in the state he lives in, and what is needful for that state either to export or import.

CHAPTER V. OF THE ENDS WHICH THE ORATOR IN DELIBERATIVES PROPOUNDETH, WHEREBY TO EXHORT OR DEHORT.

AN ORATOR, IN exhorting, always propoundeth felicity, or some part of felicity, to be attained by the actions he exhorteth unto: and in dehortation, the contrary.

By felicity is meant commonly prosperity with virtue, or a continual content of the life with surety.

And the parts of it are such things as we call good in body, mind, or fortune; such as these that follow.

Nobility, which to a state or nation is to have been ancient inhabitants; and to have had most anciently, and in most number, famous generals in the wars, or men famous for such things as fall under emulation. And to a private man, to have been descended lawfully of a family, which hath yielded most anciently, and in most number, men known to the world for virtue, riches, or any thing in general estimation.

Many and good children. Which is also public and private. Public, when there is much youth in the state endued with virtue; namely, of the body, stature, beauty, strength, and dexterity; of the mind, valour and temperance: private, when a man hath many such children, both male and female. The virtues commonly respected in women, are of the body, beauty and stature; of the mind, temperance and housewifery without sordidness.

Riches. Which is money, cattle, lands, house-hold-stuff, with the power to dispose of them.

Glory. Which is the reputation of virtue, or of the possession of such things as all, or most men, or wise men desire.

Honour. Which is the glory of benefiting, or being able to benefit others. To benefit others, is to contribute somewhat, not easily had, to another man's safety or riches. The parts of honour are sacrifices, monuments, rewards, dedication of places, precedence, sepulchres, statues, public pensions, adorations, presents.

Health. Which is the being free from diseases, with strength to use the body.

Beauty. Which is to different ages different. To youth, strength of body and sweetness of aspect. To full men, strength of body fit for the wars, and countenance sweet with a mixture of terror. To old men, strength enough for necessary labours, with a countenance not displeasing.

Strength. Which is the ability to move any thing at pleasure of the mover. To move, is to pull, to put off, to lift, to thrust down, to press together.

Stature. Which is then just, when a man in height, breadth, and thickness of body doth so exceed the most, as nevertheless it be no hindrance to the quickness of his motion.

Good old age. Which is that which comes late, and with the least trouble.

Many and good friends. Which is to have many that will do for his sake that which they think will be for his good.

Prosperity. Which is to have all, or the most, or the greatest of those goods which we attribute to fortune.

Virtue. Which is then to be defined, when we speak of praise.

These are the grounds from whence we exhort.

Dehortation is from the contraries of these.

CHAPTER VI. OF THE COLOURS OR COMMON OPINIONS CONCERNING GOOD AND EVIL.

IN DELIBERATIVES, THE principles or elements from whence we draw our proofs, are common opinions concerning good and evil. And these principles are either absolute or comparative. And those that are absolute, are either disputable or indisputable.

The indisputable principles are such as these: Good, is that which we love for itself. And that for which we love somewhat else. And that which all things desire. And that to every man which his reason dictates. And that which when we have, we are well or satisfied. And that which satisfies. And the cause or effect of any of these. And that which preserves any of these. And that which keeps off or destroys the contrary of any of these.

Also to take the good and reject the evil, is good. And to take the greater good, rather than the less; and the lesser evil rather than the greater. Further, all virtues are good. And pleasure. And all things beautiful. And justice, valour, temperance, magnanimity, magnificence, and other like habits. And health, beauty, strength, &c. And riches. And friends. And honour and glory. And ability to say or do: also towardliness, will, and the like. And whatsoever art or science. And life. And whatsoever is just.

The disputable principles are such as follow:

That is good, whose contrary is evil. And whose contrary is good for our enemies. And whose contrary our enemies are glad of. And of which there cannot be too much. And upon which much labour and cost hath been bestowed. And that which many desire. And that which is praised. And that which even our enemies and evil men praise. And what good we prefer.

And what we do advise. And that which is possible, is good to undertake. And that which is easy. And that which depends on our own will. And that which is proper for us to do. And what no man else can do. And whatsoever is extraordinary. And what is suitable. And that which wants a little of being at an end. And what we hope to master. And what we are fit for. And what evil men do not. And what we love to do.

CHAPTER VII. OF THE COLOURS OR COMMON OPINIONS CONCERNING GOOD AND EVIL, COMPARATIVELY.

THE COLOURS OF good comparatively depend, partly, upon the following definitions of comparatives.

More, is so much and somewhat besides.

Less, is that, which and somewhat else is so much.

Greater and more in number are said only comparatively to less and fewer in number.

Great and little, many and few, are taken comparatively to the most of the same kind. So that great and many, is that which exceeds; little and few, is that which is exceeded by, the most of the same kind.

Partly, from the precedent definitions of good absolutely.

Common opinions concerning good comparatively, then are these.

Greater good is many than fewer, or one of those many.

And greater is the kind, in which the greatest is greater than the greatest of another kind. And greater is that good than another good, whose kind is greater than another's kind. And greater is that from which another good follows, than the good which follows. And of two which exceed a third, greater is that which exceeds it most. And that which causes the greater good. And that which proceeds from a greater good. And greater is that which is chosen for itself, than that which is chosen for somewhat else. And the end greater than that which is not the end. And that which less needs other things, than that which more. And that which is independent, than that which is dependent of another. And the beginning, than not the beginning.

(Seeing the beginning is a greater good or evil, than that which is not the beginning; and the end, than that which is not the end; one may argue from this colour both ways: as Leodamas against Chabrias, would have the actor more to blame than the adviser; and against Callistratus, the adviser more than the actor.)

And the cause, than not the cause. And that which hath a greater beginning or cause. And the beginning or cause of a greater good or evil. And that which is scarce, greater than that which is plentiful; because harder to get. And that which is plentiful, than that which is scarce; because oftener in use. And that which is easy, than that which is hard. And that whose contrary is greater. And that whose want is greater. And virtue than not virtue, a greater good. Vice than not vice, a greater evil. And greater good or evil is that, the effects whereof are more honourable or more shameful. And the effects of greater virtues or vices. And the excess whereof is more tolerable, a greater good. And those things which may with more honour be desired. And the desire of better things. And those things whereof the knowledge is better. And the knowledge of better things. And that which wise men prefer. And that which is in better men. And that which better men choose. And that which is more, than that which is less delightful. And that which is more, than that which is less honourable. And that which we would have for ourselves and friends, a greater good; and the contrary, a greater evil. And that which is lasting, than that which is not lasting. And that which is firm, than that which is not firm. And what many desire, than what few. And what the adversary or judge confesseth to be greater, is greater. And common than not common. And not common than common. And what is more laudable. And that which is more honoured, a greater good. And that which is more punished, a greater evil. And both good and evil divided than undivided, appear greater. And compounded than simple, appear greater. And that which is done with opportunity, age,

place, time, means disadvantageous, greater than otherwise. And that which is natural, than that which is attained unto. And the same part of that which is great, than of that which is less. And that which is nearest to the end designed. And that which is good or evil to one's self, than that which is simply so. And possible, than not possible. And that which comes toward the end of our life. And that which we do really, than that which we do for show. And that which we would be, rather than what we would seem to be. And that which is good for more purposes, is the greater good. And that which serves us in great necessity. And that which is joined with less trouble. And that which is joined with more delight. And of the two, that which added to a third makes the whole the greater. And that which having, we are more sensible of. And in every thing, that which we most esteem.

CHAPTER VIII. OF THE SEVERAL KINDS OF GOVERNMENTS.

BECAUSE HORTATION AND dehortation concern the commonwealth, and are drawn from the elements of good and evil; as we have spoken of them already in the abstract, so we must speak of them also in the concrete, that is, of what is good or evil to each sort of commonwealth in special.

The government of a commonwealth is either democracy, or aristocracy, or oligarchy, or monarchy.

Democracy is that, wherein all men with equal right are preferred to the highest magistracy by lot.

Aristocracy is that, wherein the highest magistrate is chosen out of those that have had the best education, according to what the laws prescribe for best.

Oligarchy is that, where the highest magistrate is chosen for wealth.

Monarchy is that, wherein one man hath the government of all; which government, if he limit it by law, is called kingdom; if by his own will, tyranny.

The end of democracy, or the people's government, is liberty.

The end of oligarchy, is the riches of those that govern.

The end of aristocracy, is good laws and good ordering of the city.

The end of monarchy or kings, is the safety of the people and conservation of his own authority.

Good therefore in each sort of government, is that which conduceth to these their ends.

And because belief is not gotten only by proofs, but also from manners; the manners of each sort of commonwealth ought to be well understood by him that undertaketh to persuade or dissuade in matter of state. Their manners may be known by their designs; and their designs by their ends; and their ends by what we see them take pleasure in. But of this more accurately in the politics.

CHAPTER IX. OF THE COLOURS OF HONOURABLE AND DISHONOURABLE.

IN A DEMONSTRATIVE oration, the subject whereof is praise or dispraise, the proofs are to be drawn from the elements of honourable and dishonourable.

In this place we anticipate the second way of getting belief; which is from the manners of the speaker. For praise, whether it come in as the principal business, or upon the by, depends still upon the same principles; which are these:

Honourable, is that which we love for itself, and is withal laudable; and that good, which pleaseth us only because it is good; and virtue.

Virtue is the faculty of getting and preserving that which is good; and the faculty of doing many and great things well.

The kinds of it are these:

Justice, which is a virtue whereby every man obtains what by law is his.

Fortitude, which is a virtue by which a man carries himself honourably and according to the laws, in time of danger.

Temperance, which is a virtue whereby a man governs himself in matter of pleasure according to the law.

Liberality, which is a virtue by which we benefit others in matter of money.

Magnanimity, which is a virtue by which a man is apt to do great benefits.

Magnificence, which is a virtue by which a man is apt to be at great cost.

Prudence, which is an intellectual virtue, by which a man is able to deliberate well concerning any good leading to felicity.

And honourable are the causes and effects of things honourable. And the works of virtue. And the signs of virtue. And those actions the reward whereof is honour. And the reward whereof is rather honour than money. And that which we do not for our sakes. And what we do for our country's good, neglecting our own. And those things are honourable which, good of themselves, are not so to the owner. And those things which happen to the dead, rather than to the living. And what we do for other men, especially for benefactors. And bestowing of benefits. And the contrary of those things we are ashamed of. And those things which men strive for earnestly, but without fear of adversary.

And of the more honourable and better men, the virtues are more honourable. And more honourable are the virtues that tend to other men's benefit, than those which tend to one's own.

And honourable are those things which are just. And revenge is honourable. And victory. And honour. And monuments. And those things which happen not to the living. And things that excel. And what none can do but we. And possessions we reap no profit by. And those things which are had in honour, particularly in several places. And the signs of praise. And to have nothing of the servile, mercenary, or mechanic.

And that which seems honourable; namely, such as follow: Vices confining upon virtue. And the extremes of virtues. And what the auditors think honourable. And that which is in estimation. And that which is done according to custom.

Besides, in a demonstrative oration, the orator must show that he whom he praiseth, did what he praiseth unconstrainedly and willingly. And he does so, who does the same often.

Praise is speech, declaring the magnitude of a virtue, action, or work. But to praise the work from the virtue of the worker, is a circular proof.

To magnify and to praise, differ in themselves as felicity and virtue. For praise declares a man's virtue; and magnifying declares his felicity.

Praise is a kind of inverted precept. For to say, "Do it because it is good," is a precept; but to say, "He is good because he did it," is praise. An orator in praising, must also use the forms of amplification; such as these: He was the first that did it. The only man that did it. The special man that did it. He did it with disadvantage of time. He did it with little help. He was the cause that the law ordained rewards and honours for such actions.

Further, he that will praise a man, must compare him with others, and his actions with the actions of others, especially with such as are renowned.

And amplification is more proper to a demonstrative oration, than to any other. For here the actions are confessed; and the orator's part is only this, to contribute unto them magnitude and lustre.

CHAPTER X. OF ACCUSATION AND DEFENCE, WITH THE DEFINITION OF INJURY.

IN A JUDICIAL oration, which consists in accusation and defence, the thing to be proved is, that injury has been done: and the heads from whence the proofs are to be drawn are these three: —

1. The causes that move to injury.
2. The persons apt to do injury.
3. The persons obnoxious or apt to suffer injury.

An injury is a voluntary offending of another man contrary to the law.

Voluntary is that which a man does with knowledge, and without compulsion.

The causes of voluntary actions are intemperance, and a vicious disposition concerning things desirable. As the covetous man does against the law out of an intemperate desire of money.

All actions proceed either from the doer's disposition, or not. Those that proceed not from the doer's disposition, are such as he does by chance, by compulsion, or by natural necessity. Those that proceed from the doer's disposition, are such as he does by custom, or upon premeditation, or in anger, or out of intemperance.

By chance are said to be done those things, whereof neither the cause nor the scope is evident; and which are done neither orderly, nor always, nor most commonly after the same manner.

By nature are said to be done those things, the causes whereof are in the doer; and are done orderly, and always or for the most part after the same manner.

By compulsion are done those things, which are against the appetite and ordination of the doer.

By custom those actions are said to be done, the cause whereof is this, that the doer has done them often.

Upon premeditation are said to be done those things, which are done for profit, as the end or the way to the end.

In anger are said to be done those things, which are done with a purpose of revenge.

Out of intemperance are said to be done those things, which are delightful.

In sum, every voluntary action tends either to profit or pleasure.

The colours of profitable, are already set down. The colours of that which is pleasing, follow next.

CHAPTER XI. OF THE COLOURS OR COMMON OPINIONS CONCERNING PLEASURE.

PLEASURE IS A sudden and sensible motion of the soul, towards that which is natural. Grief is the contrary.

Pleasant therefore is that, which is the cause of such motion. And to return to one's own nature. And customs. And those things that are not violent.

Unpleasant are those things which proceed from necessity, as cares, study, contentions. The contrary whereof, ease, remission from labour and care, also play, rest, sleep; are pleasant.

Pleasant also is that to which we have an appetite. Also the appetites themselves, if they be sensual; as thirst, hunger, and lust. Also those things to which we have an appetite upon persuasion and reason. And those things we remember, whether they pleased or displeased then when they were present. And the things we hope for. And anger. And to be in love. And revenge. And victory: therefore also contentious games; as tables, chess, dice, tennis, &c.; and hunting; and suits in law. And honour and reputation amongst men in honour and reputation. And to love. And to be beloved and respected. And to be admired. And to be flattered. And a flatterer: for he seems both to love and admire. And the same thing often. And change or variety. And what we return to afresh. And to learn. And to admire. And to do good. And to receive good. And to help up again one that is fallen. And to finish that which is unperfect. And imitation; and therefore the art of painting; and the art of carving images; and the art of poetry; and pictures

and statues. And other men's dangers, so they be near. And to have escaped hardly.

And things of a kind please one another. And every one himself. And one's own pleases him. And to bear sway. And to be thought wise. And to dwell upon that which he is good at. And ridiculous actions, sayings, and persons.

CHAPTER XII. PRESUMPTIONS OF INJURY DRAWN FROM THE PERSONS THAT DO IT: OR COMMON OPINIONS CONCERNING THE APTITUDE OF PERSONS TO DO INJURY.

OF THE CAUSES which move to injury, namely, profit and pleasure, has been already spoken (chap. vi, vii, xi). It follows next, to speak of the persons that are apt to do injury.

The doers of injury are: such as think they can do it. And such as think to be undiscovered, when they have done it. And such as think, though they be discovered, they shall not be called in question for it. And such as think, though they be called in question for it, that their mulct will be less than their gain, which either themselves or their friends receive by the injury.

Able to do injury are: such as are eloquent. And such as are practised in business. And such as have skill in process. And such as have many friends. And rich men. And such as have rich friends, or rich servants, or rich partners.

Undiscovered when they have done it, are such as are not apt to commit the crimes whereof they are accused: as feeble men, slaughter; poor and not beautiful men, adultery. And such as one would think could not chuse but be discovered. And such as do injuries, whereof there hath been no example. And such as have none or many enemies. And such as can easily conceal what they do. And such as have somebody to transfer the fault upon.

They that do injury openly are: such, whose friends have been injured. And such as have the judges for friends. And such as can escape their trial

at law. And such as can put off their trial. And such as can corrupt the judges. And such as can avoid the payment of their fine. And such as can defer the payment. And such as cannot pay at all. And such as by the injury get manifestly much, and presently; when the fine is uncertain, little, and to come. And such as get by the injury money, by the penalty shame only. And such on the contrary as get honour by the injury, and suffer the mulct of money only, or banishment, or the like. And such as have often escaped or been undiscovered. And such as have often attempted in vain. And such as consider present pleasure more than pain to come, and so intemperate men are apt to do injury. And such as consider pleasure to come more than present pain, and so temperate men are apt to do injury. And such as may seem to have done it by fortune, nature, necessity, or custom; and by error, rather than by injustice. And such as have means to get pardon. And such as want necessities, as poor men; or unnecessaries, as rich men. And such as are of very good or very bad reputation.

CHAPTER XIII. PRESUMPTIONS OF INJURY DRAWN FROM THE PERSONS THAT SUFFER, AND FROM THE MATTER OF THE INJURY.

OF THOSE THAT do injury, and why they do it, it hath been already spoken. Now of the persons that suffer, and of the matter wherein they suffer, the common opinions are these.

Persons obnoxious to injury are: such as have the things that we want, either as necessary, or as delightful. And such as are far from us. And such as are at hand. And such as are unwary and credulous. And such as are lazy. And such as are modest. And such as have swallowed many injuries. And such as we have injured often before; and such as never before. And such as are in our danger. And such as are ill-beloved generally. And such as are envied. And our friends; and our enemies. And such as, wanting friends, have no great ability either in speech or action. And such as shall be losers by going to law: as strangers and workmen. And such as have done the injuries they suffer. And such as have committed a crime, or would have done, or are about to do. And such as, by doing them an injury, we shall gratify our friends or superiors. And such whose friendship we have newly left, and accuse. And such as another would do the injury to, if we should not. And such as by injuring, we get greater means of doing good.

The matters wherein men are obnoxious to injury are: those things wherein all, or most men use to deal unjustly. And those things which are easily hid, and put off into other hands, or altered. And those things which a man is ashamed to have suffered. And those things wherein prosecution of injury, may be thought a love of contention.

CHAPTER XIV. OF THOSE THINGS WHICH ARE NECESSARY TO BE KNOWN FOR THE DEFINITION OF JUST AND UNJUST.

WHEN THE FACT is evident, the next inquiry is, whether it be just or unjust. For the definition of just and unjust, we must know what law is; that is, what the law of nature, what the law of nations, what the law civil, what written law, and what unwritten law is: and what persons, that is, what a public person or the city is, and what a private person or citizen is.

Unjust, in the opinion of all men, is that which is contrary to the law of nature.

Unjust, in the opinion of all men of those nations which traffic and come together, is that which is contrary to the law common to those nations.

Unjust, only in one commonwealth, is that which is contrary to the law civil, or law of that commonwealth.

He that is accused to have done anything against the public, or a private person, is accused to do it either ignorantly, or unwillingly, or in anger, or upon premeditation.

And because the defendant does many times confess the fact, but deny the injustice; as that he took, but did not steal; and did, but not adultery; it is necessary to know the definitions of theft, adultery, and all other crimes.

What facts are contrary to the written laws, may be known by the laws themselves.

Besides written laws, whatsoever is just proceeds from equity or goodness.

From goodness proceeds, that which we are praised or honoured for.

From equity proceed those actions, which though the written law command not, yet, being interpreted reasonably and supplied, seems to require at our hands.

Actions of equity are such as these: — Not too rigorously to punish errors, mischances, or injuries. To pardon the faults that adhere to mankind. And not to consider the law, so much as the law maker's mind; and not the words, so much as the meaning of the law. And not to regard so much the fact, as the intention of the doer; nor part of the fact, but the whole; nor what the doer is, but what he has been always or for the most part. And to remember better the good received, than the ill. And to endure injuries patiently. And to submit rather to the sentence of a judge, than of the sword. And to the sentence of an arbitrator, rather than of a judge.

CHAPTER XV. OF THE COLOURS OR COMMON OPINIONS CONCERNING INJURIES, COMPARATIVELY.

COMMON OPINIONS CONCERNING injuries comparatively, are such as these.

Greater is the injury, which proceedeth from greater iniquity. And from which proceedeth greater damage. And of which there is no revenge. And for which there is no remedy. And by occasion of which he that hath received the injury hath done some mischief to himself.

He does greater injury, that does it first, or alone, or with few; and he that does it often.

Greater injury is that, against which laws and penalties were first made. And that, which is more brutal or more approaching to the actions of beasts. And that, which is done upon more premeditation. And by which more laws are broken. And which is done in the place of execution. And which is of greatest shame to him that receives the injury. And which is committed against well deservers. And which is committed against the unwritten law; because good men should observe the law for justice, and not for fear of punishment. And which is committed against the written law; because he that will do injury, neglecting the penalty set down in the written law, is much more likely to transgress the unwritten law, where there is no penalty at all.

CHAPTER XVI. OF PROOFS INARTIFICIAL.

OF ARTIFICIAL PROOFS we have already spoken.

Inartificial proofs, which we invent not, but make use of, are of five sorts.

Laws. And those are civil or written law: the law or custom of nations; and the universal law of nature.

Witnesses. And those are such as concern matter, and such as concern manners. Also they be ancient or present.

Evidences or writings.

Question or torture.

Oaths. And those be either given or taken, or both, or neither.

For laws, we use them thus: when the written law makes against us, we appeal to the law of nature, alleging that to be greatest justice, which is greatest equity. That the law of nature is immutable, the written law mutable. That the written law is but seeming justice; the law of nature very justice; and justice is among those things which are, and not which seem to be. That the judge ought to discern between true and adulterate justice. That they are better men that obey unwritten than written laws. That the law against us does contradict some other law. And when the law has a double interpretation, that is the true one which makes for us. And that the cause of the law being abolished, the law is no more of validity.

But when the written law makes for us, and equity for the adversary, we must allege: That a man may use equity, not as a liberty to judge against the law; but only as a security against being forsworn, when he knows not the law. That men seek not equity because it is good simply, but because good

for them. That it is the same thing not to make, and not to use the law. That as in other arts, and namely, in physic, fallacies are pernicious; so in a common-wealth it is pernicious to use pretexts against the law. And that in common-wealths well instituted, to seem wiser than the laws is prohibited.

For witnesses, we must use them thus. When we have them not, we must stand for presumptions, and say: That in equity, sentence ought to be given according to the most probability. That presumptions are the testimony of the things themselves, and cannot be bribed. That they cannot lie.

When we have witnesses against him that has them not, we must say: That presumptions, if they be false, cannot be punished. That if presumptions were enough, witnesses were superfluous.

For writings, when they favour us, we must say: That writings are private and particular laws; and he that takes away the use of evidences, abolisheth the law. That since contracts and negotiations pass by writings, he that bars their use dissolves human society.

Against them, if they favour the adversary, we may say: That since laws do not bind that are fraudulently made to pass, much less writings; and that the judge being to dispense justice, ought rather to consider what is just than what is in the writing. That writings may be gotten by fraud or force, but justice by neither. That the writing is repugnant to some law, civil or natural; or to justice; or to honesty. That it is repugnant to some other writing, before or after. That it crosses some commodity of the judge; which must not be said directly, but implied cunningly.

For the torture, if the giving of it make for us, we must say: That it is the only testimony that is certain. But if it make for the adversary, we may say: That men enforced by torture, speak as well that which is false as that which is true. That they, who can endure, conceal the truth; and they who cannot, say that which is false, to be delivered from pain.

For oaths, he that will not put his adversary to his oath, may allege: That he makes no scruple to be forsworn. That by swearing he will carry the cause, which, not swearing, he must lose. That he had rather trust his cause in the hands of the judge, than of the adversary.

He that refuseth to take the oath may say: That the matter is not worth so much. That if he had been an evil man, he had sworn, and carried his cause. That to try it by swearing, for a religious man against an irreligious is as hard a match, as to set a weak man against a strong in combat.

He that is willing to take the oath, may pretend: That he had rather trust himself, than his adversary; and that it is equal dealing for an irreligious man to give, and for a religious man to take the oath. That it is his duty to take the oath, since he has required to have sworn judges.

He that offers the oath, may pretend: That he does piously commit his cause to the Gods. That he makes his adversary himself judge. That it were absurd for him not to swear, that has required the judges to be sworn.

And of these are to be compounded the forms we are to use, when we would give, and not take the oath; or take and not give; or both give and take; or neither give nor take.

But if one have sworn contrary to a former oath, he may pretend: That he was forced: that he was deceived; and that neither of these is perjury, since perjury is voluntary.

But if the adversary do so, he may say: That he that stands not to what he hath sworn, subverteth human society. And (turning to the judge): What reason have we to require, that you should be sworn that judge our cause; when we will not stand to that we swear ourselves?

And so much for proofs inartificial.

BOOK II.

CHAPTER I. THE INTRODUCTION.

OF BELIEF PROCEEDING from our invention, that part which consisteth in proof is already spoken of.

The other two parts follow; whereof one ariseth from the manners of the speaker, the other from the passions of the hearer.

The principles, colours, or common opinions upon which a man's belief is grounded concerning the manners of him that speaks, are to be had, partly out of that which hath before been said of virtue (Book i. cha); partly out of those things which shall be said by-and-by concerning the passions. For a man is believed, either for his prudence or for his probity, which are virtues; or for good will, of which among the passions.

The principles concerning belief, arising from the passion of the hearer, are to be gathered from that which shall now be said of the several passions in order.

In every one of which, three things are to be considered.

1. First, how men are affected.
2. Secondly, towards whom.
3. Thirdly, for what.

CHAPTER II. OF ANGER.

ANGER IS DESIRE of revenge, joined with grief, for that he, or some of his, is, or seems to be, neglected.

The object of anger is always some particular or individual thing.

In anger there is also pleasure proceeding from the imagination of revenge to come.

To neglect, is to esteem little or nothing; and of three kinds: 1 Contempt, 2 Crossing, 3 Contumely.

Contempt, is when a man thinks another of little worth in comparison to himself.

Crossing, is the hinderance of another man's will without design to profit himself.

Contumely, is the disgracing of another for his own pastime.

The common opinions concerning anger are therefore such as follow. They are easily angry, that think they are neglected. That think they excel others; as the rich with the poor; the noble with the obscure,&c. And such as think they deserve well. And such as grieve to be hindered, opposed, or not assisted; and therefore sick men, poor men, lovers, and generally all that desire and attain not, are angry with those that, standing by, are not moved by their wants. And such as having expected good, find evil.

Those that men are angry with, are: such as mock, deride, or jest at them. And such as shew any kind of contumely towards them. And such as despise those things which we spend most labour and study upon; and the more, by how much we seem the less advanced therein. And our friends, rather than those that are not our friends. And such as have honoured us, if

they continue not. And such as requite not our courtesy. And such as follow contrary courses, if they be our inferiors. And our friends, if they have said or done us evil, or not good. And such as give not ear to our entreaty. And such as are joyful or calm in our distress. And such as troubling us, are not themselves troubled. And such as willingly hear or see our disgraces. And such as neglect us in the presence of our competitors, of those we admire, of those we would have admire us, of those we reverence, and of those that reverence us. And such as should help us, and neglect it. And such as are in jest, when we are in earnest. And such as forget us, or our names.

An orator therefore must so frame his judge or auditor by his oration, as to make him apt to anger: and then make his adversary appear such as men use to be angry withal.

CHAPTER III. OF RECONCILING, OR PACIFYING ANGER.

RECONCILIATION IS THE appeasing of anger.

Those to whom men are easily reconciled, are: such as have not offended out of neglect. And such as have done it against their will. And such as wish done the contrary of what they have done. And such as have done as much to themselves. And such as confess and repent. And such as are humbled. And such as do seriously the same things, that they do seriously. And such as have done them more good heretofore, than now hurt. And such as sue to them for any thing. And such as are not insolent, nor mockers, nor slights of others in their own disposition. And generally such as are of a contrary disposition to those whom men are usually angry withal. And such as they fear or reverence. And such as reverence them. And such as have offended their anger.

Reconcilable are: such as are contrarily affected to those, whom we have said before to be easily angry. And such as play, laugh, make merry, prosper, live in plenty; and, in sum, all that have no cause of grief. And such as have given their anger time.

Men lay down their anger for these causes. Because they have gotten the victory. Because the offender has suffered more than they meant to inflict. Because they have been revenged of another. Because they think they suffer justly. And because they think the revenge will not be felt, or not known that the revenge was theirs, and for such an injury. And because the offender is dead.

Whosoever therefore would assuage the anger of his auditor, must make himself appear such as men use to be reconciled unto: and beget in his

auditor such opinions as make him reconcileable.

CHAPTER IV. OF LOVE AND FRIENDS.

TO LOVE IS to will well to another, and that for others, not for our own sake.

A friend is he that loves, and he that is beloved.

Friends one to another, are they that naturally love one another.

A friend therefore is he; that rejoiceth at another's good. And that grieves at his hurt. And that wishes the same with us to a third, whether good or hurt. And that is enemy or friend to the same man.

We love them: that have done good to us, or ours; especially if much, readily, or in season. That are our friends' friends. That are our enemies' enemies. That are liberal. That are valiant. That are just. And that we would have love us. And good companions. And such as can abide jests. And such as break jests. And such as praise us, especially for somewhat that we doubt of in ourselves. And such as are neat. And such as upbraid us not with our vices, or with their own benefits. And such as quickly forget injuries. And such as least observe our errors. And such as are not of ill tongue. And those that are ignorant of our vices. And such as cross us not when we are busy or angry. And such as are officious towards us. And those that are like us. And such as follow the same course or trade of life, where they impeach not one another. And such as labour for the same thing, when both may be satisfied. And such as are not ashamed to tell us freely their faults, so it be not in contempt of us, and the faults such as the world, rather than their own consciences, condemns. And such as are ashamed to tell us of their very faults. And such as we would have honour us, and not envy, but imitate us. And such as we would do good to, except with greater hurt to ourselves.

And such as continue their friendship to the dead. And such as speak their mind. And such as are not terrible. And such as we may rely on.

The several kinds of friendship, are society, familiarity, consanguinity, affinity &c.

The things that beget love, are, the bestowing of benefits, gratis; unasked; privately.

CHAPTER V. OF ENMITY AND HATRED.

THE COLOURS OR common opinions concerning hatred, are to be taken from the contrary of those which concern love and friendship.

Hatred differs from anger in this; that anger regards only what is done to oneself; but hatred not. And in this, that anger regards particulars only; the other, universals also. And in this, that anger is curable; hatred not. And in this, that anger seeks the vexation, hatred the damage, of one's adversary. That with anger there is always joined grief; with hatred, not always. That anger may at length be satiated; but hatred never.

Hence it appears how the judge or auditor may be made friend or enemy to us, and how our adversary may be made appear friend or enemy to the judge; and how we may answer to our adversary, that would make us appear enemies to him.

CHAPTER VI. OF FEAR.

FEAR IS A trouble or vexation of the mind, arising from the apprehension of an evil at hand, which may hurt or destroy. Danger is the nearness of the evil feared.

The things to be feared are: such as have power to hurt. And the signs of will to do us hurt; as anger and hatred of powerful men. And injustice joined with power. And valour provoked, joined with power. And the fear of powerful men.

The men that are to be feared, are: such as know our faults. And such as can do us injury. And such as think they are injured by us. And such as have done us injury. And our competitors in such things as cannot satisfy both. And such as are feared by more powerful men than we are. And such as have destroyed greater men than we are. And such as use to invade their inferiors. And men not passionate, but dissemblers and crafty, are more to be feared than those that are hasty and free.

The things especially to be feared, are: such, wherein if we err, the error cannot be repaired; at least, not according to ours, but our adversary's pleasure. And such as admit either none, or not easy help. And such as being done, or about to be done to others, make us pity them.

They that fear not are: such as expect not evil; or not now; or not this; or not from these. And therefore men fear little in prosperity. And men fear little, that think they have suffered already.

An orator therefore that would put fear into the auditor, must let him see that he is obnoxious; and that greater than he do suffer and have suffered from those, and at those times, they least thought.

CHAPTER VII. OF ASSURANCE.

ASSURANCE IS HOPE, arising from an imagination that the help is near, or the evil afar off.

The things therefore that beget assurance are: the remoteness of those things that are to be feared, and the nearness of their contraries. And the facility of great or many helps or remedies. And neither to have done, nor received injury. And to have no competitors, or not great ones; or if great ones, at least friends, such as we have obliged, or are obliged to. And that the danger is extended to more or greater than us.

Assured or confident, are: they that have oft escaped danger. And they, to whom most things have succeeded well. And they, that see their equals or inferiors not afraid. And they, that have wherewith to make themselves feared; as wealth, strength, &c. And such as have done others no wrong. And such as think themselves in good terms with God Almighty. And such as think they will speed well, that are gone before.

CHAPTER VIII. OF SHAME.

SHAME IS A perturbation of the mind arising from the apprehension of evil, past, present, or to come, to the prejudice of a man's own, or his friends' reputation.

The things therefore which men are ashamed of, are those actions which proceed from vice: as to throw away one's arms, to run away, signs of cowardliness. To deny that which is committed to one's trust, a sign of injustice. To have lain with whom, where, and when, we ought not, signs of intemperance. To make gain of small and base things; not to help with money whom and how much we ought; to receive help from meaner men; to ask money at use from such as one thinks will borrow of him; to borrow of him that expects payment of somewhat before lent; and to re-demand what one has lent, of him that one thinks will borrow more; and so to praise as one may be thought to ask; signs of wretchedness. To praise one to his face; to praise his virtues too much, and colour his vices; signs of flattery. To be unable to endure such labours as men endure that are elder, tenderer, greater in quality, and of less strength than he; signs of effeminacy. To be beholden often to another; and to upbraid those that are beholden to him; signs of pusillanimity. To speak and promise much of one's self, more than is due; signs of arrogance. To want those things which one's equals, all or most of them, have attained to, is also a thing to be ashamed of. And to suffer things ignominious; as to serve about another's person, or to be employed in his base actions.

In actions of intemperance, whether willingly or unwillingly committed, there is shame; in actions of force, only when they are done unwillingly.

The men before whom we are ashamed, are such as we respect: namely, those that admire us. And those whom we desire should admire us. And those whom we admire. Those that contend with us for honour. Those whose opinion we contemn not. And therefore men are most ashamed in the presence: of old and well bred men. Of those we are always to live with. Of those that are not guilty of the same fault. Of those that do not easily pardon. And of those that are apt to reveal our faults; such as are men injured, backbiters, scoffers, comic poets. And of those before whom we have had always good success. And of those who never asked anything of us before. And of such as desire our friendship. And of our familiars, that know none of our crimes. And of such as will reveal our faults to any of those that are named before.

But in the presence of such whose judgment most men despise, men are not ashamed. Therefore we are ashamed also in the presence of those whom we reverence. And of those who are concerned in our own, or ancestors', or kinsfolk's, actions or misfortunes, if they be shameful. And of their rivals. And of those that are to live with them that know their disgrace.

The common opinions concerning impudence, are taken from the contrary of these.

CHAPTER IX. OF GRACE OR FAVOUR.

GRACE IS THAT virtue, by which a man is said to do a good turn or to do service to a man in need, not for his own, but for his cause to whom he does it.

Great grace is when the need is great; or when they are hard or difficult things that are conferred; or when the time is seasonable; or when he that confers the favour, is the only or first man that did it.

Need is a desire, joined with grief, for the absence of the thing desired. Grace therefore it is not, if it be done to one that needs not. Whosoever therefore would prove that he has done a grace or favour, must show that he needeth it to whom it was done.

Grace it is not, which is done by chance. Nor which is done by necessity. Nor which has been requited. Nor that which is done to one's enemy. Nor that which is a trifle. Nor that which is nought, if the giver know the fault.

And in this manner a man may go over the predicaments, and examine a benefit, whether it be a grace for being this, or for being so much, or for being such, or for being now, &c.

CHAPTER X. OF PITY OR COMPASSION.

PITY IS A perturbation of the mind, arising from the apprehension of hurt or trouble to another that doth not deserve it, and which he thinks may happen to himself or his.

And because it appertains to pity to think that he, or his, may fall into the misery he pities in others; it follows that they be most compassionate: who have passed through misery. And old men. And weak men. And timorous men. And learned men. And such as have parents, wife and children. And such as think there be honest men.

And that they are less compassionate: who are in great despair. Who are in great prosperity. And they that are angry; for they consider not. And they that are very confident; for they also consider not. And they that are in the act of contumely; for neither do these consider. And they that are astonished with fear. And they that think no man honest.

The things to be pitied are: such as grieve, and withal hurt. Such as destroy. And calamities of fortune, if they be great: as none or few friends, deformity, weakness, lameness, &c. And evil that arrives where good is expected. And after extreme evil, a little good. And through a man's life to have no good offer itself; or being offered, not to have been able to enjoy it.

Men to be pitied are: such as are known to us, unless they be so near to us, as their hurt be our own. And such as be of our own years. Such as are like us in manners. Such as are of the same, or like stock. And our equals in dignity. Those that have lately suffered, or are shortly to suffer injury: and those that have the marks of injury past. And those that have the words or actions of them that be in present misery.

CHAPTER XI. OF INDIGNATION.

OPPOSITE IN A manner to pity in good men, is indignation; which is grief for the prosperity of a man unworthy.

With indignation there is always joined a joy for the prosperity of a man worthy; as pity is always with contentment in the adversity of them that deserve it.

In wicked men the opposite of pity is envy; as also the companion thereof, delight in the harm of others, which the Greeks in one word have called *ἐπιχαιρεκακία*. But of these in the next chapter.

Men conceive indignation against others, not for their virtues, as justice, &c.; for these make men worthy; and in indignation we think men unworthy: but for those goods which men indue with virtue, and noble men, and handsome men are worthy of. And for newly-gotten power and riches, rather than for ancient; and especially if by these he has gotten other goods, as by riches, command. The reason why we conceive greater indignation against new than ancient riches, is that the former seem to possess that which is none of theirs, but the ancient seem to have but their own: for with common people, to have been so long, is to be so by right. And for the bestowing of goods incongruously: as when the arms of the most valiant Achilles were bestowed on the most eloquent Ulysses. And for the comparison of the inferior in the same thing, as when one valiant is compared with a more valiant; or whether absolutely superior, as when a good scholar is compared with a good man.

Apt to indignation are: they that think themselves worthy of the greatest goods, and do possess them. And they that are good. And they that are

ambitious. And such as think themselves deserve better what another possesseth, than he that hath it.

Least apt to indignation are, such as are of a poor, servile, and not ambitious nature.

Who they are, that rejoyce or grieve not at the adversity of him that suffers worthily, and in what occasions, may be gathered from the contrary of what has been already said.

Whoever therefore would turn away the compassion of the judge, he must make him apt to indignation; and shew that his adversary is unworthy of the good, and worthy of the evil which happens to him.

CHAPTER XII. OF ENVY.

ENVY IS GRIEF for the prosperity of such as ourselves, arising not from any hurt that we, but from the good that they receive.

Such as ourselves, I call those that are equal to us in blood, in age, in abilities, in glory, or in means.

They are apt to envy: that are within a little of the highest. And those that are extraordinarily honoured for some quality that is singular in them, especially wisdom or good fortune. And such as would be thought wise. And such as catch at glory in every action. And men of poor spirits; for every thing appears great to them.

The things which men envy in others are: such as bring glory. And goods of fortune. And such things as we desire for ourselves. And things in the possession whereof we exceed others, or they us, a little.

Obnoxious to envy are: men of our own time, of our own country, of our own age, and competitors of our glory; and therefore, those whom we strive with for honour. And those that covet the same things that we do. And those that get quickly, what we hardly obtain, or not at all. And those that attain unto, or do the things that turn to our reproach, not being done by us. And those that possess what we have possessed heretofore; so old and decayed men envy the young and lusty. And those that have bestowed little, are subject to be envied by such as have bestowed much upon the same thing.

From the contraries of these may be derived the principles concerning joy for other men's hurt.

He therefore that would not have his enemy prevail, when he craves pity or other favour, must dispose the judge to envy; and make his adversary

appear such as are above described to be subject to the envy of others.

CHAPTER XIII. OF EMULATION.

EMULATION IS GRIEF arising from that our equals possess such goods as are had in honour, and whereof we are capable, but have them not; not because they have them, but because not we also. No man therefore emulates another in things whereof himself is not capable.

Apt to emulate are: such as esteem themselves worthy of more than they have. And young and magnanimous men. And such as already possess the goods for which men are honoured: for they measure their worth by their having. And those that are esteemed worthy by others. And those whose ancestors, kindred, familiars, nation, city, have been eminent for some good, do emulate others for that good.

Objects of emulation are, for things; virtues. And things whereby we may profit others. And things whereby we may please others.

For persons: they that possess such things. And such as many desire to be friends or acquainted with, or like unto. And they whose praises fly abroad.

The contrary of emulation is contempt. And they that emulate such as have the goods aforementioned, contemn such as have them not. And thence it is, that men who live happily enough, unless they have the goods which men honour, are nevertheless contemned.

CHAPTER XIV. OF THE MANNERS OF YOUTH.

OF PASSIONS WE have already spoken. We are next to speak of manners.

Manners are distinguished by passions, habits, ages, and fortunes.

What kind of manners proceed from passions, and from virtues and vices, which are habits, hath been already shewed. There remains to be spoken of the manners that are peculiar to several ages and fortunes.

The ages are youth, middle-age, old age. And first of youth.

Young men are: violent in their desires. Prompt to execute their desires. Incontinent. Inconstant, easily forsaking what they desired before. Longing mightily, and soon satisfied. Apt to anger, and in their anger violent; and ready to execute their anger with their hands. Lovers of honour and of victory more than money, as having not been yet in want. Well-natured, as having not been acquainted with much malice. Full of hope, both because they have not yet been often frustrated, and because they have by natural heat that disposition that other ages have by wine; youth being a kind of natural drunkenness; besides, hope is of the time to come, whereof youth hath much, but of the time past little. Credulous, because not yet often deceived. Easily deceived, because full of hope. Valiant, because apt to anger and full of hope; whereof this begets confidence, the other keeps off fear. Bashful, because they estimate the honour of actions by the precepts of the law. Magnanimous, because not yet dejected by the misfortunes of human life. And lovers of honour more than of profit, because they live more by custom than by reason; and by reason we acquire profit, but virtue by custom. Lovers of their friends and companions. Apt to err in the excess rather than the defect, contrary to that precept of Chilon, *Ne quid nimis*; for

they overdo every thing: they love too much and hate too much; because thinking themselves wise, they are obstinate in the opinion they have once delivered. Doers of injury, rather for contumely than for damage. Merciful, because, measuring others by their own innocence, they think them better than they be, and therefore less to merit what they suffer; which is a cause of pity. And lovers of mirth, and by consequence such as love to jest at others.

Jesting is witty contumely.

CHAPTER XV. OF THE MANNERS OF OLD MEN.

THE MANNERS OF old men are in a manner the contraries of those of youth. They determine nothing. They do everything less vehemently than is fit. They never say, they know; but to everything they say, perhaps and peradventure; which comes to pass from that, having lived long, they have often mistaken and been deceived. They are peevish, because they interpret everything to the worst. And suspicious through incredulity, and incredulous by reason of their experience. They love and hate, as if they meant to continue in neither. Are of poor spirits, as having been humbled by the chances of life. And covetous, as knowing how easy it is to lose, and how hard to get. And timorous, as having been cooled by years. And greedy of life; for good things seem greater by the want of them. And lovers of themselves, out of pusillanimity. And seek profit more than honour, because they love themselves; and profit is among the goods that are not simply good, but good for one's self. And without bashfulness, because they despise seeming. And hope little; knowing by experience that many times good counsel has been followed with ill event; and because also they be timorous. And live by memory rather than hope; for memory is of the time past, whereof old men have good store. And are full of talk, because they delight in their memory. And vehement in their anger, but not stout enough to execute it. They have weak or no desires, and thence seem temperate. They are slaves to gain. And live more by reason than custom; because reason leads to profit, as custom to that which is honourable. And do injury to endamage, and not in contumely. And are merciful by compassion, or imagination of the same evils in themselves; which is a kind of infirmity,

and not humanity, as in young men, proceeding from a good opinion of those that suffer evil. And full of complaint, as thinking themselves not far from evil because of their infirmity.

Seeing then every man loves such men and their discourses which are most agreeable to their own manners; it is not hard to collect, how the orator and his oration may be made acceptable to the hearer, whether young or old.

CHAPTER XVI. OF THE MANNERS OF MIDDLE-AGED MEN.

THE MANNERS OF middle-aged men, are between those of youth and old men. And therefore they neither dare, nor fear too much; but both as is fit. They neither believe all, nor reject all; but judge. They seek not only what is honourable, nor only what is profitable; but both. They are neither covetous, nor prodigal; but in the mean. They are neither easily angry, nor yet stupid; but between both. They are valiant and withal temperate.

And in general, whatsoever is divided in youth and old men, is compounded in middle-age. And whereof the excess or defect is in youth or old men, the mediocrity is in those of middle-age.

Middle-age for the body, I call the time from thirty to five and thirty years: for the mind, the nine-and-fortieth, or thereabouts.

CHAPTER XVII. OF THE MANNERS OF THE NOBILITY.

OF MANNERS THAT proceed from the several ages we have already spoken. We are next to speak of those that rise from several fortunes.

The manners of the nobility are: to be ambitious. To undervalue their ancestors' equals; for the goods of fortune seem the more precious for their antiquity.

Nobility is the virtue of a stock. And generosity, is not to degenerate from the virtue of his stock. For as in plants, so in the races of men, there is a certain progress; and they grow better and better to a certain point; and change, viz. subtile wits into madness, and staid wits into stupidity and blockishness.

CHAPTER XVIII. OF THE MANNERS OF THE RICH.

RICH MEN ARE contumelious, and proud; this they have from their riches; for seeing everything may be had for money, having money they think they have all that is good. And effeminate; because they have wherewithal to subminister to their lust. And boasters of their wealth, and speak in high terms foolishly; for men willingly talk of what they love and admire, and think others affect the same that they do; and the truth is, all sorts of men submit to the rich. And think themselves worthy to command, having that by which men attain command. And in general they have the manners of fortunate fools. They do injury, with intention not to hurt, but to disgrace; and partly also through incontinence.

There is a difference between new and ancient riches. For they that are newly come to wealth, have the same faults in a greater degree; for new riches are a kind of rudeness and apprenticeship of riches.

CHAPTER XIX. OF THE MANNERS OF MEN IN POWER, AND OF SUCH AS PROSPER.

THE MANNERS OF men in power, are the same, or better than those of the rich. They have a greater sense of honour than the rich, and their manners are more manly. They are more industrious than the rich, for power is sustained by industry. They are grave, but without austereness; for being in place conspicuous, they carry themselves the more modestly; and have a kind of gentle and comely gravity, which the Greeks call σεμνότης. When they do injuries, they do great ones.

The manners of men that prosper, are compounded of the manners of the nobility, the rich, and those that are in power; for to some of these all prosperity appertains.

Prosperity in children, and goods of the body, make men desire to exceed others in the goods of fortune.

Men that prosper have this ill; to be more proud and inconsiderate than others. And this good; that they worship God, trusting in him, for that they find themselves to receive more good than proceeds from their industry.

The manners of poor men, obscure men, men without power, and men in adversity, may be collected from the contrary of what has been said.

CHAPTER XX: COMMON PLACES OR PRINCIPLES CONCERNING WHAT MAY BE DONE, WHAT HAS BEEN DONE, AND WHAT SHALL BE DONE; OR OF FACT POSSIBLE, PAST AND FUTURE. ALSO OF GREAT AND LITTLE.

WE HAVE HITHERTO set down such principles as are peculiar to several kinds of orations. Now we are to speak of such places as are common to them all; as these: possible, done, or past, future, great, small.

Possible is that: the contrary whereof is possible. And the like whereof is possible. And than which some harder thing is possible. And the beginning whereof is possible. And the end whereof is possible. And the usual consequent whereof is possible. And whatsoever we desire. And the beginning whereof is in the power of those whom we can either compel or persuade. And part whereof is possible. And part of the whole that is possible. And the general, if a particular. And a particular, if the general. And of relatives, if one, the other. And that which without art and industry is possible, is much more so with art and industry. And that which is possible to worse, weaker, and more unskilful men, is much more so to better, stronger, and more skilful.

The principles concerning impossible are the contraries of these.

That has been done: than which a harder thing has been done. And the consequent whereof has been done. And that which being possible, he had a will to do, and nothing hindered. And that which was possible to him in his anger. And that which he longed to do. And that which was before upon the

point of doing. And whose antecedent has been done; or that for which it uses to be done. And if that for whose cause we do this, then this.

The principles concerning not done are the contraries of these.

That shall be done: which some man can, and means to do. And which some man can, and desires to do. And which is in the way, and upon the point to be done. And the antecedents whereof are past. And the motive whereof is past.

Of great and small, more and less, see Chapter vii. of Book i.

CHAPTER XXI. OF EXAMPLE, SIMILITUDE, AND FABLES.

OF THE PRINCIPLES, both general and special, from whence proofs are to be drawn, has been already spoken. Now follow the proofs themselves, which are examples or enthymemes.

An example, is either an example properly so called, as some action past; or a similitude, which also is called a parable; or a fable, which contains some action feigned.

An example, properly so called, is this: Darius came not into Greece till he had first subdued Egypt; Xerxes also conquered Egypt first; then afterwards crossed the Hellespont; we ought therefore to hinder the King of Persia from conquering Egypt.

A similitude, or parable, is such as followeth: They who choose their magistrates by lot, are like them that choose for their champions those on whom the lot shall fall, rather than those who have the greatest strength; and for their pilot, not him that hath skill, but him whose name is drawn out of the urn.

A fable is in this manner: The horse desiring to drive out the stag from his common pasture, took a man to assist him; and having received into his mouth a bridle, and a rider upon his back, obtained his intent, but became subject to the man. So you of Himera, having, in hope to be revenged of your enemies, given unto Phalaris sovereign authority, that is to say, taken a bridle into your mouths; if you shall also give him a guard to his person, that is, let him get up upon your backs, you be come his slaves presently, past recovery.

To find out examples, that is, actions done that may serve our purpose, is therefore hard, because not in our power. But to find fables and similitudes, is easier; because, by conversing in philosophy, a man may feign somewhat in nature like to the case in hand.

Examples, similitudes, and fables, where enthymemes are wanting, may serve us in the beginning of an oration for inductions; otherwise are to be alleged after enthymemes, for testimonies.

CHAPTER XXII. OF A SENTENCE.

A SENTENCE IS an universal proposition concerning those things which are to be desired or avoided in the actions or passions of the common life. As, A wise man will not suffer his children to be over-learned. And is to an enthymeme in rhetoric, as any proposition is to a syllogism in logic. And therefore a sentence, if the reason be rendered, becomes a conclusion; and both together make an enthymeme. As for example: To be over-learned, besides that it begets effeminacy, procures envy. Therefore he that is wise will not suffer his children to be over-learned.

Of sentences there be four sorts. For they either require proofs or not, that is, are manifest or not.

Such as are manifest, are either so as soon as they are uttered; as, Health is a great good. Or as soon as they are considered; as, Men use to hate whom they have hurt.

Such as are not manifest, are either conclusions of enthymemes; as, He that is wise will not suffer his children, &c. Or else are enthymematical; that is, have in themselves the force of an enthymeme; as Mortal men ought not to carry immortal anger.

A sentence not manifest, ought to be either inferred or confirmed. Inferred thus: It is not good to be effeminately minded, nor to be envied by one's fellow-citizens. A wise man, therefore, will not have his children over-learned. Confirmed thus: A wise man will not have his children over-learned; seeing too much learning both softens a man's mind, and procures him envy among his fellow-citizens.

If a reason be added to a manifest sentence, let it be short.

Sentences become not every man; but only old men, and such as be well-versed in business. For to hear a young man speak sentences, is ridiculous; and to hear an ignorant man speak sentences, is absurd.

Sentences generally received, when they are for our purpose, ought not to be neglected; because they pass for truths. And yet they may be denied, when any laudable custom or humour may thereby be made appear in the denier.

The commodities of sentences, are two. One proceeding from the vanity of the hearer, who takes for true universally affirmed, that which he has found for true only in some particular; and therefore a man ought to consider in every thing what opinion the hearer holds. Another is, that sentences do discover the manners and disposition of the speaker; so that if they be esteemed good sentences, he shall be esteemed a good man; and if evil, an evil man.

Thus much of sentences, what they be; of how many sorts; how to be used; whom they become; and what is their profit.

CHAPTER XXIII. OF THE INVENTION OF ENTHYMEMES.

SEEING AN ENTHYMEME differs from a logical syllogism, in that it neither concludes out of every thing, nor out of remote principles; the places of it, from whence a man may argue, ought to be certain and determinate.

And because whosoever makes a syllogism, rhetorical or other, should know all or the most part of that which is in question; as, whosoever is to advise the Athenians in the question, whether they are to make war or no, must know what their revenues be, what and what kind of power they have: and he that will praise them, must know their acts at Salamis, Marathon, &c. it will be necessary for a good speaker to have in readiness the choicest particulars of whatsoever he foresees he may speak of.

He that is to speak *ex tempore*, must comprehend in his speech as much as he can of what is most proper in the matter in hand.

Proper, I call those things which are least common to others: as, he that will praise Achilles, is not to declare such things as are common both to him and Diomedes; as that he was a prince, and warred against the Trojans: but such things as are proper only to Achilles; as that he killed Hector and Cygnus; went to the war young and voluntary.

Let this therefore be one general place; from that which is proper.

CHAPTER XXIV. OF THE PLACES OF ENTHYMEMES OSTENSIVE.

FORASMUCH AS ENTHYMEMES either infer truly, or seem only so to do; and they which do infer indeed, be either ostensive, or such as bring a man to some impossibility; we will first set down the places of enthymemes ostensive.

An ostensive enthymeme is, wherein a man concludes the question from somewhat granted.

That enthymeme which brings a man to an impossibility, is an enthymeme wherein from that which the adversary maintaineth, we conclude that which is manifestly impossible.

All places have been already set down in a manner in the precedent propositions of good, evil, just, unjust, honourable, and dishonourable: namely, they have been set down as applied to particular subjects, or in concrete. Here they are to be set down in another manner; namely in the abstract or universal.

The first place, then, let be from contraries; which in the concrete or particulars is exemplified thus. If intemperance be hurtful, temperance is profitable: and if intemperance be not hurtful, neither is temperance profitable.

Another place may be from cognomination, or affinity of words: as in this particular. If what is just, be good; then what is justly, is well: but justly to die, is not well: therefore not all that is just, is good.

A third from relatives; as, This man has justly done, therefore the other has justly suffered. But this place sometimes deceives; for a man may suffer

justly, yet not from him.

A fourth from comparison, three ways.

From the great to the less; as, He has stricken his father; and therefore this man.

From the less to the greater: as, The Gods know not all things; much less man.

From equality: as, If captains be not always the worse esteemed for losing a victory; why should sophisters?

Another from the time: as Philip to the Thebans: If I had required to pass through your country with my army, before I had aided you against the Phocæans, there is no doubt but you would have promised it me. It is absurd therefore to deny it me now, after I have trusted you.

A sixth from what the adversary says of himself: as, Iphicrates asked Aristophon, whether he would take a bribe to betray the army; and he answering no; What, says he, is it likely that Iphicrates would betray the army, and Aristophon not?

This place would be ridiculous, where the defendant were not in much more estimation than the accuser.

A seventh from the definition; as that of Socrates; A spirit is either God, or the creature of God; and therefore he denies not that there is a God, that confesses there are spirits.

An eighth from the distinction of an ambiguous word.

A ninth from division: as, If all men do what they do for one of three causes, whereof two are impossible; and the accuser charge not the defendant with the third; it follows that he has not done it.

A tenth from induction: as, At Athens, at Thebes, at Sparta, &c.; and therefore every where.

An eleventh from authority, or precedent sentence; as that of Sappho, that Death is evil; for that the gods have judged it so, in excepting

themselves from mortality.

A twelfth from the consequence; as, It is not good to be envied; therefore neither to be learned. It is good to be wise, therefore also to be instructed.

A thirteenth from two contrary consequences; as, It is not good to be an orator; because if he speak the truth, he shall displease men, if he speak falsely, he shall displease God.

Here is to be noted, that sometimes this argument may be retorted: as thus, If you speak truth, you shall please God; if you speak untruth, you shall please men; therefore by all means be an orator.

A fourteenth from the quality that men have to praise one thing and approve another: as, We ought not to war against the Athenians upon no precedent injury; for all men discommend injustice. Again, We ought to war against the Athenians; for otherwise our liberty is at their mercy, that is, is no liberty: but the preservation of liberty is a thing that all men will approve.

A fifteenth from proportion: as, Seeing we naturalize strangers for their virtues, why should we not banish this stranger for his vices?

A sixteenth from the similitude of consequents: as He that denies the immortality of the gods, is no worse than he that has written the generation of the gods: for the same consequence follows of both, that sometimes there are none.

A seventeenth from that, that men change their mind: as, If when we were in banishment, we fought to recover our country, why should we not fight now to retain it?

An eighteenth from a feigned end: as that Diomedes chose Ulysses to go with him, not as more valiant than another, but as one that would partake less of the glory.

A nineteenth from the cause; as if he would infer he did it from this, that he had cause to do it.

A twentieth from that which is incredible, but true: as that laws may need a law to mend them, as well as fish bred in the salt water may need salting.

CHAPTER XXV. OF THE PLACES OF ENTHYMEMES THAT LEAD TO IMPOSSIBILITY.

LET THE FIRST place be from inspection of times, actions, or words, either of the adversary, or of the speaker, or both. Of the adversary: as, He says he loves the people, and yet he was in the conspiracy of the Thirty. Of the speaker; as, He says I am contentious, and yet I never began suit. Of both; as, He never conferred any thing to the benefit of the commonwealth; whereas I have ransomed divers citizens with mine own money.

A second is from shewing the cause which seemed amiss, and serves for men of good reputation that are accused; as, The mother that was accused of incest for being seen embracing her son, was absolved as soon as she made appear that she embraced him upon his arrival from far by way of salutation.

A third, from rendering of the cause; as, Leodamas, to whom it was objected, that he had, under the thirty tyrants, defaced the inscription, which the people had set up in a pillar, of his ignominy; answered, He had not done it; because it would have been more to his commodity to let it stand; thereby to endear himself to the tyrants by the testimony of the people's hatred.

A fourth from better counsel; as He might have done better for himself, therefore he did not this. But this place deceives, when the better counsel comes to mind after the fact.

A fifth from the incompatibility of the things to be done; as, They that did deliberate whether they should both mourn and sacrifice at the funeral

of Leucothea, were told that, if they thought her a goddess, they ought not to mourn; and if they thought her a mortal, they ought not to sacrifice.

A sixth (which is proper to judicial orations) from an inference of error; as, If he did it not, he was not wise; therefore he did it.

Enthymemes that lead to impossibility, please more than ostensive. For they compare and put contraries together, whereby they are the better set off and more conspicuous to the auditor.

Of all enthymemes, they be best which we assent to as soon as hear. For such consent pleaseth us, and makes us favourable to the speaker.

CHAPTER XXVI. OF THE PLACES OF SEEMING ENTHYMEMES.

OF SEEMING ENTHYMEMES, one place may be from the form of speaking. As when a man has repeated divers sentences, he brings in his conclusion as if it followed necessarily, though it do not.

A second from an ambiguous word.

A third from that which is true, divided, to that which is false, joined; as that of Orestes, It was justice that I should revenge my father's death, and it was justice my mother should die for killing my father: therefore I justly killed my mother. Or from that which is true, joined, to that which is false, divided; as, one cup of wine, and one cup of wine, are hurtful; therefore one cup of wine is hurtful.

A fourth, from amplification of the crime. For neither is the defendant likely to have committed the crime he amplifies; nor does the accuser seem, when he is passionate, to want ground for his accusation.

A fifth from signs; as, when a man concludes the doing of the fact from the manner of his life.

A sixth from that which comes by chance. As if from this, that the tyranny of Hipparchus came to be overthrown from the love of Aristogeiton to Harmodius, a man should conclude that in a free commonwealth loving of boys were profitable.

A seventh from the consequence; as, Banishment is to be desired, because a banished man has choice of places to dwell in.

An eighth from making that the cause which is not; as, In Demosthenes' government the war began; therefore Demosthenes governed well. With the

Peloponnesian war began the plague, therefore Pericles, that persuaded that war, did ill.

A ninth from the omission of some circumstance; as, Helen did what was lawful when she ran away with Paris, because she had her father's consent to choose her own husband; which was true only during the time that she had not chosen.

A tenth from that which is probable, in some case, to that which is probable simply; as, It is probable he foresaw that if he did it he should be suspected; therefore it is probable he did it not. From this place one may infer both ways that he did it not. For if he be not likely to do it, it may be thought he did it not: again, if he were likely to do it, it may be thought he did it not, for this, that he knew he should be suspected.

Upon this place was grounded the art which was so much detested in Protagoras, of making the better cause seem the worse, and the worse the better.

CHAPTER XXVII. OF THE WAYS TO ANSWER THE ARGUMENTS OF THE ADVERSARY.

AN ARGUMENT IS answered by an opposite syllogism, or by an objection.

The places of opposite syllogisms are the same with the places of syllogisms, or enthymemes; for a rhetorical syllogism is an enthymeme.

The places of objections are four.

First, from the same. As, to the adversary that proves love to be good by an enthymeme, may be objected, that, No want is good, and yet love is want; or particularly thus, The love of Myrrha to her father was not good.

The second from contraries. As, if the adversary say, A good man does good to his friends, an objection might be made, that then an evil man will do also evil to his friends.

The third from similitude. As thus, if the adversary say, all men that are injured do hate those that have injured them, it may be objected, that then all men that had received benefits should love their benefactors, that is to say, be grateful.

The fourth from the authority of famous men. As when a man shall say, that drunken men ought to be pardoned those acts they do in their drunkenness, because they know not what they do; the objection may be, that Pittacus was of another mind, that appointed for such acts a double punishment; one for the act, another for the drunkenness.

And forasmuch as all enthymemes are drawn from probability, or example, or from a sign fallible, or from a sign infallible: an enthymeme from probability may be confuted really, by showing that for the most part it falls out otherwise; but apparently or sophistically, by showing only that it

does not fall out so always; whereupon the judge thinks the probability not sufficient to ground his sentence upon. The reason whereof is this, that the judge, while he hears the fact proved probable, conceives it as true. For the understanding has no object but truth. And therefore, by-and-by, when he shall hear an instance to the contrary, and thereby find that he had no necessity to think it true, presently changes his opinion, and thinks it false, and consequently not so much as probable. For he cannot at one time think the same thing both probable and false; and he that says a thing is probable, the meaning is, he thinks it true, but finds not arguments enough to prove it.

An enthymeme, from a fallible sign, is answered by showing the sign to be fallible.

An enthymeme from an example, is answered as an enthymeme from probability; really by showing more examples to the contrary; apparently, if he bring examples enough to make it seem not necessary.

If the adversary have more examples than we, we must make it appear that they are not applicable to the case.

An enthymeme from an infallible sign, if the proposition be true, is unanswerable.

**CHAPTER XXVIII. AMPLIFICATION AND EXTENUATION
ARE NOT COMMON PLACES. ENTHYMEMES, BY WHICH
ARGUMENTS ARE ANSWERED, ARE THE SAME WITH
THOSE BY WHICH THE MATTER IN QUESTION IS
PROVED OR DISPROVED. OBJECTIONS ARE NOT
ENTHYMEMES.**

THE FIRST, THAT amplification and extenuation are not common places, appears by this, that amplification and extenuation do prove a fact to be great or little; and are therefore enthymemes to be drawn from common places, and therefore are not the places themselves.

The second, that enthymemes, by which arguments are answered, are of the same kind with those by which the matter in question is proved, is manifest by this, that these infer the opposite of what was proved by the other.

The third, that an objection is no enthymeme, is apparent by this, that an objection is no more but an opinion, example, or other instance, produced to make appear that the adversary's argument does not conclude.

Thus much of examples, sentences, enthymemes, and generally of all things that belong to argumentation; from what places they may be drawn or answered.

There remain elocution and disposition to be spoken of in the next book.

BOOK III.

CHAPTER I. OF THE ORIGINAL OF ELOCUTION AND PRONUNCIATION.

THREE THINGS BEING necessary to an oration, namely proof, elocution, and disposition; we have done with the first, and shall speak of the other two in that which follows.

As for action or pronunciation, so much as is necessary for an orator may be fetched out of the book of the Art of Poetry, in which we have treated of the action of the stage. For tragedians were the first that invented such action, and that but of late; and it consisteth in governing well the magnitude, tone, and measure of the voice; a thing less subject to art, than is either proof or elocution.

And yet there have been rules delivered concerning it, as far forth as serve for poetry. But oratorical action has not been hitherto reduced to art. And orators in the beginning, when they saw that the poets in barren and feigned arguments nevertheless attained great reputation; supposing it had proceeded from the choice or connexion of words, fell into a style, by imitation of them, approaching to verse, and made choice of words. But when the poets changed their style, and laid by all words that were not in common use, the orators did the same, and lighted at last upon words and a government of the voice and measures proper to themselves.

Seeing therefore pronunciation or action are in some degree necessary also for an orator, the precepts thereof are to be fetched from the Art of Poetry.

In the meantime this may be one general rule. If the words, tone, greatness of the voice, gesture of the body and countenance, seem to

proceed all from one passion, then it is well pronounced. Otherwise not. For when there appear more passions than one at once, the mind of the speaker appears unnatural and distracted. Otherwise, as the mind of the speaker, so the mind of the hearer always.

CHAPTER II. OF THE CHOICE OF WORDS AND EPITHETS.

THE VIRTUES OF a word are two; the first, that it be perspicuous; the second, that it be decent, that is, neither above nor below the thing signified, or, neither too humble nor too fine.

Perspicuous are all words that be proper.

Fine words are those, that are borrowed, or translated from other significations; of which in the Art of Poetry.

The reason why borrowed words please, is this. Men are affected with words, as they are with men; admiring in both that which is foreign and new.

To make a poem graceful, many things help; but few an oration. For to a poet it sufficeth, with what words he can, to set out his poem. But an orator must not only do that, but also seem not to do it: for else he will be thought to speak unnaturally, and not as he thinks; and thereby be the less believed; whereas belief is the scope of his oration.

The words that an orator ought to use are of three sorts; proper, such as are received, and metaphors.

Words taken from foreign languages, words compounded, and words new coined, are seldom to be used.

Synonymes belong to poets, and equivocal words to sophisters.

An orator if he use proper words, and received and good metaphors, shall both make his oration beautiful, and not seem to intend it; and shall speak perspicuously. For in a metaphor alone there is perspicuity, novelty, and sweetness.

Concerning metaphors the rules are these:

He that will make the best of a thing, let him draw his metaphor from somewhat that is better. As for example, let him call a crime an error. On the other side, when he would make the worst of it, let him draw his metaphor from somewhat worse; as, calling error, crime.

A metaphor ought not to be so far-fetched, as that the similitude may not easily appear.

A metaphor ought to be drawn from the noblest things; as the poets do, that choose rather to say rosy-fingered, than red-fingered Aurora.

In like manner the rule of epithets is, that he that will adorn, should use those of the better sort; and he that will disgrace, should use those of the worse. As Simonides being to write an ode in honour of the victory gotten in a course by certain mules, being not well paid, called them by their name, Ἡμιόνες, that signifies their propinquity to asses: but having received a greater reward, styles them the sons of swift-footed coursers.

CHAPTER III. OF THE THINGS THAT MAKE AN ORATION FLAT.

THE THINGS THAT make an oration flat or insipid, are four:

Words compounded. And yet a man may compound a word, when the composition is necessary for want of a simple word, and easy, and seldom used.

Foreign words. As for example, such as are newly derived from the Latin; which though they were proper among them whose tongue it is, are foreign in another language: and yet these may be used, so it be moderately.

Long, impertinent, and often epithets.

Metaphors indecent and obscure. Obscure they are, when they are far-fetched. Indecent, when they are ridiculous, as in comedies; or too grave, as in tragedies.

CHAPTER IV. OF A SIMILITUDE.

A SIMILITUDE DIFFERS from a metaphor only by such particles of comparison as these; as; even as; so; even so, &c.

A similitude therefore is a metaphor dilated; and a metaphor is a similitude contracted into one word.

A similitude does well in an oration, so it be not too frequent; for it is poetical.

An example of the similitude, is this of Pericles, that said in his oration, that the Bæotians were like so many oaks in a wood, that did nothing but beat one another.

CHAPTER V. OF THE PURITY OF LANGUAGE.

FOUR THINGS ARE necessary to make language pure.

The right rendering of those particles, which some antecedent particle does require; as to a not only, a not also; and then they are rendered right, when they are not suspended too long.

The use of proper words, rather than circumlocutions; unless there be motive to make one do it of purpose.

That there be nothing of double construction, unless there be cause to do it of purpose; as the prophets of the heathen, who speak in general terms, to the end they may be better maintain the truth of their prophecies; which is easier maintained in generals, than in particulars. For it is easier to divine whether a number be even or odd, than how many; and that a thing will be, than what it will be.

Concordance of gender, number, and person; as not to say him for her, man for men, hath for have.

In sum, a man's language ought to be easy for another to read, pronounce, and point.

Besides, to divers antecedents, let divers relatives, or one common to them all, be correspondent; as, he saw the colour, he heard the sound; or he perceived both colour and sound: but by no means, he heard or saw both.

Lastly, that which is to be interposed by parenthesis, let it be done quickly: as, I purposed, having spoken to him (to this, and to this purpose), afterward to be gone. For to put it off thus; I resolved, after I had spoken to him, to be gone; but the subject of my speech was to this and this purpose; is vicious.

CHAPTER VI. OF THE AMPLITUDE AND TENUITY OF LANGUAGE.

A MAN SHALL add amplitude or dignity to his language, but by such means as these.

By changing the name with the definition, as occasion shall serve. As, when the name shall be indecent, by using the definition; or contrary.

By metaphors.

By using the plural number for the singular.

By privative epithets.

CHAPTER VII. OF THE CONVENIENCE OR DECENCY OF ELOCUTION.

ELOCUTIONS ARE MADE decent:

By speaking feelingly; that is, with such passion as is fit for the matter he is in; as, angrily in matter of injury.

By speaking as becomes the person of the speaker; as for a gentleman to speak eruditely.

By speaking proportionably to the matter; as of great affairs to speak in a high, and of mean, in a low style.

By abstaining from compounded, and from out-landish words: unless a man speak passionately, and have already moved, and, as it were, inebriated his hearers; or ironically.

It confers also to persuasion very much, to use these ordinary forms of speaking; all men know, it is confessed by all, no man will deny, and the like. For the hearer consents, surprised with the fear to be esteemed the only ignorant man.

It is good also, having used a word that signifies more than the matter requires, to abstain from the pronunciation and countenance that to such a word belongs; that the disproportion between it and the matter may the less appear. And when a man has said too much, it will show well to correct himself: for he will get belief by seeming to consider what he says. But in this a man must have a care not to be too precise in showing of this consideration. For the ostentation of carefulness is an argument oftentimes of lying; as may be observed in such as tell particularities not easily

observed, when they would be thought to speak more precise truth than is required.

CHAPTER VIII. OF TWO SORTS OF STYLES.

THERE BE TWO sorts of styles. The one continued, or to be comprehended at once; the other divided, or distinguished by periods.

The first sort was in use with ancient writers; but is now out of date. An example of this style is in the history of Herodotus; wherein there is no period till the end of the whole history.

In the other kind of style, that is distinguished by periods, a period is such a part as is perfect in itself; and has such length, as may easily be comprehended by the understanding.

This latter kind is pleasant, the former unpleasant; because this appears finite, the other infinite. In this the hearer has always somewhat set out, and terminated to him; in the other he foresees no end, and has nothing finished to him. This may easily be committed to memory, because of the measure and cadence; which is the cause that verses be easily remembered: the other not.

Every sentence ought to end with the period, and nothing to be interposed.

Period is either simple, or divided into parts.

Simple, is that which is indivisible; as, I wonder you fear not their ends, whose actions you imitate.

A period divided, is that which not only has perfection and length convenient for respiration, but also parts. As, I wonder you are not afraid of their ends; seeing you imitate their actions: where in these words, I wonder you are not afraid of their ends, is one colon or part; and in these, seeing you imitate their actions, another: and both together make the period.

The parts or members, and periods, of speech, ought neither be too long, nor too short.

Too long, are they which are produced beyond the expectation of the hearer. Too short, are they that end before he expects it.

Those that be too long, leave the hearer behind; like him that walking goes beyond the usual end of the walk, and thereby out-goes him that walks with him.

They that be too short, make the hearer stumble; for when he looks far before him, the end stops him before he be aware.

A period that is divided into parts, is either divided only; or has also an opposition of the parts one to another.

Divided only is such as this; This the senate knows, the consul sees; and yet the man lives.

A period with opposition of parts, called also antithesis, and the parts antitheta, is when contrary parts are put together, or also joined by a third.

Contrary parts are put together as here; The one has obtained glory, the other riches; both by my benefit.

Antitheta are therefore acceptable, because not only the parts appear the better for the opposition, but also for that they carry with them a certain appearance of that kind of enthymeme, which leads to impossibility.

Parts or members of a period, are said to be equal, when they have altogether, or almost, equal number of syllables.

Parts or members of a period, are said to be like, when they begin or end alike: and the more similitudes, and the greater equality there is of syllables, the more graceful is the period.

CHAPTER IX. OF THOSE THINGS THAT GRACE AN ORATION, AND MAKE IT DELIGHTFUL.

FORASMUCH AS THERE is nothing more delightful to a man, than to find that he apprehends and learns easily; it necessarily follows, that those words are most grateful to the ear, that make a man seem to see before his eyes the things signified.

And therefore foreign words are unpleasant, because obscure; and plain words, because too manifest, making us learn nothing new. But metaphors please; for they beget in us, by the genus, or by some common thing to that with another, a kind of science. As when an old man is called stubble; a man suddenly learns that he grows up, flourisheth, and withers like grass, being put in mind of it by the qualities common to stubble and to old men.

That which a metaphor does, a similitude does the same; but with less grace, because with more prolixity.

Such enthymemes are the most graceful, which neither are presently very manifest, nor yet very hard to be understood; but are comprehended while they are uttering, or presently after, though not understood before.

The things that make a speech graceful, are these; antitheta, metaphors, and animation.

Of antitheta and antithesis hath been spoken in the precedent chapter.

Of metaphors, the most graceful is that which is drawn from proportion.

Aristotle, in the twelfth chapter of his Poetry, defines a metaphor to be the translation of a name from one signification to another; whereof he makes four kinds, 1. From the general to the particular. 2. From the

particular to the general. 3. From one particular to another. 4. From proportion.

A metaphor from proportion is such as this; A state without youth, is a year without a spring.

Animation is that expression which makes us seem to see the thing before our eyes. As he that said, The Athenians poured out their city into Sicily; meaning, they sent thither the greatest army they could make. And this is the greatest grace of an oration.

If therefore in the same sentence there concur both metaphor and this animation, and also antithesis, it cannot choose but be very graceful.

That an oration is graced by metaphor, animation, and antithesis, hath been said: but how it is graced, is to be said in the next chapter.

CHAPTER X. IN WHAT MANNER AN ORATION IS GRACED BY THE THINGS AFORESAID.

IT IS GRACED by animation, when the actions of living creatures are attributed to things without life; as when the sword is said to devour.

Such metaphors as these come into a man's mind by the observation of things that have similitude and proportion one to another. And the more unlike and unproportionable the things be otherwise, the more grace hath the metaphor.

A metaphor without animation, adds grace then, when the hearer finds he learns somewhat by such use of the word.

Also paradoxes are graceful, so men inwardly do believe them. For they have in them somewhat like to those jests that are grounded upon the similitude of words, which have usually one sense, and in the present another; and somewhat like to those jests which are grounded upon the deceiving of a man's expectation.

And paragrams, that is, allusions of words, are graceful, if they be well placed, and in periods not too long, and with antithesis. For by these means the ambiguity is taken away.

And the more of these, namely, metaphor, animation, antithesis, equality of members, a period hath, the more graceful it is.

Similitudes grace an oration, when they contain also a metaphor.

And proverbs are graceful, because they are metaphors, or translations of words from one species to another.

And hyperboles, because they also are metaphors. But they are youthful, and bewray vehemence; and are used with most grace by them that be

angry; and for that cause are not comely in old men.

CHAPTER XI. OF THE DIFFERENCE BETWEEN THE STYLE TO BE USED IN WRITING, AND THE STYLE TO BE USED IN PLEADING.

THE STYLE THAT should be read, ought to be more exact and accurate. But the style of a pleader, ought to be suited to action and pronunciation.

Orations of them that plead, pass away with the hearing. But those that are written, men carry about them, and are considered at leisure; and consequently must endure to be sifted and examined.

Written orations appear flat in pleading. And orations made for the bar, when the action is away, appear in reading insipid.

In written orations repetition is justly condemned. But in pleadings, by the help of action, and by some change in the pleader, repetition becomes amplification.

In written orations disjunctives do ill; as, I came, I found him, I asked him: for they seem superfluous, and but one thing, because they are not distinguished by action. But in pleadings it is amplification; because that which is but one thing, is made to seem many.

Of pleadings, that which is judicial ought to be more accurate than that which is before the people.

And an oration to the people ought to be more accommodate to action, than a judicial.

And of judicial orations, that ought to be more accurate, which is uttered to few judges; and that ought to be more accommodate to action, which is uttered to many. As in a picture, the further he stands off that beholds it, the

less need there is that the colours be fine; so in orations, the further the hearer stands off, the less need there is for his oration to be elegant.

Therefore demonstrative orations are most proper for writing, the end whereof is to be read.

CHAPTER XII. OF THE PARTS OF AN ORATION, AND THEIR ORDER.

THE NECESSARY PARTS of an oration are but two; propositions and proof; which are, as it were, the problem and demonstration.

The proposition is the explication or opening of the matter to be proved. And proof is the demonstration of the matter propounded.

To these necessary parts are sometimes added two other, the proem and the epilogue; neither of which is any proof.

So that in some there be four parts of an oration; the proem; the proposition, or as others call it, the narration; the proofs, which contain confirmation, confutation, amplification, and diminution; and the epilogue.

CHAPTER XIII. OF THE PROEM.

THE PROEM IS the beginning of an oration, and, as it were, the preparing of the way before one enter into it.

In some kinds of orations it resembles the prelude of musicians, who first play what they list, and afterwards the tune they intended. In other kinds it resembles the prologue of a play, that contains the argument.

Proems of the first sort, are most proper for demonstrative orations; in which a man is free to foretell, or not, what points he will insist upon. And for the most part it is better not; because when a man has not obliged himself to a certain matter, digression will seem variety; but if he have engaged himself, variety will be accounted digression.

In demonstratives, the matter of the proem consisteth in the praise or dispraise of some law or custom, or in exhortation or dehortation, or in something that serves to incline the hearer to the purpose.

Poems of the second kind are most proper for judicial orations. For as the prologue in a dramatic, and the exordium in an epic poem, setteth forth in few words the argument of the poem; so in a judicial oration, the orator ought to exhibit a model of his oration, that the mind of the hearer may not be suspended, and for want of foresight err or wander.

Whatsoever else belongs to a proem, is drawn from one of these four: from the speaker, from the adversary, from the hearer, or from the matter.

From the speaker and adversary, are drawn into proems such criminations and purgations as belong not to the cause.

To the defendant, it is necessary in the proem to answer to the accusations of his adversary; that those being cleared, he may have a more

favourable entrance to the rest of his oration.

But to the plaintiff, it is better to cast his criminations all into the epilogue; that the judge may the more easily remember them.

From the hearer and from the matter, are drawn into the proem such things as serve to make the hearer favourable or angry, attentive or not attentive, as need shall require.

And hearers use to be attentive to persons that are reputed good; to things that are of great consequence, or that concern themselves, or that are strange, or that delight.

But to make the hearer attentive, is not the part of the proem only, but of any other part of the oration, and rather of any other part than of the proem. For the hearer is everywhere more remiss than in the beginning. And therefore wheresoever there is need, the orator must make appear both the probity of his own person, and that the matter in hand is of great consequence; or that it concerns the hearer, or that it is new, or that it is delightful.

He that will have the hearer attentive to him, but not to the cause, must on the other side make it seem that the matter is a trifle without relation to the hearer, common and tedious.

That the hearer may be favourable to the speaker, one of two things is required: that he love him, or that he pity him.

In demonstrative orations, he that praises shall have the hearer favourable, if he think himself or his own manners, or course of life, or anything he loves, comprehended in the same praise.

On the contrary, he that dispraises shall be heard favourably, if the hearer find his enemies, or their courses, or anything he hates, involved in the same dispraise.

The proem of a deliberative oration is taken from the same things from which are taken the proems of judicial orations. For the matter of a

deliberative oration needeth not that natural proem, by which is shown what we are to speak of, for that is already known; the proem in these being made only for the speaker's or adversary's sake, or to make the matter appear great or little, as one would have it; and is therefore to be taken from the persons of the plaintiff or defendant, or from the hearer, or from the matter, as in orations judicial.

CHAPTER XIV. PLACES OF CRIMINATION AND PURGATION.

ONE, FROM THE removal of ill opinion in the hearer, imprinted in him by the adversary or otherwise.

Another from this: that the thing done is not hurtful, or not to him, or not so much, or not unjust, or not great, or not dishonourable.

A third from the recompense: as, I did him harm, but withal I did him honour.

A fourth from the excuse; as, It was error, mischance, or constraint.

A fifth from the intention; as, One thing was done, another meant.

A sixth from the comprehension of the accuser; as, What I have done, the accuser has done the same, or his father, kinsman, or friend.

A seventh from the comprehension of those that are in reputation; as, What I did, such and such have done the same, who nevertheless are good men.

An eighth from comparison with such as have been falsely accused or wrongfully suspected, and nevertheless found upright.

A ninth from recrimination; as, The accuser is a man of ill life, and therefore not to be believed.

A tenth from that the judgment belongs to another place, or time; as, I have already answered, or am to answer elsewhere to this matter.

An eleventh from crimination of the crimination: as, It serves only to pervert judgment.

A twelfth, which is common both to crimination and purgation, and is taken from some sign; as, Teucer is not to be believed, because his mother

was Priam's sister. On the other side, Teucer is to be believed, because his father was Priam's enemy.

A thirteenth, proper to crimination only, from praise and dispraise mixed; as, to praise small things, and blame great ones; or to praise in many words, and blame with effectual ones; or to praise many things that are good, and then add one evil, but a great one.

A fourteenth, common both to crimination and purgation, is taken from the interpretation of the fact. For he that purgeth himself, interpreteth the fact always in the best sense; and he that criminates, always in the worst; as when Ulysses said, Diomedes chose him for his companion, as the most able of the Grecians, to aid him in his exploit: but his adversary said, he chose him for his cowardice, as the most unlikely to share with him in the honour.

CHAPTER XV. OF THE NARRATION.

THE NARRATION IS not always continued, and of one piece; but sometimes, as in demonstratives, interrupted, and dispersed through the whole oration.

For there being in a narration, something that falls not under art; as namely, the actions themselves, which the orator inventeth not; he must therefore bring in the narration of them where he best may. As for example, if being to praise a man, you would make a narration of all his acts immediately from the beginning, and without interruption, you will find it necessary afterwards to repeat the same acts again, while from some of them you praise his valour, and from others his wisdom; whereby your oration shall have less variety, and shall less please.

It is not necessary always that the narration be short. The true measure of it must be taken from the matter that is to be laid open.

In the narration, as oft as may be, it is good to insert somewhat commendable in one's self, and blameable in one's adversary: as, I advised him, but he would take no counsel.

In narrations, a man is to leave out whatsoever breeds compassion, indignation, &c. in the hearer beside the purpose; as Ulysses in Homer, relating his travels to Alcinous, to move compassion in him, is so long in it that it consists of divers books: but when he comes home, tells the same to his wife in thirty verses, leaving out what might make her sad.

The narration ought also to be in such words as argue the manners, that is some virtuous or vicious habit in him of whom we speak, although it be

not expressed; as, setting his arms a-kimbo, he answered, &c.; by which is insinuated the pride of him that so answered.

In an oration a man does better to shew his affection than his judgment; that is, it is better to say, I like this, than to say, this is better. For by the one you would seem wise, by the other good. But favour follows goodness; whereas wisdom procures envy.

But if this affection seem incredible, then either a reason must be rendered, as did Antigone. For when she had said, she loved her brother better than her husband or children; she added, for husband and children I may have more; but another brother I cannot, my parents being both dead. Or else a man must use this form of speaking; I know this affection of mine seems strange to you; but nevertheless it is such. For it is not easily believed that any man has a mind to do any thing that is not for his own good.

Besides in a narration, not only the actions themselves, but the passions and signs that accompany them, are to be discovered.

And in his narration a man should make himself and his adversary be considered for such and such, as soon and as covertly as he can.

A narration may have need sometimes not to be in the beginning. In deliberative orations, that is, wheresoever the question is of things to come, a narration, which is always of things past, has no place. And yet things past may be recounted, that men may deliberate better of the future. But that is not as narration, but proof; for it is example.

There may also be narration in deliberatives, in that part where crimination and praise come in. But that part is not deliberative, but demonstrative.

CHAPTER XVI. OF PROOF OR CONFIRMATION, AND REFUTATION.

PROOFS ARE TO be applied to something controverted.

The controversy in judicial orations is, whether it has been done; whether it has been hurtful; whether the matter be so great; and whether it be just, or no.

In a question of fact, one of the parties of necessity is faulty; for ignorance of the fact is no excuse; and therefore the fact is chiefly to be insisted on.

In demonstratives, the fact for the most part is supposed: but the honour and profit of the fact are to be proved.

In deliberatives, the question is, whether the thing be like to be, or likely to be so great; or whether it be just; or whether it be profitable.

Besides the application of the proof to the question, a man ought to observe whether his adversary have lied in any point without the cause. For it is a sign he does the same in the cause.

The proofs themselves are either examples, or enthymemes.

A deliberative oration, because it is of things to come, requireth rather examples than enthymemes.

But a judicial oration, being of things past, which have a necessity in them, and may be concluded syllogistically, requireth rather enthymemes.

Enthymemes ought not to come too thick together: for they hinder one another's force by confounding the hearer.

Nor ought a man to endeavour to prove everything by enthymeme, lest like some philosophers he collect what is known, from what is less known.

Nor ought a man to use enthymemes, when he would move the hearer to some affection. For seeing divers motions do mutually destroy or weaken one another, he will lose either the enthymeme, or the affection that he would move.

For the same reason, a man ought not to use enthymemes when he would express manners.

But whether he would move affection, or insinuate his manners, he may withal use sentences.

A deliberative oration is more difficult than a judicial, because it is of the future; whereas a judicial is of that which is past, and that consequently may be known; and because it has principles, namely, the law; and it is easier to prove from principles, than without.

Besides, a deliberative oration wants those helps of turning to the adversary, of speaking of himself, of raising passion.

He therefore that wants matter in a deliberative oration, let him bring in some person to praise or dispraise. And in demonstratives, he that has nothing to say in commendation or discommendation of the principal party, let him praise or dispraise somebody else, as his father or kinsman, or the very virtues or vices themselves.

He that wants not proofs, let him not only prove strongly, but also insinuate his manners: but he that has no proof, let him nevertheless insinuate his manners. For a good man is as acceptable as an exact oration.

Of proofs, those that lead to an absurdity, please better than those that are direct or ostensive; because from the comparison of contraries, namely, truth and falsity, the force of the syllogism does the better appear.

Confutation is also a part of proof. And he that speaks first, puts it after his own proofs; unless the controversy contain many and different matters. And he that speaks last, puts it before. For it is necessary to make way for

his own oration, by removing the objections of him that spake before. For the mind abhors both the man and his oration, that is damned beforehand.

If a man desire his manners should appear well, lest speaking of himself, he become odious, or troublesome, or obnoxious to obtreaction; or speaking of another, he seem contumelious or scurrilous; let him introduce another person.

Last of all, lest he cloy his hearer with enthymemes, let him vary them sometimes with sentences, but such as have the same force. As here is an enthymeme: If it be then the best time to make peace, when the best conditions of peace may be had; then the time is now, while our fortune is entire. And this is a sentence of equal force to it: Wise men make peace, while their fortune is entire.

CHAPTER XVII. OF INTERROGATIONS, ANSWERS, AND JESTS.

THE TIMES WHEN it is fit to ask one's adversary a question, are chiefly four.

The first is, when of two propositions that conclude an absurdity, he has already uttered one; and we would by interrogation draw him to confess the other.

The second, when of two propositions that conclude an absurdity, one is manifest of itself, and the other likely to be fetched out by a question; then the interrogation will be seasonable; and the absurd conclusion is presently to be inferred with out adding that proposition which is manifest.

The third, when a man would make appear that his adversary does contradict himself.

The fourth, when a man would take from his adversary such shifts as these: In some sort, it is so; in some sort, it is not so.

Out of these cases, it is not fit to interrogate. For he whose question succeeds not, is thought vanquished.

To equivocal questions a man ought to answer fully, and not to be too brief.

To interrogations, which we foresee tend to draw from us an answer contrary to our purpose, we must, together with our answer, presently give an answer to the objection which is implied in the question.

And where the question exacteth an answer that concludeth against us, we must, together with our answer, presently distinguish.

Jests are dissolved by serious and grave discourse; and grave discourse is deluded by jests.

The several kinds of jests are set down in the Art of Poetry. Whereof one kind is ironia, and tends to please one's self. The other is scurrility, and tends to please others.

The latter of these has in it a kind of baseness: the former may become a man of good breeding.

CHAPTER XVIII. OF THE EPILOGUE.

THE EPILOGUE MUST consist of one of these four things.

Either of inclining the judge to favour his own, or disfavour the adversary's side. For then, when all is said in the cause, is the best season to praise or dispraise the parties.

Or of amplification or diminution. For when it appears what is good or evil, then is the time to show how great or how little that good or evil is.

Or in moving the judge to anger, love, or other passion. For when it is manifest of what kind, and how great the good or evil is, then it will be opportune to excite the judge.

Or of repetition, that the judge may remember what has been said.

Repetition consisteth in the matter and the manner. For the orator must show that he has performed what he promised in the beginning of his oration; and how, namely, by comparing his arguments one by one with his adversary's, repeating them in the same order they were spoken.

THE ART OF RHETORIC

PLAINLY SET FORTH. WITH PERTINENT EXAMPLES FOR THE
MORE EASY UNDERSTANDING AND PRACTICE OF THE SAME.
BY THOMAS HOBBS OF MALMSBURY.

CHAPTER I.

RHETORIC IS AN art of speaking finely. It hath two parts:

Garnishing of speech, called elocution;

Garnishing of the manner of utterance, called pronunciation.

Garnishing of speech is the first part of rhetoric; whereby the speech itself is beautified and made fine. It is either the fine manner of words, called a trope; or the fine shape or frame of speech, called a figure.

The fine manner of words is a garnishing of speech, whereby one word is drawn from its first proper signification to another; as in this sentence: sin lieth at the door: where sin is put for the punishment of sin adjoined unto it: lieth at the door, signifieth at hand; as that which lieth at the door, is ready to be brought in.

This changing of words was first found out by necessity, for the want of words; afterwards confirmed by delight, because such words are pleasant and gracious to the ear. Therefore this change of signification must be shamefaced, and, as it were, maidenly, that it may seem rather to be led by the hand to another signification, than to be driven by force unto the same.

Yet sometimes this fine manner of speech swerveth from this perfection; and then it is, either the abuse of this fine speech, called katachresis, or the excess of this fineness, called hyperbole.

Be not too just nor too wicked; which speech, although it seem very hard, yet it doth, not without some fineness of speech, utter thus much; That one seek not a righteousness beyond the law of God; and that when none can live without all sin, yet that they take heed that sin bear not dominion over them.

As, My tears are my meat day and night. Those that hate me are more in number than the hairs of my head. Both which do utter by an express of speech, a great sorrow, and a great number of enemies.

The abuse of speech is, when the change of speech is hard, strange, and unwonted, as in the first example.

The excess of speech is, when the change of signification is very high and lofty, as in the second example, and Psalms vi. vii.

But the excellency or fineness of words or tropes, is most excellent, when divers are shut up in one, or continued in many.

An example of the first sort is in 2 Kings ii. 9: I pray thee, let me have a double portion of thy Spirit: where by Spirit is meant the gift of the Spirit; and by thy Spirit, the gift of the spirit like to thine.

The continuance of tropes, called an allegory, is, when one kind of trope is so continued, as, look with what kind of matter it be begun, with the same it be ended. So in Psalm xxiii. the care of God towards his church is set forth in the words proper to a shepherd. So in the whole book of Canticles, the sweet conference of Christ and his church, is set down by the words proper to the husband and the wife. So old age is set down by this garnishing of speech, in Ecclesiastes xii. 5, 6.

Hitherto of the properties of a fine manner of words, called a trope. Now the divers sorts do follow. They are those which note out, 1, no comparison, or are with some comparison; or, 2, no respect of division, or some respect.

The first is double: 1. The change of name, called a metonymy. 2. The mocking speech, called an irony.

The change of name is where the name of a thing is put for the name of a thing agreeing with it. It is double: 1. When the cause is put for the thing caused; and contrarywise. 2. When the thing to which anything is adjoined, is put for the thing adjoined; and contrarywise.

The change of name of the cause is when either the name of the maker, or the name of the matter, is put for the thing made.

Of the maker, when the finder out, or the author of the thing, or the instrument whereby the thing is done, is put for the thing made. So Moses is put for his writings: so love is put for liberality, or bestowing benefits, the fruit of love; so (Rom. i. 8): faith, the cause, is put for religious serving of God, the thing caused. So (James iii.) the tongue, the instrument of speech, is put for the speech itself. Rule thy tongue.

Of the matter: Thou art dust, and to dust shalt thou return; that is, one made of dust.

Now, on the other side, when the thing caused, or the effect, is put for any of these causes. So the Gospel of God is called the power of God to salvation; that is, the instrument of the power of God. So love is said to be bountiful, because it causeth one to be bountiful. St. Paul saith, The bread that we break, is it not in the communion of the body and blood of Christ? That is, an instrument of the communion of the body of Christ. So the body is said to be an earthly tabernacle; that is, a tabernacle made of earth.

The change of name, or metonymy, where the subject, or that which hath anything adjoined, is put for the thing adjoined, or adjunct. So the place is put for those, or that in the place: set thine house in order; that is, thy household matters. It shall be easier for Sodom and Gomorrha; that is, the people in Sodom and Gomorrha. So Moses' chair is put for the doctrine taught in Moses' chair. So all Jericho and Jerusalem came out; that is, all the men in Jericho and Jerusalem. So before, sin was put for the punishment of sin. Let his blood rest upon us and our children; that is, the punishment which shall follow his death. So Christ said, This is my body; that is, a sign or sacrament of my body. This wine is the new testament in my blood; that is, a sign or seal of the new testament in my blood. So John saith, I saw the Spirit descending in the likeness of a dove; that is, the sign of the Spirit.

On the other side, the adjunct is put for the thing to which it is adjoined. As Christ (1 Tim. i. 1) is called our hope; that is, on whom our hope did depend. So, we are justified by faith; that is, by Christ applied by faith. So, love is the fulfilling of the law; that is, those things to which it is adjoined. Hope for the things hoped for; as Rom. viii. 24. So in the Epistle to the Ephesians, v. 16: The days are evil; that is, the manner, conversation, and deeds of men in the days.

Hitherto the metonymy, or change of name. Now followeth the mocking speech, or irony.

CHAPTER II.

THE MOCKING TROPE is, when one contrary is signified by another; as God said, Man is like to one of us. So Christ saith, Sleep on; and yet by-and-by, Arise, let us go. So Paul saith, You are wise, and I am a fool.

This trope is conceived either by the contrariety of the matter, or the manner of utterance, or both. So Elijah said to the prophets of Baal, Cry aloud, &c. So the Jews said unto Christ, Hail, King of the Jews!

Hitherto appertaineth the passing by a thing, which yet with a certain elegance noteth it. So Philemon 19: That I say not, thou owest thyself unto me.

Hitherto of the fineness of words which respect no division. Now followeth that which respecteth division, called synechdoche.

A synechdoche is when the name of the whole is given to the part; or the name of the part to the whole. And it is double. 1. When the whole is put for the member, and contrarily. 2. When the general, or whole kind, is put for the special; or contrarily.

So St. John: Not only for our sins, but for the sins of the whole world. So righteousness, a member of goodness, is put for all goodness; so unrighteousness is put for all manner of sins.

Examples of the second sort, as these: So Israel is put for those of Juda sometimes. So nations for the heathen. A minister of Christ for an apostle of Christ, as Rom. xv. 16. A minister put for a distributor, as Rom. xii. 7.

On the other side, one sort or special is put for the whole sort or general, in the examples following. In the Lord's prayer, bread, one help of life, is

put for all helps; this day, one time for all times. So Solomon saith, the thing of the day in his day; that is, the thing of the time in his time.

So sometimes less is spoken, and yet more is understood; which is called diminution, or meiosis. As James saith to him that knoweth how to do well and doth it not, it is sin; that is a great sin. So our Saviour Christ saith, If they had not known, they had had no sin; that is, no such great sin as they have now. Likewise the denial by comparison.

So Solomon saith, Receive my words, and not silver; that is, my words rather than silver. So Paul saith, I was sent to preach, and not to baptize; that is, not so much to baptize as to preach.

Hitherto of the fineness of words, which note out no comparison. Now followeth the fineness of words which noteth out comparison, called a metaphor.

CHAPTER III.

A METAPHOR IS when the like is signified by the like: as (1 Cor. iii. 13) the Apostle saith, doctrine must be tried by fire; that is, the evidence of the word, spirit, trying doctrine, as fire doth metals. So Christ is said to baptize with fire; where fire is put for the power of the Holy Ghost, purging as fire. So Christ saith, none shall enter into the kingdom of God but he that is born of the Holy Ghost and water. So Paul calleth himself the father of the Corinthians, and said, that he begat them in Christ. So he calleth Timothy and Titus his natural sons in the faith.

Hitherto of a trope or garnishing of speech in one word, where the metaphor is most usual; then the change of name; then the synechdoche; and last of all, the irony. Now followeth the fine frame or shape of speech, called a figure.

A figure is a garnishing of speech wherein the course of the same is changed, from the more simple and plain manner of speaking unto that which is more full of excellency and grace. For as in the fineness of words, or a trope, words are considered asunder by themselves; so in the fine shape or frame of speech, or a figure, the apt and pleasant joining together of many words is noted.

The garnishing of the shape of speech, or a figure, is garnishing of speech in words, or in a sentence.

The garnishing of speech in words, called figura dictionis, is wherein the speech is garnished by the pleasant and sweet sound of words joined together.

This is either in the measure of sounds; or in the repetition of sounds.

The measure of sounds is belonging either to poets, with us called rhymers; or orators, with us called eloquent pleaders.

The first is the measure of sounds by certain and continual spaces; and it is either rhyme or verse.

Rhyme is the first sort, containing a certain measure of syllables ending alike; and these in the mother tongues are most fit for psalms, songs, or sonnets.

Verses are the second sort, containing certain feet fitly placed.

A foot is a measure framed by the length and shortness of syllables; for the several sorts whereof, as also of the verses of them, because we have no worthy examples in our English tongue, we judge the large handling of them should be more curious than necessary.

The measure of sounds belonging to orators, is that which, as it is not uncertain, so it differeth altogether from rhyme and verse, and is very changeable with itself. Therefore in that eloquent speech you must altogether leave rhyme and verse, unless you allege it for authority and pleasure.

In the beginning of the sentence little care is to be had, in the middle least of all, and in the end chiefest regard is to be had; because the fall of the sentence is most marked, and therefore lest it fall out to be harsh and unpleasant both to the mind and ear, there must be most variety and change.

Now this change must not be above six syllables from the end, and that must be set down in feet of two syllables.

And thus much of garnishing of speech by the measure of sounds, rather to give some taste of the same to the readers, than to draw any to the curious and unnecessary practice of it.

Now followeth the repeating of sounds.

CHAPTER IV.

REPETITION OF SOUNDS is either of the like, or the unlike sound.

Of the like, is either continued to the end of, or broken off from, the same, or a diverse sentence.

Continued to the end of the same sentence is, when the same sound is repeated without anything coming between, except a parenthesis; that is, something put in, without the which, notwithstanding, the sentence is full. And it is a joining of the same sound, as Rom. i. 29: All unrighteousness, fornication, wickedness. And in the prayer of Christ, My God, my God. From men by thine hand, O Lord, from men, &c. (Psalm xvii. 14.)

Continued in a diverse sentence is, either a redoubling, called anadyplosis; or a pleasant climbing, called climax.

Redoubling is when the same sound is repeated in the end of the former sentence, and the beginning of the sentence following. As Psalm ix. 9: The Lord also will be a refuge to the poor, a refuge, I say, in due time. Psalm xlviii. 14: For this God is our God. But more plain in Psalm xlviii. 8: As we have heard, so have we seen in the city of our God: God will establish it for ever.

A pleasant climbing, is a redoubling continued by divers degrees or steps of the same sounds: as Rom. viii. 17: If we be children, we be heirs, even heirs of God, annexed with Christ. Rom. viii. 30: Whom he predestinated, them also he called; and whom he called, them also he justified; and whom he justified, them also he glorified. Also Rom. ix. 14, 15.

And hitherto of the same sound continued to the end. Now followeth the same sound broken off.

CHAPTER V.

THE SAME SOUND broken off, is a repetition of the same in the beginning or in the end.

In the beginning, it is called anaphora, a bringing of the same again; as Rom. viii. 38, 39: Nor death, nor life, nor angels, &c. nor any other creature, shall be able to separate us, &c. So likewise Ephes. iv. 11: Some to be apostles, some preachers, &c. So Galatians ii. 14: Nor Jew, Gentile, &c. So likewise Hebrews xi. 1, 2.

Repetition of the same sound in the end, is called epistrophe, a turning to the same sound in the end. So Ezekiel viii. 15: Behold greater abominations than these. Lament. iii. 41, &c. Let us lift up our hearts with our hands unto God in the heavens; we have sinned and have rebelled; therefore thou hast not spared.

When both of these are joined together, it is called a coupling or symplote. As 2 Cor. vi. 4-11: But in all things we approve ourselves as the ministers of God, in much patience, in afflictions, &c. See also 2 Cor. xi. 23.

Hitherto of the repetitions in the same place. Now of those that do interchange their place.

They are either epanalepsis, which signifieth to take back; or epanados, which signifies the turning to the same tune.

The first is when the same sound is repeated in the beginning and the ending; as, 2 Sam. xviii. 33: My son Absalom, my son.

Epanados is when the same sound is repeated in the beginning and the middle, in the middle and the end. Ezekiel xxxv, 6: I will prepare thee unto

blood, and blood shall pursue thee: except thou hate blood, even blood shall pursue thee. And 2 Thes. ii. 4: So that he that doth sit as God, in the temple of God, sheweth himself that he is God.

Hitherto of the repetition of those sounds which are like. Now of those that are unlike.

CHAPTER VI.

UNLIKE; A SMALL changing of the name, as παρονομασια; a small changing of the end or case, as πολυπτωτον.

A small change of name is, when a word, by the change of one letter or syllable, the signification also is changed; as, Rom. v. 4: Patience, experience; and experience, hope. 2 Cor. x. 3: We walk after the flesh, not war in the flesh. 2 Cor. vi. 8-9: So by honour and dishonour, as unknown and yet known.

A small changing of the end or case, is when words of the same beginning rebound by divers ends: Christ being raised from the dead, dieth no more, death hath no more power over him. He that doth righteousness, is righteous. If ye know that he is righteous, know ye that he that doeth righteously, is born of him. And of both these there are many in the Scripture; but the translations cannot reach them.

Hitherto of the garnishing of the shape of speech, in words. Now followeth the garnishing of the shape of speech, in a sentence.

CHAPTER VII.

GARNISHING OF THE frame of speech in a sentence, is a garnishing of the shape of speech, or a figure; which for the forcible moving of affections, doth after a sort beautify the sense and very meaning of a sentence. Because it hath in it a certain manly majesty, which far surpasseth the soft delicacy or dainties of the former figures.

It is either the garnishing of speech alone, or with others.

The garnishing of speech alone, is when as the sentence is garnished without speech had to other. And it is either in regard of the matter; or of the person.

In regard of the matter; it is either a crying out, called exclamation; or a pulling or calling back of himself, called revocation.

A crying out, or exclamation, is the first, which is set forth by a word of calling out. Sometimes of wonder, as, Rom. xi. 33: O the depth of the judgments of God! Psal. viii. 1: O Lord, how excellent is thy name! Sometimes of pity; also these words, Behold, Alas, Oh, be signs of this figure, as, O Jerusalem, Jerusalem, which stonest the prophets. Sometimes of desperation; as, My sin is greater than can be forgiven. Behold, thou drivest me out, &c. Sometimes of wishing: as, Psalm lxxxiv. 1: O Lord of hosts, how amiable are thy tabernacles! Sometimes of disdain: as, Rom. vii. 24: O miserable wretch that I am, who shall deliver me from this body of sin! Sometimes of mocking: as they which said to our Saviour Christ, Ah, thou that, &c. Sometimes of cursing and detestation; as in David, Let their table be made a snare, and bow down their back always.

Also when this figure is used in the end of a sentence, it is called a shooting out of the voice or *επιφωνημα*; as when the sins of Jezebel were spoken against, this is added at the end, Seemed it a little to her to do thus and thus.

So after the high setting forth of the name of God, David shutteth up his praise with this: Blessed be his glorious name, and let all the earth be filled with his glory. Sometimes here is used a certain liberty of speech, wherein is a kind of secret crying out: as Peter (Acts iii. 12,) saith: Ye men of Israel, hear these words. And Paul, (2 Cor. xi. 1): Would to God you could suffer a little my foolishness, and indeed ye suffer me.

Thus much of crying out. Now followeth the figure of calling back, or revocation.

Revocation is when any thing is called back; and it is as it were a cooling and quenching of the heat of the exclamation that went before.

And this is either a correction of one's self, called *επανορθωσις*; or a holding of one's peace, called *αποσιωπησις*.

Επανορθωσις is correction, when something is called back that went before: as Paul correcteth his doubtfulness of Agrippa's belief, when he saith, Believest thou, King Agrippa? I know thou believest. So, 1 Cor. xv. 10: I laboured more abundantly than they all, yet not I, &c.

A keeping of silence, or *αποσιωπησις*, is when the course of the sentence bygone is so stayed, as thereby some part of the sentence, not being uttered, may be understood. So our Saviour Christ (John xii. 27) saith, My soul is heavy: what shall I say?

Thus much of a figure garnishing the speech alone, in regard of the matter. Now followeth the garnishing of the speech alone, in regard of the person.

CHAPTER VIII.

GARNISHING OF THE speech alone in regard of the person, is double: either in turning to the person called apostrophe; or feigning of the person, called prosopopœia.

Apostrophe, or turning to the person, is when the speech is turned to another person than the speech appointed did intend or require. And this apostrophe or turning is diversely seen, according to the diversity of persons. Sometimes it turneth to a man's person; as David in the sixth Psalm, where having gathered arguments of his safety, turneth hastily to the wicked, saying, Away from me, all ye workers of iniquity; for the Lord hath heard the voice of my petition.

Sometimes from a man to God, as Psalm iii. 3. David being dismayed with the number of his enemies, turneth himself to God, saying: But thou art my buckler, &c.

Sometimes to unreasonable creatures without sense; as Isaiah i. and Isaiah xxi.

Prosopopœia, or a feigning of the person, is whereby we do feign another person speaking in our speech. And it is double; imperfect and perfect.

Imperfect is when the speech of another person is set down lightly and indirectly. As in Psalm. xi. 1. David bringeth in the wicked, Who say unto my soul, fly as the bird unto yonder hill.

A perfect prosopopœia, is when the whole feigning of the person is set down in our speech, with a fit entering into the same, and a leaving it off.

So Wisdom, (Prov. viii.); where the entrance is in the first verses, her speech in the rest of the chapter.

Hitherto of the figures of sentences concerning one speaking alone. Now follow the other, which concern the speeches of two.

CHAPTER IX.

THEY WHICH CONCERN the speeches of two, are either in asking, or in answering.

That of asking, is either in deliberation; or in preventing an objection.

Deliberation is when we do every now and then ask, as it were, reasons of our consultation, whereby the mind of the hearers wavering in doubt, doth set down some great thing.

This deliberation is either in doubting, or in communication.

A doubting is a deliberating with ourselves, as Paul (1 Philipp. i. 23,24), doubting whether it were better to die than to live, he garnisheth his speech in this manner: For I am greatly in doubt on both sides, desiring to be loosed, and to be with Christ, which is best of all: nevertheless, to abide in the flesh is more needful for you.

Communication is a deliberation with others. As, Galatians iii. 1, 2: O foolish Galatians, who hath bewitched you, &c.

And hitherto of the figure of speech between two, called deliberation.

Now followeth the figure of speech between two, called the preventing of an objection, or occupation.

Occupation is, when we do bring an objection, and yield an answer unto it. Therefore this speech between two, in the first part, is called the setting down of the objection or occupation: in the latter part, an answering of the objection or the subjection: as Rom. vi. 1: What shall we say then? Shall we continue still in sin, that grace may abound? In which words is set down the objection: the answering in these words, God forbid. And here this must be marked, that the objection is many times wanting, which must be wisely

supplied by considering the occasion and answer of it: as 1 Tim. v. 11,12: They will marry, having condemnation. Now lest any might say, what, for marrying? He answereth: No, for denying their first faith.

Hitherto of the figures of asking. Now followeth the figures of answering. They are either in suffering of a deed, called permission; or, granting of an argument, called concession.

Suffering of a deed or permission is, when mockingly we give liberty to any deed, being never so filthy; as Rev. xxii. 11: Let him that is filthy, be filthy still. And 1 Cor. xiv. 38: If any be ignorant, let him be ignorant.

Concession or granting of an argument is, when an argument is mockingly yielded unto, as Ecclesiastes xi. 9: Rejoice, O young man, in thy youth, and let thy heart cheer thee, &c.

THE ART OF SOPHISTRY.

ALTHOUGH THE RULES of Sophistry be needless for them that be perfect in logic; yet because the knowledge of them bringeth some profit to the young beginners, both for the ready answering of the subtle arguments, and the better practising of logic and rhetoric, we have thought good to turn it into the English tongue.

Sophistry.

Sophistry is the feigned art of elenches, or coloured reasons.

A coloured reason, or elench, is a show of reason to deceive withal. It is either when the deceit lieth in the words; or in the default of logic, called a sophism.

In words, is either when the deceit lieth in one word; or in words joined together. If it were, it should be, whosoever.

In one word, is either the darkness of a word; or, the doubtfulness of a word.

The darkness of a word, or an insolence, deceiveth, when by a reason the meaning is not understood, whether the strangeness be through the oldness, newness, or swelling vanity of the words; and of the last sort is that spoken of in 2 Peter ii. 18.

By this fallacy the Papists conclude, the Fathers to be on their side for deserving by good works.

Whosoever saith man's merits are crowned, they say man's works do deserve.

But the Fathers say, man's merits are crowned.

Therefore the Fathers say, man's works do deserve.

Where merits is an old word, put for any works done under the hope of reward, whether it come by desert or freedom of promise.

Doubtfulness of a word, likeness of name, is either called homonymia; or by a trope or fineness of speech.

The likeness of name, or homonymia, is when one word is given to signify divers things: as,

He that believeth shall be saved.

The hypocrites to whom our Saviour Christ would not commit himself, believed,

Therefore they shall be saved.

Where faith doth note out both a justifying faith, and a dead faith.

Doubtfulness by a trope, is when a word is taken properly, which is meant figuratively or contrarily: As,

That which Christ saith is true.

Christ saith that bread is his body.

Therefore it is true.

Where by body is meant the sign or sacrament of his body.

Unto the first, a perfect logician would answer, that the proposition is not an axiom necessarily true, according to the rule of truth, because of the doubtfulness of the old and new signification of merit. And if the word be far worn out of use, that it be not understood, then the answer must be, I understand it not, or put your axiom in plain words.

To the second he would answer, that the proposition or first part is not according to the rule of righteousness, because the proper subject and adjunct are not joined together: which hath justifying faith, or believing sincerely, shall be saved; and then the assumption being in the same sense inferred is false.

Unto the third he would answer, that the assumption is not necessarily true; because if the word body be taken properly, it is not then true that is

set down; but if it be taken figuratively, it is true, and therefore would bid him make the assumption necessarily true, and then say, Christ saith in proper words, it is my body; and then it is false.

Hitherto of the fallacies in single words. Now of those that are joined together.

It is either amphibolia, or the doubtfulness of speech: or exposition, or unapt setting down of the reason.

The first is, when there is doubtfulness in the frame of speech; as thus, if any obey not our word by a letter, note him: where some refer by a letter, to the first part of the sentence, and some to the latter; where the signification of the word and right pointing doth show that it must be referred to the first.

The answer is, that the right and wise placing of the sentence is perverted.

Unapt setting down of the reason, is when the parts of the question and the reasons entreated, are not set down in fit words: as,

All sin is evil.

Every child of God doth sin.

Therefore every child of God is evil.

Here the answer according to logic, is that the assumption doth not take the argument out of the proposition, but putteth in another thing; and so it is no right frame of concluding, as appeareth by the definition of the assumption.

Hitherto of the deceits of reason, which lie in words. Now of the default of logic, called sophism.

It is either general or special. The general are those which cannot be referred to any part of logic. They are either begging of the question, called the petition of the principle; or bragging of no proof.

Begging of the question, is when nothing is brought to prove but the question, or that which is doubtful: as,

That righteousness, which is both by faith and works, doth justify.

But this righteousness, is inherent righteousness: Ergo.

Here the proposition in effect is nothing but a question.

If together with the blood of Christ, we must make perfect satisfaction for our sins before we come to heaven; then there must be purgatory for them that die without perfection.

But the first is so: Ergo.

Where the argument they bring is as doubtful, and needeth as much proof, as the question.

The answer is this, out of the definition of the syllogism; that there is no new argument invented; therefore it cannot be a certain frame of concluding.

Bragging of no proof, is when that which is brought is too much, called redounding.

It is either impertinent to another matter, called heterogenium; or a vain repetition, called tautologia.

Impertinent, or not to the purpose, is when anything is brought for a proof, which is nothing near to the matter in hand; whereunto the common proverb giveth answer, I ask you of cheese, you answer me of chalk.

A vain repetition, is when the same thing in effect, though not in words, is repeated; as they that after a long time of prayer say, Let us pray. And this fallacy our Saviour Christ (Matt. vi. 5) condemneth in prayer. And this is a fault in method.

Special are those, which may be referred to certain parts of logic, and they are of two sorts. Such as are referred to the spring of reasons, called invention; or to judgment.

Those referred to invention, are when anything is put for a reason, which is not; as no cause for a cause, no effect for an effect; and so of the rest.

In the distribution this is a proper fallacy, when anything simply or generally granted, thereby is inferred a certain respect or special not meant nor intended: as,

He that saith there are not seven sacraments, saith true.

He that saith there are only three, saith there are not seven.

Therefore he that saith there are three, saith true.

The right answer is, that the proposition is not necessarily true; for there may be a way to say there are not seven, and yet affirm an untruth.

Fallacies of judgment, are those that are referred to the judgment of one sentence, or of more.

Of one sentence, either to the proprieties of an axiom, or to the sorts.

To the proprieties, as when a true is put for a false, and contrarily: an affirmative for a negative, and contrarily. So some take the words of St. John, I do not say concerning it, that you shall not pray, for no denial; when as it doth deny to pray for that sin.

To the sorts, are referred either to the simple or compound.

The first, when the general is taken for the special, and contrarily. So the Papists, by this fallacy, do answer to that general saying of Paul; We are justified with faith without the works of the law: which they understand of works done before faith, when that was never called in doubt.

The fallacies which are referred to a compound axiom, are those which are referred either to a disjoined, or knitting axiom. To a disjoined axiom, when the parts indeed are not disjoined: as, Solomon was either a king, or did bear rule.

To a knitting axiom, is when the parts are not necessarily knit together; as, If Rome be on fire, the Pope's chair is burnt.

And hitherto of the first sort of fallacies referred to judgment. Now followeth the second.

And they be either those that are referred to a syllogism; or to method. And they again are general, and special. General, which are referred to the general properties of a syllogism. It is either when all the parts are denied; or are particular. All parts denied: as,

No pope is a devil.

No man is a devil.

Therefore no man is a pope.

And this must be answered, that it is not according to the definition of a negative syllogism, which must always have one affirmative.

All particular: as,

some unlawful thing must be suffered; as, namely, that which cannot be taken away,

The stew is some unlawful thing.

Therefore the stew must be suffered.

This is answered, by the definition of a special syllogism; which is, that hath one part general.

The special, are those which are simple or compound.

The simple is of two sorts. The first is more plain. The second less plain.

More plain, is when the assumption is denied, or the question is not particular: as,

Every apostle may preach abroad:

Some apostle is not a pope,

Therefore some pope may not preach abroad.

Also, every pope is a lord:

Some pope may give an universal license.

Therefore every lord may give an universal license.

Less plain, hath one fallacy in common, when the proposition is special: as,

Some player is a rogue:

Every vagabond is a rogue,
Therefore every player is a vagabond.

Also, some player is a rogue:

Every vagabond is a player,
Therefore every player is a rogue.

The fallacy of the first kind, is when all the parts be affirmative: as,
All Paul's bishops were ordained for unity.

All archbishops be ordained for unity.

Therefore all archbishops are Paul's bishops.

The fallacy of the second kind is when the assumption is denied: as,
Every puritan is a Christian.

No Lord Bishop is a puritan,

Therefore no Lord Bishop is a Christian.

Hitherto of the fallacies referred to a simple syllogism. Now follow those which are referred to a compound; which are those which are referred either to the connexive, or to the disjoined.

Of the first sort, one is when the first part or antecedent is denied, that the second or consequent may be so likewise: as,

If any man have two benefices, he may escape unpunished at the bishop's hands.

But he may not have two benefices,

Therefore he may not escape unpunished at the bishop's hands.

The second part is affirmed, that the first may be so also: as,

If every ignorant minister were put out of the church, and a preacher in his place, we should have good order,

But we have good order.

Therefore every ignorant minister is put out of the church, and a preacher in his place.

Of those referred to the disjoined, the first is when all the parts of the disjunction or proposition are not affirmed: as,

Every ignorant minister is to be allowed, or not.

But he is not.

Therefore he is.

The second kind, is when the second part of the copulative negative axiom is denied, that the first may be so: as,

A non-resident is either a faithful, or unfaithful minister.

But he is unfaithful. Ergo, &c.

And thus much of the fallacies in a syllogism.

The fallacy in method is when, to deceive withal, the end is set in the beginning, the special before the general; good order be gone, confounded; and finally when darkness, length, and hardness, is laboured after.

Translation of Homer's 'Iliad'

ADVERTISEMENT.

THE TRANSLATION OF Homer was amongst the latest of Hobbes' works; a signal of retreat from those mathematical contests in which he had spent so much of his time:— "Silentibus tandem adversariis, annum agens octogesimum septimum, Homeri Odysseam edidit." — See Vita Thomæ Hobbes.

In 1673 appeared, "The travels of Ulysses, as they were related by himself in Homer's 9th, 10th, 11th, and 12th books of his Odysseys, to Alcinous king of Phæacia," published by Wm. Crook, in 12mo. The date of 1674, given by Anthony Wood and others, seems to be a mistake; they may perhaps have been misled by Hobbes' telling us, that he translated the Odyssey in his 87th year.

Whether Hobbes had at this time finished any other part of Homer, and put forth those four books of the Odyssey as a specimen of the performance, or to ascertain what reception might be expected from the public for the remainder of it, is unknown. In about a year afterwards (see Vita) they were followed by the translation of the entire Iliad and Odyssey. Copies are to be found of various dates; as 1676, 1677, 1684, 1686, and perhaps others: but there were but three editions, the second dated 1677, and the third, 1686. The biographers appear to have been mistaken in repeating one after the other, (see Biog. Britan., Brit. Biog., Gen. Dict., Aikin's Biog.), that in the course of ten years this translation went through three large editions.

Pope, in the preface to his translation, observes, that the poetry of Hobbes' version is "too mean for criticism." Some, however, may possibly find the unstudied and unpretending language of Hobbes convey an idea

less remote from the original, than the smooth and glittering lines of Pope and his coadjutors.

Pope's remark upon the habitual carelessness displayed in the execution of the work, is well founded. It was possibly never meant for criticism, and may be fairly looked upon, as the translator has told us in his preface, as the amusement of his old age.

The present edition is printed from that of 1677.

TO THE READER, CONCERNING THE VIRTUES OF AN HEROIC POEM.

THE VIRTUES REQUIRED in an heroic poem, and indeed in all writings published, are comprehended all in this one word — discretion.

And discretion consisteth in this, that every part of the poem be conducing, and in good order placed to the end and design of the poet. And the design is not only to profit, but also to delight the reader.

By profit, I intend not here any accession of wealth, either to the poet, or to the reader; but accession of prudence, justice, and fortitude, by the example of such great and noble persons as he introduceth speaking, or describeth acting. For all men love to behold, though not to practise virtue. So that at last the work of an heroic poet is no more but to furnish an ingenuous reader, when his leisure abounds, with the diversion of an honest and delightful story, whether true or feigned.

But because there be many men called critics, and wits, and virtuosi, that are accustomed to censure the poets, and most of them of divers judgments, how is it possible, you'll say, to please them all? Yes, very well; if the poem be as it should be. For men can judge what is good, that know not what is best. For he that can judge what is best, must have considered all those things, though they be almost innumerable, that concur to make the reading of an heroic poem pleasant. Whereof I'll name as many as shall come into my mind.

And they are contained, first, in the choice of words. Secondly, in the construction. Thirdly, in the contrivance of the story or fiction. Fourthly, in the elevation of the fancy. Fifthly, in the justice and impartiality of the poet.

Sixthly, in the clearness of descriptions. Seventhly, in the amplitude of the subject.

And, to begin with words: the first indiscretion is, the use of such words as to the readers of poesy (which are commonly persons of the best quality) are not sufficiently known. For the work of an heroic poem is to raise admiration, principally, for three virtues, valour, beauty, and love; to the reading whereof women no less than men have a just pretence, though their skill in language be not so universal; and therefore foreign words, till by long use they become vulgar, are unintelligible to them. Also the names of instruments and tools of artificers, and words of art, though of use in the Schools, are far from being fit to be spoken by a hero. He may delight in the arts themselves, and have skill in some of them, but his glory lies not in that, but in courage, nobility, and other virtues of nature, or in the command he has over other men. Nor does Homer in any part of his poem attribute any praise to Achilles, or any blame to Alexander, for that they had both learnt to play upon the guitar. The character of words that become a hero are property and significancy, but without both the malice and lasciviousness of a satyr.

Another virtue of an heroic poem is the perspicuity and the facility of construction, and consisteth in a natural contexture of the words, so as not to discover the labour, but the natural ability of the poet; and this is usually called a good style. For the order of words, when placed as they ought to be, carries a light before it, whereby a man may foresee the length of his period, as a torch in the night shows a man the stops and unevenness in his way. But when placed unnaturally, the reader will often find unexpected checks, and be forced to go back and hunt for the sense, and suffer such unease, as in a coach a man unexpectedly finds in passing over a furrow. And though the laws of verse (which have bound the Greeks and Latins to number of feet, and quantity of syllables, and the English and other nations to number

of syllables and rhyme) put great constraint upon the natural course of language, yet the poet, having the liberty to depart from what is obstinate, and to choose somewhat else that is more obedient to such laws, and no less fit for his purpose, shall not be, neither by the measure, nor by the necessity of rhyme, excused; though a translation often may.

A third virtue lies in the contrivance. For there is difference between a poem and a history in prose. For a history is wholly related by the writer; but in an heroic poem the narration is, a great part of it, put upon some of the persons introduced by the poet. So Homer begins not his Iliad with the injury done by Paris, but makes it related by Menelaus, and very briefly, as a thing notorious; nor begins he his Odysseys with the departure of Ulysses from Troy, but makes Ulysses himself relate the same to Alcinous, in the midst of his poem; which I think much more pleasant and ingenious, than a too precise and close following of the time.

A fourth is in the elevation of fancy, which is generally taken for the greatest praise of heroic poetry; and is so, when governed by discretion. For men more generally affect and admire fancy than they do either judgment, or reason, or memory, or any other intellectual virtue, and for the pleasantness of it, give to it alone the name of wit, accounting reason and judgment but for a dull entertainment. For in fancy consisteth the sublimity of a poet, which is that poetical fury which the readers, for the most part, call for. It flies abroad swiftly to fetch in both matter and words; but if there be not discretion at home to distinguish which are fit to be used and which not, which decent and which indecent for persons, times, and places, their delight and grace is lost. But if they be discreetly used, they are greater ornaments of a poem by much than any other. A metaphor also (which is a comparison contracted into a word) is not unpleasant; but when they are sharp and extraordinary, they are not fit for an heroic poet, nor for a public consultation, but only for an accusation or defence at the bar.

A fifth lies in the justice and impartiality of the poet, and belongeth as well to history as to poetry. For both the poet and the historian writeth only, or should do, matter of fact. And as far as the truth of fact can defame a man, so far they are allowed to blemish the reputation of persons. But to do the same upon report, or by inference, is below the dignity, not only of a hero, but of a man. For neither a poet nor a historian ought to make himself an absolute master of any man's good name. None of the Emperors of Rome whom Tacitus, or any other writer, hath condemned, was ever subject to the judgment of any of them; nor were they ever heard to plead for themselves, which are things that ought to be antecedent to condemnation. Nor was, I think, Epicurus the philosopher, (who is transmitted to us by the Stoics for a man of evil and voluptuous life), ever called, convicted, and lawfully convicted, as all men ought to be before they be defamed. Therefore it is a very great fault in a poet to speak evil of any man in their writings historical.

A sixth virtue consists in the perfection and curiosity of descriptions, which the ancient writers of eloquence call icones, that is images. And an image is always a part, or rather a ground of the poetical comparison. As, for example, when Virgil would set before our eyes the fall of Troy, he describes perhaps the whole labour of many men together in the felling of some great tree, and with how much ado it fell. This is the image. To which if you but add these words, "So fell Troy," you have the comparison entire; the grace whereof lieth in the lightsomeness, and is but the description of all, even the minutest, parts of the thing described; that not only they that stand far off, but also they that stand near, and look upon it with the oldest spectacles of a critic, may approve it. For a poet is a painter, and should paint actions to the understanding with the most decent words, as painters do persons and bodies with the choicest colours, to the eye; which if not done nicely, will not be worthy to be placed in a cabinet.

The seventh virtue, which lying in the amplitude of the subject, is nothing but variety, and a thing without which a whole poem would be no pleasanter than an epigram, or one good verse; nor a picture of a hundred figures better than any one of them asunder, if drawn with equal art. And these are the virtues which ought especially to be looked upon by the critics, in the comparing of the poets, Homer with Virgil, or Virgil with Lucan. For these only, for their excellency, I have read, or heard compared.

If the comparison be grounded upon the first and second virtues, which consist in known words and style unforced, they are all excellent in their own language, though perhaps the Latin than the Greck is apter to dispose itself into an hexameter verse, as having both fewer monosyllables and fewer polysyllables. And this may make the Latin verse appear more grave and equal, which is taken for a kind of majesty; though in truth there be no majesty in words, but then when they seem to proceed from a high and weighty employment of the mind. But neither Homer, nor Virgil, nor Lucan, nor any poet writing commendably, though not excellently, was ever charged much with unknown words, or great constraint of style, as being a fault proper to translators, when they hold themselves too superstitiously to their author's words.

In the third virtue, which is contrivance, there is no doubt but Homer excels them all. For their poems, except the introduction of their Gods, are but so many histories in verse: where Homer has woven so many histories together as contain the whole learning of his time (which the Greeks call cyclopædia,), and furnished both the Greek and Latin stages with all the plots and arguments of their tragedies.

The fourth virtue, which is the height of fancy, is almost proper to Lucan, and so admirable in him, that no heroic poem raises such admiration of the poet, as his hath done, though not so great admiration of the persons he introduceth. And though it be a mark of a great wit, yet it is fitter for a

rhetorician than a poet, and rebelleth often against discretion, as when he says,

Victrix causa Diis placuit, sed victa Catoni. that is,
The side that won the Gods approved most,
But Cato better lik'd the side that lost.

Than which nothing could be spoken more gloriously to the the exaltation of a man, nor more disgracefully to the depression of the Gods. Homer indeed maketh some Gods for the Greeks, and some for the Trojans, but always makes Jupiter impartial; and never prefers the judgment of a man before that of Jupiter, much less before the judgment of all the Gods together.

The fifth virtue, which is the justice and impartiality of a poet, is very eminent in Homer and Virgil, but the contrary in Lucan. Lucan shows himself openly in the Pompeian faction, inveighing against Cæsar throughout his poem, like Cicero against Cataline or Marc Antony, and is therefore justly reckoned by Quintilian as a rhetorician rather than a poet. And a great part of the delight of his readers proceedeth from the pleasure which too many men take to hear great persons censured. But Homer and Virgil, especially Homer, do everywhere what they can to preserve the reputation of their heroes.

If we compare Homer and Virgil by the sixth virtue, which is the clearness of images, or descriptions, it is manifest that Homer ought to be preferred, though Virgil himself were to be the judge. For there are very few images in Virgil besides those which he hath translated out of Homer; so that Virgil's images are Homer's praises. But what if he have added something to it of his own? Though he have, yet it is no addition of praise, because it is easy. But he hath some images which are not in Homer, and better than his. It may be so; and so may other poets have which never durst

compare themselves with Homer. Two or three fine sayings are not enough to make a wit. But where is that image of his better done by him than Homer, of those that have been done by them both? Yes, Eustathius, as Mr. Ogilby hath observed, where they both describe the falling of a tree, prefers Virgil's description. But Eustathius is in that, I think, mistaken. The place of Homer is in the fourth of the Iliads, the sense whereof is this:

As when a man hath fell'd a poplar tree,
Tall, straight, and smooth, with all the fair boughs on;
Of which he means a coach-wheel made shall be,
And leaves it on the bank to dry i' th' sun;
So lay the comely Simoisius,
Slain by great Ajax, son of Telamon.

It is manifest that in this place Homer intended no more than to show how comely the body of Simoisius appeared as he lay dead upon the bank of Scamander, straight and tall, with a fair head of hair, and like a straight and high poplar with the boughs still on; and not at all to describe the manner of his falling, which, when a man is wounded through the breast, as he was with a spear, is always sudden.

The description of how a great tree falleth, when many men together hew it down, is in the second of Virgil's *Æneads*. The sense of it, with the comparison, is in English this:

And Troy, methought, then sunk in fire and smoke,
And overturned was in every part:
As when upon the mountain an old oak
Is hewn about with keen steel to the heart,
And plied by swains with many heavy blows,
It nods and every way it threatens round,

Till overcome with many wounds, it bows,
And leisurely at last comes to the ground.

And here again it is evident that Virgil meant to compare the manner how Troy, after many battles, and after the losses of many cities, conquered by the many nations under Agamemnon in a long war, and thereby weakened, and at last overthrown, with a great tree hewn round about, and then falling by little and little leisurely.

So that neither these two descriptions, nor the two comparisons can be compared together. The image of a man lying on the ground is one thing; the image of falling, especially of a kingdom, is another. This therefore gives no advantage to Virgil over Homer. It is true, that this description of the felling and falling of a tree is exceeding graceful, but is it therefore more than Homer could have done if need had been? Or is there no description in Homer of somewhat else as good as this? Yes, and in many of our English poets now alive. If it then be lawful for Julius Scaliger to say, that if Jupiter would have described the fall of a tree, he could not have mended this of Virgil; it will be lawful for me to repeat an old epigram of Antipater, to the like purpose, in favour of Homer.

The writer of the famous Trojan war,
And of Ulysses' life, O Jove make known,
Who, whence he was; for thine the verses are,
And he would have us think they are his own.

The seventh and last commendation of an heroic poem consisteth in amplitude and variety; and in this Homer exceedeth Virgil very much, and that not by superfluity of words, but by plenty of heroic matter, and multitude of descriptions and comparisons (whereof Virgil hath translated but a small part into his *Æneads*), such as are the images of shipwracks,

battles, single combats, beauty, passions of the mind, sacrifices, entertainments, and other things, whereof Virgil, abating what he borrows of Homer, has scarce the twentieth part. It is no wonder therefore if all the ancient learned men both of Greece and Rome have given the first place in poetry to Homer. It is rather strange that two or three, and of late time, and but learners of the Greek tongue, should dare to contradict so many competent judges both of language and discretion. But howsoever I defend Homer, I aim not thereby at any reflection upon the following translation. Why then did I write it? Because I had nothing else to do. Why publish it? Because I thought it might take off my adversaries from showing their folly upon my more serious writings, and set them upon my verses to show their wisdom. But why without annotations? Because I had no hope to do it better than it is already done by Mr. Ogilby.

T. Hobbes.

THE LIFE OF HOMER, COLLECTED AND WRITTEN BY J. WALLIM.

HOMER, WHOSE PROPER name was Melesigenes, was born in the country of Æolia, about 160 years after the siege of Troy, which was about the year of the world 3665, of Critheis, daughter of Melanopus and Omyris, who, after her father and mother's death, was left to a friend of her father's at Cuma, who, when he found she was with child, in displeasure he sent her away to a friend's at a place nigh the River Meles; where, at a feast among other young women, she was delivered of a son, whose name she called Melesigenes, from the place where he was born. Critheis went with her son to Ismenias, and after to Smyrna, where she dressed wool to get a livelihood for herself and son. Phemius, the schoolmaster, taking a fancy to her, married her, and took her son into the school, who by his sharpness of wit outwent all the school in wisdom and learning. In a short time after, his master dying, he taught the same school, and gained great reputation by his learning, not only at Smyrna, but all the countries round about; for the merchants that did frequent Smyrna, with corn, &c. did spread his fame about; amongst which merchants, one Mentès, master of a ship of Leucadia, took that kindness for him, that he persuaded him to leave his school and travel with him, which he did, by whom he was maintained well and plentifully in his travels.

They went to Spain, from thence to Italy, and from Italy through several countries, and at last came to Ithaca, where a violent rheum fell into the eyes of Homer, that he could not travel any further, so that Mentès left him with a friend of his called Mentor, a person of great riches and honour in

Ithaca, where Homer learned the principal matters relating to Ulysses' life; but Mentès the next year came back the same way, and finding Homer recovered in his eyes, took him in his travels. They went through many countries till they came to Colophen, where he fell into his old distemper of his eyes, and there grew quite blind; after which he addicted himself to poetry; but being poor, he went to Smyrna, expecting to get better encouragement there; but being disappointed of his expectation, he went to Cuma, and as he went he rested at a town called New-wall, where he repeated some of his verses; and one Tichio, a leather-seller, took such delight to hear them, that he entertained him kindly for a long time. After, he proceeded on his journey to Cuma, and when he came there he was well received, and he had some friends in the senate that did propose to have had a maintenance settled on him for life, but it could not be carried. At this place he first received the name of Homer, from his blindness.

From Cuma he went to Phocæa, where lived one Thestorides, a schoolmaster, who invited Homer to live with him, and by that means he got some of his verses, and after went to Chios, where he taught them as his own verses, and got great reputation by them. When Homer heard that Thestorides had thus abused him, he followed him to Chios, and by the way, at a place called Bollisus, was taken up by a shepherd, as he was keeping his master's sheep; the shepherd did relieve him, and carried him to his master, where he lived some time, and taught his children; yet he could not rest till he had been at Chios to discover the cheat of Thestorides, who when he heard of Homer's coming, he left Chios, where Homer tarried some time, and taught a school, grew rich, married, and had two daughters, one of which died young, the other he married to the shepherd's master that took him in at Bollisus. When he grew old he left Chios, and went to Samos, where he staid some time singing of verses at feasts and at new moons, at the chiefest men's houses in all places where he was. From Samos he was

going to Athens, but fell sick at Ios, and there died, and was buried on the sea-shore. Long after, when his poems had gotten an universal applause, the people of Ios built him a sepulchre.

**HOMER'S ILIADS. TRANSLATED OUT OF GREEK BY
THOMAS HOBBS OF MALMESBURY.**

LIB. I.

The discontent and secession of Achilles.

GODDESS SING WHAT woe the discontent
Of Thetis' son brought to the Greeks; what souls
Of heroes down to Erebus it sent,
Leaving their bodies unto dogs and fowls; 5
Whilst the two princes of the army strove,
King Agamemnon and Achilles stout.
That so it should be was the will of Jove,
But who was he that made them first fall out?
Apollo; who incensed by the wrong 10
To his priest Chryses by Atrides done,
Sent a great pestilence the Greeks among;
Apace they died, and remedy was none.
For Chryses came unto the Argive fleet,
With treasure great his daughter to redeem; 15
And having in his hands the ensigns meet,
That did the priestly dignity beseem,
A golden sceptre and a crown of bays,
Unto the princes all made his request;
But to the two Atrides chiefly prays, 20
Who of the Argive army were the best.
sons of Atreus, may the Gods grant you
A safe return from Troy with victory;
And you on me compassion may shew,

Receive these gifts and set my daughter free; 25
And have respect to Jove's and Leto's son.
To this the princes all gave their consent,
Except King Agamemnon. He alone,
And with sharp language from the fleet him sent;
Old man, said he, let me not see you here 30
Now staying, or returning back again,
For fear the golden sceptre which you bear,
And chaplet hanging on it, prove but vain.
Your daughter shall to Argos go far hence,
And make my bed, and labour at the loom, 35
And take heed you no farther me incense,
Lest you return not safely to your home.
Frighted with this, away the old man went;
And often as he walked on the sand,
His prayers to Apollo up he sent. 40
Hear me, Apollo, with thy bow in hand,
That honour'd art in Tenedos and Chryse,
And unto whom Cylla great honour bears,
If thou accepted hast my sacrifice,
Pay th' Argives with thy arrows for my tears. 45
His prayer was granted by the deity;
Who with his silver bow and arrows keen,
Descended from Olympus silently
In likeness of the sable night unseen.
His bow and quiver both behind him hang, 50
The arrows chink as often as he jogs,
And as he shot the bow was heard to twang,
And first his arrows flew at mules and dogs.

But when the plague into the army came,
Perpetual was the fire of funerals; 55
And so nine days continued the same.
Achilles on the tenth for counsel calls;
And Juno 'twas that put it in his head,
Who for the Argive army was afraid:
The lords to counsel being gathered, 60
Up stood Achilles, and thus to them said,
We must, I think, Atrides, run from hence,
Since war and plague consume us both at once,
Let's think on how to stay the pestilence,
Or else at Troy resolve to leave our bones. 65
Let's with some priest or prophet here advise,
That knows the pleasure of the gods above,
Or some that at expounding dreams are wise,
For also dreams descend on men from Jove:
That we may from him know Apollo's mind, 70
If we for sacrifice be in arrear,
Or if he will for lambs and goats be kind,
And to destroy us from henceforth forbear.
Achilles then sat down, and Chalchas rose,
That was of great renown for augury, 75
And any thing was able to disclose,
That had been, is, or should hereafter be;
And guided had the Greeks to Ilium;
Achilles, said he, since you me command
To tell you why this plague is on us come, 80
Swear you will save me both with word and hand.
Of all the Greeks it will offend the best;

Who though his anger for awhile he smother,
Will not, I fear, long time contented rest,
But will revenged be some time or other. 85
Chalchas, replied Achilles, do not fear,
But what the god has told you bring to light:
By Phœbus, not a man shall hurt you here,
As long as I enjoy my life and sight;
Though Agamemnon be the man you dread, 90
Who is of all the army most obeyed.
The prophet by these words encouraged,
Said what before to say he was afraid.
'Tis not neglect of vow or sacrifice
That doth the God Apollo thus displease; 95
But that we do his priest so much despise,
As not his child for ransom to release.
And more, till she be to her father sent,
And with a hecatomb, and ransomless,
The anger of the god will not relent, 100
Nor will the sickness 'mongst the people cease.
This said, he sat. The king look'd furiously,
And anger flaming stood upon his eyes,
While many black thoughts on his heart did lie;
And to the prophet Chalchas thus replies: 105
Unlucky prophet, that didst never yet
Good fortune prophecy to me, but ill,
And ever with a mind against me set
Inventest prophecies to cross my will;
And now again you fain would have it thought, 110
Because I would not let Chryseis go,

The gifts refusing which her father brought,
Therefore this plague was sent amongst us now.
With Clytemnestra she may well contend,
For person, or for beauty, or for art; 115
Yet so, to send her home I do intend,
For of our loss I bear the greatest part.
But you must then some prize for me provide;
Shall no man unrewarded go but I?
This said, Achilles to the king replied, 120
Atrides, that on booty have your eye,
You know divided is, or sold the prey
Which never can resumed be again.
But send her home. When we shall have sack'd Troy,
Your loss shall be repaid with triple gain. 125
No, said Atrides, that I never meant;
D'ye think 'tis fit that you your shares retain?
And only mine unto the God be sent,
That unrewarded none but I remain?
I thought it reason th' Argives should collect 130
Amongst themselves the value (how they list)
And give it me before they did expect
This prize of mine should be by me dismiss.
If they'll do that, 'tis well. If not, I'll go
To your, or Ajax, or Ulysses' tent, 135
And take his prize, and right myself will so,
Wherewith I think he will not be content.
But since there's time enough to speak of this,
Let's ready make a ship with able rowers,
And th' hecatomb, to go with fair Chryseis, 140

And, to direct, one of the counsellors;
Ajax, Idomeneus, Ulysses, or
Yourself may go, Achilles, if you please,
And do the business you are pleading for,
And, if you can, th' offended God appease. 145
impudence! Achilles then replied,
What other of th' Achæans willingly,
Will, when you only for yourself provide,
Go where you bid, or fight with th' enemy?
Against the Trojans I no quarrel have. 150
In Pthia plund'ring they were never seen,
Nor ever thence my kine or horses drave,
Nor could; the sea and great hills are between.
Only for yours and Menelaus' sake,
To honour gain for you we came to Troy, 155
Whereof no notice, dogs-head, now you take,
But threaten me my prize to take away;
Which by my labour I have dearly bought,
And by th' Achæans given me has been.
And when the city Troy we shall have got, 160
Your share will great, mine little be therein.
For though my part be greatest in the pain,
Yet when unto division we come,
You will expect the greatest part o' th' gain,
And that with little I go weary home. 165
Then farewell Troy. To sea I'll go again,
And back to Pthia. Then it will be seen
When you without me shall at Troy remain,
What honour and what riches you shall win.

Go when you will, said Agamemnon, fly, 170
I'll not entreat you for my sake to stay.
When you are gone more honour'd shall be I,
Nor Jove, I hope, will with you go away.
In you I shall but lose an enemy
That only loves to quarrel and to fight. 175
The Gods have given you strength I not deny.
Go 'mongst your myrmidons and use your might.
I care not for you, nor your anger fear,
For after I have sent away Chryseis,
And satisfi'd the God, I'll not forbear 180
To fetch away from you the fair Briseis,
And that by force. For I would have you see
How much to mine inferior is your might,
And others fear t' oppose themselves to me.
This swell'd Achilles' choler to the height, 185
And made him study what to do were best,
To draw his sword and Agamemnon kill,
Or take some time his anger to digest.
His sword was drawn, yet doubtful was his will.
But Juno, that of both of them took care, 190
Sent Pallas down, who coming stood behind
Achilles, and laid hold upon his hair.
Whereat Achilles wond'ring in his mind,
Turn'd back, and by the terror of her eyes
Knew her; but by none else perceiv'd was she. 195
Come you, said he, to see the injuries
That are by Agamemnon done to me?
So great, O Goddess Pallas, is his pride,

As I believe it cost him will his life.
I hither came, Athena then reply'd, 200
To put an end to this unlucky strife.
From heaven I hither was by Juno sent,
That loves you both, and of you both takes care,
Drawing of swords and bloodshed to prevent.
But as for evil words you need not spare. 205
For the wrong done you he shall trebly pay
Another time. Hold then. Your sword forbear.
I must then, said Achilles, you obey,
Tho' wrong'd. Who hears not Gods, the Gods not hear.
This said, his mighty sword again he sheath'd, 210
And Pallas up unto Olympus flew.
Achilles still nothing but choler breath'd,
And Agamemnon thus revil'd anew.
Dog's-face, and drunkard, coward that thou art,
That hat'st to lead the people out to fight; 215
Nor yet to lie in ambush hast the heart,
And painfully watch in the field all night.
But thou to take from other men their due,
Safe lying in the camp, more pleasure hast.
But fools they are that ruled are by you, 220
Or else this injury had been your last.
But this I'll say, and with an oath make good.
(Now by this sceptre, which hath left behind
The stock whereon it once grew in the wood,
And never more shall have nor leaf nor rind, 225
And by Achæan princes now is borne
By whom Jove's laws to th' people carried be.)

You hear now what a great oath I have sworn:
If ere the Achæans shall have need of me,
And Agamemnon cannot them relieve, 230
When Hector fills the field with bodies slain,
And Agamemnon only for them grieve,
They my assistance wish for shall in vain.
This said, Achilles threw the sceptre down
That stuck all over was with nails of gold; 325
And Nestor rose, of Pyle that wore the crown,
Wise and sweet orator and captain old.
His words like honey dropped from his tongue.
Two ages he in battle honour gain'd.
For all that while he youthful was and strong, 240
And with the third age now in Pyle he reign'd.
What grief t' Achæa coming is, said he,
Gods, what joy to Priam and his seed,
How glad will all the Trojans be to see
You two, that all the rest in pow'r exceed, 245
With your own hands shed one another's blood!
I elder am, do then as I advise.
For I conversed have with men as good,
That yet my counsel never did despise.
Perithous and Dryas were great men, 250
And Polyphemus and Exadius,
Such as for strength I ne'er shall see again;
And so were Cæneus, and Theseus,
The strongest of mankind were these, and slew
The strongest of wild beasts that haunt the wood. 255
These strong men I convers'd withal and knew;

And with them also I did what I could.
With these no other could contend in fight.
Yet they from Pyle thought fit to call me forth
Far off; nor ever did my counsel slight. 260
Think not therefore my counsel nothing worth.
Atrides take not from him, though you can,
The damsel which the Greeks have given him.
Forbear the king, Pelides. For the man
Whom Jove hath crown'd is made of Jove a limb. 265
Though you be strong, and on a Goddess got,
Atrides is before you in command.
Atrides, be but you to peace once brought,
T' appease Achilles I will take in hand,
Who is (while we are lying here) our wall. 270
To this Atrides answered again,
I nothing can deny of this at all.
But he amongst us thinks he ought to reign,
And give the law to all as he thinks fit.
But I am certain that shall never be. 275
He well can fight; the Gods have granted it,
But they ne'er taught him words of infamy.
Then interrupting him, Achilles said,
I were a wretch and nothing worth indeed,
If I whatever you command obey'd. 280
I will no more to what you say take heed.
But this I tell you, if you take away
The damsel which is mine by your own gift,
I do not mean for that to make a fray
Amongst the Greeks, or once my hand to lift. 285

Fetch her yourself, Atrides, but take heed
Against my will you nothing else take there.
Try; that th' Achæans may see how you speed,
And how your black blood shall run down my spear.
Thus in disorder the assembly ends. 290

Achilles to his own ships took his way,
Patroclus with him and his other friends.
And Agamemnon then without delay
Launched a bark, and in go row'rs twice ten.
Aboard the maid and th' hecatomb they lay. 295

Ulysses went commander of the men.
And swiftly then the ship cuts out her way.
And then Atrides th' army purifi'd,
And threw into the sea the purgament.

Then sacrific'd o' th' sands by the sea side 300
A hecatomb. To heaven up went the scent,
And busy were the people. But the king
Still on his quarrel with Achilles thought,
And how Briseis from his tent to bring.

For what he threaten'd he had not forgot. 305
But sent Talthybius and Eurybates

T' Achilles' tent to fetch Briseis thence.
(Two public servants of the king were these,
Ordained to carry his commandments.)

If he refuse, said he, to let her go, 310
I'll thither go myself with greater force
And take her thence, whether he will or no.
Which, angry as he is, will vex him worse.
The messengers, though not well pleased, went

Unto the fleet o' th' Myrmidons, and there 315
They found Achilles sitting by his tent.
Well pleas'd he was not. And they silent were,
And stood still, struck with fear and reverence.
Achilles seeing that, spake first, and said,
Come near. To me you have done no offence. 320
Go you, Patroclus, and lead forth the maid,
And give her to these men, that they may be
To Gods and men, and to th' unbridled man,
My witnesses, when they have need of me
To save th' Achæans, which he never can. 325
For what can he devise of any worth?
Or how can he the Greeks in battle save?
This said, Patroclus led Briseis forth,
And to Atrides' messengers her gave.
She with them went, though much against her heart. 330
Achilles from his friends went off and pray'd.
And sitting with his face to the sea apart
Weeping, unto his mother Thetis said,
Mother, though Jove have given me so small
A time of life, I could contented be, 335
Had I not been dishonoured withal,
And forc'd to bear such open injury.
Thetis in the inmost closets of the deep,
Sat with the old God Nereus, and heard.
And not enduring long to hear him weep, 340
Above the sea like to a mist appear'd,
And by him sat, and strok'd his head, and said,
Why weep you, child? What is't that grieves you so?

Tell me, speak out. Of what are you afraid?
Come, whatsoever 'tis let me it know. 345
Mother, said he, 'tis not to you unknown,
When we took Thebe, and had brought away
The captives and the riches of the town,
Chryseis fell t' Atrides for his prey.
And how her father Chryses came to th' fleet 350
With ransom great his daughter to redeem,
And having in his hands the ensigns meet
Which did his priestly dignity beseem,
A golden sceptre and a crown of bays,
Unto the princes all made his request. 355
But to the two Atrides chiefly prays,
Who of the Argive army were the best.
sons of Atreus, may the Gods grant you
A safe return from Troy with victory;
And you on me compassion may shew, 360
Receive these gifts, and set my daughter free;
And have respect to Jove's and Leto's son.
To this the princes all gave their consent,
Except King Agamemnon. He alone,
And with sharp language from the fleet him sent. 365
Away the old man goes, and as he went,
Against the Greeks he to Apollo pray'd;
Who heard him, and the plague amongst them sent,
Which daily multitudes of them destroy'd.
Of which the prophet, being ask'd the cause, 370
Said, 'twas for th' injury to Chryses done.
I mov'd to send her back. Then angry was

Atrides, though beside Atrides, none.
And though he too has sent her now away,
Yet what he threaten'd he has brought to pass. 375
His officers from me have forc'd my prey,
And Agamemnon now Briseis has.
And now, if ever, let me have your aid,
If you have holpen Jove with word or deed;
(For in my father's house you oft have said, 380
That heretofore you stood him in great stead,
When other Gods to bind him had decreed,
Juno and Neptune, Pallas and the rest,
You to him came and from his bonds him freed.
For up you fetch'd Briareus, the best 385
Of Titans all, whom men Ægæon call,
The gods Briareus, with a hundred hands,
And set him next to Jove. No God at all
Then durst to Jupiter approach with bonds);
Put Jove in mind of this, and him intreat 390
The Trojan hands to fortify in fight,
And to repel the Greeks with slaughter great,
That in their goodly king they may delight,
And Agamemnon count what he hath won
By doing such dishonour to the best 395
Of th' Argives, and that has such service done.
Ay me, said Thetis, would you could here rest
Unhurt, ungriev'd. For I have born you to
Short life. And not far from you is your fate.
And grievous 'tis to be dishonour'd too. 400
But I to Jove will all you say relate

When I go to Olympus. Till then stay,
And angry though you are, from war forbear.
To blackmoor-land the Gods went yesterday,
And twelve days hence again they will be there. 405
This said, the Goddess went away, and left
Her son Achilles with his anger striving,
For that he had been of his prize bereft.
And then Ulysses at the port arriving
Of Chryse, first his sails he furl'd, and stow'd 410
Them on the deck together with the mast;
And with their oars their ship ashore they row'd,
And out their anchors threw; and ty'd her fast.
And on the beach the men descending laid
The victims in good order on the sand. 415
When this was done, they disembark'd the maid.
And then Ulysses took her by the hand,
And brought her to the altar, where the priest
Her father stood, and to him spake, and said,
Chryses, see, Atrides hath dismiss'd 420
Your daughter, and this hecatomb hath paid.
By Agamemnon we are hither sent
The same to offer, and t' Apollo pray,
That he accept it will, and be content
The sickness from the Greeks to take away. 425
This said, he put Chryseis to his hand,
And he with great contentment her receiv'd.
Then all with salt and barley ready stand,
And Chryses pray'd with hands to heaven upheav'd.
Hear me, Apollo, with the silver bow, 430

That dost in Tenedos and Cylla reign,
And heardst my pray'r against the Greeks; hear now,
And from them send the pestilence again.
When Chryses had thus to Apollo pray'd,
Then pray'd they all; and salt and barley threw 435
Upon the victims; which they kill'd and flay'd.
But from the altar first they them withdrew.
And then the thighs cut off they alit in twain,
And round about they cover them with fat,
And one part on the other laid again. 440
The priest himself came when they had done that,
And burnt them on a fire of cloven wood;
And as they burning were pour'd on black wine.
Young men with spits five-branched by them stood.
When burnt the thighs were for the pow'r divine, 445
And entrails eaten, the rest cut in joints
Before the fire they roasted skilfully,
Pierced through with the spits that had five points;
And took it up when roasted thoroughly.
When ended was their work, began the feast; 450
Where nothing wanting was of what was good.
And having thirst and hunger dispossessed,
And filled with sweet wine the temp'ers stood.
Then round the cups were borne; and all day long
Sitting they celebrated Phœbus' might, 455
And magnifi'd his goodness in sweet song,
And he in his own praises took delight.
But when the sun had borne away his light,
Upon the sands they laid them down to sleep.

And when again Aurora came in sight, 460
Again they launch their ship into the deep.
A good fore-wind Apollo with them sent.
Then with her breast the ship the water tore
(Which by her down on both sides roaring went)
And soon arrived at the Trojan shore. 465
And there they drew her up again to land,
And ev'ry man went which way he thought best.
Achilles yet not able to command
The anger that still boiled in his breast,
No longer would the Greeks at council meet, 470
Nor with them any more to battle come;
But sullen sat before his tent and fleet,
Wishing to see the Argives beaten home.
Twelve times the sun had risen now and set,
The Gods t' Olympus all returned were; 475
Thetis her son's complaints did not forget,
But up she carried them to Jupiter.
Upon the highest top alone sat he
Of the great many-headed hill, and laid
One hand on's breast, th' other on his knee. 480
And in that posture thus unto him said,
father Jove, if for you I have done
Service at any time by word or deed,
Repay it now I pray you to my son,
Whom Agamemnon hath dishonoured. 485
Short time the Fates have given him to life.
Atrides taken from him hath his prey.
Now victory unto the Trojans give

Till Agamemnon for his fault shall pay.
Thus prayed she. But Jove made no reply. 490
Nor took she off her hands; but pray'd anew;
Jove, my prayer grant me, or deny,
That I may know what power I have in you.
Then Jove much grieved, spake to her, and said,
'Twixt me and Juno 'twill a quarrel make. 495
For she before the Gods will me upbraid,
When she shall know the Trojans' part I take.
But go, lest she observe what you do here.
I'll give a nod to all that you have spoken,
That you may safely trust to and not fear. 500
A nod from me is an unfailing token.
This said, with his black brows he to her nodded,
Wherewith displayed were his locks divine;
Olympus shook at stirring of his Godhead;
And Thetis from it jump'd into the brine, 505
And Jupiter unto his house went down.
The Gods arose and waited on him thither:
But unto Juno it was not unknown
That he and Thetis had conferr'd together,
Who presently to Jove her husband went, 510
And angry him rebuk'd with language keen.
You that still in my absence tricks invent,
What God hath with you now in counsel been?
Though unto me you hate to tell your mind.
Juno, said Jove, you must not hope to hear 515
All whatsoe'er it be, I have design'd.
But what I mean shall come unto the ear

Of all the Gods, you first of all shall know.
But what from all together I shall hide
Ask me no more, I will not tell you, though 520
My wife you be. Juno then thus repli'd.
Harsh Chronides, what words of yours are these!
To ask you questions I'll henceforth forbear,
And quietly let you do what you please.
But one thing I must tell you that I fear. 525
Thetis, I fear, has gotten your consent,
For her son's sake the Argives to oppress.
Suspect you can, said Jove, but not prevent,
Which doth but give me cause to love you less.
Though it be true, 'twas I would have it so. 530
Therefore sit still and do as I would have you.
Lest when my mighty hands about you go,
Nor all the other Gods in heav'n shall save you.
Then Juno silent sat with grief and fear;
And all the Gods i' th' house of Jove did grieve. 535
But Vulcan, the renown'd artificer,
Stood up his mother Juno to relieve.
what will this come to at last, said he,
If you for mortals thus shall be at odds!
The tumult than the cheer will greater be. 540
What pleasure can this be unto the Gods?
And though my mother wiser be than I,
Yet thus much I'll not doubt her to advise,
That with my father's will she would comply,
That no such quarrel may hereafter rise. 545
For by the roots he can the world pluck up.

Therefore I pray you mother speak him fair;
He'll soon be pleas'd. Then filled he a cup
Of nectar sweet, and bore it to her chair;
And to her said, mother, I pray you hold, 550
And do no more my father's choler move.
If you be beaten I shall but behold,
And grieve I am not strong enough for Jove.
I would have helpt you once, when by the foot
He threw me down to Lemnos from the sky. 555
All the day long I was a falling to't,
Where more than half dead taken up was I.
And there by th' Sincians I was taken up.
When Vulcan had his history told out,
His mother on him smil'd, and took the cup, 560
And to the Gods he nectar bore about.
And then the Gods laught all at once outright
To see the lame and sooty Vulcan skink.
And all the day from morning unto night
Ambrosia they eat, and nectar drink. 565
Apollo played, and alternately
The Muses to him sung. When night was come,
Then gently Sleep solicited each eye,
And to his house each God departed home.
And Jupiter went up unto the bed 570
Where he at other times was wont to lie
When sleep came on him, and laid down his head
To take repose; and Juno lay him by.

LIB. II.

The dream of Agamemnon. The tempting of the army, and the catalogue of ships and commanders.

THE GODS, AND princes of the Argive host
Slept all night long. Jove only waking lay,
And many projects in his mind he tost,
To grace Achilles, and the Greeks annoy. 5
At last a Dream he call'd. False Dream, said he,
Go, hie to Agamemnon's tent, and say,
Distinctly as you bidden are by me.
Bid him bring up his army now to Troy;
For now the time is come he shall it take. 10
The Gods no more thereon deliberate,
But all consented have for Juno's sake,
No longer to delay the Trojan fate.
Then with his errand went the Dream away,
And quickly was at Agamemnon's tent. 15
And finding him as fast asleep he lay,
Up presently unto his head he went.
And in the shape of Nestor to him spake.
Sleep you, said he, Atrides? 'Tis not fit
For him from whom the people counsel take, 20
That sleep all night upon his eyes should sit.
But Jove looks to you. Listen then to me.

For 'tis from Jove that I am to you come.
He bids you lead the army presently
Up every man to the walls of Ilium. 25
For now the time is come you shall it take.
The Gods no more thereon deliberate.
But all consented have for Juno's sake,
No longer to delay the Trojan fate.
And therefore when you wake forget it not. 30
This said, the Dream departed. And the king
Believ'd it as an oracle, and thought
To take Troy now as sure as anything;
Vain man, presuming from a dream Jove's will,
Who meant to th' Greeks and Trojans yet much woe, 35
And with their carcasses the field to fill
Before the Greeks should back to Argos go.
The king awak'd, and sat upon his bed,
Puts on his coat and a great cloak upon,
Handsome and new; his dream still in his head;
The dream of Agamemnon, &c. 40
And then his silver-studded sword puts on.
And then he took his sceptre in his hand
Which formerly his ancestors had borne,
And went to th' ships whereof he had command.
And to the Gods with light then came the morn. 45
Then Agamemnon bids to counsel call.
The cryers call'd, the Greeks together went.
But first he had with the old captains all
Consulted what to do at Nestor's tent;
And said he dream'd that one like Nestor spake 50

To him and said, Atrides 'tis not fit
For one of whom the people counsel take
That sleep upon his eyes all night should sit.
But Jove secures you. Listen then to me,
For 'tis from him that I unto you come. 55
He bids you lead the army presently
Up every man to the walls of Ilium.
For now the time is come you shall it take,
The Gods thereon no more deliberate,
But all consented have for Juno's sake, 60
No longer to delay the Trojan fate.
And therefore when you wake forget it not.
This said, the dream went off again, and I
How to th' assault the army may be brought
As far as we can safely fain would try. 65
I'll first give them advice to go away,
As if there were no hope to gain the town.
But you must then be sure to make them stay.
This said, King Agamemnon sat him down,
And Nestor rose. Captains of th' host, said he, 70
This dream, had it been told b'another man,
Feigned and foolish would have seem'd to me.
But since the king is th' author (if we can)
Let us persuade the people to take arms.
And having said, began to lead away. 75
And now the people coming there in swarms.
For as the bees in a fair summer's day
Come out in clusters from the hollow rock,
And light upon the flow'rs that honey yield;

So to th' assembly did the people flock, 80
And bristling stood with expectation fill'd.
When they sat down, it made the ground to sigh.
The lords nine criers then amongst them sent
To make them silent, or to drown their cry,
And from the press their chairs to defend. 85
With much ado at last they silent were.
Then Agamemnon took into his hand
His sceptre (which was made by Mulciber
For Jove to carry when he did command.
Jove gave it afterward to Mercury;
The tempting of the army. 90
And Mercury to Pelops gave the same.
From Pelops it went down successively
To Atreus, and to Thyestes came.
From him it came to Agamemnon's hand,
Who many islands and all Argos sway'd.) 95
And leaning now upon it with his hand,
Unto the princes of the army said.
Servants of Mars, commanders of the Greeks,
what great trouble Jove involves me in!
Disgracefully to send me home he seeks, 100
Although he told me I the town should win,
And now (when I have lost so many men)
It seems to play with men he takes delight.
What towns has he destroy'd, and will again
Destroy still more, to exercise his might? 105
For both to us and our posterity
'Twill be a great disgrace to go to Troy

With so great multitudes, and baffled be,
And nothing done again to come away.
If we and they should on a truce agree, 110
And one by one they muster up their men;
And we should count how many tens we be,
And make one Trojan fill out wine for ten,
Many a ten would want a man to skink,
So much in number we the town exceed. 115
But when upon their many aids I think,
I wonder less that we no better speed.
Nine years are gone; our cordage spoiled with rain:
Our ships are rotted, and our wives at home,
And children dear expect us back again. 120
Nor know we of the war what will become.
Come, then, and all agree on what I say,
Let's put to sea, and back t' Achæa fly.
We shall not win the town although we stay.
This said, the army with applauses high 125
Consented all (save those that had been by
In council of the princes of Achæa)
And moved were like to the billows high
That rolled are by some great wind at sea.
Or as, when in a field of well-grown wheat 130
The ears incline by a sharp wind opprest;
So bow'd the heads in this assembly great
When their consent they to the king exprest.
Then going to the ships cry'd Ha la la!
Great dust they raised, and encouraged 135
Each other to the sea his ship to draw,

And cleans'd the way to th' water from each bed;
And straight unpropt their ships; and to the sky
Went up the noise. Then Juno sent away
Pallas. Pallas, quoth she, the Greeks will fly, 140
And Helen leave behind, for whom at Troy
So many of the Greeks their lives have lost,
And stay'd so long in vain before the town.
And then will Priam and the Trojans boast,
Unless you quickly to the ships go down. 145
Go quickly then, try if you can prevail,
With hopeful words to stay them yet ashore,
And take away their sudden list to sail,
And let the ships lie as they did before.
This said, the Goddess leapt down to the ground, 150
From high Olympus, and stood on the sand
Where lay the Greeks. Ulysses there she found
Angry to see the people go from land.
Ulysses, said she, do you mean to fly,
And here leave Helen after so much cost 155
Of time and blood, and show your vanity;
And leave the Trojans of their rape to boast?
Speak to each one, try if you can prevail
With hopeful words to stay them on the shore,
And take away this sudden list to sail, 160
And let the ships lie where they lay before.
Ulysses then ran t' Agamemnon's tent,
And took his staff (the mark of chief command)
And laying by his cloak to th' ships he went,
Amongst th' Achæans with that staff in's hand. 165

And when he met with any prince or peer,
He gently said, fear does not you become.
You should not only you yourself stay here,
But also others keep from flying home.
Atrides now did but the Argives try, 170
And those he sees most forward to be gone
Shall find perhaps least favour in his eye.
For of the secret council you were none.
Deep-rooted is the anger of a king,
To whom high Jove committed has the law, 175
And justice left to his distributing.
But when a common man he bawling saw,
He bang'd him with his staff, and roughly spake.
Be silent, and hear what your betters say.
For who of you doth any notice take 180
In council or in martial array?
Let one be king (we cannot all be kings)
To whom Jove gave the sceptre and the laws
To rule for him. Thus he the people brings
Off from their purpose, and to council draws. 185
Then to th' assembly back again they pass'd,
With noise like that the sea makes when it breaks
Against the shore, and quiet were at last.
Thersites only standeth up and speaks.
One that to little purpose could say much. 190
And what he thought would make men laugh would say.
And for an ugly fellow none was such
'Mongst all the Argives that besieged Troy.
Lame of one leg he was; and look'd asquint;

His shoulders at his breast together came; 195
His head went tapering up into a point,
With straggling and short hair upon the same.
Ulysses and Achilles most him hated,
For these two princes he us'd most to chide;
And Agamemnon now aloud he rated, 200
And thereby anger'd all the Greeks beside.
What is't, Atrides, said he, stays you here?
Your tent is full of brass; women you have
The best of all that by us taken were,
For always unto you the choice we gave. 205
Or look you for more gold that yet may come
For ransom of some prisoner whom I
Or other Greeks shall take at Ilium,
Or for some young maid to keep privately?
But kings ought not their private ease to buy 210
With public danger and a common woe.
Come, women of Achaia, let us fly,
And let him spend his gettings on the foe.
For then how much we help him he will know,
That has a better than himself disgrac'd. 215
But that Achilles is to anger slow,
That injury of his had been his last.
This said, Ulysses straightway to him went,
And with sour look, and bitter language said,
Prater, that to thyself seems eloquent, 220
How darest thou alone the king t' upbraid?
A greater coward than thou art there's none
'Mongst all the Greeks that came with us to Troy.

Else 'gainst the king thy tongue would not so run.
Thou seek'st but an excuse to run away. 225
Because we know not how we shall come off
As yet from Troy, must you the king upbraid,
And at the princes of the army scoff,
As if they too much honour to him paid?
But I will tell you one thing, and will do't. 230
If here again I find you fooling thus,
Then from my shoulders let my head be cut,
Or let me lose my son Telemachus,
If I not strip you naked to the skin,
And send you soundly beaten to the ships 235
With many stripes and ugly to be seen.
This said, he basted him both back and hips.
Thersites shrugg'd, and wept, sat down, and had
His shoulders black and blue, dy'd by the staff;
Look'd scurvily. The people that were sad 240
But just before, now could not choose but laugh.
And, oh, said one t' another standing near,
Ulysses many handsome things has done,
When we in council or in battle were,
A better deed than this is he did none, 245
That has so silenced this railing knave,
And of his peevish humour stay'd the flood,
As he no more will dare the king to brave.
And then to speak Ulysses ready stood.
Where Pallas like a crier did appear, 250
And standing by him silence did command,
That also they that sat far off might hear.

Then spake he, with the sceptre in his hand.
The people, O Atrides, go about
To put you on an act will be your shame, 255
Forgetting what they promis'd setting out,
Not to return till Troy they overcame.
But now like widow-women they complain,
Or little children longing to go home.
To be from home a month, it is a pain 260
To them that to their loving wives would come.
To sea they'd go though certain to be tost
By many a sturdy wind upon the same.
But they have now lain here nine years almost;
I cannot therefore say they are to blame. 265
But certainly after so long a stay
'Tis very shameful empty back to go.
Let us at least abide till know we may
Whether what Chalchas said be true or no.
For this we all know and are witnesses 270
(Excepting only those that since are dead)
When we from Aulis went to pass the seas,
And by contrary winds were hindered,
That there we to the gods did sacrifice
Upon an altar close unto a spring, 275
That of a plane-tree at the root did rise;
And how we saw there a prodigious thing.
A mighty serpent with a back blood-red
From out the spring glided up to the tree,
The boughs whereof were ev'ry way far spread. 280
On th' utmost chanc'd a sparrow's nest to be.

Young ones were in it eight, with th' old one nine;
The old one near the nest stay'd fluttering,
And grievously the while did cry and whine.
At last the serpent catcht her by the wing. 285
And when the serpent had devour'd all nine,
He presently was turn'd into a stone;
That we might see from Jove it was a sign
Of what should afterward at Troy be done.
We were amaz'd so strange a thing to see, 290
Till Chalchas rose and did the same explain.
This is a certain sign from Jove, said he,
That he intends to do the like again.
For as the snake devour'd nine birds in all;
So nine years long we shall make war at Troy, 295
And after nine years Ilium shall fall.
But in the tenth year we shall come away.
This then said Chalchas; and all hitherto
Is come to pass. Therefore Achæans stay,
Since nothing here remaineth now to do, 300
But overcoming the old town of Troy.
This said, the people made a mighty noise,
Which bounding from the ships was twice as great,
Sounding of nothing but Ulysses' praise.
And up then rose old Nestor from his seat. 305
Fie, fie, said he, why sit we talking here?
Where are your promises, and whither gone
Our oaths and vows? To what end did we swear?
Where be the hands that we rely'd upon?
What good will't do to sit upon the shore, 310

How long soever be our time to stay?
Hold fast, Atrides, as you did before
The power you have; and lead us up to Troy.
A man or two you safely may neglect,
Though they dissent and secret counsel take. 315
For they'll be able nothing to effect,
Before to Argos our retreat we make,
And know if Jove have spoken true or no.
For when we went aboard to go for Troy,
Jove light'ned to the right hand, which all know 320
A sign of granting is for what we pray.
Let none of you long therefore to be gone,
Till of some Trojan's wife he hath his will,
And ta'en a not unfit revenge upon
The Trojans that have Helen us'd as ill. 325
But he that for all this is fiercely bent
On going home, and thinks that counsel best,
And lays hand on his ship, let him be sent
Down into Erebus before the rest.
But you, O king, think well, and take advice 330
First into tribes the army to divide,
And tribes again into fraternities,
That tribe may tribe and fellow fellow aid.
The leaders and the soldiers then you'll know
Which of them merits praise, and which is naught. 335
And if the town you do not overthrow,
Whether on us or Jove to lay the fault.
To this Atrides answer made and said,
Nestor, father, you exceed all men

In giving counsel. Would the Gods me aid 340
With counsellors such as you are but ten,
The town of Priam we should quickly win.
Nor had we now so long about it staid,
If Jupiter had not engag'd me in
A quarrel with Achilles for a maid. 245
But if we come but once more to agree,
The evil day from Troy will not be far.
Now take your food, that we may ready be,
And able to endure the toil of war.
Let ev'ry man now sharpen well his spear, 350
His buckler mend, and give his horses meat,
And look well to his chariot everywhere,
That we may fight all day without retreat,
For we shall fight I doubt not all day long,
And never cease as long as we can see. 355
Of many a shield sweaty will be the thong,
And spear upon the hand lie heavily;
And many horses at the chariot sweat.
But he that willingly to avoid the fight
Shall stay behind, or to the ships retreat, 360
His body shall be food for dog and kite.
This said, the people pleas'd with what was spoken,
Approv'd the same with shouts, as loud as when
Betwixt great waves and rocks the sea is broken.
Then from the assembly they return again. 365
And at their ships they sacrifice and pray
Each one to th' God in whom he trusted most,
That he might by his favour come away

Alive, with whole limbs from the Trojan host.
But Agamemnon sacrific'd a steer 370
To Jove, of five years old, and to the feast
Call'd such as in the army princes were,
Or held to be for chivalry the best,
Nestor, Idomeneus, two Ajaces,
And the son of Tydeus Diomed, 375
The sixth Ulysses Laertiades,
And Menelaus thither came unbid.
For well he knew his brother would be sad.
About the victim then th' assembly stands,
And in their hands they salt and barley had. 380
Then pray'd Atrides holding up his hands;
Great, glorious Jove, that dwellest in the sky,
let not Phœbus carry hence the day
Till Priam's palace proud in ashes lie,
And Hector sprawling in the dust of Troy, 385
And many Trojans with him. So pray'd he.
And Jove was with his sacrifice content.
But unto all his pray'r did not agree,
Intending still his labour to augment.
Whan all had pray'd, they salt and barley threw 390
Upon the victim which they kill'd and flay'd.
But from the altar they it first withdrew.
The thighs they slit, and fat upon them laid.
And burnt them in a fire of cloven wood;
The entrails o'er the fire they broiled eat, 395
The rest they roast on spits that by them stood;
And when they roasted were, fell to their meat.

When the desire of meat and drink was gone,
Nestor stood up, and to Atrides said,
Let us no longer leave the work undone, 400
Which Jupiter himself has on us laid.
Let's call the Greeks together out of hand,
That we may make them ready for the war.
Atrides then to th' criers gave command
T' assemble them. They soon assembled are. 405
And then the princes went into the field,
And them in tribes and in fraternities
Distinguished. And Pallas with her shield,
(An undecaying shield and of great price,
Rais'd at the brim with orbs of beaten gold 410
An hundred, worth an hundred cows at least.)
With this the Goddess went, to make them bold,
Courage inspiring into ev'ry breast.
And now their hearts are all on fire to fight,
And vanish'd is the thought of their returning. 415
And such as of a mountain is the sight
Upon whose top a large thick wood stands burning;
Such, as they marching were, the splendour was,
And seemed to reach up unto the sky,
Reflected from so many arms of brass 420
Bright and new polished unto the eye.
As when of many sorts the long-neck'd fowls
Unto the large and flow'ry plain repair,
Through which Cayster's water gently rolls,
In multitudes high flying in the air, 425
Then here and there fly priding in their wing,

And by and by at once light on the ground,
And with great clamour make the air to ring,
And th' earth whereon they settle to resound;
So when th' Achaeans went up from the fleet, 430
And on their march were to the town of Troy,
The earth resounded loud with hoofs and feet.
But at Scamander's flow'ry bank they stay,
In number like the flowers of the field,
Or leaves in spring, or multitude of flies 435
In some great dairy 'bout the vessels fill'd,
Delighted with the milk, dance, fall and rise.
The leaders then amongst them went, and brought
Them quickly into tribes and companies,
As ev'ry goat-herd quickly knows his goat 440
Whether it be another man's or his.
And Agamemnon there amongst the rest
Was eminent. Like Jove in hea and face;
Belted like Mars; like Neptune's was his breast.
Such beauty Jove upon the man did place.
The catalogue of ships and commanders. 445
Now, Muses, ye that in Olympus dwell,
(For Goddesses you are, and present were,
And all that pass'd at Troy can truly tell,
And we can nothing know but what we hear.)
Who of the Greeks at Troy commanded men? 450
The common soldiers you need not name,
For I should never say them o'er again,
Although I had as many tongues as Fame.
Boetia, wherein contained be

Eteonus, and Schœnus, and Scolus, 455
Aulis, Thespeia, Græa, Hyrie,
Harma, Eilesius, and Mycalessus,
Erythræ, Elion, Ocaliæ.
Hylæ, Eutresis, Thisbe, Peleon,
Platæa, Aliareus, and Copæ, 460
Coronia, Glisse, Thebe, Medeon,
Onchestus Neptune's town, Nissa divine,
And Midias, and utmost Anthedon,
And Arne that great plenty has of wine.
The which in all made fifty ships. And those 465
Commanded were by Archesilaus,
And Prothoenor and Peneleos,
And Leitus, and with them Clonius.
The seamen in each one to six score rose.
Aspledon and Orchomenus besides 470
Did set forth twenty good black ships to sea.
Ascalaphus and Ialmenus were guides,
Begot by Mars upon Astyoche.
The towns of Phocis, Crissa, Panopea,
And Cyparissus, Python, and Daulis, 475
And on the brook of Cephissus Lilæa,
And Anemoria, and Hyampolis,
And other towns o' th' bank of Cephissus,
Made ready forty good ships for the seas,
Ruled by Schedius and Epistraphus 480
The sons of Iphitus Naubolides.
The Locrians the lesser Ajax led,
Of King Oileus the valiant son.

(For he was lower more than by the head
Than t' other Ajax, son of Telamon) 485
A linen armour he wore on his breast.
But understood as well to use a spear,
Or better, than could any of the rest
That in the army of th' Achæans were.
There went with him from Cynus and Opus, 490
From Bessa, Scarphe, Thronius, Aygiæ,
Tarphe, Calliarus, Boagrius,
Forty good ships well fitted for the sea.
Th' Eubœans were by Elephenor led,
That dwell in Chalcis and Eretriæ, 495
Cerinthus, Dion (that holds high her head),
Carystus, Styra, and in Istiæa.
And by the name Abantes they all go,
Good men, and that in battle use the spear,
And love to pierce the armour of a foe. 500
And these on forty ships embarked were.
From Athens (who Erectheus' people were,
Aurora's son, by Pallas nourished
In her own temple, in which ev'ry year
Many good bulls and lambs are offered), 505
Under Menesteus fifty ships did pass,
Who for the ord'ring of a battle well
Of horse or foot the best of all men was,
Save Nestor, who in age did him excel.
From Salamis came to the Trojan shore, 510
And by the greater Ajax govern'd were,
The son of Telamon, twelve good ships more,

And lay at anchor to th' Athenians near.
Argos, Tyrinthe, Trœzen, Asine,
And Epidaurus, and Hermione, 515
Mases and Ægina, and Eione,
Amongst them all put four score ships to sea.
Of which there were three captains, Diomed,
Euryalus, and Sthenelus. But they
By Diomed were chiefly governed. 520
For him they all commanded were t' obey.
And from Mycenæ, Corinth, Cleonæ,
And Orthe, and Hyperesiæ,
From Sicyon, and Aræthuree,
And Gonoessa, and from Helice, 525
Pellenæ, Ægium, and all that shore,
An hundred ships were laid upon the sea;
And with King Agamemnon passed o'er,
And his peculiar command were these.
Amongst them he puts on his armour then, 530
Proud that he was of all the heroes best.
For of his own he thither brought most men,
And chief commander was of all the rest.
From Sparta, Pharæ, Messa, Brysiæ,
From about Otylus, with those from Laus, 535
Helos, Amyclæ, and from Aygiæ,
Went thirty good black ships with Menelaus.
Which from his brother's forces stood apart,
And he amongst them heart'ning them to fight,
And breathing courage into every heart. 540
For to the Trojans he bare greatest spite.

Pylus, Arene, Cyparisseis,
Amphigenia, Æpy, and Thryus,
(Whereat a ford i' th' stream Alpheus is)
Elos, and Pteleus, and Dorius. 545
(Here 'twas the Muses met with Toamyris
The Thracian fiddler, which their art did slight,
And said their skill was not so good as his,
And they depriv'd him both of art and sight.)
The number of the ships those towns set forth, 550
In all amounted to four score and ten;
And led were by a captain of great worth.
'Twas Nestor the command had of these men.
From Phene, Ripe, and Orchomenus,
And from Enispe, and from Stratiaë, 555
Tege, Mantinea, Stymphalus,
And those that dwelled in Parrhasia,
(Arcadians all, and in sharp war well skill'd)
Came sixty ships by Agapenor led,
And ev'ry ship sufficiently fill'd. 560
But then the ships Atrides furnished.
The men of Helis, and Buprasium,
And all the ground enclos'd by Hyrmine,
Myrsinus, Olene, Alisium,
Amongst them all put forty ships to sea, 565
Led by Amphimachus and Thalpius,
Diores, and Polyxenus, the son
Of martial Agasthenes, and then
Ten good ships were commanded by each one.
Dulichium, and th' isles Echinades, 570

Sent forty ships. Messes commander went
The son of Phyleus, who for his ease
Liv'd from his father there in discontent.
Ulysses also brought out twelve good ships
From Ithaca, Neritus, Ceph'lonia, ⁵⁷⁵
From Same, and from Zant, and Ægylips,
And from Epirus, and Croæyia.
Th' Ætolians with Thoas Andræmon's son
Sent from Pylene, and from Chalcis, and
From Olenus, Pleuron, and Calydon ⁵⁸⁰
Sent forty ships, whereof the sole command
In Thoas was. For Æneus was dead,
And Meleager; all the royal race.
Andræmon's son their men to Troy to lead
By suffrage of the cities chosen was. ⁵⁸⁵
From Crossus, Gortys (in the isle of Crete)
Lictus, Miletus, Phæstus, Rycius,
Lycastus, and some others went a fleet
Of eighty ships with King Idomenus.
And valiant as Mars Meriones. ⁵⁹⁰
And nine good ships went with Tlepolemus
(That was the son of mighty Hercules)
From Lindus, Camirus, Ialissus.
For Hercules Tlepolemus begat
On Astyochia whom in war he won, ⁵⁹⁵
And for her many cities had laid flat.
But after Hercules was dead and gone,
Tlepolemus, now grown a man and bold,
Licymnius (his father's uncle) slew

By th' mother's side, a branch of Mars, but old. 600

Then cuts down trees, and rigs a navy new,

And many men together gathered,

And wandered till to Rhodes he came at last,

And there dwelt in three tribes distributed.

Fear of his kindred made him go in haste. 605

And mightily in little time they throve,

And ev'ry day in wealth and power grew,

And favour'd were continually by Jove.

For daily he unto them riches threw.

From Syme went with Nireus ships three, 610

Nireus that was the fairest man of all

(Achilles always must excepted be)

But weak was Nireus, and his number small.

From Casus, Carpathus, and Nisyrus,

Calydnæ Islands, and the Isle of Cous 615

Went thirty ships. Two sons of Thessalus

The son of Hercules commanded those.

And the Pelasgic Argives sent to sea

From Trechis, and from Hellas, and Halus,

From Pthia, and the port of Alope, 620

Commanded by the son of Peleus,

Fifty good ships of Myrmidons, which some

Achæans, others Hellens used to call.

But these would not to any battle come.

For sullen sat ashore their general, 625

Because Briseis they had forc'd away,

Which when he won Lyrnessus, was his prize,

And did Epistrophus and Mynes slay.

There sat he then, but shall again arise.
From Inon, Phylace, and Pyrasus, 630
From Pteleus, and Antron on the sea
Went forty ships, with Protesilaus,
Which he commanded while alive was he.
But he was dead. For as he leapt to land
From out his ship, he was the first man slain 635
Of all th' Achæans by a Trojan hand,
And left his wife to tear her hair in vain,
His house at Phylace half finished.
His soldiers chose Podarces in his place,
His younger brother, who at Troy them led. 640
A captain good; but th' elder better was.
And they that dwelt about Boebeis Lake,
Iaolcus, Boebe, Pheræ, Glaphyræ,
Put all together, ships eleven make.
Under Eumelus these were put to sea. 645
From rugged Olizon and Melibœa,
The towns Methone and Thomacia sent
Seven ships of fifty oars apiece to sea,
And Philoctetes their commander went.
But him the Achæans left in Lemnos isle, 650
In cruel torment bitten by a snake.
And of his ships medon took charge the while.
But better care of him the Greeks will take.
From Tricca then, and from Methone steep,
And from Oechalia (seat of Euritus), 655
Thirty good ships to Troy went o'er the sea,
By Machaon led and Podalirius,

Two skilful sons of Æsculapius.
From chalky Titanus Hyperia, and
Astirius, and from Ormenius, 660
Eurypilus did forty ships command.
And from the towns Argissa and Gyrtone,
From Oloosson, Orthe on the Hill,
With those that sent were from the town Elone,
So many went as forty ships did fill. 665
And had two leaders. Polypætes one,
Son of Perithous the son of Jove,
And gotten by him was the day whereon
He and the Lapiths 'gainst the Centaurs strove,
And drave them from the mountain Pelion. 670
The other leader was Leontius,
Whose father was Capaneus, who the son
Was of the valiant Lapith Cœneus.
The Ænians and Perrhibœans bold
Did two-and-twenty good black ships set out, 675
From hollow Cyphus, and Dodona cold,
And other habitations about
The pleasant river Titaretius,
That into Peneus runs, but doth not mix,
But glides like oil at top of Peneus, 680
For Titaretius is a branch of Styx.
These Gonæus led. Then the Magnesians sent
From towns upon the banks of Peneus,
And sides of Pelion mountain eminent,
Forty good ships under swift Prothous. 685
These were the leaders of the Achæan forces.

Goddess, tell me now who was the best
In battle of the leaders, and whose horses
In swiftness and in force excell'd the rest.
Eumelus, his two horses did surpass 690
(Though they were females) all the rest for speed;
Their colour, age, and stature equal was,
Sprung in Pieria from Apollo's breed,
That terror drew about as swift as wind.
'Mongst Greeks the greater Ajax had no peer. 695
For now Achilles had the war declin'd,
Whom none in prowess equall'd or came near,
Nor other horses could with his compare.
But at his ships he discontented stay'd,
And full of spite which he th' Atrides bare, 700
Whilst on the beach idle his soldiers play'd
At who could furthest throw a dart or stone.
The horses loosely wander'd here and there
Amongst the people, and had riders none,
Or upon lote and cinquefoil feeding were. 705
But the Achæans to Scamander march'd
Swiftly as when a fire runs o'er a plain
Which Phœbus had with a long summer parch'd,
And going made the ground to groan again,
As when Jove angry lasheth Arimy, 710
Which men say of Typhæus is the bed,
The earth therewith is made to groan and sigh,
So groan'd the ground when they to Troy were led.
Then Jove unto the Trojans Iris sent,
Who old and young were then at Priam's gate 715

Assembled with the king in parliament.
Over their heads stood Iris as they sate.
Her voice was like to that of Priam's son
Polytes, that was watching at the tomb
Of old Æsutes, there to wait upon 720
The coming of the Greeks to Ilium.
Old man, said she, you love to hear men preach
As in a time of peace. But now 'tis war.
The Greeks no more lie idle on the beach,
But at your gates, and numberless they are, 725
As sands by the sea-side, or leaves in spring.
And to the city now they bring the war.
Hector, to you this counsel now I bring.
Within the city many people are
To aid you come of divers languages. 730
Let them that hither led them lead them here,
Arm, and command them each one as he please.
When she had done, dismiss'd the people were.
Hector to open all the gates commands,
And with great clamour horse and foot come out. 735
Before the city a high pillar stands,
To which the field lies open round about;
And Battiea called was by men;
Which 'mongst the Gods another name did bear,
Myrinna's sepulchre. And there again 740
The Trojans and their succours muster'd were.
The Trojans were by Hector led. The best
In battle, and in number most were these,
With spear in hand, and brass on back and breast.

The Dardans were commanded by Æneas, 745
(Anchises' son; but Venus was his mother;
Amongst the hills of Ida got he was.)
And joint commanders with him were two other
Brave men, Archilochus and Acamas.
And of Zeleia the inhabitants, 750
Which of Mount Ida lieth at the foot,
And on the river of Æsopus stands,
Under command of Pandarus were put,
Son of Lycaon, and that well knew how
To make an arrow in the air fly true. 755
Phœbus himself had given him a bow,
And how to use the same none better knew.
Th' Adrasteians and the men of Apæsus,
Of Pityeia and Tereia hill
Were by Adrastus led and Amphius, 760
Two sons of Merops, that had mighty skill
In prophecy, and both of them forbad
Themselves to venture in the war at Troy.
But Fate a greater power with them had,
And made them go, but brought them not away. 765
The people of Percosia, and they
That dwell upon the banks of Practius,
Arisbe, Sestus, Abydus, obey
The orders of their leader Asius
The son of Hyrtacus, whose chariot 770
By horses great and black as any coal,
And on it he to Ilium was brought;
And of Selleis race each one a foal.

Larissa was Pelasgic by descent.
Under Pylæus and Hyppothous, 775
Two stout Pelasgic leaders these were sent,
Who both the grandsons were of Teutomus.
The Thracians on this side Hellespont,
Were led by Pirus and by Achamas.
O' th' Cycon who do these oppose in front 780
Træzenus' son Euphemus leader was.
From Amydon that standeth on the side
Of Axius, the fairest stream that flows,
The Pœons came. Pyrechmus them did guide,
And arm'd they were with arrows and with bows. 785
The Enneti in Paphlagonia,
From whence proceedeth of wild mules the race,
Parthenius' brook and the town Corona,
Cytorus, Sesamus, and the high place
Of th' Erithius, and of Ægyalus 790
The charge was given to Pylomenus,
And of the Halizons t' Epistrophus,
But not alone; join'd with him was Dius
Of Alybe, where is a silver mine.
The leaders of the Mysians were Chronis, 795
And Enomus. Both of them could divine
By flight of birds, though they foresaw not this
That in Scamander stream they both should die,
Slain by Achilles who there massacred
Many a Trojan, many a good ally, 800
Which to the sea the river carried.
The Phrygians from Ascania, far off,

Were led by Phorcys and Ascanius;
And battle lov'd. But the commanders of
The Mæones, Mesthles and Antiphus, 805
The two sons were of old Pylomenes,
Both of them born upon Gygæna lake,
(At th' foot of Tmolus dwell the Mæones.)
Amphimachus and Nastes charge did take
Of those of Caria, people of rude tongue; 810
And of Miletus, and the hill Phtheiron,
And of the towns that seated are among
The windings of Mæander, and upon
Mount Mycale. And Nastes carried gold
Unto the battle, like a child or sot; 815
Wherewith his life he did not buy but sold.
For slain he was; his gold Achilles got,
And left him lying at the river dead.
The succours by the Lycians sent to Troy,
By Glaucus were and King Sarpedon led.
Far off they dwelt, and a long march had they.

LIB. III.

The duel of Menelaus and Paris, for the ending of the war.

WHEN BOTH THE armies were prepar'd for fight,
The Trojans marched on with noise and cry.
As in the air of cackling fowl a flight,
Or like the cranes when from the north they fly, 5
The army of Pygmæan men to charge,
And shun the winter, with a mighty cry
Fly through the air over the ocean large;
So swiftly march'd the Greeks, but silently
Resolved one another to assist. 10
And such a dust between both hosts did rise,
As when upon the mountains lies a mist,
Which to a stone's cast limiteth the eyes.
(Which good for thieves is, but for shepherds not)
So great a dust the middle space possest. 15
When they were near to one another got,
Came Alexander forth before the rest.
A leopard's skin he wore upon his shoulders,
Two spears in hand, his sword girt at his side,
Bow at his back, and brave to the beholders; 20
And any of Achæan host defied.
And glad was Menelaus to see this.
As when a lion finds a lusty prey,

A wild goat or a stag well pleased is,
And hungry seizes him without delay, 25
Although by hunters and by hounds pursu'd;
So glad was Menelaus him to see.
And soon as he his person had well view'd,
Arm'd from his char'ot to the ground leap'd he.
Assured, as he thought, revenge to take. 30
But soon as Alexander once saw that,
He fled into the throng, as from a snake
Seen unawares, trembling and pale thereat.
Then Hector him with words of great disgrace
Reprov'd and said, Fine man and lover keen, 35
Cajoler, that confidest in thy face,
I would to God thou born hadst never been,
Or never hadst been married. For that
A great deal better had been of the twain,
Than to be scorn'd of men, and pointed at 40
For one that durst not his own word maintain.
how the Greeks are laughing now to see
That so absurdly they themselves mistook,
Supposing you some mighty man to be
That art worth nothing, judging by your look. 45
Was't you to Lacedemon pass'd the deep,
And fetch'd fair Helen thence, the bane of Troy,
And now, when it concerns you her to keep,
You dare not in her husband's presence stay?
For you would quickly know what kind of man 50
You have bereav'd unjustly of his wife.
Neither your cittern, nor your beauty can,

Nor other gifts of Venus save your life.
Were not the Trojans fearful more than needs,
You had a coat of stones by this time had, 55
A fit reward for all your evil deeds.
This answer then to Hector, Paris made.
Hector, since your reproof is just, said he,
And your hard language (as when help'd by art
A shipwright's axe strikes deep into a tree) 60
Like rigid steel has cut me to the heart;
If with Atrides you would have me fight,
Object not Venus' favours ('tis unfit
The gifts of the immortal Gods to slight),
But make the Greeks and Trojans both to sit. 65
And in the midst set me and Menelaus,
And which of us shall have the victory,
Helen be his, and all the wealth she has,
And 'twixt the Greeks and Trojans amity.
Let this be sworn to, that we may remain 70
At Troy in quiet, and the Greeks repass
To Argos and Achæa back again.
At this brave proffer Hector joyful was;
And stepping forth, the Trojan ranks kept in
With both his hands o' th' middle of his spear. 75
And to shoot at him the Greeks begin,
And many took up stones and hurling were.
But Agamemnon with a voice as high
As high as he could raise it, to the Greeks cried, hold.
Throw no more stones, let no more arrows fly; 80
Hector to us has somewhat to unfold.

This said, they held their hands, and silent were,
And Hector both to Greeks and Trojans spake.
May you be pleased on both sides to hear
The motion I from Alexander make. 85
Let arms, said he, on both sides be laid by,
And in the midst set him and Menelaus,
And which of them shall have the victory,
Be Helen his, with all the wealth she has.
And let the rest an oath on both sides take 90
The pacts agreed on not to violate.
When this was said, then Menelaus spake,
And both the armies with great silence sate.
Hear me too then, said Menelaus, who
By Alexander have been most offended. 95
If you'll do that which I advise you to,
The quarrel he began will soon be ended.
Which of us two shall fall in single fight,
Let him die only, and the rest agree.
Bring forth two lambs, one black, another white, 100
To t' Earth and Sun a sacrifice to be.
Another we will sacrifice to Jove.
And let the old King Priam present be,
(His proud sons think themselves all oaths above)
That what is sworn he may performed see. 105
No hold is to be taken of an oath
Which young men make, whose likings change like wind.
But old men can foresee what's good for both.
'Tis good for both that makes a contract bind.
These words did to both armies sweetly sound; 110

They thought the worst was past; and up they tied
Their horses; and their spears stuck in the ground,
With spaces left between them, but not wide.
Then Hector to the king two heralds sent,
To fetch the lambs, and Priam to implore 115
To take the oath. From Agamemnon went
Talthybius to the fleet to fetch two more.
Meanwhile to the fair Helen Iris came,
So like t' Antenor's wife Laodice,
King Priam's daughter, that she seem'd the same. 120
Quickly she found her; for at work was she
Upon a double splendid web, wherein
Many a cruel battle she had wrought
The Trojans and th' incensed Greeks between,
That for her own sake only had been fought. 125
Come nymph, said Iris, see one battle more
Between the gallant men of Greece and Troy.
They fight not altogether as before,
But silent sit, and from their arms away.
Shields are their cushions, planted are their spears; 130
Paris and Menelaus only fight.
Save these two no man any armour wears;
And you his wife are, that has greatest might.
Thus Iris said, and her inspir'd anew
With love to Menelaus as before. 135
Then o'er her head a milk-white scarf she threw,
And out went weeping at the chamber door,
But not alone; two maidens follow'd her,
Fair Æthre Pittheus' child, and Clymene.

And quickly at the Scæan gate they were, 140
Where Priam sate; and in his company
Were the old lords, Lampus and Clytius,
And Icetaon, and Ucalegon,
Antenor, Thymetes, and Panthous,
Whence both the armies they might look upon. 145
Old men they were, but had brave captains been,
And now for consultation prized were.
As soon as Helen came into their sight,
They whisper'd one another in the ear,
I cannot blame the man that for her strives, 150
Like an immortal God she is. Yet so,
Rather than we should hazard all our lives,
I should advise the king to let her go.
Thus said they one t' another. But the king
Call'd her and said, daughter, sit down by me, 155
(Not you, but the immortal powers bring
Upon the Trojans this calamity.)
And tell me who that great Achæan is.
I see some higher by the head than he,
But comelier man I never saw than this, 160
Nor liker to a king in majesty.
king, then answered Helen, to whom I
Of all men owe most reverence and fear,
Would I had rather chosen there to die,
Than to your son's ill counsel given ear, 165
Leaving my house, my child, and brothers two,
And all my sweet companions for his sake.
But since I cannot what is done undo,

Unto your question I'll now answer make.
The man you point to Agamemnon is, 170
A good king, and a valiant man in fight,
And brother to the husband is of this
Unworthy woman, me, that did him slight.
And Priam then the man admiring said,
Happy Atrides, great is thy command, 175
Whose soldiers though now very much decay'd,
In such great multitude before us stand.
At a great fight I was in Phrygia,
And brought to Otreus and Mygdon aid
Against the Amazons. I never saw 180
Till then, so many for a fight array'd,
As were the Amazons, upon the banks
Of Sangareus, and yet they fewer were,
Than are contained in the bristled ranks
Of th' armed Greeks that stand before us here. 185
Again Ulysses coming in his sight,
Tell me, said he, sweet daughter, who is this?
He wants the head of Agamemnon's height,
But at the breast and shoulders broader is.
His arms lie still upon the ground; but he 190
In no one certain place himself can keep,
But through the ranks and files runs busily,
Just as a ram runs in a fold of sheep.
To this Jove's daughter, Helen, thus replies.
Ulysses 'tis, the old Laertes' son, 195
Of Ithaca; to counsel and devise,
In all the army like him there is none.

Helen, said Antenor, you say right;
On your affair he once came into Troy
With Menelaus. I did them both invite 200
To sup with me; and in my house they lay.
I them compar'd. When at their audience
They both stood up, Atrides taller seem'd;
Sitting Ulysses won most reverence,
And was amongst the people most esteem'd. 205
And when they were orations to make,
Atrides' words went easily and close,
For little he, but to the purpose spake,
Though th' younger man. But when Ulysses rose,
Upon the ground a while he fix'd his eyes, 210
Nor ever mov'd the sceptre in his hand;
You would have thought him sullen or unwise,
That did not yet his bus'ness understand.
But when his voice was raised to the height,
And like a snow upon a winter's day 215
His gentle words fell from him, no man might
With him compare; so much his words did weigh.
Then Priam seeing Ajax, ask'd again,
What Greek is that, that taller by the head
And shoulders is than all the other men? 220
And Helen to the king thus answered,
Great Ajax; who of th' Argives is the sconce:
And he o' th' other side Idomeneus,
Who was the guest of Menelaus once,
And lodg'd at Lacedemon in his house. 225
And now I see the rest, and could them name.

But Castor I and Pollux cannot see.
Two princes are they, and well known by Fame,
And by one mother brothers are to me.
Did they not pass the sea? Yes sure they did 230
Come with the rest; but are asham'd of me.
And in the Argive fleet lie somewhere hid,
And will not in my shame partakers be.
Thus Helen said, because she could not tell
Whether her brothers were alive or dead. 235
But dead they were; and, where they both did dwell,
In Lacedemon they were buried.
The heralds now the two lambs had brought in,
That for their sacrifice appointed were,
And full of noble wine a great goat skin. 240
Idæus with the golden cups stood near,
And pray'd the king to go down to the plain.
There stay for you the Greeks and Trojans both;
A peace agreed on is; but all in vain
Unless you also go and take the oath. 245
For Paris must with Menelaus fight,
And he must Helen and her wealth enjoy
Upon whose side the victory shall light;
The Greeks return; and peace remain at Troy.
These words to th' old man's heart came cold as ice. 250
But straight he bade his coach made ready be.
The servants made it ready in a trice,
And up into 't Antenor went and he;
And pass'd the Scæan gate into the plain.
And when they came near to Scamander's banks, 255

From out the coach alighted they again,
And stood between the adverse armies' ranks.
Then Agamemnon and Ulysses came,
And to the contract for the Greeks did swear.
And Priam and Antenor swore the same. 260
The heralds mix the wine with water clear;
And poured water on the princes' hands.
Atrides at his sword a knife did wear,
And as he near unto the victims stands,
Cuts with it from their foreheads locks of hair, 265
Which by the heralds were distributed,
Till ev'ry leader part had of the hair.
The ceremonies being finished,
Atrides to the Gods then made this prayer.
mighty Jove, the monarch of the Gods, 270
glorious Sun, with thy all-seeing eye,
Streams, O Earth, O you that hold the rod
Beneath the earth, scourges of perjury,
Hear me, and be you witnesses of this.
If Menelaus be by Paris slain, 275
Let Helen and the wealth she has be his,
And to Achæ we return again.
If slain by Menelaus Paris be,
Let Helen with her wealth to Greece be sent
With some amends made for the injury, 280
To be of th' wrong done an acknowledgment.
If such amends the Trojans will not make,
I will pursue the war, and here abide,
Till I the town of Ilium shall take,

Or till the Gods the quarrel shall decide. 285
This said, the victims with his knife he slew.
And sprawling there upon the place they lay.
Then into golden cups the wine they drew,
And pour'd it on the lambs. Then prayed they
Both Greeks and Trojans; Jove, and pow'rs divine, 290
Who first to break this peace shall go about,
As poured on the victims is this wine,
So they, and their sons' brains be poured out.
Thus prayed they. But Jove that pray'r did slight.
Then Priam said, To Troy return will I. 295
It cannot please me to behold the fight.
For none but Gods know which of them shall die.
And then into the char'ot went again
He and Antenor, and drave t' Ilium,
And with them carried their victims slain. 300
Then in Ulysses and great Hector come,
And having measur'd out the lists, wherein
They were to fight, then the two lots they drew
For who to throw his spear should first begin.
And then the Greeks and Trojans pray'd anew. 305
glorious Jove, whom all the Gods obey,
Let him that of the war the author was
Be slain, and all the rest firm peace enjoy.
Then mighty Hector shook the skull of brass.
The lot that was the first drawn out, was that 310
Which gave to Paris the right to begin.
Then down upon the ground the people sate
In order as their armour plac'd had been.

And Paris arm'd himself, and first puts on
His leg-pieces of brass, and closely ties, 315
That silver'd over were at th' ancle-bone.
And then his breast-plate to his breast applies.
Lycaon's breast-plate 'twas, but ev'ry whit
As just upon him sat, as it had done
Upon Lycaon when he used it. 320
And next to this his good sword he puts on.
And then his broad shield and his helmet good.
And last of all a spear takes in his hand.
And in like armour Menelaus stood.
Then come they forth, and in the lists they stand. 325
And one did on another fiercely look.
(The people stupid sat 'twixt hope and fear.)
And when they come were nigh, their spears they shook.
But Paris was the first to throw his spear,
And threw, and smote the shield of Menelaus, 330
But through the mettle tough it passed not,
But turn'd, and bended at the point it was.
Then Menelaus was to throw by lot.
But first he prayed. Grant me, O Jove, said he,
That this my spear may Alexander slay, 335
Who was the first that did the injury;
That they who shall be born hereafter may
Not dare to violate the sacred laws
Of hospitality. Having thus said,
He threw his spear, which Paris' shield did pass, 340
And through his breast-plate quite, and there it stay'd;
But tore his coat. And there he had been dead,

But that his belly somewhat he drew back.
Then with his sword Atrides smote his head
Which arm'd was, and the sword in pieces broke. 345
Then Menelaus grieved at the heart,
Looking to heaven did on Jove complain.
Jove, that of the Gods most cruel art,
Broken my sword, my spear is thrown in vain.
Then suddenly laid hold on Paris' crest, 350
And to the Greeks to drag him did begin,
And Paris then was mightily distress,
Choakt by the latchet underneath his chin.
And to the Greeks had dragg'd been by the head,
If Venus to his aid had not come in, 355
Who broke the string and him delivered.
Atrides' conquest else had famous been.
Then to the Greeks the empty cask he threw.
But Venus snatcht him from him in a mist.
And whither she convey'd him none there knew. 360
A God she is, and can do what she list.
When Paris to his chamber was convey'd,
His chamber which of perfumes sweetly smelt,
Then puts she on the form of an old maid
That Helen serv'd when she at Sparta dwelt. 365
And in that shape went to call Helen home,
That stood with other ladies of the town
Upon a tow'r. When she was to her come,
She gently with her finger stirr'd her gown.
Helen, said she, Paris has for you sent, 370
And on his glorious bed doth for you stay,

Not as a man that came from fight, but went
To dance, or from it were new come away.
Helen at this was mov'd, and mark'd her eyes,
And of her lovely neck did notice take, 375
And knew 'twas Venus though in this disguise;
And troubled as she was, thus to her spake.
Venus, why seek you to deceive me still,
Since Menelaus has the victory?
Though I have wrong'd him, he receive me will, 380
And you come hither now to hinder me.
Whither d'ye mean to send me further yet;
To Phrygia or to Mœonia,
That there I may another husband get?
You shall not me to Alexander draw. 385
Go to him you, and Heaven for ever quit;
Grieve with him; have a care the man to save,
And by his side continually to sit,
Till he his bride have made you, or his slave.
I will not to him go (for 'twere a shame) 390
Nor any longer meddle with his bed,
Nor longer bear the scorns, nor mocks, nor blame
Which from the wives of Troy I suffered.
Then Venus vext, Hussie, said she, no more
Provoke my anger. If I angry be, 395
And hate you as I loved you before,
The armies both will to your death agree.
This said, the beauteous Helen frightened was,
And with the Goddess went, who led the way,
And by the Trojan wives did quiet pass 400

Unto the house where Alexander lay.
I'th' rooms below at work her women were,
But up went Helen with the Goddess fair.
And when to Alexander they were near,
The Goddess unto Helen fetcht a chair. 405
Then sat she down, and look'd at him again.
You come from battle. I would you had there
And by my former husband's hand, been slain.
You bragg'd you were his better at a spear.
Go challenge him again, and fight anew. 410
But do not though, for fear you should be kill'd
But rather when you see him, him eschew,
Lest he should leave you dead upon the field.
To Helen Alexander then replied.
Forbear; though he have now the victory 415
By Pallas' help; there are Gods on our side,
And they another time may favour me.
Let's go to bed, and in sweet love agree.
Your beauty never did me so much move,
At Lacedemon, nor in Cranae; 420
Where the first blessing I had of your love.
This said, to bed they went, first he, then she.
Atrides then sought Paris in the throng
O'th' Trojans and their aids; but could not see
Nor hear of him the company among. 425
They would not have conceal'd him though they might;
But had to Menelaus him betray'd.
So hateful to the Trojans was his sight.
Then stood King Agamemnon up and said,

Hear me ye Trojans and your aids. 'Tis plain 430

That Menelaus has the victory.

Let Helen therefore rendered be again,

And pay your fine. 'Tis right, the Greeks all cry.

LIB. IV.

The articles broken by the Trojans.

MEAN WHILE THE Gods at counsel drinking sat.
Hebe the nectar carried up and down.
And Jove amongst them present was thereat,
And sitting had his eyes upon Troy town. 5
Then Jupiter puts out a word, to see
What Juno would unto the same reply.
Two Goddesses assistants are (said he)
To Menelaus, but sit idly by,
Pallas and Juno; but on th'other side 10
Venus gives Paris aid, and really
Has helpt him when he thought he should have died;
Though Menelaus have the victory.
But let us now think which the best will be,
To suffer war to make an end of Troy, 15
Or let Troy stand and make them to agree,
And Helen with Atrides go her way.
Juno and Pallas that together sat,
Grumble and plot; Pallas her spite kept in.
But such of Juno was the choler, that 20
Had she not spoke, her heart had broken been.
Harsh Jove, said she, what do you mean by this?
Shall I with so much sweat, and labour spent,

And horses tir'd, now of my purpose miss?
Do. But the other Gods will not consent. 25
Devil, said Jove, what hurt is done to you
By Priam and his sons, that you should so
Fiercely the ruin of the town pursue?
I think if you int' Ilium should go,
And eat up Priam and his children all, 30
And every Trojan in the town beside,
Man, woman, child alive within the wall,
Your anger will at last be satisfied.
Do as you please. It shall breed no contention
'Twixt you and me. But then remember this, 35
When I to raze a city have intention
That yours, and greatly in your favour is,
To let me do't without plea or request;
Since to give you your will I lose my own.
For Ilium I love above the rest, 40
Though under Heaven be many a goodly town.
For I by Priam and his people still
Have honour'd been, my altars richly serv'd
With wine and sacrifices to my will,
Which is the honour to the Gods reserv'd. 45
To this the Goddess Juno then replied,
Three cities I prefer before the rest,
Argos, and Sparta, and Mycena wide.
Destroy you may which of them you think best,
If you see cause; I'll not stand in your way. 50
Or if I do, what mends can I have so?
For since your power does mine so much outweigh,

It will be done whether I will or no.
But you ought not t'undo what I have done,
For I a Goddess am, and have the same 55
Parents, of whom you boast to be the son.
And further of your wife I bear the name,
Whom mortals and immortals all obey.
Then let us not in such things disagree.
But I to you, and you to me give way. 60
For of our two minds all the Gods will be.
Let Pallas to the army straight be sent
To make the Trojans first the peace to break.
And Jupiter to do so was content,
And did (as he was bid) to Pallas speak. 65
Pallas, said he, down to the armies go,
Let not this peace be by the Trojans kept.
When Pallas heard her father Jove say so,
Glad of the errand, from the sky she leapt,
Just like a falling star, which Saturn sends 70
To armies or unto seafaring men;
Which change of fortune, commonly portends.
The Goddess through the air descending then,
Splendid and sparkling on the ground did light.
The armies that were in the field array'd, 75
Both Greeks and Trojans wond'ered at the sight;
And one unto another next him said,
This bloody war will sure return again,
Or else the peace be surer made than 'tis;
But which o' th' two Jove has not yet made plain, 80
Who both of peace and war disposer is.

Pallas the form took of Laodocus,
Antenor's son, and went into the throng
O' th' Trojans to inquire for Pandarus.
At last she found him his own troops among, 85
That were of Lycaonia the bands,
And from Zeleia led by Pandarus
To Ilium. There Pallas by him stands
Like to Antenor's son; and to him thus:
Lycaon's son, says she, dare you let fly 90
A shaft at Menelaus? For I know
The Trojans all would thank you, specially
Paris, the son of Priam, and bestow
Great presents on you if you should him kill.
Shoot at him then, and to Apollo pray, 95
The God of archers, that he help you will.
And vow a hecatomb of lambs to pay,
When to Zeleia safely you come home.
For there your people to Apollo vow.
When this was said, the vain man overcome, 100
From off his shoulders taketh down his bow,
(Which did a lusty goat's head once adorn,
Which with a shaft he killed had among
The rocks, and taken from his head the horn,
Which was no less than sixteen handfuls long. 105
And to a fletcher gave it to be wrought,
Shaven, and polish'd, and gilt at the hand.)
This bow he bent; and lest the foe should know't,
He crouched down, and laid it on the sand.
But lest the Greeks should rush on him, before 110

He ready were to shoot, they that stood near,
Before him with their bucklers stood good store.
And being now delivered of that fear,
From out the quiver takes an arrow keen,
And new, well wing'd to carry mischief true, 115
Which shot before that time had never been.
But yet his vow before his arrow flew.
Phœbus, said he, if I Atrides slay;
As soon as I shall to Zeleia come,
I vow unto your deity to pay 120
Of my first-yeaned lambs an hecatomb.
Then to his breast he drew the leather string,
And to the bow return'd the arrow head.
Out leapt the shaft, and as it went did sing
Amongst the throng, as pleas'd man's blood to shed. 125
And, Menelaus, now the Gods you blest,
And chiefly Pallas, that before you stood,
And turn'd the deadly arrow from your breast,
About as much as a kind mother could
From her child's face divert a busy fly; 130
And made it on the golden buckle fall,
Where of his breast-plate double was the ply,
And though it pass'd through buckle, plate, and all,
And girdle which his coat unto him bound,
The shaft into his body penetrated, 135
And made, though not a great one, yet a wound,
The force it went with being much abated;
Yet out the blood ran. As when ivory
Is stain'd with crimson, to adorn the cheeks

Of the proud steeds, and please the driver's eye, 140
Many a cavalier to have it seeks.
The dame that stain'd it then holds up the prize,
And keeps it by her as a precious thing;
So lovely seems the colour to her eyes,
As to be sold to none but to a king. 145
So look'd his body when the streams of blood
His iv'ry legs and insteps did defile.
But Agamemnon stiff with horror stood;
And so did Menelaus for a while.
But when he saw the arrow barbs appear 150
Above the nerve, his courage came again.
But Agamemnon, not yet out of fear,
Did of the Trojans' perjury complain.
Brother, said he, and took him by the hand,
Dear brother, 'tis the oath that has you slain, 155
Making you thus before the Trojans stand.
But sure I am the oath cannot be vain,
Confirmed with so great solemnity.
They shall, though late, pay for it with their lives;
(For Jove ne'er fails to punish perjury) 160
Both they themselves, their children, and their wives.
For I well know the fatal day will come
To Priam, and to Priam's people all.
Jove will his black shield shake o'er Ilium,
And for this ugly action make it fall. 165
This, Menelaus, is a thing to come.
But what if of your wound you chance to die?
The Argives straight will think of going home.

How by the Greeks then scorned shall be I!
How proud will Priam and the Trojans be, 170
When Argive Helen shall be left behind,
And your bones rotting in the ground they see,
Without effecting what they had design'd?
Some trampling on your grave perhaps will say,
Would Agamemnon thus would always vent 175
His choler, as he now has done at Troy,
Now gone with empty ships back to repent,
Leaving his brother Menelaus here.
Then should I wish the earth would swallow me.
But Menelaus, to displace that fear, 180
Fright not the army, brother, thus said he.
Not mortal is the wound. 'Twixt me and death
My armour and the clasps stood, all of brass;
Besides a good tough girdle underneath.
Pray God 't be true, said he to Menelaus, 185
But we must send for a chirurgeon,
To mitigate with lenitives the pain.
Talthybius, said he, call Machaon,
And having found him quickly come again.
Tell him he must to Menelaus come, 190
Who by a foe is with an arrow shot,
Trojan or Lycian, I know not whom,
That with great grief to us has honour got.
This said, the herald went and look'd about
Amongst the troops of Tricca which he led. 195
Nor was it long before he found him out
With many targetiers environed.

You must, said he, to Menelaus come,
Who by some foe is with an arrow shot,
Trojan or Lycian, I know not whom, 200
That, with great grief to us, has honour got.
'Tis Agamemnon calls you. Then they pass
Together through the host, and hastened
Till they were come where Menelaus was
With many other lords encompassed. 205
There Machaon the arrow first pulls out.
(The barbs were broken as they came away)
Then took he off his armour and his coat.
Then sucked he the wound the blood to stay;
And laid on unguents to allay the pain. 210
Meanwhile the Trojans arm'd were coming in.
And then the Greeks were forc'd to arm again.
And Agamemnon's virtue now was seen.
He did not at their coming sleep nor start,
But speedily prepared for the fight, 215
And of a chief commander did the part,
His own commanders first to disaffright.
His horses and his chariot he sent off.
T' Eurymeon, the son of Ptolemy,
The son of Pirus he gave charge thereof,
The first battle. 220
And bad him with it always to be nigh,
To use when labour tired had his knees.
Through the great army then on foot he went,
And where them hasting to the fight he sees,
He gives them in few words encouragement. 225

On, Argives, and be sure Jove never fights
Against good men for such perfidious knaves,
But leave them will for food to dogs and kites,
And to their foes their wives and children slaves.
But where he saw the soldiers negligent, 230
His admonition was then severe.
Fie, Argives, what d' you fear? To what intent
Stand you thus staring like a herd of deer?
Just like so many deer that had been chased
O'er some great plain looking about they stay, 235
So stand you here like frightened deer amazed,
Till to our ships come down the troops of Troy,
To try if Jove will help you there or no.
Thus he commanding went the host throughout.
And when the martial Cretans he came to, 240
Where armed stood Idomeneus stout.
(Meriones the rear led, he the van)
And Agamemnon look'd on them with joy;
And to Idomeneus thus began.
Of all the Greeks that me assist at Troy 245
I value you the most, both in the war
And otherwise. And when at feast we drink,
Other men's cups by measure stinted are,
But yours, as mine, stands always full to th' brink.
The King of Crete replied, I shall, said he, 250
Continue still your good confederate,
As heretofore I promis'd you to be.
But go, and th' other leaders animate,
That we may with the Trojans quickly fight.

Then woe be to them, sure they are to die 255
Who of the Gods and sacred oaths make light.
Then on went Agamemnon joyfully;
And came to the quarters of the Ajaxes,
There armed both complete, and followed
With a huge multitude of Greeks he sees, 260
And ready to the battle to be led.
As when a shepherd from a hill espies
A full-charg'd cloud march tow'rd's him in the deep,
It seems as black as pitch unto his eyes,
And makes him seek a shelter for his sheep; 265
So black the squadrons of the Ajaxes,
And horrible with thick and upright spears
T' Atrides seem, and well it did him please,
And both of them he thus commends and cheers.
Ajaxes, expect not I should bid 270
You hearten up your army for the fight;
'Tis done so well already, there's no need.
Jove, Apollo, Pallas, that I might
Find all the other leaders such as you,
We should not need from Argos long to stay 275
Ere we the town of Priam should subdue
And rifle. And this said, he went away,
And came to Nestor, who was ordering
His troops and bands of horse and foot, each one
Against the enemy encouraging. 280
And with him stood Alastor, Pelagon,
Hæmon, and Chromius, skilful men in war.
I' th' front the char'ots and the horsemen were.

The most and best infantry placed are
(A hedge unto the battle in the rear.) 285
The middle ranks were filled up with those,
Upon whose courage he did least rely.
For these would fight because they could not choose;
Since they could neither back nor forward fly.
And Nestor to the horsemen spake. Let none, 290
Said he, before another go, to shew
His manhood or his skill. But all go on
At once. To single is to weaken you.
Further, If any of you should have need
To mount into another's chariot, 295
There let him use his spear; but still take heed
That with the horses reins he meddle not.
Our fathers have before us us'd these laws,
And thereby many cities level laid.
Thus Nestor taught them. Glad Atrides was, 300
And with great approbation to him said,
Nestor, that your arms were but as strong
As is your mind! But they're decay'd by age.
Or could you give your age to some man young,
And with the youngest of the foes engage. 305
Atrides, then said Nestor, so wish I.
Would I were as when Eruthalyon
I slew. But Gods' gifts come successively.
I then was young; and age is now come on.
But as I am I'll ride amongst my horse, 310
And as becomes an old man, give advice,
While they that may presume upon their force,

With spear in hand charge on their enemies.
Atrides pass'd on to th' Athenians
That by Menestheus commanded were. 315
And by these stood the Cephalonians
Ulysses' bands. Neither of these did hear
The clamour of the battle new begun,
But stood unmoved, because they did expect
Some greater troops of Greeks should first fall on. 320
For this Atrides grievously them check'd.
Menestheus, said he, son of a king,
And you the crafty man Ulysses, why
When you your men should to the battle bring,
Stand you here shrinking from the enemy? 325
You hear the first when there will be a feast,
And stay for no man. For your messes are
Greater than other men's; your wine the best,
And without stint. And therefore in the war
You should strive who should be the first to fight. 330
But now, though ten troops were before you there,
You would not be displeased with the sight.
These words came harshly to Ulysses' ear,
And with a frowning look, what's this, said he,
Are we not making all the haste we can? 335
Telemachus his father you shall see
By and by fighting in the Trojan van,
And that this reprehension needless was.
But Agamemnon smiling then replied,
(Seeing his censure did not kindly pass) 340
Noble Ulysses, I meant not to chide,

Nor to direct you, that so skilful are.
For we are both of us of the same mind.
What's said amiss I shall again repair.
But let it now away go with the wind. 345
Then on he went and came to Diomed,
Whom mounted on his chariot he found
With Capaneus' son accompanied,
And other lords that him encompass'd round.
Ay me, Tydides, wherefore stand you thus, 350
As if you for some bridge did look about.
You do not as your father Tydeus,,
Who still before his fellows leaped out.
So said they that had seen him at the war,
Which I did not, but take it upon fame, 355
Which him above the rest preferred far.
But certain 'tis, he to Mycena came
With Polynices, to desire their aid
Against the Thebans. And they willingly
Had granted it, but that they were afraid. 360
For Jove forbad them by a prodigy.
Then to the brook Asopus back they went,
Which doth the Theban territory bound.
To Tydeus the Greeks a letter sent
To enter Thebes, and terms of peace propound. 365
To Thebes he went, and with Eteocles
He found the chief o' th' Thebans at a feast.
And at all manly games the prize with ease,
By Pallas' help, he carried from the best.
And when for spite they sent out fifty men 370

With Mæon Hæmon's son, and Lycophon
To murder him as he went back again,
Slain by Tydeus they were all but one.
For he sav'd Mæon, warned by the Gods.
Such Tydeus was, but left a son behind 375
That less could do, but for words had the odds.
But valiant Diomed reply declined,
Who gave t'Atrides what respect was due.
The other answered him with language rude.
You say, said he, what you know is not true. 380
We than our fathers there more manhood shew'd.
For we with fewer men proud Thebes did gain,
By Jove's help, and observances divine,
Whilst the Cadmeans for their pride were slain.
How from our fathers then do we decline? 385
But straight reprov'd he was by Diomed.
My friend, said he, are you more grieved than I?
Would you not have the army ordered?
Atrides, both i' th' loss and victory
Is most concern'd. Let us of battle think, 390
And down he leapt, as soon as that was said,
In complete arms, with such a sudden chink,
As might a constant man have made afraid.
As when the billows of the sea rais'd high
By some great wind, go rolling to the shore, 495
And follow one another to the dry,
There stopp'd and broken are, and foam, and roar:
So then the Greeks up to the Trojans come,
Obeying each his leader silently,

(You would have thought them, though so many, dumb) 400

In glittering arms, and glorious to the eye.

On th'other side, the Trojans made a noise,

Like ewes a milking kept off from their lambs

When in the field abroad they hear their cries,

And they again bleat back unto their dams. 405

But did not one another understand;

For few there were whose language was the same.

Some were of one, some of another land,

And most of them from far off thither came.

Pallas the Greeks, Mars Trojans favoured. 410

Then Fright came in, with (Mars his sister) Strife,

Little when born, but grew until her head

Was in the clouds; for she grows all her life.

But when the armies were together near,

Then man to man came close, and shield to shield, 415

And mingled in the front was spear with spear,

And horrible the noise was in the field;

Whilst some insult and others groaning die.

And th'earth they stood on covered was with blood.

As when great torrents from the mountains high 420

Pour down into the valleys a great flood;

The streams through thousand channels falling roar;

The trembling shepherds hear it on the hills.

So much the noise o'th' battle the air tore,

And all the region with terror fills. 425

A Trojan was the first man that was slain,

Echepolus son of Thalysias.

He smote was with a spear into the brain;

Antilochus the man that smote him was.
His armour rattled on him as he fell, 430
As if some tow'r had fall'n. But then Elphenor
(To strip him of his arms that hoped well)
Dragging him off was killed by Agenor.
For whilst in stooping he his flank unhides.
Agenor quickly his advantage spies, 435
And pierc'd him with his spear through both his sides.
Then down he fell, and darkness seiz'd his eyes.
And then about his body rose great strife,
And one upon another falling on,
Anthemans son, a fair youth, lost his life, 440
Slain by great Ajax, son of Telamon,
And Simoisius called was by name,
'Cause born upon the bank of Simois,
Whither from Ida both his parents came
To view their flocks, lest aught should be amiss; 445
But had no joy of him. He was unblest
To be the first that came in Ajax's way,
Who smote him with his spear quite through the breast.
There dead he fell, and by the river lay.
As when a man has fell'd a poplar tree, 450
Tall, straight, and smooth, with many fair boughs on,
Of which he meant a cart-wheel made shall be,
And leaves it on the bank to dry i' th' sun;
So lay the comely Simoisius,
Slain by great Ajax, son of Telamon. 455
At Ajax then a spear threw Antiphus,
Bright-arm'd Antiphus, King Priam's son.

Death the spear carries, but of Ajax misses,
And deadly wounds the groin of Leucus bold,
And well beloved soldier of Ulysses, 460
Who dragg'd the dead, but now lets go his hold.
Ulysses, angry that his friend was slain,
Went out before the rest, and coming close
To th' Trojan front, some fit revenge to gain.
Democoon, King Priam's son, he chose, 465
(A lawful son where nature is the law).
The Trojans when they saw him look about,
Into the shelter of the ranks withdraw.
Then soon his spear Democoon pick'd out,
And through both temples forward went the head. 470
Then heavily he falls, his armour chinks,
His eyes with endless night are covered,
And Hector with his Trojans from him shrinks.
The Greeks then shouted, and drew off their slain,
And on the Trojans pressing further were. 475
But then Apollo cried out amain
From Pergam tow'r, O Trojans, what d'ye fear?
Go on upon the Greeks; no more give way.
Their bodies neither are of stone nor steel,
Nor able are the force of brass to stay, 480
No less than you the wounds it makes they feel.
Nor fights Achilles here, but angry lies,
And wishes that the Greeks were overthrown.
So Phœbus. 'Mongst the Argives Pallas flies,
Through ranks and files encouraging each one. 485
And then Diores slain was with a stone,

By Pyros, whom the Thracians obey'd.
Crush'd of his right leg was the ankle-bone,
And in the dust upon his back was laid,
Unto his fellows holding up his hands. 490
Ready to die he for assistance cries.
Pyros comes quickly in, and o'er him stands,
And wounds him in the belly. Then he dies.
But Thoas then slew Pyros with his spear,
That pass'd his breast till in his lungs it stopp'd. 495
Then coming in he drew his sword, and there
His belly ripp'd till out his bowels dropp'd,
But to disarm him could not stay, because
So many Thracians about him stood.
Then back retir'd he, and well pelted was, 500
Leaving two leaders wrapp'd in dust and blood,
One an Epeian, th' other Thracian,
And many others lying by them dead.
This battle was well fought. Although a man
Through both the armies safely had been led 505
By Pallas, and protected by her shield,
He had no want of courage seen that day,
So many Greeks and Trojans in the field
Depriv'd of life by one another lay.

LIB. V.

And Pallas now t' ennoble Diomed

AMONGST THE GREEKS, with force did him inspire,
Whereby his heart and hands were strengthened;
And on his shield and helmet stood a fire
*The first battle continued, wherein Pallas strengtheneth Diomedes to supply
the absence of Achilles. 5*

Bright as th' autumnal star above his head
And shoulders flaming. And straightway he runs
(Set on by Pallas and encouraged)
Into the throng, where were the two good sons
Of Dares, who was Vulcan's priest. Well skill'd 10
They both were in the war. Idæus one,
The other Phegus. These seeing him i' th' field
On foot, and not far from them, and alone,
Met him; and Phegus threw, but hit him not.
For o'er his shoulder flew the spear in vain. 15

Then Diomedes threw, and Phegus smote,
Clean through the breast. When Phegus thus was slain
Down leap'd Idæus from the chariot;
But durst not by his brother's body stay.
For if he had, the like fate he had got. 20
But Vulcan in a smoke took him away,
Not willing that his priest should childless die.

Tydidēs to the ships the horses sent.
To see these two, one slain, the other fly,
To the proud Trojans' very hearts it went. 25
But Pallas then took Mars by th' hand, and said,
Mars, bloody Mars, to what end stay we here?
Let's neuters be. For I am much afraid
We both shall too much anger Jupiter.
This said, she led him out, and set him on 30
Scamander's bank. And then the Trojans fled
Before the Greeks. Each leader killed one,
Pressing them at their backs uncovered.
Then Dalius first his char'ot turn'd about,
And open lay to Agamemnon's spear, 35
Which in at's back, and at his breast went out.
Down fell the Alizonian charioteer.
Idomeneus slew Phæstus with a thrust,
As up into his chariot he went,
The spear at the right shoulder passed just, 40
And back again unto the earth him sent.
And Menelaus slew Scamandrius,
That well the art of hunting understood.
I' th' hills and woods none was more dexterous,
But Dian, and his skill did him no good. 45
For Menelaus pierc'd him back and breast,
Between the shoulders with a deadly spear,
And down he tumbled of life dispossessed,
His eyes with endless darkness covered were.
Meriones slew Phorichus, the son 50
Of Harmonides, the great architect,

That, but by Pallas, taught had been by none.
But of his art unhappy was th' effect.
'Twas he that built those ships for Alexander,
That brought with him so much ill luck to Troy, 55
And to himself, and to his chief commander;
Not knowing what the oracles did say.
But he, as from the fight he fled, was here
O'ertaken by Meriones, and slain.
At his right buttock entered the spear; 60
And at his groin the point came out again.
Meges Pedæus slew, Antenor's son,
Though not his wife's, yet was his wife so kind
T' Antenor, that she bred him as her own,
And look'd upon him with a mother's mind. 65
Him Meges overtaking as he fled
Slew with his strong sharp-pointed spear, which lighting
Behind upon the noddle of his head,
Forward he fell, the senseless weapon biting.
And then Eurypylus, Euæmon's son, 70
Hypsenor slew, new made Scamander's priest,
That from him, but not fast enough, did run.
Eurypylus shav'd off his hand at th' wrist.
For at his shoulder though he aim'd the stroke,
The quick sword finding there the brass resist, 75
Slipt down unto his hand with force unbroke,
And there in streams of blood his soul dismiss'd.
Meanwhile Tydides, like a man enraged,
Ran up and down the field. One could not know
With whom and where he was in fight engaged, 80

Whether amongst the Greeks, or with the foe.
As when a torrent falling from the hills
Distends itself with fury on the plain,
And suddenly the river overfills,
Supplied by Jove with mighty showers of rain, 85
And beareth down the bridges as it goes;
No fence of vineyard can against it stand,
But all the husbandry of men o'erthrows,
And uncontrolled passes o'er their land;
Tydides so brake through each Trojan band, 90
And made them fly before him as he went.
And Pandarus then took his bow in hand,
And a sharp arrow from it to him sent,
Which pass'd through the right shoulder of his coat
Of mail, and fetch'd the blood, and with great joy, 95
Trojans, cried he, no more stand so remote.
For wounded is the stoutest foe of Troy,
And long he cannot the sore pain endure,
Unless my faith in Phœbus be in vain.
Thus said he boasting. For he thought 'twas sure 100
The wound was mortal, and Tydides slain.
Tydides to his char'ot did then retreat,
And Sthenelus alighting on the ground
(For sitting he was on the char'ot-seat)
Drew out the cruel arrow from the wound, 105
And out the blood gush'd. Then Tydides pray'd,
Pallas, Jove's all-conquering child, said he,
If e'er you did me or my father aid,
Within my spear's reach let me this man see,

That with his arrow me prevented has, 110
And boasting says, I have not long to live.
Athena to his wish indulgent was,
And to him did more strength and courage give.
Fear not, said she, to go into the throng,
And charge i' th' thickest of the enemies. 115
For I have made thee as thy father strong,
And taken have the mist off from thy eyes,
That thou mayst see who Gods are, who are men.
If any God oppose thee, give him way,
Except if Venus thou encounter; then 120
Spare her no more than mortals in the fray.
This said, away the Goddess Pallas went,
And Diomed went to the fight again,
And though before he were upon it bent,
His courage now was trebled by his pain. 125
As when a shepherd sees a lion come,
And wounds him slightly as he leaps the pen;
Then leaves his sheep, and frighted runneth home,
And dares not in the field appear again;
The lion now made fiercer than before, 130
Lays all the sheep one by another dead,
And back again the pen once more leaps o'er:
So rag'd amongst the Trojans Diomed.
Astynous there, and Hypenor died;
One through the breast he pierced with his spear; 135
And th' other's head did from his neck divide
With his broad sword. And slain he left them there,
And overtook Abas and Polyeide,

Sons of Eurydamas, who could tell what
Upon a dream should to a man betide, 140
And slew them both. No dream had told him that.
Thoon and Xanthus then he followed,
Phænop's two sons, gotten when he was old,
And of them both the vital blood did shed;
Th' estate to strangers came to have and hold. 145
Then Chromius and Echemon he slew,
Two sons of Priam, in one chariot,
Whom from the seat unto the ground he threw,
And till he had disarm'd them left them not.
But to the ships he sent away the horses. 150
Æneas seeing how he disarray'd
Before him as he went the Trojan forces,
Sought Pandarus, and having found him, said,
Lycaon's son, where are thy shafts and bow,
And skill, wherein the Lycians yield to thee? 155
See you the man that rages yonder now?
Aim a shaft at him whosoe'er he be,
For many valiant Trojans he has slain.
(Unless he be one of the Gods above
Neglected by us) 'twill not be in vain. 160
Shoot boldly then, but first invoking Jove.
Then Pandarus replying, to him said,
'Tis Diomed as far as can be guess'd.
His horses, and his shield I have survey'd,
And plaited horse-hair hanging at his crest. 165
Though it be he, as I believe it is,
Yet sure some God does on his shoulders sit.

For else of killing him how could I miss,
When I his shoulder with my arrow hit?
For I one arrow shot at him before, 170
And verily believ'd I had him slain.
His armour all besmeared was with gore,
But slew him not. Now here he is again.
I did not on a char'ot hither come,
Although Lycaon have eleven new, 175
With handsome curtains to each one, at home,
And horses fit to draw them not a few.
The old knight too advis'd me earnestly
That when to battle I the Trojans led,
I from a car should charge the enemy; 180
But to his counsel I not hearkened.
(Which I repent.) It came into my head
That when within Troy's walls we should be pent,
My horses, which were us'd to be well fed,
Would there be useless wanting nourishment. 185
This made me come without a chariot,
And march, as far as 'twas, to Troy on foot,
And trust unto my bow, which helps me not,
But faileth me as often as I shoot.
For two of them I have already shot, 190
Tydides and Atrides, and good store
Of blood have drawn from both, though killed not,
But made them fiercer than they were before.
In an ill hour sure I took down my bow
To fight for Hector and the Trojan men; 195
But if I safely to my country go,

And to my house and wife get back again,
Let any man that will cut off my head,
If presently my bow I do not burn,
That never yet my hopes has answered. 200
For why not, when it doth not serve my turn?
To Pandarus Æneas then replied:
No, say not so, but first let's to him go.
For by th' encounter soon it will be tried
Whether he be indeed a God or no. 205
Get up into the seat, and you shall see
The virtue of my horses on the plain,
And if some God with Diomedes be,
How nimbly they will fetch us off again.
Come, take the whip and reins in hand, and I 210
Descend will from the chariot and fight.
Or if you please, when to him we are nigh
I'll hold the whip and reins, and you alight.
No, no, said he, keep you the reins in hand,
The horses us'd thereto will you obey. 215
To me, it may be, they will restive stand,
And to the foe themselves and us betray.
Let me alight and meet him with my spear.
This said, they mounted both; and coming on
Towards Tydides, both observed were 220
By Sthenelus Copaneus his son,
Who warning to Tydides gave. I see
Two mighty men to fight us coming on,
Of which I know th' one Pandarus to be,
The other Venus and Anchises' son. 225

Come up into your chariot and retire.
But frowning he replied, I'll ne'er do that
It not becomes the children of my sire,
When they should fight to double nor to squat.
I loath to sit upon a chariot, 230
And as I am I will attend them here.
For of my strength deprived I am not,
And Pallas has forbidden me to fear.
I doubt not but to kill them both, or one.
If both, your reins unto the two wheels tie, 235
And to Æneas' horses quickly run,
And seize their reins, less frightened they should fly.
Then send them to the ships, brave steeds, well bred;
Of heavenly race they are, and got by those,
Which Jove, to make amends for Ganymed, 240
Was pleas'd to give unto his father Tros.
Anchises privily convey'd to these,
Six mares, and had a colt by ev'ry one;
Whereof he gave two to his son Æneas.
To take these horses now were bravely done. 245
While they were talking, th'other two came nigh,
And then said Pandarus, O Diomed,
Since my swift arrow could not make you die,
I come to try now how my spear will speed.
And as he spake the spear flew from his hand 250
And pass'd his shield, but in his armour stayed.
Y'are hit, said he, and long you cannot stand.
But Diomed, nothing at all dismayed,
No, no, cried out, your spear is thrown in vain.

But I believe before we have done here, 255
That one of you, if not both, will be slain.
And as he spake he at him threw his spear.
Which at his nose close by his eye went in,
And struck his teeth out, and cut off his tongue,
And out again it pass'd beneath his chin. 260
For Pallas from above it downward flung.
There dead he lay. Æneas to defend
His body, to him came with spear and shield,
And 'bout him went, resolv'd the man to send
To hell, that should oppose him in the field. 265
Tydides then took up a mighty stone
Which two men scarce could bear such as are now.
But Diomedes swinging it alone,
The same with ease did at Æneas throw,
And hit him on the huckle bone, wherein 270
Into the hip inserted is the thigh.
And torn was by the rugged stone the skin,
And tendons broken which the joint did tie.
Then down upon his knees and hands he fell,
And taken from him was his sight with pain. 275
That Venus saw him lying thus 'twas well;
Else by Tydides he had there been slain.
For then came Venus down, and with the lap
Of her celestial robe him covered,
Lest any of the Greeks should have the hap 280
To kill or wound him as from earth he fled.
But Stheneius rememb'ring well his order,
Tied his own steeds up to his chariot-wheels,

And led them out o'th' tumult and disorder,
And to Deiphilus that was at's heels, 285
(His friend) he gave the horses of Æneas
To carry them unto the Argive fleet.
But took Tydides' horses, and with these
To try went if Tydides he could meet.
But he in chase of Venus now was gone 290
(Knowing that she a tender Goddess was,
And for the war commission had none,
Nor had as Pallas any shield of brass.)
And had when he came to her wounded her.
For through her robe, though by the Graces made, 295
Without resistance quickly pass'd the spear,
And at her wrist did her fair hand invade.
And from the wound out sprang the blood divine,
(Not such as men have in their veins, but ichor.
For Gods that neither eat bread nor drink wine 300
Have in their veins another kind of liquor,
And therefore bloodless and immortal be.)
And Venus screaming then lets fall her son,
But by Apollo's hand preserv'd was he,
Convey'd thence in a mist perceiv'd by none, 305
For fear he should be by some Argive slain.
To Venus then Tydides whoop'd, and said,
Away, Jove's daughter, from the war abstain.
Go practise how to cozen wife or maid,
For I believe if here you longer stay, 310
(So many such as these mishaps there are)
That you therein will have but little joy,

And troubled be when men but talk of war.
This said, away she went, not knowing where
She was; and great the pain was of her hand. 315
But Iris from the fight conducted her,
And set her hard by Mars upon the sand.
For there by Pallas placed he had been.
His horses and his char'ot by him staid
Hid in a mist, by man not to be seen. 320
And Venus there before him kneeling said,
Dear brother, let me your good horses have,
To bear me to Olympus from the fray;
This cruel wound mad Diomed me gave,
And would wound Jove if he came in his way. 325
Mars presently his horses to her lent.
Venus and Iris mount into the seat;
Iris the reins held, and away they went;
The time they spent in going was not great.
When they were there, Iris the steeds untied, 330
And set them up, and gave unto them meat,
Such as immortal horses use to eat,
Ambrosian meat, till they were satisfied.
But Venus fell into Diones' lap,
Her mother, who embrac'd her lovingly, 335
Strok'd her, and said, how came this sad mishap?
Who used you thus? What a rash God was he?
What more could he have done, if he had found
You doing something openly amiss?
It was a man, said she, gave me this wound, 340
Tydides; and for nothing else but this;

I sav'd my son Æneas from his hand,
My dearest son, whom he was going to slay.
And now the war is all (I understand)
'Twixt Greeks and Heaven, not 'twixt Greeks and Troy. 345
Daughter (replied Dione then) 'tis hard,
For we the Gods that in Olympus dwell
Many from men as ill as you have far'd,
And many no less wrongs have put up well.
Otus and Ephialtes, Neptune's sons, 350
In a brass dungeon once imprison'd Mars,
And kept him in the dark there thirteen moons.
There like he was t'have stayed till now, for scarce
Could Hermes set him free with all his art
And Juno's help. And when to liberty 355
He was restor'd, he took it in good part,
Though with his chains he gall'd was cruelly.
When Hercules shot Juno in the breast,
Though wounded sore, yet she reveng'd it not.
And Pluto by the same man shot did rest 360
Contented, and no reparation got.
But to the house of Jupiter he went,
And got the arrow pluck'd out from the wound
By Pæon; who with gentle plaisters sent
The pain away, and made his shoulder sound. 365
But though no God of any wound can die,
Yet of Amphitryon the peevish son
(Who little cares at whom his arrows fly)
Great mischief oft unto the Gods has done.
But Pallas 'tis that thus has wounded you, 370

Though with Tydides spear. Fool as he was,
What 'tis to wound a God he never knew.
Not long such wicked deeds unpunish'd pass.
Such men when they return from painful war
Shall seldom set their children on their knee 375
Pleas'd with their half-form'd words. Let him beware
Lest he provoke some stronger Deity,
And then Ægilia Diomedes's wife
Awake the household with her lamentation,
And cry, Tydides, thou hast lost thy life, 380
my dear husband, best of all the nation.
This said, she wip'd the ichor from her hand,
And straight her hand was well, the pain was gone.
Then Juno by, and Pallas, jeering stand.
And Pallas thus to Jupiter begun. 385
Shall I say what I think? O father Jove,
Venus some Argive dame has courting been
To take the Trojan's part, whom she doth love,
And stroking her, her hand scratch'd with a pin.
Jove smil'd at this, and then to Venus said, 390
Daughter, I gave you no command in war.
That charge on Mars and Pallas I have laid.
Of nuptials and love take you the care.
While they were thus discoursing, Diomed
Did with great speed and rage Æneas follow, 395
To gain his armour and his blood to shed,
Knowing he was in th' hands now of Apollo.
Undaunted then, with shield before his breast,
And sword in hand, struck at Æneas thrice,

And thrice again Phœbus his rage repress'd. 400
But at the fourth time gave him good advice.
Retire, said he, Tydides, and beware
You not yourself think equal to the Gods.
They sway the heav'ns, on earth men creeping are.
'Twixt mortals and immortals there's great odds. 405
Tydides then retir'd a little way,
Not knowing what harm might from Phœbus come.
And Phœbus thence Æneas did convey
T' a temple of his own in Pergamum.
There Leto and Diana cur'd his wound. 410
And then an image Phœbus like him made,
And in like arms, and set it on the ground,
For which the foes each other then invade,
And there they one another's bucklers hew.
To Mars Apollo speaking, why, said he, 415
Mars, bloody, murd'ring Mars, why suffer you
Tydides at the battle still to be?
Mad as he is now, he with Jove would fight.
From Venus' hand he made the blood run down,
And then at me he flew like any sprite. 420
This said, he sat o' th' top of Pergam town.
And Mars the Trojan bands encouraged,
Taking the shape of valiant Acamas,
Who to the war at Troy the Thracians led.
And as he through the armed ranks did pass, 425
Children of Priam what d'ye mean, said he;
Shall the Greeks follow killing us to Troy?
Fall'n is Æneas, the great man whom we

Like Hector honour'd. Come, let's if we may
This good commander rescue. Thus said he. 430
Sarpedon likewise Hector sharpen'd. Where
Are now your kin you said enough would be
Troy to defend? I see none of them here.
Like hounds about a lion off they stand,
We your confederates the fight maintain. 435
The labour lieth all upon our hand;
And I myself amongst the rest would fain
Make trial of this mighty man in fight.
At least I shall, as doth a friend become,
My people's courage all I can excite; 440
Since they are here, and very far from home;
And though from me the Greeks can nothing get,
Neither to carry nor to drive away.
But you to th' Trojans have not spoken yet,
So much as to defend their wives in Troy 445
From being taken in the Argives' net,
And plund'red be the stately town of Troy.
When chiefly you on this your heart should set,
And your confederates persuade to stay,
And not the fault on one another lay. 450
So said Sarpedon. Hector therewith stung,
Upon his chariot could no longer stay,
But armed down unto the ground he sprung.
And 'mongst the Trojan ranks and files he goes,
Into their hearts new courage to inspire. 455
And then they turn'd their faces to their foes.
Nor did the Argives from their place retire.

And then, as when on Ceres' sacred floor
The winnowed chaff lies heap'd together white,
So white the troops of Argives were all o'er 460
With dust their horses rais'd had in the fight.
And then the Trojans boldly marched on,
And Mars to aid them dark'ned had the field,
As he was bidden by Latona's son,
When Pallas from the Greeks removed her shield. 465
And from the Temple fetch'd Æneas out
Alive and whole, and bold, and made him stand
Amongst the troops, that joyful stood about.
But other work now lying on their hand,
(Made them by Mars and Strife) no time had they 470
To ask him questions. But encouraged
The Argives were by th' Ajaxes to stay,
And by Ulysses and by Diomed.
For of the Trojans they were not afraid.
But as a cloud that resteth on a hill, 475
Which in calm weather there by Jove is laid,
Till boisterous winds arise it resteth still.
Then up and down went Agamemnon there,
My friends, said he, be bold, and fight like men,
Of one another's censure stand in fear. 480
Of them that do so, fewer perish than
Of those that fly and never think upon
The loss of fame. This said, he threw his spear
And smote Æneas' friend Democoon,
Who was unto the Trojans no less dear 485
Than if he one of Priam's sons had been.

For with the foremost he was still in fight.
And at his buckler went the weapon in,
And through both that and belt it passed quite.
And mortal in his belly was the wound, 490
And with his armour rat'ling down he fell.
Æneas then two Greeks laid on the ground,
The sons of Diocles, descended well.
For of th' immortal and fair stream Alpheus,
Orsilochus a great king was the son. 495
And he the father was of Diocles,
And he Orsilochus got and Crethon;
Brave men, who when they came to man's estate
With Atreus' son his honour to regain,
To Ilium sail'd, and there they met their fate, 500
And never to their country came again.
As when two lions in the mountains bred
And woods obscure, come down into the plain,
And sheep and cattle in the field leave dead,
Until at last by hunters they are slain; 505
So fell these two men by Æneas kill'd,
And like two fir trees straight laid on the sand.
And Menelaus then with fury fill'd,
With helmet on his head, and spear in hand,
Advanced boldly to Anchises' son, 510
In hope to have deprived him of breath.
And Mars himself it was that set him on
To bring him by Æneas' hand to death.
Antilochus then, Nestor's valiant son,
Fearing lest Menelaus should be slain, 515

Resolv'd he should not fight with him alone,
And all their toil at Ilium make vain.
Went after him, and overtook him as
They ready were to fight, but nothing done.
Æneas then, as valiant as he was, 520
Retir'd, eschewing th' odds of two to one.
And when they had brought off the bodies slain,
And left them in their fellow-soldiers' hands,
Unto the skirmish they returned again,
And slew the Prince of Paphlagonians 525
Pylæmines. Atrides threw the spear
Which near the shoulder pass'd into his neck.
By Nestor's son slain was his charioteer,
Mydon by name that did his horses check,
As he his char'ot turning was to fly, 530
Antilochus him wounded with a stone
On th' elbow, and benumb'd his hand, whereby
The sense he had to hold the reins was gone.
The reins fell down, and then with sword in hand
Antilochus divides his head in twain, 535
And headlong fell he where it chanc'd the sand
Was very deep, and there he did remain
With head and shoulders sticking in the sands.
But upright in the air were both his hips.
The horses laid him flat. Which by the hands 540
Of Nestor's son convey'd were to the ships.
Hector saw this, and in came with great cry,
Whom bands of lusty Trojans followed,
Mars and Bellona marching furiously

Against the Argives to the fight them led. 545
Bellona brought in tumult and affright.
And Mars a mighty spear had in his hand.
And sometimes after Hector went i' th' fight,
Sometimes before, and oft did by him stand.
Tydides when he saw him was afraid, 550
As when a man in haste has lost his way,
And running on is at some river stayed,
That's deep and swift, he runs as fast away;
So he retir'd. And to his Argives said,
No wonder 'tis if Hector valiant be; 555
One God or other always gives him aid,
And near him stands from death to set him free.
Now Mars comes with him, like a mortal wight.
Retire. But turn your faces to the foe,
Forbearing still against the Gods to fight. 560
This said he, but the Trojans near were now.
And Hector there had slain two men that sat
Together, Mnestheus and Anchialus,
Both warriors good. But Ajax griev'd thereat,
(The greater Ajax, Telamonius) 565
Darted his heavy spear at Amphius.
Rich was he both in lands and goods, and dwelt
At Pæsus: and fought here for Priamus.
But by the spear which pass'd quite through his belt
Upon his belly took a mortal wound. 570
And as he fell, Ajax ran fiercely in
To strip him of his armour on the ground,
And stript him had, had he not hindered been.

For from the Trojans came a shower of spears,
Whereof his shield received not a few. 575
Then to be hemm'd in by the foe he fears.
His own spear he recover'd and withdrew.
Whilst they in stubborn war thus toiling were,
Unlucky fate Tlepolemus brought on
To charge Sarpedon; and when they were near 580
Together come, Jove's grandson and his son,
Tlepolemus said then, what need had you,
Unskilful in the war, to tremble here?
Jove's son men say you are, but 'tis not true.
No such weak men by Jove begotten were; 585
But such as Hercules is said t'have been,
Courageous as a lion; with few men
In but six ships, this strong town he did win,
And rifled it, and safe went off again.
But you are weak, your men a great part dead, 590
And can but little help afford to Troy,
And though from Lycia you were strengthened,
I mean to send you now another way.
To this Sarpedon answered, 'Tis true
That Hercules sack'd Troy, because the steeds 595
Laomedon kept back that were his due,
And gave him evil language for good deeds.
But you from me shall present death receive,
For which I shall have honour truly paid,
And you your soul shall now to Pluto leave. 600
And this Sarpedon had no sooner said,
Than from their hands the spears together started.

Tlepolemus clean through the neck was struck,
And from him presently his life departed.
But from Sarpedon Jove kept such ill luck; 605
Yet on his left thigh he receiv'd a wound:
For through it went the spear close by the bone.
Sarpedon, by his friends borne off the ground,
Was plac'd apart where battle there was none,
Tormented with the spear still in his thigh. 610
To pull it out they all had quite forgot.
In so great haste they were, the foe so nigh,
The time so little, and the fight so hot.
Meanwhile Tlepolemus his body dead
The Greeks fetch'd off. The wise Ulysses then 615
Within himself a while considered,
Whether to charge Sarpedon or his men.
But since by fate Sarpedon was to die
By other, and not by Ulysses' hands,
Athena made him lay that purpose by, 620
And turn his anger on the Lycians.
Alastor then he slew, and Coëramus,
Alcander, Prytanis, and Noemon.
And Halius he slew, and Chromius,
And many Lycians more had overthrown, 625
But mighty Hector now approached near
In glittering arms, and brought with him affright.
But glad Sarpedon was to see him there;
And when he was come up unto him quite,
Himself lamenting, thus to Hector said, 630
Leave me not, Hector, to the Greeks a prey,

But let my body in your ground be laid,
Since I my country must no more enjoy,
Nor my beloved wife and tender son.
So said Sarpedon. Hector not replies, 635
But to the enemy he passeth on;
And as he goes the ground with blood he dies.
Under a beech, sacred to Jupiter
Sarpedon placed was upon the ground,
And gently Pelagon pull'd out the spear; 640
The pain hereof put him into a swoond.
Lost was his sight; but by a gentle wind
And cool, that from the north upon him blew,
He soon recover'd both his sight and mind,
And all the company about him knew. 645
To Mars and Hector still the Greeks gave way
And still their faces to the Trojans were,
But for to charge none durst advance or stay.
For Diomed had told them Mars was there.
Now tell me, Muse, who slain by Hector was? 650
Trechus, Orestes, Teuthras, Helenus,
(Whose father Ænops was) and Ænonaus;
And last of all wealthy Oresbius.
In Hyla on Cephisses lake he dwelt,
The richest pasture of Bœotia, 655
And known was by the gayness of his belt.
This slaughter of the Greeks when Juno saw,
She then to Pallas spake. Pallas, said she,
If we let Mars still play the madman here,
Our word to Menelaus false will be, 660

That he from Troy return should conqueror.
Let's courage take, and try what we can do.
Pallas contented, 'twas agreed upon.
And Juno ready made herself to go,
And quickly the coachwheels Hebe sets on. 665
Eight spokes each wheel had, and were all of brass,
And fixed round about at th' axle-tree.
The axle-tree itself of iron was,
The circle gold, and wonderful to see.
But arm'd it was above with plates of brass. 670
The naves on both sides were of silver white,
With gold and silver wire extended was
The seat, which had two silver rings and bright,
In which the beam of silver fast'ned stayed;
At the other end th' golden yoke she tied, 675
And on the yoke the golden reins she laid.
And Juno then no longer could abide,
But to the coach herself the horses brought,
From quarrels so impatiently she stayed.
Pallas threw off her robe, and took Jove's coat, 680
And with the same she there herself array'd.
And then her breast with armour covered,
And on her shoulder hung her frightful shield,
Wherein Strife, Force, Flight, Chase, were figured,
With all the horror of a foughten field; 685
And in the middle stood out Gorgoe's head.
Then put she on her golden helmet, that
Ten thousand men's heads might have covered,
And to the chariot up she went, and sat,

And her great heavy spear takes in her hands 690
The spear wherewith, when she displeased is,
She scatters of proud kings the armed bands.
Then Juno with the whip was not remiss,
And of itself flew open heaven-gate,
Though to the Seasons, Jove the power gave 695
Alone to judge of early and of late.
And out the Goddesses their horses drave.
Jove on the highest of Olympus tops,
Sitting alone they found, and none him nigh.
The Goddess Juno there her horses stops, 700
And spake unto him thus, his mind to try:
Pray tell me, Jove, if you contented be,
That Mars thus raging in the field remain;
For what unseemly work he makes, you see,
And of brave Greeks how many he has slain, 705
While Venus at my grief stands laughing by,
And pleased is Apollo with the sight,
And set him on. But I could make him fly
(But that I fear your anger) from the fight.
Do't then, said Jove; not you, but Pallas; she 710
Accustom'd is to vex him more than you.
Juno took this commission willingly.
Feeling the whip, away her horses flew,
'Twixt heaven and earth, and went at every strain
As far as coming one can see a ship, 715
That from a hill looketh upon the main,
So far the horses of the Gods can skip.
Arriv'd at Troy, on ground they set their feet,

And Juno there her heavenly steeds untied,
Where Simois doth with Scamander meet. 720
And with ambrosia, Simois them supplied.
Then swift as doves, to give the Argives aid,
They went to where they saw the greatest throng.
There was Tydides, and about him stayed
Many as lions valiant and strong. 725
And Juno there in shape of Stentor stood,
And spake as loud as any fifty men.
Argives, said she, cowards, for nothing good,
Although you make a goodly show. For when
Achilles went before you to the fight, 730
Out at their gates the Trojans durst not peep,
So much they of his spear abhorr'd the sight,
But from your ships you scarce now can them keep.
When Juno thus the Greeks encouraged,
To Diomed went Pallas; whom she found 735
Hard by his horses sitting, wearied.
And cooling in the open air the wound
Given by Pandarus; which with the sweat
Under his belt afflicted him the more;
And lifting up his belt some ease to get, 740
He from the wound was wiping off the gore.
As at the yoke Athena leaning stood,
Like him, said she, your father left no son;
A little man was he, but warrior good.
Though I not bade him, he went boldly on. 745
And when to Thebes alone I bade him go
Ambassador, and with the Theban lords

To sit at feast, and not provoke the foe,
And at their table to forbear harsh words,
Yet he his native courage still retained, 750
And them defied at manly exercises,
And from them all the victory he gained,
And won, by my assistance, all the prizes.
But when I you, as I did him, defend,
And bid you boldly with the Trojans fight, 755
You are afraid, or weariness pretend.
Of Tydeus sure the son you are not right.
Tydides to her then replying said,
Daughter of Jove, Pallas I know you are,
'Tis not that I am weary or afraid, 760
That I stand here abstaining from the war,
But in obedience to your own command,
Who gave me leave, if Venus in the wars
I met, to wound her; but not lift my hand
'Gainst other Gods. Now in the field is Mars, 765
And domineering fights on Hector's side;
And that's the cause why I from fight abstain,
And others by my counsel here abide.
To this the Goddess then replied again,
Nor Mars nor any of th' Immortals spare, 770
That shall advance against you in the field.
And for your safety trust unto my care,
And know you are protected by my shield.
But first to Mars drive up your horses close,
And strike the blockhead with your spear in hand, 775
That fights sometimes for these, sometimes for those,

And with the Trojans now you see him stand,
And yet to help the Greeks he promis'd me
And Juno, but a little while before,
And now amongst the Trojans fighteth he, 780
And thinks upon his promises no more.
This said, they mount into the chariot,
And Sthenelus descending left his seat.
The axle-tree groaned under them. Why not?
A great man he, she was a Goddess great. 785
And then to Mars directly they drive on,
Who had but newly slain great Periphas,
Of old Ochesius the valiant son,
And far the best of all th' Ætolians was.
Athena then puts Pluto's helmet on, 790
Lest she by Mars should be discovered.
When Mars there saw Tydides all alone,
He Periphas forsook, who there lay dead;
And turn'd to meet Tydides on the way;
And when to one another they were near, 795
Mars making full account the man to slay,
Over the yoke thrusts at him with his spear.
But Pallas with her hand the point suppress'd,
And made it light beneath the seat in vain.
Tydides then to Mars a spear address'd, 800
Which had he been a mortal had him slain;
For Pallas in his belly stuck the spear,
And presently the same pluck'd out again.
Mars roar'd as loud as if in battle there
Fighting had been nine or ten thousand men, 805

And frightened both the armies with the noise.
Then like a black cloud which some wind makes rise,
He left th' unlucky field and went his ways,
And in a little time was in the skies.
And sitting down hard by his father's throne, 810
Shew'd him the blood that from the wound did flow,
And grievously lamenting made his moan.
Father, said he, do you such work allow?
That we the Gods such harm from mortals take,
While some for Trojans, some for Argives fight, 815
And partial be for one another's sake,
The fault is to be laid on you by right.
For you brought forth this mad, pernicious maid,
Whose study is her malice to effect,
When by us other Gods you are obey'd; 820
And this you saw, but never would correct.
'Twas she that on the Gods set Diomed,
Who wounded Venus first, then flew at me.
And there in pain I lain had 'mongst the dead,
Or crippled been, had not my feet been free. 825
Uncertain Mars, then Jupiter replied,
Of all the Gods most hateful to my sight,
That quarrel lov'st to make, but not decide;
Thou hast thy mother Juno's nature right,
That oft provokes me with her peevish tongue, 830
And by her order, I think, this was done.
But in this pain I'll not detain you long,
Seeing you are as well mine as her son.
But had another got you, you had sure

To Pluto and th' infernal Gods been sent. 835
This said, to Pæon he commits his cure;
And Pæon presently about it went.
As quickly as the milk is turn'd to curd,
When with a proper rennet it is mix'd,
And with a housewife's hand together stirr'd, 840
So quickly was the wide wound clos'd and fix'd.
Then bath'd he was by Hebe, and new clad;
And that he so came off was well content.
Juno and Pallas when they driven had
Mars from th' battle, up t' Olympus went.

LIB. VI.

The first battle yet continued. The other Gods forbidden by Jove to assist.

THE GODS TO neither side assistance yield,
But on his own hand each man's fortune lies;
Now here, now there, they skirmish in the field,
Betwixt the streams Xanthus and Simseis. 5
And first great Ajax killed Acamas,
And for his fellows opened a door
For slaughter 'mongst the files and ranks to pass,
And caus'd thereby the loss of many more.
And by Tydides Axylus was slain, 10
That at Arisbe dwelt near the highway,
Rich, and the Greeks did often entertain;
But none of them would save him in the fray,
For slain he was by Diomedes there,
Together with his squire, Calesius, 15
That by him sat, and was his charioteer.
Euryalus then slew Opheltius
And Dresus. After Pedasus he runs,
And Æsepus, sons of Bucalion,
Who by Abarbarea had two sons, 20
But he for father had Laomedon,
And th' eldest was, but not in wedlock got;
And twins the sons were of Bucalion.

But from Euryalus they 'scaped not,
Nor long they lay there with their armour on. 25
Then Polypoetes by Astyalus,
Pidytes by Ulysses, and by Teu-
cer Areton, and by Antilochus
Ablerus; by Atrides Eleteus
Was slain, that the Pedasians led 30
From the delightful bank of Satnius.
And Leitus Philacus slew as he fled.
Eurypylus then slew Melanthius;
And then Adrestus taken was alive
By Menelaus. For his horses frightened, 35
Whilst to the town they labour'd to arrive,
Upon two branches of a tree they lighted,
And brake the char'ot pole off at the head.
The horses loose away ran tow'rd the town,
As did the rest that from the battle fled. 40
Adrestus headlong from the seat fell down,
And by him with a spear Atrides stood.
Adrestus then lays hold upon his knee.
Save me, said he, my ransom will be good,
At any rate I shall redeemed be. 45
My father wants nor iron, nor brass, nor gold,
And any thing to set me free will give,
When he of my condition shall be told,
And that I am your prisoner and live.
This said, Atrides was thereto inclin'd, 50
And ready for to send him to the ships.
But Agamemnon came and chang'd his mind

Before he had confirm'd it with his lips.
Brother, said he, what makes you be so kind
To any of these men? Is it because 55
You did at home the Trojans faithful find,
And that they had well served Menelaus?
No, no, we must no quarter give at Troy,
Nor spare the child yet in his mother's womb,
But utterly the nation destroy, 60
And pluck up by the root proud Ilium.
Then Menelaus pitied him no more,
But violently push'd him from his knee,
Wherewith he backward tumbled o'er and o'er,
And soon by Agamemnon slain was he. 65
Then Nestor to the Greeks, with voice as high
As he could raise it, cried out, Let none
Yet on the spoil and booty set his eye,
But follow killing now, plunder anon:
The dead will stay till back again we come. 70
The Greeks by Nestor thus encouraged,
Had chas'd the Trojans unto Ilium,
But that by Helenus was hindered.
For standing near to Hector and Æneas,
Since all the work, said he, lies on your hand, 75
And you in fight and counsel chiefly please
Both Lycians and Trojans, make them stand;
About them go, and put yourselves between
The gates and them, lest followed by the foe
They should be by their loving wives there seen, 80
And the Argives stand triumphing in our woe.

And when you once have them encouraged,
Æneas and myself will with them stay,
And fight against the Greeks, though wearied.
But Hector to the town go you away, 85
And bid your and my mother take with her
The eldest Trojan matrons, and make haste
To Pallas' temple, and present her there
With the best robe she has; and having plac'd
It on her knee, vow to her deity 90
(If she protect our wives and children will,
And city from this raging enemy,
And take off Diomed) that you will kill
Twelve heifers at her altar. For in fight
He has the great Achilles much outdone, 95
Who never did the Trojans thus affright,
Although they say he is a Goddess' son.
Then Hector armed leapt down to the ground,
And with two spears about the army goes,
Courage inspiring to the Trojans round, 100
And straight they turn'd their faces to the foes.
The Greeks retiring then no longer fought.
Some God from heav'n descended was, they thought,
And t' Hector and the Trojans aid had brought.
Then Hector to the Trojans cried out, 105
Trojans and aids, said he, be sure to stay
And play the men, whilst I to Ilium
Return, and cause them to the Gods to pray,
And to them sacrifice an hecatomb.
And as he walk'd, the edges of his shield 110

By turns his ankle and his neck did smite.
Tydides then, and Glaucus, on the field
Met one another, and prepar'd to fight.
Tydides speaking first, Brave man, said he,
Who are you? Let me know your name and race, 115
That dares so boldly thus advance on me.
I never yet in battle saw your face.
Men mortal to provoke me thus none dare,
But they whose parents are condemn'd to woe.
But if some God come down from heaven you are, 120
Do what you will I'll not return a blow.
Licurgus, son of Dryas, chas'd the train
Of Bacchus with a goad at Nyssa, where
The Mænades threw from them on the plain
Their ivy-twined staves, and fled for fear; 125
Bacchus himself leapt into Thetis' lap,
Trembling and frightened, and the Goddess kind
Receiv'd him, and defended from mishap.
But for this act Jove struck Licurgus blind,
Who died soon after. For the Gods above 130
All hated him. And that's the cause that I
Dare not the anger of the Gods to move.
But if thou mortal art, come near and die.
brave Tydides, Glaucus answer'd then,
To what end serves it you to know my race? 135
As with green leaves, so fareth it with men;
Some fall with wind, others grow in their place.
But since you ask me (though it be well known)
My pedigree at large I shall you tell.

Within a creek of Argos stands a town 140
Call'd Ephyre. There Sisyphus did dwell;
The subtle Sisyphus, who Glaucus got.
Glaucus, the father of Bellerophon,
Than whom a fairer person there was not,
Nor valianter in all the land not one. 145
But Prætus sought to take away his life;
For so enamour'd of him was the queen
Anteia, who of Prætus was the wife,
That she a suitor to him oft had been.
But still in vain; for he would not consent. 150
The fury of her love then turn'd to hate.
And spitefully she to her husband went,
And weeping bitterly, down by him sate,
And to him said, O king, resolve to die
Yourself, or else Bellerophon to kill, 155
For he attempted has my chastity,
And would have lain with me against my will.
The king incens'd, to kill him did intend,
But loth to do it there, he thought it better
Unto the King of Lycia him to send 160
(Who was Anteia's father) with a letter,
Wherein he had declar'd his cruel mind,
And many ways to bring it to effect.
He, ignorant of what was then design'd,
The king's commandement did not neglect. 165
To Lycia he went, and coming thither,
In favour with the Gods, was honoured
And treated like a God, nine days together.

O' th' tenth his letter he delivered.
The letter read, the king him first employ'd 170
The terrible Chimæra to assail,
That by the monster he might be destroy'd.
A lion's head it had and dragon's tail,
And in the midst the body of a goat;
A flame of burning fire was its breath. 175
Bellerophon with this foul monster fought,
And put it (by the aid o' th' Gods) to death.
The next adventure that he set him on,
Was th' expedition 'gainst the Solymi.
The third when from the Amazons he won 180
(Those martial females) a great victory.
And as he came from thence the king had laid
An ambush for him on the way in vain,
Of choicest Lycians, whom he destroy'd,
That not a man of them return'd again. 185
The king receiv'd him then, believing now
That he descended was of heavenly race,
And gave him half his pow'r, and land enough,
And with his daughter's marriage did him grace.
Bellerophon by her had children three; 190
Two sons, Isandrus and Hippolochus,
And one fair daughter, call'd Laodamie,
On whom by Jove Sarpedon gotten was.
Her father, by the Gods forsaken, then
Liv'd up and down in the Alean plain, 195
And shunn'd the conversation of men.
At Solym battle was Isander slain.

But of Hippolochus the son am I,
And he of noble ancestors descended.
To Troy he sent me, and especially 200
Unto me th' honour of my race commended,
Than which in Ephyre none nobler is,
Nor in the land of Lycia more renown'd.
And Diomedes, joyful to hear this,
Turn'd his spear's point and stuck it in the ground, 205
And to him kindly spake. There is, said he,
Between your ancestors and mine of old,
A mutual bond of hospitality.
Bellerophon, as I have oft been told,
Was by my grandsire, Ceneus, freely treated, 210
And stayed with him twenty days and nights,
And when again he from his house retreated,
They tokens gave of hospitable rights;
Ceneus to him a belt most glorious,
Bellerophon to him a golden cup, 215
Which I not with me brought, but in my house
When I came thence I safely left lock'd up.
My father I remember not. For he
Left me too young when last he went from home.
Henceforth my guest in Argos you must be, 220
I yours in Lycia, when I thither come.
Meantime, let's one another's spear decline;
For many Trojans more I have to kill,
Unless I cross'd be by some pow'r divine.
And of the Achæans kill you whom you will. 225
And that our friendship may the more appear,

I will present you with these arms of mine;
And you to me present the arms you wear.
This said, they lighted and their hands did join.
But Glaucus surely here bewitched was, 230
Or cursed by the Gods, that had forgot
His arms were gold, and Diomed's but brass.
An hundred his, nine beeves the other bought.
Hector was now come to the Scæan gates;
To him the Trojan wives and daughters run 235
To ask their husbands' and their brothers' fates,
But to those questions he answer'd none.
But to the temples bade them go and pray;
Inquire no more for what you will lament;
Then to the royal palace went his way. 240
For great the danger was and imminent.
On every side within were galleries
Magnificent, of square well-plained stones,
With fifty lodgings for the families
(One by another) of King Priam's sons; 245
And for his daughters twelve apartments were
(In the same court, but on the other side)
To lodge his sons-in-law when they were there,
Of the same stone in like form beautified.
Here Hecuba, as she conducted home 250
Laodice, her beautifulest daughter,
Met her son Hector that was newly come
In dusty bloody armour from the slaughter.
And took him by the hand, and to him said,
Why come you from the fight? Have we the worst, 255

And you come to solicit Jove for aid,
And after that is done to quench your thirst?
A little wine will much the strength sustain
Of one that labour'd has as you have done.
No, no, from wine (said he) I must abstain, 260
Lest I forget and leave my work undone.
Besides, to Jove I dare not offer wine
With bloody hands, lest I should him incense.
But, mother, go you to Minerva's shrine
With other ladies, and with frankincense; 265
And of the robes in your perfumed chest
Take with you that which in your judgment is
Amongst them all the largest and the best,
And lay it down upon the Goddess' knees.
And vow that at her altar you will kill 270
Twelve yearling heifers of the best you have,
If at your prayer condescend she will
Your children with yourselves and Troy to save,
And from the fight this Diomed remove.
To th' temple presently go you away. 275
But I to Paris now must go, and prove
If he th' advice I give him will obey.
Then Hecuba into the chamber came
Where many divers-colour'd vestures lay,
The work of many a Sidonian dame, 280
Which then from Sidon Paris brought to Troy,
When thither he from Sparta Helen brought.
Of these, to give the Goddess, she took one
The largest and most curiously wrought,

And that like to a star in heaven shone. 285
And when unto the temple come they were,
Theano opened the door; for she
(Antenor's wife) was Pallas' priest. And there
She took the robe, and laid it on her knee.
Then prayed she (whilst with a mighty cry 290
They to the Goddess lifted up their hands.)
Pallas, said she, daughter of Jove most high,
In whose protection ev'ry city stands,
Great Pallas, break the spear of Diomed,
And overthrow him at the Scæan gate, 295
That at thy altar may be offered
Twelve yearling heifers; and commiserate
The wives and children and the state of Troy.
Thus prayed they; but Pallas would not hear.
To th' house of Paris Hector went away 300
That was unto his own and Priam's near,
Built by himself the citadel within,
With all the art the Trojans understood.
There Hector with his spear in hand went in,
That was in length eleven cubits good, 305
And pointed at the head with polish'd brass,
Fasten'd into the staff with a gold ring.
Busy about his armour Paris was,
And Helen work to th' maids distributing.
Here Hector Paris chid. Is this, said he, 310
The fittest time to manifest your spite
Against the Trojans, when the enemy
Under our walls is killing them in fight?

When none but you the cause is of the war
And tumult, which surrounds the town of Troy. 315
I think it would become you better far
To rate those men that from the battle stay.
Brother, said Paris, what you say is right.
But hear me, too. I stayed not behind
Because I to the Trojans bear a spite, 320
But from their slanders to avert my mind.
And now my wife too has persuaded me,
Who of myself was ready to begone.
Not sure to any side is victory.
Stay only while I put my armour on. 325
Or go. I'll follow you and find you out.
Thus he. But Hector to it nothing said.
And to begone his face he turn'd about,
But Helen saw about to speak, and stayed.
Brother, said she, though I unworthy am 330
To call you so, I would I had been thrown
Into the sea the same day that I came
Into the world, so many shames to own.
Or that this husband sensible had been,
As men of honour should be of ill-fame; 335
But that's not now, nor ever will be seen,
He one day will, I fear, repent the same.
But brother, pra' ye, sit down and rest awhile,
That with the toil of battle weary are;
The cause whereof am I the woman vile, 340
That with me brought to Troy this cruel war.
Unlucky day that brought me first acquainted

With Alexander to our infamy,
Which through the world hereafter will be chaunted,
And make us loathsome to posterity. 345
Helen, said Hector, now I cannot stay,
The Trojans of my presence stand in need;
But bid you Alexander come away,
While I am in the town, and that with speed.
For hence unto my house I must go home 350
To see my wife, my child, and family,
And 't may be never back again shall come,
But by the hands of the Achæans die.
This said, home Hector went, and there was told
His wife Andromache at home was not. 355
For with the nurse the battle to behold,
Into the tow'r on Scæa gate was got.
Then Hector of the women ask'd again,
Is she gone to some sister or some brother?
Or to the Goddess temple in the train 360
Of those that thither waited on my mother?
To this one of the women said again,
She neither went to sister nor to brother,
Nor to the Goddess' temple, in the train
Of those that thither waited on your mother. 365
But when I know not who inform'd her had
That th' Argives did the Trojans overpower,
With her young son and nurse as one that's mad
Ran to the gate, and up into the tower.
Then back went Hector passing the same streets 470
Through which he went when he came from the fight,

Where in the way Andromache he meets
That now was running home in great affright.
The daughter she was of Eetion,
Who of Cilicia the sceptre carried, 375
And dwelt at Thebe in Hypoplacion,
But unto noble Hector she was married.
Now Hector met her with their little boy
That in the nurse's arms was carried,
And like a star upon her bosom lay 380
His beautiful and shining golden head.
Scamandrius he called was by Hector,
Astyanax he named was in Troy.
Because his father was their sole protector,
The people from his honour nam'd the boy. 385
Then Hector smiling look'd upon his son.
And to him weeping said Andromache,
My dear, you'll by your courage be undone,
And this your son a wretched orphan be.
The Greeks at once on you alone will fall, 390
And then a woeful widow shall be I,
And have no comfort in the world at all,
But live in misery and wish to die.
Father or mother they have left me none,
For by the great Achilles he was slain 395
When he the goodly town of Thebe won.
But from disarming him he did refrain.
Together with his arms he did him burn,
And with such rites as did a prince become.
And having put his ashes in an urn 400

Buried the same, and o'er it rais'd a tomb.
The mountain-nymphs, daughters of Jupiter,
Planted about it many elmen-trees.
My seven brothers all were killed there.
In one day by Achilles slain were these, 405
As they defending were their kine and sheep.
My mother with the booty he brought hither,
And her he at the ships did pris'ner keep
Until her friends her ransom had sent thither.
Then to her country back they sent my mother, 410
Who shortly after there fell sick and died.
Now Hector you my father are and brother,
Husband and mother. In you I confide.
For pity's sake then on this turret stay,
Lest fatherless your son, I widow be; 415
And set your armed people in array,
And those that aid you at the syc'more-tree,
Where to the city easiest is th' access.
For there it was the Argives thrice fell on
Led by Idomeneus, and th' Ajaxes, 420
The two Atrides, and Tydeus' son.
Whether they had some God for their director,
Or had observ'd some weakness in the place,
I know not. And to this replied Hector,
Dear wife, this might be done. But what disgrace 425
Shall I be in? How will the Trojans scoff,
Both men and women, and deride my fear,
If on the tow'r they saw me standing off
When others fighting with the Argives were?

Besides, by nature I am framed so, 430
I am not able to abstain from fight,
But must be 'mongst the foremost, when the foe
Invades my father's honour in my sight.
And yet I know the evil day will come,
That Priam and his people perish must, 435
And utterly destroy'd be Ilium,
And all her stately buildings lie in dust.
Yet am not griev'd so much to think upon
The fate of Troy, of Priam, of my mother,
Or all my brothers, as for you alone 440
When by a proud Achæan one or other
You dragg'd are weeping into slavery,
And when t' Achæa he has brought you home,
To fetch in water you employ'd shall be,
And made to labour at another's loom. 445
And one that sees you weeping, there will say,
This woman was the noble Hector's bride,
The bravest man of all that fought for Troy,
And of your tears bring back again the tide.
But dead may I be first and buried 450
Before I see you dragg'd or hear you cry.
And when he thus had said, his arms he spread
The child to take, who terrified thereby,
And unacquainted with a glittering crest
And horse's mane that nodding at it hung, 455
Turn'd his face crying to the nurse's breast,
And with his little arms close to her clung;
Which made his father and his mother smile.

Then Hector on the ground his helmet laid,
And took the child, and dandled him awhile, 460
And then to Jove and all the Gods he pray'd.
Jove and Gods, grant that this son of mine
No less in Troy may honour'd be than I,
Nor from his father's virtue e'er decline,
But hold the reins of Ilium steadily, 465
That men may say when he hath slain his foe,
And bringeth with him home his spoil to Troy,
In battle he his father doth outdo,
And fill his loving mother's heart with joy.
This said, he gave the child t' Andromache, 470
Which she receiving hugg'd, and laugh'd, and cried.
Which Hector with compassion did see,
And thus with gentle words his wife did chide.
Dear wife, do not afflict yourself for me.
No man can die before his hour is come; 475
And when 'tis come, put off it cannot be
By weak nor strong. Therefore I pray go home,
And tend your work, and give your women theirs,
And sit still at your spindle and your loom,
And leave to men these martial affairs, 480
And me that have the charge of Ilium.
Then up he takes his helmet and departs,
And homewards she; but often turn'd her head.
At home with grief she fill'd her women's hearts,
And made them mourn for Hector not yet dead. 485
Nor Paris at his house did longer stay
Than he must needs his armour to put on,

And up and down the streets went ev'ry way,
To see if he could Hector light upon.
As when a horse i' th' stable pampered, 490
And used to be washed in the river
His headstall breaks, or be delivered
From that which held him by what means soever;
Then proudly he sets up his tail and head,
And beats the plain, and with the wind he makes 495
His mane play in the air dishevelled,
Then to the pasture known the way he takes:
So from his house went Paris through the streets
With shining arms, and courage at his heart;
And quickly with his valiant brother meets, 500
Turning from where he and his wife did part.
And first to Hector Paris thus began.
Brother, I fear I've made you stay too long.
No, he replied, your courage no man can
Accuse, but such as mean to do you wrong. 505
But when you, out of humour, will not fight,
The Trojans that much suffer for your sake
Speak all the ill they can of you in spite.
Which, when I hear, it makes my heart to ache.
But now let's go. If e'er the powers divine 510
Displace the Achæan host, and give us peace,
That freely to them we may offer wine,
Your quarrel with the Trojans soon will cease.

LIB. VII.

*The Greeks enclose their ships with a wall and ditch. The duel betwixt
Hector and Ajax.*

THIS SAID, THEY went together to the fight,
For Paris now no more the war declin'd,
And welcome to the Trojans was the sight,
As to a weary rower a good wind. 5
There Paris slew Menesthus, the son
Of the great clubman Areïthous
Of Arne. And by Hector overthrown
And struck clean through the neck was Eionus.
Iphinous, the son of Dexias, 10
As to his car he mounted to have fled,
By Glaucus through the shoulder wounded was,
And to the ground again fell backward dead.
When Pallas saw the Argives fall so fast,
She from Olympus leaped to Ilium: 15
Apollo then to meet her made great haste,
That saw her from his tow'r in Pergamum.
And when they were together at the beach,
He for the Trojans, for the Argives she,
Apollo to her thus address'd his speech: 20
Daughter of Jove, what great necessity
Brought you to Troy? Was it to please your mind,

Or give unto the Greeks the victory?
For well I know to Troy you are not kind.
But for the present be advis'd by me. 25
Let th' armies both give over fight to day,
And fight it out hereafter, till they know
What end the Fates assigned have to Troy,
Since you and Juno needs will have it so.
Your counsel's good, said Pallas, and the same 30
I thought upon. But tell me how to do it.
For to that end I from Olympus came.
Tell me but how, and I'll consent unto it.
Why then, said Phœbus, Hector I'll excite
In duel all the Argives to defy; 35
And they some one will choose with him to fight,
And both the armies quietly stand by.
This counsel was by both agreed upon;
And known to Helenus by augury,
To Helenus, that was King Priam's son. 40
And he to Hector did himself apply.
Hector, said he, will you do that which I,
That am your brother, shall advise you to?
Go to th' Achæan army, and defy
The best of all the Argives; boldly go; 45
For in this combat you are not to die:
The Gods have told me so. Then never fear.
Then to the front came Hector joyfully,
With both his hands o' th' middle of his spear
To keep the Trojans back and make them stand; 50
And straight King Agamemnon seeing it,

Unto the Argives gave the like command.
Then on the ground both Greeks and Trojans sit.
Phœbus and Pallas flew up to the tree,
The high beech-tree that sacred was to Jove, 55
I' th' likeness of two vultures, thence to see
How the two armies looked from above.
As when a west wind ruffled has the main,
It black and horrid to the eye appears;
So look'd the Greeks and Trojans on the plain, 60
Grisly and dark with helmets, shields, and spears.
Into the midst between them Hector stept.
You, Trojans and well-armed Greeks, said he,
Since 'twas Jove's will our oath should not be kept,
But that the war continued shall be 65
Till either you shall win the town of Troy,
Or we your army and your ships confound,
Fighting till one another we destroy;
I to you, Argives, somewhat will propound.
The best of all the Greeks are present here. 70
Let one of them come forth and fight with me,
On these conditions (witness Jupiter)
If by his hand I slain in combat be,
Let him do with my armour what he will,
But send my body into Ilium. 75
But if Apollo grant me him to kill,
His armour I will have and carry home,
And in Apollo's temple dedicate.
His body to the ships shall rendered be,
That on his urn the Greeks may elevate 80

A mount of earth for passengers to see
Upon the shore of Hellespont, and say,
Here lies a valiant Greek by Hector slain
Long since, when th' Argives were besieging Troy.
My honour thus for ever will remain. 85
So Hector said. The Greeks all silent were.
For shame the challenge they could not refuse;
And to accept it ev'ry one did fear.
But Menelaus then his valour shews,
And rising up in anger, thus he said, 90
Women of Argos, what a shame is this,
That you should all of Hector be afraid!
What now become of all your threat'ning is?
There (dust and water, heartless, nameless), sit.
Myself I'll arm (for I perceive no odds) 95
And will this sturdy champion Hector meet.
For victory comes only from the Gods.
This said, he rose and arm'd himself; and there
Depriv'd of life had Menelaus been
(So much too weak he was) by Hector's spear, 100
But that the princes starting up came in.
And Agamemnon seizing on his hand,
Why, Menelaus, are you mad, said he,
In fight you cannot against Hector stand,
How much soever you concerned be. 105
Avoid him in the field as others do.
Achilles, who than you much stronger is,
Strong as he is, considers Hector too,
And cooler grows as oft as he him sees.

Therefore, good brother, sit still at your troop. 110
Some other we'll oppose to Hector's might,
That, haughty as he is, shall make him stoop,
And thank the Gods if safe he come from fight.
To this good counsel yielded Menelaus.
Whereat his servants not a little joy'd, 115
Came in, and soon by them unarm'd he was,
And to the Greeks then Nestor rose, and said,
how unwelcome will this story be
To Greece, and Peleus king o' th' Myrmidons,
Who at his house the names enquir'd of me 120
Both of yourselves, your fathers, and your sons;
If he should know how much you Hector dread,
How oft would he hold up his hands, and pray
The Gods to send him down amongst the dead,
And from his body take all sense away! 125
that I were as young as I was then
When war was 'twixt Arcadia and Pyle,
And at the walls of Pheia stood the men
Ready for bloody fight in rank and file!
Amongst them stood one Ereuthalion, 130
And of the great man Areïthous
Upon his shoulders had the armour on,
Who Clubman commonly surnamed was,
Because he used neither bow nor spear,
But with an iron club the battles brake. 135
Lycurgus slew him though he weaker were,
(When at advantage great he did him take)
By craft, not strength. For in a narrow way

He watch'd him at a turning with his spear,
And on a sudden took his life away, 140
So that the club had nothing to do there.
Then took he off his arms, and wore the same
In battle when there was occasion,
But gave them, when old age upon him came,
To this his squire Ereuthalion. 145
Who wearing them our army did defy,
At which, when others trembling stood and shook,
Although the youngest of them all was I,
Great as he was, the man I undertook,
And slew him by the Goddess Pallas' aid, 150
The strongest and tallest that I e'er slew,
As when upon the ground he stretch'd was laid,
The place he covered did plainly show.
If I were now as young and strong as then,
The Greeks for Hector soon a match should find, 155
Though none of you that are their bravest men
To try your fortune with him have a mind.
Thus Nestor th' Argive lords did reprehend,
And nine of them in number (all that durst
In single fight with Hector to contend) 160
Armed, and Agamemnon was the first.
And next the strong and valiant Diomed,
And then the greater Ajax, then the less,
Then King Idomeneus, of Crete the head,
And with him his good squire Meriones, 165
Who as the God of battle valiant was,
Besides Eurypylus Euæmon's son,

And of Andremon the stout son Thoas,
And wise Ulysses last of all made one.
So many Greeks durst Hector undertake. 170
Bring in your lots, said Nestor then, and we
Will in a helmet them together shake.
And who by lot our champion shall be
Shall please us all, but please himself much more
When back again he cometh from the fight. 175
Then brought they in their lots; which o'er and o'er
He shook in Agamemnon's helmet bright.
Meanwhile the people lift their hands, and pray,
Jove, let now the lot to Ajax fall,
Or that on Diomedes light it may, 180
Or on Atrides our great general.
The helmet shaken threw out Ajax' lot,
Which th' herald took and carried about
To th' Argive princes, but they own'd it not,
Till to the hand of Ajax it was brought, 185
Who sign'd it had, and into th' helmet thrown.
He took it, and awhile consider'd it;
And when he was assured 'twas his own,
Rose up, and lets it fall before his feet.
And to the princes said, This lot is mine, 190
And glad I am, and hope for victory.
But send your pray'rs up to the pow'rs divine,
While I put on my arms; and silently,
So that, at least, the Trojans may not hear.
Or, now I think on't, plain and openly. 195
For I see nothing that I need to fear.

I am not forc'd to fight unwillingly,
Nor rashly undertook the enterprise.
For I was born and bred in Salamis,
And hope I am not so weak or unwise. 200
As soon as mighty Ajax had said this,
The people looking up to heav'n pray'd.
Jove, said one, grant Ajax victory,
Or if you be inclin'd Hector to aid,
Then let their strength and glory equal be. 205
When Ajax had his arms put on complete,
He walked away with a majestic pace,
As Mars goes to the war. His strides were great,
And scornful smiles with terror in his face.
And as he went he shook his mighty spear, 210
Which joyfully the Argives did behold;
But by the Trojans look'd on was with fear;
And Hector at the heart himself was cold,
But was ashamed back again to fly,
Since he provok'd him had into the field. 215
And Ajax now was come unto him nigh,
As from a tower, looking o'er his shield,
By Tychius of Hyla made it was,
And cover'd with sev'n fat bulls' hides well tann'd,
And over them an eighth of shining brass, 220
And at his breast he held it with his hand,
And threat'ning said, Hector, I'll make you see,
That in the army many yet remain,
Though from us angry gone Achilles be,
And discontent from battle now abstain, 225

That fear not Hector. Do the worst you can.
Ajax, said Hector, I am not a child,
Nor woman, to be threaten'd, but a man
That understands the bus'ness of the field,
And can my buckler bear from left to right, 230
And have whereon in battle to rely,
And know to guide my horses in a fight,
And move my feet to Mars his melody.
But no such cunning will I use with you,
My spear I'll send unto you openly. 235
And at that word the long spear from him flew,
And pierc'd his target to the seventh ply.
But there it staid. Then Ajax threw his spear,
Which Hector's shield, armour, and coat went thro';
But Hector shrunk his belly in for fear, 240
For else it pierced had his belly too.
Then from their shields the spears they plucked out,
And them no more at one another threw,
But came unto each other close, and fought,
And like two lions on each other flew. 245
And Hector made a thrust at Ajax' shield
Which enter'd not, resisted by the brass:
But Hector's shield to Ajax' spear did yield,
Which pierc'd it through, and so far in did pass,
That grazing on his neck it fetch'd the blood. 250
But Hector, not dismay'd, took up a stone.
Ajax took 't on his shield and firmly stood,
And with his hand took up a greater one,
And rougher, which did Hector's buckler tear,

And with the weight unto the ground him threw, 255
But up again Apollo did him rear.
Then both of them, the combat to renew,
Their swords were drawing. But the heralds then,
Idæus and Talthibius, came in,
The sacred messengers of Gods and men, 260
And put themselves the combatants between.
Troy's herald then, Idæus, to them spake.
Good sons, belov'd of Jove, give over fight,
For all men of your valour notice take.
And now 'tis late; we must submit to night. 265
Idæus, then said Ajax, let these words
From Hector come, from whom came the defy.
'Twas he that challeng'd all the Argive lords.
Let him give over first, and then will I.
Then Hector spake. Ajax, since you, said he, 270
The Gods endued have with strength and wit,
Let for to-day the quarrel ended be.
Hereafter let the Gods determine it,
And give which side they please the victory,
For now 'tis late. To night we must submit; 275
That you the Greeks may cheer, and specially
Your own friends and companions, at your fleet:
And I the Trojans from their fear relieve,
And wives, that for my safe return do pray.
But come, let's t' one another tokens give, 280
That Greeks and Trojans seeing them may say,
These two men fought and sought each other's death,
Yet parted friends. This said, he to him gave

His belt with his good sword and iv'ry sheath;
Ajax to him his shining girdle brave. 285
Thus parted, Ajax to the Argives went;
And Hector back into the troops of Troy;
Who mightily rejoic'd at the event
That past all hope they saw him come away.
The lords conducted him to Ilium: 290
The Greeks to Agamemnon Ajax led.
And when they all unto his tent were come,
He for them sacrific'd a bull well fed,
Which flay'd, divided, roasted, taken up,
The carvers into messes cut. This done, 295
King Agamemnon and the princes sup.
The chine at Ajax' table was set on,
And when their thirst and hunger were subdu'd,
Nestor, whose counsel still had been the best,
What further was to be consider'd shew'd, 300
And to the princes all his speech address'd.
Atrides, and you other princes, know
How Mars with Argives strewed hath the plain,
And sent their souls down to the pow'rs below,
Whose bloody bodies in the field remain. 305
Tomorrow, therefore, let us cease from war,
And early in the morning fetch the dead,
And burn them somewhere from the ships not far,
That t' Argos back they may be carried,
When we depart from hence; that their bones may 310
By their own friends and children buried be.
Let's raise a mount upon the shore of Troy,

One for them all, for passengers to see,
And fortify our good ships with a wall,
And turrets in it, and a ditch without, 315
Lest unawares the Trojans on us fall,
And gates for char'ots to go in and out.
Meanwhile the Trojan lords at counsel were
Loud and discordant. Then Antenor said,
Trojans and aids, I pray to me give ear, 320
For of the worst I greatly am afraid.
Let Menelaus have his wife again,
And all the goods she brought with her. Take heed;
Against our oath we shall but fight in vain.
Then let her go, or never look to speed. 325
Antenor, then said Paris, this is not
The best advice you could have given, or
(If what you say dissent not from your thought)
You are not now so wise as heretofore:
Thus much to you. But to the Trojans this: 330
Her wealth I'll render, with more of mine own,
But my wife Helen I will not dismiss.
And when he that had said, again sat down.
Then Priam rose. Trojans and aids, said he,
Now take your supper as you us'd to do, 335
And sentinels set, such as careful be;
To-morrow I will send Idæus to
The Greeks with Paris' answer, and to try
If they from battle for so long will cease,
That we may burn our slain men quietly, 340
And fight again hereafter when they please.

This said, the Trojans to their suppers went.
Next morn Idæus found the Argive lords
Together met at Agamemnon's tent,
And coming in, unto them said these words: 345
Atrides, and you Argives all, I come
With terms from Paris, and by Priam sent,
On which you may depart from Ilium,
And end the war, if thereto you consent.
The wealth which he with Helen brought ashore, 350
(I would before he brought it he had died)
To Menelaus he will give, and more;
But his wife Helen shall with him abide.
Besides, the people have commanded me
To ask you if you will the war suspend, 355
Until our dead fetch'd off and burned be,
And after fight till Jove the war shall end.
So said Idæus. The Greeks silent were
Awhile. At last Tydides rose and spake.
Let not the Greeks so much the Trojans fear 360
As Helen's goods, or her herself to take
At Alexander's hands. The hour is come
(As any child may manifestly see)
That must o'erthrow the state of Ilium.
So said Tydides, and much prais'd was he. 365
Then Agamemnon answer'd to Idæus,
You hear what the Argives say. I say the same.
As for the dead men, burn them if you please;
They're good for nothing. I contented am.
And of this truce let Jove a witness be. 370

This said, to Jove his sceptre up he heav'd.
Idæus back to Troy went speedily,
The answer to relate he had receiv'd.
Meanwhile the states of Troy in council sat,
And there their herald's coming back expected. 375
Idæus then went in, and told them that
The offer made by Paris was rejected,
But that a truce was granted for a day.
Next morn the Trojans, early as they could,
Went some to th' field to fetch their dead away, 380
And others to the hill to fetch down wood.
So did the Argives some to Ida go
For wood, and others to the bloody field,
But could not then distinguish friend from foe.
But by and by the sun began to gild 385
Scamander's plain; then wash'd they off the gore
And dust, and laid their dead men upon carts.
But Priam had forbidden them to roar,
Or cry outright, though grieved at their hearts.
When they had burnt them, back they went again. 390
The Greeks too, when they had consum'd with fire
And done their lamentation for the slain,
Unto their ships did back again retire.
But this th' Achæans did at break of day,
And rais'd one mighty monument for all. 395
And the incursion of the foe to stay,
Their navy they inclosed with a wall,
With turrets high, and a great ditch without,
(Upon the sides whereof sharp pales they fix)

And gates for char'ots to go in and out. 400
And all the day thus toiling were the Greeks.
Meanwhile the Gods together sat above,
And wond'ring look'd upon this work of men;
And Neptune then address'd his speech to Jove.
What mortals will the Gods consult again? 405
See you not what a wall the Greeks have rear'd,
And what a ditch about it made, said he,
The fame whereof 'mongst people will be heard
As far as the sun-beams extended be?
Yet to the Gods they hecatomb gave none. 410
Whereas the walls that I and Phœbus rais'd
About the city for Laomedon,
Obscur'd by this, no longer will be prais'd.
Then answer'd Jove. Neptune, I never thought
That such a word would e'er have come from you, 415
That have the pow'r to bring their work to nought.
A lesser God might have complain'd, 'tis true;
But of your pow'r Aurora sees no bound.
Stay only till the Greeks be gone away;
Then break their wall, and throw it to the ground, 420
And hide the place with sand. Thus talked they.
The sun now set, and finish'd was the wall.
The Greeks went back then each man to his tent,
And many good fat beeves they made to fall;
And wine they had great store from Lemnos sent. 425
For ships abundance laden were come in,
Which by Euneus (th' hero Jason's son,
Got on Hypsipyle) thither sent had been,

For which the army barter'd. Hides gave one,
Another th' ox itself, another brass; 430
One iron, and another gave a slave,
Beside what by Euneus given was
To the two Atrides of free gift to have.
When supper ready was they all sat down,
And all night long the feast continued, 435
Greeks in their tents, and Trojans in the town.
And all night long aloud Jove thundered,
Meaning no good to th' Greeks. Then pour'd they on
The ground the offer'd wine, Jove to content,
And no man durst to drink till that was done.
And when they had well drunk to sleep they went.

LIB. VIII.

The second battle; and the Trojans stay all night in the field.

THE MORNING NOW was quite display'd, and Jove
Upon Olympus' highest top was set:
And all the Gods and Goddesses above
By his command were there together met. 5
And Jupiter unto them speaking said,
You Gods all, and you Goddesses, d'ye hear,
Let none of you the Greeks or Trojans aid;
I cannot do my work for you. Forbear.
For whomsoever I assisting see 10
The Argives or the Trojans, be it known
He wounded shall return and laugh'd at be,
Or headlong into Tartarus be thrown,
Into the deepest pit of Tartarus,
Shut in with gates of brass, as much below 15
The common hell, as 'tis from hell to us.
But if you will my pow'r by trial know,
Put now into my hand a chain of gold,
And let one end thereof lie on the plain,
And all you Gods and Goddesses take hold; 20
You shall not move me howsoe'er you strain.
At th' other end, if I my strength put to't,
I'll pull you Gods and Goddesses to me,

Do what you can, and earth and sea to boot,
And let you hang there till my pow'r you see. 25
The Gods were out of countenance at this,
And to such mighty words durst not reply,
Till Pallas said, Well known, O father, is
Your mighty pow'r. But do not us deny,
When we so many Argives falling see, 30
To show we have compassion, and grieve.
And though in fight we no assistants be,
Yet let us sometimes counsel to them give,
Lest in your anger they be all destroy'd.
Dear child, said Jove, it goes against my mind. 35
I would not have my orders disobey'd.
'Tis granted though. For I'll to you be kind.
This said, he set his horses to his car,
Hard hoof'd, swift-footed horses two. Like gold
Their manes profound well-combed shined far. 40
Then arm'd himself, and on the whip laid hold.
No sooner had the horses felt the whip,
But up they start, and 'twixt the earth and sky
The winds themselves with swiftness they outstrip,
And came unto the top of Ida high 45
To Gargarus, and there Jove took them out,
And hiding them with air on th' hill sat down;
And as he sat he cast his eyes about
With great content upon the fleet and town.
The Argives at their tents short breakfast make, 50
And arm'd themselves as soon as they had done.
The Trojans, for their wives' and children's sake,

(Though fewer) arm'd and made haste to be gone.
Then open'd were the gates, and to the field
Out came they horse and man; and being met, 55
They man to man came up with shield to shield,
And spear to spear; and on each other set.
Some groan'd, some vaunted, mighty was the din
Of those that kill, and those that falling cry.
And this condition they continued in 60
Until the sun had mounted half the sky.
Then Jove took up a pair of scales of gold,
And weigh'd the fates of both the nations,
And equally suspended them did hold;
But not so equal were their inclinations. 65
For th' Argive scale sat still upon the ground,
While th' other lifted was up to the skies.
Heaven and earth did then with thunder sound,
And Jove threw lightning in the Argives' eyes,
Then all the Greeks amazed ran away. 70
Idomeneus and Agamemnon ran;
Nor either of the Ajaxes durst stay:
Except old Nestor they fled ev'ry man.
And Nestor too had fled, had he known how:
For of his horses Paris one had shot, 75
And pierc'd his forehead just above the brow
Into the brain, so that his chariot
Now useless was, and the horse troublesome.
Then cuts he th' harness; but so long did stay,
That Hector now was almost to him come, 80
And th' old man surely had been cast away,

But that Tydides saw him in this pain,
And terribly t' Ulysses cried out,
Whether d'ye fly, Ulysses? Come again,
Help to defend old Nestor; face about. 85
While he said this, Ulysses still ran on,
Not minding what he said. And Diomed,
To succour Nestor, to him went alone,
And with him stood before his chariot's head,
And said, O Nestor, youthful is the foe 90
That cometh on, and you now very old,
Your charioteer not strong, your horses slow,
Come up into my char'ot, and behold
My Trojan horses how well they can run
When there is cause t'approach or shun the fight; 95
From Venus' son Æneas I them won,
A man of much experience in flight:
Send back your horses, and with mine we'll go
And fight the Trojans. 'Twill not be amiss
To let the mighty champion Hector know, 100
A spear as mad is in my hand as his.
This said, both Sthen'lus and Eurymedon
With Nestor's horses went to Nestor's tent:
Nestor and Diomed, both mounted on
Tydides' chariot, up to Hector went. 105
And when they were to one another near,
At Hector Diomedes threw in haste,
And miss'd of him, and kill'd his charioteer;
Clean through his breast the spear well driven pass'd;
Down dead he fell, but Hector lets him lie, 110

And turns aside to seek a charioteer,
The place of Heniopeus to supply.
And Archeptolemus then being near,
Call'd up by Hector, on the reins laid hold.
Then mighty work and slaughter there had been, 115
And Trojans shut like lambs within a fold
In Troy, but that it was by Jove foreseen;
For in a clap of thunder Jove down threw
His bolt at Diomedes' horses' feet,
And th' earth with sulphur flaming looked blue. 120
Nestor himself astonish'd was to see't;
Lets go the reins, and down the horses fell.
And Nestor then to Diomedes said,
'Tis Jove, you see, that doth our force repel,
And Hector, for this day, intends to aid. 125
Another day to us he will be kind,
If he see cause; for no man can him tie,
Nor able is to make him change his mind,
And therefore now our best course is to fly.
'Tis true, O Nestor, said Tydides then, 130
But what a pain then at my heart will lie,
When Hector, speaking to the Trojan men,
Shall brag he made Tydides from him fly?
Then should I wish the earth would swallow me.
Though Hector says so, Nestor then replied, 135
Believed by the Trojans 'twill not be,
So many of them by your hand have died.
And at this word his steeds he turn'd about.
A show'r of spears then from the Trojans flies,

Who them pursued with a mighty shout. 140
Then Hector loud unto Tydides cries,
Ho! Diomed, by th' Argives honoured
Above the most, serv'd with a greater mess,
And higher seat, and wine unlimited,
You will hereafter be esteemed less. 145
Unmanly Diomed. Fly, baggage, fly;
You ne'er shall come within the walls of Troy,
To freight your ship with women here; for I
Intend to send you first another way.
This said, Tydides was awhile in doubt 150
Whether to turn or no and Hector meet,
And thrice to turn his horses was about,
And Jove thrice thund'ring turn'd them tow'rd the fleet,
Shewing that he the honour of that day
Had granted to the Trojans. Hector then 155
Pursu'd them close, and roaring all the way,
Trojans, said he, and aids, now play the men,
For sure I am that Jove is on our side,
And give us will the victory this day.
And fools they are that in their wall confide; 160
For through their trench our horse shall find a way.
When we are at the ships, let one or other
Have fire to burn them ready, and then fall
Upon the men confounded in the smother.
This said, he did upon his horses call, 165
Xanthus, Podargus, Æthon, Lampus, see
You pay now what you owe me for your meat,
Laid in your mangers by Andromache,

Who always served you with pleasant wheat,
And steep'd sometimes, when she thought fit, in wine; 170
And very oft, though I her husband be,
Your dinner was made ready before mine.
Now, now pursue the Argives lustily,
That Nestor's shield of gold I may obtain;
Nor of Tydides' armour must we fail, 175
By Vulcan wrought. If we but these can gain,
The Argives will this very night hoist sail.
At Hector's speech Juno upon her throne
Unquiet sitting, made Olympus shake;
For mov'd she was with his presumption, 180
And looking upon Neptune to him spake.
Neptune, said she, are you not stirr'd at this?
You know at Ægæ, and at Helice,
Their liberality abundant is,
And sure I am you wish them victory. 185
What! cannot we, who with the Argives side,
If we our pow'rs together join in one,
Drive back the Trojans, and abate their pride,
And leave Jove here to sit and chafe alone?
Juno, said Neptune, griev'd, these words are bold: 190
I'll not rebel; for we shall have the worst,
And so we have by Jupiter been told.
Thus Neptune and the wife of Jove discours'd.
And now between the walls and ships, the place
With horses and with armed men was fill'd, 195
And crammed were within a narrow space
By Hector, that was master of the field.

And had not Agamemnon been inspired
By Juno to put courage in his men,
The Argive ships had certainly been fired, 200
And never had the Greeks gone back again.
Then 'mongst the ships he went, and stayed at
Ulysses' ship, which was the middlemost
Of all the navy, and the tallest; that
He might be heard to both ends of the host, 205
Both to Achilles and to Ajax' tent,
Clad in th' imperial robe, that all might see't;
For these two being the most confident,
Had plac'd themselves at th' utmost of the fleet;
And with a mighty voice to th' Argives cried, 210
Disgrace of Greece, mere outsides, where are now
Your brags, that any of you durst abide
An hundred Trojans, and yet dare not show
A face to Hector, who our ships would fire?
But this was said at Lemnos in your wine, 215
Which rais'd your language than your nature higher;
But cooled now the battle you decline.
Was ever king afflicted as I am,
Jove, or lost a victory so near?
And yet at all your altars as I came, 220
My sacrifices duly payed were,
In hope that I the town of Troy should sack.
But grant at least, O Jove, that we may come
Ourselves into Achæa safely back,
And not be here destroy'd at Ilium. 225
This said, Jove grants them safely to depart,

And from him presently his eagle came,
And brought the tender issue of a hart,
And near unto his altar dropp'd the same.
The Argives when they saw the bird of Jove, 230
Were to the fight again encouraged,
And who should first repass the trenches strove.
And he that first came forth was Diomed.
And much before that any of the rest
Had any slain, he killed Agelaus, 235
Whom with his spear he pierc'd from back to breast,
When from him he his char'ot turning was.
Then Agamemnon came, and Menelaus,
And then the greater Ajax, then the less.
The sixth the king Idomeneus was, 240
And with him came his squire Meriones.
And next Eurypylus, Euæmon's son.
The ninth was Teucer with his bow unbent.
Hid with the shield of Ajax Telamon
His mighty brother, to the field he went, 245
Which Ajax lifting, Teucer chose his man,
And having at him aim'd, and shot, and kill'd,
As children to their mothers, back he ran,
And hid himself behind his brother's shield.
How many were the men he killed thus? 250
Orstolochus, Ophlethus, Lycophon,
And Melanippus, Dætor, Ormenus,
And Chromius, and last Amopaon.
All those lay dead together on the sands.
When Agamemnon saw what work was done 255

By Teucer's arrows on the Trojan's bands,
He to him came, and said, O valiant son
Of Telamon, so, so your shafts bestow,
Unto the Argives all an honour be,
And to your father Telamon; for though 260
Unto your mother married not was he,
Yet has he still maintain'd you as his own.
And if it please Jove and the pow'rs divine
To make me once the master of this town,
Your share shall be the next set out to mine, 265
And to your honour shall receive from me
A tripod, and two horses with the car;
Or if you will, your bed shall honour'd be
With some fair woman taken in the war.
Teucer to this then answer made and said, 270
Of this encouragement no need have I.
Since we came forth I have no time delay'd,
But done as much as in my pow'r did lie.
Eight shafts already have gone from my bow,
And in as many Trojans fix'd have been. 275
Of this mad dog I miss I know not how.
Then took he out another arrow keen,
And aim'd at Hector, but he hit him not,
But wounded on the breast Gorgythion,
Who on fair Castianira was begot, 280
And of King Priam's valiant sons was one.
Who falling on his knees hung down his head,
Just as a poppy charg'd with fruit and rain,
So had his casque his head o'erburthened.

And Teucer then at Hector shot again, 285
And miss'd again. Apollo put it by.
But Archeptolemus, his charioteer,
He missed not. Hector 'scap'd narrowly,
And Archeptolemus expired there
Shot through the breast. Hector was sorry, but 290
Left him. Cebriones chanc'd to be nigh,
And in his hands Hector the reins did put,
And from his chariot leap'd down suddenly,
And took a heavy stone into his hand.
Teucer the while again his bow had bent. 295
But drawing did so long, and aiming stand,
The stone from Hector the arrow did prevent,
And near the shoulder on the breast him struck.
And broken was the bow-string with the blow,
And his benumbed arm all sense forsook, 300
And sinking on his knees he dropped the bow.
Then Ajax stepp'd before him with his shield.
Mecistheus and Alastor him convey'd
Unto the Argive ships from off the field,
Grievously bruised, groaning and dismayed. 305
The courage of the Trojans now renew'd,
They chas'd the Argives back unto their wall,
And till the trenches they had pass'd, pursu'd,
And Hector at their heels the near'st of all.
As when a hound pursueth a wild boar, 310
Or lion, and presuming on his feet
Pinches his haunch or side, and then gives o'er,
Not daring if he turn the beast to meet;

So Hector chasing them still slew the last.
And many of them had the Trojans slain 315
Ere they the trenches and the pale had pass'd.
But being in they there themselves contain,
And comfort one another all they can;
And to the Gods and Goddesses they pray,
Lifting their hands to heaven every man; 320
And Hector then turn'd off and went his way.
Which Juno seeing, unto Pallas said,
Daughter of Jupiter, do you not see
What Greeks one madman, Hector, has destroy'd?
Shall we sit still in this extremity? 325
To Juno then Athena thus replied,
Had not my father's wits been at a loss,
This furious Hector by the Greeks had died,
But he my counsel always loves to cross.
He has forgot how oft his son I sav'd 330
Oppressed by Euristheus' tyranny.
For always when his father's help he crav'd,
Down to the earth from heaven sent was I.
But had I known as much as I do now,
When for the dog he went to Pluto's gate, 335
He had for me till this time staid below,
And by the odious Styx for ever sate.
But now he hates me. And by Thetis led,
He must Achilles honour. But my hope is,
The time will come I shall be favoured 340
By him again, and called his dear Glaucopis.
But make you ready now your chariot,

While I put on my arms; that we may see
If Hector will thereof be glad or not,
Or if some Trojans rather shall not be 345
Left dead for dogs and vultures to devour.
Then Juno to her car the horses brought.
To Jove's house Pallas went, and on the floor
Threw down her long robe, and put on Jove's coat.
And then her breast with armour covered. 350
And on her shoulder hung her fearful shield.
Then took her heavy spear with brazen head,
Wherewith she breaketh squadrons in the field.
Then open of itself flew heaven-gate,
(Though to the Seasons Jove the power gave 355
Alone to judge of early and of late)
And out the Goddesses the horses drave.
Then Jove to Iris said, Go, to them speak.
Tell them an ill match they will have of me.
I'll lame their horses and their char'ot break, 360
Unto the ground they both shall tumbled be;
And with my thunder wounded shall be so,
That ten years after they shall not be well.
For I would have Glaucopis well to know
What 'tis against her father to rebel. 365
But Juno is so us'd to cross my will,
That towards her my anger is the less.
Then Iris went her way from Ida hill,
And near Olympus met the Goddesses,
And as she bidden was did to them speak. 370
What fury's this? Whither d'ye go, said she.

Jove will your horses lame, your char'ot break,
And to the ground you both will tumbled be,
And with his thunder wounded will be so,
That ten years after you will not be well. 375
For you, Glaucopis, he will make to know
What 'tis against your father to rebel.
But Juno is so us'd to cross his will
That he affronts from her can better bear;
But, Pallas, at your hands he takes it ill 380
That you should dare against him lift a spear.
Iris, her errand done, no longer stay'd,
And to Minerva thus said Juno then:
Jove shall no more for me be disobey'd,
By taking part in war with mortal men. 385
But let one live and let another die,
As by the chance of war it shall fall out,
And let him do what he thinks equity.
This said, her chariot she turn'd about.
The horses by the Seasons freed and fed, 390
The char'ot was set up against the wall.
The Goddesses themselves then entered,
And took their places in the council-hall
With th' other Gods. And Jove himself from Ida
T' Olympus came, and lighted from his car, 395
And Neptune from the same his steeds untied,
And set them up, and of them had a care.
The chariot he set to the altar near
Cover'd with linen fine. Then to his throne,
His throne of gold, mounted the Thunderer, 400

And made Olympus shake as he sat down.
But Juno and Athena silent sat
Together by themselves from Jove apart
And discontent. But Jove knew well for what;
And answer made to what was in her heart. 405
Juno, said he, and Pallas, why so sad?
Your fight against the Trojans was not long.
And more you had been vexed if it had;
So much for th' other Gods I am too strong.
The danger scarce begun was when you fled. 410
But had you dar'd the battle to maintain,
You had been by my hand so thundered,
You never had t' Olympus come again.
Juno at this and Pallas grumbling sat,
And Pallas from replying did abstain, 415
Although no less the Trojans she did hate.
But Juno was not able to contain.
cruel Jove, said she, what words are these?
Must we unto our friends be so ingrate,
Because we know you can do what you please, 420
As not the Argives to commiserate?
We are content, since you will have it so,
No longer in the war to give them aid;
But let us give them counsel what to do,
Lest in your anger they be all destroy'd. 425
Juno, said Jove, tomorrow you shall know
If you'll be pleas'd the battle to behold,
How many martial Greeks I'll overthrow.
For Hector shall not be by me control'd

Until Achilles be fetch'd back again, 430
And at the Argive ships the battle be
About the body of Patroclus slain.
For so it is ordain'd by destiny.
And for your anger, Juno, I not care,
Though to the end of earth and sea you go, 435
(Where pent Iäpetus and Saturn are
In horrid darkness) and complain; yet so
I will not for your anger care a jot.
For you are grown extremely insolent.
Thus Jupiter; and Juno answer'd not. 440
Then down the sun into the ocean went,
Drawing upon the fields a cloudy night,
Which gave the Trojan army no content,
But to the Greeks more welcome was than light.
The army Hector call'd to parliament, 445
And led them to a clean place, free from blood,
And there they all on foot about him throng.
Hector unto them giving orders stood
With spear in hand eleven cubits long.
Hear me, you Trojans and you aids, said he, 450
I thought we should have now the Greeks destroy'd,
And lodged in the town with victory.
But this my hope is by the night made void,
Nor can we help it. Let us now provide,
For supper, beeves and sheep, and wine and bread 455
From Troy; and let the horses be untied,
And care be taken that they be well fed.
Then fetch in wood, and fires abundance make,

That with the flame light'ned may be the sky,
Lest th' Argives in the dark advantage take, 460
To go aboard and safe to Argos fly.
Let them embark at least in haste, and bear
Along with them their wounds uncured home,
That others who shall see't may stand in fear,
And say, This 'tis to fight 'gainst Ilium. 465
And let great boys and old men all night wake
Upon the walls and tow'rs, and guards be set,
And every wife at home a great fire make,
Lest into Troy the foe by treason get.
This, valiant Trojans, let be done to-night, 470
To morrow I shall further order give.
I doubt not but to put these dogs to flight
By th' help of Jove, and Ilium relieve.
But while 'tis night have on your guards a care,
Tomorrow early arm yourselves for fight. 475
For to the Argive ships I'll bring the war,
And trial make of Diomedes' might,
If from the ships he drive me shall away,
Or with my spear I him shall overthrow
And send his bloody armour into Troy. 480
Tomorrow he his strength will better know.
I would I were as certain not to die,
And of old age live still free from the sorrow,
As Phœbus and Athena do, as I
Am sure we shall defeat these Greeks tomorrow. 485
Thus ended he. The Trojans, full of joy,
Their sweating horses soon took out and fed,

And some were sent into the town of Troy,
To bring in beeves and sheep, and wine, and bread,
While others fetch'd in wood. Then to the sky 490
Arose the pleasant vapour of the roast.
The Trojans confident of victory
Sat cheerful at their arms throughout the host.
As many stars as in a heav'n serene
Together with the moon appear i' th' night, 495
When all the tops of hills and woods are seen,
And joyful are the shepherds at the sight:
So many seem'd the fires upon the plain.
A thousand fires, and at each fifty men,
That by their horses there all night remain
Expecting till Aurora rose again.

LIB. IX.

The Greeks deliberate of going home, but are staid by Diomed and Nestor.

THUS WATCH THE Trojans kept. But at the fleet
Distracted was with fear the Argive host,
And their commanders; as when two winds meet,
The sea between them into heaps is toss'd. 5
And Agamemnon grieved at the heart,
Bad th' heralds forthwith to th' assembly call
The prime commanders ev'ry one apart,
And not make proclamation once for all;
And some of them himself he summoned. 10
When met were all the leaders of the Greeks,
They sat them down with hearts discouraged,
And tears ran down on Agamemnon's cheeks.
As springs of water issue from a rock,
So fell the tears from Agamemnon's eyes, 15
And to th' assembly thus he weeping spoke.
My friends, what help can any man devise?
Jove told me I should conquer Ilium,
And unto Argos safe return again,
And now deceiv'd me has, and sends me home 20
With shame when I have lost so many men.
And thus he loves to do to show his might.
Therefore my counsel, Argives, all obey:

Let's hoist our sails and save ourselves by flight;
For we shall never take the town of Troy. 25
This said, the princes long time silent sit,
At last Tydides rising thus replied,
King Agamemnon, so far as 'tis fit
In such a public place I must you chide.
Take it not ill, because not long ago 30
You me with want of courage did upbraid
Before the Greeks, as old and young well know.
Jove giv'n you has the right to be obey'd,
And grac'd you with the title of our king,
But has denied you a courageous spirit, 35
Which now is the most necessary thing.
You think too meanly of your people's merit.
As for yourself, if you will needs away,
Go. That's your way. Your ships there ready lie
That from Mycene brought you unto Troy, 40
But leave the rest their fortune here to try.
If none else stay, yet Sthenelus and I
Will not give over fighting till we know
To what side Jove will give the victory.
The Gods, I'm sure, will favour to us show. 45
This speech the lords commended very much.
Then Nestor rose, and to Tydides said,
There is not of your age another such,
For counsel wise, in battle not afraid.
None will deny but what you say is right; 50
But you have not said all you could have done;
And no great wonder, since for age you might

(So young you are) have been my youngest son.
Yet the advice you given have is best;
I that am elder what wants will supply, 55
Adding thereto what you have not express'd,
To take from Agamemnon all reply.
For none but such as have no law, nor kin,
Nor house, in civil discord can delight.
But let us first our chiefest work begin, 60
And make the young men keep good watch all night.
And let them all from you, Atrides, take
Their orders. For you are our general.
And for the princes a good supper make,
And all the eldest captains to it call. 65
It best becomes you that can do it best.
For in your tents of wine you have good store,
And easlier provided than the rest,
So many ships you have to bring in more.
Hear their advice, and do what you think fit. 70
Good counsel now we need the most of all,
Since our insulting foes so near us sit.
By this night's counsel we must stand or fall.
Thus Nestor said, and 'twas agreed upon.
The captains of the watch then straight went forth; 75
First Thrasymedes, that was Nestor's son;
And after him six captains more of worth,
Ascalaphus, and then Ialmenus,
Then Aphyres, and then Meriones,
And Lycomedes, and Deipyrus: 80
The seven captains of the watch were these.

And with each one a hundred spearmen went
Betwixt the pale and wall, and supped there.
And the old leaders t' Agamemnon's tent,
And by him nobly entertained were. 85
But when they had an end made of the feast,
Nestor his counsel further open laid,
Which formerly had always been the best;
And, looking t' Agamemnon, thus he said.
King Agamemnon, I'll with you begin, 90
And with you end, since you the sceptre bear,
And in your care it lies to lose or win.
You chiefly should good counsel give and hear.
Hear then what now is my opinion,
Than which a better, I think, you'll not find, 95
Nor is it now the first time thought upon.
But heretofore I was of the same mind,
When from Achilles you Briseis took,
And I advised you to let her stay,
Though my good counsel then you could not brook, 100
But to your own great heart too much gave way,
Dishonouring the man of greatest might
In all the army, and most honoured
By all the Gods, and, contrary to right,
Taking the prize which he had purchased. 105
So that the bus'ness we have now to do
Is how to reconcile him if we can,
What gifts to give him, who shall with them go,
And with sweet language pacify the man.
This said, Atrides penitent replied, 110

Nestor, all you charge me with is true,
And for Achilles' sake, 'tis not denied,
Jove does th' Achæan army now subdue.
He whom Jove loves worth a whole army is.
But since I made Achilles discontent, 115
I'll make amends for what I did amiss,
And send a noble present to his tent.
I'll name the gifts I'll give him one by one.
Seven fire new trivets. Talents ten of gold.
Twenty black cauldrons. Twelve steeds that have won 120
Each one their prizes, and yet are not old.
A man that hath so many and so fleet
I think not poor, but gold may quickly win,
When I consider with their nimble feet
How many prizes they have brought me in. 125
And women seven, the best of women kind
For beauty and for works of housewifery.
And unto these Briseis shall be join'd,
And I'll be sworn she goes untouch'd from me.
And all this shall be sent him presently. 130
Hereafter, if we win the town of Troy,
Let him, before the prey divided be,
Come in and carry to his ship away
As much as it can bear of gold and brass.
And twenty Trojan women which he please, 135
Helen except. But if it come to pass
That safe to Argos we repass the seas,
My son in law he shall be if he will,
And as my son Orestes honour'd be;

Within my house three daughters I have still, 140
Iphianassa and Laodice,
And fair Chrysothemis, take which he list,
And to his father's house convey. For I
On settling of estate will not insist,
But of my own do that sufficiently. 145
Seven cities he shall have: Pheræ divine,
Enope, Ire, and Cardamyle,
And Pedasus that fertile is of wine,
Anthria, Æpia, all on the sea
Of sandy Pyle; and rich in sheep and kine 150
The people are, and will his laws obey,
And tribute pay as to a pow'r divine.
All this I'll give his anger to allay.
And this content him may if anything.
Inexorable none but Pluto is, 155
But hated for't. I am the greater king,
And elder man: he should consider this.
Thus Agamemnon. And then Nestor said,
The gifts, O king, no man can reprehend.
The next thing to be thought upon and weigh'd, 160
Is whom we shall unto Achilles send,
I think that Phoenix ought to lead the way,
Then Ajax and Ulysses, and with these
The public heralds two, Eurybates
And Odius, and here no longer stay
Ambassadors sent with gifts to reconcile Achilles in vain. 165
Than to bring water for our hands, that we
May first send up our prayers unto Jove,

That our embassy may successful be.
This said by Nestor, all the rest approve.
When water was brought in they wash'd and pray'd; 170
The young men fill'd the temperers with wine;
And round about the full cups were convey'd,
And offer'd up unto the powers divine.
When they had offer'd, and drunk what they would,
And parting were from Agamemnon's tent, 175
Old Nestor to instruct them how they should
Achilles best persuade, out with them went.
And one by one advis'd them what to say,
Especially Ulysses. Then they went
Saying their prayers to Neptune all the way, 180
Until they came unto Achilles' tent.
Who sitting, in his hand had a guitar
To pass the time, and sung unto the same
The noble acts that had been done in war
By th' ancient heroes, men of greatest fame. 185
Patroclus sat before him, looking when
He should have done. Ulysses then led in
Ajax and Phœnix. And Achilles then
Leap'd up as one that had surprised been.
And them receiving kindly to them said, 190
Welcome, my friends, whate'er your bus'ness be.
To see you I am not a little joy'd,
Although th' Achæans have provoked me.
And to his friend Patroclus order gave,
A larger temperer, said he, set up, 195
For these the dearest friends are that I have.

Pure be the wine, and give each man a cup.
Patroclus did so. And sets on a pot
Upon the flaming fire, and puts into't
A good sheep's chine, another of a goat, 200
Besides the chine of a fat boar to boot.
The blood boil'd out, Automedon it takes
And holds it to Achilles to divide,
Who of it many equal portions makes.
Patroclus makes a fire of wood well dried; 205
And when the flame was spent, the coals he rakes
Till they lay even; then the meat he spits
And roasts; and when 'twas roasted up it takes,
And on clean dresser-boards the same he sets;
And brought, in baskets, to the table bread; 210
And by Achilles was set on the meat.
Who when he saw the table furnished
Over against Ulysses took his seat,
And bade Patroclus sacrifice, who then
The first cut took and threw into the fire, 215
And freely to their meat then fell the men.
But when of food they had no more desire,
Then Ajax Phœnix jogg'd, which was the sign
When to begin, for which Ulysses staid.
Ulysses then fill'd up his cup with wine, 220
And speaking to Achilles, thus he said.
All health t' Achilles. Noble is your fare,
And by Atrides treated well we were.
Your tables plentifully furnished are,
But that's not it for which we now are here. 225

Our ships in danger are to be destroy'd;
The Trojans are encamped near our wall.
Unless you condescend to give us aid,
By Hector they are like to perish all;
Who threatens he will set them all on fire, 230
And is encourag'd to't by signs from Jove.
To see the morning rise is his desire,
And feareth neither men nor pow'rs above.
And like a dog enrag'd, and looking grim,
Assures the Trojans he our ships will burn, 235
And either put us for our lives to swim,
Or never to Achæa to return.
I am afraid the Gods perform it will,
And so to perish here will be our fate.
Rise, then; if but a little you sit still, 240
All you can do for us will come too late.
And then I am assured you will grieve,
When remedy there can be none, in vain:
Therefore, while yet you can, the Greeks relieve;
Your father's counsel call to mind again. 245
My son, said he (when you took leave for Troy),
May Juno and Athena strengthen you.
But this one lesson take from me. I pray
Remember still your anger to subdue;
Decline all contestation of the tongue, 250
And let your conversation gentle be;
So shall you win the hearts of old and young
In the Achæan host. Thus counsell'd he.
Though you have this forgot, yet now be friends,

And since he sorry is, forget th' offence, 255
And take the gifts he offers for amends,
Which we esteem a worthy recompence.
I'll name the gifts he offers one by one.
Seven fire-new trivets. Talents ten of gold.
Twenty black cauldrons. Twelve steeds that have won 260
Their sev'ral prizes, and yet are not old.
A man that has so many and so fleet
I think not poor, but gold will quickly win,
When I consider with their nimble feet
What prizes to Atrides they brought in. 265
And seven fair women, best of all the kind
For beauty and for works of housewifery,
And unto these Briseis shall be join'd;
And swear he will she is from blemish free.
And all this shall be sent you presently. 270
Hereafter, if we take the town of Troy,
You may, before the prey divided be,
Come in and carry to your ship away
As much as it can bear of gold and brass;
And twenty Trojan women which you please, 275
Helen except. But if it come to pass
That safe to Argos we get o'er the seas,
His son in law you shall be if you will,
And as his son Orestes honour'd be.
Within his house three daughters he hath still, 280
Iphianassa and Laodice,
And fair Chrysothemis, take which you list,
And to your father's house convey her; he

On settling of estate will not insist,
But of his own do that sufficiently. 285
Seven cities you shall have. Phæraë divine,
Enope, Ire, and Cardamyle,
And Pedasus that fertile is of wine,
Anthria, Æpia, all on the sea
Of sandy Pyle; and rich in sheep and kine 290
The people are, and will your laws obey,
And tribute pay as to a pow'r divine.
All this he'll give your anger to allay.
And though Atrides and his gifts you hate;
Honour'd you are by th' other Argives all, 295
And should have pity on their sad estate,
Who in such numbers before Hector fall;
Whom you may have the honour now to kill;
For now he will your spear no longer shun,
But stand you in the open field he will; 300
For'mongst the Greeks he thinks there's like him none.
To this Achilles answer'd, and thus said,
Ulysses, I perceive I must be plain.
For if I be not so, I am afraid
I shall be put to speak my mind again. 305
But to prevent more importunity,
What once I say I'll do. Those men I hate
Whose tongues and hearts I find to disagree,
As much as I abominate hell-gate.
I will no more persuaded be to fight 310
By Agamemnon or by any Greek,
Since they my labour do so ill requite,

And they that fight, and fight not fair alike.
For good and bad are equal when they die.
Then for my pain and danger in the wars, 315
What more than any other man have I?
With me as with a bird i' t' field it fares,
That to her unfledg'd young ones bringeth meat.
She has it in her mouth and hungry is,
Yet she forbears and gives it them to eat. 320
With the Atrides twain my case is this,
In blood by day I lead a weary life,
And sleepless am the great'st part of the night.
And why? That Menelaus may win his wife
Achilles must against the Trojans fight. 325
I did so; and from Troy twelve cities won
Upon the shore, i' th' land eleven more,
And all the prey I sent to Atreus' son,
Wherein of precious treasure was great store.
A small part he divided 'mongst the host. 330
Somewhat he gave for honour to the best;
But to himself made sure to keep the most.
And firm is whatsoe'er he gave the rest;
From none but me his gift he takes away.
I am content, and let him keep her still 335
And her enjoy. But why then came to Troy
Atrides with such strength? What was his will?
Was it not only for fair Helen's sake?
What then must no man love his wife but they?
Yes, all men of their own wives much should make, 340
If they have either wit or honesty.

And I love mine as well as he loves his,
Although she be my captive. But since she
By Agamemnon from me taken is,
Ne'er think, Ulysses, to prevail with me. 345
He shall not twice deceive me. But provide,
Ulysses, that your ships not burned be.
I know a wall, a ditch pal'd, deep and wide,
Is made by Agamemnon without me.
But all this will not Hector long keep out. 350
But with the Greeks when I went to the fight
He never durst to show his face without
The Scæan gate, save once. And then by flight
He 'scap'd. And since I am no more his foe,
To morrow to the Gods I'll sacrifice, 355
And launch and lade my ships, and homewards go.
And you shall see me, e'er the sun shall rise,
Upon the Hellespont if you think fit,
And how my lusty Myrmidons can row.
And so, if Neptune please, the wind may fit, 360
As in three days we may to Phthia go,
Where treasure plenty I behind me left:
And now shall carry thither gold and brass,
Iron and women fair, although bereft
Of her that given me by Atrides was. 365
Tell him all this, and speak it openly,
Lest other Greeks put up the like disgrace.
As for myself, though impudent he be,
He dares no more to look me in the face.
I will no more in battle or advice 370

With Agamemnon join. Let him be glad
He could deceive me once. He shall not twice.
There let him rest. The Gods have made him mad.
I hate his gifts. And him I value not.
Though he would twenty times as much bring forth 375
As now he has, or to him shall be brought,
Or all that which Orchomenus is worth,
Or Thebæ, that Egyptian town that can
Send twenty thousand chari'ts to the field,
And all provided well with horse and man; 380
Yet so I will not t' Agamemnon yield;
No, nor for gold so much as here is sand,
Till he has smarted for this injury,
Nor any wife will I take at his hand
Though she should fairer much than Venus be. 385
Nor though she could like Pallas work, or better,
I'll not his daughter take. Bid him bestow her
Upon some prince he thinks more worthy. Let her
For husband have a king of greater power.
For if the Gods to Hellas bring me home, 390
Peleus will there provide me of a wife.
King's daughters, not a few there are, of whom
I shall choose one, and with her lead my life,
And with my father live contentedly.
For all the wealth of stately Ilium, 395
Which they enjoyed in tranquillity
When yet the Argives were not hither come,
And all Apollo's sacred treasury
Laid up at Pytho, is not price enough

The life of any man though poor to buy. 400
Horses, and kine, and sheep, and household stuff,
May be recover'd, but man's life cannot.
My mother Thetis told me as my end,
That if I fight 'gainst Troy, 'twill be my lot
To die there, but that Fame would me commend. 405
But on the other side assured me,
That if 'gainst Ilium I warred not,
But back to Phthia went, my fate would be
Long time to live, and after be forgot.
And I advise you and the rest to sail 410
As soon as may be to your native land;
For you will not at Ilium prevail,
Since Jupiter protects it with his hand.
And now go tell the princes what I say,
That they may better counsel take to save 415
Their ships and men by sea, because the way
Which now they take no good effect will have.
Let Phœnix, if he will (not else), stay here.
This said, th' ambassadors were mute, and sorry
They from him could no better answer bear, 420
Than a denial, flat and peremptory.
At last unto Achilles Phœnix spake;
If you, said he, resolv'd are to be gone,
And leave the war for Agamemnon's sake,
In what estate shall I be here alone? 425
When you to Agamemnon first were sent,
You were a child, and understood not war,
Unable to say clearly what you meant,

Which the first principles of honour are.
And by your father I was with you sent, 430
To show you how you were to speak and do.
So that if you to go be fully bent,
You need not doubt but I shall be so too,
And should be though I were as young as when
I Hellas left, and from my father fled, 435
Amyntor, son of Orminus, who then
A concubine had taken to his bed;
My mother, to the end to make her hate
In such a way the old man's company,
Was with me oftentimes importunate 440
To court her, and I did thereto agree,
And got her love. Which when my father knew,
He fell into a mighty passion,
And many bitter curses on me threw,
And pray'd the Gods I ne'er might have a son. 445
His pray'r by Pluto and by Proserpine
Was heard, and I no longer would abide
At home; but cross'd awhile was my design,
By friends and nephews that my purpose spy'd,
Who pray'd me and retain'd me with good cheer; 450
Many good kine they kill'd and lusty sheep,
And many swine were daily singed there,
And much wine spent, and nightly watch they keep
By turns nine nights together; and fires twain.
One in the court against my chamber-door, 455
Another in the porch they kept in vain.
For on the tenth the court-wall I leapt o'er

And undiscerned to king Peleus fled,
Who us'd me as a father would his son,
His only son far off begot and bred; 460
Enrich'd, and gave me the dominion
Of the Dolopians, who are a part
Of Peleus' realm. · Now, no man like you is,
Divine Achilles, whom I love at th' heart,
And joy that I have brought you up to this, 465
Though painful to me were your infancy,
Who not at feast nor in the house would eat,
If first I did not set you on my knee,
And into little pieces cut your meat.
And often on my breast you puk'd your wine. 470
But since I knew my line with me would end,
To take you for my heir was my design,
Who in my feeble age might me defend.
Master your heart, Achilles; for you know
The Gods, though stronger and more fear'd than you, 475
With incense and with pray'rs are made to bow,
Although from men they not receive their due.
For Prayers of high Jove the daughters are,
Though lame their feet, and squinting be their eyes;
And follow Wrath (though she runs faster far), 480
And to the hurt she does give remedies,
And cure all those that show them due respect.
But when an angry man they cannot move,
That reconciliation always will reject,
They call for judgment from their father Jove. 485
Therefore, Achilles, give respect unto

These Goddesses, the daughters of high Jove,
As other mighty men and princes do.
Had not Atrides, to redeem your love,
Offer'd you presents great, and promised more, 490
I never had advis'd you to agree
To save their ships from burning on the shore.
Till that were done you could not blamed be.
But since he does so amply make amends,
And chosen has good men to intercede, 495
Who are of all the Greeks your greatest friends,
Refuse them not the grace for which they plead,
Such was the hero's custom heretofore,
When one had done another injury,
The damage they had done first to restore, 500
And then with gifts and pray'rs buy amity.
But I will tell you how it came to pass
At Calydon long since, not yesterday,
War 'twixt the Curets and th' Ætolians was,
These to defend, the other to destroy. 505
For Ceneus having got his harvest in,
To all the Gods made a great sacrifice;
Only Diana had no part therein,
Forgot she was; he did not her despise.
But she in anger sent a great wild boar, 510
That wasted and made havoc of his field,
And up by the roots, his goodly fruit-trees tore.
This boar Meleager, son of Ceneus kill'd,
Assisted by the youth of many a state
That to the chase with men and hounds came in. 515

Between them then Diana rais'd debate
About who was to have the head and skin.
While Meleager with them went to war,
The Curets never durst approach the wall,
Although they were the greater number far. 520
But when with choler swelled was his gall,
(Which often happens to a man, though wise)
He kept his chamber and abstain'd from fight,
Offended with his mother's injuries,
And of all company eschew'd the sight, 525
But Cleopatra, consort of his bed,
Child of Marpissa, who (by stealth) was bride
Of Idas, who at that time carried
For strength the reputation far and wide.
This Idas' child was Meleager's wife. 530
But Idas rashly for his dear wife's sake
Against Apollo did engage his life,
And him at bow and arrows undertake.
But Cleopatra then surnamed was
Halcyone, that was not so before 535
Her father with Apollo fought, because
She did her mother's death so much deplore.
With her now grieving Meleager lay,
And angry at the curses of his mother;
Who to the Gods continually did pray 540
Against his life for killing of her brother;
And from her eyes the tears ran down her breast,
And often with her hand the ground she smote.
Making to Pluto and his queen request

To kill her son; which they rejected not. 545
Meanwhile the uproar heard was at the gates,
And thumping of the tow'rs of Calydon.
To Meleager then came priests and states
Intreating him his armour to put on,
And save the town, and offer'd for his pain, 550
As much good land (so take it where he would,
One half for wine, the other half for grain)
As fifty able oxen labour could.
Then came his father rattling at his door,
His brothers, and his angry mother too: 555
But he persisted in his will the more;
His dearest friends could with him nothing do.
But when the cry and danger now was nigher,
And on the tow'rs the Curets mounted were,
And ready now to set the town on fire, 560
Then Cleopatra to her husband dear
Show'd th' image of a town won by the foe.
How butcher'd are the men, the houses burned,
Their wives and children dragg'd away; and so
Her husband's heart again to pity turned. 565
Then went he and repell'd the enemies,
Though what they promis'd him they never gave.
But that's not it to which I you advise;
But first the ships, and then the Greeks to save;
But not without these gifts to go to war: 570
For more unto your honour it will be
To give them aid when satisfied you are,
By Agamemnon for the injury.

Thus Phoenix said. Achilles then replied,
Such honour I seek none. Jove honours me, 575
Since by his will I at my ships abide,
And will do till I dead or strengthless be.
No more molest me for Atrides' sake,
But stay with me, and equal to me reign,
And such as are my friends for your friends take, 580
And do not lose my friendship his to gain.
Stay, then, this night, and take your lodging here;
My answer t' Agamemnon these will carry;
As soon as morning shall again appear,
We'll talk of whether we shall go or tarry. 585
And as he spake those words, he wink'd upon
Patroclus to give order for his bed,
That he himself prepare might to be gone.
Amongst them then great Ajax spake and said,
Ulysses come, our labour here is lost; 590
Let's carry back his answer, such as 'tis,
To Agamemnon and the Argive host,
Who us expect, since obstinate he is,
And can a thought so savage entertain,
Unkind and unregardful of his friends, 595
When others for a son or brother slain
Can be contented to receive amends,
And let the man that slew him live in rest,
As soon as they have paid for their misdeed.
But you, Achilles, harbour in your breast 600
An everlasting anger without need,
And hurtful to your friends no less than foes,

For 'tis but for one maid he took away;
And for her now he seven on you bestows,
And much beside, your anger to allay. 605
Regard your house. We your domestics are,
Nearer than any of the Greeks beside,
And in your honour more concern'd by far.
Thus Ajax said. Achilles then replied,
Ajax, noble son of Telamon, 610
I not deny but all you say is well;
But always when that man you mention,
My choler rising, makes my heart to swell.
He made me has to th' Argives despicable,
As if I were a fool or inmate who 615
Of honour in a town is incapable,
And with the public nothing has to do.
Go, therefore, let Atrides know my mind.
I will no more against the Trojans fight,
Till Hector at my tents and ships I find, 620
And th' Argive fleet be flaming in my sight.
For if he come unto my ships, I think,
Keen as he is, I shall his fury stay.
This said, unto the Gods above they drink,
And then they with his answer went away. 625
Patroclus then gave order for a bed
With woolly cov'rings soft and linen fine
For Phœnix, where he lay till day was spread.
But with Achilles slept a concubine,
Fair Diomeda, whom he brought away 630
From Lesbos when he had that city sack'd.

And in another part Patroclus lay,
Nor he a beautiful bed-fellow lack'd,
Fair Iphis, whom Achilles gave him when
He newly rifled had the town of Scyros, 635
And now th' ambassadors were come again,
And to them store of people flock, desirous
To hear the news, and wine unto them brought.
But Agamemnon first inquir'd and said,
Ulysses, will he save the fleet or not, 640
Or is his choler not to be allay'd?
And he Achilles' answer then related.
The man, said he, retains his anger still.
And now 'tis greater rather than abated,
And says, tomorrow put to sea he will. 645
And your alliance and your gifts rejects,
And says he would advise us to go home;
Since Jupiter himself the town protects,
He says in vain we stay at Ilium.
And bids you order take to save the fleet. 650
Thus said he, as these know as well as I,
Ajax and both the heralds, men discreet,
Who all the while he spake were standing by,
And Phœnix too. But he lies there all night,
That o'er the sea together they may go, 655
If Phœnix will, as soon as it is light;
But forc'd is not whether he will or no.
When thus Ulysses ended had his story,
All silent were awhile and much dismay'd
With his denial flat and peremptory. 660

At last Tydides to them spake and said,
king Atrides, we have done amiss
With gifts and prayers thus to seek his aid,
That proud before, by this made prouder is.
Let him go when he will. Be not afraid, 665
But let's refresh ourselves tonight with bread
And wine; for that gives men both strength and heart,
And see your men i' th' morn embatteled,
And at the head of them do you your part.
This said, the princes of the host admired 670
The gallant speech of valiant Diomed:
And every one unto his tent retired,
With a good will to sleep, and went to bed.

LIB. X.

Encounter of the scouts by night.

ALL NIGHT THE princes of the Argives slept,
Save Agamemnon, who could take no rest,
But with unquiet thoughts was waking kept,
And casting for his safety what was best. 5
And frequent as the lightning flashes are
When Jove is making rain or hail i' th' skies,
Or somewhere punishing the proud by war;
So frequent then were Agamemnon's sighs.
And when the fires he saw upon the plain 10
Made by the foe, and th' acclamation
And shouts he heard, he wondered. But again
When he his ships and people look'd upon,
Then by the roots he pluck'd off from his head
Handfuls of hair, and sigh'd and groaned more; 15
And thought it best then to be counselled
By Nestor how he might himself restore.
And rising up, his coat he first puts on,
And to his smooth white feet his shoes he tied;
And then, above his coat, he cast upon 20
His back a great and tawny lion's hide.
And Menelaus, too, that waking lay
And trembling in his bed all night, for fear

The Greeks that for his sake were come to Troy
Should fall into some great disaster there, 25
Rose up and to his brother's tent went in.
A spear he had in's hand, and armed was,
Having upon his back a leopard's skin,
And on his head a helmet good of brass.
And said to Agamemnon, Brother, why 30
So early up? Have you a mind to send
Into the army of the foe some spy?
I fear you will not find so bold a friend
As thither dares to go i' th' night alone.
Brother, said Agamemnon, you and I 35
Must better counsel take than we have done,
Since Jove now favoureth the enemy,
And takes in Hector's sacrifice delight.
For so much harm so soon was never done,
As he to us has done in one day's fight; 40
Yet nor of God nor Goddess is the son.
His this day's acts the Greeks will ne'er forget.
But go you to the princes quickly. Run.
Call up Idomeneus the King of Crete,
And the great Ajax son of Telamon, 45
While I call Nestor up and bring him to
The place which is appointed for the guard,
T' instruct the men with what they have to do,
Because his counsel they will most regard.
For by his son the watch commanded is, 50
And with him we Meriones have join'd.
Then Menelaus farther ask'd him this,

That he might fully understand his mind,
When they are call'd, what next is to be done?
Must I stay here till you come back again, 55
Or after you about the army run?
No, no, said he, where you are now, remain.
But going call upon each one aloud,
And by the name he from his father takes,
And praise them all, let them not think you proud; 60
Pain is no shame when 'tis for our own sakes.
This said, they part, and Agamemnon went
To seek out Nestor; whom he found a-bed,
And all his armour by him in his tent,
His shield, two spears, and helmet for his head, 65
And belt of many colours finely wrought,
Which always he was wont in war to use
When he his people unto battle brought.
No labour would he on his age excuse.
Now raised on his elbow, Who, said he, 70
Are you that walk abroad when others sleep?
Stay there, I say, and come no nearer me;
Until your name you tell, at distance keep.
Seek you some officer or camerade?
I Agamemnon am, said he, your friend, 75
Whom Jove to bear such miseries hath made,
As while I live will never have an end;
And in my bed no sleep at all I take
For fear of some unfortunate event.
Unsettled is my heart, my limbs all shake, 80
And in this plight I wand'ring to your tent:

And now, I pray you, since you waking lie
Come with me to the watch; for since the foe
Unto our wall encamped is so nigh,
They charge us may by night for aught we know. 85
To this old Nestor answer made and said,
Think not, Atrides, Jove will all things do
As they are now in Hector's fancy laid?
For harder work he would be put unto
If we Achilles can but once appease. 90
But go, I'll follow you, and call upon
Tydides and Ulysses if you please,
Ajax the less, and Meges Phyleus' son.
I wish some other man of nimbler feet
Were to great Ajax sent to make him rise, 95
And to Idomeneus the King of Crete,
Whose quarter from this place a great way lies.
But Menelaus I intend to chide,
That sleeps and leaves the work to you alone.
'Tis no fit time within his tent t' abide, 100
But to the princes should himself have gone.
To Nestor Agamemnon then replied,
Nestor, he is often negligent,
And often I have pray'd you him to chide.
Yet 'tis not sloth; but my commandment 105
He always looks for, though there be no cause.
And yet tonight he has prevented me.
For up and arm'd before me now he was;
And when he came I sent him presently
To call up Ajax and the King of Crete. 110

And at the watch we both of them shall see,
Where I appointed have the rest to meet.
Nestor again replied. 'Tis well, said he,
The Greeks will of him have a better thought,
And readier obedience he will find. 115
This said, he put himself into his coat,
And tied his shoes on, and his cloak well lined,
And took his spear in hand. Then on they went
Among the Argive ships upon the sand.
And when they came unto Ulysses' tent, 120
To call and waken him, they made a stand.
And Nestor, with his voice stretch'd to the height,
Call'd to him by his name. Ulysses straight
Came forth and said, Why come you in the night?
Your bus'ness sure must be of mighty weight. 125
Laërtiades, said Nestor then,
Take it not ill. Such is our misery.
But come with us to call up other men,
That we may counsel take to fight or fly.
Ulysses then return'd into his tent, 130
And on his shoulders hung his painted shield;
And with them first to Diomed he went,
Whom they found armed in the open field,
His soldiers sleeping lay about him round,
And on his buckler each one had his head, 135
The butt-ends of their spears fix'd in the ground,
Whereof the points like lightning glittered.
But he himself slept on a good cow-hide,
His head upon a gaudy carpet laid.

Then Nestor came and standing at his side 140
Awak'd him with his foot, and to him said,
Awake, Tydides, hear you not how nigh
The Trojans are encamped to the fleet?
This said, Tydides leap'd up suddenly,
And when he raised was upon his feet, 145
Nestor, said he, unhappy restless man,
That aged as you are take not your ease,
When younger men there are that better can
Call up the Argive princes if they please.
'Tis true, said Nestor, I have at my tent 150
Sons of my own, and others can command,
Who might upon such errands have been sent,
But that upon the very brink we stand
Of life and death. And since you pity me,
Call little Ajax up, and Phyleus' son. 155
For young you are, and can do't easily.
Tydides then a lion's skin puts on
Tawny and reaching to his heels, and then
Into his hand he took a heavy spear,
And out he went and called up those men. 160
When to the watch they come together were,
The captains of the watch were not asleep,
But all were sitting at their arms awake.
As dogs that guarding are a fold of sheep
Hearing the noise the hounds and hunters make, 165
When in the woods they chase some savage beast,
And nearer still and nearer hear the cries,
They doubt the worst, and cannot take their rest,

But list'ning stand and sleep forsakes their eyes;
So watchfully spent they the tedious night, 170
And ever when of feet they heard the tread
'Twixt them and Troy, that way they turn'd their sight;
So much they Hector's coming on did dread.
When Nestor coming by, observ'd them had,
So, so, said he, brave lads, continue so, 175
And give no cause to Hector to be glad.
He and the princes then together go
(All that to counsel had been made to rise,
Except Meriones and Nestor's son,
Whom they thought worthy with them to advise) 180
And part the ditch, and sitting down upon
The place to which they were pursued before
By Hector, who retiring thence, left clear
The ground from dead men's carcasses and gore,
Of what they next should do consulted there. 185
First Nestor spake. Who dares (said he) to go
Unto the Trojan camp that lies so near,
And kill, or bring thence some outlying foe?
Or what they shall resolve upon to hear?
Whether (since they have worsted us) to stay 190
So near us, or retire into the town.
If this he do and safely come away,
He to himself acquire will great renown,
And by each one that has of ships command,
He for his service shall be well requited. 195
Each one an ewe and lamb shall give him, and
He to our public feastings be invited.

This said, they paus'd awhile, but by and by
Tydides rising spake. Nestor, said he,
To go into the Trojan camp dare I. 200
But 'twould be best some other went with me,
More hope and courage is where there are two;
What one observeth not the other may.
A man alone can little see or do,
And single judgments see but little way; 205
At these words many with him would have gone,
Ajaxes, both the greater and the less,
And stout Antilochus, old Nestor's son,
And Menelaus and Meriones.
But most of all Ulysses long'd to see 210
What projects in the Trojan camp were laid.
For none adventure farther durst than he.
Then to Tydides Agamemnon said,
Tydides, whom I love, now choose your man;
Regard not birth nor sceptres, but the cause. 215
Take him that you think best assist you can,
And this he said in fear for Menelaus.
To this Tydides answer made again,
Since of my fellows I the choice must make,
Ulysses I prefer before all men, 220
And him for my assistant I will take;
So much in diligence he doth excel,
And so much care Athena of him has,
That I believe we both should come off well
Though through a flaming fire we were to pass. 225
Then, said Ulysses, Speak no more of me,

Nor good nor ill. The Argives know me well.
Let's go. Two-thirds o' th' night are spent, you see,
As any man that sees the stars can tell.
Then put they on their arms. And Thrasymed 230
Gave Diomed a sword (who had forgot
To bring his own), and to defend his head
A leather cap without crest, call'd a pot.
Meriones unto Ulysses gave
His bow and quiver, sword and dogskin cap, 235
Pleated with thongs within, his head to save
If need should be in combat, from mishap.
For 'twixt the leathers tough inserted were
Guards of thick felt; of boar's teeth was the brim.
Eleon was the first that did it wear, 240
But taken by Autolycus from him,
And given 'twas unto Amphidamus,
Which he to Molon gave that was his guest,
And to Meriones then left it was,
And now upon Ulysses' head did rest. 245
And being both thus armed, forth they went
And by the way a heron dexter flew,
A lucky sign, and by Athena sent,
As by the sound made by her wings they knew.
Ulysses then unto the Goddess pray'd, 250
Hail virgin daughter of almighty Jove,
That all my labour seest, and giv'st me aid,
Now more than ever let me find your love.
Grant me that I some good exploit may do
To vex the Trojans, and come safe from thence. 255

And then Tydides pray'd unto her too.
Celestial maid, that with my father went'st
When he ambassador to Thebes was sent
With words of peace, and coming back achieved
By your assistance and encouragement 260
Such noble acts as scarce will be believed,
If you will aid me as you aided him,
Goddess, I will to you sacrifice
A heifer, and with gold her horns I'll trim.
This said, their suit the Goddess not denies. 265
When their devotion now was at an end,
Away they went, 'mongst carcases and blood,
Like lions that on slaughter love t'attend.
Nor Hector and the Trojans idle stood,
But call'd a council of the chiefs, and said, 270
Who's he will undertake what I'll propound,
And for his pains be honourably paid,
And for his valour far and near renown'd?
I give him will two horses and a coach,
The best that shall be taken from the foe, 275
That will unto the Argive fleet approach,
And bring me word what they intend to do;
Whether their ships they guard as heretofore,
Or mean to quit the siege at Ilium.
And beaten thus, haul down their ships from shore, 280
And ere their work be finished, go home.
This said, they silent sat. But one there was,
Dolon by name, the squire Eumedes' son,
That master was of store of gold and brass,

A sorry fellow, but that well could run. 285
Hector, said he, I'll to the fleet approach.
Swear now by Jove, and hold your sceptre high,
I shall Achilles' horses have and coach,
And I for you will be a faithful spy.
For down to Agamemnon's tent I'll go, 290
Where they consult whether to fight or fly:
For there their resolution I shall know.
Then Hector held his sceptre up on high.
Jove, betwixt us witness bear, said he,
No Trojan shall these horses have but you, 295
And yours they shall perpetually be.
Thus Hector swore, although it prov'd not true.
Upon his shoulder then his bow he hung.
His cap of cat, a wolf's skin was his coat.
And when he gotten clear was from the throng, 300
With spear in hand he fell into his trot.
And first Ulysses heard the sound of feet.
I hear one come, said he to Diomed,
Perhaps a spy that sent is to our fleet,
Or one that has a mind to strip the dead. 305
'Tis best t' avoid him till he past us be,
And then to follow him and drive him on.
But lest he swifter be of foot than we,
And to the city back again should run,
Rise and be sure to turn him with your spear. 310
And when he was a land's length past them gone
They follow'd him. And he their feet did hear,
And thought some Trojans had been coming on

By Hector sent to call him back again.
But when they from him were scarce a spear's cast, 315
He knew then they were Agamemnon's men,
And frighted was; and then his feet mov'd fast.
As two hounds in a wood obscure and dim
Pursue a fearful doe or hare, just so
Tydides and Ulysses hunted him, 320
When back into the herd he could not go.
When Dolon to the watch was very near,
Athena puts into Tydides' head,
That some man else might at him throw a spear,
And be thereby before him honoured. 325
To Dolon then Tydides spake, and said,
Stay, or my spear shall make you stay; for long
I am assur'd you cannot death avoid.
And as he spake the word, his spear he flung,
And miss'd on purpose, but it lighted near. 330
Dolon affrighted, pale and trembling stands,
And in his head chatter'd his teeth with fear.
Then in they came and seiz'd on both his hands;
And Dolon weeping, then for quarter pray'd,
Great ransom for me will my father give, 335
For gold he has enough; and will, he said,
Give any price, when here he knows I live.
Then to him said Ulysses, Do not fear,
Nor think of death. But see you tell me true
Upon what weighty bus'ness you are here, 340
When others sleep, and at a time undue.
Meant you to rifle any of the dead?

Or were you sent by Hector as a spy,
Or undertook the same of your own head?
T' Ulysses Dolon then did thus reply: 345
I was by Hector's promises set on,
And should have had Achilles' chariot
And horses, if I to the fleet had gone.
And good intelligence to Hector brought,
Whether the ships be guarded as before, 350
Or that the Greeks now beaten mean to fly,
And weary of their labour, watch no more.
To this again Ulysses made reply,
And smiling said, It was no small reward
You aimed at. Achilles' horse, ye say? 355
To rule them for a mortal man 'tis hard.
The Goddess Thetis' son they'll scarce obey.
But tell me further; when you came away,
Where you left Hector, where his horses are,
And where his arms; where other Trojans stay 360
To sleep or watch, and whether they prepare
To go into the town, or mean t' abide
Always so near our ships as they are now.
T' Ulysses Dolon then again replied,
This also I will let you truly know. 365
I Hector left at Ilus' sepulchre
With other lords in consultation,
The rest about the bonfires waking were.
But certain watch appointed there was none;
But those confederates that came from far 370
Slept at their ease all night and watched not;

For that they trusted to the Trojans' care,
Having no wives nor children with them brought.
Ulysses then examin'd him again,
How lie the strangers? mix'd with those of Troy, 375
Or by themselves? Inform me and be plain.
Nothing, said Dolon, but the truth I'll say.
Pæans, Pelasgians, Caucons, Leleges,
And Cars lie by the sea-side on the sands,
The rest near Thymbra quarter, and are these; 380
The Mæons, Mysians, Lycians, Phrygians.
But there's no need to tell you ev'ry thing;
For if upon our quarters you would fall,
There lie the Thracians new come, and their king,
Rhesus by name, and utmost lies of all. 385
Such horses yet I never did behold,
Swift as the wind, and than the snow more white,
With silver cover'd is his car, and gold;
Gold are his arms, and make a gallant sight,
And fitter for a God than man to wear. 390
But try now whether I say true or no,
And send me to the ships, or bind me here.
Then said Tydides with a frowning brow,
Think not to 'scape, though all you say be true;
For if I let you loose, for aught I know, 395
You may return again to fight or view;
But hurt us cannot if I kill you now.
As Dolon then beginning was to pray,
Tydides' sword lighted on's neck so just,
That from his shoulders fell his head away 400

As he was speaking, and lay in the dust.
And from him then they took his cap of cat,
His spear, and wolf's skin coat, and bow unbent,
And in his hands Ulysses took all that,
And to Minerva up his prayer sent. 405

Hail Pallas, whom we pray'd to for success
Before all other Gods, receive these gifts,
And us unto the Thracian tents address.

This said, the spoils of Dolon up he lifts,
And lays them in a tree; and for a mark, 410
They near the way laid store of boughs and reeds
To find them coming back, because 'twas dark.
Then with Tydides onward he proceeds,

The surprise of Rhesus.

And ev'ry step on arms or blood they tread,
And soon amongst the Thracians they were, 415
That sleeping lay, as if they had been dead,
And by each one his buckler and his spear.
Their horses to the chariot seats were tied.
Thus in three rows the Thracians were laid,
Rhesus i' th' midst; which first Ulysses spied, 420
And to Tydides speaking softly, said,
See there the horses, and see there the man
Rhesus, of whom we were by Dolon told.
Untie the horses; or kill all you can,
And I upon the horses will lay hold. 425
Tydides then, made by Minerva bold,
Amongst them killing went, and never staid
(Like lion fierce in a neglected fold)

Till he a dozen of them dead had laid.
And whomsoever Diomedes slew, 430
Ulysses following took him by the foot,
And from the place a little way him drew,
For fear the steeds, not yet accusom'd to't,
Should boggle, tremble, and refuse to pass.
To Rhesus last of all went Diomed, 435
And kill'd him too. So he the thirteenth was.
And panted as he slept; for at his head
He dreamt Tydides all night standing was.
Ulysses to the horses went; and now
Seiz'd, and their heads together tied has: 440
But for a whip he made use of his bow.
And gotten forth, whistled to Diomed
To come away, who gave no ear thereto,
But staying with himself, considered
What further hurt he might the Trojans do. 445
To draw away the chariot by the pole,
Wherein the golden arms of Rhesus lay,
Or thence upon his shoulders bear the whole;
Or whether he more Thracians should destroy.
While thus he studied, Pallas by him stood. 450
Contented be, said she, with what is done.
To go unto the ships I think it good,
For fear you thither should be forc'd to run.
Some other God awake the Trojans may.
This said, that Pallas to him spake he thought, 455
And from the Thracian quarter came away,
And on one of the horses' backs he got,

And tow' rds the ships at full speed then they ride,
Ulysses with his bow still switching on;
But Phœbus with Tydides Pallas spy'd, 460
And angrily call'd up Hippocoon;
Who, when he came and empty saw the ground
Where th' horses stood, and dy'd with blood the field,
And sprawling in their blood the Thracians found,
Ay me, said he, they have my uncle kill'd. 465
The Trojans then in haste and frightened rise,
And at the place in great disorder meet,
And gaze upon the mischief with their eyes,
But they that did it fled were to the fleet.
When flying they were at the tree, where lay 470
The spoils of Dolon, there awhile they tarry,
Until Tydides fetch'd them had away,
And to Ulysses given them to carry,
And mounted was upon his horse again.
Again Ulysses switch'd them tow' rds the fleet; 475
And when they near it were, old Nestor then,
Who was the first that heard the horses' feet,
Cried out, The sound of horses' feet I hear;
I wish Ulysses 'twere and Diomed.
But somewhat else and worse it is, I fear; 480
So many sad mishaps run in my head.
He scarce had spoken this but they came in.
When they alighted were and welcomed
With hands and speeches of their friends had been,
Then Nestor thus Ulysses questioned: 485
Ulysses, glory of the Greeks, said he,

Whence are these horses, beauteous as the sun?
Won from the Trojans? But that cannot be;
For such amongst the Trojans I saw none,
Though I amongst them were in ev'ry fight. 490
Or given by the Gods? which may be true;
For both of you are gracious in their sight,
And Jove and Pallas have a care of you.
noble Nestor, said Ulysses then,
Gods can give better horses if they please; 495
For richer much are they than mortal men.
Tydides from a king of Thrace took these,
Who was come newly to the Trojans' aid;
And slain him has, besides a dozen more,
And besides these a spy that them betray'd, 500
By Hector sent your purpose to explore.
This said, Ulysses with much people went
Triumphing, and the milk-white horses drove
Over the trenches to Tydides' tent.
There sets them up, and wheat unto them gave; 505
But Dolon's spoils astern his ship he plac'd,
Preparing for Athena's sacrifice.
And then into the sea they went and wash'd
The sweat from off their shoulders, legs, and thighs,
And after bathe, and 'noint themselves with oil; 510
That done, they sit down to their meat and dine;
And being thus refreshed from their toil,
Unto the Goddess Pallas offer wine.

LIB. XI.

The third fight.

AURORA RISING FROM Tithonus' bed,
Before both Gods and men to hold her light,
Eris from Jove the signal carried
Unto the Argive fleet of bloody fight. 5
And down unto Ulysses' ship she went,
That was the middlemost and high'st of all,
That heard she might be to Achilles' tent,
And Ajax's, that they might hear her call.
At th' outsides of the fleet they quarter'd were; 10
For they upon their prowess most relied:
Then Eris with her voice the air did tear,
And horribly to the Achæans cried,
Come quickly forth into the field and fight;
Be bold, Achæans; to the battle come. 15
Encourag'd thus, the Greeks took more delight
In staying at the war than going home.
Fellows, to arms, then Agamemnon cried,
And to put on his arms the first man was.
His leg-pieces he down to th' ankles tied 20
With silver buckles, leg-pieces of brass;
And then puts on an armour on his breast,
That had been given him by Cinyres,

(His ancient acquaintance and his guest,)
Whilst he preparing was to pass the seas: 25
For long before the Greeks for Troy set sail,
Their purpose was at Cyprus known by fame,
And thinking such a gift might him avail,
In kindness t' Agamemnon sent the same.
The colour was by pales distinguished, 30
Ten black, twelve gold, and twenty were of tin:
And in it three black serpents figured,
As if they creeping were unto his chin.
Their sides like rainbows look'd, which in the sky
Are shown by Jove for men to wonder at. 35
Then from his shoulder down upon his thigh
He hung his sword. Studded with gold was that.
Then took his shield which finely varied was;
Bossed in twenty places with white tin;
And round about them were ten orbs of brass; 40
And black the circle was enclos'd within.
Then Gorgo painted was with killing eyes,
And with her standing Terror and Affright:
His belt of silver was, and to the skies
Returned back again the glitt'ring light. 45
Wound up lay on it painted a great snake,
Which had three heads, and crowned was each one.
And last into his hand two spears did take,
Having his helmet on his head put on.
Thus Agamemnon armed was. And then 50
Juno and Pallas both rais'd such a sound
(To honour him before the Greeks) as when

A man that's slain falls suddenly to th' ground.
Then every one unto his charioteer
Commandment gave upon the ditch to stay 55
And ready be. The foot all armed were,
And forth into the field were march'd away.
But soon again the horses with them stood.
Then Jove amongst them Noise and Tumult sent;
And mingled was the morning dew with blood, 60
For on that day much blood was to be spent.
Upon a rising ground now Hector was,
Æneas with him, and Polydamas,
And three sons of Antenor, Acamas,
Agenor, Polybus, and th' army was. 65
And Hector with a round shield at their head,
As when a star does through the clouds appear,
And presently again is covered;
Sometimes i' th' front was, sometimes in the rear
Giving command; his arms like lightning show. 70
As mowers standing one rank 'gainst another,
A field of barley or of wheat to mow;
So Greeks and Trojans mow down one the other.
On neither side thought any man of flight,
But like to wolves on one another fly, 75
In number equal; and gave great delight
To Eris, who (and no God else) was by.
The other Gods stayed on Olympus Hill,
Within whose folds they dwell, and murmur'd at
Their father Jove for bearing such goodwill 80
To Ilium. But he car'd not for that.

And by himself he from them went; and then
Took pride to see the Greeks and Trojans fight,
And look on killing and on dying men,
And of their arms to see the flashing light. 85
Now all the while that mounting was the sun,
The number slain on both sides was the same;
But when the woodman half his work had done,
And willingly unto his dinner came,
The Greeks then brake the Trojan ranks, and on 90
Fell Agamemnon, and Bienor slew,
Both him and Ocles his companion,
That drove the horses which the chariot drew.
He lighting and assailing him was slain;
And Ocles had no time his spear to throw: 95
For Agamemnon's spear had pierc'd his brain,
Passing both through his helmet and his brow.
These there he left, stript both of arms and coat,
And Antiphus and Isus then drew near,
Both Priam's sons, one legal, th' other not, 100
Upon one seat, and Isus charioteer.
Once by Achilles taken were these men,
As they were feeding sheep on Ida's hills,
And for their ransom were set free again;
But both of them now Agamemnon kills. 105
For Isus' breast he pierc'd through with his spear;
The other with his sword he overthrew,
And seen him had when he was prisoner.
And that 'twas Antiphus (when stript) he knew.
As when a lion with his mighty teeth 110

Crusheth the tender issue of a hind,
Which the affrighted dam stands by and seeth,
And grieveth, but no remedy can find;
And skipping in the woods for shelter seeks
To save her own life; so the Trojans fled, 115
Pursu'd by Agamemnon and the Greeks,
And thought not on their fellows they left dead.
T' Hyppolochus then comes he and Pisander,
Sons of Antimachus, a person noted
For having gold receiv'd of Alexander, 120
And for it in the common council voted.
And these two Agamemnon took alive;
For by mischance the reins slipp'd from their hands,
And then they saw it was in vain to strive,
And Agamemnon now before them stands. 125
Then as they sat together on one seat,
Save us (said they) Atrides, let us live,
For we redeem'd shall be with ransom great,
Our father for us what you please will give.
Are you Antimachus's son, said he, 130
That gave advice to murder Menelaus,
Contrary to the laws of honesty,
When of the Greeks ambassador he was,
And with Ulysses sent into the town?
You for your father's evil deed must pay. 135
Then from his car Pisander he struck down;
With breast pierc'd through upon his back he lay.
Hyppolochus was lighted and on foot,
And with the sword of Agamemnon slain,

Who cuts his head off, and his hands to boot, 140
And then upon the Trojans press'd again.
And great the slaughter was of them that fled,
And wonderful the dust that raised was;
And both the field and army covered,
Forc'd up by troops of horses shod with brass. 145
As boughs fall in a wood that's set on flame,
And shaken by the violence of wind,
So fast unto the ground the Trojans came,
When Agamemnon follow'd them behind.
And many horses made their chariots rattle, 150
Which empty ran about when no man drives.
For they that drove them fall'n were in the battle,
A lovelier sight to vultures than their wives.
But Hector was by Jove set out of sight
Of all this dust and slaughter and disorder: 155
But Agamemnon still with all his might
Pursuing killed, and to kill gave order.
Then they that were encamp'd at Ilus' tomb
Retir'd in haste unto the sycamore,
Half the plain over towards Ilium, 160
And after them Atrides, covered o'er
With blood and dust. But when the Trojans were
Got back unto the beech near Scæa gate,
Awhile they for their fellows stayed there,
Who swiftly ran, fearing to come too late. 165
As when a lion falleth in the night
Upon a herd of kine, and one must die,
And all the rest are put into a fright,

So Agamemnon made the Trojans fly;
And all the way he went the hindmost kill'd. 170
And from their cars some forward fell, and some
Upon their backs, and lay dead on the field.
But when unto the wall they near were come,
Then Jove came down to Ida from the sky
With thunder in his hand, and t' Iris said, 175
Go, Iris, quickly, and tell Hector I
Command him Agamemnon to avoid
As long as in the front he raging is,
And let the fight by others manag'd be.
But when he Agamemnon wounded sees, 180
And leave the field, I'll give the victory
To him, and he shall put them all to flight,
And to the fleet go killing all the way,
Until the sun be set, and dark the night.
This said, away she went without delay; 185
And down from Ida came to Ilium,
And finding him upon his car, To you
From Jove (said she) O Hector, I am come
To warn you Agamemnon to eschew,
As long as in the front he raging is. 190
And let the fight by others manag'd be;
But when by spear or bow he wounded is,
And leaves the field, he'll give the victory
To you, and you shall put them all to flight,
And to the fleet go killing all the way, 195
Until the sun be set, and dark the night.
Having thus said, she did no longer stay.

Then Hector armed, leap'd unto the ground,
And with two spears well pointed in his hand
Exhorting went about the army round. 200
Their faces then the Trojans turn, and stand.
The first that did advance Atrides was.
But tell me, Muse, who first came in his way?
One of Antenor's sons, Iphidamas,
That was brought up in Thrace (though born at Troy) 205
By Cisseus, who his mother's father was,
From childhood till to man's estate he came,
And made his son in law. But then, because
The coming of the Greeks was known by Fame,
Was thence, although but new espoused, sent 210
To th' aid of Priam and his sons at Troy,
And at Percopa landing t' Ilium went,
And now was standing in Atrides' way.
First Agamemnon threw his spear and miss'd:
Iphidamas then at Atrides threw, 215
And hit his belt, which did the stroke resist,
For massy silver was the belt and true,
And bent the point as if it had been lead.
Then Agamemnon with his sword came on,
And smote him on the neck, and laid him dead. 220
Thus died Iphidamas, Antenor's son:
And much to be lamented was his case,
That far from his espoused virgin wife,
Without receiving from her any grace,
Should fighting for his country lose his life. 225
He given for her had a thousand kine,

And promis'd sheep and goats a thousand more.
Now slain, and stript was of his armour fine
By Agamemnon, and triumphed o'er.
But Coön then, Antenor's eldest son,
Agamemnon wounded. 230
Incensed by his brother's death, came in,
And pierc'd Atrides' arm close by the bone,
(Unseen) the elbow and the wrist between.
Then cold was Agamemnon's heart with fear,
But gave not over. For as Coön drew 235
His brother off, he came on with his spear,
And with a thrust beneath his shield, him slew,
And, on his brother, then cuts off his head.
Thus these two brothers finished their fate.
Atrides still the slaughter followed 240
With spear, and sword, and stones of mighty weight,
Not giving over whilst the wound was warm.
But when 'twas cleans'd, and stayed was the blood,
So cruel then the pain was in his arm,
That on the ground no longer stay he could. 245
Then, mounted on his chariot, he said,
Drive to the ships; for he was in great pain.
And on the princes then the charge he laid,
The fight against the Trojans to maintain.
My friends, said he, 'tis your part now to stay 250
The fury of the Trojans from our ships;
Since Jove not suffers me to fight all day.
This said, the charioteer his horses whips,
Which when they felt, away they swiftly went,

And stain'd with sweat and powder of the plain, 255
Brought wounded Agamemnon to his tent,
From off the field bestrew'd with bodies slain.
As soon as Hector saw Atrides gone,
Now Trojans, Dardans, Lycians, he cried,
Now charge the Greeks with resolution, 260
For he is gone on whom they most relied,
And Jove assures me that the day is mine.
This said, like hounds encourag'd by the hunter
Against a lion or a tusked swine,
The Trojans boldly marched to th' encounter,
The Greeks beaten to their camp. 265
And on them fell, with Hector at their head.
And as a down-right wind the sea, so he
The Argive ranks and files disordered,
And them that fled pursued furiously.
But tell me, Muse, whilst Hector, Priam's son, 270
By Jove assisted, did the Greeks pursue,
And great renown amongst the Trojans won,
Who and how many were the men he slew.
Assæus first, and then Antonous,
Oplites, Dolops, and Ophelitus, 275
And then Æsymnus, and Agelaus;
Then Orus, and the last Hipponous.
All these were princes in the Argive host.
But look how many are the drops of dew,
When into th' air the sea by winds is tost, 280
So many private soldiers Hector slew.
And then incurable their loss had been,

And fled had to their ships the Greeks, dismay'd,
Had not Ulysses then the same foreseen,
And to Tydides, not far from him, said, 285
Tydides, to what purpose stand we here?
Come hither, man, and stand close to my side,
To let our ships be lost great shame it were.
Tydides to Ulysses then replied,
Yes, yes, Ulysses, I will with you bide, 290
Though we shall take but little pleasure here,
For Jove I see inclineth to their side.
This said, he at Thymbræus threw his spear,
Which lighting on his left pap pierc'd him through.
Ulysses slew Molion, Priam's man; 295
Upon the field unstript they left these two,
And then into the Trojan throng they ran,
(Whilst th' other Greeks from Hector swiftly fly)
Like two wild boars that turn upon the hounds,
That know they may upon their strength rely, 300
And scatter 'mongst the Trojans death and wounds.
And there two valiant sons of Merops kill'd,
As they together on one chariot sate.
This Merops was in prophecy well skill'd,
And bade them stay, and told them had their fate. 305
But the two forward youths would not obey,
But led unto the war by destiny,
Unluckily came in Tydides' way,
Where by his hand their fortune 'twas to die.
Hippodamas was by Ulysses kill'd, 310
As also was Eypirichus; and now

None knew who had the better in the field
But Jove, who looked on from Ida's brow.
And then Agastrophus, King Pæon's son,
Was by Tydides wounded in the thigh,
Diomed, Machaon, Ulysses, and Eurypylus wounded. 315
And would have fled, but horses he had none,
His man that held them for him was not nigh.
Yet fought he 'mongst the foremost till he died.
This Hector saw, and towards Diomed
His horses turn'd, and to the Trojans cried, 320
Come, follow me, and they all followed.
And Diomed, as soon as he saw this,
Though chill with fear, unto Ulysses said,
To us this plaguy Hector rolling is;
But stand, and let him see we're not afraid. 325
This said, he straight at Hector threw his spear,
Which hit his helmet, but glanc'd from the brass,
And never to his tender skin came near:
This helmet given him by Apollo was.
But stunn'd he was, and resting on his knees, 330
He kept himself from falling with his hand.
Dark are his eyes, nothing at all he sees,
And for a while unable is to stand.
But whilst Tydides on the plain advanced,
To get into his hand again the spear, 335
Which from the place he aim'd at far was glanced,
Hector was mounted, and his senses clear.
Tydides then upon him look'd, and said,
Thou dog, escap'd an evil death thou hast;

And twice been saved by Apollo's aid, 340
But sure I shall dispatch thee at the last,
For of a God I also have the aid.
But now to other Trojans I'll go on,
Such as shall come into my way. This said,
Away he went to strip King Pæon's son. 345
And then, as Diomed was taking from
Agastrophus the armour of his breast,
Paris, that leaning stood at Ilus' tomb,
To him an arrow unperceiv'd addrest,
Which hit him on the foot above the toes, 350
And to the ground clean thorough went the shaft.
Then openly into the field he goes,
And coming nearer to him spake, and laugh'd.
Ye're hit, said he, Tydides. Would it had
Been on your belly, that you might have died; 355
The Trojans would of that been very glad,
That are so often by you terrified.
Proud, boasting archer, said Tydides, know,
If in your armour you before me stood,
To try your valour and your force, your bow 360
And arrows would not do you any good.
You value such a scratch as this too much.
The weapons of the strengthless blunted are:
Mine is not so; but whom it does but touch,
His wife lamenting tears her cheeks and hair; 365
His children orphans are; and red the ground
Whereon he rotting lies; and vultures more
Than women standing by him will be found.

Ulysses then, that near him was before,
Stepp'd in, and stood betwixt him and his foes 370
Whilst from his foot the arrow he pull'd out.
Then to his char'ot up Tydides goes,
And left the field where he had nobly fought.
And now Ulysses left was all alone,
For from him all the rest were fled for fear, 275
And then unto himself he made his moan.
Ay me, said he, what now shall I do here?
Though many be the foes, 'tis ill to fly,
But yet, since Jove saves all the rest by flight,
It would be worse if I alone should die. 380
But why dispute I, when I ought to fight?
None but a coward from the fight will run.
But he that honour loves will stand his ground,
And be content with what he cannot shun,
Whether it be to give or take a wound. 385
While thus Ulysses argued in his mind,
Hector was near him, and enclos'd him had
With targetiers before him and behind,
Whereof they had no reason to be glad.
As when the hounds by hunters are set on 390
A wild boar as he comes out from the wood,
He whets his teeth, they from him will not run;
Even so Ulysses 'mongst the Trojans stood;
Where by him slain first Deiopites was,
And Thoon then, and Eunomus he kill'd; 395
And after these he slew Chersidamas,
As from his car he lighted in the field.

Then leaving these, slew Charops with his spear,
Socus, his brother Hippasus his son.
Then Socus to him came, and standing near 400
Unto Ulysses, with a speech begun.
Ulysses, much renown'd for craft and pain,
This day you either must the honour wear
Of having Hippasus his two sons slain,
Or lose your own life, wounded by my spear. 405
Then threw his spear, and pierc'd Ulysses' shield,
His breast-plate, and his coat, and tore his skin.
But Pallas him preserv'd from being kill'd;
For to the vital parts it went not in.
Ulysses knew the wound not mortal was; 410
Made a step back, and then to Socus said,
Fool that thou art, that wouldst not let me pass
On other Trojans, hast thyself destroy'd,
I do not think you shall this hour outlive,
But from my spear's sharp point receive your death, 415
And unto me more reputation give,
And leave your soul unto the pow'rs beneath.
Then Socus turn'd himself about to fly,
But overtaken by Ulysses' spear,
That pierc'd him back and breast, he fell down dead. 420
Then scornfully Ulysses did him jeer.
Socus, gallant man at arms, said he,
By death prevented is your enterprise;
Your eyes shall not by parents closed be,
But shall be pecked out by crows and pyes. 425
Then from his shield and body he pull'd out

The spear which at him was by Socus thrown.
The blood then from the wound did freely spout,
Which when the Trojans saw, they straight came down
And all together tow' rds him went the rabble. 430
Then he retir'd, and as he going was,
Thrice called out, as loud as he was able,
For help; and thrice was heard by Menelaus,
Who t' Ajax said, Ulysses' voice I hear,
And like the voice of one that is distrest. 435
He hemm'd in by the Trojans is, I fear;
Come, let us to him go, and do our best
To fetch him off. For valiant though he be,
I fear, unless we aid him with great speed,
He by the Trojans will be slain, and we 440
Lose a good man, of whom we oft have need.
Then up they went, and found him by the foes
Environ'd round. As when a stag is shot
By some young man, he swiftly from him goes
Whilst strong his knees are, and his blood is hot. 445
But when he by the arrow tamed is,
The wolves feed on him in the gloomy wood;
Then comes the lion, and the prey is his.
About Ulysses so the Trojans stood,
Till Ajax, with a target like a tower, 450
Came to his aid; then sev'ral ways they fled.
Ulysses, now no longer in their power,
Was from the field by Menelaus led,
And mounted on his chariot again.
But on went Ajax, and slew Pandocus, 455

King Priam's son, and wounded three good men,
Lisander, Pylartes, and Pyrasus.
Then as a river coming to the plain,
And swell'd by Jupiter with show'rs of rain
More than the banks are able to contain, 460
Bears oaks and pines before it to the main,
So Ajax charg'd the Trojan troops. But this
Hector knew nothing of; for far off now
Upon Scamander's banks he fighting is,
And to the ground doth many an Argive throw. 465
There was the noise, there aged Nestor stood,
And there Idomeneus, with their steeds.
And Hector, that the use well understood
Of spears and horses, there did mighty deeds.
And yet the Greeks retir'd not; nor had done 470
If Paris had not with an arrow smote
Machaon on the shoulder to the bone.
Three-forked was the arrow which he shot;
And mightily the Argives were afraid
Since now the foe prevail'd, he would be slain. 475
To Nestor then Idomeneus said,
Nestor, to your char'ot mount again,
And with Machaon make haste to the ships.
A surgeon many other men is worth.
For many other men alive he keeps 480
By making salves and drawing weapons forth.
Then Nestor mounteth and the horses whips,
Which they no sooner feel than they are gone,
And quickly brought unto the hollow ships

Machaon Æsculapius his son. 485

Mean while Cebriones, the chari'teer
Of Hector, saw the Trojans were distress'd,
And to him said, To what end stay we here,
Since yonder by the Greeks our friends are press'd?
'Tis Ajax that disorders them, I see; 490

I know him by the largeness of his shield.
Now where they fighting are most furiously,
Let us go down to that side of the field.

This said, he crack'd his whip, his horses ran
Unto the place where greatest was the cry, 495
O'er many a shield, and over many a man
That gasping on the bloody field did lie.
The horses' bellies and the char'ot wheels
And axletrees with blood were cover'd o'er,
Forc'd up in drops by the swift horses' heels. 500

And Hector rushing in, their battles tore.
But Hector still took heed of Ajax' spear.
And fought in other places of the field.
But Ajax, struck by Jupiter with fear,
Amazed, at his shoulder hung his shield; 505

And staring on the foe awhile he stood,
Then turn'd and softly from them went away.
As when a lion coming from the wood
Down to a pasture, on a cow to prey,
Is hu'd by dogs and peasants in the night, 510
And hungry sometimes goes and sometimes stands,
But cannot have his will for all his might,
So many spears are flying from their hands,

And flaming brands which put him in a fright,
Keen as he is, then sullenly he goes 515
Back to the wood and comes no more in sight;
So then retired Ajax from his foes.
Or as an ass, in spite of many boes,
Is got into the corn, and there abides,
Though they upon him fall with blows and noise, 520
And many cudgels break upon his sides,
For he the force of boys but little feels,
He hardly will be driven out though fill'd,
And now and then kicks at them with his heels:
So Ajax at the last went off the field, 525
By Hector and the Trojans still pursu'd,
Upon his shield receiving many a spear;
Sometimes his back, sometimes his face he show'd,
So that they could not to the ships come near.
Thus he between the Greeks and Trojans stands, 530
While spears abundance at him hurled were;
Some in his shield stuck, driven by strong hands,
Some on the ground fell short and fix'd were there.
But then Eurypylus, Euæmon's son,
That saw him thus oppress'd, came to his side, 535
And wounded with his spear Apisaon
The liver through; and on the place he died.
But as he stripp'd him lying on the ground
Was shot by Alexander in the thigh,
And broken was the arrow in the wound, 540
And much increased was his pain thereby.
Then went Eurypylus into the crowd,

And cried out to the princes of the host,
Turn and save noble Ajax from this cloud
Of Trojan spears, or else he will be lost. 545
This said, the best commanders to him go
With spears advanc'd, and bucklers turn'd before,
And place themselves between him and the foe.
And then again the fight was very sore.
Mean while Achilles as he sitting was 550
On high astern his ship to see them fight,
Perceived Nestor and Machaon pass,
And to Patroclus call'd with all his might,
Come hither, friend. Patroclus heard him call,
For he was sitting in Achilles' tent, 555
And (which was the beginning of his fall)
Immediately rose up and to him went,
And said, Achilles, what's your will with me?
Achilles then replied, Patroclus, now
The Argives, I believe, will bend the knee, 560
For their condition never was so low.
But go to Nestor and informed be
Who 'tis that he brought with him from the fight.
Machaon by his back he seem'd to me,
But of his face I could not have a sight. 565
So many cars and horses cross'd the way.
This said, unto the ships Patroclus went;
But at the ships arrived now were they,
Alighted and gone into Nestor's tent:
The horses by Eurymedon untied 570
Were cooled by the sea-side in the air,

And of their sweat well cleansed were and dried,
And in the mean time Ecamedea fair,
That was the daughter of Arsinous,
And taken by Achilles was when he 575
Conquer'd and sack'd the city Tenedus,
And by the Greeks to Nestor giv'n; and she
To Nestor and Machaon setteth up
A table with a black foot smooth and fine,
And on it set a basket, and a cup, 580
And to each one before him set on wine.
The cup with nails of gold was studded o'er,
Four ears it had, and two doves at each ear,
And those were gold, and at the foot two more
In posture such as if they feeding were. 585
Nestor to Troy had with him brought this cup.
Another scarce could lift it from the table
When fill'd with wine; though he to take it up,
Old as he was, and easily was able.
And in the same the woman made the drink, 590
With goat's-milk cheese, and white flour sprinkled o'er,
And left it on the board full to the brink.
Then quenched they their thirst, and drank no more,
But talking sat, to put out of their thought
Their ill success. Now at the door o' th' tent 595
Patroclus was, and in by Nestor brought,
And pray'd to sit, but he would not consent,
But said, Achilles bade me ask you who
It is whom you brought with you from the fight.
And this already I can answer to. 600

Machaon 'tis that sits there in my sight.
What need then is there of my longer stay?
Return I will with all the speed I can,
For fear he should some blame upon me lay,
Though I deserve it not. You know the man. 605
What makes Achilles, aged Nestor said,
Of th' Argives wounded men to take such care?
He knows not how the army is dismay'd,
Nor yet how many of them wounded are.
Ulysses wounded is, and Diomed, 610
And Agamemnon, and Eurypylus,
And this man whom I with me hither led.
Achilles pity has on none of us;
Although our safety now lie in his hands.
Intends he to sit still till Hector burn 615
In spite of us our ships upon the sands,
And ev'ry one of us kill in his turn?
For now my strength decayed is with age.
that I were as strong as I was then
When war 'twixt us and th' Elians did rage, 620
And we our cattle fetch'd from them again,
And slew Itymoneus that took our kine,
For I then went his cattle to distrain,
And take amends for those he took of mine.
There he defending them by me was slain, 625
And all his people from him ran away.
And there we took of fifty herds of kine
And of as many herds of goats a prey,
As many flocks, as many herds of swine,

And horses three times fifty, females all, 630
Of colour sandy mix'd with sparks of light;
And most of them had foals, and to the wall
Of Pyle I brought this booty all by night.
My father Neleus joyful was to see't;
For yet he thought I was for war too young. 635
Next morn the criers make the people meet,
(All those to whom the Elians had done wrong)
The lords amongst them then divide the prey.
Many there were that had been injured,
And with their shares contented sent away, 640
Though Pylus were not well inhabited.
For Hercules not many years before
Had kill'd the best of them. And Neleus then
Had twelve good sons, whereof he left no more
Alive but me. This made th' Epian men 645
Despise our number small, and do us wrong.
And Neleus now unto himself did keep
The best herd of the kine, and from among
The flocks chose one that had three hundred sheep,
And justly, since so great a loss had none. 650
For he four steeds unto the games had sent
Of value great, which all had prizes won.
But by Augias his commandement,
When for a tripod they prepar'd to run,
Together with the cars were there detain'd. 655
Chari'teers related what was done.
And Neleus then the best o' th' prey retain'd;
And ev'ry man had of the rest his share.

This done unto the Gods we sacrifice.
Mean while the Elians for war prepare, 660
And two days after altogether rise,
And forth o' th' town went they both foot and horse,
And with them Molion's two sons, not yet
Arrived at the age of martial force,
And round about the town Colone sit. 665
Colone is a frontier-town, between
Elis and Pyle, upon Alphæus' side.
Passing the plain they were by Pallas seen;
And she aloud unto the Pylians cried,
To arms, you men of Pyle. Then in the night 670
We put on arms, and to the field we hied;
And cheerfully went ev'ry one to fight.
My horses only were convey'd aside.
For Neleus thought I was in war unskill'd:
But I at home could not be made t' abide, 675
But with the rest on foot went to the field,
For on the Goddess Pallas I relied.
Near to Arene falls into the main
A little brook. All night by that we lay,
And in the morn betime we march'd again, 680
And to Alphæus came in half a day.
And there to Jove his sacred rites we paid.
To Neptune and Alphæus each a bull;
An heifer to the heav'nly martial maid
We gave; and when the bands of foot were full, 685
Then sup we in our ranks, and armed slept.
Th' Epeians still the town besieging lay;

But seeing the war was now so near them crept,
They rose; then presently began the fray.
And there the first man that was slain I slew, 690
Which Molius was, Augias' son-in-law.
He wedded Acamedea had, who knew
As many med'cines as the world e'er saw.
Him first I slew, and to his char'ot mounted.
Then fled th' Epeians scatter'd here and there: 695
For he the best amongst them was accounted.
And as they fled I follow'd with my spear,
And fifty char'ots took, and at each one
Two men I kill'd; for like a storm I went;
Nor had I left to Molius any son, 700
If Neptune had not hinder'd my intent,
That took them up and sav'd them in a cloud.
Great honour won the Pyleans that day;
For on the plains we chac'd th' Epeians proud,
Killing and gath'ring armour all the way 705
Until we came unto Buprasium,
Alesium, and Rock-Olene; and there
Advis'd we were by Pallas to go home.
To Pylus then we went and welcome were.
And thanks were given to the Gods, but most 710
To Jupiter the greatest God. And then
In general were thanked all the host,
And Nestor namely above other men.
Thus I behav'd myself amongst the Greeks,
Whereas Achilles sitting in his tent,

Patroclus is persuaded by Nestor to obtain of Achilles to be sent to the aid of the Greeks in Achilles' armour. 715

Neglecting us, his own contentment seeks;
Though if our fleet be lost he will repent.
But, O Patroclus, the advice was good
Menœtius your father gave you then
When I at Phthia was and by him stood, 720
By Agamemnon sent to levy men.
To Peleus' house Ulysses came and I,
And there we found Menœtius and you.
And you upon Achilles waited nigh,
And Peleus to the Gods fat cattle slew 725
I' th' court o' th' grass, a gold cup in his hand,
And pour'd wine on the burning sacrifice,
And you then saw us in the gate-house stand,
Though busy you were then to burn the thighs.
Achilles to us came and led us in, 730
And made us sup, and supper being done,
To tell our bus'ness then I did begin,
Which was to bring with us to Troy his son.
Both he and you desirous were to go;
And Peleus then unto Achilles said, 735
Strive still to be the best, and let the foe
Be always of your spear the most afraid.
Then to you spake your father; Son, said he,
Achilles is a better man of war
Than you, and higher in nobility 740
Of blood; but you in age before him are.
Give him good counsel therefore, and suggest

What's for his good, although he see it not:
He will obey when for himself 'tis best;
Thus he advis'd you, though you have forgot. 745
But do it now. For 'tis not yet too late.
Who knows but you may make him change his mind?
Or if he still continue obstinate,
Or in some oracle a scruple find,
Or Thetis told him somewhat has from Jove, 750
Yet let him send his Myrmidons with you,
The Trojans from the navy to remove,
And give th' Achæans time to breathe anew.
But let him give you his own arms. Then they
(When like unto Achilles you appear, 755
Leading fresh forces) fly will into Troy,
And rid th' Achæans of their present fear.
This said, Patroclus, grieved, went his way,
And tow' rds Achilles' tent ran back apace,
Passing by where Ulysses' vessels lay. 760
There were the altars, there the market-place,
There were the courts of justice. There he met
Eurypylus, with the arrow in his wound,
And from his head and shoulders dropp'd the sweat,
And bled apace, but still his sense was sound. 765
Then, pitying him, Patroclus spake, and said,
Ah! poor commanders of the Achæan host,
Must we be all so far from home destroy'd,
And lie for dogs'-meat on the Trojan coast?
But say, Eurypylus, is there no way 770
To keep off Hector, but must perish all?

Nothing I know, said he, can Hector stay,
But in our flaming ships we all must fall.
For all the best of us here wounded lie,
And still the Trojan power grows more and more. 775
But, O Patroclus, cut out of my thigh
This arrow-head; for it torments me sore,
And with warm water wash away the blood,
And salves apply, the same that Chiron knew,
(The best of Centaurs) to be very good, 780
And taught Achilles, and Achilles you.
For of two surgeons in the army, one
As much need of a surgeon hath as I,
And Podalirius to the fight is gone.
Patroclus to him then made this reply. 785
How can this now be done, Eurypylus,
Since to Achilles I must go with speed
With Nestor's answer? Yet to leave you thus
In torture, were but an ungentle deed.
Then in his arms he bears him to his tent, 790
And there, upon a many cow-hides spread,
Laid him, and with his knife to work he went,
And from his thigh cuts out the arrow-head.
And in his hands he bruis'd a bitter root,
And wash'd away the blood. When that was done. 795
He cleans'd the wound, applied the med'cine to't,
And straight the blood was stopp'd, the pain was gone.

LIB. XII.

The fourth fight, Hector having entered the Argive camp, at the ships.

THUS WAS EURYPYLUS of pain releas'd.
Meanwhile the Greeks and Trojans fiercely fought,
Nor could the Argive wall and trench (unbless'd,
For on a hecatomb they never thought) 5
Though made their ships and booty to defend,
Keep Hector and the Trojans long time out.
For very quickly cometh to an end
Whate'er without the Gods men go about.
Indeed while Hector liv'd, and angry lay
The fourth fight. 10
Achilles at his tent, and would not fight,
And standing were the walls and town of Troy,
The great wall of the Argives stood upright.
But when the bravest Trojans once were slain,
And many Greeks, and burnt was Ilium, 15
That had almost ten years held out in vain,
And what remained of the Greeks gone home.
Then Neptune and Apollo both devise
The wall to ruin, and the rivers all
That in this spacious mountain Ida rise 20
Upon this Argive mighty work make fall.
Aresus, Rhesus, Heptaporius,

Æsepus, Rhodius, Scamander, and
Besides these six, the river Granicus,
And Simoeis, upon whose banks of sand 25
Many a shield and helmet scatter'd lay,
And many a Demi-God. These rivers all
Apollo turned from their wonted way,
Directing them unto the Argives' wall.
Nine days perpetually they thither run, 30
And Jove nine days together pour'd down rain,
To th' end the work might be the sooner done.
And Neptune with his trident from the main
Before them went and wrenched out the stone
And timber which had there been laid with pain 35
The deep'st of all for the foundation,
And made it to the sea all smooth again.
And strew'd again with sand the ample shore;
And made the brooks in their own channels run
No otherwise than they were wont before: 40
But this not yet, but afterwards was done.
For Hector had the Greeks with show'rs of spears
Constrain'd to quit their walls and tow'rs so high,
That rattled terribly about their ears,
And back unto their hollow ships to fly. 45
As when a lion or a boar beset
With hounds and hunters, this and that way tries
(Close as they stand) through them by strength to get,
And passing on their spears prevails or dies,
And as he goes still makes them to give way; 50
So Hector 'mongst his friends went here and there,

Exhorting them the trenches to assay.
The horses when upon the brink they were
Boggled and whinnied, and refus'd to pass;
For broad it was and not to be leap'd o'er: 55
And to descend into, too deep it was,
And on each side bristled with stakes good store,
Fix'd by the Achæans to keep off the foe;
So that for horse and cars there was no way.
But very willing were the foot to go, 60
And only to receive command did stay.
And then to Hector said Polydamas,
Hector and you, the princes of our friends,
We strive in vain to make our horses pass
O'er such great stakes, so sharpen'd at the ends, 65
Having above our heads the enemy.
Where (though we could get down) we cannot fight,
Though Jove unto our side inclined be,
And to the Greeks should bear as much despite,
As I, that wish their name were rooted out. 70
Yet if the Greeks, when we encumber'd were
For want of room, should turn and face about,
And set upon us in the ditch, I fear
A man of us would not be left alive
To tell at Troy what is become of us. 75
But if you mean to have the bus'ness thrive,
Then hear my counsel, Let us all do thus:
Till of our horse and chariots we have need
Let servants hold them to the trenches nigh,
And we on foot fight; for if Jove indeed 80

Intend us victory, the Greeks will fly.
Thus he advis'd; and Hector thought it best,
And from his chariot leap'd unto the sand,
Arm'd as he was; and so did all the rest,
And to their charioteers they gave command 85
All in their order near the trench to stand.
The Trojans in five parts themselves divide;
And Hector of the first took the command.
But with himself he joined two beside,
Polydamas and stout Cebriones, 90
And left a meaner man to hold his car.
Of all the Trojan host the best were these.
O' th' second party Paris had the care,
Join'd with Agenor and Alcathous.
The third commanded was by leaders three: 95
First Helenus, and then Deiphobus,
The third was Asius. From Arisbe he
With mighty horses, colour'd like to flame,
Bred on the bank of Sellis, came to Troy.
The fourth command unto Æneas came; 100
And he likewise two seconds had, and they
Two sons were of Antenor (both well skill'd
In war), Archelochus and Acamas.
Lastly, Sarpedon led into the field
The Trojan aids; and he assisted was 105
By valiant Glaucus and Asterapæus.
For of the Lycians which he led thither
The ablest and the best men he thought these.
And then with bucklers joined close together,

Away they march directly to the foe, 110
And to the combat had a great desire.
The Greeks (they thought) as fast as they could go,
Would presently unto their ships retire,
But Asius would not his horses leave
And man, without the trench, as others did. 115
Fool as he was himself so to deceive.
Upon his chariot tow'rs the ships he rid;
But never came triumphant back again
For all his flaming horses and his car,
But by Idomeneus' spear was slain. 120
When Hector to the ships had brought the war,
The Greeks had in their wall a gate, whereat
Their horses to the field were us'd to pass,
And Asius with his chariot drave to that,
Which now left open by the Argives was, 125
Their people chas'd by Hector to let in.
And all his party with a mighty cry
March'd after him, as if they sure had been
The Argives to their hollow ships would fly;
But were deceived. For at the gate they found 130
Two mighty men that like two great oaks stood
With deep and large roots fixed in the ground,
That many winds and storms had long withstood.
And Lapiths they were both; Leontes one,
The other Polypoetes gotten by 135
Pirithous. Both saw them coming on,
And staying, on their hands and strength rely.
The Trojans led by Asius came on

With mighty noise, Orestes, Adamas,
(This Adamas of Asius was the son) 140
Thoon, Iamenus, and Ænomaus,
And o'er their heads they held their shields on high,
For fear of stones and spears from off the wall.
The Greeks within to one another cry
To save the ships, the tents, themselves, and all. 145
But when they saw the Trojans went about
To scale the wall, they roar'd and frighted were;
But the two Lapiths presently leap'd out,
And furiously fell on the Trojans there.
As if two boars the men and hounds withstood, 150
You'd often hear the boughs before them snap,
While with their bended necks they tear the wood;
So thick they did the Trojan armours rap.
For valiantly they fought, in part relying
Upon their strength, and partly on the showers 155
Of mighty stones perpetually flying
Upon the Trojans from the wall and tow'rs.
As thick as to the ground fall flakes of snow,
When by a cold wind stirred is the cloud,
Their weapons from their hands on both sides go, 160
And shields and helmets crack apace and loud.
But Asius at this vex'd to the heart,
Then spake to Jove, and clapping of his thigh,
Aye me, said he, thou too a liar art,
That mad'st us to believe the Greeks would fly; 165
Who like so many motly wasps or bees
That in the hollow way their houses build,

And for their young resist their enemies,
Till they repel them or themselves be kill'd,
Still sharply fight and will not quit the place. 170
Thus Asius said, but Jove unmoved sate,
And none that day but Hector meant to grace.
And as at this they fought at ev'ry gate,
I cannot like a God relate it all,
The flaming stones that from the Trojans flew 175
With fire divine up to the Argive wall
On ev'ry side. How th' Argives no way knew
To save themselves but for the ships to fight;
And how the Gods that with the Greeks took part
Sat discontent in heav'n, and full of spite, 180
To see Jove so severely make them smart.
But for the fight without, 'twas first begun
By the bold Lapiths, though but two they were.
For Polypœtes, Pirithous' son,
At Damasus threw first a heavy spear, 185
And through his helmet's brazen cheeks it went,
And through the bone into the brain went on;
And when unto the shades he him had sent,
He killed Orminus and Pyloon:
And then a deadly spear Leontes threw, 190
Which through the body pierc'd Hippolochus.
And on Antiphates his sword he drew
And killed him, and then Iamenus,
Orestes, Menon, one upon another.
But whilst they stay'd to strip these and the rest, 195
Hector, Polydamas, and many other,

That of the Trojan army were the best,
Were at the trench, and stood upon the brink
The wall to break, and set the ships on fire.
But as they stood a little while to think, 200
There came a bird not suiting their desire.
An eagle in his pounces held a snake,
And over Hector's soldiers carried it
Alive, but that could yet resistance make,
And by and by the snake the eagle bit. 205
The eagle smarting cried and flew away,
And 'mongst the Trojans lets the serpent fall,
And there amazed they, and gaping stay
To see Jove's prodigy before them crawl.
Hector, said Polydamas, though you 210
In courts and councils cross whate'er I say,
How good soe'er it for you be and true,
Unless in ev'ry thing I go your way,
(Which is not well done, for your counsel ought
In peace and war to have their voices free, 215
And never give advice against their thought,
But always for the public good to be);
Yet now I'll tell you, if this bird be sent
Unto the Trojans as a prodigy,
'Tis not uneasy to foresee th' event. 220
For this I think the end of it will be:
As th' eagle in his pounces bore the snake,
But could not to her young ones bear it home;
So if the Trojans this attempt shall make,
They'll back unto the city smarting come, 225

And many good companions leave behind,
Whom th' Argives, to defend their ships, will kill.
And this, I think, will any augur find
That in's profession has any skill.
Then Hector sourly looking thus replied: 230
Polydamas, this counsel I like not;
You have a better which you from me hide.
But if indeed it be your very thought,
The Gods have sure depriv'd you of your sense,
That bids me not on Jove to set my rest, 235
But feather'd fowls, that fly I care not whence,
Nor whither, right or left, or east or west;
But we to Jove, the greatest God, will trust,
That all the other Gods excels in might.
He one bird has, that still observe we must, 240
And that is, for our country well to fight.
But why are you so much afraid? For though
You ne'er so many see before you slain,
You of yourself will have a care I know,
And not adventure where you may abstain. 245
But if you stay or counsel other men
To stay behind, my spear shall strike you dead.
This said, he led them further on; and then
They all with mighty clamour followed.
And Jove a mighty wind from Ida sent, 250
Which to the ships directly blew the dust,
That to the Trojans gave encouragement,
But to the Argives horror and distrust.
Encourag'd thus, unto the wall they go

And brake down battlements, and posts pluck'd out, 255
And piles that had been planted by the foe,
With levers strong they wring up by the root.
Thus at the wall the Trojans laboured,
And hope they had the same to overthrow.
Before the battlements the Argives spread 260
Cow-hides, and thence threw stones on them below.
The Ajaxes then ran from tow'r to tow'r,
Endeavouring to give the Argives heart,
Some with sweet words, and some of them with sour,
According as they each one did his part. 265
Fellows, said they, you that excel in war,
And you that great strength have, and you that small
(For well you know, all men not equal are)
Now play the men, there's bus'ness for you all.
Fear not the clamour of this threat'ning man; 270
Endure this brunt, which if you overcome,
As (if Jove hinder not) I know you can,
We'll course him to the gates of Ilium.
Thus they encouraged the Greeks. And now,
As when great Jove to show his armory 275
Upon a winter's day sends down his snow,
Innumerable are the flakes that fly
And cover hills, and woods, and pastures green,
And all the fruitful works of husbandry,
And cover would, but that the sea comes in, 280
Both ports and shores; for there snow cannot lie;
The wall with stones resounded round about,
Yet Hector ne'er had broken wall nor gate,

But by the Greeks had still been kept without,
Had not Jove sent, the Trojans t' animate, 285
His son Sarpedon. With his shield of brass,
Lined with many folds of strong cow-hide,
And which with golden circles strength'ned was,
And two spears in his hand, to th' wall he hied.
And as a lion that had fasted long 290
Comes from the hill upon a flock of sheep,
Will try what he can do, for all the throng
Of men and dogs that them are set to keep;
So boldly goes Sarpedon to the walls,
With mighty hand the battlements to tear, 295
And as he going was to Glaucus calls.
Glaucus, said he, what cause think you is there
That we in Lycia more honour'd are
Than other men, and look'd upon like Gods,
And higher sit at feasts, and better fare, 300
And drink best wine, and more land have by odds?
Is't not because we foremost are in fight!
'Tis not in vain, they'll say, our princes have
More honour, since they are of greater might,
And their lives venture other men to save. 305
Glaucus, if we could death eschew and age
By running from the battle cowardly,
D'ye think I foremost would myself engage,
Or ever counsel you to follow me?
You know the ways to death are infinite. 310
Though we ne'er fight we cannot always live.
Therefore come on, and let us bravely fight,

And either honour gain, or honour give.
So said Sarpedon. Glaucus him obey'd;
And tow'rd the Greeks well followed they went. 315
Then Mnesteus was terribly afraid,
For to assault his tower he saw them bent,
And look'd about what heroes he could spy
On other towers unto his aid to call.
He saw th' Ajaxes two, and Teucer by, 320
But too far off to hear. For at the wall
Of shields and helmets so great thumping was,
That 'twas impossible to hear him call.
The gates resounded no less than the brass;
For fiercely they were fighting at 'em all. 325
Then Mnesteus to the squire, Thootes, said,
Run quickly, call the Ajaxes to me,
Both, if they can be spar'd. I am afraid
Against these men I shall not able be
To keep my place. Keen warriors they are. 330
But if they be themselves distressed there,
Let Telamonius of the place take care,
And Teucer use his bow and arrows here.
Thootes then unto th' Ajaxes ran
Along the Argive wall, and to them said, 335
Mnesteus entreats both of you, if you can,
To come unto his tow'r and give him aid.
Keen warriors, he says, these Lycians are:
But if you be yourselves distressed here,
Let Telamonius of the place take care, 340
And Teucer use his bow and arrows there.

This said, great Ajax said unto the less,
Æliades, stay here awhile, till I
Deliver Mnesteus from his distress.
That done, I shall be with you presently. 345
Ajax and Teucer then together go
Unto the tow'r of Mnesteus with all speed,
Pandion with them, carry'ng Teucer's bow,
And at their coming found him in great need.
The Lycians, like a black and low'ring cloud, 350
Ascended to the wall, and fiercely fought.
The Greeks resist. The noise is mighty loud.
And with a heavy stone stood Ajax out,
That two men scarce could carry, such as now
The earth brings forth, and with the same he stroke 355
Epicles on the helmet such a blow
As head and helmet both in pieces broke.
Down like a diver from the wall fell he
Headlong, and dead upon the ground he lay.
At Glaucus Teucer lets an arrow flee 360
Which through his arm unarmed made its way.
Glaucus, no longer able now to fight,
Leapt from the wall unseen unto the ground,
For fear, if of his hurt they had a sight,
The Greeks would make a triumph of his wound. 365
Griev'd was Sarpedon to see Glaucus gone,
But not so grieved but that still he fought,
And fix'd a heavy spear in Alcmaon,
And with the same his life and all pluck'd out.
Sarpedon then tore down a battlement, 370

And wider for the Lycians made the way.
But Teucer then an arrow to him sent;
But Jupiter, to save his son that day,
The shaft unto his shield and belt directed,
So that it passed not unto the skin, 375
The shield and belt together him protected.
And then, with spear in hand came Ajax in,
And with a push that pierc'd his shield clean through,
His coming on a little while he staid.
But with Sarpedon that could little do, 380
That honour sought. Then to his friends he said,
Ye Lycians, what makes ye thus remiss?
Can I make way unto the ships alone?
Strong as I am, impossible it is.
For many hands much better are than one. 385
This said, the Lycians heavier than before,
To please their prince, upon the Argives lay.
The Greeks within their broken ranks restore,
And terrible the battle was that day.
For neither could the Lycians passage make 390
Unto the ships and break the Argives' wall,
Nor Greeks compel the Lycians to forsake
The battlements, so fiercely fought they all.
As two men on the confines of their ground
At two ends of a measure tugging stand, 395
Contending earnestly about their bound,
And each of them would fain enlarge his land:
So for the battlement they striving stood,
And wounded one another back and breast,

And sprinkled was the battlement with blood, 400
Nor was it certain yet who had the best.
But as a woman that is fain to spin,
To find herself and children sorry food,
In one scale wool, in th' other weight puts in
Till they hang ev'n: so ev'n the battle stood 405
Till Hector came, to whom Jove chiefly meant
To give the honour of the victory.
Then Hector up the wall the foremost went,
And thence unto his Trojans loud did cry,
Trojans, come on, and break me down this wall, 410
And set the Argives' hollow ships on flame.
This said, he heard was by the Trojans all,
And straight unto the battlements they came.
Then Hector at the gate took up a stone,
Great and sharp pointed, two men such as now 415
Could scarce have lifted up so great a one:
But Hector with one hand the same could throw;
For Jupiter to him had made it light.
And as unto a shepherd is a fleece
Of wool, that to be borne needs little might; 420
So eas'ly borne the stone by Hector is;
And standing at the gate well fortified
With planks well join'd, and two cross-bars within,
And taking with his right foot back a stride,
Out flew the stone, and at the gate went in. 425
The gate then roar'd; the hinges broken were;
The bars upon the ground asunder lay;
And pieces of the planks flew here and there;

And to the ships now open was the way.
And Hector with a countenance like night 430
Flew in. And fire appeared in his eyes:
His armour as he marched shining bright,
And light reflected up unto the skies;
And two good spears he grasped in his fist.
And then the Greeks were mightily afraid; 435
For none except a God could him resist.
And then unto the Trojans turning said,
Now Trojans to the wall. And presently
Great numbers of the Trojans that way pass,
And others at the gate. The Argives fly
Unto their ships. And great the tumult was.

LIB. XIII.

Neptune encourageth the Greeks.

WHEN JOVE HAD to the ships the Trojans brought,
He left them fighting there, and turn'd his face
(Thinking th' Immortals would no more have fought)
And look'd upon the fields and men of Thrace, 5
And Mysians, and Hippomolgi (men
That live on milk the goodly mothers give
Of lusty steeds, and are more honest than
The rest of mortals, and do longer live.)
While Neptune from a hill in Samothrace 10
Look'd down and saw the Greeks and Trojans fight.
For thence of Ida hill and all the space
'Bout Troy and th' Argive fleet he had a sight.
And grieved was to see the Argives slain,
And mightily offended was with Jove, 15
And from the hill in haste came down again
On foot; and ever as his feet did move,
Under the same the haughty mountains shook,
And the thick woods, and unto Ægæ came.
Thither to come four steps he only took. 20
There stands a temple sacred to his name,
Of glistening gold and never to decay.
And there he puts his horses to his car;

Long manes of gold they had, and swift were they;
And then in gold himself array'd for war, 25
And mounted on his car o'er sea he drives.
The whales on both sides from the bottom rise
Their king to see. The sea her bosom rives,
But not a drop up to the axtree flies.
Thus quickly to the Argives Neptune came. 30
Half way 'twixt Tenedus and Imbrus is
In the deep sea a cave, and in the same
(Lest coming back his horses he should miss)
He sets them up and laid before them meat,
And tied them there with foot-locks at their feet, 35
Strong locks of gold, that loose they could not get.
Then up he went unto the Argive fleet,
And there he found the Trojans like a flame
At Hector's heels with mighty noise and cry,
Greedy and full of hope the Greeks to tame, 40
And then in flames to make their ships to fry.
Then Neptune speaking to th' Ajaxes two
In Chalchas' shape, You two, said he, can save
The ships, if you but set yourselves thereto.
For of the foe no fear at all I have 45
In other parts. Defended they will be
By other Greeks. The danger all is here
Where Hector like a flame you leading see,
That would be thought the son of Jupiter.
If you but think some God bids you resist, 50
And stand your ground when Hector cometh on,
And cheer your fellows; though Jove him assist,

He quickly from your good ships will be gone.
This said, he on them both his sceptre laid,
And presently themselves they stronger find; 55
Their thighs and legs and hands much lighter weigh'd.
And Neptune suddenly rose from the ground.
Just as a hawk from off a rock flies at
Some other fowl; so quickly Neptune rose.
The lesser Ajax first observed that, 60
And to the greater did the same disclose.
Ajax, said he, this was some Deity
That in the shape of Chalchas bade us fight.
For 'twas not Chalchas I am sure. For I
As he went off had of his legs a sight, 65
And of his feet and steps. For marks there are
To know a God by from a man. Withal
I find myself much more inclin'd to war.
Methinks my hands and feet for battle call.
And so do mine, said Telamonius, 70
And fain I would with Hector have a bout.
While they together were discoursing thus,
Neptune behind them busy was about.
Confirming those that to the ships were gone
A little to refresh themselves. For they 75
Had long and painful labour undergone,
And heavy at their hearts the danger lay
When Hector and his troops had pass'd the wall,
And of their safety were in great despair.
But Neptune coming soon confirm'd them all, 80
And gave them hope their fortune to repair.

To Teucer first he came and Leitus,
To Deipyrus and to Meneleos,
Meriones and stout Antilochus,
And standing near address'd his speech to those. 85
Fie, Argives, fie young men; what shame is this;
Upon your hands I chiefly did rely
To save our ships. If you be so remiss,
The day is come in which we all must die
By Hector's hands. O strange! I never thought 90
The Trojans durst to th' ships have come so near,
That heretofore peep out o' th' town durst not,
But like to hinds that hide themselves for fear
Of leopards, wolves, and other beasts of prey.
For so at first they did. But you'll not fight 95
For anger that the king had sent away
Dishonoured the man of greatest might.
But what though Agamemnon have indeed
Dishonour'd Thetis' son, must we therefore
Give over fight? Or rather with all speed 100
Endeavour all we can to cure the sore?
But, howsoe'er, you that excuseless are,
And of the Argive army all the best,
And bodies have and hearts well made for war,
I needs must reprehend you. But the rest 105
That weak or wretched are I cannot blame.
Fond men, this negligence may bring forth yet
Some greater ill. Then come away for shame.
For never were the Greeks so hard beset.
Hector has broken both the bars and gates, 110

And now hard by our ships he fiercely fights,
And with great noise his Trojans animates.
Thus Neptune the dismayed Greeks excites.
At th' Ajaxes the ranks stood firm and close.
Nor Mars nor Pallas could a fault have spied. 115
They chosen were the Trojans to oppose
Whom Hector led. And standing side by side,
Shield shield, and target target, and man man
Sustain'd, and spear by spear assisted was.
So close they stood, and labour all they can 120
Lest Hector to their hollow ships should pass.
And Hector with his troops went swiftly on.
As when a torrent swell'd with showers of rain
Breaks from the hill a round and heavy stone,
It makes the wood resound, till at the plain, 125
Swift as it hither roll'd, it rolls no more;
So Hector marching made account to pass
Through th' Argive fleet and tents to the sea-shore.
But at th' Ajaxes battle stopp'd he was;
And forced back a little to recoil, 130
Resisted by so many spears and swords,
And speaking to his Trojans stood awhile,
And Lycians, and Dardans in these words.
Ye Trojans, Lycians, Dardans, do not fly.
I know they cannot long maintain the fight, 135
If we upon Jove's promise may rely,
Who all the other Gods excels in might.
This said, Deiphobus went towards the foe,
Holding his buckler out before him high,

So that it cover'd him from head to toe. 140
Meriones, that on him had his eye,
His spear threw at him, which no harm did do.
For though upon the buckler fell the stroke,
It carried not th' intended mischief through,
But in the tough bull-hides the spear he broke. 145
Then back unto the throng he went, and fum'd
Both for the loss of the good spear he brake,
And of the victory he had presum'd,
And went to the ships another spear to take.
The rest fought on, and mighty noise there was. 150
There Teucer with his spear slew Imbrius
The son of Mentor, till the Greeks did pass
The sea to Troy he dwelt at Pedasus,
And to Medesicaste there was wed.
But when the Argives came to Troy, he then 155
Dwelt in King Priam's court, much honoured
Both by the king himself and by his men.
But now by Teucer's spear was slain. And as
Upon a hill a goodly ashen tree,
Unto the ground, cut from the roots with brass, 160
Brings down its boughs, so to the ground fell he.
To strip him of his arms then Teucer goes;
Which Hector seeing, at him threw his spear,
And misses him; yet not in vain he throws,
But kills another man that stood him near, 165
Amphimachus, that newly to the fight
Was from the ships come back t' assist the rest;
And scarcely of the skirmish had a sight,

When Hector's spear he felt upon his breast.
Then to Amphinachus came Hector near, 170
Meaning his helmet from his head to take.
Which Ajax seeing, at him threw his spear
That hit his shield, but passage could not make.
Yet with such strength the spear fell on his shield,
That backward he was driven from the dead; 175
So that the Argives bore them off the field.
Amphinachus to th' ships was carried
By Mnestheus and Stichius, that led
Th' Athenian troops. But the Ajaxes two,
One at the feet, another at the head, 180
Bore Imbrius from off the ground into
The throng of Greeks, like hungry lions two,
That carry in their jaws a goat which they
Had snatched from the dogs, and were to go
Through many shrubs to carry it away. 185
Him they disarm'd, and to let Hector know it,
The lesser Ajax cutteth off his head,
And turning round with all his strength doth throw it,
And unto Hector's feet 'twas carried.
Now Neptune for Amphinachus thus slain, 190
Who from his loins descended, vexed sore,
Went to the Argive ships and tents again
To cheer the Greeks, and hurt the Trojans more,
And with Idomeneus met as he went,
That had a wounded friend brought from the fight, 195
And straightway back again to go he meant
To them that fought, and help them all he might.

And Neptune like unto Andremon's son,
Thoas, whose father all th' Ætolians sway'd
Like Jove in Pleuron and in Calydon, 200
Unto Idomeneus then spake and said,
king Idomeneus, what is betide
Of th' Argive threats that Ilium they would tame?
Thoas, then Idomeneus replied,
I know not any man that we can blame. 205
There's none of us but understands the war,
Nor any that betray themselves with fear,
Nor that for sloth to fight unwilling are.
But Jove, it seems, will have us perish here.
But Thoas, you that always heretofore 210
Have fought so well, and set on other men,
Still hold that purpose never giving o'er.
T' Idomeneus then Neptune said again,
Idomeneus, may that man ne'er come back,
But in the fields lie for the dogs a prey, 215
That at this time is negligent or slack.
But now put on your arms and come away,
And quickly. For although we are but two,
Yet since conjoined force of men not strong
Can do as much as one good man, let's go. 220
This said, up Neptune went into the throng.
Idomeneus then goes into his tent
And arm'd himself, and took in's hand two spears,
And out again he came like light'ning sent
To men from Jove to fill their hearts with fears. 225
And scarce came forth, he met Meriones

That to his tent was going for a spear,
And speaking to him said Idomeneus,
Meriones, my friend, what make you here?
What are you wounded that you leave the fight? 230
Or bring you me some news? For I to hide
Myself from battle here take no delight.
Meriones then to him thus replied.
king Idomeneus, unto your tent
I forc'd was from the battle to come down, 235
And thence to take a spear of yours I meant,
Since on Deiphobus I broke my own.
A spear, then said Idomeneus, there are
Twenty, if you had need of them, that stand
Upright against the walls, which in this war 240
I took from Trojans vanquish'd by my hand.
For when I fight I stand near to the foe.
And that's the cause so many spears I have,
And can so many shields and helmets show,
And armours for the breast great store and brave. 245
Then spake Meriones; And I, said he,
Have many spoils of Trojans at my tent,
But fetch'd from thence so soon they cannot be.
For close up to the foe I also went
Amongst the foremost boldly. Which although 250
The Argives take no notice of, yet you
That how I still behav'd myself well know,
Can bear me witness what I say is true.
To him then thus Idomeneus replied,
Meriones, this need not have been said; 255

I know your courage were it to be tried,
And men somewhere in ambush to be laid,
Where fear and courage are discerned best;
For there 'tis seen who valiant are, who not.
A coward's heart still panteth in his breast; 260
And nothing but on death he has his thought;
He cannot without trembling quiet sit,
But dances on his hams, and changes hue;
And cannot hold himself upon his feet;
And shakes his chaps. These things a coward show. 265
But in a valiant man there's none of this.
He quietly abides without afright,
When in the danger he engaged is;
And longs for nothing but to come to fight.
If you amongst them had been there, I know 270
None of them such a fault in you had found.
Or if you had been hurt 'tis sure enow,
Nor in your back nor neck had been the wound,
But either in your belly or your breast.
But let's no longer talk like children here, 275
Lest we be blam'd. I think it therefore best
You now go to my tent and take a spear.
This said, Meriones fetch'd out a spear,
And with Idomeneus went to the fight,
As Mars, when in the field he will appear, 280
And with him his beloved son Affright,
And to th' Ephyrians and Phlegyans goes
From Thrace to give one side the victory;
So with Idomeneus unto the foes

Meriones went up courageously, 285
And to him said, Idomeneus, where now
O' th' left or right side of the Trojan host,
Or in the midst shall we our force bestow
To help the Greeks? For now they need us most.
Idomeneus then to him said again, 290
The middle of the battle to maintain
There ready stand enow, and able men,
Teucer good bowman and th' Ajaxes twain.
Hector shall there of fighting have his fill,
As greedy as he is. Though strong he be, 295
He'll find it hard that way to have his will,
And come unto the ships with victory,
And burn them, if Jove not with his own hand
Throw in the brands. He must be more than man,
Whom Ajax is not able to withstand; 300
Not mortal, such as live by Ceres can,
And may be killed with a spear or stone.
For Ajax with Achilles may compare
In standing fight, though able less to run.
In that, Achilles him excelleth far. 305
But now unto the battle let us go,
And fall on at the left side of the field,
And try what we are able there to do,
And either honour win or honour yield.
This said, they went together to the fight, 310
And on them presently the Trojans fell.
There was no place for victory to light,
So close they fought on both sides and so well.

And such a mighty cloud of dust they raise,
As, when great winds contend upon the plain, 315
Is in dry weather raised from the ways;
While one to kill another takes great pain.
And horrid of the squadrons was the sight,
That bristled was all over with great spears.
Their armours, shields, and helmets, with their light 320
Dazzled the eyes, and clamour fill'd the ears.
Hard-hearted had he been that with dry eyes
Had this affliction of the heroes seen,
That from the sons of Saturn did arise,
And but for their dissention had not been: 325
For Jupiter for Hector was and Troy,
And meant to honour Thetis and her son;
But not th' Achæan army to destroy.
But Neptune moved with compassion
To see the Argives by the Trojans slain, 330
And angry with his brother, secretly
In likeness of a man rose from the main
T' encourage them and give them victory.
Though they were brothers, yet Jove of the two
The elder and the wiser was, so that 335
Neptune against Jove's will durst nothing do
In favour of the Greeks distress'd, but what
He thought might be effected privily.
And thus he saw, from brother unto brother,
Of cruel war was drawn alternately, 340
And many slain of one side and the other.
And now half gray came in Idomeneus

With lusty Cretans, and the Trojan frightened.
For presently he slew Othryoneus,
Othryoneus that was by fame invited 345
To purchase honour in the war at Troy,
And promis'd, if Cassandra he might wed,
From Ilium to drive the Greeks away.
Which Priam to him granted if he sped.
And in this hope, strutting he went to fight. 350
There with his spear Idomeneus him smote.
The spear upon his belly just did light,
And down he fell; his armour sav'd him not.
Idomeneus, insulting o'er him, spake:
Othryoneus, great praise you'll win indeed, 355
If you can do what you did undertake.
Come fight for us, and you shall no worse speed.
For if you for us win the town of Troy,
Atrides' fairest daughter yours shall be.
Come with me to the Greeks, that there we may 360
Upon the wedding articles agree.
And then to be reveng'd Asius meant,
And was on foot, although his horses there,
Breathing upon his back, behind him went.
And at Idomeneus had thrown his spear, 365
But that to throw he time enough had not;
Because the other made the greater haste,
And with his spear had hit him in the throat,
And out again at's neck the point had pass'd.
And there, as some great oak or poplar tree, 370
Or pine cut down, that by a ship-wright must

Be saw'd in planks, falls down, so fell down he,
Grasping with both his hands the bloody dust.
The charioteer was so amaz'd thereat,
That he forgot to turn his car with fear, 375
And quiet sat. Antilochus saw that,
And going nearer, at him threw his spear,
Which through his armour and his belly went,
And gasping, fell to th' ground the charioteer.
Antilochus to the ships his horses sent, 380
And by the Argives now possess'd they were.
And then Deiphobus himself advanc'd
And at Idomeneus he threw his spear,
Which, grazing only on his buckler, glanc'd
Unto the Argives that behind him were. 385
For as he saw it come, he sunk and hid
His body all under his shield of brass.
Yet not from out his hand depart it did
In vain; for with it slain Hypsenor was.
Deiphobus then crowing said, So, so, 390
Asius goes not unreveng'd to hell.
And though the place unpleasant be, I know
To have such company will please him well.
Antilochus then to the body came,
And kept the Trojans off from stripping it. 395
Mecistes and Alastor bore the same
Upon their shoulders to the Argive fleet.
Idomeneus still like a fury went
To kill more Trojans, or himself be kill'd.
And for the Argives thought his life well spent. 400

Aloathous then met him on the field,
Who was a suitor to Hippodamie,
Anchises' eldest daughter, and the best
Beloved by her parents both was she,
And of her time exceeded all the rest 405
In beauty, and in curious work, and wit,
And a fit consort for the best of Troy.
But Neptune now on purpose bound his feet,
And from his eyes, though bright, took sight away,
So that he could not fly, nor turn, nor fight, 410
But fixed stood, like to a post or tree;
And by Idomeneus, with Neptune's might,
Pierced through the armour and the breast was he,
And through the heart, as plainly did appear.
For as he bleeding on the ground did lie, 415
The beating of his heart did shake the spear;
And Mars took from him all his chivalry.
Idomeneus then crowed mightily.
Deiphobus, said he, is't not enough
That for your one man I have killed three? 420
If not, come on, and take a better proof
Of what the seed of Jove in war can do.
For Jove got Minos, and Deucalion he.
He me, and I whole shiploads bring of woe
To Troy, unto thy father, and to thee. 425
This said, Deiphobus considered
Whether to stay and meet him hand to hand,
Or see by whom he might be seconded.
And at the rear he saw Æneas stand.

For he not much good will did Priam bear, 430
Who small respect unto his virtue paid.
To him Deiphobus approaching near,
Æneas, now, said he, you must us aid.
Your brother-law, Alcatous, is kill'd,
Who oftentimes has fed you with his hand, 435
And naked will be left upon the field
B' Idomeneus, unless you him withstand.
This said, t' Idomeneus they came away,
And with him greedy were to enter fight.
And he as boldly did their coming stay; 440
Though two to one, they did not him affright.
But as a boar in unfrequented place,
By dogs and men pursu'd, stands sullenly,
Knowing his strength, and looks them in the face,
Bristled his back, and flaming is his eye; 445
So for Æneas staid Idomeneus,
And to his fellows call'd; Ascalaphus,
Meriones, Antilochus, and Aphareus,
Good men of war, and you, Deipyrus,
Come hither friends, said he. I coming see 450
Æneas towards me with mighty rage,
A valiant man at arms you know is he,
And now is in the flower of his age.
Were I so young, and of the mind I am,
I'd honour win of him or he of me. 455
This said, they quickly all about him came
Æneas to repel or kill. Then he
Call'd Paris to him, and Agenor, and

Deiphobus, the Argives to oppose,
And all of them of Trojans had command, 460
And with their spears behind him marched close.
As when a shepherd leads with a green bough
His sheep from off the pasture to the brook,
Is joy'd to see them follow him; so now
Æneas in his troops great pleasure took. 465
No sooner they were come unto the ground
Whereon Alcathous his body was,
But close they fought, and hideous was the sound
Of helmets, shields, and mighty arms of brass.
And there the two that far excell'd the rest, 470
Æneas and Idomeneus, would fain
Have fix'd their spears in one another's breast.
First threw Æneas, but he threw in vain,
For by Idomeneus declin'd it was,
And coming to the ground stuck trembling there. 475
And then threw he and killed Cœnomaus,
And pierced was his belly with a spear,
Who falling filled both his hands with dust.
Idomeneus pull'd out again his spear,
But to take off his arms he durst not trust 480
Himself, so many lances flying were.
His limbs and feet not supple were and light
To throw or shun a spear. They now were past
Their best, yet good were in a standing fight,
But could not from the battle run so fast. 485
And as he slowly walked off the field,
Deiphobus, that always bore him spite,

A spear threw at him, but him miss'd, and kill'd
Ascalaphus, son of the God of fight,
And on his hands into the dust fell he. 490
But Mars yet knew not that his son was dead,
For in the golden clouds, by Jove's decree,
With all the other Gods prohibited
To meddle in the battle, quiet sat.
About Ascalaphus the strife was all, 495
And first Deiphobus his helmet gat,
But forc'd he was again to let it fall,
For in the arm he then receiv'd a wound,
Which by Meriones was to him sent,
Who quickly took the helmet from the ground, 500
And with it back unto the Argives went.
Deiphobus was by Polites (who
His brother was) borne forth unto his car,
And bleeding in his car the town into.
But still upon the field went on the war, 505
And Aphareus there wounded in the throat
Was by Æneas' spear, wherewith his head
On one side hanging, shield and helmet brought
Down with him to the earth. There lay he dead.
And Thoon by Antilochus was slain, 510
That to him turn'd his back and meant to fly;
For by the spear in two was cut the vein
Which all along the back to th' neck doth lie,
And down he fell. Antilochus stepp'd in
To strip him; but the foes about him round 515
Threw at him spears, but never touch'd his skin,

Although his shield received many a wound.
For he was well defended on each side
By Neptune, who unto him bore good will,
Because he ne'er would from the fight abide, 520
And 'mongst the foes his spear was flying still.
But as his spear at one he aiming stood,
He by Asiades observed was,
Who to him came, as near as well he could,
And threw his spear, whereof one half did pass 525
Clean through Antilochus his shield, and stuck
Therein; but th' other half fell to the ground,
For Neptune him preserv'd from that ill luck.
So 'scap'd Antilochus without a wound.
And Adamas retir'd into the rout, 530
Meriones sent after him a spear,
Which ent'ring at his hinder parts, came out
Beneath his navel, and above his gear,
Where wounds most fatal are. Then down he falls,
And like a cow that by the horns is tied 535
By strength of swains, a little while he sprawls,
But with the plucking out the spear he died.
And then the son of Priam, Helenus,
With a broad sword in hand, all steel of Thrace,
Upon the helmet smote Deipyrus, 540
Who there fell down and died upon the place.
The Greeks took up the helmet at their feet;
And griev'd thereat was Menelaus so,
That up he went with Helenus to meet,
Shaking his spear. The other draws his bow, 545

And on the breast-plate hit was Menelaus;
But off the arrow flew, like chaff which fann'd
Is from the corn. But th' other wounded was,
Just where he held the bow, quite through the hand,
And dragging hand and spear, himself withdrew 550
Into the Trojan troops; where from the wound
The heavy spear his friend Agenor drew,
And in a woollen bandage wrapp'd it round,
Which in his hand a servant held hard by.
And then Pisandrus went to Menelaus, 555
Betray'd thereto by cruel destiny,
For to have slain him in great hope he was,
And when they were to one another nigh,
First Menelaus threw his spear, but wide.
At him Pisandrus then his spear lets fly; 560
But passage being at the shield denied,
Beneath the brazen point in twain it crack'd.
Then to him with his sword went Menelaus,
And he to Menelaus with an ax,
Which cover'd with his buckler ready was, 565
And on his helmet crest then fell the stroke;
But he Pisandrus with his keen sword hit
Upon the forehead near the nose, which broke
The bone, and carried present death with it;
His eyes unto the ground fell in the blood. 570
Atrides kick'd him as o' th' ground he lay,
Then stripp'd him of his arms, and o'er him stood,
Insulting and reproaching those of Troy.
Thus, thus, said he, proud Trojans, you'll at last

Be taught to quit our ships, and have your fill 575
Of bloody war, and pay for what is past.
You thought, ye dogs, too little was the ill,
Against the laws of hospitality
To steal away my goods, and wedded wife;
But further will (if in your pow'r it lie) 580
Deprive the Argive princes all of life,
And burn their ships, although no injury
I ever did you. But I hope ye shall
Your greediness of fighting satisfy.
But father Jove, who, men say, art of all 585
The Gods most wise, all this proceeds from you,
That to the Trojans, false and insolent,
More favour shew than to the just and true;
So that with peace they never are content.
Of everything there is satiety. 590
Of sleep, of love, of dance, and pleasant song,
And all men else with war may cloyed be:
Only the Trojans still for fighting long.
This said, the armour to the ships he sent,
And 'mongst the foremost Greeks again he fought. 595
And there Harpalion unto him went
(Who t' Ilium was by his father brought,
But brought from thence again he never was)
And at him throws his spear, and hits his shield
Right in the midst; but through it could not pass, 600
The stubborn brass unto it would not yield.
Missing his purpose, he the field forsook,
And fearing to be slain, look'd still about

Until an arrow keen him overtook,
Sent from Meriones, that pass'd throughout 605
From buttock unto bladder. Then he sat
Expiring 'mongst the Trojans, his good friends,
And lay like to a worm benumbed, that
Upon the ground itself at length extends.
The Paphlagonians of him had a care, 610
And, sorry for him, carried him to Troy.
His father weeping followed the car,
But how to be revenged saw no way.
And Paris then with anger was possest,
And 'mongst the Argives lets an arrow fly, 615
For of Harpalion he had been the guest,
And well received in Paphlagonie.
Amongst the Argives one Euchenor was,
The son of Polydus, an aged prophet,
That knew full well how things would come to pass 620
Before the town of Troy, and told him of it.
You must, said he, at home by sickness die,
Or going with the Greeks, at Troy be slain.
But for all that the young man valiantly
Went with the Greeks; but ne'er came home again, 625
Though he behav'd himself with caution there,
In hope t' avoid both danger and diseases.
But Paris shot him 'twixt the cheek and ear,
And on his eyes there death and darkness seizes.
Thus keenly fought they here; but Hector yet 630
Knew not the Trojans that were fighting at
The left hand of the host were so beset,

For if he had perhaps been told of that,
He might have given the Greeks the victory;
Such courage Neptune gave unto them there. 635
And sometimes by his strength immediately
In battle fighting they assisted were.
But Hector yet was where he first made way,
Breaking the Argive ranks, and wall, and gate,
Where of Protesilaus the good ships lay, 640
And those of Ajax next unto them sate;
Where low the wall and sharpest was the fight.
Th' Epeians, Pthians, and Ionians,
Bœotians, Locrians, all oppose their might
To Hector's Trojans, Dardans, Lycians, 645
And led were by good men. Th' Athenians
By Menestheus, Bias, Phidas, Stichius.
Meges the leading had of th' Epians,
And with him Amphion and Dracius.
Medon and Menepolemus brought on 650
The Pthians. Medon was Ajax's brother,
And of Oileus the natural son,
Not gotten by his wife, but by another.
His wife was call'd Eriopis. And he
For killing of her brother forced fled, 655
To save himself, to th' town of Phylacie,
Where Menepolemus was born and bred.
And so the Phthian leaders were these two,
And 'mongst the chief of the Bœotians, sought
To keep the Trojans from approaching to 660
The Argive ships, to burn them as they thought.

But Ajax the swift, son of Cēleus,
Not all this while departed from the side
Of Ajax, son of Telamonius,
But as two oxen which the ground divide 665
Go tugging of the plough with one consent,
Till underneath their horns their foreheads sweat,
So labouring in the field together went
Yok'd, both the little Ajax and the great.
But Telamonius was followed 670
With good companions, who, when there was cause,
His mighty buckler for him carried.
The other destitute of followers was,
For none but Locrians to the war he led,
Who have no use of bucklers when they fight, 675
Nor spears, nor helmets, that defend the head;
But came to Troy with bows and arrows light,
And in a standing fight durst not abide.
But from behind the Argive ranks unseen,
They Hector and his Trojans terrified 680
Incessantly with showers of arrows keen,
Whilst from the front with spears they plagued were.
The Trojans' courage then was so allay'd,
That into Troy they all had run for fear,
But that Polydamas to Hector said, 685
Hector, you are a man uncounselable.
Because in deeds of arms you so excel,
You think yourself in counsel too much able,
As if all virtues must in one man dwell.
The Gods to some have given well to fight, 690

And others with the muses they have graced;
Others with dance the people to delight;
And in the mind of others wisdom placed,
The fruit whereof by many is enjoy'd:
It cities saves, as they that have it know, 695
Which quickly would without it be destroy'd,
But what we are to do I'll tell you now,
The war now lieth only on your hand;
For since we pass'd the wall, some quite give o'er,
And armed as they were do idle stand, 700
And th' enemy than ours that fight are more.
Therefore retire, and call the princes hither,
That it may be determin'd by them all,
Upon mature deliberation, whether
Upon the Argives at their ships to fall 705
(If so it please the Gods) or otherwise,
Since Ajax there resolved is to stay,
How with most safety we may hence arise,
For they are in our debt for yesterday.
So said Polydamas, and Hector thought 710
The counsel not amiss, and straight obey'd.
And armed from his chariot leapt out,
And standing on the ground unto him said,
Polydamas, stay you, and here detain
The Trojan chiefs, while to the fight I go, 715
And give some orders there; I shall again
Be with you quickly, when I have done so.
He miss'd Deiphobus, and Helenus,
And valiant Adamas, Asiades,

And Asius, the son of Hyrtacus, 720
And went about the field to look for these;
Of which some wounded were retir'd to Troy,
And some in battle by the Argives kill'd;
But found his brother Paris in his way,
Encouraging his men upon the field, 725
And spake unto him, in ill language, thus:
Unlucky Paris, fine man, lover keen,
Where are Deiphobus, and Helenus,
And Adamas? Where are they to be seen?
And what is of Othryoneus become? 730
And where is Asius? Now certainly
Down to the ground burnt will be Ilium,
And thou a miserable death wilt die.
So Hector said, and Paris thus replied:
Hector, there was for such words now no cause. 735
Sometimes perhaps you may me justly chide.
I do not think a coward born I was,
For since unto the ships you brought the war,
We with the Greeks perpetually have fought.
But those you miss slain by the Argives are, 740
Save that Deiphobus was carried out,
And Helenus, both wounded in the hand.
Now lead us on to what part you think fit;
We ready are to do what you command,
As far as strength of body will permit. 745
This said, his brother reconciled was,
And both went to where cruelly they fought.
About Cebriones, Polydamas,

Orthæus, Polyphœtes, and about
Phalces and Palmes, and the children two, 750
Ascanius, Moris, of Hippotion,
Who Ilium but the day before came to,
And now to th' battle went by Jove set on.
As when a storm of wind falls on the plain,
The sea erects itself in ridges white, 755
And foaming rolls in order on the main;
So to the Greeks, with helmets shining bright,
The Trojans one another followed
In order with their captains to the fight,
And Hector, like another Mars, at th' head, 760
With buckler round and strong, and armour bright.
His buckler he before him held far out,
That cover'd was his body with the same,
And peeping under it he look'd about,
And in that posture to the Argives came. 765
And at the foremost ranks went here and there
To try if through them he could passage make;
But fast they stood, nor at it troubled were;
And Ajax seeing it, unto him spake,
Come nearer, man. Why think you to affright 770
The Greeks? We are not so unus'd to war.
Nor are we driven hither by your might;
But by the hand of Jove afflicted are.
Hector, I know, to burn our ships you think;
But we have hands as good the ships to save, 775
And Troy will first, I think, int' ashes sink.
And shortly, I believe, you'll wish to have

And pray to Jove and all the pow'rs on high
For horses that run faster than hawks fly,
That from the ships you may go speedily. 780
This said, an eagle dexter presently
Flew over them. And they Jove's prodigy
Received gladly with a mighty cry.
Then thus to Ajax Hector did reply.
Ajax, you love to prate and brag and lie. 785
that the son of Jove as sure were I,
And had been certainly conceived by
Juno, Jove's wife, and as a Deity
Like Pallas and Apollo ne'er to die,
As I am sure great woe will fall this day 790
Upon the Argives all and then be kill'd,
If for the coming of my spear thou stay,
And dogs and kites shall eat thee in the field.
This said, he led away. The Trojans shout,
So do the Argives, and resolv'd to try 795
The power of their foes with courage stout.
The noise on both sides went up to the sky.

LIB. XIV.

Now Nestor with Macaon drinking sat,

AND HEARD THE Greeks and Trojans fighting roar,

And to him said: Macaon, hear you that?

The noise is greater much than 'twas before.

*Juno, by the help of Venus, layeth Jove asleep, whilst Neptune assisteth the
Greeks. 5*

Let Hecamede o'er the fire set water,

And wash away the blood from off your sore,

While I go hence and see what is the matter.

But at the wine sit you still as before.

This said, he took up Thrasymedes' shield, 10

And Thrasymedes, his son, took up his,

And with a good sharp spear went to the field;

And going forth, a shameful sight he sees,

The Trojans chasing, while the Argives fly,

And down unto the ground was torn their wall. 15

And then, as when a wave is raised high

By secret gales, on neither side can fall,

Until some certain and prevailing wind

Commandeth in the air: so Nestor stood,

And with two thoughts distracted was his mind. 20

Sometimes to go t' Atrides he thought good,

And sometimes to the battle. But at last

Resolved, unto Agamemnon goes,
Whilst shields and helmets, all the way he past,
Resounded in his ears with frequent blows. 25
And as he went, the wounded chiefs he met,
Ulysses, Agamemnon, Diomed.
For far off from the fight the ships were set,
And close unto the shore lay at a head.
Only the foremost haul'd were to the plain, 30
And close astern of those was built the wall.
For with so many ships they cross'd the main,
That near the field they could not place them all.
But side-by-side along the shore they lay,
And took up all the compass of the bay. 35
The wounded men, to look upon the fray,
Help'd by their spears, went softly on the way,
Griev'd at the heart, and met with Nestor there,
Who, with his coming, made them more afraid.
And when unto them Nestor was come near, 40
Then Agamemnon spake, and to him said:
Nestor, glory of the Argive nation,
I am afraid that Hector will make good
That which he promised once in his oration,
Before the Trojans, when he boasting stood. 45
I never will to Troy come back, said he,
Till I have slain these Greeks, and set on fire
Their ships. And now performed it will be.
Oh, strange! Do all the other Greeks conspire
Against me with Achilles, Thetis' son, 50
And therefore are resolved not to fight?

'Tis plain, said Nestor, some such thing is done,
Else Jove himself could not with all his might
Have made such work. The wall is broken down,
In which, to save ourselves we did confide; 55
And at the ships they fight, nor was it known,
Nor could it be observed on which side
The Greeks that fighting were, were most distress,
So thick to th' ground in ev'ry part they fall.
But let's consult what course to take were best, 60
If counsel can do any thing at all.
But that we all should fight I'll not advise.
For what can wounded men in battle do?
To Nestor, Agamemnon then replies, —
Nestor, since now the war is brought unto 65
Our ships, and that, nor wall, nor trench does good,
And much the Argives suffer'd have who thought
Their wall for all the Trojans would have stood,
And all our hopes built on it come to nought.
For though I know Jove once was to us kind, 70
Yet now I see our ruin he designs,
And pleasure takes in changing of his mind,
And aids the Trojans whilst our hands he binds.
Let's all to what I saying am agree.
The ships that nearest lie to the sea-side, 75
Drawn down into the water let them be,
And there till night let them at anchor ride.
And if the Trojans then give over fight,
We'll fetch away the rest. For 'tis less shame
A danger to eschew, although by night, 80

Than needlessly to perish in the same.
Ulysses frowning on him then replied:
Atrides, what a word have you let fall?
You ought of cowards to have been the guide,
And not of us Achæans general. 85
For we by Jove are fram'd for actions high,
And to achieve the wars we undertake,
How dangerous soever, or to die.
And must we now the siege of Troy forsake,
And after so much labour lost go hence? 90
Peace! let no other Greek hear what you say.
Who would have said this that had common sense,
And whom so great an army did obey?
Nor is, in how to fly, your counsel right.
Must we our ships draw down from off the shore, 95
And at the same time with the Trojans fight,
Who now rejoice, but would do then much more,
And we that fight be utterly destroy'd?
For they that were at anchor on the main
Would go their way the danger to avoid. 100
Thus by your counsel we should all be slain.
Atrides to him then this answer gave:
Ulysses, your reproof is very smart;
Yet not command but counsel 'twas I gave,
And better I would hear with all my heart. 105
And so you shall, said Diomed, and though
Amongst you all the youngest man I be,
Be not offended with it. For you know
That born I am of a good family.

For Portheus three worthy sons begat, 110
In Calydon and Pleuron they all dwelled;
Melas, and Agrius, and Ceneus, that
The other two in deeds of arms excelled.
Of him my father, Tydeus, was the son,
But in exile at Argos led his life, 115
And of Adrastus' daughters married one,
And great possessions had he with his wife;
And there a rich and noble house did keep.
For corn, and wine, and fruit he had much ground,
And in his pastures had great store of sheep, 120
And chiefly was for chivalry renown'd.
Therefore, my counsel, if you find it good,
You should not for my person take amiss,
Since I dare fight and am of noble blood.
The counsel I shall give you now is this: 125
Let ev'ry man unto the battle go,
And place the wounded out o'th' reach o'th' shot,
That they encourage may against the foe,
Those discontented men that fight would not.
This said, they went together to the fight, 130
Which, Neptune spying, did not idle stand,
But, like unto an aged man in sight,
Came in, and took Atrides by the hand.
Achilles' heart, said he, now leaps to see
The slaughter of the Argives, and the flight, 135
And joys therein, so little wit has he.
May death and shame upon him for it light!
Atrides, do not all the Gods mistrust,

For sure I am you'll aided be by some,
And see the Trojans fill the air with dust, 140
As from your ships they fly to Ilium.
This said, amongst the Greeks he went about,
And loud, as if nine or ten thousand men
Together on a plain had made a shout,
He shouted, and the Greeks took heart again. 145
Now Juno standing on Olympus high,
Her brother 'mongst the Argives saw with joy,
And Jove on Ida with an angry eye;
And in her mind consid'ring was which way
To cozen him. And was resolv'd, at last, 150
To go to Ida to him finely drest,
And after she had by him been embrac'd,
To bind him fast, in gentle sleep to rest.
Then went she to her chamber, which her son
Vulcan had for her made, with door-posts high, 155
And solid doors, which of the Gods not one
Could open but herself, such mystery
Was in the lock and key. Then went she in,
And fast she lock'd the door, and there alone
She with ambrosia cleans'd her dainty skin, 160
Till not a speck unmeet was left thereon.
Then 'noints herself with sweet ambrosian oil,
That as unto the house of Jove she went,
The scent thereof diffus'd was all the while
Throughout the space 'twixt th' earth and firmament. 165
Then comb'd and plaited she her golden hair,
And cloth'd herself with her ambrosian vest,

And many figures on't embroid' red were,
And with gold buttons button'd at her breast.
A hundred tassels at her girdle hung. 170
And wore a precious pendant at her ear
Of three rich gems. And over all she flung
A dainty scarf, by which they cover'd were.
Then on her tender feet she tied her shoes.
And when herself she fully had array'd 175
From out her chamber presently she goes,
And Venus took aside and to her said,
Sweet child, I come a favour to request;
But tell me, will you grant it, yea or nay.
I fear you bear me ill will in your breast, 180
'Cause I for th' Argives am, and you for Troy.
And Venus to her answer made and said,
Juno, Jove's sister, do not from me hide
Your mind, which to my power shall be obey'd.
Juno to Venus then again replied, 185
Lend me Desire and Love, by which you tame
Both mortal men and the immortal Gods.
For to Oceanus I going am,
And Tethys, far from hence, that are at odds.
For when beneath the earth Jove Saturn sent, 190
I was by them receiv'd and cherished.
But now with one another discontent,
They will not come together in one bed.
If by this means I him can get within
Love's arms again, no jar shall them divide, 195
And I from both shall love and honour win.

And Venus then again to her replied,
Juno, Jove's wife and sister, your request
Cannot by me, nor ought to be denied.
And as she spake, she from about her breast 200
The fine enchanting girdle straight untied;
Wherein embroid'red were love and desire,
Soothing, and comfort, that sufficient were,
A heart, though very wise, to set on fire.
And to her hands she puts it, and said, Here, 205
Take it. There's nothing wanting that you need
When you would have a man or God beguiled.
Put it but in your bosom, you will speed.
So Juno did, and as she did it smiled.
And to the house of Jove then Venus goes. 210
But Juno o'er Æmathia, and all
Pierra, and all the Thracian snows,
And never on the ground her foot lets fall.
And from the mountain Athos o'er the deep,
And came to Lemnos where king Thoas sway'd. 215
And there she met the gentle God of sleep.
And took him by the hand, and to him said,
Sweet Sleep, to whom both men and Gods all bow,
If ever with my will you did comply,
Deny not what I shall request you now. 220
Diffuse sound sleep a while upon Jove's eye,
As soon as he with love is satisfied.
And I will thank you for it whilst I live.
And from my hand you shall receive beside,
A chair of beaten gold which I'll you give; 225

Vulcan my son shall make it curiously,
Together with a foot-stool for your foot.
And Sleep to Juno then made such reply,
As if he were afraid and durst not do't.
Juno, said he, if 'twere another God, 230
Though Ocean the great sire of them all,
I durst upon his eyes have softly trod.
But not on Jove's, unless he for me call.
Your order once, like this, I did obey
Before, when Hercules, Jove's mighty son, 235
Went off to sea after he conquer'd Troy.
Meanwhile the strong unruly Winds set on
By you, with mighty blasts at sea arose,
And from his best friends hurried him in pain,
And at the last threw him ashore at Coos. 240
But Jupiter, when he awoke again,
The Gods at home he all tost up and down,
And chiefly would of me have had a sight.
Into the sea then sure I had been thrown,
But that I fled, and was conceal'd by Night, 245
Till of his anger blunted was the edge.
For Night great power has with Gods and men,
And loth was Jove to break her privilege.
T'encourage him then Juno said again,
D'ye think Jove will as angry be for Troy, 250
As he was then for Hercules his son?
But go. Pasiphae you shall enjoy;
She's fair and young, and of my Graces one,
And with you as a wife shall always stay.

Content, said Sleep; but I will have you swear 255
By Styx. Come, on the earth now one hand lay,
The other on the sea, that witness bear
May all the Gods below, that Juno will
Give me the Grace Pasiphae to wife,
And that as wife she shall dwell with me still, 260
That love her dearly as I do my life.
Then Juno, as she was required, sware
By all the subtartarian Gods, by name
The Titans and the brood of Saturn are.
And then together both from Lemnos came 265
To Lectos, at the foot of Ida hill,
And o'er the woods upward their way they took.
But out of sight of Jove there Sleep stood still;
And as they went the wood below them shook.
Then Sleep went up into a high fir tree, 270
And there he sat in likeness of a fowl,
All cover'd o'er with boughs and leaves was he,
Call'd Chalcis by the Gods, by us an owl.
Juno went on to Gargarus, where Jove
Saw her and met her with no less desire 275
Than when the first time to enjoy her love
Without their parents' knowledge he lay by her.
And Jove then standing by her very near,
What made you from Olympus come, said he,
Neither your car nor horses have you here. 280
Deceitfully then to him answer'd she,
I going am upon a visit now
To th' father and the mother of the Gods,

Oceanus and Tethys; who, you know,
Did bring me up. For now they are at odds, 285
And angry he abstaineth from her bed.
But if I can I reconcile them will.
The horses that me brought unharnessed
Attend me at the foot of Ida hill.
But that I from Olympus hither came, 290
Was that I would not such a journey take,
And not make you acquainted with the same.
This said, to Juno Jove again thus spake.
You may, said he, at any time do that,
But let us now with love ourselves delight. 295
For never yet upon my heart love sat
For woman or for Goddess with such might.
Not when upon the wife of Ixion
The wise Perithous I did beget;
Nor when the fair maid Danae I won 300
That brought forth godlike Perseus; nor yet,
When by Europa I two children got,
Minos and Rhadamant, both famous men,
For her; nor Semele, when I begot
Bacchus, man's joy; nor for Alcmena, when 305
I Hercules begot, my lusty boy;
Nor Ceres, Leto, nor yourself till now,
So much I long your beauty to enjoy.
Fierce Cronides, then answered Juno, how?
On Ida top, for some o' th' Gods to spy, 310
And tell it to the rest to make them sport?
Then so ashamed of it shall be I,

That I shall never after come to court.
You have a chamber without chink or hole,
Made you by Mulciber, my son, whereat 315
Neither the sun nor any living soul
Can peep. Go thither if you will do that.
And Jove to Juno then again replied.
That man or God shall see us do not fear;
With such a cloud of gold I will us hide, 320
As to the Sun himself we'll not appear.
This said, within his arms his wife he caught,
Whilst under them the Earth made to arise
Great store of saffron, hyacinth, and lote.
There pleased Jupiter with Juno lies, 325
Closely concealed in a cloud of gold.
Away went Sleep unto the Argive fleet,
And speaking there to Neptune said, Be bold,
And help the Greeks awhile. Jove cannot see't.
I clos'd his eyes as he by Juno lay. 330
He'll soon awake; but help the Greeks till then,
Who now before the Trojans dare not stay.
This said, Sleep went amongst the tribes of men,
And Neptune to the Argive ranks, and cried, —
Shall Hector think to get the victory 335
Because Achilles is not on our side?
No. Of Achilles little need would be
If every man would his companion cheer.
But now the counsel I shall give obey:
Arm every man himself with a good spear, 340
And shield, and helmet strong, and come away,

And follow me. I'll lead you to the field.
Hector, though bold, my coming will not stay.
But let the best man take the largest shield,
And to a weaker put his own away. 345
This said, well pleased were the Argives all;
The wounded princes arm'd themselves each one;
King Agamemnon first, the general;
Ulysses and Tydides then put on
Their arms, and every way the field they range, 350
Surveying men and arms; and all along
Make weak men with their betters armours change,
And give their heavy arms to men more strong.
Thus armed all, and Neptune at the head,
Who with a great and long sword in his hand, 355
Went brandishing as if 't had lightened,
To th' fight they go; no man durst him withstand.
And Hector, with the Trojans well array'd,
On th' other side came on. And then began,
Betwixt the Greeks that had the God for aid, 360
And those of Troy led by a valiant man,
A cruel fight. And high the sea arose
Up to the ships and tents. And presently,
With Alalaes the mighty armies close;
And up unto the heavens went the cry. 365
So loud as now, the sea did never roar,
When beaten 'twas int' heaps by Boreas;
Nor wind, when in the woods great oaks it tore
Up by the roots, nor th' wood when fir'd it was.
And here did Hector first begin the fight, 370

And at the greater Ajax threw his spear,
Which hit him; but upon two belts did light,
Which one upon another lying were, —
One of his sword, the other of his shield.
Hector was angry that in vain he flung, 375
For he was in great hope he had him kill'd,
And now retired backward to the throng.
Then Ajax in his hand took up a stone,
Of those to which the Greeks their ships did tye,
For there amongst their feet lay many a one, 380
And at him, as he parted, lets it fly;
And as a top he made it flying spin.
It but a little o'er his buckler flew,
And hit him 'twixt his buckler and his chin,
Upon the breast, and to the ground him threw. 385
As when an oak is overthrown by thunder,
Which known is eas'ly by the brimstone smell,
Men look upon't with horror and with wonder;
So gazed they at Hector when he fell.
And from his hands went out both shield and spear, 390
And helmet from his head; and with great cry
The Greeks rush on, and in fair hope they were
To gain his body, and their spears let fly.
But all in vain. For by Polydamas,
Divine Æneas, and Agenor, and 395
Sarpedon, and by Glaucus sav'd he was,
Who all before him with their bucklers stand.
His friends then from the battle him convey'd
Unto his chariot and charioteer,

That close behind the squadrons for him stay'd, 400
And in his car tow'rds Ilium him bear.
But at the ford of Xanthus, by the way,
They poured water on his face, and then,
In little time, as on the ground he lay,
He breath'd, and came unto himself again. 405
Then sitting on his knees, he cast up blood;
And backward fell unto the ground again:
Upon his eyes again the darkness stood,
For of the stroke remained still the pain.
The Greeks, as soon as they saw Hector gone, 410
Took heart, and on the Trojans fiercer were.
Then Ajax, of Oileus the son,
Slew Satnius, son of Enops, with his spear.
His mother, Neis, was a very fine
Nymph of the river Satnius. Of the same, 415
Enops upon the bank sat keeping kine,
And on her got a son called by that name.
Him Ajax now struck through the flank and slew;
Then for the body there was much ado.
At him Polydamas a spear then threw, 420
Which Prothoenor's shoulder pierced through.
And on his hands into the dust he fell.
To th' Greeks then, boasting, said Polydamas,
I have not thrown in vain. I know full well
That one Greek or another taken 't has 425
To lean on as a staff i' th' way to Hell.
At this, the Greeks were griev'd, but specially
The heart of Telamonius did swell.

For Prothoenor slain did near him lie;
And with his spear threw at Polydamas, 430
Who nimbly leapt aside and it declin'd.
But by Archelocus receiv'd it was,
Antenor's son, whose death the Fates design'd,
Who having on his neck receiv'd the wound,
His forehead, and his eyes, and lips, and nose, 435
Before his legs or knees came to the ground.
Then Ajax took his turn, and at it crows.
Polydamas, said he, was Prothoenor
As good a man in your own estimation,
As this man that was brother to Antenor, 440
Or son? For he is not unlike that generation.
This said he, though he well knew who it was.
Then Promachus, as he drew off the dead,
Was killed by a spear from Acamas.
And in it Acamas then gloried. 445
Argives, said he, great threat'ners as you are
You vulnerable are as well as we,
And no less subject to the chance of war.
How quiet Promachus now lies you see,
And so I hope ere long you all shall lie. 450
My brother not long unrevenged lay.
'Tis good you see to have a brother nigh.
And when he this had said he went away.
Peneleus then went to throw his spear
At Acamas, but Acamas was gone.
Neptune assisteth the Greeks. 455
But yet he threw and kill'd another there,

Iliones, of Phorbas th' only son,
A man much favoured by Mercury.
The spear beneath his eyebrow enter'd in,
And to the ground fell down the bloody eye. 460
The spear went on unto the brain within,
Then sitting down with both his hands outspread,
The deadly spear yet sticking in his eye,
Peneleus with his sword cuts off his head,
Which to the ground with helmet on did fly. 465
Then looking up, he to the Trojans said,
Tell this in Troy. And let his parents mourn.
For Promochus's wife will not be joy'd,
When we without her husband shall return.
This said, the Trojans stricken were with fear, 470
And look'd about each one which way to fly.
Now tell me, Muse, who and by whom slain were
When they pursu'd the flying enemy.
Great Ajax first, the son of Telamon,
Killed the Mysian leader, Hyrtius, 475
Of Gyrtias the strong and valiant son;
Antilochus then killed Mermerus
And Phalces. By Meriones were slain
Hippotion and Morys. Teucer slew
Prothon and Periphetes, good men twain. 480
At Hyperenor then Atrides threw,
And gave him on the flank a cruel wound,
And where the spear went in, his life went out,
And suddenly he fell unto the ground,
And on his eyes sat darkness all about. 485

But he that far the greater number slew,
The lesser Ajax was, Oïleus' son.
'Twas hard to scape when Ajax did pursue;
For of the Argives all he best could run.

LIB. XV.

Jupiter awakes and sends away Neptune. Hector chaseth the Greeks again to their ships, and fireth one of them. The acts of Ajax. Which is the fifth battle.

WHEN FLYING THEY had pass'd the ditch and wall,
They at the horses and the chariots stay'd,
With loss of many men, and looking pale.
And Jove, awak'd, stood and the field survey'd, 5
And saw the Greeks pursue, and Trojans fly,
And Neptune with the Greeks, and Hector laid
Upon the plain, his friends there sitting by,
And not a little of his life afraid,
For gasping he scarce able was to draw 10
His breath, and blood abundance vomited,
Nor knew his friends. When Jupiter him saw,
Offended his condition pitied.
And then on Juno fiercely look'd and said,
Juno, I see all this is done by you; 15
And if you for it with a whip were paid,
'Twould be no more than for your work is due.
Have you forgot how once you swung i' th' air,
And had two anvils hanging at your feet,
Your hand with a gold chain tied to my chair? 20
Though sorry were the other Gods to see't;

Yet had I any seen but go about
Your manacles or shackles to untie,
I from the sill of heaven had thrown him out,
And strengthless made him on the earth to lie. 25
I was not so much griev'd for Hercules
When Boreas, set on by you, arose
As he went off from Troy, enrag'd the seas,
And at the last threw him ashore at Coos.
But I to Argos brought him safe again. 30
And this I now repeat, that you may try
Whether you likely are to lose or gain,
Abusing our familiarity.
This said, the Goddess Juno, struck with fear,
By Earth, said she, and Heaven about it spread, 35
By Styx, which is our greatest oath, I swear,
And by your life, and by our nuptial bed,
I never did to Neptune speak a word,
To hurt the Trojans, or the Greeks to aid;
But all he did was of his own accord, 40
By pity only and compassion sway'd.
And from henceforward I will him advise,
Seeing what way you lead, the same to take.
Then Jupiter with favourable eyes
On Juno look'd, and thus unto her spake. 45
Juno, if we were both one way inclin'd,
Neptune would quickly with us both comply.
Now if your words dissent not from your mind,
Go 'mongst the other Gods, and presently
Bid Iris and Apollo to me come. 50

For Iris unto Neptune I will send,
To bid him leave the battle and go home.
To Hector and the Trojans I intend
To send Apollo, to give Hector might,
And cure him of his pain, that he may lead
Jupiter awakes and sends away Neptune. 55
The Trojans on, and put the Greeks to flight,
That Thetis' son may see them scattered;
And he shall send Patroclus to the field,
Who shall the Trojans rout and kill my son
Sarpedon, and himself shall then be kill'd 60
By Hector's spear. And after that is done,
Achilles in revenge again shall fight,
And by his hand stout Hector shall be kill'd
Under the walls of Troy, i' th' Trojans' sight,
And beaten be the Trojans from the field, 65
Till Troy by Pallas' counsel taken be.
Nor till I have performed all I said
To Thetis, supplicating at my knee,
Let any God presume the Greeks to aid.
This said, went Juno to Olympus high. 70
As when a man looks o'er an ample plain,
To any distance quickly goes his eye;
So swiftly Juno went with little pain,
And found the Gods at wine together set.
And at her coming in they all stood up. 75
But Themis forward went and Juno met,
And to her hand delivered the cup,
And said, You look as if you frightened were

By Jupiter for something. But what is't?
You know, said Juno, that he is severe; 80
And you shall hear the matter if you list,
Together with the other Gods, though bad.
They will not all contented with it be;
But some of them will troubled be and sad.
And griev'd was she, though speaking smilingly. 85
Then Juno went up to her throne, and sat;
And unto all the Gods spake angrily,
How mad, said she, or foolish are we, that
Are thinking how again Jove's hands to tie,
Who, careless and unmov'd on Ida hill, 90
Knows his own strength, and does our plots despise.
And therefore what he sends, be't good or ill,
We'll take it patiently, if we be wise.
Nor must the God of war on Jove complain,
Or in rebellion against him rise 95
Because his son Ascalaphus is slain.
At this, with both his hands Mars clapp'd his thighs,
And to the Gods above complaining said,
Pardon me, Gods; I will revenge my son,
And 'mongst the Argives go and give them aid, 100
Though I should lie amongst the dead. Then on
He puts his armour, and gives order to
Terror and Flight his chariot to prepare;
And then there had been twice as much ado
T'appease Jove's anger ere it came to war, 105
If Pallas had not (for the Gods afraid)
Pluck'd off his helmet, and set up his spear,

And pull'd his buckler off, and to him said,
Fool, Bedlam, what! have you no ears to hear?
You hear what news now Juno brings from Jove. 110
And if you care not though yourself be lost,
Yet let the danger of us all you move.
For Jove will leave both Greek and Trojan host,
And, coming hither, seize us one by one,
And never ask who guilty is or not. 115
Therefore give over vexing for your son,
For better men than he, by Gods begot,
Already here have been and shall be slain.
The Gods cannot preserve their children all.
This said, she brought Mars to his place again. 120
And Juno to their houses went to call
Iris and Phœbus. You must go, said she,
To Jove on Ida. What you are to do,
You will by Jove himself informed be,
As soon as you his presence come into. 125
Her message done, Juno resumes her place,
Iris and Phœbus down to Ida fly,
And finding Jove, stood still before his face.
Nor look'd he on them with an angry eye;
For soon they did his wife's command obey. 130
Then speaking first to Iris, Go, said he,
To Neptune quickly, tell him what I say.
Bid him no longer at the battle be,
But either go t'Olympus to the Gods,
Or to the sea. If he will neither do, 135
Bid him consider if there be no odds

As well in strength as age between us two.
He knows that all the other Gods me fear,
And for my coming dareth none to stay,
As strong as to himself he doth appear. 140
This said, swift-footed Iris went her way
From Ida hill, and Jove without delay,
And swift as any cloud before the winds,
Came down unto the battle before Troy,
And there amongst the Argives Neptune finds, 145
And going to his side, I came, said she,
To speak with you a word or two from Jove.
You must not in the war a party be.
He bids you go up to the Gods above,
Or down to th' sea, where lies your own command. 150
If you refuse, he threatens you with war,
And bids you have a care t'avoid his hand;
And th'elder is, he says, and stronger far,
Which you yourself, he thinks, will not deny,
Since th'other Gods of him stand all in awe. 155
Neptune to this replying, first spake high:
Good as he is, said he, it is not law,
Thus to usurp upon my liberty.
For sons and heirs of Saturn we were three,
Begot on Rhea. Pluto, Jove, and I. 160
By lot the rule o' th' waters came to me.
To Jove the government of heaven fell,
And of the clouds, and the ethereal sky.
To Pluto darkness, and the rule of hell.
Earth and Olympus did as common lie. 165

Let Jove then with his share contented be,
And not encroach on me. For well 'tis known
I hold not any thing of him in fee,
But live as he should do, upon my own.
He should not unto me such language use, 170
But to his children, that will be afraid,
And dare not what he bids them to refuse.
Thus Neptune spake. Again then Iris said,
Neptune, shall I this haughty answer carry
To Jove? And will you that I with it go 175
As 'tis? The wise their minds oft vary;
And Furies on the eldest wait you know.
So she to him. Then Neptune thus to her.
Iris, this word was spoken in good season.
Much worth, I see, is a wise messenger. 180
But I was vex'd, because thus without reason,
When I his equal am by birth and lot,
Jove uses me as if I were his slave.
Well. For the present, cross him I will not,
Though I be vex'd. That answer let him have. 185
And further, that if he without consent
Of me, Athena, Juno, Mercury,
And Vulcan, Troy shall spare, our discontent
For th' Argives' wrong implacable will be.
And when he this had said he fight forbears, 190
Nor any longer 'mongst the Argives stay'd,
But div'd into the sea o'er head and ears.
Then Jove unto Apollo spake, and said,
To Hector go; for Neptune now is gone

For fear of my displeasure; had he stay'd, 195
The sons of Saturn of our war had known.
'Twas wisely done of him my hand t' avoid.
And better both for him and me; but go,
And shaking your great shield, the Greeks affright,
And strengthen Hector, and encourage so 200
That he the Argive lords may put to flight,
And follow them down to the Hellespont,
And make them for their hollow ships to fight.
What then is to be done? I'll think upon't.
For I intend not to destroy them quite.
Hector chaseth the Greeks again to their ships. 205
This said, Apollo left his father Jove,
And down he came to Troy from Ida hill,
Swift as a falcon flying at a dove,
And Hector on the ground found sitting still,
Not laid, but to his senses come anew, 210
And freely breathing, although very weak,
And very well his friends about him knew.
There Phœbus standing nigh did to him speak.
Hector, said he, why sit you here alone?
O, kindest of the Gods, said he, you know 215
That Ajax wounded has me with a stone,
So that I am disabled with the blow,
And once to-day I thought I should have gone
To Erebus with other shadows dim;
With such a force he threw the mighty stone. 220
Then thus again Apollo answered him.
Hector, I Phœbus am, and hither come

From Jove, against the Greeks to give you aid,
And ever have wish'd well to Ilium.
Lead to the ships your troops. Be not afraid. 225
Hector at this encourag'd was again,
And as a horse at rack and manger fed,
Breaking his headstall, scuds upon the plain,
And high into the air he holds his head,
His mane upon his shoulders plays with th' air, 230
And proud is in his freedom to behold
The pleasant river and the pastures fair,
To which he had accusom'd been of old,
And swiftly to the same is carried;
So swiftly now went Hector to each part, 235
And in the field his troops encouraged,
After Apollo once had giv'n him heart.
But as when swains with curs to chase a roe,
Go forth into the field, and with their cry
Rouse a fierce lion, they the prey let go 240
To save itself i' th' woods or rochers high,
And both the men and dogs are forc'd to fly;
Just so the Greeks whilst they in bodies fight,
They save themselves; but seeing Hector nigh,
They troubled were, and lost their courage quite. 245
Then to them spake Thoas, Andræmon's son,
Well skill'd at distance or at hand to fight.
Amongst th' Ætolians better there was none.
And few compare with him for counsel might.
strange, said he, what wond'rous sight is this! 250
I verily thought Hector had been slain

By Ajax' hand. But see he risen is.
Some God or other rais'd him has again.
He kill'd us has already many men,
And many more is likely now to slay. 255
For Jupiter defends him now as then.
But come, let all my counsel now obey.
Let us that most pretend to fortitude
Stay here embattl'd to receive the foe,
And to the ships send back the multitude. 260
For thither, I think, Hector dares not go:
This counsel was approv'd, and then stood out
Ajax, Idomeneus, Meriones,
Teucer, Meges, and such as were most stout,
And one battalion was made of these, 265
Th'impression of Hector to sustain,
Till to the ships the rest retreated were.
And Hector with his troops came on amain,
Himself the foremost shaking his long spear.
Apollo march'd before him to the field, 270
Concealing in a cloud his glorious head,
And carried in his hand a shining shield,
Which whosoever laid his eyes on fled.
'Twas made at first by Mulciber, and then
Given to Jove when he came down to fight 275
Against the squadrons of rebellious men,
To make them fly the field at the first sight.
Expecting Hector, close the Argives stand,
And loud and sharp on both sides was the cry,
And many a spear from every lusty hand, 280

And in the air, arrows abundant fly,
And spears; whereof some flying home did kill,
And others would have done, but short they fell.
As long as Phœbus did his shield hold still,
Many a soul on both sides flew to Hell. 285
When shaking it, he made the Argives see 't,
They stricken were with fear and suddenly
Their heavy hearts fell down into their feet,
And then they made all haste they could to fly.
And as a herd or flock is frightened when 290
A wolf or lion coming on they see,
And no assistance have of dogs or men;
So th' Argives scatter'd before Hector flee.
Then slain by Hector was Arcesilaus,
And Stichius who the Bœotians led. 295
The other a good friend of Mnesteus was;
Both killed were by Hector as they fled;
Æneas Medon slew, and Iasus.
Medon was little Ajax' bastard brother,
And lived from his father Oileus, 300
By th' instigation of his stepmother
Eriopis, whose brother he had slain.
And Iäsus th' Athenian leader was,
But back to Athens led them not again.
His father was Sphelus Bucalidas. 305
Mecestes slain was by Polydamas.
Polites Echius slew in the first fight,
And Clonius by Agenor killed was;
And Deiochus by Paris in the flight.

Whilst from the foe each one his armour takes, 310
The flying Greeks into the ditch leap'd all,
And there encumber'd mightily with stakes,
Were forced to retire within the wall.
Then Hector roared to the Trojans, saying,
On to the ships, and let the dead men lie. 315
I'll be his death whom ever I find staying,
Nor shall he buried be or burned by
His friends and kin, but in the fields of Troy
Be left for dogs to tear and haul about.
This said, unto the ships he drave away, 320
By th' Trojans follow'd with a mighty shout.
Phœbus before them march'd, and with his foot
Into the trench threw down the earth again,
And made an easy and plain passage through't
As far as one a spear can well hurl, when 325
He hurleth for a wager. To the wall
The Trojans go, Apollo there again
Before them is, and eas'ly makes it fall,
As children when themselves they entertain
With making pretty things upon the sands, 330
Then comes into their heads another toy,
And down they push this with their feet or hands;
So easily Apollo did destroy
The Argives' mighty work, and bring the fight
Again unto the ships. Where now they pray'd, 335
And one another's courage did excite.
Nestor to heav'n held up his hands and said,
Jove, if you the sacrifice accepted have

Of any Greek before he hither came,
And promis'd that the army you would save, 340
O, at our prayer, now perform the same;
Let us not perish by the Trojans here.
Thus Nestor pray'd, and then Jove thundered,
Declaring that his prayers granted were.
At this the Trojans were encouraged, 345
And by their hopes interpreting Jove's mind,
Upon the Greeks with greater fury fall.
As when a wave is thrown by some great wind
Into a ship, so pass'd they at the wall,
And to the ships they went with horse and car. 350
The Greeks went up into their ships to fight,
And with long spears, made for a naval war
And pointed well with brass, and shining bright,
The Greeks and Trojans push at one another,
These mounted stood upon their chari'ts high, 355
And higher on their black ships stood the other.
Patroclus, that till now sat quietly,
Because the fight was only at the wall,
And to Eurypylus his care applied
And med'cines fit to cure his wounds withal, 360
And sat discoursing with him by his side,
Now when he saw the Trojans were within,
And of the Argives heard the woful cries,
And saw the fear and danger they were in,
With both his hands then clapped he his thighs. 365
Eurypylus, said he, I cannot stay;
For mightily increased is th' affray.

Your wound be dressed by your servant may,
But to Achilles I must go away.
Who knows but I may win him at the last 370
To help the Greeks? This said, away he went,
And left Eurypylus, and made what haste
He could to get unto Achilles' tent.
Meanwhile the victory no way inclin'd.
Neither the Greeks could make the Trojans fly, 375
Nor yet the Trojans, as they had design'd,
Back from the ships could force the enemy;
But level hung the wings of victory,
As when two scales are charg'd with equal weight,
Made by the art of Pallas curiously, 380
The beam lies level in the air and straight.
And at one time at divers ships they fought.
Directly unto Ajax Hector went,
And there sharp fighting was one ship about.
Hector to burn, Ajax to save it meant. 385
Here Ajax, with a long spear in his hand,
Killed Caletor, Hector's brother's son,
As he was coming with a flaming brand
To fire the ship, and died before 'twas done.
This Hector saw, and to his fellows cried, 390
Trojans and friends, defend the body dead
Of Clytius' son, and shrink not from my side.
And as he spake his long spear from him fled,
Which, aim'd at Ajax, fell on Lycophron,
A man that was to Ajax very dear, 395
But born at Cythera, and Mastor's son,

That having kill'd a man durst not stay there,
But unto Ajax fled, and with him staid,
Till now by Hector's spear struck through the head
He died. Then Ajax to his brother said, 400
Teucer, our friend Mastorides is dead.
You know how much we honour'd him at home.
'Tis Hector that has slain him. Where are now
Your deadly arrows? And what is become
Of Phœbus' gift, your so egregious bow? 405
Which Teucer hearing, quickly with him was
With bow and quiver in his hand, and shot
And slew the servant of Polydamas,
That had the guiding of his chariot,
Clitus by name, who while in vain he sought 410
By driving to where hottest was the fight,
From Hector and the Trojans thanks t' have got,
The fatal arrow on his neck did light.
Then down he fell. The frightened horses shook
The empty car. Then came Polydamas, 415
And by the heads the cap'ring horses took,
And sets Astynous in Clytus' place;
And gave him a strict charge to hold them nigh,
But not to come with them into the fight.
Then Teucer lets another arrow fly 420
At Hector, which if it had hit him right,
He never at the ships again had fought.
But Jupiter was pleas'd to save him now,
And brake the bow-string. Then in vain flew out
The arrow, and into the dust the bow. 425

And Teucer to his brother made his moan.
Ajax, said he, is't not a wondrous thing?
My bow is started from my hand and gone,
Some God or other broken has the string,
Yet new 'twas made this morning purposely 430
To last all day. Teucer, said Ajax then,
Cannot you let your bow and quiver lie,
And fight with spear in hand like other men,
And give unto the Greeks encouragement?
No. Though the Gods above should in their hate 435
To let the Trojans take our ships be bent,
Yet let us sell them at a lusty rate.
Teucer then laid his bow up in his tent,
And arm'd himself with helmet and with shield,
And a good spear, and back to Ajax went, 440
And found him where he left him in the field.
When Hector saw that Teucer's noble bow
Was useless now, he to his squadrons cried,
Trojans and Lycians, come on boldly now,
For Teucer now his bow hath laid aside. 445
Jove brake the string. I saw it with these eyes.
For easily it may discerned be
To whom the hand of Jove intends the prize,
And to whom he denies the victory.
And now upon our side he is you see, 450
And from the Greeks their courage takes away.
Then to the ships let's go courageously,
And let the fear of death no man dismay.
For why should any of us fear to die?

When for his country 'tis, it is no shame. 455
And if we make the enemy to fly,
Sav'd are his wife and children, goods, and name.
Whilst Hector thus the Trojans did excite,
Ajax unto the Argives spake, and said,
We must now either put our foes to flight, 460
Or make account we shall be all destroy'd.
If Hector here to burn our ships should chance,
Can you go home again, d'ye think, a-foot?
He calleth on his men; 'tis not to dance,
But fire our ships, if we will let him do't. 465
For us 'tis better in close fight to die
Here all at once, or get the victory,
Than here, God knows how long, consuming lie,
And peck in vain at a weak enemy.
Thus Ajax rais'd the courage of th' Achæans. 470
Then Hector slew the son of Perimed,
Stichius that had command of the Phocæans.
And Ajax slew Laodamas that led
The Trojan foot, and was Antenor's son.
And Otus by Polydamas was slain, 475
Otus, that led the bold Epeians on,
And was a friend of Meges. He again
A spear threw at Polydamas, and miss'd;
For Phœbus kindness had for Panthus' son,
And with a present wit did him assist 480
To turn about and let the spear go on,
And Cræsmus there receiv'd it on his breast,
And down he fell. Then Dolops, Lampus' son,

(Lampus, that was of living men the best,
And grandchild of the King Laomedon) 485
To be reveng'd, at Meges threw his spear,
Which pass'd his shield, but in his breastplate staid,
(The breastplate which his father used to wear,
With many plies of strong mail overlaid,
And given was to Phyleus by his guest 490
At Ephyre, wherewith, in martial strife,
From deadly strokes of spears to save his breast,
And of his son it now preserv'd the life),
But Meges Dolops hit upon the head,
And from his crest struck off the goodly main, 495
Which he but newly then had dyed red.
But Dolops still the fight did well maintain,
Till Menelaus stole unto his side,
And struck him through the shoulder with his spear.
No longer stood he then, but fell and died, 500
And both of them to strip him going were.
And Hector then call'd out to all his kin,
And unto Menalippus specially,
Who, while the Greeks were absent, lived in
Percote, and took care of th' husbandry, 505
But when the Argive fleet to Troy was come,
He then return'd his country to defend,
And liv'd in Priam's house at Ilium,
And proud the Trojans were of such a friend,
And lov'd he was by Priam as his son. 510
And now unto him Hector spake, and said,
Have we for Dolops no compassion,

Or to defend his body are afraid?
Come, follow me. We must no longer play
At distance with the Greeks, but either they 515
Must utterly deface the town of Troy,
And kill us all, or we them all destroy.
This said, away they both together went
To save the body of their cousin dead;
And Ajax, with a contrary intent, 520
His Argives to the fight encouraged.
Argives, said he, to honour have an eye,
And of your fellows' censures have a care;
For slain are always more of those that fly
Than those that of base flight ashamed are. 525
This said, though of it no great need there was
Amongst the Greeks, they presently obey'd,
And at the ships stood like an hedge of brass;
But on came Hector, not at all afraid.
T' Antilochus then Menelaus said, 530
Amongst us there is none that better can
Both fight and run. Why should you be afraid
To leap unto the throng and kill your man?
This said, away again went Menelaus.
Antilochus leapt out before the rest, 535
And threw his spear at Menalippus, as
He coming was, and hit him on the breast.
No sooner was he fallen to the ground,
Than to the spoil Antilochus ran in,
As quick as when upon a deer a hound 540
Runs in, that by the hunter kill'd had been.

But soon as he saw Hector coming on,
As valiant as he was, he durst not stay;
But as some wild beast that had mischief done,
Ere people could assemble, ran away. 545
The Trojans follow'd him with clamour loud,
And spears abundance after him they threw,
But he ran on, and got into the crowd.
But they unto the ships the Greeks pursue;
For Jupiter to make his promise good 550
To Thetis, hitherto the Greeks dismay'd,
And in the battle with the Trojans stood,
Until he had performed all he said;
But meant to stay no longer with them, than
To see some Argive ship with fire to shine, 555
And then to let the Greeks prevail again.
From the beginning such was his design
In aiding Hector, who now furiously
Went on like Mars, or like fire in a wood,
With foam about his mouth, and fire in's eye. 560
And Jove himself came down, and o'er him stood,
To save him when he was hemm'd in by foes,
And honour him, since 'twas his destiny
That not long after he his life should lose,
And by none but Achilles' hand should die. 565
Now Hector, looking where the best men stood,
And armed best, tried first to break in there.
Keen as he was, he there could do no good;
So close they join'd to one another were,
And stuck like great stones in a tow'r or rock, 570

That of the boist'rous winds and billows high
Which break upon it, still endures the shock.
Then Hector other places went to try,
And through he pass'd. Then as a wave high grown,
When in foul weather forced by the wind 575
Under dark clouds, into a ship is thrown,
The mist and roaring sails bring to the mind
Of the poor seamen nothing but to die;
So frightened were the Greeks. But forward he
Still went; and as when in the meadows by 580
The river's side thousands of kine there be,
And th' herdsmen see a lion to them come,
But with a wild beast know not how to fight,
Some go before them, and behind them some,
The lion falleth on them in their sight, 585
Between both ends, and killeth only one,
The rest all fly; so th' Argives all, before
Hector and Jupiter, dispersed run,
But only one was killed, and no more.
And Periphetes 'twas, the worthy son 590
Of an unworthy father, Copreus, who,
When any labour great was to be done
By Hercules, did from Eurystheus go
As messenger, to carry the commands.
But Periphetes virtue wanted none. 595
His feet were swift, and valiant were his hands,
A wiser man Mycena had not one.
But slain he was; for as he turn'd to fly,
He trod upon the edge of his own shield,

And overthrown, upon his back did lie; 600
And with a stab of Hector's spear was kill'd.
His friends, though many standing by him were,
And griev'd to see him fall, did him no good,
For ev'ry one now for himself did fear,
And out of Hector's way kept all he could.

The acts of Ajax. 605

The Greeks retreated were no further yet,
Than to between the first and second row
Of th' Argive ships; but fore'd that place to quit,
Near to their tents themselves they rally now,
Where Nestor them encouraged again. 610
Argives, my friends, be valiant now, said he,
And, if at any time, now play the men.
Of one another's censures fearful be.
Besides, by what you should be moved most,
Your parents, children, wives, and goods and land, 615
Whether you have them still, or have them lost,
I you conjure against the foe to stand.
This Nestor said, the Argives to excite:
And Pallas from them took the mist again,
That they might see who did, who did not fight, 620
Both at the ships and elsewhere on the plain.
But Ajax Telamonius thought not good
To stay with other Argives in the throng,
But up into a ship he went and stood,
With a ship's spear twenty-two cubits long. 625
As when a man that taught has been to guide
Four horses at a time, and in his hand

Holdeth their reins while they go side by side,
And people on the way admiring stand,
He from one horse unto another skips, 630
And makes them run together to the town;
So Ajax o'er the Argives' ranged ships
To save them, and the tents, ran up and down.
And terribly unto the Argives cried
To play the men. Nor Hector 'mongst his troops 635
Could be persuaded longer to abide;
But suddenly as a black eagle stoops
At a great flock of geese, or cranes, or swans,
So Hector of the Argive ships to one
Flew down, and Jove, with his puissant hands, 640
Behind him marching, always push'd him on.
Then at the ships the fight began again,
More cruel than before. You would have said
They had no sense of weariness or pain,
So mightily they all about them laid. 645
The Greeks were in despair of their return.
The Trojans thought the Argive lords to rout,
And all the ships that brought them thither burn.
Thus minded on each side, they fiercely fought.
Upon a ship then Hector laid his hand, 650
Which brought Protesilaus unto Troy,
But never back unto his native land.
For this good ship they one another slay.
Arrows and darts no longer flew about;
But now with battle-axes of great strength, 655
In one another's reach they stood and fought,

And with great spears, and of a mighty length,
And great keen swords, whereof from dying hands
Abundance fell on either side to th' ground;
And cover'd were with streaming blood the sands, 660
That gushed out from many a ghastly wound.
But Hector on the ship his hand held fast,
And to his Trojans call'd aloud for fire.
This day, said he, requites our ill days past;
To burn these ships Jove with us doth conspire. 665
And set on fire they had been long ago
(For I would gladly at the ships have fought)
But that the senate would not have it so,
And kept both you and me from going out.
But though by Jove then smitten were their hearts, 670
Yet boldly now himself he leads us on.
This said, the Trojans bravely play their parts,
And with more vigour fought than they had done.
Then on the deck no longer Ajax staid,
So many spears went singing by his head. 675
For if he there had stood he was afraid
That some unlucky spear would strike him dead;
And to the far side of the ship retreats,
Leaving the deck, which fenceless was and high,
And sat upon one of the rower's seats, 680
And still upon the Trojans kept his eye.
And thence he from the fire the ship defends,
And terribly on th' Argive heroes calls
To do their best. We have, said he, no friends
Behind to save our lives, nor better walls 685

Than those we made; nor any city nigh,
That can or willing are our part to take.
But far from home, in hostile ground we lie,
And hemmed in are by the briny lake;
And nothing can redeem us but our hands. 690
This said, he look'd about him furiously,
To see if any durst approach with brands,
Resolved to kill him that with fire came nigh.
And many to the ship with fire were sent
By Hector; but when they approached near, 695
Ajax continually did them prevent,
And twelve he killed with his naval spear.

LIB. XVI.

The sixth battle. The acts of Patroclus, and his death.

THUS FIERCELY FOUGHT the Trojans and the Greeks.

And with Achilles was Patroclus now,

With tears abundance running down his cheeks,

Like springs that from a high rock streaming flow. 5

No sooner him Achilles weeping spied,

But pitied him. Why weep you so, said he,

Like a child running by his mother's side,

And holding by her coat, would carried be?

Bring you some news that none but you can tell? 10

Menoëtius and Peleus still do live

At Phthia with the Myrmidons, and well.

If not, we both have cause enough to grieve.

Or is it that the Greeks are slaughter'd so,

And fall before their ships? 'Tis for their pride! 15

Speak, what's the matter, that we both may know?

Patroclus, sobbing, to him then replied,

son of Peleus, of all Greeks the best,

Forgive me if in this necessity

I freely speak. They that excel the rest 20

In prowess, at the ships all wounded lie.

Ulysses wounded is, and Diomed,

And Agamemnon, and Eurypylus,

And cur'd may be, but stand us in no stead;
Nor does your virtue any good to us. 25
Gods, let never anger in me dwell
Like this of yours. If you cannot, who can
The Trojans from the Argive fleet repel,
And save so many lives? O cruel man!
The noble Peleus sure was not your father; 30
Born of the Goddess Thetis you were not.
Sprung from the raging sea I think you rather,
And that by some hard rock you were begot.
But if you stand upon some prophecy,
Or Thetis have forbidden you to fight 35
From Jove, yet send some Myrmidons with me,
That I may to the Argives give some light.
But in your armour let me be array'd,
That when they see me they may think me you,
And back into the city run dismay'd, 40
And th' Argives wearied take breath anew.
For long the Trojans have endur'd the fight;
And if fresh enemies they coming see,
With little labour they'll be put to flight,
And leave the Argive tents and navy free.

The sixth battle. 45

Thus prayed he, but 'gainst himself he pray'd,
And rashly sued to cast his life away.
To this Achilles answer made and said,
My dear Patroclus, what is this you say?
I stand not on, nor care for prophecy, 50
Nor yet by Jove forbidden am to fight;

But at my heart it lieth grievously,
My equal should oppress me by mere might.
A town I won, in which we found great prey;
For my reward the Greeks gave me a maid, 55
Which Agamemnon from me took away,
Only because more people him obey'd,
As if I were a man of little worth.
But let that pass. Though once I never meant
My Myrmidons should with the Greeks go forth 60
To battle till the foes were at my tent,
Yet since the Argive ships with such a mist
Of Trojans on the shore environ'd lie,
And th' Argives, wanting room, can scarce resist,
And have the pow'r of Troy for enemy, 65
Take you my arms, and lead unto the fight
The Myrmidons. The Trojans shall not see
My helmet near to put them in a fright.
If Agamemnon had been just to me,
The ditches had been fill'd with Trojans dead. 70
But now into the very camp they break;
Nor can resisted be by Diomed.
To save the ships Tydides is too weak.
Nor can that hateful mouth of Atreus' son
Be heard for Hector, who the air doth fill 75
With roaring to the Trojans to fall on,
And shouting of the Trojans as they kill.
Yet so, Patroclus, charge them lustily,
For fear the ships should all be set on fire;
Then lost the Greeks are without remedy, 80

And to their country never shall retire.
But now what I shall say give ear unto,
To th' end the Greeks may honour me, and send
Briseis back with gifts, you thus must do.
When you have freed the ships, there make an end 85
And come away. If Jove give you success,
No longer without me pursue the fight,
'Twill make my honour with the Greeks the less;
Nor in the slaughter take so much delight
As to proceed up to the walls of Troy, 90
Lest by some God or other you be check'd;
But having freed the ships come straight away,
Apollo has for Troy a great respect,
And leave both sides to fight upon the plain
Till, grant it, O ye Gods, there left are none 95
But you and I the town of Troy to gain.
Thus they to one another talk'd alone.
Ajax by this time from the ship was gone,
Forc'd by the spears that from the Trojans flew,
And weak'ned by the hand of Saturn's son. 100
For at his head the Trojans alway threw,
And forc'd he was to hold his great shield high,
And wearied was thereby his buckler-hand.
With spear in hand no Trojan durst come nigh,
But pelting him with spears aloof they stand. 105
The sweat ran down his limbs, nor could he well,
Though mightily for breath he pull'd, respire,
Now tell me, Muses, that in heav'n do dwell,
How came the ship first to be set on fire?

Thus. Hector with his broad-sword, at a blow, 110
The spear of Ajax chanc'd to cut in twain,
Where to the staff the head was fix'd, and so
His mighty naval spear he shook in vain:
The head of brass flew humming to the ground.
This Ajax saw, and frightened was to see 115
Jove thus the counsel of the Greeks confound,
To give unto the Trojans victory,
And went his way. Then in the Trojans came
With brands of flaming fire; and presently
The hind part of the ship was all in flame. 120
Achilles with his hand then clapp'd his thigh,
And to Patroclus said, a flame I see
Rise at the ships. 'Tis time that you were gone,
Lest our retreat should intercepted be.
Away, and quickly put my armour on. 125
This said, Patroclus first of all puts on
His boots of war, and to his legs them tied
With silver clasps; and next of Thetis' son
The breast-plate good he to his breast applied,
With golden stars like heaven beautified. 130
His sword then o'er his shoulder he puts on,
With silver studs to hang down by his side;
And then his helmet, shining like the sun,
He puts upon his head; and last of all
He took two spears that fit were for his hand. 135
But not that which Achilles fought withal,
For that none but Achilles could command.
A great and strong and heavy spear it was,

Made of an ash cut down i' th' woody hill
Of Pelius, and by Chiron given 'twas 140
To Peleus, his mighty foes to kill.
Then to Achilles' car Automedon
The horses Balius and Xanthus tied,
That were by Zephyrus begotten on
Podarge, feeding by the ocean's side; 145
And at their heads he Pedasus did place,
(A horse he took at Thebe in the prey),
That with them both was able to keep pace,
Though he were mortal, and immortal they.
While by his car Patroclus arming stands, 150
Apace from tent to tent Achilles runs,
And calleth unto those that had commands,
To arm and bring away the Myrmidons.
Then came they and about Patroclus stood,
Like wolves that on a lusty stag had fed, 155
And lapping stain'd the river with his blood,
With bellies full and hearts encouraged.
When they together were, Achilles then
Appointed who i' th' field should them command.
To Troy he ships brought with him five times ten, 160
From ev'ry ship came fifty men to land.
And then five bodies he made of them all,
And captains five by whom they led should be.
But was himself the captain-general,
For of the Myrmidons the king was he. 165
Of these five captains one Menestius was,
Who was the river Sperchius his son,

And by the name of Boro then did pass.
His mother was of Peleus' daughters one,
And Polydora was her name. And she 170
To Perierus had been married,
And for his wife reputed constantly
Before she was of M'nestius brought to bed.
The second bands were by Eudorus led,
The son of Polymela, a fair maid. 175
Hermes of her became enamoured,
As at a dance her beauty he survey'd.
It was upon Diana's holy day
He saw her dancing, and at night he got
Unseen into her bed and with her lay, 180
And his brave son Eudorus then begot.
To Echecles she after married.
Her father Phylas to him took her son,
And unto man's estate him nourished,
And lov'd no less than if t' had been his own. 185
The third Pisandrus led, that swift could run,
And had at fighting with a spear more art
In bloody war than any Myrmidon
Amongst them all, Patroclus set apart.
The fourth was by the old knight Phœnix led. 190
And of the fifth, charge had Alcimedon.
When they were all together gathered,
Unto them sharply thus spake Thetis' son.
Ye Myrmidons, said he, remember now,
How all the time I kept you have from fight, 195
You have the Trojans threaten'd hard; and how

You said my mother fed me had with gall,
And in great tumult bid me let you go,
Or at the ships upon the Trojans fall.
Lo, there before you is the war you crave. 200
The Trojans are about to burn the fleet;
Do you your utmost now the same to save.
Let him that brags of valour let us see't.
This said, the Myrmidons became more keen,
Because they saw the king had chang'd his mind; 205
And presently into their ranks fell in,
And close themselves to one another join'd,
As close as in a wall are laid the stones,
By him that means his house shall keep out wind;
So close together stood the Myrmidons, 210
Helmets with helmets, shields with shields conjoin'd.
Before them all two good men armed went,
Patroclus and Automedon, to th' fight.
Achilles then returned to his tent,
Where stood a chest most beautiful to sight, 215
Which Thetis gave him when he went to Troy,
Wherein were carpets, coats, and cloaks laid up,
To keep him warm when he a ship-board lay;
And in the same was kept a dainty cup,
In which no other man e'er drank but he, 220
Though 'twere to offer to the Gods above.
Nor he himself (such was his nicety)
E'er in it drank but offering to Jove.
Achilles then with sulphur scour'd the cup,
And having rins'd it clean with water fair, 225

And wash'd his hands, went out and held it up
Tow'rds heav'n, and thus to Jove address'd his prayer.
Pelasgic Jove, that far from hence dost dwell,
But at Dodona men thy counsel know,
The Selli there, thy prophets, fortunes tell, 230
Though on the ground they sleep, and barefoot go,
That at my prayer once didst honour me,
And broughtest on the Argive host much woe,
Once more unto my prayer inclined be.
Though to the fight myself I do not go, 235
I thither send my dear companion.
Jove, now honour him! Let Hector know
Patroclus is a man of war alone,
And not then only when I with him go.
And when he has the Trojans driven from 240
The Argive ships, then grant, O Jove, he may
With all his Myrmidons safe hither come,
With all their arms, and make no longer stay!
Thus prayed he. To half of his desire
Jove nodded; but the other half denied.
The acts of Patroclus, and his death. 245
He granted him to save the ships from fire;
But at returning safe his neck he wried.
Achilles, when he offer'd had and pray'd,
Went with the cup again into his tent,
And safely laid it up; and not long staid, 250
But out again to see the fight he went.
The Myrmidons now marched orderly;
But when unto the Trojans they were near,

Like wasps incensed they upon them fly.
As when at unawares a traveller 255
Is going by a wasps' nest near the way,
Which to the common damage stirr'd has been,
And anger'd by a young unlucky boy,
Upon the traveller they vent their spleen,
And all at once with fury on him fly: 260
Just so the Myrmidons occasion take,
Provok'd by Agamemnon's injury,
To fall upon the Trojans for his sake.
Patroclus yet did further them incite.
Ye Myrmidons, said he, Achilles' bands, 265
Remember now courageously to fight;
Achilles' honour now lies in your hands,
The best of Greeks. Let Agamemnon see
The fault he did, and know he was unwise,
How wide soever his dominion be, 270
The best of all th' Achæans to despise.
Then on the Trojans all at once they fly:
With them the other Greeks by shouts conspire.
The Trojans when they saw Patroclus nigh,
With stout Automedon, Achilles' squire, 275
Their courage fell, their ranks disorder'd were,
They look'd about which way 'twere best to run.
For they suppos'd Achilles now was there,
And that his discontent was past and gone.
Patroclus first of all lets fly his spear 280
Amongst the thickest of the foes, about
Protesilaus' hollow ship (for there

The Trojans standing close together fought)
And slew Pyræchmes, who from Amydon,
And Axius' wide stream, the Pœons led. 285
The spear passed through his right shoulder-bone,
And when the Pœons saw him fall, they fled.
Not only these he frightened had, but all,
By killing of a captain of such fame.
Patroclus then upon the rest did fall, 290
And drave them from the ships, and quench'd the flame.
The Trojans towards Troy retire apace;
Patroclus and the Argives them pursue,
Leaving the ship half burnt upon the place,
And on the plain the fight began anew. 295
As men see all the rocks and woods about,
When than the hills the mist is gotten higher;
So when the fire was at the ships put out,
The Greeks did for a little while respire.
For yet the Trojans did not plainly fly, 300
But still resisting went, and losing ground.
Here Areilochus was killed by
Patroclus, that gave him a deadly wound
Upon the thigh, just as he turn'd about;
The spear went through, and passing brake the bone, 305
And at the wound his blood and life went out,
And on his face he fell down with a groan.
Thoas by Menelaus on the breast,
Close by his shield, a wound receiv'd and died.
To Meges Antichus a spear addrest, 310
But Meges, that his purpose had espied,

Prevented him, and with his spear him hits
Upon the leg, and near unto the knee,
And all the nerves thereof asunder splits,
And of the wound he died presently. 315
Antilochus then slew Atymnius,
The spear went through his flank and struck him dead.
And Maris then struck at Antilochus,
But was prevented by Torasymed,
And slain, pierc'd through the shoulder with his spear. 320
And thus by two sons of old Nestor slain
The two sons of Amisodorus were,
And of Sarpedon good companions twain;
Their sire, Amisodorus, kept at home
The foul Chimæra, that had done much harm, 325
Devouring people which did that way come,
Till she was slain by Bellerophontes' arm.
Cleobulus then, pester'd in the throng
By little Ajax, taken was alive,
But after he was taken, liv'd not long, 330
For Ajax did him of his life deprive.
For on the neck he gave him such a wound
With his broad sword as made it smoke with blood;
And presently he fell unto the ground,
And on his eyes perpetual darkness stood. 335
With swords Peneleos and Lycon prest
Each other hard. For both their spears had miss'd.
Lycon him hit upon the helmet crest,
And broke his sword. One part staid in his fist,
The other flew. Peneleos him hit 340

Upon the neck. The sword so far went in,
As from the shoulders it divided it,
Save that it hung a little by the skin.
Meriones pursued Acamas,
Amongst the Trojans that before him fled; 345
And overtook him as he mounting was,
And with a wound i' th' shoulder left him dead.
And by Idomeneus, the king of Crete,
Hit in the mouth was Erymas and slain.
His teeth all stricken out, fell at his feet, 350
And by the spear pierced through was his brain,
And fill'd with blood stood staring both his eyes,
Which through his nose and mouth he strove to void,
And gasping, seeks to cast it out, and dies.
Thus the Greek lords each one his man destroy'd: 355
And then as bloody wolves invade the lambs
Or kids, that by the shepherd's negligence
Are wander'd on the mountains from their dams,
And kill; for nature gives them no defence;
So fiercely on the Trojans fell the Greeks, 360
But they no more trust to their hands, but feet.
Ajax to throw his spear at Hector seeks,
But with him Hector has no mind to meet,
But by th' advantage of his skill in war,
Knowing of arrows and of spears the sound, 365
To keep aloof from Ajax still took care,
And cover'd with his shield, oft shifted ground.
And though he knew the honour of the day
Would fall unto th' Achæans in the end,

Yet from the field he went not straight away, 370
But staid and sought his people to defend.
And then as clouds rise from Olympus high,
And through the air to heaven tend upright
Before tempestuous winds; so rose the cry
At th' Argive ships. Then Hector left the fight, 375
And after him the Trojans take their heels,
But in the trench greatly encumbered were,
And many char'ot-poles they brake and wheels.
And when they of the trench were gotten clear,
Fill'd with affright was ev'ry path and way; 380
Thus at the ships the storm of war gave o'er.
The horses that were loose ran back to Troy;
And to the ships the Trojans came no more.
Patroclus, where he most disorder found,
Thither he drove, and trod the Trojans down, 385
And char'ot-seats were tumbled to the ground,
And many from their seats were headlong thrown.
But the swift horses of Patroclus, which
On Peleus by the Gods bestowed were,
Found no impediment, but leapt the ditch, 390
Pursuing Hector, who now was not there.
As when with stormy winds th' autumnal rain
Falls heavy on the earth, from heaven sent,
When wrested are the laws by men for gain,
Who from the Gods expect no punishment; 395
The rivers swell; down from the mountain's side
Innumerable currents headlong run,
Roaring and foaming, to the ocean wide;

And wash'd away is all man's work, and gone:
So fled the Trojans. These thus put to flight, 400
He kept the Greeks from going to the town,
As they desir'd; yet gave not over fight,
But 'twixt the ships and river overthrown
Were many more; for unrevenge'd yet
Were many Greeks. First Pronous he kill'd, 405
Whom with his spear upon the breast he hit,
Where he was not well cover'd with his shield.
The next he slew was Thestor, Enop's son,
That sate upon his seat amaz'd with fear,
And from his hand the horses' reins were gone. 410
Patroclus standing by him with his spear,
Struck him upon the cheek, and there it stuck
Fast in his teeth; and over the fore-wheel
To th' ground Patroclus fetch'd him with a pluck,
As to the bank a fisher pulls an eel, 415
And to the earth he threw him on his face.
Eryalus then to him went, in vain,
And by Patroclus slain was on the place,
For with a stone he cleft his head in twain.
Epaltes, Erymas, Amphoterus, 420
And Echius, Pyres, Damastorides,
Euippus, Polymelus, Iphius;
He one upon another kill'd all these.
Sarpedon saw how fast his good friends died,
And that his Lycians ready were to fly; 425
He them rebuking, with a loud voice cried,
Whither d'ye go? For shame, stay here; for I

Intend to meet this man myself, and know
Who 'tis that here so furiously fights,
And lays so many valiant Trojans low. 430
This said, he from his chariot alights.
Patroclus, seeing that, alighted too,
And presently betook him to the fight,
As keen as on a high rock vultures two.
And Jupiter was grieved at the sight, 435
And to his wife and sister, Juno, said,
Ay me, my son Sarpedon will be slain,
For by the Fates long since it so is laid;
And now my mind divided is in twain,
To snatch him hence, and carry him again 440
To Lycia, or now to let him die,
And by Patroclus' fatal spear be slain.
And Juno then to Jove made this reply.
Jove, most wilful of the Gods, what say'st?
A mortal man condemn'd is by the Fates, 445
And you would now the execution stay?
Do. But take heed how you offend the states.
And this I tell you further, if you do
Your son, Sarpedon, from the combat save,
The other Gods will look to do so too, 450
For sons at Troy many immortals have.
But since you love your son, and for him grieve,
First let Patroclus take away his life,
And then to Death and Sleep commandment give
To carry him, from out the bloody strife, 455
To Lycia, amongst his friends and kin,

Who see him will embalm'd and buried,
And build a tomb to lay his ashes in,
Which are the honours due unto the dead.
This Juno says; Jove to it condescends, 460
And for the honour of his son so dear,
For rain he drops of blood from heaven sends.
When they were come to one another near,
First threw Patroclus, and kill'd Thrasymed,
A valiant man, Sarpedon's charioteer, 465
The spear into his belly entered.
Then at Patroclus flew Sarpedon's spear,
And hit him not, but Pedasus he slew,
The fore-horse of Achilles' car, and now
The sprawling horse caus'd a disorder new. 470
The yoke screeks, and Automedon lets go
The reins; whereby the combatants are parted;
Automedon soon found a remedy,
For from the char'ot-seat he nimbly started,
And cut the gears that did the fore-horse tie. 475
The horses two adjusted were again,
And then the combatants the fight renew.
And first Sarpedon threw, and threw in vain;
The spear just over his left shoulder flew.
But not in vain Patroclus' spear was thrown, 480
That smote him through the midriff. Heavily
Sarpedon then unto the ground came down,
As if't had been an oak or poplar-tree;
Or as a pine cut down i' th' hill, to be
A mast for some great ship, falls to the ground, 485

So fell to th' earth Sarpedon heavily,
And with his armour made the place resound.
As when a bull is by a lion slain,
Under his paw to th' ground he groaning falls;
So groaning fell Sarpedon, in great pain, 490
And to his friend, the valiant Glaucus, calls,
And to him said, Now, Glaucus, valiant be,
And set your mind on nothing but to fight.
But first, go call my best men all to me,
And to assist me here join all your might. 495
If of my arms I stripp'd be by the foe,
The shame thereof for ever will abide.
So therefore quickly call the people: go.
And when he thus had spoken to him, died.
Patroclus on the body sets his foot, 500
And out again he pull'd the bloody spear,
With pieces of the midriff sticking to't.
And now away the horses ready were
To run, for no man was upon the seat;
But by the Myrmidons they soon were staid. 505
The grief of Glaucus then was very great,
For that he knew not how the king to aid;
For in great pain his arm was with the stroke
Of Teucer's arrow, at the Argive wall,
And found no remedy but to invoke 510
Apollo, and upon him thus did call:
Apollo, whether thou in Troy be now
Or Lycia, unto my prayer give ear;
For when distressed men unto thee bow,

Thou dost from any place or distance hear. 515
I grievously am wounded in the hand,
The pain whereof up to my shoulder goes;
No longer now can I my spear command,
When most I need to use it 'gainst the foes.
Sarpedon, the brave son of Jove, is slain; 520
His father of him takes no further care.
But thou, Apollo, now assuage my pain,
And cure my wound, and make me fit for war;
That I may bring the Lycians to fight,
And I with them the body may defend. 525
This said, Apollo, by his heavenly might,
His wound heal'd up, the pain was at an end;
The blood was gone; encourag'd was his mind,
And Glaucus knew Apollo did it all,
And joy'd such favour with the God to find: 530
Then out he went the Lycians to call.
That done, he to the Trojan princes goes,
Agenor, Hector, and Polydamas,
Divine Æneas, and craves aid of those;
But what he said, to Hector spoken was. 535
Hector, said he, your friends you now forget,
Who from their country hither came so far,
Their lives to venture for your sake. For yet
How to assist them you take little care.
Slain is the King Sarpedon in the fight, 540
That both with might and justice rul'd the land
Of Lycia. Let them not vent their spite
Upon the body slain; but by him stand:

The Myrmidons else, for th' Achæans' sake,
Of whom he slew so many at the fleet, 545
Will in revenge his armour from him take,
And do unto him other things unmeet.
This said, the Trojans all were on a flame
To be reveng'd. To Troy he was a wall,
Although he thither as a stranger came; 550
He many led, himself the best of all.
And to the Myrmidons they march'd away,
Hector himself before them, at the head,
As angry for Sarpedon's death as they.
Patroclus then the Greeks encouraged, 555
And speaking first to the Ajaxes two,
Ajax, said he, both you and you, again
Fight gallantly, as you are us'd to do,
Or better if you can. For I have slain
Sarpedon with my spear, who was the man 560
That mounted first up to the Argive wall.
Let's take his armour off him if we can,
And make his fellows some of them to fall.
This said, they into order put their men,
Trojan and Lycian; Greek and Myrmidon; 565
And to the body slain return again,
And fiercely one another fell upon.
And Jove the place with darkness cover'd round,
As long as they were fighting 'bout his son.
And at the first the Greeks forsook the ground. 570
For then there was a noble Myrmidon,
Epigeus, that king was formerly

Of Budeon, and forced thence away
For a man's death, to Peleus did fly,
Who sent him with Achilles unto Troy. 575
And now no sooner layed had his hand
Upon Sarpedon's body, but was slain
By a great stone, that flew from Hector's hand,
And broke (for all his casque) his skull in twain.
Down he upon the dead king falling, dies. 580
Patroclus, when he saw his friend thus fall,
Swift as a hawk that at a starling flies,
Up to the foes ran, and amongst them all
He threw a stone, which lighted on the neck
Of Stenelaus, and the tendon rent. 585
And this gave to the Trojan horse a check;
And back a little Hector with them went,
As far as one can for experiment,
Or at a foe in battle throw a spear;
So far back Hector with his char'ot went, 590
The Argives them pursuing in the rear.
But Glaucus, that did then the Lycians lead,
Pursu'd by Bathycles, and very near,
Upon a sudden to him turn'd his head,
And deep into his breast he thrust his spear, 595
And down he fell. The Trojans then were glad,
And at the body fallen boldly staid.
On th' other side, the Greeks were very sad
To lose so good a man, but not dismay'd.
Meriones then slew Laogonus, 600
Son of Onetor, priest of Jupiter,

And honour'd like a God in Gargarus,
The spear him pierc'd between the cheek and ear.
Then at Meriones Æneas threw,
And was in hopes to give him his death's wound; 605
But he then stoop'd, and o'er him the spear flew,
And one end shook, the other stuck i' th' ground.
At this Æneas, angry, to him said,
Meriones, as well as you can dance,
My spear was like your motion to have staid, 610
And that it did not, think it was by chance.
To him replying, said Meriones,
Æneas, strong and valiant as you are,
You cannot kill men whom and when you please;
Yourself are subject to the chance of war 615
As well as I. And if my spear fall right
(As much as to your hands you trust) you'll die
Like other men, and I win honour by't,
And to the shades below your soul will fly.
This said, Patroclus came and him reproved. 620
Meriones, why talk you thus, said he,
D'ye think the Trojans can be hence removed
With evil words, till many slain there be?
In council words may somewhat signify,
But hands in war determine the event, 625
'Tis to no purpose words to multiply.
This said, away they both together went,
And by and by was heard a mighty sound,
As if the woods were falling on the hills,
Of men in armour falling to the ground, 630

And swords and spears on helmets and on shields.
Sarpedon cover'd was from top to toe,
With dust and spears, and so besmear'd with blood,
That wise he must have been that could him know,
Though who it was they all well understood, 635
And busy were about him as the flies
That buzz in summer time about the pans
Of milk. And all this while Jove kept his eyes
Upon the battle; and advising stands,
Whether 'twere best to let Patroclus die 640
Upon Sarpedon, slain by Hector, or
Let him go on, and follow those that fly,
And of the Trojans make the slaughter more.
At last resolv'd, he made the Trojans fly.
Patroclus then pursu'd them up to Troy, 645
And as he went, made many of them die;
And Hector was the first that fled away,
Not ignorant of Jove's apostacy.
And then the lusty Lycians also fled;
Whose king, Sarpedon, now i' th' heap did lie, 650
Stretch'd out on th' earth amongst the other dead.
And him Patroclus of his armour strips,
His mighty armour, all of solid brass,
And sent it by his fellows to the ships.
Thus slain and stripp'd Jove's son Sarpedon was. 655
Then Jove unto Apollo spake, and said,
Go, Phœbus, bear Sarpedon from the fight
A great way off, and let him be array'd
In an immortal garment, pure and bright.

But in the river clear first wash him clean, 660
And with ambrosia anoint his skin.
Let Death and Sleep, two sisters, bear him then
To Lycia, unto his friends and kin,
By whom his body will embalmed be,
And tomb and pillar set upon his grave, 665
Whereby preserv'd will be his memory,
Which all the honour is the dead can have.
This said, Apollo down from Ida came,
And bare Sarpedon's body from the fight.
And far off in the river wash'd the same, 670
And with ambrosia his body white
Anointed, and with garments fair array'd,
Immortal garments; and into the hands
Of Death and Sleep committed it, who laid
It down again amongst the Lycians. 675
Patroclus then commands Automedon
To drive to Troy. Not well; for had he then
The counsel of Achilles thought upon,
He had escap'd. But Jove knows more than men,
And quickly can take from a man of might, 680
And to a weaker give the victory,
Whom he himself encourage will to fight,
As now by Jove himself set on was he.
But while Patroclus chas'd the Trojans thus,
Who fell? Adrestus, and Autonomous, 685
Epistor, Melanippus, Perimus,
Pylartus, Mulius, and Echeclus,
And Elasmus. And taken had been Troy

Now by Patroclus, but that Phœbus stood
Upon the tow'r, and push'd him still away, 690
To vex the Greeks, and do the Trojans good.
For thrice he mounted, and was thrice put back
By the immortal hand; but when again
He mounting was, Apollo to him spake.
Retire, said he, Patroclus, 'tis in vain; 695
It is not you that Ilium can win,
Nor Thetis' son, a better man than you.
Patroclus, at these words, great fear was in,
And far off from the wall himself withdrew.
Now Hector was upon his char'ot seat, 700
I' th' Scaean gate, and did deliberate
Whether to make the Trojans to retreat,
And when they were come in to shut the gate,
Or go to th' fight. While he consulted thus,
Apollo came, and standing by his side 705
In likeness of his uncle Asius,
Him sharply did for standing idle chide.
Hector, said he, why stay you here? If I
Exceeded you in strength as you do me,
I teach you would, in such necessity 710
To quit the field thus, and unuseful be.
Go: to Patroclus now directly drive,
And doubt not but that by Apollo's aid,
You may him of his life and arms deprive.
Away went Phœbus when he this had said, 715
And Hector then returned to the fight,
While Phœbus did the Argive throng dismay.

Cebriones still kept his horses right
Upon Patroclus. For upon the way
Hector pass'd through the Greeks, and killed none. 720
Patroclus then alighting, with his spear
In his left hand, in th' other took a stone,
And with it killed Hector's charioteer,
Cebriones, King Priam's bastard son.
Above his eyes, upon his forehead just, 725
Patroclus hit him with the knobby stone,
Then from his seat he dropp'd into the dust.
Broke was his skull, his eye-brows crush'd int' one,
And at his feet, before him fell his eyes.
Patroclus scoff'd, and said 'tis nimbly done. 730
And proudly thus, insulting, o'er him cries:
Oh, that we had a man could leap like him,
And set upon one of our ships were he,
To leap into the sea, and groping swim!
How satisfied with oysters should we be! 735
So quickly down he tumbled to the plain,
I see that there good tumblers are in Troy.
This said, he ran unto the body slain,
Himself with his own valour to destroy.
And then unto the ground leapt Hector too, 740
And at Cebriones his body, fought
He and Patroclus, fierce as lions two,
That had a great stag, slain by chance, found out;
And hungry both, strove who should first be fed,
So sought these two each other to destroy. 745
And Hector pull'd the dead man by the head,

Patroclus by the heels, the other way.
Meanwhile the Greeks and Trojans fighting stood,
As when between two hills two great winds fight,
On both sides strongly shaken is the wood, 750
And boughs beat one another with great might,
And with a horrid noise together clash,
And many lusty limbs then broken are,
Of barky corme, broad beech, and lofty ash;
So did it with the Greeks and Trojans fare. 755
About Cebriones stuck many a spear,
And many a fledg'd arrow from the bow,
And many shields by great stones broken were,
While he along in bed of dust lay low,
And quite forgotten had his chivalry. 760
Now all the while that mounting was the sun,
The weapons flew, and men fell equally,
But after noon, when half the day was gone,
The Argives clearly had the victory,
And from the field Cebriones they drew, 765
And stripp'd there of his armour, let him lie.
Patroclus then the Trojans chas'd anew,
And there before the Myrmidons leapt out,
Like Mars himself, and thrice nine Trojans slew.
And out again he went; but at that bout, 770
Upon himself untimely death he drew.
For Phœbus came (Patroclus saw him not)
Wrapp'd up in air, and standing on the ground,
Between the shoulders with his hand him smote,
That all about him seemed to go round, 775

And from his head his helmet then he flung
Into the dust, and foul it was all o'er,
And beaten by the hoofs of horses rung,
That never had been so defil'd before,
When on Achilles' godlike head it sate. 780
But Jove to Hector gave it now to wear,
And only then, when near him was his fate.
Moreover, Phœbus brake Patroclus' spear,
A heavy spear, well armed at the head,
And pluck'd his mighty shield out of his hand, 785
And left him of his arms uncovered.
With this, Patroclus did amazed stand;
And near unto him then a Dardan came,
And in the back he smote him with his spear;
Panthorides Euphorbus was his name, 790
And kill'd him not, but back ran to the rear.
For though he well could fight, and ride, and run,
And going first abroad to learn the wars,
He was by no man of his age outdone,
And had o'erthrown twice ten men from their cars; 795
Yet for Patroclus now he durst not stay,
Although he wounded and disarmed were.
Then to the rear Patroclus went away;
And after him ran Hector with his spear,
And at the belly struck him through the side, 800
And down he fell. The Greeks were grieved sore.
As when at a small fountain almost dried,
Together come a lion and a boar
With equal thirst, and drink they both would fain,

But fight who shall drink first, slain is the boar; 805
So now by Hector was Patroclus slain,
Though many Trojans he had kill'd before.
And Hector then triumphing o'er him said,
Patroclus, you thought sure t' have stormed Troy,
And in your ships our women t' have convey'd 810
To Argos with you, when you went away.
Were you so simple that you could not see
That Hector, with his horses and his spear,
Protects the Trojans from captivity?
Now shall you for the dogs and fowls lie here; 815
Nor can Achilles do you any good,
That bad you, 't may be, when you from him went,
Not to return, till dyed in his blood,
You Hector's coat had from his shoulders rent,
And vain enough you were to promise it. 820
Patroclus, with a feeble voice, replied,
Hector, you now may boast as you think fit,
And in your own ability take pride.
T' Apollo first my death I owe, who threw
My armour from my body to the ground; 825
I could have slain else twenty such as you,
And from Euphorbus I receiv'd a wound.
To bring me down, you were but one of three.
But hear me, and remember what I say;
Hector, you will not long live after me, 830
And only for Achilles' hand you stay.
And at these words he was of life bereft.
His soul unto th' infernal regions fled,

Lamenting so much youth and vigour left;
And Hector to him spake again, though dead. 835
Patroclus, why do you foretell my death?
Who knows but that Achilles may be slain
By me first, and before me lose his breath?
This said, he pulled out the spear again,
And presently pursu'd Automedon, 840
Who of Achilles was the char'oteer;
But he away was carried and gone
By Peleus' horses, that immortal were.

LIB. XVII.

The seventh battle, about Patroclus's body.

AND MENELAUS UNDERSTANDING now
That slain Patroclus lay upon the ground,
Careful, as of her first calf is a cow,
To th' body went and walk'd about it round, 5
Couching his spear and holding out his shield,
Resolv'd to kill him, whosoe'er he was,
That durst to stand against him in the field.
Then to him said Euphorbus, Menelaus,
Retire, let me advise you, from the dead. 10
For I am he that gave him the first wound,
That with his arms I may be honoured;
Lest with my spear I strike you to the ground.
And Menelaus to him thus replied.
Jupiter, in lion never was, 15
Nor yet in panther, nor in boar, such pride
(Though other beasts in strength they far surpass)
As in these sons of Panthus. Though they know,
When Hyperenor proudly me defied,
And spitefully did value me below 20
All other Greeks, that by my hand he died,
And sorry were his parents and his wife.
Now you succeed will to your brother's fate.

Begone, then, if you mean to save your life,
And quickly, or you will be wise too late. 25
No, Menelaus, said Euphorbus then,
Since you have griev'd his parents and his wife,
'Tis best, I think, to comfort them again,
By making you pay for it with your life.
For though intolerable be their grief, 30
Yet when they see your armour and your head
Brought to them home, it will be some relief.
But this by fight must be determined.
This said, he made a thrust at Menelaus,
Which he received on his trusty shield, 35
It entered not, resisted by the brass,
Which bent the point, and passage none did yield.
Then, as he backward stepp'd to get away,
He by Atrides on the breast was hit.
The spear press'd with his hand not there did stay, 40
But to his neck went up and pierced it.
And then the ground he with his armour knocks,
And dyed was with blood his dainty hair,
Those fine, with gold and silver twined, locks,
Like those that Cytherea's Graces wear. 45
As when one planted hath an olive sprig
In open place, and where are many springs,
And stirr'd by gentle winds it is grown big,
Then comes a storm and to the ground it flings;
So by Atrides fell Euphorbus now. 50
As when a lion cometh from the wood
Into the herd and seizeth on a cow,

First breaks her neck, then feeds he on her blood
And bowels, dogs and herdsmen looking on
And hueing him, that dare not to go near; 55
So then upon Atrides ventur'd none,
So much the Trojans stricken were with fear.
And now into the hands of Menelaus
Patroclus' armour came; and borne away
Had been, but that by Phœbus cross'd he was, 60
That was a friend to Hector and to Troy.
And in the shape of Mentès gone was then
(Whom now the Cicon regiments obey'd)
To call back Hector to the field again,
And overtaking him, thus to him said: 65
Hector, you here Automedon pursue
To take Achilles' horses all in vain,
Which never will be won or rul'd by you,
And suffer good Euphorbus to be slain
By Menelaus at the body dead 70
Of Menœtiades. Then went his way.
And Hector grieved turn'd about his head,
And saw how on the ground Euphorbus lay,
Bleeding and naked left by Menelaus.
And Hector then, enflamed with the sight, 75
Like raging fire did through the squadrons pass.
And with great cry returned to the fight.
And cold was then Atrides at the heart,
And with himself he thus disputing stands;
If I should from the body slain depart, 80
The Greeks would say of me but little good;

But if I stay alone here 'twill be worse
Than anything the Greeks can of me say.
For he brings with him all the Trojan force.
But wherefore do I thus disputing stay? 85
Who fights against him whom a God doth aid,
Draws on himself a great and certain ill.
My best course then is Hector to avoid,
And let the Greeks say of it what they will.
But if of Ajax I could get a sight, 90
Then he and I together would not fear
With Hector aided by a God to fight,
And to Achilles the dead body bear.
Whilst thus unto himself he laid the case,
The Trojans came with Hector at their head, 95
And Menelaus then forsook the place,
And going left behind the body dead.
But oft look'd back. As when a lion is
Compell'd to leave a fold by men and dogs,
He oft looks back, and runs not for all this, 100
But tow'ards the wood still slowly on he jogs
Unwillingly; his heart's too big to run;
So Menelaus off went safe and sound.
And then for Ajax, son of Telamon,
Look'd round about, and 'mongst his troops him found 105
Inciting them to fight. For not a man
But frightened was by Phœbus and dismay'd;
And with all speed Atrides to him ran,
And standing at his side unto him said,
Come, Ajax, quickly come away with me 110

To save Patroclus from the Trojans' wrath,
That to Achilles carried he may be
Though naked. For his armour Hector hath.
Ajax enrag'd at this, flies to the place
With Menelaus where Patroclus lay, ¹¹⁵
When Hector from the field him drawing was
(Having already snatch'd his arms away)
Unto the Trojans to cut off his head,
And give the body to the dogs to eat.
But when great Ajax thither came, he fled, ¹²⁰
And to the Trojans made a quick retreat;
And order gave to bear the arms to Troy,
Achilles' arms, a noble monument
Of his great deed. But Ajax still did stay,
And with his shield about the body went. ¹²⁵
As when a lion, his whelps following him,
Into the open fields comes from the wood,
And hunters meets, he looks upon them grim;
So Ajax looking, by Patroclus stood.
And Glaucus then, that led the Lycian bands, ¹³⁰
To Hector went and frowning to him said,
Though you be thought a good man of your hands,
Hector, it is not so I am afraid.
Consider first if you the town can save
By Trojans only, without other guard, ¹³⁵
And of their service how great need you have;
And then how lightly you their pains regard.
What Lycian again will for you fight?
Or how will you defend a meaner man,

That left Sarpedon to the Argives' spite 140
And sport, and from his body frightened ran,
That was your friend and had such service done?
So that if I were won to lead them home,
You'd find a little after we were gone,
The utmost fate of Troy were on it come. 145
For if the Trojans had as forward been,
As men should be that for their country fight,
Patroclus' body we in Troy had seen,
Fetch'd from the field, for all the Argives' might;
And from the Greeks in change we might have had 150
Sarpedon's corpse, and brought it into Troy;
And all the Greeks thereof would have been glad,
So great experience of his worth had they.
But you to Ajax never yet durst go,
And when he came to you, you from him ran 155
Into the throng o' th' Trojans. And why so?
But that you know he is the better man.
Then Hector, frowning on him, thus replied,
Glaucus, 'tis strange that such a man as you
Should so severely without cause me chide; 160
I thought you very wise, but 'tis not true.
You say I dare not with great Ajax fight,
When I do neither foot nor horsemen shun,
But only way give sometimes to the might
Of Jove when he the enemy sets on. 165
For he to whom he will gives victory,
And from the proud their courage takes away.
But to the fight come with me now, and see

If I be such a coward as you say;
And do not from Patroclus' body make 170
Some of the Argives to retire again.
This said, he turn'd and to the Trojans spake.
Trojans, said he, and Lycians, play the men
Whilst I myself in these good arms array,
Which from Patroclus' body slain I took. 175
This said, he from the field went toward Troy,
And quickly those that bare them overtook,
And gave to them the armour he then wore,
And th' armour of Patroclus there puts on,
Giv'n by the Gods to Peleus heretofore, 180
Which he when aged gave unto his son,
But were not kept by him till he was old.
Then Jove that out of sight in heaven sat,
And Hector in this armour did behold,
Poor man, said he, he knoweth not his fate, 185
Which now is near; and at it shook his head,
And said, though now these heavenly arms you wear
Of this great man whom all men else did dread,
Killing the gentle knight that did them bear,
And so unhandsomely, you'll never go 190
To show them to Andromache your wife.
Yet now you shall prevail against the foe,
To please you, since thus shorten'd is your life.
And as he said it, seal'd it with a nod.
Now Hector, having on these arms and fit, 195
Into his breast went in the mighty God
Of battle, and with courage filled it.

Then Hector, like Achilles shining, came
To his confederates, and ‘mongst them went,
Calling upon the best of them by name, 200
To give unto them all encouragement,
Mesthles, and Glaucus, and Thersilochus,
Asteropæus, and Hippothous,
Medon, Disinor, Phorcys, Chromius,
And you, the skilful augur, Ennomus, 205
And you, the thousands that to aid me come,
’Tis not to muster that you called are,
But to defend the wives of Ilium,
And babes, against the Greeks, that love the war;
Which to prevent, the Trojans day by day 210
With pay and with free quarter, tired are.
Let’s therefore fight, and either die or slay;
For there’s no other traffic at the war,
And he that shall Patroclus’ body gain,
And, spite of Ajax, fetch it off the field, 215
Half of his armour shall have for his pain,
And I will half the honour to him yield.
This said, the Trojans on the Argives fell
With all their weight, and made account to gain
Patroclus’ body; for they could not tell 220
How many Trojans there would first be slain.
And then to Menelaus Ajax said,
I fear we shall no more return from Troy;
And am not for Patroclus so afraid
(That to the dogs is sure to be a prey) 225
As for myself and you; with such a cloud

Of Trojans Hector thund'ring cometh on.
Go therefore, presently, and call aloud
To th' other princes. Other help there's none.
Then Menelaus cried out aloud, ²³⁰
you that have command in th' Argive host,
And diet with Atrides are allow'd,
And drink unstinted at the public cost,
'Tis hard to call you ev'ry one by name,
But you that hear me come away with speed; ²³⁵
For to us all 'twill be no little shame,
To let the dogs upon Patroclus feed.
This said, first little Ajax running came,
And with Idomeneus, Meriones,
Then many more came in; but who can name ²⁴⁰
The number great that came in after these?
And Hector with the Trojans then came in,
And as the sea that rolleth to the shore
Which by some mighty wind had driven been;
So to the fight the Trojans marching roar. ²⁴⁵
The Greeks about Patroclus' body staid,
All of one mind, all cover'd with their shields,
And on their head Jove then a great fog laid,
And all the place about with darkness fills.
For while Patroclus was alive, and serv'd ²⁵⁰
Achilles, Jove took at him no offence,
Nor thought that to be dogs' meat he deserv'd,
And therefore urg'd the Greeks to his defence.
At first the Trojans made the Greeks to fly,
And leave the body, but they killed none, ²⁵⁵

So great a fog upon the place did lie.
Then with his friends again came Ajax on,
Of all the Greeks, for person and for might,
The bravest man, excepting Thetis' son.
The Trojans, when the Greeks refus'd to fight, 260
The body seiz'd, and thought the bus'ness done.
As when a boar, pursu'd by hounds and men,
Upon them turns, they scatter'd are and fly;
So, when great Ajax to them came again,
The Trojans, scatter'd, let Patroclus lie. 265
For when Hippothous was in great hope
To drag Patroclus' body up to Troy,
And to his ankle tyed had a rope,
Arrived to him was his latest day.
For Ajax now was come unto him near, 270
And smote him through the helmet and the brain,
Which, stained with his blood, stuck to the spear,
And down he threw Patroclus' foot again,
And with it near unto the body fell,
Depriv'd of life by mighty Ajax' spear, 275
Far from Larissa, where his friends did dwell,
And never for his breeding payed were.
And Hector then a spear at Ajax threw,
Which he perceiving, did a little shun,
A very little it beside him flew, 280
And killed Schedius, Iphitus' son,
That of Photæans all was far the best,
And did in well-built Panopæa reign.
The spear, sharp-pointed, enter'd at his breast,

And at his shoulder out it went again. 285
And Ajax then the valiant Phorcys slew,
That 'bout the body of Hippothous went.
The spear through breast-plate and through belly flew,
And as it pass'd the guts in pieces rent.
Then Hector and the Trojan lords gave way, 290
Retiring from the Argive lords; and thus
By th' Argives coming in, without delay,
Stripp'd were both Phorcys and Hippothous.
And now the Trojans had, for want of heart,
Been chased by the Argives up to Troy, 295
And th' Argives gotten had on th' other part,
Without the Gods, an honourable day;
Had not Apollo, like to Periphas,
Anchises' squire, to Æneas come disguised,
That very wise now grown, and aged was, 300
And standing by his side, him thus advised;
Æneas, cannot you, without the Gods,
As well as the Achæans, gain the day
By valour, since in men they have no odds?
For Jove would rather you should win than they. 305
Thus Phœbus said. Æneas knew 'twas he;
And with a loud voice, unto Hector said:
Hector, and you who the commanders be
Of Trojans, or have brought unto them aid,
Oh, what a shame 'tis for us thus to run 310
Before the Greeks, ourselves in Troy to hide!
But come, there yet amongst the Gods is one
That hath assur'd me Jove is on our side.

This said, before the Trojans he leapt out,
And with his spear in hand, stood at their head. 315
And when he made them had to wheel about,
Unto the body he directly led,
And with his spear Leocritus he slew,
The friend of Lycomed, Arisbas' son;
And Lycomed, displeas'd, at Hector threw, 320
And hit him not, but kill'd Apisaon;
Of all that from Pæonia pass'd the seas,
He was in battle of the greatest might,
Excepting no man but Asteropæus;
Who angry at his fall went to the fight. 325
But now the Greeks about Patroclus stood
So close, with spears advanc'd, with bucklers hidden,
That there Asteropæus did no good;
For by great Ajax so they had been bidden.
Let none from hence again retire, said he, 330
Nor any man before the rest skip out,
But stand together till you charged be.
Thus roaring to them Ajax went about,
And thick the Trojans and their aids now fell,
And with their blood bedewed was the ground. 335
Nor did the Argives come off very well;
But fewer of them 'mongst the dead were found,
For standing close, one shield sav'd more than one.
Thus keen as fire on both sides fought they here;
And such a darkness was the place upon, 340
As if nor sun nor moon in safety were.
But th' other places all about had light,

And brightly did the sun in Ida shine,
And gentle at a distance was the fight,
And one another's spear did oft decline. 345
But in the middle, where the very best
Both of the Argives and the Trojans stood,
The pain they suffer'd cannot be express'd,
Of restless labour, and of loss of blood.
But of Patroclus, by the Trojans kill'd, 350
Antilochus and Torasymed knew not,
But fought in other places of the field,
And that he still pursu'd the Trojans thought,
When for his body, who the same should get,
Now fighting were the Trojans and the Greeks, 355
And from their knees and legs ran down the sweat,
And stained were with blood their arms and cheeks.
As when men set themselves about the skin
Of some fat bull, and stretch it ev'ry way,
That th' humour may go out, the grease go in, 360
Just so Patroclus' body tugged they,
Trojans to Troy, and Argives to the fleet;
And thereupon arose this mighty fray.
If Mars or Pallas had been there to see't,
They had not known on whom a fault to lay, 365
Though angry they had been; such work was then
By Jove, about Patroclus' body, set
For Trojans and for Argives, horse and men.
But to Achilles known it was not yet,
That slain by th' Trojans was his favourite. 370
For now not far off from the Trojan wall,

At a great distance from him, was the fight,
So that he thought not on his death at all;
But having chas'd the Trojans to the gates
Of Ilium, that straight he would come back; 375
For well he knew 'twas order'd by the Fates,
Patroclus never should the city sack.
His mother, Thetis, oft had told him that,
As she before had told it been by Jove;
But quite Patroclus' destiny forgot, 380
Or knew it not, whom he so much did love.
The Greeks and Trojans at the body staid
Together close, and one another kill'd.
And one Achæan to another said,
'Twould be a great disgrace to quit the field, 385
And leave the body of Patroclus thus;
I rather had by th' earth we swallowed were,
Than they should have it and crow over us,
And to the town the noble body bear.
The Trojans likewise t' one another cried, 390
Though ev'ry one of us were sure to die
By this man's body, let us here abide.
And then the clamour rose up to the sky.
Achilles' steeds now, with Automedon
Upon the car, without the battle stood; 395
But to the fight he could not get them on.
He to them call'd, but that would do no good;
And then he flatters them, then threats, then whips,
But for Patroclus griev'd, they would not go
With th' Argives to the fight, nor to the ships, 400

But lay down on the ground, and wept for woe
That they had lost a gentle char'oteer.
Jove, seeing them upon the ground thus laid,
And for Patroclus how they grieved were,
Shaking his head, unto himself he said, 405
Poor steeds, why did I you on man bestow,
That mortal is, and you immortal are,
And make you also misery to know,
And to participate of human care?
There breatheth not upon the earth so wide, 410
So poor a thing and wretched as a man.
But Hector on your car shall never ride,
For he, without my leave, do nothing can.
Is't not enough for him that he hath got
Achilles' arms, to please himself in vain? 415
But have Achilles' horses he shall not,
For you shall to the ships return again,
And safely carry back Automedon,
Though to the Trojans I intend to-day
The victory, till setting of the sun, 420
And that by darkness parted be the fray.
This said, he strength and courage to them gave:
Automedon then to the troops of Greece,
As swiftly the immortal horses drave
As flies a vulture at a flock of geese. 425
For from the foe he quickly could retire,
And easily upon them go again,
As oft as the occasion should require;
But by his hand no enemy was slain,

For since he was upon the seat alone, 430
He could not both together fight and guide.
But to him came at last Alcimedon,
Laertes' son, and stood by th' char'ot side.
What God, said he, has put it in your head,
Automedon, amongst so many spears 435
To be alone, knowing your friend is dead,
And Hector now Achilles' armour wears?
Automedon unto him then replied:
Alcimedon, a fitter man is none
Than you are, the immortal steeds to guide, 440
Since Menoctiades, my friend, is gone.
Get up then you, and the good steeds command,
Whilst on the ground I with the Trojans fight.
Alcimedon then took the whip in hand
And reins; Automedon did then alight. 445
This Hector saw, and to Æneas spake:
Achilles' horses yonder coming are;
To us, said he, they are not hard to take,
For with them there is no great man of war;
And if we to them go, they dare not stand. 450
This said, Æneas well contented was,
And forward then they go, with spear in hand,
And shoulders cover'd well with hide and brass.
And Chromius with them, and Aretus went,
And made no doubt but both the men to slay; 455
And then to seize Achilles' steeds they meant,
And with the car triumphing drive to Troy.
Vain men, that were not sure themselves to save.

To Jupiter Automedon then pray'd,
Who heard his pray'r, and great strength to him gave. 460
And then unto Alcimedon he said:
Alcimedon, keep still thy horses near,
So that upon my back may fall their breath;
For quiet never will be Hector's spear,
Until of both of us he see the death, 465
And set himself upon Achilles' car,
And put the squadrons of the Greeks to rout,
Or be amongst the foremost slain i' th' war.
This said, he to th' Ajaxes cried out,
And Menelaus: Ajax, Menelaus, 470
The care of him that's dead to others give,
And shew your valour where there is more cause.
Come hither, and take care of us that live;
For Hector and Æneas both are here.
But yet, since on Jove's will dependeth all, 475
Both good and evil hap, I'll throw my spear,
And let him where he pleaseth make it fall.
And as he spake the spear he from him sent,
Which chanc'd to light upon Aretes' shield,
And passing through, into his belly went, 480
At which he starting fell upon the field.
And at Automedon then Hector threw;
But stooping forward he the spear declin'd,
And o'er his head through th' empty air it flew,
And shaking fix'd it stood i' th' ground behind. 485
And then the fight by Mars becalmed was;
But with their swords they had again fall'n on,

But that th' Ajaxes two and Menelaus
Came in, that call'd were by Automedon.
Æneas then and Hector shrunk away, ⁴⁹⁰
And Chromius with them, but Aretes not,
But on the ground without his armour lay.
Automedon then mounts his chariot
All bloody, and the armour by him set;
And said, though this revenge be very small ⁴⁹⁵
For great Patroclus' death, 'tis better yet,
Though this a worse man be, than none at all.
And at Patroclus' body now the fight
Was greater than before, and fiercer grown.
For Pallas coming, did the Greeks incite, ⁵⁰⁰
By Jove himself (whose mind was chang'd) sent down.
As when to mortals Jove will signify
Th' approach of war, or tempests cold and loud,
To make men leave their work, and cattle die,
He sets up in the sky a purple cloud; ⁵⁰⁵
In such a cloud wrapp'd up Athena came,
The daughter of great Jove, and martial maid,
To th' Argive host, their courage to inflame,
And to Atrides, who stood nearest, said,
In voice and shape like Phœnix: Menelaus, ⁵¹⁰
If you let dogs Patroclus' body tear,
That of Achilles so beloved was,
You will be scorn'd. Go to him, do not fear.
Phœnix, said he, would Pallas strengthen me,
And save me from so many spears that fly, ⁵¹⁵
Patroclus' body soon should rescued be.

For no man for him griev'd is more than I,
But Hector fighteth like a raging flame,
And as he goes Jove gives him victory.
This said, Athena pleas'd was with the same, ⁵²⁰
Because to her he trusted specially,
And strengthened both his shoulders and his thighs,
And made him bold as is a busy fly,
Which, beaten off, again upon you flies,
And fears not for a little blood to die. ⁵²⁵
And to Patroclus then went Menelaus,
And 'mongst the throng of Trojans threw his spear.
It chanced that amongst them one there was,
Pydes, Eëtion's son, to Hector dear,
And at the wine his good companion. ⁵³⁰
Him Menelaus with his spear then slew
Just as he turn'd himself about to run,
And from the Trojans the dead body drew.
To Hector then came Phœbus, having on
The form of Phœnops, son of Asius, ⁵³⁵
In Hector's grace inferior to none,
And standing by his side said to him thus:
If you be so afraid of Menelaus,
What other Greek will be afraid of you?
He never yet good spear-man counted was, ⁵⁴⁰
Nor is, though Pydes now by chance he slew,
And vainly now he thinks alone he can
Bring off Patroclus' body from the field.
This said, unto the body Hector ran,
And Jove then lifted up his mighty shield, ⁵⁴⁵

And in thick clouds the mountain Ida wraps,
And dark it was upon the field as night.
And then with lightning and with thunder claps
The squadrons of the Argives puts to flight.
Menelaus, who the Bæotians led, ⁵⁵⁰
Hurt in the shoulder by Polydamas,
Of the Achæans was the first that fled,
And Leïtus his mate the second was,
That was by Hector wounded in the wrist,
And could no longer use make of his spear; ⁵⁵⁵
But from the battle forc'd was to desist,
And looking still about him ran in fear.
Him Hector as he running was pursues.
On Hector's shield then lights a heavy spear,
That thrown was at him by Idomeneus, ⁵⁶⁰
But brake in two; and glad the Trojans were.
And at Idomeneus then Hector threw;
Beside him but a little went the spear,
And lighting upon Cœranus him slew,
Who was Meriones his char'oteer, ⁵⁶⁵
And with him came to Lyctus all the way
By sea, and thence he went to Troy by land.
And much good service he had done to Troy,
For fallen had the king by Hector's hand,
And safe had been himself; but now was hit ⁵⁷⁰
By Hector's spear betwixt the cheek and ear,
And struck out were his teeth, his tongue was slit,
And fallen to the ground expired there.
And then Meriones took up the reins,

And to Idomeneus cried out to fly. 575
To little purpose now is all our pains;
You see the Trojans have the victory.
Idomeneus to th' ships then drave away
As fast as he could make the horses go,
As being certain they had lost the day. 580
And Ajax did the same acknowledge now.
Meriones, said he, and Menelaus,
That Jove will to the Trojans give the day,
A man may see that little judgment has,
So manifestly now he fights for Troy. 585
The spears thrown by the Trojans never miss,
But on one Greek or other always light;
Ours seldom hit. What cause is there of this,
But that great Jove doth for the Trojans fight?
Let's therefore here consider of some way 590
To fetch Patroclus off, and then go home.
For to our friends in Greece 'twill be a joy
To see us safe again from Hector come;
Who when they to the sea their faces turn,
Despair of ever seeing us again, 595
And think that Hector will the navy burn,
And that we there shall ev'ry man be slain.
that we had some fit man here to send
T'Achilles' tent; for nothing yet knows he,
That by the Trojans slain is his dear friend; 600
But 'tis so dark I no such man can see.
Jove, give us once more a sky serene;
Remove this mist that we may see to fight,

Or if to kill the Argives all you mean,
father Jove, yet kill us in the light. 605
This said, Jove had compassion on his tears;
The sun again his glitt'ring beams displays,
Scatters the clouds again and th' Heaven clears.
And then to Menelaus Ajax says,
About the field go Menelaus now, 610
And seek Antilochus, and bid him go
Unto Achilles' tent, and let him know
His friend Patroclus slain is by the foe.
This said, away Atrides went. As when
A hungry lion parteth from a fold, 615
Having in vain provok'd the dogs and men
That did him from th' expected prey withhold,
Watching all night, when fain he would have fed;
But all the night the darts about him fly
And flaming brands, which lions chiefly dread; 620
Away he goes i'th' morn unwillingly;
So from Patroclus' body parted he
Against his will, thinking the Greeks afraid
Might leave Patroclus to the enemy,
And to Meriones and th' Ajaxes said, 625
How good a man Patroclus was you know,
And how in our defence his blood he shed,
And therefore valiantly defend him now.
Let not the foe abuse his body dead.
And when he this had said he went away, 630
Amongst the Argives peeping here and there,
Like to an eagle soaring for a prey

Amongst the bushes peeping for a hare;
So he amongst the Argives look'd about
Seeking of Nestor's son Antilochus. 635
Nor was it long before he found him out,
Cheering his men, and said unto him thus:
Antilochus, come near, and hear from me
Sad news; I would it were not also true.
That now the Trojans have the victory, 640
I think it is already known to you.
But further know that slain Patroclus is.
Run therefore to Achilles quickly, and
Tell him the news. It may be, mov'd by this
To help the Argives with his mighty hand, 645
He'll to the naked body hither come;
For now Achilles' armour Hector wears.
At this Antilochus was stricken dumb,
And filled were and swoln his eyes with tears.
And there Antilochus no longer staid, 650
But to Laodocus his armour gave,
And he the same upon his char'ot laid;
For to that end he near unto him drave.
Away Antilochus then weeping went
To carry to Achilles the ill news, 655
And left to Thrasymed his regiment.
For Menelaus did the same refuse;
Though of a valiant commander then
The tired Pylians had the greatest need,
And to the Ajaxes return'd again 660
Where lay Patroclus' body, with all speed.

And when he thither came, unto them said,
Antilochus is to Achilles gone,
Although I see not how he should us aid.
How can he, seeing armour he has none? 665
Let's therefore now bethink ourselves, how we
Ourselves may bear the body from the field,
And also how we may secured be,
Against the Trojans, that we be not kill'd!
Ajax to this replying said, 'Tis true, 670
And the advice I'll give you will be right.
Take up the corpse, Meriones and you,
And on your shoulders bear it from the fight.
We two, that are of one name and one mind,
And in the field together use to be, 675
Will fighting with the Trojans come behind,
Till at the ships the body lain we see.
This said, Meriones and Menelaus
Up to their shoulders hoist the body dead.
Whilst towards them the back of Ajax was, 680
The Trojans with great shouting followed.
Just as a pack of hounds pursue a boar
Wounded by hunters, running with great cry,
Until he turn; then follow him no more,
But scatter'd are, and this and that way fly; 685
So did the Trojans after Ajax run
As long as towards them was not his face.
But when he turned, near him durst stay none,
But stood at a great distance from the place.
Thus fetch'd they off at last the body dead, 490

With at their heels of Trojans' spears great showers;
And Argives dropt abundance as they fled,
Like houses in a town on fire, and tow'rs.
As when two mules in heavy way are set
To drag down from the hills some mighty tree, 695
To be a beam or mast, it makes them sweat
Before into the plain it drawn could be;
So Menelaus and Meriones
Sweating and moiling with the body go;
And as a rock that keepeth off the seas; 700
So Ajax at their backs kept off the foe.
The Trojans, led by Hector and Æneas,
Pursue the flying Greeks with mighty cry,
As from a hawk that preys on birds like these,
A cloud of starlings cackle when they fly. 705
And many of them threw their arms away,
And that they came to fight had quite forgot;
In and about the ditch much armour lay
Of flying Greeks. But done the fight was not.

LIB. XVIII.

The grief of Achilles, and new armour made for him by Vulcan.

WHILST AT THE ships the Greeks and Trojans fought,
Antilochus came to Achilles' tent,
And found him to the Argive ditch gone out,
Presaging in his mind the sad event, 5
And saying to himself, Ah me, what's this?
The battle to the ships is come again;
Pray God it be not as I fear it is,
The Greeks are routed and Patroclus slain.
My mother told me that the best of all 10
The Myrmidons by th' Trojans should be slain.
I bad him not assault the Trojan wall,
Nor fight with Hector, but come back again.
As speaking to himself Achilles stood,
Antilochus unto him weeping came, 15
The news, said he, I bring you is not good;
I cannot without tears relate the same.
Slain is Patroclus. On the ground he lies,
And now they fighting are with swords and spears
Who shall his body have, with mighty cries, 20
Though naked; for his armour Hector wears.
At this sad news dark were Achilles' eyes;
And up he takes the dust with both his hands,

And throws it on his head; then down he lies,
His face and coat sullied with dust and sands, 25
And tore his hair. And then the lovely prey
Of captive women, that had taken been
By him and by Patroclus before Troy,
Affrighted from Achilles' tent came in,
And over him they beat their breasts and moan'd. 30
On the other side Antilochus was fain
To hold his hands, so mightily he groan'd;
Lest otherwise he should himself have slain.
His mother Thetis hearing him complain,
Though sitting in the deepest of the seas, 35
Wept out aloud, and presently her train
About her came of the Nereides.
Glaucæ, Thaleia, and Cymodocæ,
Nesæa, Speio, Thoa, Halia,
And Æmioneia, and Cymothesia, 40
Melita Iæra, and Amphithoa,
And Doto, Proto, Actæa, Agave,
Doris, Dexamena, Dynamena,
And Callianassa, and Amphinoma,
Pherusa Apseudes, and fair Panope, 45
Nemertes, and the milk-white Galatæa,
And Clymene there was, and Callianassa,
And Mæra, Orithyia, and glorious Amatheia,
And, not to name them all, fair Janassa
With all the rest, and fill'd the silver cave, 50
And beat their breasts, and round her stood dismay'd.
And Thetis then told their account unto them gave

Of her great grief, and thus unto them said:
Hear me, Nereides, my sisters dear,
And be acquainted with my misery. 55
Ah, wretched Goddess that I was, to bear
The best of all the heroes; and when he
Was quickly grown up to a goodly height,
Send him unto the war at Ilium
Against the Trojans for the Greeks to fight, 60
From whence he never should again come home;
But spend his little time of life in woe,
And I can nothing do for his relief.
And now I mean to visit him, and know,
Since he not fights, what cause he hath of grief. 65
This said, she with her nymphs went from the cave.
The sea before them her smooth water tore,
And gentle passage to the Goddess gave,
Till they were landed on the Trojan shore,
Where lay Achilles' ships upon the sand; 70
And straight up to Achilles Thetis went,
The nymphs attending on her hand in hand,
And seeing him so grievously lament,
She held him by the head, and to him said,
Why weep you thus, sweet child; what is't you ail? 75
For that which formerly to Jove you prayed
Against th' ingrateful Greeks, I did prevail.
To th' ships they have been beaten from the field,
And know in what great need they stand of you,
And have in heaps been by the Trojans kill'd. 80
To this Achilles answ'ring said, 'Tis true,

But in my life what pleasure can I find,
Since sweet Patroclus slain is by his foes,
On whom of all men most I set my mind,
And Hector in his arms triumphing goes; 85
Those mighty arms, giv'n by the Gods that day
That you were pleas'd a mortal man to wed,
To Peleus. Oh, had you been away,
And he a mortal woman married!
You had not for your son been grieved then, 90
That never to you should return again.
Nor do I wish to live with mortal men,
But till I with my spear have Hector slain.
By what you say, said Thetis to her son,
Short-liv'd you are. Your own fate then is nigh. 95
I care not, said Achilles, when that's done
I shall be very well content to die.
For since I never must return again,
And no defence in me Patroclus found,
Nor other good men by the Trojans slain, 100
I but a needless weight am to the ground.
Oh that contention lost for ever were,
And choler to the heart of man so sweet,
Which often make the wisest men to err!
In Agamemnon and myself I see't. 105
But since 'tis past, let's put it out of mind.
For dead he is, and cannot live again.
And now I'll see if Hector I can find,
That has my dearest friend Patroclus slain,
And then let Jove do what himself thinks good. 110

For Hercules could not avoid his fate,
Who most of mortals in his favour stood,
But died by destiny and Juno's hate;
And so shall I, when my day shall arrive,
Lie still when dead. But now let me gain fame ¹¹⁵
Amongst th' Achæans while I am alive.
And make some Trojan or some Dardan dame
With both her tender hands to tear her cheeks,
And sigh, and with her tears her beauty blot,
And know my hand from that of other Greeks, ¹²⁰
And when I with th' Achæans am, when not.
And therefore, mother, dearly as you love me,
Endeavour not to make me here abide.
For from my purpose you cannot remove me.
Unto Achilles Thetis then replied, ¹²⁵
Dear child, your purpose I'll not reprehend,
Patroclus' body from the foe to save,
Nor that the Argive people you defend.
But now you know your arms the Trojans have,
And Hector weareth them; but shall not long. ¹³⁰
The latest of his days is to him nigh.
But go not you into the bloody throng,
Till here again you have me in your eye.
This said, she turn'd to the Nereiades,
And to them said, Nereiades, dive you ¹³⁵
To Nereus, at the bottom of the seas,
And all you see has happ'ned to him show.
For I up to Olympus must be gone
To Vulcan, if such favour I can gain,

To get a good new armour for my son. 140
This said, the nymphs to sea return'd again,
And Thetis to Olympus went her way.
Meanwhile the Greeks before the Trojans fly
With mighty cries, and never stopt till they
Were at the ships, and to the wide sea nigh. 145
Nor was Patroclus' body rescued yet;
For now afresh the Trojans to them came,
Which did another fiercer fight beget,
And Hector fell upon them like a flame.
Thrice laid he hold upon Patroclus' foot, 150
And forc'd he was as oft to let it fall
To kill some others, then again came to't,
But from the body went not back at all.
No more could Hector driven be away
From the dead body by th' Ajaxes two, 155
Than can a hungry lion from his prey
For anything the herdsmen griev'd can do.
And Hector had Patroclus' body got,
And gained had thereby a great renown,
But Juno, though the other Gods knew not, 160
T' Achilles in great haste sent Iris down.
T' Achilles straight she came, and to him said,
Up, terrible Pelides, to the war,
And your beloved friend Patroclus aid;
For at the ships they fighting for him are. 165
The Greeks to save his body are in pain,
The Trojans fain would drag him into Troy,
And Hector most of all that has him slain,

And from his shoulders take his head away
And stick it up upon the Trojan wall, 170
Leaving his corpse a prey to dog and kite.
Think what reproach will then upon you fall.
Lie then no longer here, but rise and fight.
Achilles then replied. Iris, said he,
Tell me what God or Goddess sent you down. 175
Juno, said Iris, sent me; none but she.
To all the rest my coming is unknown.
And then Achilles to her said again,
Since they have got my arms how can I fight?
And Thetis bids me from the war abstain 180
Till she return again into my sight,
Who is to Vulcan for new armour gone,
And here's no other armour for me fit
But Ajax's; who, I hope, has it on,
And for Patroclus now has use of it. 185
We know, said Iris, armour you have none.
But as you are, upon the ditch appear.
The Trojans from the corpse will soon begone,
And leave it to the Greeks for very fear.
This said, the Goddess Iris vanished. 190
Achilles rose, and Pallas to him came,
And on him puts her shield, and on his head
A golden cloud, from which arose a flame.
As when an isle invaded is by foes,
The citizens to call their neighbours in 195
Make fires, the smoke up to the heaven goes
By day; by night the flame; and far are seen;

Upon Achilles' head stood such a flame,
And then unto the ditch he went and shouted,
And farther off Athena did the same. 200
The Trojans, when they heard it, strait were routed.
As clear as any trumpet in the wars,
They heard Achilles' voice, and were afraid,
And in disorder turn'd about their cars,
But at his flaming head were most dismay'd. 205
Thrice shouted he, thrice they disorder'd were;
And slain were of the Trojans twelve brave men
By their own cars and spears encumber'd there.
In so much haste they turn'd to fly. And then
The Greeks the body laid upon a bed 210
And bier, and standing by his side lament.
And tears abundance there Achilles shed,
And that he sent him had did now repent.
The sun by Juno hasten'd quench'd his fire;
The Argives on the place stay quietly; 215
The Trojans to without the ditch retire,
And from the cars the weary steeds untie.
Then presently the chiefs to counsel call
Before they sup, and standing on their feet,
This apparition so scar'd them all, 220
That none amongst them had a mind to sit.
And first unto them spake Polydamas
Panthoides, Hector's friend; both born one night.
He better counsellor than Hector was,
But Hector better was than he to fight. 225
My friends, be well advised now, said he,

It is not safe here on the plain to stay
Until the morning light again we see,
So near the Argive ships, so far from Troy.
Whilst this man absent was in discontent 230
With Agamemnon, and forbore to fight,
The Greeks were easy foes; to th' ships I went
Myself, and willingly lay out all night;
But if Achilles hither now should come,
We must not only here fight for our lives; 235
So proud he is, he'll go to Ilium,
And for the city fight and for our wives.
Let's to the city go. 'Tis as I say,
And nothing keeps him from us but the night.
And if he here shall find us when 'tis day, 240
Some of us will acknowledge I say right.
And many flying, wish, when 'tis too late,
They were within the walls of Ilium,
Whom dogs and kites shall eat without the gate.
But to my ears may never such news come. 245
But if you will be ruled all by me,
Into the market-place of Troy by night
We'll bring our strength, and, soon as we can see,
Stand arm'd upon the tow'rs prepar'd to fight.
Then let him from the ships come fight at Troy, 250
And drive about the walls and do his worst,
And having tir'd his horses go away;
Take it he shall not, dogs shall eat him first.
Then Hector frowning on him, thus replies:
Again, said he, I from you must dissent, 255

Since you to shut ourselves in Troy advise.
We have already there too long been pent.
Troy once was counted rich in brass and gold;
But since Jove angry was, all that is gone,
In Phrygia and in Mœonia sold, ³⁶⁰
And little left in Ilium to be won;
But since the Greeks are beaten and dismay'd
By th' hand of Jove, your fear is out of season,
Nor will you by the Trojans be obey'd,
Nor shall you; though the Trojans thought it reason. ²⁶⁵
And therefore take my counsel, which is this.
Go now and ev'ry man his supper take
In rank and file there where he placed is;
And set good guards, and keep yourselves awake.
If any Trojan for his goods lament, ²⁷⁰
He may the same upon the town bestow
In service of the public to be spent,
Rather than be possessed by the foe;
And armed in the morn go to the fleet,
And sharply charge the Greeks by break of day. ²⁷⁵
And if indeed Achilles there we meet,
He were not best oppose us in our way;
For from him I will neither fly nor shrink,
But either honour from him bear away,
Or he from me. Mars common is, I think, ²⁸⁰
To them that fight; and slain are they that slay.
This said, the Trojans heard with great applause,
Fools as they were; Pallas had made them mad.
But none of them commend Polydamas,

That given them much better counsel had. 285
The Trojans presently to supper went,
The Greeks all night about Patroclus stand;
And there began Achilles to lament.
And on Patroclus' breast he laid his hand.
As when a lion coming to his den, 290
Misses the tender whelps he left behind,
He roars, and furiously goes out again,
And through the vallies hunts, the thief to find;
Such fierce thoughts on Achilles' heart then lay,
And sighing, to the Myrmidons he spake: 295
Oh, what did I to old Menœtius say!
How vain a promise did I to him make;
I said, when we had sack'd the town of Troy,
That I to Opus would bring back his son,
Enriched with his portion of the prey. 300
But all we hope from Jove is seldom done.
For both of us have the same destiny,
With our heart's blood to dye the Trojan plain,
And as he lieth now, so shall I lie,
And never to my parents come again. 305
But since, Patroclus, you the first are dead,
Your funeral I will not celebrate,
Till I have brought you Hector's arms and head,
Whose bloody hand deliver'd your sad fate,
And have twelve of the noble youths of Troy 310
Beheaded in revenge. Till then stay here,
Where Trojan captive women, night and day
Bewailing you, shall stand about the bier.

This said, he order gave for water hot,
To cleanse Patroclus' body from the gore. 315
Into a cauldron, said he, water put,
And make a fire, and set the cauldron o'er.
Into a cauldron water then they put,
And made a fire, and set the cauldron o'er.
The flame about it goes; the water's hot. 320
Then washed from the body was the gore,
And then again they laid him on the bed;
From head to foot in linen they him fold,
And on him laid a fair white coverlid,
His wounds first fill'd with unguent nine years old. 325
About the body of Patroclus stay'd
Achilles and the Myrmidons, all night
Lamenting him. Then Jove to Juno said,
You have Achilles brought again to fight
Against the Trojans, on the Argives' side. 330
Are they your children, that you love them so?
And Juno then to Jupiter replied:
Harsh Cronides, what words do you let go?
Since mortal men, that know much less than we,
May to a friend do good, and hate a foe, 335
Why may not I, that boast myself to be
The wife and sister of great Jove, do so,
And make my foes, the Trojans, feel my hate?
Whilst Jove and Juno were discoursing thus,
The Goddess Thetis come was to the gate 340
Of Vulcan's undecaying famous house
Of shining brass, with brighter stars thick set,

That 'mongst the houses of the heaven shone.
But he was at his work-house in a sweat,
And at his bellows swaying up and down. 345
For tripods twenty he had laboured,
With golden wheels, to go and come again
At his command; but had not finished
The ears and chains, which he was making then.
And whilst this bus'ness Vulcan was about, 350
Thetis was come, and at the gate did stand.
And Charis, Vulcan's wife, then going out,
Saw her, and straightway took her by the hand.
Thetis, said she, 'tis strange to see you here;
Much honour'd, and a welcome guest you are, 355
Come in, and pleased be t' accept our cheer.
Then led her in and brought her to a chair,
A dainty chair, with foot-stool join'd thereto,
And then unto her husband's shop she hied,
For, Thetis, said she, you have work to do. 360
And Vulcan, glad, to Charis thus replied:
Is Thetis here, that sav'd me from mishap!
When for my lameness thrown down from the sky,
Thetis was pleas'd to catch me in her lap,
When else I had been in great misery. 365
I wrought for her, and for Eurynome,
Nine years, and made them many pretty things,
Within a rock encompass'd by the sea,
As buckles, clasps, fine boxes, beads, and rings,
Which neither mortal nor immortal knew, 370
But only Thetis and Eurynome.

And now to Thetis I must pay what's due,
The ransom of my life, for saving me.
Go you, and entertain her well, while I
My tools take up, and bellows set away. 375
This said, the bellows he took and set by,
But in a chest his working tools did lay.
Then with a sponge he wip'd his hands and face,
His brawny neck, and hairy breast, and on
He puts his coat, and with his staff, apace, 380
Though halting goes, and waited was upon
By maids of massy gold, endu'd with wit,
And speech, and strength, and learn'd in heav'nly art;
And went to Thetis and did by her sit,
And joyful at her presence was his heart, 385
And laid his hand on hers, and to her said,
Thetis, so welcome to me there is none;
Tell me wherein you think I can you aid,
And if it can be done, it shall be done.
And then to Vulcan Thetis answered: 390
No Goddess ever was distress'd like me,
Whom Jove made subject to a mortal's bed,
And Peleus' wife constrained me to be,
Who lies at home decrepid now and spent,
And when I borne unto him had a son, 395
Of all the heroes the most excellent,
And of his breeding care omitted none,
And when he grown was to a goodly height,
He sent was to the war at Ilium,
Against the Trojans for the Greeks to fight; 400

From whence he never shall again come home.
Though yet he live, he takes therein no joy,
And I to comfort him no power have,
Since Agamemnon taken has away
Her whom the Greeks for honour to him gave. 405
And then my son no longer would him aid;
And by the Trojans beaten were the Greeks;
And Agamemnon then sent gifts, and pray'd,
And by ambassadors his favour seeks.
Then though to th' fight himself he would not go, 410
Yet he his armour to Patroclus gave,
And Myrmidons t' assist him 'gainst the foe,
And to the Scæan gate the Trojans drave.
And by Patroclus taken had been Troy,
Had he not then been by Apollo slain, 415
That unto Hector gave a glorious day,
And th' armour of my valiant son to gain.
Which makes me now come hither, to request
That you would make new armour for my son,
A shield, a helmet, armour for the breast, 420
And for the legs; for those he had are gone.
Then to her answer'd Vulcan, Do not fear.
Oh, that when for him the harsh Fates enquire,
To hide him from them I as able were
As make him arms, for mortals to admire. 425
This said, unto his shop he went, and bad
His golden serving statues blow the fire.
For twenty bellowses in all he had
To blow as he should, and his work require.

And then into the fire he threw in tin, 430
And brass, and silver fine, and precious gold;
And to the socket puts the anvil in,
And th' heavy hammer in one hand did hold,
Into his other hand the tongs he takes,
And forges first a mighty shield and strong, 435
And many various figures in it makes,
And fastens to the same a silver thong,
And bound the edge about with triple brass.
The shield itself consisted of five plies,
And with great art described in it was 440
The surface of the earth, the sea and skies,
The sun, the moon at full, and all the train
Of heaven, Pleiades, and Hyades,
Orion, and the bear, men call the Wain,
That only never dives into the seas, 445
But always to Orion has an eye.
And in it were two cities. In the one
Good cheer and weddings, and great melody,
And women at their doors stand looking on
To see the bridegroom as he passed by, 450
And lusty youths, that dancing with them go,
To citterns and to pipes, and Hymen cry,
And turn as swift as tops upon the toe.
And full of people was the market-place,
Assembled at the hearing of a cause. 455
A man was slain. And this was then the case.
One said that he had satisfied the laws,
The other said that nothing he had paid;

And on this issue they will both be tried,
And have their proofs before the judges laid, 460
And clamour great of friends was on each side.
The cryers when they stilled had the cry,
Into the judges' hands their sceptres gave,
And in the midst, of gold two talents lie,
For him that has the better cause to have. 465
Before the other town two armies stood.
The foe resolved was to plunder it;
The town, to save it, offer'd half their good,
The other to accept it thought not fit.
Then up unto the walls the towns-men sent 470
Their women, children, and their men grown old,
And all the rest out from the city went,
And Mars and Pallas with them, all in gold,
And taller than the multitude by odds,
Who in respect of them seem'd very low, 475
For men are much inferior to the Gods.
Then they before the gate to council go.
The enemies themselves in ambush laid
At th' watering place upon the river's brink,
And scouts sent out, which not far from them staid, 480
To tell them when the cattle came to drink.
And when they were informed they were nigh,
And shepherds two, that did suspect no harm,
They on the shepherds and the cattle fly.
At which the other army took th' alarm, 485
And rising up from council, with their horse
Pursued, and soon they overtaken were,

And then began the fight. Without remorse
They one another slay with sword and spear.
And there disorder plac'd was and debate; 490
And one borne wounded out, another found,
Another dead was dragg'd away by Fate,
With bloody coat and armour on the ground.
So lively seemed to the eye their features,
In fighting and in fetching off their slain, 495
One would have thought they had been living creatures,
And that the fight had real been. Again
Describ'd was in the same a spacious ground,
And men at plough; and at each ridge's end,
At turning of the plough about, they found 500
A man that for them did with wine attend.
And then again the plough about they wind,
And lab'ring to the other end go back;
And as they plough, still what they leave behind,
Though golden 'twas, to th' eye appeared black; 505
A wonder 'twas. Besides, in the same shield
Pourtrayed, was a goodly close of wheat,
And many reapers working on the field,
That threw it to the ground in handfuls great;
And boys that follow'd took it from the ground, 510
And put it in the hands of binders three,
By whom they made were into sheaves and bound,
Which standing by, their lord was glad to see.
His squires not far off standing were aside;
And at a tree a cow kill'd of the best, 515
A supper for the reapers to provide,

And to the women gave it to be dress'd.
And in't a golden vineyard was pourtray'd:
The grapes that on it hung were black, and all
The vines supported and from drooping staid 520
With silver props, that down they could not fall.
A ditch there was about it black, and on
The same a hedge, the colour of it tin,
And path unto it there was only one,
By which the fruit in vintage was brought in. 525
And on it boys and girls described were,
After a fiddle play'd on by a boy,
That sing, dance, whistle, and full baskets bear,
Of Bacchus' gifts, unto the house with joy.
And in it was a herd of bulls and kine, 530
Part gold, part tin, and herds-men four of gold,
That to the pasture drave them with dogs nine,
T' a sedgy river; where two lions bold
Upon the horned herd came from a wood,
And 'mongst the foremost seiz'd upon a bull; 535
The dogs went to them near, and barking stood:
Then roars the bull. The lions tear and pull.
And in the same he pasture made for sheep
Within a valley large, with lodges good,
And folds, and cover'd houses them to keep 540
In safety from the wild beasts of the wood.
And in it was a dancing place pourtray'd,
Like that which Dædalus had made before
For Ariadne, while in Crete he staid,
And on it dancing youths and maidens store 545

Go hand in hand. The girls, some clad in fine
White linen were, and some in coats well spun
Of glossy wool, that with the oil did shine;
And ev'ry one a garland gay had on.
The boys with silver hangers were adorn'd, 550
And golden swords, and with their well-taught feet
Sometimes they dancing in a circle turn'd,
Sometimes divided in two ranks they meet.
And round about of people stood a throng,
And in the lovely dance took great delight. 555
And in the midst two tumblers sung the song,
And many wond'rous things did in their sight.
With the ocean then he all environed.
The shield now done, he went about the rest,
And made a helmet strong fit for his head, 560
And formed was of massy gold the crest,
And breast-plate shining brighter than the fire,
And pieces for his legs of ductile tin.
And when he all had done to his desire,
He from his forge return'd, and brought it in, 565
And in the hands of Thetis puts the same;
Which she received from him joyfully.
Then straightway from Olympus down she came,
As swift as at a fowl a hawk can fly.

LIB. XIX.

Achilles reconciled to Agamemnon goes forth to battle.

NO SOONER IN her saffron robe was seen
Aurora, holding light above the ground,
Than at the ships the silver-footed queen
Achilles by Patroclus weeping found, 5
And with him many of his friends dismay'd.
Then in, into the midst of them she went,
And laid her hand on his, and to him said:
My son, why do you thus in vain lament?
Come, since the Gods have slain him, leave him here, 10
And take the arms which I from Vulcan bring,
Such as yet mortal man did never wear;
Which, as she lays them down before him, ring.
The Myrmidons were troubled at the sight,
And turn'd their backs, affrighted at the show. 15
Achilles' wrath was more enflamed by't,
His eyes a-fire, and bended was his brow;
Yet when he had them in his hands was glad,
And with great admiration them survey'd.
And when enough beholden them he had, 20
Unto his mother he replied, and said:
Mother, I see such arms from Vulcan here,
As none but an immortal could have made,

And presently will put them on, but fear
Lest flies the body should meanwhile invade, 25
And in the wounds some filthy vermin breed.
And Thetis then replied: Son, do not fear,
For I myself to that will take such heed,
As, that although it should lie here a year,
It shall no worse, but rather better be. 30
Go you, and th' Argive lords to council call,
And with king Agamemnon there agree,
And put your anger off before them all;
And spend your choler boldly on your foes.
This said, she to Patroclus mov'd her feet, 35
And dropp'd ambrosia into his nose,
To keep his body incorrupt and sweet.
Achilles then went down unto the shore,
And there the heroes did to council call
By name, though they were ready there before. 40
But thither at the news came th' Argives all,
Steers-men and stewards of provision,
And all the rest to th' council thronging in,
Though but to see the face of Thetis' son,
So long they thought he absent now had been. 45
Tydides also, and Ulysses came,
Though of their wounds they yet not cured were,
Both halting, leaning on their spears, and lame.
The last of all was Agamemnon there,
Wounded by Coon, nor recovered yet; 50
But th' heroes for his coming not long staid.
And when they were together all and set,

Achilles rose, and t' Agamemnon said:
Atrides, what great profit got we by
This our unlucky strife about a maid? 55
I would it had her fortune been to die,
Before I siege unto Lyrnessus laid.
To Hector and the Trojans comes the gain;
The Greeks with grief will think on't while they live.
But since it is too late now to complain, 60
Go forth, and orders for the battle give;
That I may to them go again, and see
If at the ships they mean to stay all night.
I think they will much rather wish to be
Within the walls of Troy than stay and fight. 65
This said, the Greeks were glad and courage take,
Assured that Achilles would them aid,
And Agamemnon, sitting, to them spake,
(Which he excus'd), and thus unto them said:
'Twere fitter, Argive princes, I stood out, 70
That so my words you might the better hear;
But such a number standing are about,
My voice, though greater, would not reach your ear.
Nor were it fit for me to go about,
And tell my mind to each man in his ear. 75
T' Achilles therefore only I'll speak out,
But so, if you attend, that all may hear.
I often have, said he, been blamed by
The Greeks for taking from you your fair prize,
When not in me, but Jove the fault did lie, 80
And in Erinnys and the Destinies,

That did me of my wits that day bereave.
For what can I do when the Gods do all?
Jove's daughter Atè did me then deceive,
From whom, on men and Gods great troubles fall. 85
Her feet are soft, because she never treads
On th' earth; but when she mischief has to do
Walks in the air, and puts it in men's heads,
And sometimes does shrewd turns t' immortals too.
For Juno, though but of th' female sex, 90
That day that Hercules was to be born,
Was able Jove, the best o' th' Gods, to vex,
And labour of Alcmena to adjourn.
For Jove before th' immortals having said
That he a man that day to light would bring, 95
By whom his race in Greece should all be sway'd.
You jest, said Juno, you mean no such thing.
I'll not believe't, unless you first be sworn
That he shall of your seed in Greece be king,
That of a woman shall this day be born. 100
This said, straight Jove, no fraud imagining,
The great oath took. But after did repent.
And Juno from Olympus' lofty head
Leapt down, and t' Argos of Achaia went,
And brought the wife of Sthenelus to bed. 105
And there was she deliver'd of a son,
That was by Perseus of Jove's descent,
Though she but seven months had of him gone.
And then to Thebes she to Alcmena went,
And hinder'd her that day from bringing forth. 110

Then up to Jupiter she came again,
And said, This day is born a man of worth,
Eurysteus, in Argos fit to reign,
And of your seed. And Jove in choler then
Took Atè by the head and swung her round, ¹¹⁵
And swore she ne'er to heav'n should come again.
And having said it, threw her to the ground;
And always after sigh'd to see the pain
To which Eurysteus did put his son;
As I do, when I see the Argives slain ¹²⁰
By Hector, grieve to think what I have done.
But since that Jove has made me to offend,
I for my error willing am to pay.
Come, then, and your assistance to us lend,
And quickly bring your Myrmidons away. ¹²⁵
And all that by Ulysses yesterday
I to you promis'd shall performed be.
Or presently, if you will for it stay,
That you th' atoning gifts yourself may see.
Achilles then unto him thus replies. ¹³⁰
As for your gifts, to give them me or no,
Yet only in your choice, Atrides, lies.
But now 'tis time we to the Trojans go,
To make fine speeches here is but delay.
But let your men o' th' field Achilles see ¹³⁵
Through squadrons of the Trojans making way,
The Argives then encouraged will be.
Ulysses then t' Achilles answered:
Godlike Achilles, mighty as you are,

Urge not the Greeks to fight till they be fed; 140
They fasting cannot long endure the war,
And likely 'tis the battle will be long,
Especially if Gods both sides assist;
And bread and wine is that which makes men strong.
Let therefore now the Argives be dismiss'd. 145
Who can, d'ye think, the toil of battle bear
From morning unto night, unless he first
With food his heart and feeble limbs do cheer?
He would be heavy, hungry, and athirst.
But he that is with food well satisfied, 150
Courageous is, and fight will all the day;
His heart and limbs are strong, and will abide
As long as any on the field dare stay.
Come, let the people now to breakfast go.
And Agamemnon send the presents in 155
Into th' assembly where we sit, that so
By the Achæans all they may be seen;
And let him take an oath before us, that
Briseis' bed he never went unto,
Nor all this while has done unto her what 160
A husband to his wife is us'd to do.
And you your anger henceforth bridle must.
And you, Atrides, feast him like a friend,
And for hereafter learn to be more just,
Nor think't a shame for men their faults to mend. 165
Ulysses, said Atrides, I am joy'd
The counsel you have given us to hear,
For 'tis but reason all that you have said,

And I with all my heart the oath will swear.
And let Achilles, though in haste, stay here 170
With all the rest, that they my gifts may see,
And witnesses be to the oath I swear.
And for the gifts, Ulysses, presently
Go you yourself with good men, whom you will,
And bring them from my tent and set them here, 175
For what they are, you well remember still;
The same that by you promis'd from me were.
And you, Talthybius, provide a swine,
That we may offer up a sacrifice
To Jove, the Sun, and other pow'rs divine. 180
This said, Achilles to him thus replies:
Renowned Agamemnon, I think yet
Another time for feast had better been,
As when in war a pause we intermit.
And whilst yet unabated is my spleen, 185
We see our friends lie torn upon the ground,
The Greeks to battle and revenge I prompt.
You think my counsel therein is not sound,
And seek with feasting to divert them from't.
But let us fasting to the battle go, 190
And make good cheer when we come back again,
And have reveng'd ourselves upon the foe;
For I will neither eat nor drink till then.
For whilst Patroclus mangled lieth here,
And they that love him stand lamenting by, 195
There nothing is that I can think good cheer
But slaughter, blood, and groans of men that die.

To this Ulysses did again reply:
Achilles, you have not in Greece your peer
For martial worth; yet elder much am I, 200
And more have seen; I pray you therefore hear.
The fare of war soon breeds satiety.
Much straw there is, but harvest none, or small.
If Jove once hold the scales unevenly,
Innumerable are the men that fall. 205
When then an end of weeping shall we see?
The bellies of the Argives must not mourn.
They that go to the war must patient be,
And let the dead unto their graves be borne,
And not weep over them above a day. 210
And we that safe from fight are come again,
When we are fed can all day fighting stay.
All other exhortation is vain.
Let therefore now the Greeks to breakfast go,
Which is the soldier's best encouragement, 215
Then all together fall upon the foe.
And when he this had said, away he went,
And with him took Meges, Meriones,
Theas, Antilochus, and Thrasymed,
And Menalippus, and added unto these 220
The martial son of Creon, Lycomed,
And brought the presents from Atrides' tent.
Sev'n tripods great, and twenty cauldrons bright,
Twelve horses, and sev'n women with them went,
And, fair'st of all, Briseis made them eight. 225
Talents of gold Ulysses weigh'd out ten,

And took the pains himself to carry that;
The rest was carri'd by the younger men,
And laid before the princes as they sat.
Then Agamemnon rose, and by him near 230
Talthybius attended with a swine,
From which Atrides clipt a lock of hair,
And lifts his hands unto the pow'rs divine.
Jove, said he, the chiefest of the Gods,
O Sun, and Earth, and Furies underground, 235
That in your hands carry th' eternal rods
To punish such as perjur'd shall be found,
My hand I on Briseis never laid,
Neither for bed, nor any other cause;
But always in my tent untouch'd she staid, 240
Nor ever by me once attempted was.
And if herein I told you have a lie,
Let all the dreadful torments that are due
To such as guilty are of perjury
Upon me fall. This said, the swine he slew. 245
Then out the stomach of the swine did cut,
And that Talthybius took in his hands.
And threw't into the sea the fish to glut.
That done, Achilles up amongst them stands.
'Tis thou, O Jove, said he, that spoilest all. 250
Briseis at my tent had stayed still,
Nor had her going from me mov'd my gall,
But that thou hadst a mind the Greeks to kill.
This said, the council he dissolv'd, and sent
Th' Achæans to their ships to break their fast. 255

Then ev'ry man unto his own ship went,
And busy were about their short repast.
Meanwhile the Myrmidons the presents bear
T' Achilles' ships, and laid them in his tent,
And thither also brought the women were. 260
But th' horses to the field his servants sent.
Briseis, when she saw Patroclus lie
With many ghastly wounds dead on the bier,
She flung her arms about him and did cry,
And her white neck, and face, and breast did tear, 265
And weeping over him did thus complain.
dear Patroclus, whom alive I left,
Now when I to you am return'd again,
Ah me, I find you of your life bereft.
How fast my woes on one another fall! 270
The husband which my parents made me wed,
And three good brothers of one mother all,
I saw before Lyrnessus massacred.
And then, Patroclus, you to comfort me,
Told me that I should be Achilles' wife, 275
And to him married in Pthia be.
But now since you have also lost your life,
I never of my woe shall see an end.
And then the other women wept and roar'd,
All for Patroclus, as they did pretend, 280
But inwardly their own fate they deplor'd.
The Greeks again about Achilles stood,
And urged him, ere he to battle went,
Himself to strengthen with a little food,

But could by no means get him to consent. 285
My friends, said he, importune me no more
To eat or drink before we go to fight.
My heart within me now is vexed sore;
Fear not, I shall endure from morn to night.
This said, the other princes from him went. 290
The two Atrides and Ulysses stay,
And Phœnix and old Nestor at his tent,
And King Idomeneus, his grief t' allay,
But nothing they could say did any good,
So fiercely he was set upon the fight. 295
And looking on Patroclus' body stood,
And then afresh lamented at the sight.
Sweet friend, said he, you wont were to provide
Good breakfast for me when I was to fight,
But since that comfort now I am denied, 300
In meat and drink I take no more delight.
For greater hurt cannot upon me fall,
Although for want of me my father die,
While absent from him at the Trojan wall,
For this accursed Helen's sake I lie; 305
Nor though my son Neptolemus should die,
Whom I in Scyros isle left to be bred,
Nor thinking then that here both you and I
Should lose our lives; but that when I was dead
He should by you be to my house convey'd, 310
And made to know my servants and estate.
For Peleus now is very much decay'd,
If quite he have not finished his fate.

When this Achilles, weeping, spoken had,
The good old men, that also had their fears 315
For those they left at home, were very sad.
And Jove had pity on Achilles' tears,
And speaking to Athena, Child, said he,
Your love to valiant men, I see, is gone.
Achilles must no more remember'd be. 320
Behold how for his friend he maketh moan,
And takes no food, though th' other princes feast,
Let not his strength by hunger be decay'd;
Distil ambrosia into his breast,
And nectar. Straight Athena him obey'd. 325
And swift as any harpy came away,
And arming of themselves she found the rest;
But that Achilles' strength might not decay,
She dropt ambrosia into his breast,
And nectar sweet, and out the Argives went. 330
As when from Jove descendeth a thick snow,
Which Boreas bloweth through the element;
Such of the armed Argives was the show;
So bright their burnish'd arms and helmets were,
The lustre up to heaven did rebound, 335
And smiling all about the fields appear,
And at the moving of their feet resound.
Achilles then his mighty arms puts on,
And grinds his teeth, and fire was in his eyes,
And hasted to the battle to be gone; 340
So much his heart did at the Trojans rise.
First to his legs the leg pieces he tied

With buckles of fine silver all along,
And next his breast-plate to his breast applied,
And on his shoulder then his sword he hung; 345
Then up into his hands his shield he took,
Large, strong, and mighty; radiant was the same,
And from afar it like the moon did look,
Or, as to seamen, on the wolds a flame,
That sure are of a storm when that they see, 350
And from their friends to scatter'd be by wind
To places where they not desire to be;
So then the buckler of Achilles' shin'd.
And next he puts his helmet on his head,
Which shined like a comet in the air, 355
So finely Vulcan had it polished,
And made it seem to blaze with golden hair.
And then to try his arms if fit they were,
He walk'd about, and thought he wings had worn.
And last from out a tub he took his spear 360
(Which by his father formerly was borne,
And made by Chiron in Mount Pelion)
Which no man but Achilles now could wield,
Since Peleus' strength decayed was and gone.
A fatal spear to heroes in the field. 365
And Alcimus then and Automedon,
The horses to the chariot made fast,
And harness'd them and put their bridles on,
And back unto the seat the reins they cast.
With whip in hand then mounts Automedon, 370
And after him Achilles not long staid,

Yclad in armour shining like the sun,
And roughly to his horses speaking said,
Xanthus and Balius take heed I pray,
A little better of your char'oteer, 375
Than of Patroclus you did yesterday,
Whom dead and stript you left behind you here.
This said, his sprightly head low Xanthus hung,
Till on the ground his golden mane was laid.
And Juno human speech gave to his tongue. 380
And to Achilles then he spake and said,
Yes, great Achilles, we will save you now:
But know ye, that your utmost day is nigh;
Not by our faults; the Gods will have it so,
And, which cannot be shunn'd, your destiny. 385
And that Patroclus is disarm'd and slain,
'Twas not because we lazy were or slow,
But that Priamides might honour gain,
Apollo slew him with his silver bow.
For we could have gone faster than the wind, 390
If that could to him any good have done.
The thread of life which for him was design'd
Was by the Destinies drawn out and spun.
This then said Xanthus, but could not proceed.
His speech the Furies from him took again. 395
Xanthus, replied Achilles, there's no need
For you to prophecy my death in vain.
I know already that I here must die,
Far from my parents; yet I mean to stay
Till I have made the Trojans hence to fly. 400

This said, his Myrmidons he led away.

LIB. XX.

The eighth battle, and the Gods permitted to assist.

WHILST WITH ACHILLES th' Argives armed stand,
And on the plain the Trojans ready all,
Jove to the goddess Thetis gave command
The common council of the Gods to call. ⁵
Then down she came, and calling went about.
Ye Gods, said she, Jove calls you to his house.
And straight the Rivers from their streams came out,
All but their father old Oceanus.
The Nymphs from ev'ry meadow, spring and grove, ¹⁰
Up to the Mount Olympus went in haste;
And when they come were to the house of Jove,
In porches round on polish'd seats were plac'd;
And Neptune also having heard the call,
Leap'd from the sea up to Olympus' hill, ¹⁵
And sitting in the midst, before them all
To Jove he spake, and said, What is your will?
D'ye call us hither our advice to hear;
To give the day to Trojan or to Greek;
For I perceive the battle now is near? ²⁰
My mind, said Jupiter, you need not seek.
For of the Greeks distress I have a care.
But on Olympus I intend to stay,

And please myself with looking on the war.
But let the other Gods go down to Troy, ²⁵
And take which side they will. For else I fear,
Achilles, whom the Trojans did so dread,
When in the battle no immortals were,
And more enrag'd is since his friend is dead;
When he has driv'n the Trojans from the field, ³⁰
Will then directly go to Ilium,
And overthrow the wall which you did build,
Before the time, by fate appointed, come.
This said, the fight began. On th' Argives' side
Stood Juno, Pallas, Neptune, Mercury; ³⁵
And Vulcan, taking in his strength great pride,
Went halting 'mongst them with his legs awry.
On th' other side, Mars for the Trojans stood,
And Phoëbus, and his sister Artemis,
Their mother Leto, and Scamander-flood, ⁴⁰
And Venus that of all the fairest is.
And whilst they from the battle stood aside,
The Argives mightily encourag'd were,
And in Achilles' presence took great pride;
For long it seem'd they had not seen him there. ⁴⁵
The Trojans, when they saw him, shook for fear,
So like to Mars he was, his arms so bright.
But when the Gods on both sides with them were,
Then all about was filled with affright,
And in the air heard was Athena's shrill ⁵⁰
As from the ditch, and sometimes from the shore,
And Mars sometimes from Callidone hill,

And sometimes as at Troy was heard to roar,
The Trojans he, but she the Greeks to incite.
Thus by the Gods from heav'n encouraged, 55
The armies met, and cruel was the fight,
And terribly above Jove thundered,
And Neptune shook the earth on ev'ry side;
The Argive ships, and stately Trojan tow'rs,
The plain beneath, and lofty tops of Ide. 60
And frighten'd with it were th' infernal pow'rs;
And Pluto, starting from his ugly throne,
To Neptune cried out his hand to hold,
For fear his dismal dwelling should be shown
To men and Gods, so hateful to behold. 65
So great a noise the Gods make when they fight.
Phœbus to Neptune now opposed is,
And Pallas stands against rude Mars his might,
And Juno matched is with Artemis,
And Mercury against Latona stood. 70
But he that Vulcan had to deal withal,
Was the divine and deep swift-running flood,
Which Xanthus Gods, but men Scamander call.
Thus were th' Immortals matched one to one.
Achilles would have given any good 75
That he had matched been to Priam's son,
T' have made to Mars a breakfast of his blood.
And then Apollo sets Æneas on
T' encounter with Achilles; and array'd
In th' person and the voice of Lycaon 80
Came to his side, and thus unto him said:

Æneas, when the wine was in your head,
I oft have heard you of yourself say this,
That 'gainst Achilles you in fight durst stand.
What say you to him now? See, there he is. 85
Priamides, Æneas then replied,
Why would you have me with Achilles fight?
I once already was, upon mount Ide
Keeping our cattle, by him put to flight;
And thence for safety to Lyrnessus fled. 90
But he the town Lyrnessus quickly won,
And Pedassus. And then I had been dead
If Jove had not enabled me to run.
For Pallas with him was and made him way,
Striking his foes before him with affright, 95
And urging him the Trojans to destroy.
'Tis more than man can do t' oppose his might;
One God or other always with him is
To put aside the spears before they come.
And whom he aims at he doth never miss, 100
And to the mark his spear flies always home.
But if the Gods impartial would be,
Although of solid brass his body were,
He should not eas'ly get the victory.
Æneas, then said Phœbus, do not fear, 105
But pray unto the Gods. Your mother is
Jove's daughter Cytherea, as they say,
A greater Goddess by descent than his;
And therefore boldly to him go your way.
His mighty words and threats you must not fear. 110

This said, he courage breath'd into his breast.
Then through the foremost went he with his spear,
And helmet of strong brass with glitt'ring crest.
Now Juno of his going was aware,
And calling to her th' other Gods, she said, ¹¹⁵
Neptune and Pallas, let us have a care;
I see a danger that ought to be weigh'd.
Æneas yonder, with his spear in hand,
Goes to Achilles with a mind to fight.
Let's keep him off, or by Achilles stand, ¹²⁰
And add both to his courage and his might,
That he may know the Gods of greatest pow'r
Are on his side, and those that stand for Troy
In virtue much to us inferior,
And dare not in the field against us stay; ¹²⁵
And that we from Olympus hither came
To save him now; hereafter, whatsoe'er
Mischances come, he must endure the same,
Since at his birth they woven with him were.
For if unknown our purpose to him be, ¹³⁰
To meet a God will put him into fear.
'Tis dangerous Gods as they are to see;
So terrible to mortals they appear.
And Neptune unto Juno then replied,
You are too fierce: a fight between the Gods ¹³⁵
I would not have begin upon our side;
Nor does it need, so much we have the odds.
But let's go hence to yonder mountain top,
And leave the battle in the hands of men.

If Mars or Phœbus then Achilles stop, 140
We to the battle will return again,
And send them to Olympus home with shame,
‘Mongst other of the Gods at court to stay,
Well beaten at our hands, disgrac’d, and tame.
And when he this had said, he led away, 145
And when he come was to the castle-wall,
Which was by th’ Trojans built for Hercules
By Pallas’ help, to save him from the whale
That much annoy’d the Trojans from the seas,
He and his party of the Gods staid there, 150
Concealed by a cloud, and looking on.
But Mars and Phœbus, with their party, were
Sitting upon the brow of Callidon.
Thus from the field the Gods on both sides staid,
Consulting how their friends the day might win, 155
But neither side effectually would aid,
For not a God amongst them durst begin.
Now cover’d over was the field with men,
Both horse and foot, array’d in armour bright;
The earth resounded with their feet. And then 160
Two warriors in the midst stood out to fight,
Achilles and Æneas, the two best.
And first Æneas, with fierce looks, went on
With spear in hand, and shield before his breast.
To meet him then advanced Thetis’ son. 165
As when to chase a lion from the plain,
The people of the town with weapons rise,
The lion looks upon them with disdain,

As if he did their multitude despise;
But when a spear from any of them comes, 170
He whips himself int' anger with his tail,
And terribly goes on, and yawns and foams,
To kill, or to be killed if he fail:
So at the seeing of Æneas' spear,
Achilles did himself to th' fight provoke. 175
And when they stood to one another near,
Achilles first unto Æneas spoke.
Æneas, why, said he, come you away
So far before the rest? To fight with me?
Will Priam, think you, make you king of Troy, 180
If by your hand perhaps I slain should be?
No. He is wise, and sons has of his own.
Or will the Trojans set you out great lands,
Some to be planted, others to be sown,
Whenever I am killed by your hands? 185
But that I hope will never be. You know
How once I made you run down Ida hill,
Into Lyrnessus, in great haste; and how
You ne'er look'd back for fear of greater ill;
And how the town I won, and led away 190
The women captives; though 'twas then Jove's will
That from my hands you should escape that day,
You must not look that you should do so still.
And therefore I advise you to be gone,
And in the throng o' th' Trojans to abide, 195
For ev'ry fool his harm knows when 'tis done.
This said, Æneas to him thus replied:

Pelides, do not think you can me fright,
As if I were a child, with words of scorn;
For if in evil words I took delight, 200
I could as many easily return.
We one another's parents know by fame;
Peleus your father was, Anchises mine.
Your mother is divine, Thetis by name;
And Venus mine, of the celestial line; 205
And one of them to-day must lose a son,
For 'tis not words can fetch us off this place.
But if you'll know my generation,
I'll by my father likewise count my race;
For first by Jove was Dardanus begot, 210
That rul'd the Dardans under Ida hill,
In divers towns; for Ilium yet was not,
But at the foot of Ida they dwelt still.
And Dardan Erichthonius begat,
That was the wealthiest of mortal men: 215
Three thousand mares he had, and unto that
As many foals, all feeding on the fen.
And twelve of these were got by Boreas,
That leapt their dams in likeness of a horse,
And o'er the ears of standing corn could pass 220
And never make them stoop, such was their force;
And run upon the sea, and never wet
Their hoofs, which very wondrous was to see.
And Erichthonius did Tros beget.
And Tros the father was of children three, 225
Ilus, Assaracus, and Ganymed.

But Ganymed was taken up by Jove,
So fair he was, and t' heaven carried,
To minister unto the Gods above.
The son of Ilus was Laomedon, ²³⁰
And he Tithonus got, and Priamus,
And Lampus, Clytius, Icetaon.
But Capys son was of Assaracus.
Capys begat Anchises, and he me.
I need not be ashamed of my race, ²³⁵
Though virtue lieth not in pedigree,
But given is to them whom Jove will grace.
Then let us from reproachful words abstain,
Whereof there is great plenty ev'rywhere,
To serve all men that will them entertain, ²⁴⁰
That as a man will speak, so he may hear.
What need we, like two women in the street,
When they cannot agree, to rail and scoff?
Who, say they true or false, are indiscreet.
For from my purpose you'll not put me off ²⁴⁵
With scornful words, before your force I try,
Let's therefore here no longer talk, but fight.
And as he spake his spear he letteth fly,
Which on Achilles' mighty shield fell right,
And terribly it made the same resound, ²⁵⁰
Achilles far before him held his shield,
For fear Æneas through it might him wound;
Though heav'nly arms to mortals will not yield.
But that he thought not on. Nor did the spear,
Well driven as it was, and strong, pass through; ²⁵⁵

For of five plies that labour'd in it were
By Mulciber, it pierced only two,
And those were brass. There still remained three,
The one of gold, the other two of tin;
And stopped by the brass it could not be, 260
But coming to the gold it there stuck in.
And then Achilles threw his spear at him,
Which flying with great force pass'd thro' his shield,
Where thin the brass and hide was near the brim,
And over him it flew into the field. 265
For when Æneas coming saw the spear,
He crouched low, and held his buckler high;
And though the same proceeded but from fear,
It made the spear above his head to fly.
Æneas at the first amazed stands; 270
But when Achilles with his sword came on,
He stoop'd, and from the ground took in his hands,
That near unto him lay, a mighty stone,
Which two men, such as now are, scarce could bear,
And hit him had on th' head or breast in vain, 275
That with celestial arms defended were,
And by Achilles' sword himself been slain,
If it had not by Neptune been foreseen.
Who speaking to the Gods did thus complain.
O Gods, said he, great pain I now am in 280
To see Æneas by Achilles slain,
For heark'ning to Apollo foolishly;
Who will not help him though he set him on.
But wherefore should we let Æneas die,

Others to please, when he no fault has done? 285
Let's therefore save him, lest we Jove offend,
Who now the offspring of King Priam hates,
And that Æneas' race shall without end
The Trojans rule, 'tis ordered by the Fates.
This said, to Neptune Juno did reply: 290
If you Æneas have a mind to save,
Save him yourself. For well you know that I
And Pallas 'mongst the Gods sworn often have,
That neither of us shall a Trojan aid,
Though Ilium itself were in a flame. 295
Away went Neptune soon as that was said,
And to Æneas and Achilles came,
And o'er Achilles' eyes a mist he spread,
And drew his spear out of Æneas' shield;
And to Achilles that he carried, 300
And laid it at his feet upon the field.
And then Æneas, lifted by the force
Of an immortal God, skipp'd to the rear,
O'er many ranks of heroes and of horse,
Unto the Caucons, that the hindmost were, 305
Where Neptune standing by him spake, and said:
Æneas, who was't of th' immortal Gods,
That to engage Achilles you betray'd,
That stronger is than you by so much odds?
Henceforth take heed you come not in his way, 310
Lest by his hand you die. When he is gone,
You boldly on the best adventure may,
For of the rest you slain shall be by none.

This said, he to Achilles went again,
And made the mist to vanish from his eyes, 315
And round about him look'd Achilles then,
And to his feet return'd, his spear espies,
And said unto himself, O strange, what's this?
The man is gone, my spear come back I see.
Æneas of the Gods beloved is, 320
And I thought all he said was vanity.
But fare him well. He will not come again,
So glad he is that he hath 'scaped so.
Now I will first put courage in my men,
And then unto some other Trojans go. 325
Then through the Argive ranks he went, and said,
No longer of the Trojans be so shy,
But man to man go close. Be not afraid;
Strong as I am, you cannot think that I
Can follow such a multitude and fight; 330
For neither Mars nor Pallas can do that,
Though Gods immortal, and of so great might,
That mortal men cannot resist. Yet what
My strength alone, with hands and feet can do,
I think I shall not anything forbear, 335
But break their ranks, and make you way clean through;
Nor shall he joyful be whom I come near.
Whilst this Achilles to the Argives said,
Hector no less the Trojans did excite.
Why should you of Achilles be afraid? 340
With words 'tis easy 'gainst the Gods to fight,
That are too strong to fight with, with a spear;

And to Achilles now I mean to go,
Though fire his hands, and steel his body were,
For more by half he says than he can do. 345
When Hector to the Trojans this had said,
The fight began, and mighty was the cry;
And then for Hector Phœbus was afraid,
And presently came in, and standing nigh,
Hector, said he, return into the throng. 350
Take heed. With Thetis' son fight not at all,
Now nor henceforth (he for you is too strong)
Lest by his spear or sword you chance to fall.
Thus Hector, by the God admonished,
Into the Trojan troops retir'd again. 355
The Trojans then before Achilles fled;
And by him first Iphition was slain,
Whom the nymph Neis to Otrynteus bare,
In Ida, at the foot of Tmolus hill;
Great troops he brought unto the Trojan war, 360
And thought he could the great Pelides kill:
But coming on, he met Achilles' spear,
The fatal spear, that cleft his head in twain.
Achilles then triumphed o'er him there,
Though fallen to the ground he were, and slain. 365
So, Otryntides, die there on the earth,
Though where runs Hyllus into Hermus deep,
On the Gygean lake, you had your birth.
This said, he left him in eternal sleep,
For th' Argive char'ot-wheels to crush and grind. 370
And after him he slew Demoleon,

A warrior good, and of undaunted mind,
That of Antenor was a valiant son.
Him through the head, with spear in hand, he smote,
And out together came both blood and brain; 375
His helmet, though of brass, preserv'd him not.
And after he Demoleon had slain,
He with his spear pursu'd Hippodamas,
Who from his car had leapt unto the ground;
Frighted, and now before him running was, 380
And gave him on the back a mortal wound,
Whereat he blows and roars like any bull
Brought to the altar for a sacrifice,
When young men by the horns him thither pull
By violence; then down he falls, and dies. 385
Unluckily, then in Achilles' sight
Was Polydorus, Priam's youngest son,
And best belov'd; whom he forbad to fight,
Though swiftest of them all he were to run:
But he, the virtue of his feet to shew, 390
Betwixt the hosts ran up and down the field,
Until a spear Achilles at him threw,
And with a wound upon the back him kill'd;
Out at his navel went the spear again,
And for his guts to follow made a way. 395
But Hector, when he saw his brother slain,
Amongst his troops he could no longer stay,
But going to Achilles, shook his spear.
Then, speaking to himself, Achilles said,
The man that slew Patroclus I see here, 400

We must no more each other now avoid;
And sourly on him looking, said, Come near,
That I may quickly of you make an end.
And Hector to him answer'd without fear,
In vain, Achilles, your proud words you spend; 405
Such words as these may children terrify,
And I can speak that language when I list;
And though you be a mightier man than I,
The victory does not in that consist,
But he shall have it whom the Gods appoint, 410
Though he be weaker, if his spear fly true,
Which mine may do, and sharp is at the point.
This said, his spear he at Achilles threw,
Which back to Hector's feet Athena blew,
With soft and gentle breath, without a sound; 415
And straight Achilles, thund'ring, to him flew.
But then Apollo snatch'd him from the ground,
Which is by any God done in a trice,
And in a mist conceal'd him from his sight:
And after him Achilles leapt up thrice, 420
And thrice the air obscure in vain did smite.
Then whoop'd he after him, and threat'ning said,
Dog, an ill death again thou 'scaped hast,
That fighting, to Apollo pray'st for aid;
But yet I shall dispatch you at the last, 425
If any of the Gods for me appear;
But now I must to other Trojans go.
This said, at Dryops straight he threw his spear,
And sent his soul unto the shades below.

To meet Demuchus then he went half way, 430
That with his sword came toward him to fight:
Him with a wound i' th' neck he made to stay,
And with his sword then killed him outright.
Then by him slain the sons of Bias were,
Laogonus and Dardanus, the one 435
With his great sword, the other with his spear.
And next he killed Tros, Alastor's son,
Who not resisted, but fell at his knee,
And begg'd his life, for being of his age,
Hoping for that he pitied might be. 440
But that Achilles' wrath could not assuage.
He quite mistook his nature like a child,
For cruel was Achilles, and hard-hearted;
But he sweet-natur'd thought he was, and mild,
Whereas he never thought how others smarted. 445
And then Achilles gave him such a wound,
That with the blood his liver started out.
And there he left him dying on the ground,
And for more Trojan leaders look'd about;
Then, coming to him, he saw Mulius, 450
And struck him through the head from ear to ear.
Then with his sword he killed Echeclus,
Antenor's son, that to him came too near.
Then on the arm he hit Demolion,
The spear stuck in, and forc'd him there to stay; 455
Achilles then came furiously on,
And with his sword he skimm'd his head away,
Helmet and all. Then Regmus, with a wound

Upon the belly, he slew with his spear,
Who from his char'ot fell unto the ground; 460
And after him he slew his char'oteer,
Areithous, whilst he his horses turns.
As a thick coppice, on a windy day,
If set on fire, unmercifully burns;
So went Achilles killing ev'ry way. 465
As oxen from the straw tread out the corn,
So trampling went his horses o'er the dead,
That with their bucklers by the wheels were torn,
And th' axle-tree with blood was covered,
And spokes; in part with droppings from the wheels, 470
(For going on the ground the wheels were gory)
And partly beaten up with th' horses' heels,
And bloody were his hands; and all for glory.

LIB. XXI.

When to the river Xanthus they were come,

THE TROJANS AT the ford half of them pass'd,
And on the highway fled to Ilium;
The other leapt into the stream for haste,
*Achilles, with great slaughter, pursues the Trojans to Scamander, and takes
twelve alive to kill at Patroclus's tomb. 5*
And with the winding flood there swimming strive.
As locusts, when by sudden tier sprung,
In swarms into the river fly and dive;
So they themselves into Scamander flung,
And filled was the stream with horse and men. 10
Achilles on the bank-side left his spear,
Set up on end against a tree; and then
Achilles leapt in with his sword; and there
He kill'd as fast as he could turn and strike,
And with their blood the stream was dyed red. 15
And grievous 'twas to hear them groan and shriek,
That in the flood were by him massacred.
As when the dolphins in a river are,
The other fish scud to the banks in shoals,
So did it with the swimming Trojans fare; 20
They fled to th' banks, and hid themselves in holes.
And twelve of them alive Achilles took,

And with their girdles hands behind them bound,
Then caus'd them to be led out of the brook,
And to the ships conveyed safe and sound, 25
To slay them at Patroclus' funeral.
Then from the river out he came again,
And Priam's son Lycaon met withal,
That from Scamander flying was in vain,
Whom prisoner he had taken once before, 30
When in his father's ground he was by night,
Cutting of spoke staves from a sycamore,
And on him now the second time did light.
To Lemnos first he sent him to be sold,
And bought he there was by Eetion. 35
Achilles for him had good store of gold.
But he got loose and home again did run.
And there eleven days he staid; and well
Was entertained in his father's house.
The twelfth into Achilles' hands he fell 40
Again, that sent him then to Erebus.
Achilles seeing him without a spear,
Without a shield, and nothing on his head,
(For he had cast away his arms for fear,
When almost tir'd he from the river fled.) 45
Achilles, grumbling to himself, then said,
strange! These Trojans are stout-hearted men,
That being sent away, will not be staid,
But to the war must needs come back again.
Here's one I sent to Lemnos to be sold, 50
And now he's come to fight with me again,

'Tis strange the sea could not him from me hold,
That can against their will hold other men.
But well, I'll give him of my spear a taste,
And send him to the earth that I may see
Achilles, with great slaughter, pursues the Trojans, &c. 55
Whether the earth or no can hold him fast,
By which are holden better men than he.
Whilst thus Achilles said, the man came near
To beg his life, for loath to die was he.
To wound him then Achilles lifts his spear, 60
But under it he got unto his knee,
And with one hand laid hold upon his spear,
And on Achilles' knee the other laid.
And kneeling down before him shook with fear,
And lamentably to him speaking said, 65
Achilles, I beseech you pity me,
And save my life, although 'twere but for this,
That I your pris'ner was. Captivity
At least for life a sanctuary is.
And when you unto Lemnos sent me had, 70
You for me got a hundred oxen's price;
And for my ransom now I should be glad
You would be pleas'd to take that value thrice.
'Tis but twelve days since I came back to Troy,
And all the way had been in grievous pain, 75
And when I thought I should my friends enjoy,
I fallen am into your hands again.
how have I so much incurr'd the hate
Of Jupiter to shorten thus my life!

Or from my mother cometh my hard fate, 80
Laothoe, whom Priam made his wife?
Altheus got her, king of Pedasus,
And she of Priam's many wives was one,
For many more beside had Priamus,
And by her had me and another son. 85
And both of us must by you now be kill'd,
For Polydore you have already slain,
Whilst like a child he ran about the field.
And for myself, I fear, I pray in vain.
But what am I that must no quarter have? 90
Though by my father I am Hector's brother,
That sent the good Patroclus to his grave,
Yet I am nothing to him by the mother.
Thus pleaded he. Achilles then replied:
Tell me no more of ransom or of quarter. 95
'Tis true, I did, before Patroclus died,
Suffer some Trojans for their lives to barter;
But now if any of the Trojans fall
Into my hands before the town of Troy,
And those of Priam's race the least of all, 100
Must hope from me to get alive away.
But wherefore, friend, should you think much to die?
Patroclus, a much better man, is gone.
You see how strong and tall a man am I,
And of a noble father am the son, 105
And have a goddess for my mother. Yet
At morn, or noon, or night, with shaft or spear,
I'm sure by one or other to be hit

And lose my life. Why therefore should you fear?
This said, Lycaon's heart and limbs both fail'd, ¹¹⁰
And of the spear let's go his hold, and wide
His hands he spread and his sad fate bewail'd.
Achilles then his sword drew from his side,
And gave him on the neck a mighty wound,
The sword's whole breadth into his neck he took, ¹¹⁵
And presently he fell dead to the ground.
Achilles threw him then into the brook,
And said insulting, Go now to the deep,
And feed the fishes that will lick your blood;
Your mother over you shall never weep, ¹²⁰
But to the sea you go shall with the flood,
Where to the curled water leaps a fish,
Upon Lycaon's dainty fat to feed;
And until Troy be by us won, I wish
That th' other Trojans may no better speed, ¹²⁵
But flying, by my spear be toss'd like hay.
Scamander shall afford them little aid,
Though to his stream they bulls and horses slay,
Till for Patroclus' death they all have paid.
With these his haughty words, Scamander griev'd, ¹³⁰
Contrived how Achilles to repel,
And how the Trojans best might be reliev'd,
That to escape into his water fell.
Achilles then Asteropæus spied,
Pelegon's son, the son of Axius, ¹³⁵
Of Axius the river deep and wide,
By th' daughter of king Accessamenus.

And to him with a mind to kill him went,
As he was newly come out of the water.
But Xanthus gave him such encouragement, ¹⁴⁰
(Because Achilles fill'd his stream with slaughter),
That there Asteropæus for him staid,
And both in right and left hand had a spear,
And never sought the combat to avoid.
And when they were to one another near, ¹⁴⁵
Who are you, said Achilles, and whose son,
That in my anger dares approach me so?
For I in arms encounter'd am by none
But those whose parents destin'd are to woe.
Asteropæus to him then replied: ¹⁵⁰
Why ask you me whose son and who I am?
The forces of Pæonia I guide;
To whom elev'n days since I hither came.
Of my descent, the author Axius is,
The fairest stream that on the earth doth run ¹⁵⁵
His son was Pelegon, and I am his.
Thus who I am 'tis told you, and whose son.
And now, Achilles, it is time to fight.
This said, from his two hands his two spears fly,
For both Asteropæus' hands were right, ¹⁶⁰
The one of them his mighty shield did try,
But pierc'd it not; the plate of gold withstood.
The other gave his arm a little wound
Near to his elbow, and fetch'd out some blood,
And so beyond him went and stuck i' th' ground. ¹⁶⁵
Achilles then his spear with all his strength

Incensed at Asteropæus threw,
Which missing, into th' earth went half its length.
Then from his side his sword Achilles drew.
Asteropæus to Achilles' spear ¹⁷⁰
Went back, and at it thrice he pluck'd in vain;
Then thought to break it; but Achilles there
Was with his sword, and with that he was slain.
For by the sword his belly was so ripp'd,
That all his bowels issued at the wound. ¹⁷⁵
There him Achilles of his armour stripp'd,
And o'er him crow'd as he lay on the ground.
Lie there, said he; shall rivers' sons compare
With th' offspring of the blessed Gods above?
The issue of a brook, you say, you are, ¹⁸⁰
But I the issue am of mighty Jove;
For Peleus my father was, and his
Was Æacus, whom Jupiter begot.
But greater he than any river is,
Then equal to his race, their race is not. ¹⁸⁵
A river great enough you had at hand,
But that you found had done you little good.
For nothing can the power of Jove withstand;
Not Achelous with his royal flood,
Nor th' Ocean itself, of waters king, ¹⁹⁰
From whose abundance seas their water take,
And ev'ry river, stream, and well, and spring
That goeth on the earth, and ev'ry lake;
Who, when they but a clap of thunder hear,
From Jove some danger presently they dread. ¹⁹⁵

This said, from th' earth he pulled out his spear,
And left o' th' sands Asteropæus dead,
Where Xanthus from the wound shall wash the blood,
And eels and other fish feed on his fat.
Achilles then pursued those that stood 200
Upon Scamander bank amazed at
The fury of the giddy stream; and when
They saw their leader killed in their sight
By th' hand of terrible Achilles, then
They ev'ry one betook themselves to flight. 205
Then with his sword he slew Thersilochus,
And after him the stout Astypylus,
And Opholostes, Mydon, Ænius,
And after these, Mnesus and Thrasius,
And had shed yet much more Pæonian blood, 210
But that Scamander at it took offence,
And like a man above his water stood,
And to Achilles spake his mind from thence.
Achilles, truly you excel in might,
And acts you do of great iniquity, 215
And by the Gods assisted are in fight.
But though by Jove you should allowed be
To kill the Trojans, kill them on the plain.
My stream so choked is with carcasses,
I cannot drive my waters to the main. 220
I wonder you should do such deeds as these;
Let those you kill be killed openly.
Go therefore from me. Thus Scamander said.
And then unto the River answer'd he:

Divine Scamander, you shall be obey'd. 225
But to pursue the Trojans I mean still,
Till I have chas'd them up to Ilium.
And fight with Hector, if he stay, I will,
And see if his or my last day be come.
Scamander then unto Apollo spake: 230
Phœbus, said he, you Jove's commandment slight,
That bade you of the Trojans care to take,
And to defend them all you could till night.
Into the stream Achilles leaps again,
At which Scamander swelling lifts his waves, 235
And out he throws the bodies of dead men,
And from Achilles' hand the living saves.
Then throws a billow on Achilles' head,
And heavy on his shield the current lay;
And on the ground by no means he could tread, 240
So fast the River carried him away.
But o'er the water hung an elmen limb
Which he laid hold on. Then fell down the tree
Into the river. And that saved him,
And served as a bridge to set him free. 245
And swiftly then Achilles from him ran,
But after him Scamander sent his water,
Resolv'd to quench the fury of the man,
And save the Trojans in his stream from slaughter.
And then as far as one can throw a spear 250
Achilles from the flood obliquely flies
Swift as a hawk; but yet was ne'er the near;
For still he water has before his eyes.

As when a man makes passage with his spade
For water to his garden from a hill, ²⁵⁵
The stream outruns him that the channel made;
So Xanthus was before Achilles still.
And ever as Achilles turn'd or stood
To see if any God would by him stand,
Above his shoulders rose the mighty flood, ²⁶⁰
And while he starts from's feet removes the sand.
Achilles then himself bewailing said,
Jupiter, and look'd up to the sky,
Let some God 'gainst this River give me aid,
And any other death then let me die. ²⁶⁵
But none I know on whom the fault to lay
But my dear mother, who to flatter me,
Said I should die before the walls of Troy,
And by Apollo only killed be.
O that I had by Hector's hand been slain, ²⁷⁰
The best of all the men that fight for Troy.
But now I perish like a silly swain
Passing a torrent in a rainy day.
These words Achilles had no sooner said,
But Neptune and Athena with him were; ²⁷⁵
And on Achilles' hand their hands they laid.
Then Neptune said, Achilles, do not fear.
Encouraged by two such Gods as we,
Pallas and I, and that by Jove's command,
Retiring soon you shall the river see. ²⁸⁰
For fear of him you need not hold your hand.
But drive the Trojans all to Ilium

Save those that fly. And having Hector slain
(As we assure you you shall do) then come
Triumphantly unto the ships again. 285
This said, unto the Gods again they came.
Achilles boldly waded in the field,
Where many bodies dead and bucklers swam.
With so much courage Pallas had him fill'd,
And in the water stoutly lifts his knees. 290
For Pallas now his strength augmented had.
And Xanthus, vex'd before, when he saw this,
Foamed and roar'd as one that had been mad;
And cried out for help to Simois.
Brother, said he, assist me here, to stay 295
This raging man that t' Ilium going is.
I am afraid he'll take the town of Troy.
Make haste to help me; and your channel fill
With water both from torrent and from spring,
And stones and trees bring with you from the hill, 300
That on this furious man we may them fling;
So that his strength shall do him little good,
Nor armour, which upon the field shall lie
Concealed from the eyes of men in mud
And sand enough. Thus bury him will I, 305
And make his tomb. The Argives will not find
Where lie his bones. I'll earth upon him throw.
They shall not need, if they should be so kind,
More monument upon him to bestow.
This said, he foam'd, and full of bodies dead 310
He at Achilles a great billow bowl'd,

Which coming to him cover'd had his head,
But Juno chanc'd to see it as it roll'd,
And unto Vulcan shriek'd in great affright,
Rise quickly, dear child, Cyllipodion, ³¹⁵
Xanthus against you coming is to fight,
And to defend yourself your flames put on.
And I will Zephyrus and Notus call
From sea, that for you so shall blow the flame;
That the armour, and the heads o' th' Trojans all ³²⁰
Shall not be able to endure the same.
Go to his bank, and burn up ev'ry tree,
And then throw fire on him, and never fear,
Nor by his threats or pray'rs persuaded be
To cease, until again you from me hear. ³²⁵
And Vulcan then made ready a huge flame.
And first the dead he burn'd upon the plain;
Then to the water with his fire he came
To send it to the channel back again.
As when a field new moist'ned is with rain ³³⁰
In summer-time, 'tis quickly dried again
By Boreas; so soon dried was the plain,
And burn'd the bodies were of the dead men.
And to the river then his flame he turn'd,
Where th' elms and willows, tamarisks, and lote, ³³⁵
Sedges, and many other plants he burn'd,
That in or by the river grew about.
And eels and fishes in the water hot
Tumbled and turn'd their bellies up with heat;
Into such pain by Vulcan they were put; ³⁴⁰

And Xanthus fainting cover'd was with sweat,
And then to Vulcan spake. Vulcan, said he,
No God is able to resist your might.
What are the Trojans or the Greeks to me?
Give over. I'll no longer with you fight. 345
Thus spake Scamander, boiling all the while.
As when upon a fire of well-dried wood
The grease of a fat swine is made to boil;
So boiled he, and went not on, but stood,
Making to Juno his complaint, and said, 350
Why does your son on me more fiercely fly,
Than on the rest that do the Trojans aid,
And to be blamed more deserve than I?
Let him give over, and I'll do so too;
And swear besides, if you my oath require, 355
That I will nothing for the Trojans do,
Although the Greeks should set the town on fire.
This Xanthus said; and Juno hearing it,
To Vulcan with a loud voice spake again:
Vulcan, now hold your hand. It is not fit 360
T' offend a God too much, to pleasure men.
And Vulcan hearing her his fire puts out;
And Xanthus back into his channel went.
Thus were they parted, and no longer fought,
And Juno, though in choler, was content. 365
And then the Gods amongst themselves fell out,
And one against another stood in duel,
And heav'n and earth resounded as they fought,
Giving each other many wounds and cruel.

And up unto Olympus rose the cry, 370
Where Jove sat on his throne in majesty,
And casting on the fields of Troy his eye,
Laughed to see them fight that could not die.
Mars first began, and to Athena said,
You, impudent, that to engage in fight 375
The Gods amongst themselves are not afraid,
To satisfy your pride and endless spite,
Remember how you on me set Tydide
To throw his spear at me, and openly
Unto my body you the same did guide 380
With your own wicked hand, and wounded me,
I'll pay you now. Which was no sooner spoken,
But Mars his spear was at Athena's shield,
Which not Jove's thunderbolt could e'er have broken.
Then took she up a stone that lay i' th' field, 385
Great, knobby, black, that had been heretofore
Set there, of some man's land to show the bound,
And with the same she struck Mars o'er and o'er.
There lay he, and seven acres hid of ground.
And over him insulting, then said she, 390
Lie there, and know I can you overcome;
And that your mother glad of this will be
For fighting 'gainst the Greeks for Ilium.
This said, she from him turn'd. Then to him went
Venus, and led him groaning from the place. 395
Pallas, said Juno, see that impudent
That leads him out, and do her some disgrace.
Then Pallas to her went, and with her hand

Hit her o' th' breast; then both fell on the plain,
For Mars without her could no longer stand. 400
Then Pallas over them insults again:
So may, said she, lie all that stand for Troy
As these do here. Had it not been for them,
The war had ended been; we come away,
And Troy destroyed, with all Priam's stem. 405
This Pallas said, and Juno smil'd; and to
Apollo Neptune straightway nearer came.
Why fight we not, said he, since others do?
If we stand still, we cannot without shame
Return to Jove, where scorned we shall be. 410
Have you forgot how to Laomedon,
To work for him, Jove once sent you and me,
And how our wages was agreed upon,
How I built houses for the Trojans all,
As he direction gave me standing by, 415
Besides, how hard I labour'd at the wall,
How fair I made it, and how strong and high,
And how he sent you, Phœbus, to attend
His herds of kine upon mount Ida side,
And when our work and th' year was at an end, 420
How proudly he our wages us denied,
And threat'ned you to bind you hand and foot,
And sell you in some island for a slave,
And cut off both your and my ears to boot,
And forc'd we were by flight ourselves to save? 425
Yet for his people you have ever fought,
Though by you they deserve to be destroy'd,

And will not join with us to root them out.
To Neptune Phœbus then replied, and said,
O Neptune, you would think me mad, if I ⁴³⁰
Should fight with you for such a thing as man.
They are but leaves, now fresh, to-morrow die;
And when he this had said, away he ran,
For with his uncle loath he was to fight.
His sister then, Diana, to him came, ⁴³⁵
That angry was to see him put to flight;
Apollo, said she, is it not a shame
Thus easily to give the victory
To Neptune? Wherefore carry you a bow
And arrows, and to nothing them apply? ⁴⁴⁰
D'ye carry them, like children, for a show?
Let me not hear you boasting any more
That you to fight with Neptune did not fear,
As in my father's house you did before.
Thus she; but Phœbus did not answer her. ⁴⁴⁵
Then Juno, angry, to Diana came;
Bold face, said she, how dare you with me fight,
That stronger than you are a great deal am?
D'ye think that in your bow there is such might?
I know to women you a lion are, ⁴⁵⁰
And Jove permits you which you will to kill;
But me to overcome 'tis harder far
Than t' hunt a stag or boar upon a hill;
But since you have a mind to understand
What I can do, I'll let you see it now. ⁴⁵⁵
Then both her wrists she seiz'd with her left hand,

With th' other from her shoulders took her bow,
And beats her with the same about the ears,
And laugh'd to see her wriggling strive to fly.
At last she freed herself, and shedding tears 460
She fled (leaving her bow and shafts to lie
Upon the ground, dispersed here and there)
Then forth came Hermes and Latona bright,
And when they were to one another near,
Leto, said he, I will not with you fight, 465
That are Jove's mistress. Boast amongst the Gods
That you have got the victory in fight,
And by no other means but the great odds
You have in strength; and I will not deny't.
This said, Latona gather'd up the bow 470
And arrows of her daughter Artemis.
To Jove went Artemis, to let him know
How ill she had been us'd: and at his knees
She weeping sate. And Jove then made her rise,
And to her said, Dear child, what God was that, 475
That was so rash as t' use you in this wise,
As one that openly had done a fault?
'Twas Juno, then said Artemis, your wife;
And she it was that was of all the first
To set the Gods amongst themselves at strife. 480
Thus Jove and she between themselves discours'd.
Then Phœbus went into the town of Troy;
For still he had a care to guard the wall,
For fear the Greeks the city should destroy.
But to Olympus th' other Gods went all, 485

One part triumphing, th' other discontent,
And sate down by their father Jupiter.
Meanwhile Achilles fiercely forward went,
Killing of men and horses with his spear.
As in a town on fire the people all ⁴⁹⁰
Are busy, and the most of them undone,
So did it with the Trojans then befall;
Some slain were by Achilles, and some run.
Now Priam standing was upon a tower,
And saw the Trojans by Achilles chas'd, ⁴⁹⁵
And that to turn again they had no power,
And down unto the gates he came in haste,
And to the porters order gave, and said,
Open the gates and let the people in,
That from Achilles hither fly dismay'd, ⁵⁰⁰
And shut them when you see they are within;
For if that cruel man should with them get
Within the wall, 'twould be a dismal day.
The porters then the gates wide open set.
Then to the gates the Trojans took their way, ⁵⁰⁵
Pursued by Achilles as they fled,
And sure he taken had the town of Troy,
But that Apollo then encouraged
Agenor to oppose him by the way;
And lest he should be by Achilles slain, ⁵¹⁰
He at the beech tree near him took his stand,
When need should be to bring him off again
Unwounded from Achilles' heavy hand.
But when Agenor saw Achilles nigh,

He troubled was, and to himself thus spake: 515
What shall I do? If from him I should fly
To Ilium, the way that others take,
He'll overtake me, and cut off my head,
For swifter much he is of foot than I.
What if I let him on the Trojans tread, 520
And I some other way to Ida fly,
And hide myself i' th' bushes there till night?
But why do I discourse thus foolishly?
I cannot pass the plain but in his sight,
And then I lost am without remedy. 525
But if I stay and fight with him, what then?
His body is not made of steel nor brass,
But mortal is, they say, like other men,
And like to other men but one life has;
His glorious acts are Jupiter's not his. 530
This said, he for Achilles' coming staid,
As when i' th' woods a panther roused is;
At hearing of the hounds he's not afraid,
But to the hunter goes for all his spear,
And though pierc'd through therewith, will to him fly 535
Upon the spear itself; that being near
He either may revenged be or die;
So resolutely then Antenor's son
Agenor, for Achilles waiting, staid,
And at him aim'd his spear as he came on, 540
And lifting up his voice, unto him said:
Achilles, Oh, you think this day to win
The town of Troy. There's yet much work to do,

For many mighty men there are therein,
And many dangers to be waded through. 545
They of their wives and parents will take care,
And little babes; but you shall perish here,
As terrible and mighty as you are.
And as he spake, he at him threw his spear,
Which on his leg below the knee did light, 550
And with the stroke resounded then the tin;
But the celestial arms were of such might,
That it rebounded back, and went not in.
And when Achilles was to throw at him,
Away Apollo snatch'd him from his sight, 555
Concealed in a mist obscure and dim,
And carried him in safety from the fight.
And that the flying Trojans might escape
Achilles' hand, and save themselves in Troy,
He took upon himself Agenor's shape, 560
And put himself into Achilles' way.
Achilles then pursues, and Phœbus flies
Along Scamander's bank upon the plain,
And kept before him still, but in such wise,
As t' overtake him he might hope in vain. 565
Achilles thus by Phœbus was deceived,
Till from the town he far was led away.
Meanwhile the flying Trojans were received,
And thronging got within the gates of Troy:
For none of them without the gate durst stay, 570
To ask who had escaped, and who not;
So glad they were of getting into Troy,

That how all others sped they never thought.

LIB. XXII.

The death of Hector, and lamentation in Troy.

THUS WERE THE Trojans driven into Troy
Like deer, and up unto the wall they went,
And from their bodies rubb'd the sweat away,
And with good wine renew'd their spirits spent, 5
And to the wall advancing was the foe.
But Hector, hamper'd by his cruel fate,
Into the town of Troy refus'd to go,
And staid without, before the Scæan gate.
Then to Achilles Phœbus spake, and said, 10
Why do you thus pursue me, Peleus' son,
That am a God? which but by passion sway'd
You might have known; but rashly you run on,
And only look how you may slaughter men.
For else, why could you not contented be, 15
When you had pent the Trojans up; but then
Must leave your way so far to follow me,
And cannot kill me; for I cannot die?
At this Achilles vex'd was at the heart;
And to Apollo answer'd angrily; 20
Apollo, thou the most pernicious art
Of all the Gods, that hast me thus misled.
For had I unto Ilium kept my way,

I strewed had the field with Trojans dead
Before they could have enter'd into Troy. 25
But by your fraud that honour I have lost,
Because the strength of men you need not fear.
But I would make you pay for't to your cost,
If to revenge myself I able were.
This said, to Troy he went a mighty pace, 30
And mighty things conceived in his mind,
And stretch'd his legs and knees, as in a race
Good horses do, to leave the rest behind.
Old Priam first upon him set his eyes;
For brightly from afar his armour shin'd 35
Like the fair star that does in autumn rise,
But agues brings, and is to men unkind,
And called is Orion's dog. So bright
Achilles in his armour did appear,
And put the old man Priam in affright, 40
And made him groan, and roar, and tear his hair.
To Hector then he cried aloud and said,
Hector, come in; come in, my dearest son;
For mightily I for you am afraid;
Fight not against that cruel man alone. 45
Achilles stronger is than you by odds;
Lose not your life to give him victory.
Oh that he were beloved by the Gods
No better than he is belov'd by me!
He eaten had ere now been on the plain 50
By dogs and fowl, and I been comforted
A little for my sons whom he hath slain,

Or in the islands far hence trafficked.
Lycaon now I miss, and Polydore;
They came not into Troy with them that fled. 55
Their mother brought me with her wealth good store
To pay their ransom if they be not dead.
If they be slain, 'tis then remediless.
Their parents and the people all will grieve;
But yet their sorrow will be much the less 60
If Hector still preserved be and live.
Come, therefore, quickly in, dear child, and save
The Trojans and their wives, yourself and wife;
And do not let Achilles th' honour have
Alone to have deprived you of life. 65
Besides, you should some pity take of me,
That now upon the very brink of age
The cruel slaughter of my sons must see,
And daughters dragg'd and hurried by the rage
Of the Achæans into slavery, 70
And chambers torn by the insulting foe,
And babes dash'd 'gainst the ground expiring lie,
Whilst into servitude their mothers go.
And after all this, slain must I be too;
My dogs will eat me raw, and lap my blood, 75
And pleased be (not knowing what they do),
That at my table daily take their food.
When young men slain are by the chance of war,
There nothing is whereof to be ashamed;
But when by dogs abus'd and eaten are 80
White heads and beards, and parts not to be named,

There's nothing to a man more miserable.
Thus said old Priam, tugging his grey hairs,
But to prevail with Hector was not able.
And to him then his mother spake with tears, ⁸⁵
And from her bosom layed out a teat,
Hector, if this e'er pleased you, said she,
Dear son, I pray you into Troy retreat,
And have compassion on my misery.
Come in; between you let there be a wall; ⁹⁰
For if you should be slain, your wife and I
Shall not lament you at your funeral,
But at the ships a prey for dogs you'll lie.
Thus weeping, he and she to Hector pray'd,
And nothing to them answer'd he again, ⁹⁵
But obstinately for Achilles staid.
And as a snake roll'd up before his den,
With venom fed, when coming towards him
He sees a man, and stirred is his gall,
Looks cruelly; so Hector, looking grim, ¹⁰⁰
Staid with his shield set up against the wall;
And grieving, to himself he spake, and said:
If I should now into the city go,
Polydamas the first would me upbraid,
That yesternight advis'd me to do so, ¹⁰⁵
Then when Achilles in the field was seen.
But his good counsel I refused then,
Which to have follow'd had much better been;
Lost by my folly are so many men.
And now I fear the Trojans and their wives ¹¹⁰

Will censure me, and some man worse than I
Say I have cast away the people's lives,
Presuming on my strength so foolishly.
So they will say; and therefore better 'tis
To venture on Achilles, though I die, ¹¹⁵
A better way I cannot take than this;
For should I lay my shield and helmet by,
And leave my spear set up against the wall,
And to Achilles thus disarmed come,
And offer Helen to restore with all ¹²⁰
The wealth she with her brought to Ilium;
And to the Greeks give half the goods of Troy,
And take an oath that we will nothing hide,
Nor anything out of their sight convey,
But bring it forth and faithfully divide. ¹²⁵
But whither to no purpose runs my mind?
I will not do't, for it were but in vain.
I ne'er the sooner should his favour find,
But by him so much eas'lier be slain.
I cannot with him talk from hill nor tree, ¹³⁰
As boys and wenches do; he is too nigh,
And therefore here I'll stay for him, and see
Whether my fate it be or his to die.
Whilst yet he spake, Achilles near him was,
As terrible as Mars, and shook his spear; ¹³⁵
As flaming fire relucant was the brass,
Or as the sun at morning doth appear.
Then Hector durst no longer stay, but fled:
Fear nimbly made his feet and knees to move;

Achilles no less swiftly followed. 140
As when a hawk is flying at a dove,
The dove flies out aside, herself to save;
But by the hawk again is followed,
That gives not over till the prey he have;
Achilles so pursu'd and Hector fled, 145
Keeping the cart-way still under Troy wall;
And to the watch-tow'r came and sicamore,
And the two springs that into Xanthus fall,
Whereof the one is always cover'd o'er
With smoke, as if upon a fire it were, 150
And with hot water all the year doth flow.
The water of the other all the year
As cold is as the hail, or ice, or snow,
And two fine washing-places built were there,
To which the Trojan women used to come, 155
And wash their garments when they sullied were,
Before the Argives came to Ilium.
This way they ran, and swiftly mov'd their thighs;
For 'twas not for a piece of flesh or hide,
Which of foot-races is the usual prize, 160
But for the life of Hector that they vied.
As when race-horses run for some great prize,
That used to it are, most swiftly run;
So Hector and Achilles now ran thrice
About Troy wall, the Gods all looking on. 165
Then, speaking to the Gods, Behold, said Jove,
I Hector see in danger to be slain,
A good and pious man, and whom I love,

And for him now my heart is in great pain;
For he hath made me many a sacrifice, 170
Both in my house on Ida and in Troy,
And now before the swift Achilles flies.
Say, shall he die, or be convey'd away?
Father, said Pallas then, what's this you say?
He's mortal, and by Fate condemned is, 175
And will you now the execution stay?
You may; but th' other Gods will take't amiss.
And Jove to Pallas then again replied:
Sweet child, it was not seriously meant,
But only said. You shall not be denied; 180
Do what you please yourself, I am content.
This said, Athena, glad, leapt down to Troy.
Achilles Hector still pursued; and as
A hound in view pursueth all the way
A frightened hare, so coursed Hector was; 185
Nor suffer'd was to double or to squat.
For when he to the gate ran for defence,
Between the gate and him Achilles gat,
So that he could not stay for help from thence.
Achilles never would the wall forsake; 190
But Hector still upon the cart-way fled.
As men can neither fly nor overtake
When in a dream they think it in their bed;
So Hector from Achilles could not fly,
Nor could Achilles Hector overtake; 195
For Phœbus Hector did with strength supply,
But of him then no further care did take.

Achilles by a sign all else forbad
To throw a spear, for fear the greatest glory
Some other of the Argives should have had, 200
And he come after but as accessory.
When to the spring the fourth time they were nigh,
Jove took his golden balance up, and laid
In one o' th' scales Achilles' destiny,
And Hector's in the other, and them weigh'd. 205
Hector's was heaviest, and down fell the same
As low as hell, so much it overweigh'd.
Then Phœbus parted. And t' Achilles came
Athena nigh, and speaking to him, said,
Achilles, now, I think, we shall not miss 210
Of killing Hector, but with honour go
To th' ships, as greedy as of fight he is;
For sure I am he cannot 'scape us now,
Phœbus in vain to Jove shall for him pray.
But stay you here and breathe awhile; for I 215
Will to him go, and make him for you stay,
And so encourage him he shall not fly.
This said, Achilles, leaning on his spear,
Staid where he was. To Hector Pallas came.
So like Deiphobus she did appear 220
In shape and voice, he took her for the same.
And when she with him was, she to him said,
Brother, you still are by Achilles cours'd
About the wall of Troy. Be not afraid;
I'll by you stand, and let him do his worst. 225
Deiphobus, said Hector, who before

Was dearest to me of my brothers all,
I bound am now to honour you much more,
That t' aid me durst appear without the wall,
When all the rest remain within for fear. 230
Pallas to Hector then replied, and said,
Brother, my father and my mother dear,
And friends with their entreaties had me staid,
So dreadful is Achilles to them all,
But I would not. But come, let's go and try 235
Whether it be our fate by him to fall,
Or his by Hector's hand and spear to die.
This said, she went before him with her spear,
Lest he, some fraud mistrusting, should have staid.
And when they were unto Achilles near, 240
Hector spake first, and to Achilles said:
Pelides, though before you I have fled
Now thrice about the wall, and durst not stay,
Yet now to stand I am determined,
And fight till either I be slain or slay. 245
But come, let's first the Gods to witness call,
Of what shall be agreed 'twixt you and me.
If by my hand it be your chance to fall,
Your body dead shall not abused be.
I'll take your arms and send them into Troy; 250
Your body dead the Greeks shall have again
Entire, and not disgraced any way;
Do you the like to me if I be slain.
Achilles, sourly looking, said again,
Talk not of oaths and covenants to me, 255

That nothing worth 'twixt lions are and men,
And wolves with lambs on nothing can agree;
And you and I shall one another hate,
Nor oaths and pacts between us will stand good,
Till we blood-thirsty Mars shall satiate 260
Either with Hector's or Achilles' blood.
It now behoves you all your pow'r to show,
And be an able man of war indeed.
You cannot, as you did, run from me now,
Although, I think, you never had more need; 265
For by Athena slain you shall be here,
And for the slaughter of the Greeks be paid.
This said, he at him threw his heavy spear,
But Hector, stooping, did the same avoid,
And o'er his head the spear then harmless flew. 270
But Pallas quickly snatch'd it from the sand
Invisibly, which Hector never knew,
And put the same into Achilles' hand.
Then Hector to Achilles spake, and said,
Achilles, you have miss'd. My fate unknown 275
Is to you yet; and me to make afraid,
You have devised fables of your own;
Upon my back your spear shall never fall.
If by it to be slain my fate it be,
It shall be on my breast, or not at all. 280
But how my spear will speed now let me see;
Oh, that it would into your body go!
The Trojans would the war much better bear,
Since from your hands proceeds the greatest woe.

And as he spake away he sent his spear, 285
And on Achilles' shield it lighted just,
But enter'd not; and other he had none.
Upon Deiphobus lay all his trust;
But when he call'd Deiphobus was gone,
And Hector then perceiv'd his death was near; 290
And oh, said he, the Gods now for me call.
Deiphobus, I thought, stood by me here,
But Pallas 'twas; he's still within the wall.
I shall not 'scape. I see, Jove heretofore,
And Phœbus too, did mean it should be so; 295
They sav'd me oft, but will do so no more.
But let me somewhat do before I go,
That men may speak of me in time to come,
And not ignoble die: and at that word
He roused up his fainting heart, and from 300
His side he drew his great and heavy sword.
As when an eagle stoopeth to the plain,
From a dark cloud, a tender lamb t' invade,
Or fearful hare; so Hector went amain
T' Achilles, brandishing his shining blade. 305
Achilles, angry, on the other side
Came on, and cruel thoughts had in his mind,
And up he kept his shield his breast to hide,
And on his head like fire his helmet shin'd;
And as he went, at ev'ry step he trod, 310
His plume, by Vulcan made of golden hair,
And to his crest applied, gave a nod,
And o'er his shoulders terribly did flare.

As Hesperus at midnight does appear,
The brightest star that shineth in the sky; 315
So gloriously the point shone of his spear.
Thus terribly to Hector he drew nigh,
And view'd his arms to see which way his spear
Might with most ease into his body pass.
But ev'rywhere entire and close they were, 320
Save at the neck a little gap there was.
At that he aim'd, and with great force he smote
Him with his mighty spear clean through the neck;
And yet the spear his wind-pipe wounded not.
Then down he fell, but able was to speak. 325
Achilles, over him insulting, said,
Hector, you thought, when you Patroclus kill'd,
You safe were, and of me were not afraid,
Because you knew I was not in the field;
And like a fool ne'er thought of what a friend 330
To take revenge he left had at the fleet;
Who now has brought you to an evil end
For dogs to eat, while he has burial meet.
Then Hector feebly to him said again,
Let not by dogs my body eaten be, 235
But be contented that you have me slain;
My friends at any price will ransom me.
Take brass and gold, as much as you require;
And to my father send my body home,
To be consumed in the fun'ral fire, 340
By th' Trojans and their wives in Ilium.
Thus Hector said. Achilles answer'd to't:

Hector, you dog, speak not of price to me;
If I myself could eat thee I would do't;
But by the dogs I'm sure you'll eaten be. 345
If they would give me twenty times as much,
Or buy thy body, weight for weight, with gold,
And promise as much more, your deeds are such,
Your body shall not at that price be sold.
Nor shall your mother lay you on a bed, 350
And over you lamenting stand and howl;
But in the open field you shall lie dead,
Until devour'd you be by dogs and fowl.
Hector replied (though ready now to die),
I knew you had a heart as hard as steel; 355
But thus much to you I will prophecy:
The vengeance of the Gods you'll for it feel,
When one day Paris and Apollo shall,
As terrible and strong as you are now,
Make you before the Scæan gate to fall. 360
This said, he died; and to the shades below,
Leaving his limbs, his soul, bewailing, flew.
And yet Achilles did again reply,
And briefly to him answer'd, Now die you;
And when the Gods call for me, so will I. 365
This said, he from the body pluck'd the spear,
And laid it by him down upon the place,
And took his armour off. Then others near
Stood, gazing at his stature and his grace,
And wond'ring at him, t' one another said: 370
We safely now to Hector may go nigher;

His raging fit is very much allay'd
Since when unto the ships he came with fire.
Then spake Achilles to the Greeks and said,
My friends, that in the army have command, 375
Since by the Gods this great man is destroy'd,
And lies before you killed by my hand,
Who did the Argive people more annoy
Than all the other Trojans put together,
Let's armed as we are go up to Troy, 380
And see on what they are resolved, whether
They'll quit the city, seeing Hector's dead,
Or still defend the same without him will.
But why should this come now into my head
When unbewail'd Patroclus lieth still? 385
For my Patroclus I must not forget
As long as I am living and can go.
And when I come to th' house of Hades, yet
I still shall think upon him there below.
But back unto the ships we now will go. 390
And let the youth of Argos pæans sing,
Whilst thither we in triumph bring the foe
With whose great praise the town of Troy did ring.
This said, he full of spite on Hector flies,
And slits his legs from th' ankles to the heels, 395
And with a rope them to his char'ot ties.
Then drives away; and rais'd is by the wheels
A cloud of dust; and in it all the while,
Along the ground dragg'd was his comely head,
Once glorious, now by the Greeks made vile, 400

Since to them Jove had him delivered.
Which, when his mother from the wall beheld,
Enrag'd, she from her head pluck'd off her hood,
And threw it from her, tore her hair, and squeal'd.
And Priam lamentably sighing stood. 405
About him were the Trojans shedding tears,
Sighing, and sobbing, and in such affray,
As if all Troy had flam'd about their ears.
And much ado they Priam had to stay.
For down he lay, and spake to ev'ry one, 410
Forbear, said he; I will go to this man
As fierce and cruel as he is, alone,
And move him to compassion, if I can;
And what respect he hath to age I'll see.
For Pelius is old as well as I, 415
That got that mischief both to Troy and me,
To th' Trojans all, but me especially.
For he hath kill'd me many a goodly son,
Which all together make me not so smart,
Nor wounds so deep as Hector's death hath done, 420
Which is alone enough to break my heart.
Oh blessed Gods, that it had been your will
He in his mother's hands and mine had died,
That over him we might have wept our fill!
This said, the Trojans wept again and sigh'd. 425
Then Hecuba amongst the wives of Troy
Began her plaint. Hector, my son, said she,
my dear son, my glory and my joy,
Why should I 'mongst the living longer be,

Since you are dead and gone, that night and day 430
The Trojans, men and women, did defend,
And as a God was honoured in Troy,
And now are come to an untimely end?
Thus wail'd his mother. But Andromache
Knew not how Hector sped without the gate; 435
For at a shining figur'd garment she
Within an inner chamber weaving sate,
And given had her maids command to set
A trivet on the fire, that Hector might,
When he came in, wash off his blood and sweat, 440
Contracted by great labour in the fight,
Not dreaming of her husband's death. But when
She heard the lamentation at the wall,
And outcries both of women and of men,
She trembling stood, and let her shuttle fall. 445
And then unto her maids she call'd, and said,
Come hither two of you, and with me go;
I hear my mother cry, and am afraid
To Priam's sons there happen'd is some woe.
I'll to the tow'r go up myself, and see 450
What 'tis. My heart is at my mouth. I fear
Lest by Achilles Hector chased be
Alone, and will be killed by his spear.
Oh, how I tremble! he can never stay,
But out before the rest will always run, 455
And never unto any man give way,
As if his strength could matched be by none.
This said, out went she like a woman mad,

And panting, up into the tow'r she hied,
Where she no sooner look'd about her had, 460
But saw her husband to a char'ot tied,
And by Achilles dragg'd away, and dead.
And presently she fell into a swoon,
And all the comely dressings of her head,
Veil, kerchiefs, ribbons, knots, to th'ground came down, 465
And coronet unto her given by
Venus, when she with Hector married.
Her sister-laws, that stood about her nigh,
Then took her up, with sorrow almost dead;
And when again her spirits to her came, 470
She wept, and spake, and stopp'd, and spake again:
Hector, of women I most wretched am,
And you the most unfortunate of men;
Both born to one and the same evil fate,
You here in Ilium, king Priam's son, 475
And I in Thebe child unfortunate
Of the unfortunate Eëtion.
And you now to the shades below are gone,
And me a woful widow here have left,
And with me my sweet babe your tender son, 480
And cannot, since you are of life bereft,
Do to him any good, nor he to you.
And though he should escape the Argives now,
Yet poverty and woe will him pursue,
And other men his goodly fields will plough. 485
A child that is an orphan has no friend;
And, though with tears, must stoop to whatsoe'er

To the supplying of his need shall tend,
When he his want of food no more can bear.
So to your friends my child shall go, and take 490
One by the cloak, another by the coat,
That give him may some wine for pity's sake,
Enough to cool his lips, but not his throat.
Or else some son of them that sit at meat
May rate, or give him a good box o'th' ear, 495
And bid him quickly out o' th' hall to get,
And tell him that his father dines not there.
Then weeping comes Astyanax to me,
That us'd was by his father to be fed
With mutton fat and marrow on his knee, 500
And with his nurse repose on a soft bed.
But since his father now is dead and gone,
Astyanax (whom so the Trojans call
Because defended were by you alone,
When you were here, the Trojan gates and wall), 505
Intolerable grief is like to find,
Since at the ships you dead and naked lie
For worms to feed on when the dogs have din'd,
While all your precious garments here have I
Of woman's work, and burn them will, since you 510
Now never in them likely are to lie,
'Tis to the wives of Troy an honour due.
This weeping spoken made the women sigh.

LIB. XXIII.

Thus wail'd the Trojans then in Ilium.

TO HELLESPONT TH' Achæans straight went down;
And when they to their hollow ships were come,
Dispers'd themselves each man unto his own,
The funeral games for Patroclus. 5
Achilles only staid his Myrmidons
Upon the place; and thus unto them spake.
You Myrmidons, my stout companions,
You must not from your cars your horses take,
With horses and with cars we first must go, 10
And for Patroclus weep about his bier.
And when we have by weeping eas'd our woe,
Untie your horses and we'll all sup here.
This said, they wail'd. Achilles first began;
And thrice about Patroclus' bier they drave. 15
And Thetis, fallen was so great a man,
Amongst them stood, and tears unto them gave,
Which down their armour fell into the sand.
Achilles bade him then with tears, farewell.
And laying on Patroclus' breast his hand, 20
Rejoice, said he, Patroclus, though in hell;
For now I to you shall my word make good,
Since hither I have Hector dragged dead

For dogs to eat. And to revenge your blood,
Twelve Trojans I will at your pile behead. 25
This said, he Hector laid upon his face
I' th' dust before the bier disgracefully.
The Myrmidons meanwhile their arms unlace,
And th' horses from the chariots untie.
And then down by Achilles' ship they sat, 30
Who gave unto them all a fun'ral feast,
And for them slew both goats and muttons fat,
And swine good store, and many a well-fed beast.
But to Achilles then came in the lords,
To wait upon him t' Agamemnon's tent, 35
That he might try with comfortable words
If he could mitigate his discontent.
When they were there Atrides first commands
His ministers to bring in water hot,
To wash the gore from off his face and hands. 40
Achilles peremptorily said, Not,
And swearing, unto Agamemnon said,
By Jove, that is of all the Gods most high,
Till I Patroclus in the fire have laid,
And rais'd him have a tomb wherein to lie, 45
And with him burn'd these locks of mine, nor hand,
Nor face shall washed be by me. But now
Let's sup. I' th' morning I will give command
That for his pile we may have wood enough,
That speedily the body we may burn. 50
And when out of our sight we have it laid,
The people to their business may return.

Thus he advised, and it was obey'd.
The people then in haste to supper went,
And had good cheer, and heartily they fed. 55
And when their hunger and their thirst was spent,
Into their tents went every man to bed.
Down went Achilles to the water's side
Attended on by many Myrmidons,
And in a place clean washed by the tide 60
He laid him down to sleep upon the stones.
Nor was it long ere sleep upon him crept.
For labour'd very hard he had that day.
For Hector him in exercise had kept
Running before him round the wall of Troy. 65
And then the spirit of Patroclus dead,
Like him in stature, garments, voice, and eyes,
Appeared to him standing at his head,
And speaking said unto him in this wise.
You sleep, Achilles, and have me forgot, 70
Though when I was alive you lov'd me well.
Pray bury me, these spirits here will not
Let me come in within the gates of hell,
Nor let me mix with those beyond the river,
But make me wander 'bout the house of Dis. 75
Give me your hand upon't, for I shall never
Return, when once my body burned is.
We shall no more together counsel take,
Since by my fate I taken am away,
And you yourself, divine Achilles, make 80
Account to die before the walls of Troy.

And then the favour let me have, I pray,
That when my flesh consum'd is in the flame,
My bones with yours you will be pleas'd to lay,
And let the urn that holds them be the same; 85
That golden urn which Thetis gave to you.
We long with one another lived have.
For when Amphidamus his son I slew,
Unto your house I fled my life to save,
From Opus, being little past a boy, 90
And childishly the quarrel took at chess;
And never meant him ill before that day,
And sorry was I for my foolishness.
Your father to his house then took me in,
Made me your man, and lov'd and cherish'd me, 95
And since so long we have together been,
Why should not now our bones together be?
Achilles to the shadow then replied,
Sweet friend, what need had you to come from hell
To tell me this? I for you do provide, 100
That all you say may be performed well.
Come nearer to me, that embrace we may
A little while, and one another moan.
This said, his arms he spreads; and then away
Patroclus sunk and left him there alone. 105
At this amazed, up Achilles starts.
Oh, oh, said he, I see 'tis certain then,
In hell there souls are, though they have no hearts,
But idols only are, and forms of men.
For by me standing was the soul all night 110

Of my Patroclus to me dictating,
And wonderfully like him 'twas t' the sight;
And what he wanted told me ev'ry thing.
This said, again about the body dead
Achilles and the Myrmidons lament, ¹¹⁵
And so continued till the day was spread;
But to the wood then Agamemnon sent
From ev'ry part of th' army men to Ide,
Whereof some axes carried in their hands,
And others ropes. And with them goes for guide ¹²⁰
Meriones, and, as their chief, commands.
O'er hills and dales then to the woods they went,
Driving their mules before them all the way;
And lusty oaks unto the ground they sent,
And cleft them into pieces as they lay. ¹²⁵
And those unto the mules with ropes they tied,
And every one of them took in his hand,
Either a heavy bough, or limb beside.
For so Meriones had given command.
This done, they back descended to the plain ¹³⁰
Fast as they could, through bri'rs and bushes store;
And quickly at the ships they were again,
And laid their wood in order on the shore.
Then to the Myrmidons Achilles spake,
You Myrmidons, put on your arms, said he, ¹³⁵
And, horsemen, all your char'ots ready make,
And mount into your seats and follow me.
When they were ready, foremost went the horse,
And by a cloud of foot were followed.

I' th' midst between them carried was the corse 140
With locks of hair thrown on him covered,
Which the sad mourners from their heads had shorn.
Achilles went himself next to the bier,
Who for his friend did principally mourn.
When at the place of funeral they were, 145
Upon the ground they layed down the bier,
And quickly in a pile they heap'd the wood.
Then cuts Achilles off his yellow hair,
And from the body at a distance stay'd,
And towards Greece and Phthia turn'd his eye, 150
And speaking to Spercheius' river said.
My father to you made a vow, when I
Return'd, this hair should unto you be paid,
And to the other Gods a hecatomb,
And fifty fat rams at your spring to slay. 155
Thus vowed he. But I shall ne'er come home,
But here must die before the gates of Troy.
Since then my father's wish you not fulfil,
Nor I return into my native land,
My hair now to Patroclus give I will. 160
And at that word he puts it in his hand.
At this the Greeks a-weeping fell again,
And wept had till the setting of the sun,
But that Achilles spake t' Atrides then,
And pray'd him that the people might be gone. 165
King Agamemnon, will the Greeks, said he,
Be never with lamenting satisfied?
'Tis in your pow'r; let them dispersed be

Unto their ships, their suppers to provide,
For we will of the fun'ral take a care. 170
But let the leaders of the army stay,
And such as specially concerned are.
This said, Atrides sent the rest away.
And then the wood into a pile they laid.
A hundred foot it was from side to side; 175
And on the top the corpse. Then kill'd and flay'd
Both sheep and beeves, and with their fat they hide
Patroclus' body dead from head to foot.
And by it laid the cattle flay'd to burn.
To the bier Achilles went and laid into 't 180
Of honey one, of oil another urn.
And of Patroclus' horses four he slew;
And of nine little dogs he kept, kill'd two.
And those into the fun'ral pile he threw;
And last of all, twelve Trojans adds thereto. 185
This done, again he to Patroclus said,
My dear Patroclus, once again, farewell.
Twelve lusty Trojans on your pile are laid.
I'm faithful to you, though you be in hell,
But Hector for the dogs shall be a prey. 190
But Venus 'nointed him with oil of rose,
And so preserved him both night and day,
That not a dog did on him lay his nose.
Then Phœbus sent from heav'n a cloud obscure,
The place whereon his body lay to hide, 195
To th' end it might the scorching sun endure,
And not be shrivell'd up, nor shrunk, nor dried.

And then Achilles a new bus'ness finds;
He could not set on flame the new-fell'd wood,
But forc'd he was to pray to the two Winds, 200
Zephyr and Boreas. Then off he stood,
And to them offer'd with a cup in's hand,
And to them vowed a good sacrifice,
If they from sea would come, and by him stand,
And blow the fire until the flame did rise. 205
This Iris hearing, went unto the Winds,
To tell them how Achilles to them pray'd,
And at good cheer in Zephyr's house them finds,
And fain they would her with them there have staid,
And made her sit; but she refused that. 210
The Gods, said she, feast at a hecatomb
In Blackmoor-land, and I must be thereat,
And must make haste, or thither cannot come.
To Zephyr now and Boreas I came,
To tell them that a plenteous sacrifice 215
Achilles make them will, if on a flame
They'll set the pile whereon Patroclus lies.
This said, she parts. The Winds arise and roar,
And toss the clouds before them in the sky,
And at their feet tumble the waves ashore, 220
And then upon Patroclus' pile they fly,
And fiercely blow. Inflamed was the pile,
And whistling at it staid the Winds all night,
Achilles standing by it all the while,
Invoking solemnly Patroclus' spright; 225
And th' earth with wine by cupfuls watered.

As one that mourneth for his eldest son,
That then dies, when he should be married;
So did he for Patroclus sigh and groan.
When in the sky the day-star did appear 230
To shew that after him Aurora came,
The pile and bodies dead consumed were
To ashes, and extinguish'd was the flame;
Away the Winds went o'er the seas of Thrace,
And passing, shook the waters of the deep. 235
Achilles went a little from the place,
And weary, laid him down and fell asleep.
And now 'twas day, the soldiers came again.
Then with their trampling did Achilles wake,
And up he stood and look'd about. And then 240
He to Atrides turn'd his eyes and spake:
Atrides, let us first with wine, said he,
Put out the fire as far as it is spread,
That taken up Patroclus' bones may be
(For where they lie 'tis soon discovered; 245
Since in the midst we did his body lay,
But others, horse and men, at the outside lie)
That in a bason of pure gold they may
Reserved be until I also die.
And though no great tomb here I have design'd, 250
Yet may the Greeks that stay when I am gone,
When they think good, if they will be so kind,
And see cause for it, make a greater one.
This said, the fire they first extinguished;
Then down unto the ground the ashes came, 255

And up Patroclus' bones they gathered,
And in a golden pan they laid the same;
And back into the ships they carried that,
To be reserved in Achilles' tent,
Wrapp'd up within a double kell of fat. 260
And then about the pile to work they went,
And where the pile was, that they made their ground,
And earth abundance on the same they lay,
Till it became a mighty hill and round.
When they had done, Achilles made them stay 265
And sit o' th' ground, to see the games which he
Prepared had, the funeral to grace.
Then many prizes rich he caus'd to be
Brought from his ship and laid upon the place,
Brass cauldrons, tripods, and great iron bars, 270
Horses and mules, and cattle of great size,
And goodly women taken in the wars.
First for the horse; he tells each one his prize.
To th' first a woman that could spin and weave,
Together with a tripod deep and wide. 275
The next a mare of six years should receive,
Together with her young mule by her side.
A handsome kettle to the third he gave,
Which never on the fire had yet been set.
Of gold two talents was the fourth to have; 280
The fifth a cup and cover was to get.
Then to them spake. These prizes here, said he,
Lie waiting for the horsemen on the plain,
If any horsemen in the host there be,

That with their char'ots hope the same to gain, 285
Come in. Had any else these games set forth,
The greatest of these prizes had been mine;
For of my horses you well know the worth,
And that they are immortal and divine,
Which Neptune gave to Peleus, he to me. 290
But I'll sit out; my horses shall stay here,
Hanging their heads as they do heavily,
Since they have lost their gentle char'oteer.
Let any other of the Argives, who
Is of his horses confident, come in, 295
And presently prepare himself thereto,
And try which of the prizes he can win.
This said, the horsemen straight themselves present.
Eumelus first, Adrestus' noble son,
That was for horsemanship most eminent. 300
Then Diomed with th' horses which he won
From Venus' son, when by her sav'd he was.
Then sitting on his chariot came forth
King Agamemnon's brother Menelaus,
And at it horses two were of great worth. 305
The one of them, Podargus, was his own,
The other, Æthe, very swift she was,
A female, and for Agamemnon's known,
To whom, when he to Ilium was to pass,
She given was by Echepolus, who 310
T' excuse himself of following him to Troy
(For very rich he was, and loath to go)
And with his leave in Siryon to stay.

The fourth, with horses of the Pylian brood,
Was Nestor's gallant son, Antilochus. 315
His father, careful of him, by him stood
Instructing him, and said unto him thus:
Antilochus, you have been taught so well
By Jove and Neptune, young man as you are,
The rules of horsemanship, I need not tell 320
You of the art, but pray you to take care;
Though you know how about the goal to wind,
Their horses somewhat are than yours more swift.
I fear you will in that some damage find;
But none of them know better how to shift. 325
'Tis care, not strength, makes a good carpenter,
And ships at sea are governed by care;
Force in foul weather little helps to steer;
Best char'oteers are they that best beware.
A man that on his horses' speed relies, 330
May from the high-way sometimes drive aside,
But not come in again. But he that's wise,
Will always tow'rds the goal directly guide,
And have an eye on him that goes before.
The goal I'll tell you (lest you know it not) 335
A staff is, of a fathom high or more,
Of oak or pine, that is not apt to rot,
Standing between two great white stones upright,
And for a monument set up was there
In ancient time, of some deceased wight, 340
Or formerly there had a race been there,
And to that purpose served now again.

Be sure you drive your horses to it close,
And leaning, press a little th' inner rein,
And let the farther horse's rein go loose. 345
But let the near horse to it go as near
As can be, so the stones you still avoid;
You'll wound your horses else, and char'ot tear,
And be asham'd whilst others will be joy'd.
If at the staff you once but get the start, 350
In coming back before you shall be none,
How good soe'er their horses be or art,
Though they the steeds were of Laomedon,
Or like Arion all their horses were,
Adrestus' horse of the celestial race. 355
Thus Nestor his good son instructed there,
And having done, returned to his place.
The fifth and last came in Meriones.
Then up into their seats they mounted all;
And then by lots determin'd which of these 360
Should start the first. T' Antilochus did fall
To start the first. The next t' Eumelus came.
The third lot fell t' Atrides Menelaus.
The fourth had on't Meriones his name.
The best, and last to start Tydides was. 365
Then all a-row they stood. Achilles by,
Showed them the goal far off upon the plain;
And all at once hold up their whips on high,
And beat their horses each one with his rein;
And loud upon them call'd to make them run. 370
Old Phoenix at the staff was set to stay

And be a witness of what there was done,
And see there were amongst them no foul play.
And swiftly from the ships they part away,
In clouds of dust up to their breasts they fly, 375
And to the wind their spreading manes display;
Their cars sometimes are in the air a-high,
And sometimes on the ground. The char'oteers
Sit for all that still fast upon their seats,
And ev'ry one aloud his horses cheers, 380
While in his breast his heart with longing beats.
But when about the goal they turned were,
And coming back again unto the shore,
Then 'twas their virtue chiefly did appear,
And faster went their horses than before. 385
And now Eumelus' horses foremost were,
And Diomed behind him was not far
With his male Trojan horses, but so near,
As if they would have gone into his car.
So near they were their heads did on it lie, 390
And made Eumelus' back and shoulders hot
With breathing on them; and the victory
Had got, or doubtful made at least, had not
Apollo been to Diomed unkind,
And from his hand struck out his shining whip. 395
Tydides then again was left behind,
And wept to see Eumelus him outstrip.
When Pallas saw what wrong was to him done,
She puts the whip into his hand again,
And angry goes unto Admetus' son, 400

And of his horses breaks the yoke in twain.
On one side of the way then went one mare,
And on the other side the other goes.
Down fell the pole, and with it he; and tare
His elbows and his eye-brows, mouth, and nose. 405
Tydides in the meantime passed by,
And got before them all a mighty length.
For Pallas to him meant the victory,
And gave unto his horses greater strength.
Behind Tydides next was Menelaus, 410
And next to him Antilochus; and he
Aloud unto his horses calling was.
Now let's, said he, your utmost virtue see.
With Diomed you are not bid contend,
Whom victor now Athena means to make, 415
And strengthened hath his horses to that end;
But only Menelaus t' overtake.
Were 't not a shame that Æthe, but a mare,
Should leave you two such lusty steeds behind?
But if you now seek how yourselves to spare, 420
I tell you this, and true you will it find,
You shall be slain. Therefore use all your speed,
And when you come into a narrow place,
Leave it to me to do what I see need.
This said, the horses fearing mend their pace, 425
And now were close at Menelaus' heels.
Then near unto a hollow way they came;
And lest they break should one another's wheels,
Atrides turn'd aside into the same.

The other after him a little wide 430
The same way took. Atrides then afraid
That he would enter with him side by side,
Unto Antilochus cried out and said,
Antilochus, you drive too carelessly,
The way's too narrow. Pray a little stay 435
Your horses; broader 'twill be by and by,
Lest both our cars lie broken on the way.
Antilochus then whipp'd his horses on
So much the faster, seeming not to hear.
And when they were a little further gone, 440
Atrides held his horses in, for fear
Their cars should clashing overturned be,
And with them they be thrown into the dust,
And to him spake, reviling: Go, said he,
Of all the men I know the most unjust, 445
And not so wise as th' Argives thought you were.
But yet the prize you shall not so obtain,
But for it first you shall be put to swear.
And then his horses he drave on again,
And to encourage them unto them said, 450
His horses cannot keep before you long;
They old are both; strain hard. Be not dismay'd,
For both of you brave horses are, and young.
This said, at highest speed again they fly,
And to Antilochus came up again. 455
The Argives on the race now sat to spy
Who foremost coming was upon the plain.
Idomeneus sat in a place more high

Without the race, and heard a char'oteer,
Whose voice he knew, unto his horses cry, 460
And presently two horses did appear.
Of one of them the colour was bright bay,
But on his forehead had a spot of white,
And, as the moon at full, round ev'ry way,
And from afar conspicuous and bright. 465
Then to the Greeks he said, Is there no more
That see these horses coming back but I?
They are not those that foremost were before;
And 'tis another char'oteer I spy.
Eumelus some mischance has had I fear; 470
And yet about the goal he turned well,
But now I cannot see him any where.
Perhaps out of his hands their bridles fell;
No longer would the horses then obey,
But thrown him somewhere have o' th' field, or borne 475
Him in their fit by violence away,
And have his char'ot overturn'd, or torn.
Stand on your feet yourselves, and mark him well,
Whether or no it Diomedes be,
The son of Tydeus, for I cannot tell; 480
He like him is, and I believe 'tis he.
The lesser Ajax then, Oileus' son,
With evil words t' Idomeneus replied,
The mares upon the field are coming on,
But you must talk, though from the purpose wide. 485
Your eyes are now grown old, and less can see,
And yet to talk you love so much the more,

Though at discerning many better be;
Eumelus, as at first, is still before.
Ajax, said he, of all the Greeks the worst, 490
Except at railing, let's a wager lay,
A tripod, or a cauldron, who comes first;
Atrides judge, that you may know and pay.
And Ajax then about was to reply;
Nor had the quarrel 'twixt them there been staid, 495
But that Achilles, who was sitting by,
Rose from his seat, and coming to them said,
Idomeneus and Ajax, 'tis a shame
For you in evil language to contend,
That others when they do so ought to blame. 500
Sit down, and but a little while attend,
They'll soon be here. They strive for victory,
And driving are as fast as e'er they can;
Discerned then it will be easily
Which is the foremost, which the hindmost man. 505
This said, they saw Tydides very near,
Plying his whip; his horses seem'd to fly,
And cover'd was with dust the char'oteer,
And hard it was the track o' th' wheels to spy.
Then coming in, before the lords he stopp'd, 510
And to the ground leapt from his chariot;
With sweat his horses' breasts and shoulders dropp'd.
Then Stenelus the prize neglected not,
But nimbly from his place he to it skips,
And by his friends there standing by his side 515
Sent th' woman and the tripod to the ships;

And having done, the horses he untied.
Antilochus next to Tydides was,
That not by virtue of his steeds, but sleight,
Advantage gotten had of Menelaus, 520
When for them both he found the way too streight.
But Menelaus to him was so near,
As is a char'ot-horse unto the wheel,
Which of his tail doth sometimes touch the hair,
And makes the horse to run that does it feel. 525
So near unto him was Atrides then,
That was behind once a quoit's cast or more.
But quickly to him he came up again,
For Æthe now ran faster than before,
And had they but a little longer run, 530
Atrides by Antilochus had pass'd,
And without doubt the second prize had won.
Meriones behind was a spear's cast;
Slow steeds he had, and but small skill in courses.
Eumelus, whom Athena overthrew, 535
Came hindmost, and before him drave his horses,
And with his hands behind, his char'ot drew.
Achilles mov'd with pity was at this,
And spake unto the Argives in this wise:
Although he come the last, the best he is; 540
'Tis fit he have at least the second prize,
But Diomed the first, that has it won.
And just it seemed in the Argives' sight,
And from Antilochus the prize had gone,
Had he not pleaded for it as his right. 545

Antilochus then to Achilles spake:
Though well, said he, in pity you incline
T' Eumelus, yet my prize he must not take;
I won it have, and 'tis not yours, but mine.
His horses good, and horseman good he is; 550
And he and they upon the ground were laid
By some mischance; I'm not concern'd in this,
He should unto th' immortal Gods have pray'd.
But you, that pity him, and at your tent
Have gold, brass, horses, women, cattle store, 555
May out of that, when you think fit, content
Eumelus with the value, or with more;
For whosoever means to have the mare,
Must for her with me fight. Thus pleaded he.
Achilles, that great love unto him bare, 560
Was glad, and said, Since you so counsel me,
The breast-plate I will to him give of brass,
That hemm'd is all about with shining tin,
With which Asteropæus armed was.
Automedon, into my tent go in, 565
And quickly to me bring the breast-plate forth.
And then Automedon no longer stands,
But fetches out the armour of great worth,
And puts the same into Eumelus' hands.
Then up Atrides Menelaus stands, 570
And in his hand the crier a sceptre laid,
And silence to be kept i' th' court commands.
T' Antilochus then Menelaus said,
Antilochus, what made you me disgrace,

Justling my horses in the hollow way, 575
When there was so much danger in the place
That 't had been best for both of us to stay?
But you, the princes, hear the cause I pray,
And judge between us both impartially,
Lest any of the Greeks hereafter say 580
I did t' Antilochus an injury,
And from him got the mare by fraud or might;
And that his horses than mine better were;
But come, I now know how myself to right.
Come, lay your hand upon the reins, and swear 585
By Neptune, that you did not willingly
And with prepensed malice cross my car.
To this Antilochus did then reply:
Menelaus, since you elder are,
You know our faults upon the sudden rise, 590
And that before-hand young men study not;
Their wits are present, but the old are wise,
To do you injury I never thought.
The mare is yours; and if you please to send
For anything I have, that too I'll give 595
Rather than with an oath the Gods offend,
And out of Menelaus' favour live.
This said, he put the mare into his hand;
Then Menelaus look'd as fresh and gay
As dew, that on the growing corn doth stand, 600
Then when the fields are in their best array,
And to Antilochus replied again:
Antilochus, I angry am no more;

I see you were by youth transported then;
But putting tricks upon your friends give o'er. 605
I not so soon forgiven had another;
But you so much have suffer'd for my sake,
Together with your father and your brother,
That I can easy satisfaction take.
And now, to shew I got it not by might, 610
Take you the prize, although it be my share.
This said, he took t' himself the cauldron bright,
And yielding to Antilochus the mare,
Unto Noëmon gave her to set up
(Noëmon was Antilochus his man). 615
One prize remain'd, which was the double cup;
Meriones the two gold talents wan.
Achilles rising then to Nestor went,
And unto him the double cup he gave.
This prize, said he, keep for a monument 620
Of my Patroclus lying in his grave.
You shall not for it arm your fists with lead,
Nor with young men at cast of spear engage,
Nor shall you on the foot-race need to tread;
Of all such work you are excus'd by age. 625
This said, the cup into his hand he laid,
Which joyfully he took, and thus replied:
Sweet son, you nothing but the truth have said.
My strength is past, it cannot be denied;
My hands I scarce can to my shoulders raise, 630
And heavily my feet both rise and fall.
Oh, that I were as young as in those days

When I saw Amarynceus' funeral
Set forth most nobly in Buprasion.
There many prizes were, and many a man; 635
But like to me amongst them there was none,
Eperan, Pylian, nor Ætolian.
At fists the prize from Clytomed I won;
And wrestling with Ancæus I him threw,
And Iphiclus, swift as he was, outrun; 640
And with the spears I Polydore out-threw,
And at the horse-race only was outstripp'd
By th' envy of the sons of Actor two;
For sitting on the char'ot they both whipp'd,
And from me won that prize with much ado. 645
Such then I was. But now to younger men
That work I leave. Old age I must obey;
But such I was amongst the Argives then.
And now, Achilles, here no longer stay,
Proceed with other games your friend to grace; 650
Your gift I take, and great content I find,
In that you shewn have in this public place,
Amongst the Greeks you have me in your mind.
Achilles having heard these praises all
Of Nestor, brought into the place a mule, 655
A prize for him that won at fist and ball,
A mule of six years old, and hard to rule.
As for the vanquish'd, he assign'd to him
A lesser prize, which was a silver cup,
That crook'd and wryed was about the brim. 660
Achilles then amongst the Greeks stood up.

Atrides, and you Argives all, said he,
Let two men fight for these at fist and ball;
The lusty mule shall for the victor be,
The cup for him that in the fight shall fall. 665
This said, Epeius, a huge man stood up,
And that had at this kind of fight great skill,
And seiz'd the mule, and said, As for the cup,
Let any one against me rise that will,
The mule is mine; at this game I am best. 670
Is't not enough that th' Argives value me
In fight but as a mean man like the rest?
For no man can the best at all things be.
But let him know, whoe'er with me contends,
I'll break his bones. Which being to him known, 675
He may about him ready have his friends,
To take him up when I have knocked him down.
This said, Mecestes' son, Euryalus,
That won the prize from the Cadmæans all,
At Thebes, upon the death of Ædipus, 680
When celebrated was his funeral,
Presents himself. About him, busy was
Tydides, wishing him the victory;
And gave him of strong leather well-wrought lace,
Wherewith the balls unto his wrists to tie. 685
The champions up their fists together have,
Which when they met so quick and mingled were,
That which was which a man could not perceive,
But how they rattled at their heads might hear.
Euryalus then chanc'd to look aside, 690

At which Epeius such a blow him hit,
Upon the cheek, that he was stupified,
And could no longer stand upon his feet.
As when the sea is curl'd by Zephyrus,
A little fish leaps up and falls again; 695
So started at the stroke Euryalus,
And fainted. To him went Epeius, then,
And took him up. His friends that by him stood,
Led him away trailing his feet behind,
His neck aside hanging, and spitting blood; 700
And wand'ring out of order was his mind.
Achilles other prizes then brought forth
For wrestlers; and for him that did the best,
A mighty three-foot pot esteemed worth,
By th' company, twelve oxen at the least, 705
And for the vanquished a lesser prize,
A woman that in many works had skill;
And to the Argives speaking, said: Arise,
You that contend for the great tripod will!
Then up rose Ajax, up Ulysses rose, 710
And having girt themselves stood on the place,
And presently extend their arms, and close;
And one another with twin'd arms embrace.
As when a carpenter to keep the wind
Out of a house, the timber bows and pleats; 715
So were their arms with one another twin'd,
And each of them keeps fast his hold, and sweats,
And squeez'd until their sides were black and blue.
And weary were the Greeks with looking on,

When neither Ajax yet Ulysses threw, 720
Nor he the mighty son of Telamon.
And Ajax then unto Ulysses said,
Let's lift each other; and withal him lifts,
And hop'd upon the ground to have him laid,
But he, then, not forgetful of his shifts, 725
Struck with his right foot Ajax on the ham,
So that to turn him Ajax strength did lack.
Then both together to the ground they came,
One on his breast, the other on his back.
And now Ulysses to lift Ajax is. 730
And from the ground he heav'd him, but not high,
And in he clapt one knee between both his,
Then both upon the ground again they lie.
Again they rise, and had not so giv'n o'er,
But that Achilles to them goes, and says, 735
You both are best; torment yourselves no more,
But equal prizes take, and go your ways,
That other Greeks for other prizes may
Their virtue show. This said, they him obey'd,
And from their bodies wip'd the dust away, 740
And with their coats themselves again array'd.
And then Achilles brought new prizes in, —
A silver temp'rer that six gallons held,
And by Sidonian workmen made had been,
And all that e'er they made before excell'd, 745
And by Phœnicians into Greece was brought,
And giv'n to Thoas, and from him it came
T' Eunæus, Jason's son. Eunæus bought

Lycaon of Patroclus with the same.
This was the prize for him that swiftest ran. 750
A great fat ox the second was to take;
And half a talent, gold, the hindmost man.
And then Achilles to the Argives spake.
Arise, said he, that for this prize will run.
Then Ajax rose, son of Oïleus, 755
The lesser Ajax. And then Nestor's son,
The swiftest of the youth, Antilochus.
Arow they stand. Achilles to them shows
The goal about the which they were to run.
Together then they start; and foremost goes 760
The nimble-footed Ajax, Oïleus' son.
But next him, and so near Ulysses is,
As from a woman's distaff comes the thread,
And on his steps trod ere the dust aris,
And breathed all the way upon his head. 765
The Greeks upon him called all the way
To do his best, and wish'd him victory.
Then to Athena did Ulysses pray.
help me, my good Goddess, now, said he.
And when almost they ended had the race, 770
Then chanced Ajax in the dung to fall
Of cattle which had kill'd been on the place,
B' Achilles for Patroclus' funeral,
And fill'd with cow-dung was his mouth and nose.
Ulysses on the temp'rer laid his hands. 775
And Ajax, spitting dung, again arose,
And with his ox before the Argives stands.

Oh, oh, said he, 'tis Pallas hath done this,
Who, as a careful mother of her child,
Upon Ulysses always waiting is. 780
And when he that had said th' Achæans smil'd.
Antilochus th' half talent took of gold,
And smil'd, and to the Argives said, You see
The Gods still give most honour to the old;
Ajax in age a little passeth me; 785
Again, Ulysses older is than he.
And younger men with these cannot contend
At running of a race, except it be
Achilles: whom he finely did commend.
Achilles, of that commendation glad, 790
Unto Antilochus replied again;
To your half-talent I'll another add.
That word of yours shall not be said in vain.
Achilles then brought forth the shield, and spear,
And helmet of Sarpedon, for till he 795
Was killed by Patroclus his they were,
And said unto the Greeks: now let me see
Two valiant men, well-arm'd, contend for these;
And he that first draws blood shall bear away
This Thracian sword won from Asteropæus. 800
The arms in common they shall both enjoy,
And at my tent they both shall feasted be.
Up then great Ajax, up Tydides rose,
And came forth armed from the company,
And looking grimly, one to th' other goes, 805
And thrice to one another fiercely leapt,

And Ajax' spear pass'd through Tydides' shield;
But by the breast-plate from his flesh was kept.
Good was his breast-plate, and not apt to yield.
But still at Ajax' neck Tydides aim'd, ⁸¹⁰
Above his shield still pushing with his spear;
At which the people standing by exclaim'd;
For then of Ajax' life they stood in fear,
And to Achilles cried to part the fray
Betime, and let them equal prizes have. ⁸¹⁵
And by Achilles then dismiss'd were they;
But yet the sword he to Tydides gave.
And then of iron he brought out a sough,
Such as at first it from the furnace came,
The which Eëtion was wont to throw; ⁸²⁰
Amongst whose goods Achilles found the same,
And to his ship he brought it with the rest.
And said to th' Argives, He this prize shall gain,
That lets us see he throw it can the best.
It will his plough with iron five years maintain. ⁸²⁵
He needs not to the town for iron go.
Then Polypœtes and Leontes rise,
And Ajax, and together stand arow;
And last of all unto them comes Epeius.
First threw Epeius, and well laugh'd at was. ⁸³⁰
And next to him Leontes threw the same.
Then Ajax threw and did them both surpass.
But when to Polypœtes' hand it came,
As far as doth a shepherd throw his hook
Seeing his sheep stand still or straggle out, ⁸³⁵

So far threw he. The prize his friends then took
And bare it to his tent. The people shout.
Achilles then brought other prizes in,
Ten double, and ten single axes keen,
The which the two best bowmen were to win, 840
And said, Now let your archery be seen.
And on the sands erects a ship-mast high,
And at the top he tied a dove unto't
With slender thread, and said, Your skill now try.
For he that dead the tender dove shall shoot, 845
Shall have the double axes for his prize;
The single he that breaks the thread shall win.
Then Teucer and Meriones arise,
And lots they cast which of them shall begin.
And to begin to Teucer fell the lot. 850
And first he shot. But should have made a vow
A hecatomb to Phœbus, but forgot.
And therefore Phœbus would not him allow
To kill the bird. But yet he brake the thread,
And tow'rs the ground, it hung down from her feet. 855
The frightened dove in th' air hovered,
And mightily the Argives shout to see't.
Meriones then quickly drew his bow,
For th' arrow fitted on't already lay,
And presently to Phœbus made a vow 860
Of his first lambs a hecatomb to pay.
And seeing how the dove amazed went
Above his head this way and that way round,
His arrow keen he quickly to her sent,

Which pierc'd her thro', and brought her to the ground. 865
The wounded dove unto a mast then flies,
And there her feathers sheds, and hangs her head,
And having sitten there not long she dies.
The Argives gazing at it wondered.
And then Meriones away did bear 870
The double axes. Teucer took the rest.
Achilles then new prizes fetch'd; a spear,
And a new cauldron worth an ox at least.
To throw the spear then rose the king Atrides,
And after him stood up Meriones 875
Idomeneus his squire. Then said Pelides,
There shall be no contention for these.
We know how much you are more excellent
At this than any of th' Achæans here.
Take you these prizes therefore to your tent, 880
And give unto Meriones the spear,
If you think fit. Atrides was content,
And to Meriones he gave the spear,
And by Talthybius the cauldron sent
Unto the ships; and all well pleased were.

LIB. XXIV.

The redemption of Hector, and his funeral.

THUS END THE games. The Greeks dispersed are,
And ev'ry man returned to his tent,
And busy was his supper to prepare;
And after they had supp'd to bed they went. 5
Achilles all the night slept not a wink,
But on Patroclus' worth, and company,
And on their common suff'rings still did think,
And lay upon his bed unquietly.
And weeping sometimes laid himself on this, 10
Sometimes on that side, sometimes on his face,
And sometimes on his back, and sometimes ris,
And walk'd upon the shore from place to place.
And soon as ere he saw the morning come,
He Hector to his char'ot ti'd again; 15
And dragg'd him thrice about Patroclus' tomb,
And then went in, and left him on the plain,
With dust all over hidden, but not rent.
For Phœbus had him cover'd with his shield,
That torn his body was not as they went. 20
The Gods meanwhile sat looking on the field,
And griev'd to see Achilles show such spite;
And some of them advised Mercury

To steal away the body from his sight.
To this the other Gods did all agree, ²⁵
But Neptune, Juno, Pallas, angry were
With Priam and with Troy, for Paris' sake,
For that he Venus did so much prefer,
And of the others small account did make.
Thus pass'd it then. But twelve days after, came ³⁰
Apollo to the Gods in council set,
And said, Ye Gods unjust, you are to blame.
What sacrifice did Hector e'er forget,
That to his father, mother, wife, and son,
That for his death lament, he must not come, ³⁵
And buried be, since he is dead and gone,
And have a funeral in Ilium?
But to Achilles' fury you give way,
Whose breast is void of all humanity.
As lions on men's cattle love to prey; ⁴⁰
Savage and proud on men so falleth he,
Asham'd of nothing. Though another man,
That had a loving brother lost, or son,
When he has wept a while, give over can,
And bear the ill that cannot be undone; ⁴⁵
But he with Hector's death is not content,
But drags his body at his chariot,
Not caring how we may the same resent.
He'll find at last 'twere better he had not
Upon the senseless earth have shown such spite. ⁵⁰
To this in anger Juno then replied,
If equal they had been, you had said right,

But that they equal are it is denied.
For Hector was a mortal woman's son;
Achilles' mother a great Goddess is, 55
Thetis, that nurs'd was and brought up by none
But by myself. The Gods can witness this,
Who, when I made her noble Peleus' bride,
Came to the wedding all, and you too then
Were with your fiddle there well satisfied, 60
Perfidious God, companion of mean men.
Then Jupiter to Juno spake and said,
Look not so angrily upon the Gods,
Nor for Achilles' honour be afraid.
'Twixt him and Hector I know well the odds. 65
But Hector we of mortals love the best,
I do at least, of all the men of Troy.
He never is behind-hand with my feast,
But flesh and wine pays duly at my day.
But we'll not Hector from Achilles steal; 70
Nor can, since Thetis for him is awake.
Call Thetis hither; for with her I'll deal
To make him for his body ransom take.
This said, into the sea leap'd Iris straight
Between the isles of Imbros and of Same. 75
The water roar'd and started at her weight;
And she to th' bottom like a plummet came,
Where in a hollow cave the Goddess sat,
Her sea-nymphs all about her sitting round,
She in the midst bewailing her son's fate, 80
That was to perish on the Trojan ground.

And going to her near, Thetis, said she,
Jove calls you to him. She replied, Why so?
What has that mighty God to say to me?
I am not fit amongst the Gods to go. 85
But well; I go. I dare not disobey.
And on her head then throws she a black hood.
Then up they went, and Iris led the way.
To let them pass the sea divided stood,
And being landed, leap'd up to the sky, 90
When Jove in council and the Gods were met;
Where Thetis was received lovingly,
And next himself by Jupiter was set:
There Juno nectar, Pallas gave her place.
And Jove unto her spake. Thetis, said he, 95
I know your grief, but such is now the case,
You could not from th' assembly spared be.
Nine days amongst ourselves we disagree
Concerning Hector's body what to do;
The most would have him stol'n by Mercury, 100
But for your sake I would not yield thereto.
But go you, Thetis, to your son, and say
The Gods are angry, and I most of all,
That Hector's body at the ships doth stay
Unransom'd, and without a funeral; 105
That he release it may for fear of me.
Meanwhile to Priam Iris shall be sent,
To bid him go t' Achilles speedily,
And with fair presents fetch it from his tent.
This said, she from Olympus took her flight 110

T' Achilles' tent, and found him sitting there,
Where he, Patroclus still lamenting, sigh'd,
And with him friends providing dinner were;
And killed had a fat sheep in his tent.
Then in she went, and sat down by his side. 115
How long, said she, will you yourself torment?
Be comforted, and for your health provide;
And take delight in women's company,
For here you know you are not long to stay,
And that at hand is now your destiny. 120
And hear what I from Jove must to you say.
From Jupiter I come, who bade me say
The Gods are angry, and he most of all,
That Hector's body at the ships doth stay
Unransom'd, and without a funeral. 125
The ransom therefore take, and let him go.
To which Achilles a short answer gave.
Let him that will, since Jove will have it so,
The ransom bring, the body he shall have.
Whilst Thetis and her son discoursing were, 130
To Priam Jove swift Iris sent away.
Iris, said he, this message from me bear
To Priam, and relate what now I say.
Bid him unto Achilles' tent to go,
And carry with him other Trojans none 135
But one old squire, his char'ot to look to,
And bring away the body of his son;
And honourable presents with him bear,
Wherewith Achilles may be well content.

And bid him death and danger not to fear, 140
So good a guardian with him shall be sent.
Hermes shall guide him to Achilles' tent,
And being there he needs not fear at all.
Achilles will not kill him, but prevent
The hurt that might from others on him fall. 145
He wants not judgment, care, nor piety,
And pity has for them that to him pray.
This said, flew Iris from Olympus high
To Priam's house, where little was of joy.
His sons about him weeping sat, and he 150
I' th' midst involved in his cloak so just,
That one th' impression of his limbs might see,
His head and neck bedaub'd with dung and dust,
Which he himself had thrown upon his head.
His daughters, and his sons' wives, howling went 155
About, for brothers and for husbands that were dead,
And to the shades by th' Argives had been sent.
Then Iris unto Priam coming near,
With soft and gentle voice unto him said:
Priam, be bold, for no ill news I bear 160
(For trembling sat he, and was sore afraid),
Jove bids you to Achilles' tent to go,
And carry with you other Trojans none
But one old squire, your char'ot to look to,
And bring away the body of your son; 165
And honourable presents with you bear,
Wherewith Achilles may be well content.
He bids you neither death nor danger fear,

So good a guardian with you shall be sent;
Hermes shall guide you to Achilles' tent. 170
When you are there, past is the danger all;
Achilles will not kill you, but prevent
The harm that may from others on you fall.
He wants not judgment, care, nor piety,
And pity has on them that to him pray 175
In their distress, and at his mercy lie.
When Iris this had said, she went away.
Then Priam said unto his sons, Arise,
And make a waggon ready out of hand;
And to a cedar chamber down he hies, 180
Where his most precious household-stuff did stand,
And thither call'd his wife, and to her said,
Jove's messenger t' Achilles bids me go
With ransom for my son. I'm not afraid,
But what think you? Is't best to go, or no? 185
At this, aloud she shriek'd, and said, Ay me,
What now is of the wit you had become,
For which so wise you once were thought to be,
By men abroad, and by your friends at home?
Will you go put yourself into the hand 190
Of him that hath your sons so many slain,
A man that does not pity understand,
Nor faith? No, no, he'll not from you abstain.
But since the Fates designed had before
His birth, to th' dogs he should be made a prey 195
By this hard-hearted man, you may deplore
Him here at home, and from Achilles stay.

Oh, that between my teeth I had his heart,
That to revenge my son I might it eat;
It would no little ease be to my smart, 200
And less the loss of him I should regret.
For Hector only for his country fought,
And of his enemies was not afraid,
Nor did him wrong, but valiant was and stout.
Then Priam to his wife replied, and said, 205
Nay, wife, since to him I am bent to go,
Dissuade me not, nor ill bird to me be
Here in my house, and bode me ill. For know,
Whate'er you say, 'twill not prevail with me.
If now a priest or prophet to me came, 210
And this had said, I thought it had a lie.
But howsoever, come what will, I am
With Hector in my arms content to die.
This said, the chests he presently unlocks,
And out he lays twelve robes for womankind, 215
As many coats, as many single cloaks,
And unto those as many that were lin'd;
And further twelve rich carpets out he laid,
And when he that had done, he gold brought forth,
Whereof he layed by ten talents weigh'd, 220
And two great black three-footed pots, much worth;
And unto those he set bright cauldrons four,
And the fine cup which giv'n him was when he
From Troy to Thrace was sent ambassador,
So long'd he to set Hector's body free. 225
I' th' porch then standing many Trojans were,

That sorry for his grief, were thither come;
To whom he said, Rascals, what make you here?
Find you not cause of grief enough at home,
That you must hither come to trouble me, 230
As if too little 'twere to lose my son?
Hereafter you will eas'lier killed be,
Since Hector, who defended you, is gone.
As for myself, before I see that day,
I hope to be within th' infernal gates. 235
Then with his staff he drave them all away;
And turning in again his sons he rates,
Paris and Agathon and Helenus,
Pammon, Polites, and Antiphobus,
Argavus, Deiphobus, Hippothous. 240
These nine he rated, saying to them thus,
Make haste, unworthy sons. I had been glad
If you in Hector's stead had all been slain.
how unfortunate am I, that had
So many and so valiant sons in vain! 245
Mestor and Troilus both valiant men,
And godlike Hector. Sure I am accurs'd.
Since Mars of these depriv'd me has again,
And now I none have left me but the worst,
Domestic wolves, the bane of lamb and kid, 250
And good for nothing but to dance and lie.
Why stand you still? Were you not by me bid
The waggon to prepare? Then out they fly,
And speedily the waggon forth they bring,
And yoke well-fitted with an iron pin; 255

And fix'd it to the pole's end with a ring,
And cord nine cubits long, to keep it in;
Which thrice about the boxen yoke they wind,
And to the waggon laid the ransom in;
And to it then the lusty mules they bind, 260
Which by the Mysians given him had been.
That done, king Priam's horses to his car
Were by himself and by Idæus tied,
Of which he always taken had such care,
That while they fed he stayed by their side. 265
Then Hecuba came to them with a cup,
A golden cup of pleasant wine, that they
The same to Jupiter might offer up
Before unto their foes they went away.
Here, take this cup, said she, and pray to Jove 270
That he will let you see a lucky flight
Of that great bird which he the most doth love,
That you may be assured by the sight
That safe you shall again return to Troy.
For if that favour to you be denied 275
I should advise you by all means to stay.
And Priam then to Hecuba replied,
This counsel, wife, of yours with reason stands.
Jove pleased is when to him men look up.
For water then he call'd and wash'd his hands, 280
And from his wife receiv'd the golden cup.
Then looking up to heav'n, O Jove, said he,
Of all the Gods most glorious, high, and great,
Grant me that I may well received be

B' Achilles at his tent, and well retreat. 285
And that thereof I may be confident,
Now show me of your bird a lucky flight.
This said, Jove presently an eagle sent,
Of colour spotted over black and white.
As wide as is a prince's gate or more, 290
So wide her wings the mighty eagle spreads,
And as it over Ilium did soar,
The people joy'd to see it o'er their heads.
The old man then went up into his seat,
And through the city to the plain did pass. 295
The waggon wherein lay the treasure great
Before him driven by Idæus was.
And so far went his sons, and sons-in-law;
And then return'd again into the city.
When Jupiter upon the way him saw 300
In this estate, he moved was with pity;
And unto Hermes turn'd his eyes and said,
Since you men's company do most frequent,
And whom you will can quickly hear and aid,
Go and guide Priam to Achilles' tent. 305
But so as to be seen by none, until
He thither safely come. And Mercury
No sooner understood his father's will
But sets himself about it willingly.
And first his shoes unto his feet he binds 310
Ambrosian shoes that over sea and land
Bear him as swift and lightly as the winds;
And then his rod he took into his hand,

Wherewith he layeth sleep on mortal eyes,
And takes it off again when he thinks good. 315
Then down to Troy and Hellespont he flies,
In likeness of a youth of royal blood,
When down begins t' appear upon his face.
Idæus now and Priam at the brink
Of Xanthus were, and night came on apace, 320
And there they made their mules and horses drink.
Idæus near them then saw Mercury,
And in great fear, to Priam cried, I see
A man, O Priam, coming. Let us fly,
Or to him go and fall down at his knee. 325
And horribly was Priam then afraid;
His hair with fear upon him stood upright.
Then Mercury unto him came, and laid
His hand on his, and to him said, 'Tis night;
What makes you be abroad? Do you not fear 330
Your foes, the Greeks? If any of them knew
That you were with so great a treasure here,
In what a pitiful estate were you?
For you, and he that's with you, both are old,
And neither of you can himself defend, 335
But as for any hurt from me, be bold;
I hither come t' assist you as a friend,
So like, me thinks, you to my father are.
And Priam then to Mercury replied:
'Tis true you say; and yet the Gods a care 340
Have of me still, to send me such a guide,
So great a man, so comely, and so wise,

That blessed are the parents you begat.
And Mercury to him again replies:
Indeed, old man, you say the truth in that. 345
But whither bear you your best goods away?
To some strange city, till the war be done?
Or are the Trojans all now leaving Troy,
Since killed is the best of them, your son,
That might with any of the Greeks compare? 350
Tell me, said Priam, pray ye, who are you,
And whence ye come, and who your parents are,
And how my son and his hard fate you knew?
You mean to try me now, said Mercury.
At th' Argive ships I Hector frightened saw, 355
And how he made the Greeks before him fly,
And how he toss'd them in the field like straw,
Where we stood by, with wonder looking on;
Achilles had forbidden us to fight.
His man am I, by birth a Myrmidon, 360
And stood amongst the rest to see the fight.
My father is Polyctor, very rich,
But now an old man is, and like to you.
And seven sons he has in all, of which
I am the last. And lots at home we drew, 365
Which of us with Achilles should be sent
To th' war of Troy. The lot then fell to me,
And with Achilles in his ship I went,
And hither come the place of fight to see.
The Greeks by break of day will hither come, 370
And try if now the city they can win;

Impatient of their stay at Ilium,
They cannot by their leaders be kept in.
Then Priam to him said again: Since you
Achilles' servant are, is Hector yet ³⁷⁵
At th' Argive ships, I pray you tell me true,
Or cut in joints, thrown to the dogs to eat?
And Hermes unto this again replies:
Nor dogs nor fowl upon him yet have fed,
But at the ships he still neglected lies, ³⁸⁰
And though he have twelve days now there been dead,
Yet is his body uncorrupt, and free
From worms that breed in other bodies slain,
And though it ev'ry morning dragged be
About Patroclus' tomb, doth whole remain, ³⁸⁵
And undefac'd, the blood all wash'd away.
You would admire to see him look so fresh,
And cleansed of the filth that on him lay,
And at his wounds how closed is the flesh,
Though many from the Greeks receiv'd he had; ³⁹⁰
So kind the Gods were after he was dead.
These words of Mercury made Priam glad,
And thus again he to him answered:
Yes, yes, 'tis good to give the Gods their due,
A thing that Hector never did omit; ³⁹⁵
And therefore to him they this favour shew,
Although his soul be in th' infernal pit.
But now t' Achilles' tent be you my guide,
And at my hand this handsome cup receive.
Again you try me, Mercury replied; ⁴⁰⁰

I dare not take't without Achilles' leave,
For of his anger in great fear I stand.
Without a bribe I'll with you go along
To what place you think fit, by sea or land,
Though 'twere to Argos; none shall do you wrong. 405
For sure, so wretchedly I do not look,
But that a man may of me stand in fear.
Then up he leapt, and in his hands he took
The whip and reins, and serv'd as char'oteer.
When they were come to th' Argive ditch and wall, 410
The watch that placed was the gate to keep,
Their supper to provide were busy all,
And Mercury there laid them all asleep,
Took off the bars, the gate wide open laid,
And in the char'ot and the waggon went, 415
With all the wealth for Hector to be paid,
And forward pass unto Achilles' tent,
Built for him by his Myrmidons, and high,
With fir-trees tall, and cover'd over head
(To keep it out of danger from the sky) 420
With the deep vesture of the flow'ry mead,
And to it had a great court pal'd about,
And in the pale a high two-valved door,
For cars and waggons to go in and out,
And one great bar of fir-tree and no more, 425
So great that it requir'd three common men
Upon the lofty gate to set it on,
And three such men to take it off again;
None but Achilles shut it could alone.

This gate then Hermes open to him laid, ⁴³⁰
And with the car and waggon in he came,
Then leaping to the ground to Priam said,
Old father, I a God immortal am,
Hermes, and hither sent to be your guide,
From heav'n, on purpose by my father Jove. ⁴³⁵
But by Achilles I'll not here be spied;
Gods must not shew to men such open love.
But go you to Achilles in, and try
What favour from him at his knees you'll find,
And put him of his son in memory, ⁴⁴⁰
And father. That will work upon his mind.
This said, t' Olympus Hermes went his way.
Then to the ground leapt Priam from his car,
And going in he bad Idæus stay,
And of the mules and horses have a care. ⁴⁴⁵
Achilles at his supper now was set,
And waiting on him stood Automedon
And Alimus, the table standing yet;
But supp'd he had, and appetite had none.
His other friends at distance from him sat, ⁴⁵⁰
And Priam to them then came in unseen,
And kiss'd the hands there of Achilles, that
Of many of his sons the death had been.
As when a man that kill'd another has,
And to another prince for safety flies, ⁴⁵⁵
Men at him stare; so he amazed was
When he saw Priam stand before his eyes.
The rest admir'd the comely man to see,

And both on him and one another look:
But Priam then upon Achilles' knee 460
Laid both his hands, and thus unto him spoke:
Godlike Achilles, take into your thought
Your father, that an old man is as I,
And into trouble by his neighbours brought,
And has no friend on whom he may rely. 465
Yet he has many intervals of joy,
And thinking on his son, is comforted
With hope to see him back return from Troy.
Undone am I; for all my hopes are fled.
When th' army of th' Achæans landed here, 470
I by the Gods with fifty sons was bless'd,
Whereof sixteen my wife did to me bear,
And other women in my house the rest.
But in this war the most of them are lost.
And now by Mars reduced are to few. 475
And Hector, which of all I loved most,
Is lately, O Achilles, slain by you.
His body to redeem I hither come,
With precious gifts, and fall before your knee,
That I may bury it in Ilium. 480
Upon your father think, and pity me.
Yet is my case more pitiful than his.
For what calamity can greater be
Than th' hands that have my children kill'd to kiss?
This said, Achilles wept. And from his knee, 485
With his, the hands of Priam gently mov'd;
And then aloud they both lamented. He

For Peleus, and Patroclus whom he lov'd,
And Priam for his own calamity,
And through the house were heard to sigh and groan. 490
Achilles, when his fit of tears was laid,
And eased was his heart, came from his throne,
And rais'd th' old man that on his knees yet staid,
And to him spake. Alas, old man, said he,
You much have suffer'd, and your pain I feel. 495
But how alone durst you to come to me,
That slew your sons, unless your heart be steel?
But come, sit down. In vain lamenting is,
The hurt that's done tears cannot take away,
Since so 'tis ordered by the Gods in bliss, 500
That men shall live in pain, and they in joy.
Two barrels in his cellar Jove has still,
Of gifts to be bestow'd on mortal wights,
One full of good, the other full of ill.
And usually to mingle them delights. 505
For they that only ill receive from Jove,
Exposed always are to injury,
And begging up and down the world shall rove,
And both by Gods and men despised be.
So Peleus at the first receiv'd much good, 510
And did in wealth his neighbours all surpass,
And with his subjects in great honour stood,
And join'd in wedlock to a Goddess was.
But after this the ill unto him came,
To leave no child behind him to succeed, 515
But only me that so short-lived am,

And from him live to vex you and your seed.
And you, O Priam, once were rich, they say,
And all that was in Lesbos did enjoy,
And over all the Hellespont did sway, 520
And that all Phrygia did you obey,
And with great store of children bless'd you were.
But now, you only fights and slaughter see,
And patiently you Hector's death must bear.
He cannot with your tears revived be; 525
Much sooner you may suffer greater ill.
T' Achilles, Priam then again replies,
Thetis' son, to sit I have no will,
Whilst at the ships my son unburied lies.
But bring him forth, that I my son may see, 530
And you the presents I have brought enjoy;
And prosperous unto you may they be,
And safely I again return to Troy.
Achilles, angry then, Old man, said he,
Provoke me not. I'll put into your hand 535
The body of your son, because to me
From Jove my mother came with that command.
And very well I know you Priam are,
And that you hither had a God for guide.
What mortal to the army come would dare? 540
Or could have pass'd the watch and not been spied?
Or open to you could the gates have set?
Therefore take heed, and anger me no more,
Lest the command of Jove I should forget,
And without Hector send you out adoor. 545

This said, old Priam was afraid and sat.
Out went Achilles with Automedon
And Axamus, his two good servants, that
He lov'd the most, Patroclus being gone.
And they the horses and the mules untied, 550
And from the waggon in the goods they brought,
Only, wherewith the body dead to hide,
They left behind a handsome robe and coat.
Achilles then his drudging maids appointed
To bear the body to some chamber meet, 555
And see the same well wash'd and well anointed,
So secretly that Priam might not see't,
Lest grieved he should something do or say,
That might so far Achilles' anger move,
That in his passion he should Priam slay, 560
Forgetting the commandement of Jove.
And being wash'd, anointed, and array'd,
Achilles laid the body on a bed,
Which his two servants in the waggon laid.
This done, he to Patroclus spake and said, 565
my Patroclus, if you hear in Hell,
That Hector's body I have sent to Troy,
Forgive me, since I for it paid am well
With gifts, whereof what's fit to you I'll pay.
This said, Achilles to his tent retired, 570
And sat upon the seat from whence he ris.
Your son, said he, is freed as you desired,
And on a bed laid in your waggon is.
Tomorrow with him go, by break of day.

But let us not our supper now forget; 575
For Niobe twelve children lost, they say;
Yet did she not for that refuse to eat.
Six lusty sons, six daughters fair they were,
And killed all, only for saying this,
[Leto but two, and she did many bear.] 580
By Phœbus they, and these by Artemis,
The Goddess Leto's daughter and her son.
Nine days and nights they lay unburied;
For Jove had chang'd the people into stone,
And then the Gods with earth them covered. 585
Yet Niobe, when she had weeping done,
Received food; and now doth somewhere lie
I' th' wolds of Sepylus, and turn'd to stone,
The hurt done by the Gods takes patiently.
Come then, old man, and lay your grief away, 590
And for the present think upon your meat,
And weep for Hector when you come to Troy,
For true it is your loss of him is great.
This said, forth goes Achilles, and appoints
A sheep for supper to be kill'd and flay'd; 595
Which straight was done, and cut out into joints,
And pierc'd with spits unto the fire was laid.
And when it was well roasted, taken up.
Automedon o' th' table laid the bread.
Achilles made the messes. Then they sup, 600
And on the meat they laid their hands and fed.
But when of food they had no more desire,
Priam admir'd Achilles' form and face.

Achilles Priam did no less admire,
In his aspect and speech there was such grace. 605
When on each other they had look'd enough,
Priam began, and to Achilles spake.
Dismiss me, if you please, Achilles, now,
That I a little sleep at last may take.
For since my son was slain, I never slept, 610
But rolling on the soiled grass have lain
Perpetually, and for him sigh'd and wept,
Nor until now touch'd either meat or wine.
Achilles then to th' women gave command
I' th' porch without to set him up a bed, 615
With handsome coverlets of purple, and
With fine soft blankets see it covered.
The women quickly his command obey'd,
And two beds ready made i' th' porch without.
Achilles smiling then to Priam said, 620
Old man, I from my tent must turn you out;
Lest some man should, from Agamemnon sent
With counsel, come and chance to see you here,
And let him know that you are at my tent,
And the redemption of your son defer. 625
But ere you go, old man, pray tell me right,
What time is needful for his obsequies?
That I so long may keep the Greeks from fight.
Then Priam to Achilles thus replies:
You know, Achilles, very well how far 630
The hills and woods are distant from the town,
And how afraid to go the Trojans are.

We need nine days to fetch the fuel down.
The tenth he shall be burnt and buried;
Th' eleventh a mount upon him shall be laid; 635
The twelfth we'll fight again if there be need.
To this Achilles answered, and said,
Old man, the time you asked granted is;
So long th' Achæans shall from fight forbear.
This said, in Priam's hand he layed his, 640
That of his faith he might not stand in fear.
There in the porch slept Priam and Idæus;
And then unto his bed Achilles went,
And there he slept, and with him fair Brisëis,
Within an inner chamber of his tent. 645
The other Gods and men slept all the night;
But sleep approached not to Hermes' eyes,
But thinking lay on Priam, how he might
Conduct him safely from his enemies.
Then up he rose, and went to Priam's head, 650
And to him said, Ho, Priam, sleep you here?
Since you redeem'd have Hector's body dead,
You think you nothing farther have to fear.
Although you for him paid a lusty price,
Yet if alive Atrides find you here, 655
Your sons and friends shall pay that value thrice.
This said, he suddenly awak'd with fear,
And calling to Idæus made him rise.
Then Hermes to the waggon and the car,
Himself the lab'ring mules and horses ties. 660
And now into their seats they mounted are,

And through the Argive camp then Hermes drove
Unseen, till past Scamander ford they were;
Then Hermes left them and return'd to Jove.
And now the morning was display'd and clear. 665
Then sighing, on they went to Ilium,
But were by neither man nor woman spied,
Till up into the tow'r of Pergamum
Cassandra went, and thence she them discried,
And weeping, to the people cried, and said, 670
Ye men and women all of Ilium,
If ever you at Hector's coming joy'd,
Run to the gates; I see him hither come.
Then, man nor woman left was in the town,
But Hector to behold went to the gate. 675
First came his loving wife and mother down,
And in the waggon by him weeping sate.
The people in a throng about him staid
Lamenting and lamented had all day,
But Priam from his car unto them said, 680
Trojans, unto the body dead give way.
And when within the house I have it laid,
Then for him weep till you be satisfied.
When this was said, the people him obey'd,
And to make way, themselves they then divide. 685
Then to the house they brought the body in,
And plac'd it on a bed. Then singers by
They set, the lamentation to begin.
Their song they sung; to which the women sigh.
Then to lament Andromache began. 690

Oh, my dear husband, you have lost your life
Unhappily, that were but a young man,
And made a wretched widow of your wife,
And with me left behind a tender son,
To evil fate begot by you and me. 695
To see him grow a man I hope have none;
This city first I fear destroy'd will be,
Since you are gone that was our sole defence.
T' Achaia now the wives of Troy must go,
And with them I. And you my child must hence, 700
And in vile work employ'd be by the foe,
Or you may by some spiteful man or other
Be from the wall or some high tower thrown,
For Hector's sake, that killed has his brother,
Or father, or his son before the town. 705
For many of the Greeks has Hector slain.
He went not to the battle bashfully.
For which the Trojans now are in great pain,
And I your loving wife especially.
that you thus should in the dust be laid, 710
And not give me your hand before you died,
Without a word upon your death-bed said
For me to think on. Then the women sigh'd.
And Hecuba began. Hector, said she,
Of all my sons to me you were most dear. 715
And when arrived was your destiny,
You by the Gods, though dead, beloved were.
My other sons, when any taken by
Achilles were, beyond sea carried were

And sold, and made to suffer slavery 720
At Samos, Imbros, Lemnos, or elsewhere;
But when of life he had deprived you,
Because his friend, Patroclus, you had slain,
About his monument he oft you drew,
Though that could not bring him to life again. 725
But now he sent it to me has again,
As fresh and as well colour'd as if by
Apollo's gentle shafts he had been slain.
This said, again the people sob and sigh.
Then Helen took her turn, Hector, said she, 730
Whom best I lov'd of all my brother-laws,
For you were so, since Paris married me,
Though when I married him accurs'd I was,
Now twenty years 'tis since I came to Troy,
And never did an ill word from you hear; 735
And when your kindred of me ill did say,
You took my part, and made them to forbear.
Since you are gone my joy is at an end,
And in your death I moan my own estate,
That now amongst the Trojans have no friend, 740
Who hate me as the author of their fate.
This, said with tears, provok'd the people's pity;
But Priam then unto them spake, and said:
Go Trojans now and fetch wood to the city;
You need not of the Argives be afraid. 745
Achilles, when I parted from his tent,
Eleven days allow'd my son t' inter
And fetch down wood without impediment;

So long the Argives should from fight forbear.
This said, to th' hills with oxen, and with wains, 750
And mules they went, and busy were about
This work nine days together and took pains.
Upon the tenth the body was brought out,
And on the top of the great wood-pile laid,
And fire put to 't; and all day long it burned, 755
And all the night. When morning was display'd,
Again the Trojans to the pile returned,
And th' embers with black wine extinguished.
His bones then by his brothers and his kin,
Were from the ground together gathered, 760
And by them to an urn of gold laid in.
The urn, with purple robes then cover'd over,
Into a grave, which soon was made, they laid.
The grave with many and great stones they cover.
And last of all, because they were afraid, 765
Before their work were done the Greeks would come,
They sent out scouts on ev'ry side to spy.
And o'er his grave, in haste, they raise a tomb.
This done, away they went, and by-and-bye
To Priam's house they came again, and there 770
He made a splendid supper for them all.
Then home they went, well pleased with their cheer.
Thus ended noble Hector's funeral. end of the iliad.

LIB. XXIII.

LIB. XXIV.

LIB. I.

In a council of the Gods (Neptune absent) Pallas procureth an order for the restitution of Ulysses, and appearing to his son Telemachus in human shape, adviseth him to complain of the suitors before the council of the Lords, and then to go to Pylus and Sparta to enquire about his father.

TELL ME, O Muse, th' adventures of the man
That having sack'd the sacred town of Troy,
Wander'd so long at sea; what course he ran
By winds and tempests driven from his way: 5
That saw the cities, and the fashions knew
Of many men, but suffer'd grievous pain
To save his own life, and bring home his crew;
Though for his crew, all he could do was vain,
They lost themselves by their own insolence, 10
Feeding, like fools, on the Sun's sacred kine;
Which did the splendid deity incense
To their dire fate. Begin, O Muse divine.
The Greeks from Troy were all returned home,
All that the war and winds had spar'd, except 15
The discontent Ulysses only; whom
In hollow caves the nymph Calypso kept.
But when the years and days were come about,
Wherein was woven his return by fate
To Ithaca (but neither there without 20

Great pain), the Gods then pitied his estate,
All saving Neptune; who did never cease
To hinder him from reaching his own shore,
And persecute him still upon the seas
Till he got home, then troubled him no more. 25
Neptune was now far off in Black-moor land;
The Black-moors are the utmost of mankind,
As far as east and west asunder stand,
So far the Black-moors' borders are disjoin'd.
Invited there to feast on ram and bull, 30
There sat he merry. Th' other Gods were then
Met on Olympus in a synod full,
In th' house of Jove, father of Gods and men.
And first spake Jove, whose thoughts were now upon
Ægistus' death, which he but then first knew, 35
By th' hand of Agamemnon's valiant son,
Who to revenge his father's blood him slew.
Ha! how dare mortals tax the Gods, and say,
Their harms do all proceed from our decree,
And by our setting; when by their crimes they 40
Against our wills make their own destiny?
As now Ægistus did Atrides kill
Newly come home, and married his wife;
Although he knew it was against my will,
And that it would cost him one day his life. 45
Sent we not Hermes to him to forbid
The murder, and the marriage of the wife;
And tell him if the contrary he did
Orestes should revenge it on his life?

All this said Hermes, as we bade him. But 50
Ægistus, for all this, was not afraid
His lust in execution to put.
And therefore now has dearly for it paid.
Then Pallas moved on Ulysses' part,
And said, O Father Jove, the king of kings, 55
Ægistus' fate was fit for his desert,
So let them perish all that do such things.
'Tis for Ulysses that I live in pain,
Poor man, long absent from his friends, forlorn,
In a small isle, the centre of the main; 60
Kept from his home, doth nought but grieve and mourn.
The isle is beautified with goodly trees,
And in it dwells a nymph. Her father's name
Atlas, that all the depths of the ocean sees,
And beareth up the pillars of the same, 65
And heaven and earth to boot. His daughter 'tis
That with fair words and gentle courtesy
Detains Ulysses. And her meaning is
For ever there to have his company.
Whilst he, alas! e'en dies for very grief. 70
To see the smoke of Ithaca he wishes,
And would take that for some, though small relief.
And yet you are not mov'd. Were not Ulysses
His sacrifices on the Trojan shore
Both free and bountiful? They were, you know: 75
In th' Argive camp, I dare say, no man's more.
Why, therefore, Father, should you hate him so?
To her the mighty Jove made this reply.

Child, what a word is this that you let fall?
Do I neglect Ulysses, or do I 80
Ulysses hate, that amongst mortals all
For wisdom and for piety excels?
Neptune, that backs and shakes the earth, 'tis he
Whose breast with anger and revenge still swells
Against him, for his son's calamity, 85
The godlike Polypheme, Cyclops the great,
Whom on Thoosa, Phorcys' daughter brave,
Neptune the king of waters did beget,
Embracing her within a hollow cave;
And him Ulysses has depriv'd of sight. 90
For which, though Neptune do not him destroy,
He crosses him with dangers day and night,
And drives him up and down out of his way.
But well, let us that are assembled now
Bethink us how to bring him home. 'Tis odds 95
'Twill cool his rage. He has not strength enough
T' oppose the power of all the other Gods.
Then Pallas said, O Jove, of kings the king,
Since the blest Gods have thought good, and decreed
Ulysses to his native soil to bring, 100
Let's Hermes send unto the nymph with speed,
In th' isle Ogygia, to let her know
Our sentence, that she may the same obey.
And I to Ithaca meanwhile will go,
And cause his son to call without delay 105
The common council; and to make him bold,
To warn his mother's suitors to be gone,

And feast no longer on his herd and fold,
As they before had insolently done.
To Sparta too I'll send him, and to Pyle ¹¹⁰
T' inquire about his father's navigation,
That in the world, by travel for a while,
He may acquire a greater reputation.
This said, upon her feet her shoes she binds,
Ambrosian golden shoes, that do her bear ¹¹⁵
On land and water swiftly as the winds,
And takes in hand her brazen-headed spear;
A heavy, massy, and strong spear, the same
Wherewith, when angry, she the armed bands
Of mighty men of war does eas'ly tame. ¹²⁰
That was the spear she carried in her hands.
Then from the high Olympus leapt she down
T' Ulysses' house, and stood in the hall-door
I' th' shape of Mentès, that possess'd the crown
O' th' Taphian people, whom he reigned o'er. ¹²⁵
And thence beheld the suitors in the court,
Sitting upon the hides of beeves, which they
Themselves had kill'd, and, wanting other sport,
Playing at chess they pass'd their time away.
Meanwhile their officers and serving-men ¹³⁰
Were busy mingling water with the wine,
Others the meat divide, others make clean,
Set up and rub the tables till they shine.
Telemachus now with the suitors sat,
Fancying, in case his father should appear, ¹³⁵
Brought home by the Gods or by some lucky fate,

How then these knaves would slink away for fear;
And he again recover his estate,
And in his own land rule without a peer.
He was the first that spied the Goddess, and 140
Then presently he hast'ned to the door;
Receives her spear and takes her by the hand,
And both go in, she after, he before.
You shall, said he, stranger be welcome here:
But first let's sup, and afterwards we'll find 145
Sufficient time both for me to inquire,
And you to tell your business and your mind.
When they were come into the stately hall,
Her spear within a case he sets upright,
T' a pillar, in which case the spears were all 150
His father left behind going to fight.
Then led her to a chair which stood upon
A dainty carpet curiously wrought,
And put t' her feet a stool to rest upon,
And for himself a handsome stool he brought: 155
Then did a maid, in a fine golden ewer,
Bring water for their hands, and pours it on
Over a bason large of silver pure,
And set a table to them, for both one:
From others' seats remoter than to fear 160
Their rudeness might offend her, or that they
Might peradventure listening overhear
What he and she did of Ulysses say.
Another sets on bread and other things
To eat, such as in her charge were at home. 165

But flesh of many sorts the carver brings,
And the cup-bearers often go and come.
Then came the suitors in, and took their places
All in a row. To each a table stands,
And golden bowl, one way look all their faces, 170
The waiters bring in water for their hands.
The maids in baskets bring both bread and meat,
On which they lay their hands with great good will,
And heartily and hastily they eat,
And to the brim their cups the servants fill. 175
When they of hunger had pluck'd out the sting,
The lusty suitors' thoughts converted were
To dancing, and to hear the minstrel sing,
Sports these are consecrated to good cheer.
To Phemius, the minstrel, that was by, 180
Unwillingly, forc'd by th' unruly throng,
They brought a cittern, and he presently
Began to play, and then to sing a song.
But to the Goddess Pallas, in her ear
Telemachus began to speak his mind, 185
Not being willing any else should hear.
Excuse me, friend, that I say what I find.
You see the care of these men what it is,
Singing and dancing. And no wonder, since
That which they spend is not their own, but his 190
Whose bones lie somewhere naked far from hence,
Unburied, it may be, on the ground,
There rotting as he lies i' th' dew and rain;
Or else at sea, perhaps, if he be drown'd,

The waves his body roll upon the main. 195
If him at home the best of them should meet
Safely arriv'd in Ithaca, he would
Much rather wish, I think, for nimble feet,
Than to be rich in garment or in gold.
But, oh! he's dead, and of some cruel death; 200
And though some tell us he is coming home,
'Tis comfortless, for he's bereav'd of breath.
To Ithaca I ne'er shall see him come.
But let this pass, and tell me truly now
Your own, your father's, and your country's name. 205
And further, I desire you'll let me know,
Whence are the mariners that with you came
Unto this town? and tell me this likewise,
Where rideth the good ship that brought you to't;
For verily I can no way devise 210
How you should come on horseback or on foot?
And tell me, were you never here before,
Nor saw my father whilst he here abode?
For strangers came to visit him good store,
As having much convers'd with men abroad. 215
I'll clearly speak, said Pallas, t' every thing.
My father was Anchialus, and I
Mentes, my city Taphos, and I king;
My people to the oar themselves apply.
At present bound I am to Temisa 220
For brass; and iron I carry with me thither.
Under Mount Neion, not near Ithaca,
My ship at Reithrus rideth safe from weather.

As for your father, we were mutual guests
(Ask the old lord Laertes) from our youth. 225
With one old maid alone his meat to dress,
He lives at's country house, he'll tell you truth.
There creeps he in his vineyard up and down.
And I came hither now, 'cause I was told
By some, his son Ulysses was in town. 230
But 'tis not so. The Gods do him withhold
From his dear wife, and native country still
Within an island, where the savage men
By force detain him much against his will:
But all in vain, he shall return again. 235
For I presage, and come it shall to pass,
That am no prophet, nor birds understand;
Though he were tied there with chains of brass,
He shall get loose and see his native land.
But say, are you indeed, that are so grown, 240
His son? Your heads and eyes are like, I mark,
For we were well to one another known;
But 'twas before he did for Troy embark
With other princes of the Argive youth;
But never saw him since. That I'm his son, 245
Said he, my mother says. But who in truth
Knoweth who 'twas that got him? I think none.
If I might choose my father, I would be
His son that groweth old on's own estate.
But whom they tell me is my father, he 250
Of all men is the most unfortunate.
Then said the Goddess, Howsoe'er that be,

The Gods will never nameless leave your kind,
That are the son of fair Penelope,
And so well fram'd in body and in mind. 255
But say, What feast is this, and who these be?
You have no cause to feast. Their conversation
Pleases me not. 'Tis rude, unmannerly.
What! is't a wedding, or is't a collation?
Friend, since you ask, said he, take the whole story. 260
This house was rich, my father being here,
But th' unkind Gods have taken hence that glory:
For where he is, a word we cannot hear.
Less had I griev'd, if he his life had lost
With other Argive lords under Troy wall, 265
Or, the war done, 'mongst those that love him most.
Then had he had a noble funeral,
At which th' Achæan princes would have been,
And the honour had redounded to his son.
But now, alas! devour'd by harpies keen, 270
Unheard-of and unask'd-for he is gone,
Leaving me here behind to sigh and groan.
Besides, the Gods have giv'n me other care,
Bitter enough. 'Tis not for him alone
My heart is rent. There other mischiefs are. 275
How many lords within these isles do sway!
Samé, Dulichium, Ithaca, and Zant;
So many suitors duly every day
For marriage with my mother the house haunt.
Whilst she can none put off, and will none marry, 280
They spend my corn and wine, and cattle kill,

And eating here and drinking still they tarry,
And me perhaps at last they murder will.
Then Pallas said, Is't so? 'Tis time indeed
Your father hither were come back again, 285
Having so long been absent hence, with speed
To lay his hands upon these shameless men.
Oh! that just now within the gates he stood
Of th' outer court, I would desire no more,
Arm'd with two spears, buckler, and helmet good, 290
Such now, as I have seen him heretofore.
From Ephyré he took our house in's way,
Where first I saw him merry drinking wine.
For he had been with Ilus, him to pray
To give him for his shafts a medicine, 295
Wherewith to make them all they wound to kill.
But he refus'd, fearing the powers above.
And 'twas my father gave't him for good will:
For why, he did him very dearly love.
If, such as then, Ulysses should appear 300
Amongst the suitors now, short liv'd I trow
They'd be, and have but bitter wedding cheer.
But when he shall come home, Gods only know,
Or whether you shall see him any more.
Meanwhile consider by what means you may 305
Get the unruly suitors out of door,
That so oppress you, and your house annoy.
And first observe what I shall you advise.
Convoke the people to the market-place;
Protest the Gods against their injuries, 310

And let the whole assembly know your case.
Say, if they needs will wed her, let her go
Back to her father, who the match should make,
And offer for her what is fit; and so
Which of them she likes best, him let her take. 315
And for yourself, I think it your best way,
In a good bark of twenty oars abroad
T' inquire what men can of your father say,
Or what some lucky sign from Jove may bode.
Go first to Pyle, inquire of Nestor; then 320
To Sparta. Ask of Menelaus, whom
Of all which had at Troy commanded men
The Gods t' Achaia brought the latest home.
If of his safety and return you hear,
How much soever they waste your estate, 325
Endure their riot yet another year.
If dead, come back, and fairly celebrate
His rites, and give your mother whom she will
For husband. Then bethink you, how you may
By open force, or howsoever kill 330
These shameless suitors that your means destroy.
Be fool'd no more. You're now at man's estate.
Ægistus slew Orestes' father. He
Ægistus slew. Who does not this relate
With honour to Orestes' memory? 335
And you, my friend, you are a goodly man.
Take heart. Gain honour. I must now be gone;
My crew with patience no longer can
Stay for me, therefore think what's to be done.

Your counsel, said Telemachus, is such 340
As might become a father to his son.
I'll not forget it. Though your haste be much,
Stay yet awhile; be not so quickly gone.
Wash and take food, and then go merrily;
And with you a fair present from me take, 345
Whereby to keep me in your memory;
Such as kind friends to one another make.
Then said the Goddess, Now I cannot stay.
As for your present I will not deny it,
But take it at my coming back this way, 350
How much soe'er you mean t' oblige me by it.
This said, she mounted from him to the sky
In likeness of an eagle, to his wonder,
Who thought it was some God, and grew thereby
Bolder, and on his father more did ponder. 355
And straightway to the suitors went, who were
Now come again into the house, and seated,
A song which Phemius then sung to hear,
Containing how the Grecians retreated
Unfortunately from the Trojan shore 360
By Pallas' doings, whom they had offended.
Penelope that heard it, and was more
Concerned than they all, straightway descended.
She ent' red not, but in the door did stand,
Veil'd with a scarf which on her head she wore, 365
Having a waiting-woman on each hand;
And to the singer thus said, weeping sore:
Phemius, y' have better songs, why sing you then

This sad one? Fitter 'twere the deeds to tell
Of mighty Gods, and mighty deeds of men, 370
Which sure would please the company as well.
Sing one of those, and let them hear and drink;
Give over this. You touch my interest,
And wound my heart in forcing me to think
Upon my husband, of all Greeks the best. 375
Then said Telemachus, Good mother, why
Should not the singer choose what song to sing,
Whose part it is to please the company?
It is not he that does the evil bring.
'Tis none of Phemius' fault, but th' act of Jove, 380
Who deals to all men all things as he please.
Should he not sing the songs that men most love,
The new'st? The Greeks' sad passage o'er the seas?
Be patient, many more besides Ulysses,
Come short from Troy by one fate or another, 385
Nor are you the only wife her husband misses.
Many men else are lost. Therefore, good mother,
Go to your work again above, and see
Your maids do theirs, leave censuring of songs
Unto us men, and specially to me, 390
To whom the greatest power here belongs.
Then to her chamber up she went again,
With her two maids, and there began to weep,
Being for her dear husband in great pain,
And wept till Pallas clos'd her eyes with sleep. 395
Meanwhile the suitors into clusters ran,
And one t' another his thoughts uttered

With noise enough. But there was not a man
That did not wish to have her in his bed.
Then to them spake Telemachus: D'ye hear, 400
Proud suitors of my mother, let's, I pray,
Give ear unto the singer, and forbear
Clamour. To-morrow is the council day,
There I shall warn you publicly, no more
To haunt my house, but each man home to go, 405
And there to feast by turns on your own store;
And if you be not willing to do so,
But your own means to spare, shall think it best
To feast yourselves on one man's substance all,
And ruin his estate, go on and feast, 410
While I upon the Gods for vengeance call.
that the mighty Jove would so ordain,
That all men's actions might be repaid
As they deserve! Then should you all be slain
Within my doors. After he this had said, 415
The suitors bit their lips, and silent mused
At the strange boldness of Telemachus,
And at the language which the young man used,
To which none answer'd but Antinous.
The Gods, quoth he, have taught you a high strain 420
Of language, and undaunted oratory;
But if their meaning were that you should reign
Here, o'er us all, I should be very sorry.
Telemachus replied, Think what you will;
If Jove consent, why should not I be king? 425
What harm is it with wealth my house to fill,

Besides the honour it will with it bring?
In Ithaca there many princes be,
You'll say, would be as glad to rule as I.
No matter, whosoe'er be king, not he, ⁴³⁰
But I am king in my own family.
Who, said Eurymachus, shall have the hap
To reign in Ithaca is hard to guess,
It lies yet folded up within Jove's lap.
None shall, Telemachus, you dispossess ⁴³⁵
Of house, or land, or goods, by violence,
As long as there in Ithaca be men.
But tell me who that was, that now went hence;
Where he was born, and where he dwells, and then
His errand, whether business of his own, ⁴⁴⁰
Or some news from Ulysses, brought perchance,
And went so soon away, t' avoid being known?
He was no mean man by his countenance.
Then said Telemachus, My father's dead,
We never shall again see one another; ⁴⁴⁵
With messengers I trouble not my head,
Nor soothsayers, that do but soothe my mother.
The man my father's old acquaintance was,
Mentes Anchialides, and his town
Taphos, and he thereof the ruling has; ⁴⁵⁰
His people for their trade by sea well known.
Thus said he, though he doubted not at all
But 'twas some God. Meanwhile the suitors staying
For th' evening's coming on, to dancing fall,
Or listen to the minstrel's song and playing. ⁴⁵⁵

The evening came, the suitors went away;
Telemachus went also to his bed,
In a warm stately chamber, where he lay
Ranging the many cares he had in's head;
Euryclea a torch before him bore, ⁴⁶⁰
Daughter of Ops, now old, but at the time
Laertes did her purchase, heretofore,
For twenty oxen, she was in her prime.
He honour'd her as if she'd been his wife,
But from her bed perpetually forbore, ⁴⁶⁵
T' avoid suspicion, and domestic strife.
She'd nurs'd Telemachus, and lov'd him more
Than did the other maids, and now she stands
To light him. He unlocks the door, goes in,
Takes off his coat, puts it into her hands, ⁴⁷⁰
She foldeth, brusheth, hangs it on a pin.
Then forth she went, and by a silver ring
Pulls to the door. And there all night he lay
Rememb'ring Pallas' words, and pondering
Upon the business of the following day.

LIB. II.

Telemachus complains in vain, and borrowing a ship goes secretly to

SOON AS THE rosy morning did appear,
Telemachus himself array'd and shod,
Puts on his sword, and takes in hand his spear
And out he went appearing like a God.
Pyle by night, and how he was there received. 5
And straight unto the criers gave command,
To call the people to the public place.
The people met. And then with spear in hand
He to them takes his way; and followed was
By two white dogs. Then takes his father's throne; 10
His elders gave him way; all on him gaze.
For why; the Goddess Pallas of her own
Had set authority upon his face.
The first that spake was old Ægyptius,
Stooping with age, of great experience: 15
One son of his, whose name was Antiphus,
Went to the siege of Troy, but coming thence
He died in the savage Cyclops' jaws,
When with Ulysses he was in his den:
Euronymus one of the suitors was, 20
The others with their father dwelled then.
But still he grieved was for Antiphus.

The tears ran down his cheeks, and weeping he
Rose up and said unto th' assembly thus:
Ye men of Ithaca, I pray hear me; ²⁵
Since we to Troy Ulysses sent with ships,
We ne'er convoked were to Parliament,
What need have young or old men of our lips?
And who is he that now doth us convent?
Has he informed been of some invasion, ³⁰
And unto us the same would first report?
Or on some other public great occasion
Would give us counsel? The Gods bless him for't.
Telemachus then presently upstands,
Though well contented with his father's praise. ³⁵
The crier puts the sceptre in his hands.
And to Ægyptius first he speaks, and says,
Here am I, that the people have convok'd.
Nor do I any news or counsel bring,
But by my private suff'rings am provok'd; ⁴⁰
Which here I offer t' your considering.
Is it not grief enough, my father's loss,
That ruled like a father to us all,
But that I must yet bear a greater cross,
To see his house to utter ruin fall? ⁴⁵
My mother's house the suitors daily fill,
And of the best of you they children are.
She wedded must be with her father's will,
But to her father go they do not dare.
But in my house continually they stay, ⁵⁰
And sacrifice my beeves, and goats, and sheep,

My wine exhaust, and much they cast away.
For why, Ulysses lost is on the deep,
And I myself unable to defend.
But shall I so be still, or once be able
Telemachus goes secretly to Pyle, &c. 55
To bring upon these men unjust their end,
Whose injuries no more are tolerable?
Take it to heart. Think how 'twill taken be
By other states. Fear from the Gods some change,
That are not pleas'd with such iniquity, 60
And may in closer order make you range.
By Jove I you adjure, and Themis, who
Convokes assemblies, and revokes again,
Forbear these evil deeds yourselves to do,
And of your sons the liberty restrain. 65
Leave me to suffer misery alone.
Hurt none but me. Unless my father have
In hatred of you some great evil done,
And for revenge these men such power you gave.
But better 'twere for me, that you than they 70
Should spend my treasure and my comings in.
For if among so many men it lay,
Begging I might from them the value win.
But for my case no help can now be found.
So said Telemachus in choler high, 75
And from him threw the sceptre to the ground.
Nor could forbear to let fall tears and sigh.
The people pitied him, but silent sat;
None but Antinous durst answer make.

Telemachus, said he, too passionate 80
You are, and too much liberty you take.
The people's hatred you would very fain
Draw to the suitors, and procure them shame.
But from your mother cometh all your pain;
And therefore her, not us, you ought to blame. 85
Three years are gone and past, the fourth is this,
Since she her suitors baffled has with art,
Putting each one in hopes by messages,
And promises that he had gain'd her heart.
Moreover, setting up a beam to weave, 90
Suitors, said she, since dead Ulysses is,
Stay yet a little while, and give me leave
To make an end but of one business.
I must for old Laertes make a cloth,
Which in his sepulchre he is to wear. 95
T' offend the wives of Greece I should be loth;
For to accuse me they will not forbear,
But say I very hasty was to wed,
If I go hence and not provide a shroud
Wherein Laertes may be buried 100
Out of such wealth, that might have been allow'd.
Her suitors all were well content. And then
All day she wove, but ere she went to bed,
What she had wov'n, she ravell'd out again.
Three years her suitors thus she frustrated, 105
In the fourth year her woman her betrayed,
And in we came, whilst she the web undid,
And then to end it she could not avoid,

Since now her purpose could no more be hid.
To your complaint the suitors answer thus; 110
Take notice of it, you and all the rest:
Send back your mother to Icarius,
There let her marry whom they both think best.
But if she think to vex us longer yet,
Caring for nothing but for Pallas' gifts, 115
To have the reputation for wit,
And skilfulness in curious work and shifts,
Wherein th' Achæan wives she doth excel,
Both old and young, Tiro, Alcmen', Micen',
Although with us she hath not dealed well; 120
But if to use us so she longer mean,
So much the longer with you we shall eat,
Which to Penelope will be a glory.
But we consume shall so much of your meat,
If long we stay there, that you will be sorry. 125
For so long as she dodges with us thus,
No whither from your house will we depart.
Then to him answered Telemachus:
Antinous, I ne'er shall have the heart
To send my mother hence against her will. 130
Abroad my father is, alive or dead.
That I her father should repay, were ill,
For forcing her to leave her husband's bed.
And from the Furies I shall suffer worse,
For if I force her from my house to go, 135
Whether she will or not, she will me curse,
And men will of me be revenged too.

If it displease you that she stayeth here,
You have your remedy; you may go home,
And ev'ry one make all the rest good cheer 140
By turns, and into my house never come.
But if you needs will feed on me alone,
I can but to the Gods for vengeance call,
And reparation for what is done,
Which may enough be to destroy you all. 145
This said, two eagles coming were in sight,
And when they were the market-place just o'er,
Th' assembled heads surveying, stopp'd their flight,
And on their broad and levell'd wings they soar;
Then, having torn themselves both neck and cheek, 150
They to their right wing rise and fly away.
What this should mean th' assembly was to seek,
And to them thus did Alitherses say:
Hear me, ye men of Ithaca, said he,
And you, the suitors, that are most concern'd. 155
Destruction is rolling toward ye,
Although it be not by yourselves discern'd.
Ulysses from his friends will not be long,
And now from Ithaca far off is not,
Seeing what daily done is in the throng, 160
And how to kill the suitors lays his plot;
Nay, many more besides the suitors may
Of their misfortune chance to have their part,
If they desist not soon, and come away.
I speak not this at random, but on art; 165
For all must come to pass I told him then,

When with the Argive lords he went to Troy:
That after twenty years he should again
Return with pain, his men all cast away.
Then said Eurymachus, Old man, go home, 170
And there to your own children prophecy,
Lest to them any harm hereafter come;
A better prophet for these things am I.
Under the sun be many birds that fly,
And yet not all of them do fortunes tell; 175
Ulysses, far hence, dead is certainly,
I know not where. I would thou wert as well,
For then you would give over to inflame
Telemachus, who but too angry is;
In hope to get some present for the same, 180
If he will give it. But I tell you this.
If any old man, with his wisdom, dare
To set against us any young man here,
He shall be sure himself the worse to fare,
And when 'tis done he shall be ne'er the near; 185
We'll set a fine upon your head so wise,
Which you to pay will not be well content.
I myself will Telemachus advise
His mother may be to her father sent
To make the match, and on the dower agree, 190
Such as becomes him, to his daughter dear;
Till that be done, no hope at all I see
The suitors should desist. For they not fear
Telemachus, as haughty as he is,
And full of words; and much less do they care 195

For such deceitful prophecies as this,
For which you only the more hated are.
Meanwhile Telemachus his goods decay,
And he shall never make them up again,
While she persists her suitors to delay, 200
And makes us all expect her love in vain.
And 'tis her virtue makes us thus to strive
Amongst ourselves who shall her favour win;
For many other ladies we could wive,
And be sufficiently delighted in. 205
Then said Telemachus, No more will I
This matter to you press, or to the woo'rs.
You and the Gods know all I do not lie;
But I demand a bark of twenty oars,
For I intend to travel for awhile, 210
To hear what men can of my father say.
To Lacedæmon I will go, and Pyle,
Or seek from Jove some notice of his way,
And if alive he be, and coming home,
Though to my cost, I'll stay another year. 215
If dead he be, then back again I'll come,
And rites of burial will give him here,
Splendid, and well becoming his estate,
And let my mother her own liking take.
Having thus spoken, down again he sate. 220
And then Ulysses' old friend Mentor spake,
With whom Ulysses left his house in trust.
Hear me, ye Ithacians, said he;
Let no king ever be hereafter just,

Nor to his people soft and gentle be, ²²⁵
Since you Ulysses have so soon forgot,
That ever rul'd us like a father kind.
But I the suitors so much accuse not,
Although on force and fraud they set their mind,
(For 'gainst Ulysses' goods, which they devour, ²³⁰
They stake their heads in hope he'll ne'er come home)
And you that many are, and have the power
To check them, sit as if you all were dumb.
And then rose up Leocritus and spake:
Mentor, said he, more busy much than wise, ²³⁵
That would about a supper quarrel make,
Ulysses, were he here, I'd not advise
To seek by force the suitors to remove.
For though he much be wish'd for by his wife,
She would not of his coming well approve, ²⁴⁰
But he the sooner be depriv'd of life.
And you, the people, now may hence retire;
Mentor and Alitherses will provide
A bark for what place ever he'll desire;
And if at Ithaca he mean t' abide, ²⁴⁵
No news he will hear of him a great while.
But never t' Ithaca shall come again,
If he to Lacedæmon go, or Pyle.
This said, dismiss'd and scatter'd were the men;
And to Ulysses' house the suitors went, ²⁵⁰
Telemachus to the sea-side, and pray'd:
God, that gavest me commandement
To pass the seas, canst not now be obey'd,

I am both by the town and woo'rs delay'd.
Then in the form of Mentor, Pallas came, 255
And standing by Telemachus, she said,
With such a voice as Mentor's seem'd the same,
If in you you retain the spirit brave
Your father had, to make his word his deed,
Then also the assurance I shall have, 260
To tell you in your voyage you shall speed;
But if Ulysses' son you be not right,
For aught I know you may this labour spare;
Few sons exceed or reach their father's might,
But commonly inferior they are. 265
But since in you I see your father's wit,
I hope your voyage shall have good success;
Therefore, no more with th' woo'rs in council sit,
Expect from fools to have no more redress,
That see not their own end that is so nigh. 270
Nor shall you long be forced here to stay,
For with a good ship furnish you will I,
And with you will myself go all the way.
Meanwhile go you into your house again,
And put up store of wine, and of cold meat, 275
And good bread, which the marrow is of men;
I'll for you mariners together get.
In Ithaca are good ships, old and new,
Good store, of which I will go choose you one,
The best of all that come within my view, 280
And make it ready, that we may be gone.
This said, to th' house return'd Telemachus.

The woo'rs in killing cattle were employ'd,
And straight unto him went Antinous,
And laughing, took him by the hand, and said, 285
Telemachus, bold and brave orator,
Fear from us neither evil word nor deed;
Eat and drink merrily as heretofore,
We'll see you furnished with what you need,
Both ship and men, and see you soon convey'd 290
To Pyle, that of your father you may hear.
Telemachus then answered, and said,
Antinous, can I be merry here?
D'ye think that yet too little was the wrong
The suitors did me, my estate to waste, 295
When I perceiv'd it not, as being young;
But since I grown am, and my childhood past,
And somewhat know, and more hear others say,
I'll do my best to bring them to their end,
Whether I go to Pyle, or here do stay. 300
And yet to go to Pyle I do intend,
And think my passage will not be in vain;
For I go like a merchant, not a guest,
As if to me no ship did appertain.
It must be so; the suitors think it best. 305
This said, his hand from his hand he snatch'd out;
And then the suitors that were in the court,
Some give him evil words, and others flout,
And one another with him made good sport.
He'll come from Pyle with succours, God knows what, 310
Said one, or Sparta, which shall on us fall,

Or poison bring from Ephiré; and that
Put in the temperer shall kill us all.
Who knows, then said another, if he go,
But he his father's fate may also have, ³¹⁵
Whilst seeking him he wanders to and fro,
Which would to us no little trouble save;
His goods amongst us we should soon divide,
And to his mother leave his houses free,
And him she chooses to lie by her side. ³²⁰
Thus they derided him. Then down went he
Into a large and high-roof'd room, where lay,
In chests pack'd up, great store of cloth of gold,
And garments very many, rich and gay,
And many barrels of sweet wine and old, ³²⁵
Which for Ulysses were preserved there,
When he returned to his native soil.
In the same room many brass vessels were,
And many barrels of sweet smelling oil,
And double were the locks upon the door, ³³⁰
Whereof the nurse, Euryclea, had the key.
Telemachus call'd for her, and says to her,
Come, nurse, this night I am to go away.
Fill me of wine twelve pitchers of the best,
Next to that which you for my father save; ³³⁵
And fine flour, twenty measures at the least,
In good thick leather satchels let me have,
Quickly. For when my mother is a-bed,
To Lacedæmon and to Pyle I go,
That of my father, if alive or dead, ³⁴⁰

There any news be, I the same may know.
Euryclea then wept and sobb'd, and said,
Dear child, why will you go from hence so far
Alone? Your mother you will make afraid,
Of whom so dearly you beloved are. 345
Your father far off is already dead,
And by the way the suitors seek to kill you,
And share your goods amongst them by the head.
I pray stay here, and do not go. Why will you?
Nurse, said Telemachus, be of good cheer; 350
'Tis by the counsel of a God I go,
And I require you solemnly to swear
You'll not my going let my mother know.
Telemachus to the suitors went again,
And Pallas, in his likeness, to the town, 355
For his transporting to procure him men,
From house to house she goeth up and down,
And of Noemon borrowed a bark,
Who not unwillingly it to him lent.
And now the sun was down, the streets were dark, 360
And down to the sea-side the Goddess went,
And the good ship into the sea they haul,
And in it stow all that was needful for't;
The mariners were there together all,
And tied the ship at far end of the port. 365
Meanwhile the suitors merrily carouse,
And Pallas then, their fancies to confound,
From the sea-side went back into the house,
And from their hands the cups threw to the ground,

And with the love of sleep possess'd their eyes, 370
And made them nod, and let their eye-lids down;
And not long after from their seats they rise,
And for that night took lodging in the town.
Then, like to Mentor both in form and voice,
Telemachus she called out of doors. 375
Your men are ready at the port, she says,
There they expecting you sit with their oars.
Then out they went, and Pallas led the way,
And found the rowers ready on the beach.
Telemachus then said, Come back, I pray, 380
To th' house with me, our victual thence to fetch,
Which, well put up, I there have ready laid;
But nothing of it does my mother know,
Nor any else but I and one old maid.
Then with Telemachus to th' house they go, 385
And to the ships at once bring all away,
And stow it as Telemachus thought fit.
Pallas and he embark without delay,
And at the stern they both together sit.
And now the mariners their tackle ply; 390
First, in the midst they set the mast upright,
And it unto the ship with strong ropes tie,
And then their sails they hoist up to their height,
Which Pallas, with a lusty gale from west,
Kept full all night. The ship the sea then gores; 395
The water, swiftly running from her breast
By both her sides, wounded and broken roars.
And then unto the Gods they offer wine,

And to them all were praying for awhile,
But specially unto their guide divine; ⁴⁰⁰
Then sail'd all night, and were next morn at Pyle.

LIB. III.

Nestor entertains him at Pyle, and tells him how the Greeks departed from Troy; and sends him for further information to Sparta.

UP FROM THE sea the sun leapt to the sky,
To hold the light up before Gods and men;
Telemachus, with all his company,
Unto the town of Pyle arrived then. 5
Then Nestor had a sacrifice in hand
To Neptune, and upon the sea-side stood,
And with him store of people on the sand.
Black bulls he eighty-one had to him vow'd:
Nine seats there were, five hundred to each seat, 10
And to the same nine bulls appointed were;
The entrails, broil'd upon the coals they eat,
The thighs to Neptune burnt to ashes were.
The ship then came within the port to land,
And disembark'd, upon the shore they staid; 15
With furled sails the ship did by them stand.
Then Pallas to Telemachus thus said:
Telemachus, by no means bashful be;
For wherefore did you undertake this task,
But of your father to hear certainty? 20
To Nestor then directly go, and ask
If of Ulysses anything he know.

He'll tell you truly. He's too wise to lie.
Mentor, said he, I'm young, and know not how
With one so old to answer and reply. 25
Telemachus, said Pallas, do not fear,
You'll somewhat prompted be by your own breast
(You never by the Gods neglected were),
The God that loves you will supply the rest.
Then up to Nestor they directly went, 30
And Pallas foremost. All about him there
They found upon the sacrifice intent.
His sons and lords, to hasten the good cheer,
Some broaching, and some roasting were of meat,
And presently about the strangers come, 35
And with their hands salute them, and entreat
To sit. And then Pisistratus went to'em,
Saluted them, and took them both by th' hands,
And for them (since there was no empty seat)
Laid sheepskins, with the wool upon the sands; 40
And of the entrails gave them part to eat,
And to her hand held up a cup of wine.
To Neptune, said he, offer up your vow,
For he expressly is the pow'r divine,
That we to worship be assembled now. 45
And having drunk, give it to this man's hand,
That he may also give the Gods their due;
For all men of the Gods in need do stand,
And I thought fit to give it first to you,
'Cause you are th' elder, th' other young as I. 50
Then Pallas from his hand receiv'd the cup,

And pleased was to see his equity,
And then to Neptune sent her prayers up.
Neptune, said she, have to my prayer regard;
First Nestor and his sons with honour bless, 55
And of his people th' hecatomb reward,
And give Telemachus and me success.
Thus prayed she, and gave for what she prayed,
And to Telemachus then gave the cup,
And he to Neptune the same prayer said. 60
The meat being ready now and taken up,
And into messes cut, themselves they feast,
And when of hunger extinct was the force,
Then to his guests Nestor his speech address'd:
Friends, said he, now we time have to discourse, 65
Tell me, Who are you? whence d'ye cross the main?
Is it for traffic? Or d'ye pleasure take,
As pirates walk at sea, to and again,
Others to spoil to set your lives at stake?
To this, Telemachus with confidence 70
(Which into him the Goddess did inspire,
The better to obtain intelligence,
And reputation to himself acquire)
Answer'd: O Nestor Nelëiades,
The glory of the Greeks, we hither came 75
From Ithaca on no state-business,
But of my father to seek news from Fame,
Unbless'd Ulysses, who at Ilium
Together with you fought before the town.
Of th' other chiefs we hear what is become, 80

But where Ulysses died is still unknown,
Whether at land he slain were by the foe,
Or by the sea devoured he hath been;
But at your knees we hither come to know,
What you since then have heard of him or seen, 85
Wand'ring about, born to calamity.
Let no respect, or pity mitigate
Your story, howsoever sad it be.
Nothing but naked truth to me relate.
And I beseech you, for my father's sake, 90
If he before the town of Troy did well
Perform the service he did undertake,
That nothing but the very truth you tell.
friend, said Nestor, since you bring again
To memory our miseries at Troy, 95
Under Achilles first by sea, what pain
We suffer'd then; and after, when we lay
And fought before King Priam's royal seat,
What we endured, what great men we lost;
The doughty Ajax, and Achilles great, 100
That were the chief of all the Argive host;
The valiant Patroclus, and my son
Antilochus, both valiant in fight,
And if an enemy were put to run
Before him, he could hardly 'scape by flight. 105
But numberless were our sad chances there;
No mortal man can count them one by one,
And if you five or six years should stay here,
You'd weary be of asking, and be gone.

Nine years we plots contriv'd to take the town, 110
Which Jove made prosperous with much ado.
Ulysses had for plotting the renown,
For none compar'd himself your father to:
If it be true you are Ulysses' son,
And I confess, hearing you speak your mind, 115
And steadfastly your person looking on,
Much respect for you in myself I find.
While we together were at Troy, we never
In council or assembly disagreed,
But what was for the Argives' good, we ever 120
Endeavour'd what we could to get decreed.
But when of Troy we had destroy'd the town,
And back unto our ships again were come,
Then Jove upon the Greeks began to frown,
Intending to them ill returning home, 125
For few there were amongst them just or wise,
But on themselves they drew down their own fate,
Which made the Goddess Pallas to devise
To set the two Atrides at debate.
Then of the people they a meeting call 130
At almost sunset, and the people came
(Having their heads with wine disorder'd all)
Th' Atrides told them why they call'd the same,
Where Menelaus votes to cross the seas,
And each man to his country to repass. 135
But this advice his brother did not please,
To stay there yet awhile his counsel was,
And first a hecatomb to sacrifice,

The Goddess Pallas' anger to appease.
But Agamemnon therein was not wise, 140
Men cannot change the will o' th' Gods with ease.
While they contending were with words unmeet,
One part arose, resolv'd to stay all night,
And in the morn to go aboard the fleet,
And each one tow'rds his home to take his flight. 145
And shipp'd our captive women, and our prey,
One half we were, and came to Tenedus;
The other half with Agamemnon stay.
And Pallas then again divided us;
And one part back to Agamemnon went, 150
But I, with all my own ships, homeward fled,
Knowing that Jove to the Greeks evil meant;
So did the son of Tideus, Diomed.
At Lesbos to us Menelaus came,
Where we, which way to go, consulting staid, 155
Chius within, or else without the same,
And for direction to the Gods we pray'd.
O'er the wide sea t' Eubœa they bid sail,
That we in safety be the sooner might;
And sent us therewithal a lusty gale, 160
Which brought us to Gerestus when 'twas night,
And there to Neptune we burnt many thighs.
On the fourth day the ships of Diomed
To Argos came. The same wind staid i' th' skies
Till I at Pyle was safe delivered. 165
So came I home, sweet child, and cannot tell
Which of the Greeks came safe home, and which not.

But what has since been told me I know well,
And so far as is reason, you shall know't.
The Myrmidons, they say, came safely home, 170
Conducted by stout Neoptolemus.
And Philoctetes very well did come
Unto his father's house, Pallantius.
Idomeneus to Crete brought all his men
That were not slain at Ilium in fight. 175
How Agamemnon, when come home again,
Was butchered, I need not to recite;
Nor how he came, nor of Ægistus' plot,
Nor yet how bitterly he smarted for't.
'Tis good, you see, to have a son begot, 180
That can revenge his father in that sort.
And you, my friend, that tall are and well made,
Be valiant, and get 'mongst men good fame.
Telemachus then answered, and said:
Nestor, but my case is not the same. 185
Sharp the revenge was of Atrides' son,
And far and wide will matter be for songs,
But from the Gods such power I have none,
To be revenged of the suitors' wrongs.
O friend, said Nestor, since I have been told 190
That many who your mother seek to marry,
Without your leave, do with your house make bold,
And spending of your substance daily tarry,
Is it because you are therewith content?
Or are you forc'd to bear such injury 195
Because your people are against you bent,

Provok'd thereto by some divinity?
But who knows but at last they may be paid
For all the injuries which they have done,
And insolence, by the Achæans' aid, 200
Or peradventure by yourself alone?
For if of you Pallas as careful were,
As carefully she did your father guide
At Troy (a God to man ne'er did appear
So plainly as she there stood by his side.) 205
If Pallas were so kind to you, you'd see
The suitors quickly would forget to woo.
Then said Telemachus, 'Twill never be,
Although the Gods should give consent thereto.
Telemachus, said Pallas, what a word 210
Have you let fall? A man may be with ease,
Though far off, to his native soil restor'd
By any of the Gods, if so he please.
And I at home would rather lose my life
Fighting than sitting, as Atrides died, 215
Slain by Ægistus and his own bad wife,
Basely by them in whom he did confide.
And yet the Gods unable are to save
A man from death, although he be a friend,
Whose end the cruel Fates determin'd have. 220
Then said Telemachus, Let's make an end
Of this discourse. Ulysses' latest day
Determin'd by the Gods already is,
And I to Nestor somewhat else will say;
For three men's ages do but equal his. 225

Nestor, I would fain informed be
How Agamemnon was of life depriv'd.
And Menelaus, where meanwhile was he?
And how Ægistus had the plot contriv'd.
Was it that Menelaus too long stay'd, ²³⁰
Ægistus ventur'd on a better wight?
I'll tell you all the truth, then Nestor said,
And yet what you yourself have guess'd is right.
For why, if Menelaus coming home
Ægistus in the house alive had found, ²³⁵
He never had at Argos had a tomb,
But eaten been by dogs above the ground,
And fowls of prey. Nor had he had the pity
Of the Argive women, nor lamented been,
But lain had i' th' fields far from the city. ²⁴⁰
For why, a viler act was never seen.
For when at Troy we ended had the strife,
Long time it was before we came away;
Then siege laid he to Agamemnon's wife,
And secretly hidden in Argos lay, ²⁴⁵
And she at first refus'd, and counsel took
Of a learn'd man, whom Agamemnon left
Going to Troy his wife to overlook,
But soon Ægistus him of life bereft;
For in a desert island he him kill'd, ²⁵⁰
And left him for a booty to the kites.
And then unto Ægistus she did yield,
And richly were perform'd the wedding rites.
Then on the altars many thighs they burn,

And with them rich men's baubles, and gold stuff, 255
For why, for so unhop'd-for a good turn,
They thought they could not thank the Gods enough.
Now coming Menelaus was and I,
And were as far come as to Sunium,
When Phrontis, his good steersman, chanc'd to die, 260
The best that in a storm ere ship brought home,
And hindrance of his coming this was some
To bury him. But when he put to sea,
And was with all his ships in safety come
Under the windy mountain of Malea, 265
Then an ill passage for them Jove provided;
The wind then whistled, and the water danced,
And into two parts was the fleet divided;
And one part to the coast of Crete advanced,
Where Cydons dwell, near Jordan river's mouth. 270
There in the sea standeth a stone upright,
That breaks the water when it rolls from south,
So that it comes to Phæstus without might;
And there the men came in and sav'd their lives,
But all the ships upon the rock were split. 275
The other part the wind to Egypt drives
With Menelaus. Five ships were in it.
Whilst Menelaus did in Egypt stay,
And visit princes and their gifts receiv'd;
Ægistus made the Argives him obey, 280
And Agamemnon of his life bereav'd;
And sev'n years in Mycene reigned he.
But then Orestes came, whom they not knew,

From Athens to them unexpectedly,
And there the slayer of his father slew, 285
And feasted th' Argives at the funeral
Of him and her. That very day did come
King Menelaus, his ships laden all,
From Egypt, with his costly presents home.
And you, my friend, take heed you do not stay 290
Too long abroad, leaving your goods among
So many knaves that waste them ev'ry day,
And will consume them utterly ere long;
But go to Menelaus, who came last,
And wand'ring has among much people been. 295
A bird could hardly so much sea have pass'd
In a year's time, as wand'ring he has seen.
Therefore to Sparta go with ship and crew,
Or if by land, my coach is ready for ye.
Also my son shall go along with you, 300
And ask of Menelaus all his story.
He's wise. Besides the truth he'll nothing say.
This said, the sun was down, and dark the sky.
Nestor, said Pallas, you before us lay
That to which we have nothing to reply. 305
Now slit the tongues, and let wine temper'd be,
That we may offer to th' immortals all;
The light is gone, and need of sleep have we.
So Pallas said, and they to offering fall.
The waiters then brought water for their hands, 310
And young men to them all brought temper'd wine.
The tongues lay on the fire, each one upstands

And offers wine unto the powers divine.
And when the offering was at an end,
Telemachus and Pallas were about ³¹⁵
To go aboard, and there the night to spend.
But Nestor on the other side cried out,
The Gods forbid that you should lie aboard,
As if I were a man so rude or poor
As not good bedding for a friend t' afford. ³²⁰
Since then I have of rugs and bedding store,
And many sons alive with me at home,
That able are my friends to entertain,
And 'tis Ulysses' son that's to me come,
Surely this night he shall with me remain. ³²⁵
Nestor, then said Pallas, that is right,
And at your house to lodge for him 'tis best.
But at the ship I needs must lie this night,
His purpose to make known to all the rest.
Amongst them there no old man is but I, ³³⁰
The company t' encourage that expect
Telemachus. Not with authority,
But my advice they'll follow for respect.
The next day with the Caucons I must be,
About an old and not a little debt. ³³⁵
And then that he may Menelaus see,
With strong swift horses on his way him set.
This said, the Goddess Pallas went away,
In likeness of an eagle to the skies.
The people star'd, and knew not what to say, ³⁴⁰
And Nestor wond'ring saw it with his eyes,

And took Telemachus by th' hand, and said,
A good man you will be, Telemachus,
And valiant, that are by a God convoy'd;
And this same God that guided you to us, ³⁴⁵
Is none but Pallas, daughter of great Jove,
That did at Troy your father always guide.
Let me and mine, O Goddess, have your love,
And amongst men a noble fame and wide;
A heifer on your altar shall be laid ³⁵⁰
That ne'er bare yoke, a yearling from the field;
And gilt shall be her horns. So Nestor pray'd.
And Pallas hearing, to his prayer did yield.
And Nestor to his house then led them all,
Both sons and sons-in-law, and being there, ³⁵⁵
They sat on chairs and couches in the hall;
Then Nestor bids one fill the temperer
With wine that aged was eleven year,
From out a vessel first uncover'd then.
And when the wine and water mixed were, ³⁶⁰
Then Nestor pray'd and offered. And when
The off'rings to the Goddess ended were,
The rest unto their lodgings went away.
Telemachus by Nestor stay'd was there,
And in a soft and costly bed he lay; ³⁶⁵
And near unto him lay Pisistratus,
Who of the sons of Nestor was the last.
And Nestor in the inmost part of th' house,
Where, by the queen his wife, his bed was plac'd.
Soon as Aurora did the day restore, ³⁷⁰

The old knight Nestor rose up from his bed,
And sat upon the bench before the door,
Of marble white and smooth that glistened.
His father used to sit there before,
King Neleus, but that since he was dead, ³⁷⁵
And that King Nestor now the sceptre bore,
There sat he now, and to him gathered
Were all his sons, Echephron, Stratius,
Perseus, Aretus, godlike Thrasymed,
Pisistratus. (Dead was Antilochus.) ³⁸⁰
Along with them Telemachus they led.
Then to his children Nestor spake and said:
Do quickly, sons, what you shall from me hear.
A vow I made to Pallas must be paid,
Who did to me so visibly appear. ³⁸⁵
Let one of you unto the pastures hie
And bid a herdsman bring a heifer home;
One to Telemachus his ship quickly,
And bid his mates, save two, all hither come;
Another bid the gilder hither come, ³⁹⁰
To gild the sacred heifer's horns with speed;
The rest stay here to look to things at home,
That all things may be ready that we need,
Seats, dry wood, and fair water. So said he,
Then busy were they all. The heifer came, ³⁹⁵
And all Telemachus his company.
The gilder came, Laercus was his name,
And every tool that to his art belongs,
And necessary is, had in his hands;

His anvil, and his hammer, and his tongs. 400
And Pallas also now amongst them stands.
Then fell the man to work on Nestor's gold,
And so elaborate it was when done,
That it might please the Goddess to behold.
Then came in Stratius and Echephron, 405
And by the horns they led the heifer in.
The basin and the ewer, and barley white,
Aretus brought; and with an axe full keen
Stood Thrasymed ready the beast to smite.
Then Nestor pray'd, and from the heifer's head 410
Cut off some hair, and into th' fire it threw.
Then prayed the rest; and barley sprinkled
Upon the fire, and Thrasymed then slew
The heifer with his axe, and cut in twain
The tendons of the neck, and down she fell; 415
And Nestor's wife and daughters shout amain
To see the sacred act performed well.
Pisistratus then cuts the victim's throat,
And up they held it to let out the blood
Into a pail which Perseus thither brought, 420
And to that purpose ready with it stood.
The life together with the blood outflies.
Then from the body they the bowels draw,
And next cut off the shoulders and the thighs,
As is of sacrifice the ritual law; 425
And them slit into two parts they display,
And cover them all over with sweet fat,
Shoulder on shoulder, thigh on thigh they lay,

And Nestor on the altar burneth that;
And with it on the fire black wine he poured. 430
By him a spit was ready with five points.
The fire the thighs, the men th' entrails devoured,
The rest divided was in smaller joints,
To roast on spits. Telemachus the while
Into the bath retired, and was there 435
Well bathed, and anointed with sweet oil
By Polycaste, Nestor's daughter dear,
And in a robe and coat clad gloriously,
And came, as if no mortal he had been,
Into the hall, and sat down Nestor by. 440
The meat now ready straightway was brought in.
Then in the young men came to fill them wine.
When they with flesh and wine were satisfied,
Then to his sons said Nestor, Children mine,
The horses to the coach see quickly tied. 445
Away they go, and to the coach they set
The horses swift; and in it bread and wine
A maid laid in, and with it choicest meat,
Which none but god-fed kings eat when they dine.
Up to the seat then went Telemachus 450
(The seat was large and capable of two)
And after him went up Pisistratus,
And whip and reins he took his hands into.
Touch'd with the whip, the horses take the way,
And all the day long made their harness shake. 455
The sun went down, dark were the streets. Then they
At Pheræ were. And there their rest they take.

There Diocles, Orsilochus his son,
Son of Alphæus them did entertain,
And with fair gifts presented them each one. 460
But soon as morning did appear again,
Their horses to the coach again they tie,
And from the porch drive them into the way,
Touch'd with the whip again away they fly.
The sun now down, and ended was the day.

LIB. IV.

His entertainment in Sparta, where Menelaus tells him what befel many of the Greeks in their return; that Ulysses was with Calypso in the isle Ogygia, as he was told by Proteus.

AND THEN TO Lacedæmon come were they,
And drove up to the house of Menelaus.
At home they found him, for there on that day
A double wedding celebrated was. 5
One of his daughters, fair Hermione,
Whom he before at Troy had promised
Of Neoptolemus the wife should be,
And on this day the same accomplished,
And her he sent unto the Myrmidons, 10
Where reigned he. To Pthia she was brought.
And then the second wedding was his son's,
Whom on a bond-woman he had begot,
And Megapenthes nam'd (for Helen's bed
Fruitless was after fair Hermione); 15
And he Alector's daughter married,
Of Lacedæmon citizen was he.
And now they merry sat that bidden were,
Making good cheer, and hearing voice and fiddle,
And wond'ring at two tumblers that were there,
His entertainment at Sparta by Menelaus, &c. 20

That moving to the time stood in the middle.
Meanwhile by th' horses, th' utter gate without,
Telemachus stood and Pisistratus.
Then Eteoneus by chance came out,
A careful servant of Menelaus. 25
And, having seen them, in he went again,
And being near to where his master sate,
king, said he, there are without two men,
Like great men's sons, with their coach at the gate;
Shall I take out their horses, or shall I 30
Tell them where they may lodged be elsewhere?
At this, Atrides, grieved, made reply:
Eteoneus, sure once you wiser were;
Have we not oft by strangers heretofore,
In our necessity relieved been? 35
And I pray God it may be so no more.
Go, loose the horses, and the men bring in.
This said, he went again, with servants more,
Takes out the horses, ties them to the mangers,
And throws before them provender good store; 40
Sets up the coach, and then brings in the strangers,
Who at the beauty of the house amazed,
(For bright it shined as the moon or sun).
And when they had sufficiently gazed,
To where the bathing-room was, walked on. 45
After they were well washed and anointed,
And clothed with soft nappy cloak and coat,
That they should near him sit the king appointed,
And near unto his throne their chairs were brought.

A maid the golden bason and the ewer 50
To wash their hands, over a cauldron brings.
(The cauldron also was of silver pure);
Another on the table laid good things,
Another bread. The carver also cuts
Of every sort of meat the choicest bits, 55
And them on trenchers on the table puts.
And Menelaus, pointing to it, sits,
And heartily invites them to fall to.
Eat now, said he, we shall have time enough
When you have supp'd, to ask you where and who? 60
Your ancestors are not obscure I know,
Such children are not got by wretched men.
And as he spake he took from his own mess
As much as both his hands could comprehend
Of good chine-beef, and gave it to these guests, 65
And then they laid their hands upon their meat.
But when their hunger and their thirst was gone,
Telemachus, that near sat to his seat,
Whisper'd Pisistratus, You, Nestor's son,
Do you not mark the splendour in this house, 70
Of brass, gold, amber, silver, ivory?
Such sure the house is of Olympius,
So many and so glorious things I see.
But Menelaus heard him. Let, said he,
No mortal man with Jupiter compare; 75
His house decays not, nor goods wasted be.
What men compare with me I do not care;
For why, my goods I paid for very dear,

With pain and peril in my coming home,
And wand'ring up and down at sea eight year, 80
Before I could into my country come.
I was in Cyprus and Phœnicia,
Came to the Cydons and Erembians,
To Egypt, and to Ethiopia,
And to the fertile ground o' th' Libyans, 85
Where ev'ry year the sheep three times do breed,
And all the lambs fall horned from the dam;
Nor master nor his man there stands in need
Of cheese or milk, or tender flesh of lamb.
While I my goods amongst them wand'ring got, 90
I lost my brother, by his wife betray'd,
And therefore in my riches glory not.
And all this to you have your fathers said.
Absent, I lost my house, and much rich stuff;
Had I my fellows sav'd I led to Troy, 95
I'd been content with the third part thereof.
So, all to all, I've little cause of joy:
For all my friends at Troy lost griev'd was I,
And sometimes wept, yet sometimes also not,
For quick of tears is the satiety. 100
But one there is, when he is in my thought,
I neither food nor sleep desire to take;
For all the while we were besieging Troy,
None suffer'd so much for the Argives' sake
As did Ulysses, nor so oft did pray. 105
And more, perhaps, he is to suffer yet;
Long stays he, and whether alive or dead

He be, I can from no man notice get,
Nor from my sorrow be delivered.
Meanwhile, as for a son of life bereft, 110
Laertes weeps; so does Penelope.
Telemachus, whom young Ulysses left,
Spends his best age in pain and misery.
This said, Telemachus before his eyes
Held up his purple robe, the tears to hide, 115
Drawn from him by his father's miseries.
And Menelaus, when he that espied,
Consider'd whether best it were or no
To tell him first what he had heard or seen
About his father, or what he would know 120
To let him ask. But Helen then came in,
Like to Diana in great majesty.
Adreste came in with her, with a chair;
Alcippe a soft carpet lay'd nigh;
Her basket brought in was by Phylo fair. 125
At Thebes, in Egypt, it was given her
By Polybus his wife, Alcandre, when
King Menelaus travelling was there;
And Polybus gave to him talents ten
Of gold, and lavers two of silver fine, 130
And two three-footed cauldrons of good brass.
Then by Alcandre t' Helena divine,
A silver-brim gilt basket given was,
With fine and curiously-spun thread press'd full,
With distaff on it, more thread yet to spin, 135
Ready invested with soft purple wool.

This was the basket Phylo then brought in.
Then Helen sat, and by her husband told
What hitherto had pass'd: I know, said she,
King Menelaus, now I them behold, ¹⁴⁰
The guests that are come to you, who they be.
But shall I tell you what I think, or no?
I'll tell you true. I never yet saw one
So like another, as this man is to
Telemachus, Ulysses' only son, ¹⁴⁵
Whom, when with other Greeks to Ilium
He went, to fetch away this monkey, me,
By bloody war, he left a child at home.
Then Menelaus spake: Since you, said he,
Have put it in my mind, I think so too. ¹⁵⁰
His eyes, his feet, his hands, his head, his hair,
Are like Ulysses', who I'd tell now you
What misery for me he suffer'd there,
But that it makes him weep, and hide his eyes.
Then to Atrides said Pisistratus, ¹⁵⁵
The truth to you, O king, I'll not disguise;
This is Ulysses' son, Telemachus,
But jealous of his tongue, and fearful is,
Before a man experienc'd and wise,
Lest he should say something at first amiss, ¹⁶⁰
And lay his weakness open to your eyes.
Nestor sent me along with him for guide,
Because he so much longed you to see,
And hear what of his father was betide,
And by you holpen and instructed be. ¹⁶⁵

Unhappy is the child whose father's gone,
And this is now Telemachus his case;
For of Ulysses news he can hear none,
Who to defend him left none in his place.
How, how! then said Atrides, I have here 170
The son of one that I esteemed most,
And for my sake suffer'd and did more there
Than any other in the Argive host;
To whom I meant, had we come safely home,
To shew more kindness than to any one 175
Of all the Greeks? As soon as we were come,
I had to Argos brought him and his son,
Built them a city, made both but one state,
And laid the cities round about us waste;
And often there with one another sate, 180
And only death our friendship had displac'd.
But by the Gods these thoughts are render'd vain;
They have Ulysses from his country kept.
This said, they could from tears no more abstain.
Jove's daughter, Argive Helena, then wept, 185
And Menelaus and Telemachus;
Nor could Pisistratus his tears restrain,
But on his brother thought, Antilochus,
That by the fair Aurora's son was slain,
And him rememb'ring, to Atrides spake: 190
Atrides, oft have I heard Nestor tell,
(As oft as we did of you mention make)
That you 'mongst men in wisdom do excel.
I pray you think not I take any pleasure

To act at supper-time the rites of mourning; 195
For that another time we shall have leisure,
Unless we look no more to see the morning.
Not that I weeping for the dead condemn,
Or cutting off of hair. It is a debt
We owe to our dead friends. And one of them 200
My brother is, whom I cannot forget.
He was not of the Greeks the meanest man;
For swift he was of foot, and bold in fight,
(Which you than I much better witness can)
To kill his foe in battle or in flight. 205
Dear friend, Atrides answer'd, you have said
What might an older man have well beseemed
To say and do; and Nestor's stock bewray'd,
Whose wisdom is of all men's most esteemed.
'Tis easy to discern the race of one 210
To whom a happy life the Gods shall grant,
As unto noble Nestor they have done,
Long life, and sons discreet and valiant.
Let's put off for the present tales of sorrow,
And to our meat again our minds apply. 215
Bring water for our hands. Betimes to-morrow
We'll talk of this, Telemachus and I.
This said, Asphalion came in with water.
They wash'd, and on the meat their hands they laid;
But in the meantime Helena, Jove's daughter, 220
An antidote into the wine convey'd,
An antidote that virtue had to keep
The man that drank it mixed with his wine,

So as for all that day he should not weep,
Nor for whatever should befall him whine; 225
No, though his father or his mother died,
Or friend or brother slain were in his sight
By cruel enemies that them envied.
Such was of Helen's medicine the might,
Which t' her in Egypt Thon's wife given had, 230
Where many drugs of wondrous virtue grow,
Some here, some there, and some good, and some bad,
For all men there the art of physic know;
For why, from Pæan sprung are all those men.
The antidote put in, she bad the wine 235
Be borne about. And then she said again:
King Menelaus, offspring of Gods divine,
Descended from the Gods are also these;
And Jove good fortune gives sometimes to one,
And sometimes to another, as he please, 240
For he can do whatever can be done.
Feast then, and merrily together sit,
And please yourselves with stories. I'll tell one,
And which as to the time is not unfit,
Of what at Troy was by Ulysses done. 245
I will not tell you all the pranks he play'd,
But only how he came into the town,
With canvas mantle o'er his shoulders laid,
Bloody with stripes, from no hand but his own;
And by the name of Dectes there did pass, 250
And as a slave went freely up and down,
When such man in the fleet at all none was,

And was to every one but me unknown.
I question'd him, and he at first was shy;
But when I bath'd him and anointed had, 255
And cloth'd, and ta'en an oath of secresy,
He told me what design the Argives had.
Then, having gotten much intelligence,
And many of the Trojan people slain,
He safely to the fleet departed thence, 260
Leaving their wives lamenting there in vain.
But I was glad; for changed had my mind,
And griev'd, by Venus t' have been made so mad,
To leave my child Hermione behind,
And my good husband, when no cause I had. 265
Then Menelaus said: Your story, wife,
Is to the purpose. Countries I have seen
Many; and oft with heroes, in my life,
In councils sitten; but was never in
The place where any like Ulysses sat. 270
I' th' wooden horse I'll tell you what he did,
(No man did ever such a thing as that);
The princes of the army there lay hid,
Death and destruction bearing into Troy.
Some demon then, that was no friend to us, 275
Made you come forth, our council to destroy,
And with you also came Deiphobus.
And thrice about the wooden horse you went,
And called to us ev'ry man by name,
And our wives' voices so did represent, 280
As not to be discerned from the same.

I' th' midst Ulysses, Diomed, and I,
Heard well your call as we together sat,
And ready were to go forth, or reply;
But by Ulysses hinder'd were of that. 285
But Anticlus had answer'd certainly,
Had not Ulysses, when he heard her call,
Laid hand upon his mouth immediately,
And held till you were gone. That sav'd us all.
'Twas much, then said Telemachus, but this 290
Was not enough the man alive to keep,
Though made of steel, whose end determin'd is;
But now, O king, the time is come for sleep.
Then Helen to her women order gave
To see their beds made ready, and lay on 295
Fair purple rugs, and under them to have
Soft blankets, and fine coverlids upon,
Before the house, in chamber o'er the gate.
But in the inmost of the palace lay
King Menelaus with his royal mate, 300
And rose again together with the day.
And when he had himself attir'd and shod,
And hung his trusty sword had by his side,
Out of his chamber came he like a God,
And to Telemachus himself applied. 305
Telemachus, said he, what bringeth you
To Lacedæmon, o'er the sea so wide?
Public or private bus'ness? Tell me true.
Telemachus unto him then replied:
To you, King Menelaus, I am come 310

T' enquire what of my father is betide.
My house is full of enemies at home,
That me consume; and there resolve t' abide.
I' th' fields they fruitless make my husbandry;
My stock they eat; and would my mother wed. 315
This made me come to know the certainty,
Whether my father be alive or dead;
Whether you saw him after he left Troy
Wand'ring abroad (for he was born to woe),
Or of him anything heard others say, 320
Let tenderness hide nothing that you know.
If in the Argive host he useful were,
In council or in battle, when need was,
Tell me the truth, be't never so severe.
To this, much grieved, answer'd Menelaus. 325
Yes, yes, said he, there many enter'd be
Into a strong man's house while he's away,
And are in hope to dwell there constantly,
Though not so valiant as he be they.
As when a stag and hind ent'ring the den 330
Of th' absent lion, lulls his whelps with tales
Of hills and dales, the lion comes again,
And tears them into pieces with his nails;
So shall Ulysses all those suitors slay.
O that the Gods, Apollo, Pallas, Jove, 335
Amongst the suitors let him would one day,
Such as when with Philomelid he strove,
And threw him flat, and made the Argives glad.
If such as then Ulysses should be there,

Short would their lives be, and their wedding bad. 340
But to the matter whereof you would hear,
I can say nothing upon certainty,
And my own knowledge, but what I was told
By Proteus. And tell I will no lie,
Nor anything of what he said withhold. 345
Before the land of Egypt Pharos lies,
An island, and therein a haven good
Against whatever wind shall chance to rise;
And ready to depart, my ships there stood;
A day's sail distant stands it in the main; 350
But 'cause the hecatomb I offer'd not,
The Gods a long time did me there detain,
For they are angry when they are forgot.
There twenty days together we were pent,
Though fain we would have put again to sea; 355
And our provision had quite been spent,
But that I then met with Idothoë.
She daughter is of Proteus, and he
A herdsman old of Neptune is, and has
The charge his sea-calves kept and fed to see. 360
His daughter met me when alone I was;
My company, their dinner to provide,
With angle rods were fishing on the strand.
Then said she to me, standing by my side,
Why stay you here, and nothing take in hand 365
To help yourself, as if a child you were,
Or negligent, or loved misery,
Suff'ring yourself to be so long pent here?

Or can you no way find to be set free?
What God you be soever, answer'd I, 370
Thus much unto you I must plainly say,
That in this isle I stay unwillingly,
And for my freedom to the Gods I pray.
But tell me you (for Gods know everything)
What God is it that to this place me tied, 375
And what it is that must me from it bring?
I'll tell you then, said she, and nothing hide.
By an old Sea-God haunted is this isle,
Call'd Proteus, that nothing says untrue,
Servant to Neptune, whom if by some wile 380
You could but catch and hold, he'd answer you
To all you ask, and he my father is.
He'll tell you how to get your ships to sea,
And how you shall get home. He knows all this,
And what's there done. So said Idothoë. 385
But how, said I, is't possible for man
Upon a God immortal to lay hold,
When he, foreseeing it, avoid it can,
If how to do't he be not by you told?
I'll tell you, said she, how it may be done. 390
Hidden in the curls of the sea each day
Brought in by Zephyrus, he lands at noon,
And on the sand himself to sleep will lay;
About him will his footless sea-calves lie,
And of the brine abominably smell. 395
And thither bring you in the morn will I,
And how to place yourselves instruct you well;

For three more must come with you, lusty men,
Whom you shall choose from out your company.
The old Sea-God his flock will number then, 400
And, having done, i' th' midst of them will lie,
Just as a shepherd lies amongst his sheep.
Now waver not, but bold and constant be.
As soon as you shall see he is asleep,
Lay hold on him, and keep it constantly, 405
For he in divers shapes will with you struggle.
He will be any serpent that he please;
Himself he'll into fire or water juggle;
Therefore hold fast, lest he your hands disease.
When of himself he shall contented be, 410
In his first form the matter to debate,
Take off your hands, and set the old God free.
Then of your business him interrogate,
What God it is that hath your hurt contrived,
How you shall put to sea, which way go home. 415
This said, into the sea again she dived.
Then, full of thoughts, back to my ships I come,
And supp'd, and when we supped had 'twas night.
Then slept we by our ships upon the sand,
But when Aurora had brought back the light, 420
Then went I with my three men to the strand,
And prayed to the Gods: my men I chose,
Such men as for the purpose fit I thought.
Idothoë then from the sea arose,
And in her hand four sea-calves' skins she brought 425
All raw, her father thereby to betray.

And with those skins upon us on the shore,
Scrap'd hollow by her, like sea-calves we lay,
And there our lodging had been very sore,
(For so abominably do they stink, ⁴³⁰
That no man near them can endure to lie.
Is it good lying with a whale, d'ye think?)
But that she for it had a remedy.
Ambrosia she with her brought, and laid
The same unto our noses one by one, ⁴³⁵
Which the ill savour of the fish allay'd.
And thus we lay expecting till 'twas noon;
Then all at once the sea-calves came ashore,
And there themselves they bedded orderly.
At noon came Proteus, and counts them o'er, ⁴⁴⁰
And first were counted my three men and I.
Then lay he also down, and by and by
He fell asleep. Then we unto him ran,
And laid hands on him with a hideous cry,
And he to shew his wondrous art began. ⁴⁴⁵
A shaggy lion first he seem'd to be;
And then a dragon; then a leopard;
And then a boar; then water; then a tree;
But still we kept our hold, and press'd him hard.
He weary was at last, and then he said: ⁴⁵⁰
Atrides, how came you by so much skill
To hold me thus? What God has me betray'd?
What needed you to vex me? What's your will?
What need, said I, have you from me to hear,
That bound am to this isle, and know not how ⁴⁵⁵

To put to sea, nor what God holds me here,
When you can tell me (for Gods all things know)?
Then back, said he, to Greece you cannot come,
Till you to Egypt do return again,
And pay to all the Gods a hecatomb; 460
That done, you shall pass safely o'er the main.
Thus Proteus said. But that I must go first
Back into Egypt, an ill and long way,
My heart to hear it ready was to burst.
'Tis hard, said I, but I'll do all you say; 465
But tell me of the Argives first, if they
With their good ships came all in safety home,
That I and Nestor left behind at Troy,
How many by the way they lost, and whom?
Some of them 'scap'd, said he, and some are lost; 470
But of the princes lost are only twain
In their return. Upon the Trojan coast
You know who died; and one the Gods detain.
First Ajax' ships by winds are laid aground
At Gyræ, rocks that on the deep look down, 475
And 'gainst the sea protection there had found,
However Pallas did upon him frown,
But that a high provoking word he spake.
I'll pass, said he, although the Gods say no.
And Neptune then the rock he sat on brake; 480
Both he and it into the water go,
Where, when he had drunk brine enough, he died.
Your brother also safely pass'd the sea,
And came to Argos (Juno was his guide).

And when he was come near to mount Malea, 485
Forc'd by foul weather, he disbarked, where
Thyestes formerly his age had spent,
But now his son Ægistus dwelled there.
The Gods then chang'd the wind, and homeward went.
Full glad he was, and kiss'd the ground for joy, 490
And from him fell the tears abundantly.
Ægistus, that long sought him to destroy,
Had plac'd a man on purpose to descry
Th' arrival of the fleet, whom he had hired
To watch upon a hill a year together, 495
For talents ten of gold, that he required,
And tell him when the fleet from Troy came thither.
The watchman saw them, and t' Ægistus went,
And gave him notice of their coming in.
Ægistus then, t' effect his bad intent, 500
Chose twenty lusty men, and them within
An inner room he placed, out of sight,
And a great supper bids his men provide;
Then down went, Agamemnon to invite,
With horses and with coaches to th' sea-side, 505
And brought him up to supper in great state;
Then rose the traitors that in ambush lay,
And killed him, as he at supper sate,
Nor any man alive went thence away,
That with Atrides or with him took part. 510
When of his story he had made an end,
To break with pity ready was my heart;
In streams down on my cheeks the tears descend.

I wished never more to see the sun,
And weeping, on the sand myself I roll'd. 515
But when my lamentation was done,
Then Proteus said again, Your weeping hold,
Tears are no remedy, but make haste home.
There lives Ægistus, or if he be slain
Already by Orestes, you will come 520
To his interment. This cheer'd me again,
And then I asked further of him this:
Since you have told me what's become of two,
Tell me the third that stays abroad, who 'tis,
Alive or dead, though that will grieve me too. 525
It is, said he, Ulysses, whom I saw
In th' island where Calypso dwells, o' th' shore
Weeping, who fain would come to Ithaca,
But with him neither has a ship nor oar.
And you, O Menelaus, shall not die 530
In Argos (for 'tis otherwise decreed)
But be convey'd t' Elysium. For why,
Of Jupiter you wedded have the seed.
There humans lead their lives in greatest ease;
No snow nor frost there is; refreshed there 535
They are by zephyrs rising from the seas,
And Jove's son Rhadamanthus dwelleth there.
This said, into the sea he went again,
But I, with thoughts confused in my head,
Returned back unto my ships and men, 540
And soon as we had supp'd, the night was spread.
Then back again into the Nile we go,

And offer'd to the Gods a hecatomb;
When we their anger had appeased so,
For Agamemnon there we rais'd a tomb. 545
When this was done, for Argos we set sail,
And quickly to our native soil we came;
Th' immortal Gods gave us a lusty gale,
And all the way continued the same.
Telemachus, you've heard all I can say, 550
But must not therefore straightway take your leave;
Until th' eleventh or twelfth day you'll stay,
The presents I intend you to receive.
A chariot you shall have and horses three,
And a fair cup emboss'd to offer wine, 555
That in your vows you may remember me.
Then said Telemachus, I here have lien
Long time already, and my men at Pyle
Are weary of expecting me; else I
Could stay a year, and never all that while 560
My mind have on my house or family,
So much I taken am with your discourse.
But let my present be some monument;
To Ithaca I'll never carry horse,
They for the plains are more convenient; 565
Large plains, which you have here in many places,
And where store is of wheat, and rice, and lote.
In Ithaca there is no ground for races,
Nor pastures good enough to feed a goat.
In th' isles about it, gallop can no horse; 570
In th' isle itself, nor gallop nor be fed.

When he had made an end of his discourse,
Atrides, smiling on him, strok'd his head.
'Tis spoken, said he, like a gallant man,
And that descended is of noble blood. 575
I'll give you other presents, for I can,
In place of these, that shall be full as good.
A monument kept in my treasury,
Of massive silver a fair temperer,
The work of Vulcan, which was given me 580
At Sidon, by the king, when I was there.
Whilst they together thus discoursing staid,
The bidden guests, fat sheep, rich wine bring in,
And bread their wives upon the table laid,
And about supper busy were within. 585
And now the suitors at Ulysses' house
Were throwing of the stone and darts. And by
Antinous sat and Eurymachus,
Chief of the woo'rs. Then came Noemon nigh:
Unto Antinous he spake, and said, 590
When will Telemachus return from Pyle?
My ship I lent him, and am now afraid
I shall have need of her myself the while.
For over into Elis I must pass;
Twelve mares of mine there go, and with the same 595
Twelve unbroke mules, with all their foals, at grass;
And some of them I would fetch home and tame.
At this they star'd. For never dreamed they
That in good earnest he would go to Pyle,
But in the fields would with some herdsman stay, 600

And there from us conceal himself awhile.
Antinous then ask'd, When parted he?
What company went with him hence? His own
Servants and husbandmen, for that might be,
Or young men of the best account i' th' town? 605
And tell me further, was it willingly
You lent your ship, or were you forc'd thereto?
To this Noemon did again reply:
I lent it willingly. What should I do?
Who would not yield to such a man's request, 610
When he has need and asks, as well as I?
And with him went of Ithaca the best,
And Mentor chief of all the company;
If he it were not, 'twas some deity,
For, which is strange, I saw him yesterday 615
Before the sun was mounted half the sky,
Yet went the ship the night before away.
This said, he went his way. Antinous
And th' others sat there yet, and wondered.
The suitors left their sport, sat down, and thus 620
Antinous the case then opened,
And in an angry tone, with fiery eye,
'Tis true, said he, Telemachus has done
A work to us of great indignity.
We thought he never could that way have gone. 625
We many are, and men; yet he, a boy,
Has got a ship, and of our men the best.
But may Jove him, before he us, destroy.
Give me a good ship, ere we be oppress'd,

And twenty able men, and in the strait 630
‘Twixt Ithaca and Same I will lie,
And for their coming back from Pylus wait,
And entertain him with hot coming by.
The suitors all were pleased with the plot,
And then they rose together and went in. 635
But Medon had heard all, which they knew not,
For he without the court was, they within.
And to inform Penelope he went,
And when she saw him coming in a door,
Medon, said she, what, are you hither sent 640
To bid my maids trouble themselves no more
With how the suitors they shall entertain;
But only for themselves make ready meat?
Lest when they hither come to sup again,
It prove the last that they shall ever eat. 645
Telemachus his wealth you wasted have,
As if your fathers never told you how
Ulysses with them did himself behave,
That never did unkindness to them show
In deed or word. Although a liberty 650
Kings often take, one man to love or hate
Above another, without telling why;
But he cause of offence to no man gave.
But of good turns received heretofore
Your nature altogether senseless is. 655
queen, said Medon, would it were no more;
But I must tell you somewhat worse than this.
The suitors have conspir’d to kill your son,

(Which Jove avert,) as he is coming home.
For he to Pylus is and Sparta gone 660
T' enquire what of his father is become.
This said, Penelope was stricken dumb,
And filled were with tears her eyes. But when
Her voice at last again was to her come,
She spake to Medon, and him asked then, 665
Medon, said she, why went my son away?
What need had he upon the sea to ride?
Meant he his name amongst men to destroy?
And Medon to her then again replied:
I cannot tell. Perhaps encouraged 670
By some o' th' Gods, or presage of his own
T' enquire about his father, whether dead,
Or on what coast he is by fortune thrown.
This said, her tears she could no longer hold,
And lets herself sink down upon the sill. 675
Then came her maids about her, young and old.
Did ever Gods, said she, bear such ill will
To any woman as they bear to me?
Why deal they worse with me than with the rest?
O my dear husband! What a man was he! 680
All manly virtues lodged in his breast.
Through Hellas and through Argos known was he;
Of him the Gods unkind me first bereft;
And now away my child must taken be,
That to sustain the house at home was left. 685
Sluts that you are, and of his going knew,
Why was it not to me discovered?

For had I of it been inform'd by you,
I had him stay'd, or he had left me dead.
To Dolius let one or other go 690
(The servant which my father gave to me,
And with Laertes at the lodge is now,
And of my garden has the custody)
And tell him what the suitors are about,
That he may to Laertes tell the same; 695
And he unto the people may come out,
And them against these wicked men inflame.
Then spake Euryclea: Dear child, said she,
Kill me, or let me live as you think best;
No longer shall the truth concealed be. 700
I knew all this. So did none of the rest.
I furnish'd him with all that he commanded,
Sweet wine and flour, but first he made me swear,
I would not tell you till it was demanded,
Or that the same by others told you were; 705
For fear lest with much weeping hurt you take.
But wash, put on clean garments, and up go
Into your chamber, and your prayers make
To Pallas, who your son to save knows how.
The griev'd old man, why should you further grieve? 710
Hated is not Arcesius his seed
By all the Gods. For I cannot believe
But some of them will help them in their need,
And both their houses and their lands protect.
This stopp'd her sobbing, and her weeping stay'd. 715
Then went she up, herself she wash'd and deck'd,

And to the Goddess Pallas thus she pray'd:
Goddess, if you well accepted have
The victims by Ulysses sacrificed
Upon your altar here, his son now save, 720
And bring to nought what th' wooers have devised.
Her prayer granted was. Then shouted they.
The suitors heard it in the hall, and one
T' another said, 'Tis for her wedding-day;
She knows not we intend to kill her son. 725
Thus said they, but upon no ground at all.
Alcinous then spake. Madmen, said he,
Such words as these what mean you to let fall?
What if within they should reported be?
Come rise, thus, gently, and the work effect 730
To which we all have given our consent.
Then did he twenty able men elect,
And down unto the water side they went,
And first of all they laid their ship afloat,
And in it with white sails the mast they laid, 735
And fit their oars. Then in their arms were brought:
The mast then rear'd was, and the sails display'd.
Then went they t' anchor in the open sea,
And stay'd all night. And then aboard they eat.
Then to her chamber went Penelope 740
Grieving, and tasting neither drink nor meat,
Casting about whether more likely 't were
Her son should 'scape the suitors' hands, or die.
Just as a lion that enclosed were
With toils about, would cast which way to fly. 745

When her sad reck'ning sleep had blotted out,
Dissolv'd her strength, and closed had her eyes,
Pallas another bus'ness went about.
She made an Idol in a woman's guise,
Like to the daughter of Icarius, ⁷⁵⁰
Wife of Eumelus, (at Pheræ dwell'd he),
And sent the same unto Ulysses' house,
T' allay the sorrow of Penelope.
In at the keyhole then the Idol goes
Into her chamber, and stood at her head. ⁷⁵⁵
Penelope, said it, amidst such woes
How can you sleep? But now be comforted.
You must no longer weep nor grieved be,
For from the Gods you no such cause shall have,
For of your son the safe return you'll see. ⁷⁶⁰
To this Penelope then answer gave.
Sister, said she, 'tis strange to see you here;
You come but seldom. For far off you dwell.
And now you bid me weeping to forbear,
When how much cause I have you cannot tell. ⁷⁶⁵
A good and noble husband I have lost,
That had a lion's heart within his breast,
Hellas and Argos of his valour boast,
What virtue is there that he not possess'd?
And now my child at sea is in a tub, ⁷⁷⁰
And has no skill in fight or parliament:
I fear extremely lest he meet some rub,
For him more than for th' other I lament.
What may befall him on the sea I dread,

And what at land, if e'er to land he come, 775
For many foes he hath that wish him dead,
And wait to kill him as he cometh home.
To this again replied the Idol dim,
Take courage, be not frightened for your son;
He has a guide that taketh care of him; 780
A better would be wished for by none.
'Tis Pallas. For of you she pity takes,
And what I said, I said by her command.
Penelope again this answer makes,
Whoe'er you be, answer one more demand: 785
Is my poor husband yet alive, or no?
Then said the Idol, That I do not find,
Nor will I tell you what I do not know.
Then through the keyhole went, and turn'd to wind.
Then wak'd Penelope, and joyful was 790
T' have had a dream so evident and clear.
Then o'er the humid plain the suitors pass,
Destruction to Telemachus to bear.
'Twixt Ithaca and Same, middle way,
There lies an island, and but small it is, 795
Yet hath it on each side a good safe bay.
There watch'd the wooers. 'Tis call'd Asteris.

LIB. V.

The Gods in council command Calypso (by Mercury) to send away Ulysses on a raft of trees; and Neptune returning from Ethiopia, and seeing him on the coast of Phæacia, scattered his raft; and how, by the help of Ino, he swam ashore, and slept in a heap of dry leaves till the next day.

UP ROSE AURORA from Tithonus' bed,
Before the Gods and men to bear her light.
The Gods were then to council gathered,
And Jove amongst them of the greatest might. 5
And there before them Pallas open laid
The painful life Ulysses did endure.
Jove, and all ye blessed Gods, she said,
Henceforth his people let no king enure
To gentle government, but keep them down, 10
And to their honesty no longer trust,
That of Ulysses are forgetful grown,
Whose government so gentle was and just.
And now he pent up lieth in an isle
Where dwells Calypso; and to come away
Calypso sends away Ulysses on a raft of trees, &c. 15
Has neither ship nor men, and all the while
Weeping for sorrow forc'd he is to stay.
The suitors also seek to kill his son,
And lie to meet him in his coming home;

For why, to Pyle and Sparta he is gone, 20
To hear what of his father is become.
Why, child, said Jove, why say you this to me?
'Twas you that sent Telemachus away;
And you consenting were to our decree,
Ulysses should come back and th' wooers slay. 25
Go you and bring Telemachus from Pyle,
And send the suitors home that lie in's way;
And Mercury, said he, go you the while
And tell the nymph Calypso what I say.
The Gods in council sitting order'd have, 30
Ulysses shall return to Ithaca.
And first upon a raft himself shall save,
Without a convoy in Phæacia
In twenty days; and there be honoured,
And to his country richly sent away, 35
With brass, and gold, and garments furnished,
More than his share had mounted to at Troy,
Though he had brought it thence all safely home;
For why, by destiny ordain'd it is
That to his friends he honourably come. 40
No sooner Jupiter had spoken this,
But that his shoes upon his feet he binds,
Ambrosian, golden shoes, wherewith he flies
On land or water, swifter than the winds.
Then takes the rod wherewith upon the eyes 45
Of mortals he lays on or takes off sleep,
And with his rod in hand jump'd down to th' hill
Pierius, and thence into the deep;

And over the wide sea he passed, till
At last he was arrived at the isle 50
Where was the nymph Calypso resident;
And like a cormorant was all this while
That hunts the fishes. Then ashore he went,
And coming to her rock found her within.
Upon the hearth a fire was of sweet wood, 55
There did she sing, and as she sung did spin.
About the cave many fair trees there stood,
Beech, poplar, and the cyprus of sweet smell,
And many birds, hawks, and sea-crows, and owls,
Within their branches used were to dwell; 60
And, such as haunt sea-water, other fowls.
The rock itself with vines was covered,
And grapes abundance hanging were thereon;
Four springs a-row four ways clear water spread.
Sweet meadows were about it many a one, 65
Stuck full of violets and flowers gay,
Which, though a God, he saw with admiration,
And for a little while he there did stay,
Pleas'd with the beauty of the habitation,
And then into the spacious cave he goes. 70
At the first sight Calypso knew him well,
For perfectly one God another knows,
How far soever they asunder dwell.
Ulysses now was gone out to the shore,
To look upon the sea that kept him in, 75
To sigh and weep as he had done before;
At Hermes' coming he was not within.

To Hermes, seated in a glistering chair,
The Goddess fair Calypso then began:
Tell me, beloved Hermes, your affair, 80
If it be possible it shall be done.
Come nearer, and with food yourself restore.
Then sets she him a table, and lays on
Of nectar and ambrosia good store.
Then Hermes took his food, and having done, 85
Goddess, said he, since me, a God, you ask,
You may be sure I tell you shall no lie.
Jove sent me 'gainst my will; for such a task
Who undertake would, think you, willingly?
For, first, a horrible long journey 'tis; 90
And then no town to bait at by the way
On hecatomb or lesser sacrifice.
But what God is there dares Jove disobey?
There is, said Jove, a man that stay'd is here,
Of th' Argives that besieged Ilium 95
The most unhappy. There they stay'd nine year,
The tenth they took it, and were coming home;
But by the way they Pallas had offended,
And she against them raised stormy weather,
In which Ulysses' mates their lives all ended, 100
But he himself by storms was driven hither.
Him Jupiter would have you send away;
For he is destin'd not to die from home,
Nor any longer from his friends to stay,
But back unto his house and country come. 105
Calypso, troubled at it, answered:

Malicious ye Gods, and jealous are,
That think much Goddesses should mortals wed.
See but how hardly did Orion fare,
After Aurora was become his wife. 110
How angry at him, O ye Gods, were you,
Until Diana took away his life,
With shafts invisible before 'twas due.
And so when Ceres with Iasion
Themselves delighted with the gift of love, 115
How soon it was by th' other Gods made known,
And with a thunder-bolt he slain by Jove!
And now they angry are with me. And why?
Because I taken have a man to bed
Who in the sea had perish'd, had not I 120
Receiv'd him in my house and cherished.
For when his ship with thunder Jove had split,
And all his company away were cast,
Him on the mast unto the rudder knit,
The wind and waves brought hither at the last; 125
And here I him receiv'd and loved well,
And meant to give him immortality.
But since Jove will not let him with me dwell,
And I cannot resist him, farewell he.
But o'er the sea I shall not him convoy, 130
For in my power I have no ship, nor men
That have the art to walk in liquid way;
Prompt him I will how to get home again.
'Tis well, said Mercury; send him now hence;
The manner how, is left unto your will. 135

Be wise, and do not Jupiter incense,
Lest he upon you bring a greater ill.
This said, away went Mercury. And she
Unto Ulysses went to the sea-side.
Himself lamenting sitting there was he, ¹⁴⁰
And when she came his eyes were not yet dried.
For now he lov'd the nymph less than before,
And lay with her a-nights unwillingly;
A-days he weeping sat upon the shore,
And on th' unbounded sea oft cast his eye. ¹⁴⁵
Then to him said the nymph: Poor man, alas!
No longer weep, but fall your work unto;
For on a raft you are the sea to pass,
And I will tell you what you are to do.
Cut down great trees, and them together join ¹⁵⁰
With bands of brass; and on them make a deck;
And on it I will lay both bread and wine,
And water fresh, hunger and thirst to check.
And garments I will give you, and a wind,
That you may safe go home and speedily; ¹⁵⁵
Unless the Gods be of another mind,
For stronger they and wiser are than I.
At this Ulysses troubled was, and said,
I looked for a convoy me to waft;
For on this sea a man would be afraid ¹⁶⁰
Though in a ship; much more upon a raft.
I will not therefore pass upon a raft,
Unless to do me no more hurt you swear.
And when he had said that, Calypso laugh'd,

And of his head she stroked down the hair. 165
You are, she said, a true bird of the nest,
As by your answer very well I see:
By Heaven and by Earth I do protest,
And Styx, which is the greatest oath can be,
I'll never anything hereafter do 170
That shall procure you hurt in any case;
And what at present I advise you to,
I would myself do, were I in your place:
For why, the Fates I also must obey,
And in my breast no iron heart I bear. 175
This said, she turn'd and homeward took her way,
And on her steps Ulysses follow'd her.
When they were come together in the cave,
She made him sit where Hermes sat before,
And meat and wine, the best that mortals have, 180
The maids upon the table laid good store;
Before Calypso they laid other meat,
Ambrosia and nectar, food divine;
There face to face they sit and drink and eat.
When she refresh'd him had with meat and wine, 185
Noble Ulysses, said she, that long so
To see your house and wife without delay,
If what you were to suffer you did know
Before you there arrived, you would stay
And live with me here, and immortal be. 190
Nor than that wife, for whom you take such care,
Less fairer or less wise can you think me;
Women with Goddesses cannot compare.

Goddess, said he again, I know all this.
Penelope I not compare with you 195
In form or stature. For she mortal is,
And you immortal. Yet, though this be true,
I cannot chuse but wish myself at home.
And though I were to perish in the deep
By th' anger of the Gods, and never come, 200
I'd rather suffer that, than always weep.
For patience long since I learned have
Sufficiently in tempest and in fight.
This said, they both in one part of the cave
To sleep went, where in love they took delight. 205
And when the morning was again display'd,
Ulysses cloth'd himself with cloak and coat;
The nymph herself in a great robe array'd
Of dainty stuff with gold all over wrought,
Which on her loins a golden girdle tied, 210
And cover'd with a golden scarf her head.
And how Ulysses o'er sea so wide
Should safely pass, she there considered.
Then puts a plainer and an axe in's hand,
Two-edged, with a haft of olive-tree. 215
Then show'd him where the greatest trees did stand,
And all the way before him walked she.
And when they were arrived at the wood,
Beeches they find, poplars, and fir-trees high,
Already dry, that lie light on the flood. 220
Calypso to her cavern back did hie.
Meanwhile Ulysses twenty trees brought low,

And hewed them, and plain'd them skilfully,
And laid them on the ground all in a row,
At corners square, and of one length they lie. 225
And then with wimbles back Calypso came;
Then pierced them, and set them one to one,
And with strong joints and nails fast bound the same.
And by the time that all this he had done,
As a good ship as broad it was and long. 230
Then for his decks he placed stoops upright
On every side, and many to be strong;
And laid upon them planks at equal height.
Then made his mast, and set it up on end,
His rudder, and a place to sit and guide, 235
And laid on boughs from waves it to defend,
And all his cordage made of good cow-hide,
And then with levers set his raft afloat.
Four days in making of the raft he spent;
When he had done, and all his work had wrought, 240
Upon the fifth the nymph away him sent.
But first she bath'd him, and with clothes array'd,
Fine and perfum'd. Then wine of pleasant taste
One goat-skin full upon the raft she laid,
And one of water, greater, by it plac'd; 245
And sweetmeats, and good flesh of ev'ry kind.
And after he his sails had hoist and spread,
She fill'd them with a warm and cheerful wind.
Then he astern sat down and governed,
And on Bootes look'd, and Pleiades, 250
And on the Bear, which people call the Wain,

Which dogs Orion rising from the seas,
But she herself ne'er dives into the main.
This Bear she bade him leave on the left hand.
Then sev'nteen days he sail'd, on th' eighteenth day 255
He came in sight of the Phœacian land,
In that part where it nearest to him lay,
Which look'd as 'twere upon the sea a skin.
But now by Neptune, who returning was,
Ulysses' raft from Solymi was seen, 260
For o'er those mountains Neptune was to pass;
Who, wounded at the sight, with anger keen,
Thus said unto himself: What, what, I find,
While I in Ethiopia have been,
The Gods about this man have chang'd their mind. 265
The isle Phœacia is near at hand,
In which he destin'd is himself to save.
But yet, I think, before he be on land,
He struggle shall with many a lusty wave.
Then with his trident he the sea enraged, 270
And made a night of clouds the sea upon,
And 'gainst Ulysses all the Winds engaged,
And from their quarters they came out each one,
Eurus, and Notus, Zephyr, Boreas,
Each one a mighty wave against him rolled. 275
And then Ulysses' heart near broken was,
And with himself, himself he thus condoled.
Ah me, what will become of me at last!
I fear the nymph Calypso all this knew,
Who told me then that as I homeward pass'd 280

I should meet danger. Now I find it true.
With what thick clouds Jove cover'd has the sky!
In what a tumult is the sea! And how
On ev'ry side the winds the water ply
And storm! My death, I see, is certain now. 285
Thrice, four times, Argives, happy were you, who
For Agamemnon's sake were slain. Would I
At Troy in battle my life lost had too,
I' th' show'r of spears about Achilles' body;
Then had I had a noble funeral, 290
And great among the Greeks had been my fame.
But now a wretched death will me befall,
For ever will unheard of be my name.
This said, he dash'd was 'gainst a point of land,
Which with great force whirled the raft about. 295
And then the rudder flew out of his hand;
And he into the water was cast out.
Of divers winds then followed one great blast,
And sail and tackle o'er-board far off bears,
And in the middle breaks in two the mast, 300
While he was in the sea o'er head and ears;
At last he rais'd his head above the pickle,
(His heavy clothes awhile had hindered him),
Then from his hair into his mouth did trickle
The brine, which he spits out, and falls to swim. 305
And when he had his raft recovered,
And plac'd himself i' th' midst, then both together
The wind uncertainly them carried
From place to place, now hither and now thither;

Just as the wind in harvest blows pease-straw 310
Upon the plain field whilst it holds together;
So on the sea without a certain law
Ulysses' raft was driven by the weather.
In this distress by Ino he was seen,
A sea-nymph and immortal she was then, 315
Though woman, Cadmus' daughter, she had been.
And now in figure of a water-hen
She sat upon the raft and to him spake.
What meaneth Neptune that he hates you so?
Do what he can your life he shall not take; 320
Do what I bid you. Off your garments throw,
And quit the raft; and to Phœacia
Swim with your hands, and there you shall find rest.
For so it is ordain'd by fatal law.
Here, take this scarf; apply it to your breast, 325
And fear not death. But when you come to land
Throw't in the sea as far off as you can,
Then turn. This said, she put it in his hand,
And diving there alone she left the man.
Ulysses grieving to himself then says, 330
What is it now I am advis'd unto!
Ah me! Some other God now me betrays
To quit my raft. I know what I will do.
For since my refuge is so near at hand,
Such counsel I will not too soon obey; 335
But do what does with greatest reason stand.
Upon my raft I mean so long to stay
As it shall hold together and be one.

But when the wind has broken it in pieces
I'll swim; since better counsel I have none. 340
While with himself consulting was Ulysses,
Neptune with wind the water sets upright
Into a high and formidable wave,
And threw it on the raft with all his might,
Which all the parts thereof asunder drave. 345
Just as the wind scatters a cock of hay,
So scatter'd was Ulysses' raft of trees;
Whilst he on one of them astride did stay,
And of his garments there himself he frees.
Then Ino's scarf applies he to his breast, 350
And on the troubled sea himself he laid
With open arms. To swim he now thought best.
Which Neptune seeing, thus unto him said:
Go wander now upon the sea in woe,
And do not make account that this is all. 355
This said, away to Ægæ did he go,
Where many men that need him on him call.
When he was gone Pallas the winds did lay,
All but a lusty gale of Boreas,
And broke the waves before him all the way, 360
That to Phœacia he might safely pass.
Two nights and days perpetual he swam,
And was of drowning all the while afraid.
But when the morning of the third day came,
The air was calm, and all the winds allay'd. 365
And now unto the isle he was so nigh,
That from a high wave he could see the shore,

And glad he was. As when about to die,
Lien has a man long time by sickness sore,
Is by the Gods recover'd suddenly, 370
Glad are his children; so Ulysses was
To see the so-much wish'd-for land so nigh,
And thither made what haste he could to pass.
When he was gotten so near to the shore
That one might hear another when he calls, 375
Torn by the rocks he heard the water roar.
(Loud is the sea when on hard rocks it falls.)
There neither haven was nor place to land,
But upright banks and cliffs and brows of stone.
And everywhere too deep it was to stand. 380
And now again quite was his courage gone,
And speaking to himself he said: Ah me,
This is the island. Jove has brought me to't,
That what must help me only I might see,
But not upon it ever set my foot. 385
There is no landing here. Rocks high and steep,
And inaccessible are all about.
The sea below so rugged is and deep,
That from it there will be no getting out.
If I should try, some mighty wave, I fear, 390
Against some rugged rock will carry me,
And make me find but woful landing there,
Amongst so many sharp stones as there be.
But if I swim along the coast to find
Some port or beach, though stormy, to land on, 395
I fear I shall again by some great wind

Far off from shore into the sea be blown;
And there by some great fish devoured be
(For many such are fed by Amphitrite)
Which Neptune may command to swallow me; 400
For well I am acquainted with his spite.
While he thus doubted, came a mighty wave
That cast him to the bank amongst sharp stones.
But for the counsel Pallas to him gave,
He torn his skin and broken had his bones. 405
A rocher with his arms he then embrac'd,
And held it till the wave roll'd back again;
And thought the danger of it now was past,
But then the same wave bore him to the main.
As looks a polypus when he is dragg'd 410
From out his hole, stuck full of stone and sands;
So, when Ulysses left his hold, were shagg'd
With broken skin all over both his hands.
And now, had not Athena giv'n him wit,
He perish'd had. For up his head he puts 415
Above the briny sea, and having spit,
He with his stretched arms the water cuts,
And swam along the shore; but kept his eye
Continually upon the land, to see
If any landing place he could espy. 420
At last before a river's mouth came he;
And knew it was a river's mouth. For there
Within the land smooth water might be seen,
And 'twixt the rocks a pause there did appear;
And here Ulysses thought fit to go in. 425

And in his mind unto the River spake:
Hear me, O king, from Neptune's rage I fly,
And of a man distress'd some pity take,
That at your knee and stream here prostrate lie;
Th' immortal Gods their suppliants respect, ⁴³⁰
When they before them humbly lay their want;
Whate'er your name be, do not me neglect
That am afflicted, and your suppliant.
This said, the stream stood still and sav'd the man.
But weary were his knees and arms, and brine ⁴³⁵
Abundance from his mouth and nostrils ran,
And all his body swell'd was. And in fine,
Speechless and breathless was he, like one dead.
But when he came unto himself again,
The scarf he to the stream delivered, ⁴⁴⁰
Which carried it again into the main.
And Ino took it then into her hand.
Then on a bulrush-bed himself he laid,
And, glad he had escaped, kiss'd the land.
But fearing still, unto himself he said, ⁴⁴⁵
Ah me, what will become of me at length!
For in the river if I spend the night,
So much already wasted is my strength,
With frost and dew I shall be killed quite.
If up the hill I go into the wood, ⁴⁵⁰
And in some thicket there lie warm and sleep,
I fear I shall for beasts and fowls be food.
At last concludes into some wood to creep.
A wood there was unto the river nigh;

Two thickets in it were; of olive one, ⁴⁵⁵
The other was of Phylia close by,
So twin'd they were together that nor sun,
Nor wind, nor rain, to th' ground could find a way.
Between them of dry leaves a bed made he,
And over head and ears there close he lay; ⁴⁶⁰
For leaves there were enough for two or three,
To keep them warm although cold weather 'twere.
As when a man takes up a brand of fire
In country-house, few neighbours dwelling near,
To warm himself withal if need require; ⁴⁶⁵
So buried in dry leaves Ulysses lay.
And then Athena closed up his eyes
With sound and gentle sleep to take away
Sad thoughts suggested by his miseries.

LIB. VI.

Nausicaa going to a river near that place to wash the clothes of her father, mother, and brethren, while the clothes were drying played with her maids at ball, and Ulysses coming forth is fed and clothed and led to the house of her father, King Alcinous, where being received, the queen after supper taking notice of his garments, gave him occasion to relate his passage thither on the raft.

THERE SLEPT ULYSSES. But Athena went
Unto the people of Phœacia,
Who once dwelt near a nation insolent,
The great Cyclopes in Hyperia, ⁵
And by the odds of strength were there oppress'd;
But by Nausithous transplanted were
To Scheria, that they might live at rest;
Who built them houses, and a city there,
And fortified the same with strong walls round, ¹⁰
And temples built, and gave them shares of land.
But he departed was, and under ground,
And now Alcinous had the command.
His house it was the Goddess went unto,
And int' a chamber gay, where lay a-bed ¹⁵
A godlike maid asleep, with less ado
Than could a gentle wind have entered.
This the king's daughter was, Nausicaa.

Within the door shut close, on each side one,
Two of her waiting-maids asleep she saw, 20
And as the Graces fair to look upon.
Then standing at Nausicaa's bed's-head,
In form of Dymas' daughter, there she stay'd,
Who of her age was, and most favoured,
And to Nausicaa she spake, and said: 25
Careless Nausicaa, what do you mean,
When to your wedding-day you are so near,
To let so many garments lie unclean?
You would be glad yourself fair clothes to wear,
And give to them that are to lead you out. 30
For e'en such things as these procure good fame
Amongst the people that dwell round about;
Your parents also take joy in the same.
Come therefore, to the river let's be gone
By break of day; for I will with you go
Ulysses fed and clothed by Nausicaa, &c. 35
And help that you the sooner may have done.
I'm sure your wedding is not far off now,
For sought you are in marriage by the best
Of all the town where you were born and bred.
Go early to your father and request 40
You may with mules and coach be furnished,
That aprons, gowns, and mantles you may bear
Unto the washing-place, for far 'tis to't,
And for your person so 'tis comelier
Than to be seen to go so far on foot. 45
This said, the Goddess up to heaven went,

Where is the dwelling of the Gods in bliss;
A pure and undecaying firmament
Which by no wind moved or shaken is,
Nor wet nor slabber'd is with show'r of rain, 50
Nor clouded, nor approach'd unto by snow;
But bright and shining always doth remain.
Here dwell th' immortals, and no sorrow know.
Thither went Pallas. Then Nausicaa
Awak'd, and through the house went to relate 55
Unto her parents what a dream she saw.
Her mother by the fire-side spinning sate
With distaff laden with fine purple wool.
Her father going out, she met i' th' hall,
Call'd by the lords sitting in council full, 60
And waiting for him to consult withal.
And to him said: Pray, father, shall not I
Allowed be a coach your clothes to bear
(Which in the house sullied and spotted lie)
Unto the river side to wash them there; 65
For you yourself when you to council go
Would gladly have your garments clean and sweet.
Your five sons, whereof two be wedded now,
Would fain with clean clothes at the dancings meet.
So said Nausicaa. But to her father 70
To talk of wedding she forbore for shame,
Yet what she thought on he could eas'ly gather,
However she dissembled had the same.
Dear child, then said her father, you shall have
Both mules and coach with handsome covering. 75

Unto his servants then command he gave
To see it done. And out the coach they bring,
And to it set the mules. Then came her mother,
And laid in things to eat, of relish fine,
And such as eaten are with bread, much other; 80
And in a bag of goat-skin pleasant wine.
When in the coach the garments all were plac'd,
Nausicaa went up into her seat,
And with her took (when their toil should be past)
A cruse of oil to help wash off the sweat. 85
Then out, with whip and reins in hand, did drive.
And then, with strained limbs and clatt'ring feet,
The mules soon at the river side arrive,
And pasture for them there was very sweet.
And there the mules first they unharnessed, 90
Then push'd them off to graze on the bank-side.
The clothes, in pits with water covered,
They tread, and who shall fastest tread they vied.
Then on the beach the garments wet they spread
Upon the cast up pebbles one by one. 95
Then washed they, and dried themselves, and fed,
And left the garments drying in the sun.
And after they with food were satisfied,
It came into their minds to play at ball,
And spend the time so till the clothes were dried. 100
The tune Nausicaa sung for them all.
As when upon Mount Erymanthus high
Or on Tăygetus stands Artemis,
And many rural fair nymphs playing by.

But she than all the rest much taller is; 105
And the wild boars and harts delights to see,
But more her mother Leda to see her,
For though they fair were all, yet fairer she;
So shew'd Nausicaa and her maidens there.
And when 'twas time that they should homewards go, 110
And that the clothes into the coach were laid,
And mules set to, Athena thought on how
Ulysses should awake and see the maid,
And be conducted by her to the town.
Nausicaa then throws the ball and misses, 115
The ball into the river falleth down;
Then shout the maids. At that awak'd Ulysses,
And sitting up, unto himself he said,
Ay me, where am I now? 'Mongst men unjust,
And such as of the Gods are not afraid? 120
Or good and godly men, whom I may trust?
But female are the voices which I hear.
Are they some nymphs that haunt the mountains high,
Or keep the meadows green, or waters clear,
Or are they mortals whom I am so nigh? 125
But why go I not out myself and see?
Then with strong hand he wringed off a bough
With many leaves upon it from a tree,
To cover what became him not to show;
Then as a lion, confident and bold, 130
Howe'er it blow or rain, with fiery eyes
Comes from the mountain to a herd or fold,
And on the flock at last his fortune tries;

So came Ulysses boldly from the wood
Stark naked, forc'd to't by necessity, 135
And in the presence of the maidens stood.
The sight was terrible and made them fly;
Nausicaa fled not, but hid her eyes.
Off stood Ulysses, with himself to weigh
Whether to speak from thence was the more wise, 140
Or else himself before her feet to lay.
To stay there right at last resolved he,
Lest she should take his coming near her ill:
Then said, O queen, I beg upon my knee
That you with patience hear my prayer will. 145
You are a Goddess, or of human race;
If Goddess, you can then no other be
Than Artemis, Jove's daughter. In your face
Such beauty is; in height such majesty.
If mortal, and of human race you be, 150
Thrice happy are your parents and your brothers,
How glad in the processions they will see,
How much they are more grac'd by you than others;
For such a branch I ne'er saw with my eyes
On mortal stock. To see't I am amazed. 155
But once a palm at Delus saw arise
In the same manner, and long on it gazed
(For that way went I once well followed,
Which the first cause was of my trouble sore);
And then, as I do now, I wondered, 160
For I had never seen the like before.
T' approach unto your knees I was afraid,

Or show myself. But such is my estate.
For twenty days upon the sea I stray'd,
And here in storms was thrown ashore by fate 165
From th' isle Ogygia last night, and fear
I am to suffer yet more misery,
And that the Gods will persecute me here.
And since my landing you the first I see;
Now pity me, O queen, and show me where 170
The city stands. And t' hide my nakedness,
Give me some rag if there be any here;
And may Jove you with all you wish for bless,
A husband and a house, and concord good;
For man and wife to live in unity 175
Is the great'st blessing can be understood:
It joys your friend, and grieves your enemy.
Nausicaa then speaks, and to him says,
You seem to be a good man and discreet,
But Jove on good and bad such fortune lays, 180
Happy or otherwise, as he thinks meet;
And since distress is fallen to your share,
You must contented be to suffer it.
But seeing to this place arriv'd you are,
You shall have raiment, and what else is fit. 185
The city I will shew you, and the name
The people of this isle are called by;
Phœacians they are call'd. And I am
Daughter of him that has th' authority,
Alcinous, the king. And then she cried 190
Aloud unto the maids to make them stay;

Why, said she, run you so away and hide?
D' ye think the man will carry you away?
For why, no enemy can come in hither,
The Gods so with the sea have wall'd us in. 195
Nor stranger dwells here. But by evil weather
To come to land this man hath forced been;
Let's do him good. From Jove come beggars all,
And welcome to them is whate'er they get;
Our givings to him will be very small. 200
Go, therefore, set before him wine and meat,
And wash him in the river, in such part
As cover'd is from wind. And then they did
(When they had given one another heart)
Set him in such a place as they were bid; 205
And gave him th' oil to scour his skin withal.
And by him a good cloak and coat they laid,
And then they bade him to his washing fall.
Ulysses answer'd them, and to them said,
Stand further off, I pray, fair maids; for I 210
My body naked am asham'd to show.
Then stand they off, and tell their mistress why,
(For washing he must have put off his bough.)
Then washed he his head and shoulders wide,
And with his hand from's head strok'd down the brine, 215
And with the clothes that laid were by his side
Array'd himself, that comely were and fine.
Then Pallas to him came, and made him look
Taller and broader than he was before;
And from his hair the colour grey she took, 220

And made it like the hyacinthine flower.
As one by Vulcan or Athena taught,
Gold upon silver skilfully had spread;
So Pallas on Ulysses beauty wrought,
And graceful majesty upon his head; 225
Then sat he on the sands. Nausicaa
Then said unto her maidens, Do you hear,
How poor he look'd the first time we him saw,
And now how like a God he does appear;
And by the Gods, it may be, he was sent, 230
To dwell amongst the people of this place.
With such a husband I could be content
(If he would stay) and think it no disgrace;
Go, maids, and set before him wine and meat.
Away they went and did as she them bade; 235
(And he fell to, and heartily did eat,
For long before he nothing eaten had);
Then harnessed the mules and set them to,
And folded and put up the garments all.
Nausicaa went up with maidens two, 240
And then unto Ulysses did she call,
Rise, stranger, to the city let us go,
That I may send you to my father's house,
Where all the best Phœacians you'll know;
But hear you (for I think you cautelous), 245
Whilst in the fields the coach is on the way,
Amongst my maidens follow it apace,
But when you see it near the city, stay;
And that you may well understand the place,

A tower there is, you'll see it, for 'tis high: 250
There, 'twixt two havens is a narrow way,
You'll see it by the masts, for ships there lie;
Near it the people meet o' th' market-day,
And there a temple fair of Neptune stands,
Of free-stone from the quarry hewn and fit; 255
For the Phœacians employ their hands
On shipping, and no other art but it.
For bows and arrows they care not a pin,
But for such things as serve to pass the seas,
Ships, cordage, oars, they take their pleasure in, 260
And spend their time and labour upon these.
I am afraid these men will censure me,
And say (for censurers are many here),
This handsome and tall fellow who is he,
That's with Nausicaa, from God knows where? 265
Where did she find him; must he marry her?
From some far country he is landed here,
Wand'ring by fortune, or a traveller;
For sure I am no such man dwelleth near.
May be some God from heaven descended is, 270
And to live with her always hither come,
So, then to wed a stranger better 'tis,
Since she thinks none is good enough at home;
For many seek her, and the best men here.
So will they say, and 'twill be to my shame; 275
For if another that had done it 'twere,
I should myself condemn her for the same;
For 'tis unseemly a fair maid to see,

That subject is t'her parents' government,
Converse with any man, unless she be 280
First married, or their parents give consent.
And, therefore, stranger, if you mean to be
Convoyed by my father to your home,
Do as I tell you. Near the way you'll see
A grove of poplars. When you thither come 285
You'll find my father's vineyard, from the town
As far as one that hollas heard can be,
And when you thither come, there sit you down
Till at my father's house you think are we.
Then to the city go; ask where does dwell 290
Alcinous. For you shall meet with none,
Though but a child, but can inform you well;
So well his house is known to every one.
And there go in, and on, until you find
My mother. Whom you'll by the fire-side see 295
Spinning; and maids at the same work behind
The pillar under which sits working she.
My father's chair by the same pillar stands,
Where, when he drinketh, like a God he is.
Pass by it to my mother, and your hands, 300
If you mean to get home, lay on her knees.
If once her favour you can but obtain,
You need not fear, but you your friends shall see,
And to your house and country come again.
This said, her whip upon the mules laid she. 305
The mules start swiftly from the river side,
For nimble was the motion of their feet:

But she for those who went afoot, did guide
The swiftness of their pace as she thought meet.
When they were come t' Athena's sacred grove, ³¹⁰
The sun went down; and there Ulysses staid
And to the Goddess, daughter of great Jove,
That he might good reception find, he pray'd.
Hear me, Jove's virgin daughter, hear me now,
Since still you did refuse to help me then, ³¹⁵
When Neptune sought at sea my overthrow,
Grant that I may be welcome to these men.
Thus pray'd he, and was by Athena heard,
Though to him face to face she would not come,
But of her uncle Neptune was afeard, ³²⁰
That ne'er forgave him till he was at home.

LIB. VII.

Alcinous entertains him, and grants him a convoy, and both he and the lords give him presents.

WHILST THERE HE pray'd, Nausicaa went on,
And stay'd her coach the outer gate without,
And like to Gods her brothers came each one,
From out the house and her stood round about. 5
The mules they freed, th' apparel they took in,
Nausicaa straight to her chamber went;
Eurymedusa made a fire therein;
Who, ta'en by rovers on the continent,
Was given to the king Alcinous, 10
That like a God was honour'd by the nation
Of the Phœacians at home. And thus
She of Nausicaa had th' education.
A fire she made her, and her supper brought.
Ulysses then into the city went, 15
Pallas of air had made him such a coat,
As he could not be seen; lest insolent
And sturdy townsmen should him mock and jeer,
Or ask him questions, who, what, or why.
But when he was unto the gate come near, 20
Pallas appeared to him openly,
Like a young maid with pail upon her head.

Ulysses then spake to her, and said thus:
Sweet pretty girl, will you be pleas'd to lead
Me to the house of king Alcinous? 25
For I a stranger come, and no man know,
Nor ever in my life was here before.
Yes, then said Pallas, I will you it show,
For 'tis the next unto my father's door.
Go softly, thus, and I will lead the way, 30
For our folk strangers do not well endure;
But in good ships their honour wholly lay,
And the wide sea to pass themselves inure:
For Neptune given to them has this gift,
That their good ships fly like to thought or wind. 35
This said, the Goddess led with motion swift;
And on her steps he treading went behind.
And through the people so he pass'd unseen.
For why, the Goddess Pallas, for good will,
A wondrous mist of air had wrapt him in. 40
Then looking at the house he there stood still.
The havens and the ships he wonder'd at;
The market-place, and walls so thick and high.
Then Pallas said, Alcinous' house is that.
There sup the king and queen now merrily. 45
Though you a stranger be, fear not, go in;
The bold than fearful always better speed.
And first of all the house you'll find the queen,
Arete is her name. Both from one seed
Descended are she and Alcinous, 50
In Perrhæa, child of Eurimedon.

The God o' th' seas begot Nausithous
Who two sons had; Alcinous was one,
The other was Rexenor, who no son
But one fair daughter only left behind.

Alcinous entertains him, &c. 55

Arete was her name. Besides her none.
Alcinous and she in wedlock join'd;
And he to her so much respect doth bear,
As no man living to a wife bears more,
And honour'd is by all her children dear. 60

The people like a Goddess her adore,
And bless her when she comes into the street;
And loving to them all is also she,
For a wise woman is she and discreet.

When they fall out she makes them to agree. 65
If you her favour can but once obtain,
You need not fear but you your friends shall see,
And safely to your country come again.

And when she this had said, away went she
O'er sea to Marathon in Attica, 70

T' Erectheus' house. And he now was to enter
Into the house. But long he laid the law
Unto himself before he would adventure.
Ent'ring he saw the walls lin'd round with brass,
And fring'd about with colour of the sky. 75

The door within golden all over was,
And all appear'd like heaven to the eye.
The door-posts silver, glorious to behold,
The lindle-tree upon them silver too;

The sill was brass, the ring to pull it, gold. 80
And by the door great dogs were standing two,
Of silver one, the other was of gold,
As watch before the royal gate to stay,
Immortal dogs that never can grow old.
And round about them all, thrones ev'ry way, 85
All cover'd with a dainty stuff and fine,
The work of women's hand. There us'd to eat
The king and lords, and drink and make good cheer.
His riches was a never-dying teat.
About the altar were set boys of gold, 90
That to the guests, as soon as it was night,
With burning torches they the light might hold;
For now the sun had borne away his light.
Fifty maid-servants were at work within,
Some at the mill were grinding wheat for bread, 95
And others with their distaffs sat to spin,
And others cloth were weaving with the thread;
Like to the leaves of a high aspen tree
Their fingers went. So much they did excel
In all the works, that taught by Pallas be, 100
The women that in other places dwell;
As do these men all other men surpass
In all things that belong to navigation;
For wit and art more Pallas given has
To them, than women of another nation. 105
Close by the house a dainty orchard is,
Four-square and fenc'd with hedge and pale about,
Of pear, pomegranate, apple, olive-trees,

And fig-trees. For the season ne'er goes out
Summer nor winter, for by Zephyrs some 110
Are made put forth, and others ripened;
Pears after pears, apples to apples come;
Grapes are by grapes, figs by figs followed;
And in it was the vineyard of the king.
Grapes in some places by the sun were dried, 115
In others staid till vintage ripening.
Upon some vines no flower yet was spied,
And grapes on some to blacken now began.
Green beds of herbs there were on ev'ry side,
And through it from two springs the water ran, 120
And to and fro the one did winding glide,
The other to the house his stream did bear,
And under ground was to the town convey'd,
And rose a fountain for the people there.
And when Ulysses had all this survey'd, 125
Then went he in, and found them in the hall
Sitting at supper, and to Mercury
There off'ring up of wine: which last of all
At bed-time men do offer usually.
And on he went up to the king and queen, 130
And both his hands upon her knee did lay.
Pallas had kept him in the mist unseen;
But thither come, the mist straight fell away.
Amaz'd they were when first they saw the man,
And like to men that had been stricken dumb. 135
Ulysses then t' Arete thus began:
queen Arete, to your knee I come,

And to the king, and those that with you sit:
May the Gods grant you all much happiness,
Long life, and your possessions to transmit 140
T' your children, and your honours still possess;
And may you me send presently away
Unto my house: long absent I have been.
This said, he sat down by the fire. And they
Said nothing, such amazement they were in. 145
At last old Echineus spake, that knew
Both what in former times and now was fit:
king Alcinous, is't good, think you,
To let the stranger in the ashes sit?
We silent sat to see what was your will; 150
Pray make him rise, and to a chair him bring,
And bid the squire to temper wine and fill,
That we to Jove may make our offering,
Who with poor strangers keepeth company;
And bid the maid before him set such meat 155
As she within has in her custody.
This said, Alcinous rose from his seat,
T' Ulysses went, and took him by the hand,
And to a chair him led, where sat his son
Laodamas, to whom he gave command 160
To give him place, although he loved none
So dearly as he lov'd Laodamas,
Who next unto him us'd to sit at meat.
Then by a maid brought in a bason was
And ewer of gold, to wash ere he did eat; 165
Another maid before him layed bread,

And other good things on his table laid,
And heartily thereon Ulysses fed.
Alcinous then to the squire said:
Temper the wine, Pontonous, that we 170
Wine-offering to Jove may offer up,
In whose protection all suppliants be,
And round about presented be the cup.
Then went about the wine from one to one;
And when the sacred offering was over, 175
Then said Alcinous: Since we have done,
Let's go to bed, and soon as we discover
Aurora rising, hither come again,
And make unto the Gods a sacrifice,
And this our stranger farther entertain, 180
And how to send him to his house advise,
That safely he may go, and joyfully,
And swiftly to the place where he would be,
How far soever hence his dwelling lie,
Nor on the sea delay or trouble see, 185
Until his native country he be at:
But what his fate is after he is there,
Be't good or evil, he must suffer that.
But if it be some God that sitteth here,
'Tis only our devotion t' approve; 190
For to that end Gods let themselves be spied,
To sit with men at holy feasts they love,
And not themselves in caves like giants hide.
To this Ulysses said: O king, lay by
That thought of yours. With Gods I'll not compare, 195

For body or for mind. Of misery
If man can boast, to boast 'mong them I dare;
For I more tokens can produce of woe
Than any man that shall with me contend,
Though all I tell not that I can. Yet so 200
I fain would of my supper make an end.
No creature is so fierce as is the gut,
And so loud barketh when it is forgot,
That out of mind it never can be put,
But will be heard whether one will or not. 205
So 'tis with me, that am afflicted sore,
Yet still my belly bids me eat and drink,
And forget all I had endured before,
And on my misery no more to think.
And so, since now I hunger to go home, 210
Forget not with a ship me to supply
To-morrow: for were I once thither come,
I could be well contented there to die.
When this was said, he was by all commended.
He speaks discreetly; let him then, said they, 215
A speedy conduct have. When all was ended,
The rest unto their houses went away.
Only Ulysses stay'd, and by him sate
The king and queen. Tables removed were,
And all that to the supper did relate; 220
The queen then marked what garments he did wear,
And that she and her maids had made them, knew.
Stranger, said she, who are you? whence? and more,
The garments you have on, of whom had you?

Had you them on, then, when you came ashore? 225
Grievous, said he, O queen, is your command,
That calls again, when past it is, my pain;
Yet will I answer make to this demand.
An island lieth far hence in the main,
Ogygia 'tis call'd; Calypso there, 230
The daughter fair of Atlas, lives alone,
Nor God nor man she has to dwell with her;
And I by fate upon that isle was thrown,
For Jove my good ship had with thunder split:
My fellows in the sea all perished, 235
But I the rudder had, and held by it:
And thus nine days and nights I wandered,
And thrown was on that isle the tenth, at night.
Calypso there received me, and fed;
And immortality have had I might, 240
If I had with her there inhabited.
But I to that would never give consent.
Yet there by force I stayed seven years,
For want of ship and men, in discontent,
Washing the clothes she gave me with my tears. 245
The eighth year come, she did my going press,
Whether by Jove's command I cannot say,
Or whether 'twere because she loved me less.
Then on a raft of trees I came away.
Bread and sweet wine upon the deck she laid, 250
And garments gave me fair, and a good wind;
And good for seventeen days the weather stay'd.
On th' eighteenth near your coast myself I find;

And glad I was, though still unfortunate,
For more I was to suffer by and by: 255
For Neptune rais'd against me, in his hate,
A storm of winds, with furious waves and high,
And then I forced was the raft to quit:
The trees asunder floated here and there,
The storm so broken had and scatter'd it. 260
Then swam I: 'gainst the rocks the waves me bear,
And falling off, they cast me back again.
Again I swam, and to the river came,
And there I saw the landing smooth and plain,
And from the wind defended was the same: 265
There landed I, half dead, and now 'twas night.
Then up I went and in a thicket lay,
Cover'd with leaves abundance, dry and light,
And slept till almost spent was the next day,
For then the sun was setting. There I hear 270
The voice of women playing by the brook;
And going out I saw your daughter there,
That like a Goddess come from heaven did look.
To her I made my prayer in this distress:
Wisely she answered, and beyond her age, 275
(For th' younger commonly consider less),
And gave me food my hunger to assuage.
Of her I had the garments I have on.
Nay, stranger, answered Alcinous,
'Twas in my child an indiscretion, 280
That she not brought you with her to my house.
To this Ulysses answered and said:

'Twas not her fault we came not both together:
She bade me, I would not; but was afraid
What you and they would think that saw me with her, 285
For jealous and mistrustful mortals be.
To this again Alcinous replied:
From such ill thoughts I always have been free.
Jove and Pallas make you here abide;
Such are you, and our thoughts so well agree, 290
That you Nausicaa should have for bride,
If you would with me live here willingly,
And for your house and wealth I would provide.
But 'gainst your will I will not make you stay
(From such iniquity the Gods me keep); 295
To-morrow shall be ready your convey,
And till then go you to your bed and sleep.
And here be men, that, when the wind shall fail,
Can row you on how far soe'er you'll go;
Their hands can do as much as any sail, 300
Although beyond Eubœa they must row:
For farther no Phœacian ever went.
But thither once they carried Rhadamant,
Of Tityus to see the punishment,
Son of the earth, that terrible giant; 305
Yet that long voyage cost them but a day
Going and coming all the way at ease.
But you yourself, when you are on the way,
Will see how stoutly our men plough the seas.
This said, Ulysses joyful was, and pray'd, 310
Make all this good, O father Jove, said he,

The glory of the king will be display'd,
And quickly in my country I shall be.
Whilst they together thus discoursing stay'd,
Arete bade the maids to make his bed, ³¹⁵
And see fair purple rugs upon it laid,
And under them soft woolly blankets spread.
Then went away the maids into the porch,
And made his bed, and soon came back again,
And stood before Ulysses with a torch. ³²⁰
Come stranger, said they, all is ready. Then
Ulysses to his bed went willingly.
Alcinous in a room lay far within,
Where formerly he used was to lie,
That was prepared for him by the queen.

LIB. VIII.

The next day's entertainment of Ulysses, where he sees them contend in wrestling and other exercises, and, upon provocation, took up a greater stone than that which they were throwing, and overthrew them all; and how the king asked his name, his country, and his adventure.

SOON AS AURORA was again espied,
The king Alcinous rose from his bed.
Up rose Ulysses and came to his side,
And to the public place the king him led, 5
To sit in counsel with his princes there;
And being there they sat together nigh.
Pallas the while, that did great favour bear,
T'Ulysses' welfare always had an eye,
In likeness of Alcinous his squire 10
(Who, by his office, did the counsel call)
Their favour for Ulysses to acquire,
Went through the streets, and there unto them all
Said one by one, Make haste. To counsel go.
A stranger, new come to the king, you'll see, 15
That like a God immortal is in show.
This said, unto the counsel house they flee.
And filled was the house, and ev'ry seat;
And of his person all admired the grace;
For Pallas made him had more tall and great,

The next day's entertainment of Ulysses, &c. 20

And laid more majesty upon his face.

To make him welcome to those men she meant,

And to gain him honour at their exercises

When they should put him to experiment.

Alcinous unto them then arises; 25

Hear, said he, princes of Phœacia,

This man (who 'tis, or whence, I cannot say)

Cast here ashore, till then I never saw.

Since 'tis our custom, grant him a convoy.

For no man yet unto my house did come, 30

By force of weather wandering on the main,

Lamenting and desiring to go home,

That can affirm he sought our help in vain.

Come then, let's launch a good new ship, and choose

Out two-and-fifty lusty youths to row; 35

And let them ready have their oars to use,

And to my house, when that's done, let them go.

And you the princes thither come with me,

That we may well the stranger entertain.

And let the singer too sent thither be, 40

To give us sometimes of his art a strain.

This said, the princes to his house he led.

The squire unto the house the singer sent.

The fifty-two, as they were ordered,

Down to the haven where the ship lay went. 45

The ship they launch, and up they set the mast;

And then the yards and sails they hoisted high;

Their oars, where they be placed should, they plac'd.

This done they let her in the water lie.
Then also to the house these men went up. 50
The porches, court, and rooms with men were fill'd,
Some old, some young. The king to make them sup,
Two kine, eight swine, and twice six fat sheep kill'd.
These flay'd and dress'd, and to the tables brought,
Came in the singer, whom the muses kind 55
Had taught to sing divinely; but, could not
Or would not him preserve from being blind.
Pontonous the squire then led him in,
And set him by a pillar in the hall,
And hung his fiddle o'er him on a pin, 60
And how to reach it showed him withal:
Sets him a table and a basket by,
And a great bowl of wine before him plac'd,
To drink as often as he should be dry.
And when their thirst and hunger was displac'd, 65
The singer sung the song in most request,
How once Ulysses and Achilles great
In high and bitter language did contest,
When at a sacred feast they sate at meat;
And how king Agamemnon pleased was, 70
To see the two best of the Greeks fall out.
For Phœbus told him so 'twould come to pass,
When he at Pythos asked him about
The issue of the fleet design'd for Troy.
This song Demodocus sung to them then; 75
Which to Ulysses was of little joy;
But he his tears to hide before those men,

Before his eyes his cloak of purple drew,
And when the singer ceas'd, his eyes he dried,
And from before his face his cloak withdrew, 80
And of the wine perform'd the sacrifice.
And when the lords call'd for the song anew,
(For they to hear him took no small delight),
His cloak again before his eyes he drew,
And as before again he sobb'd and sigh'd. 85
Alcinous, none else, observed it,
And well enough could hear him sigh and groan;
For he the nearest there did to him sit,
And would not to the princes make it known.
But speaking to them all said only this: 90
Since you with feasting are well satisfied,
And music (which to feasts annexed is),
Let now our men's activity be tried,
That when the stranger is where he doth dwell,
He to his friends and countrymen may tell 95
How much we do all other men excel
At wrestling, buffets, leaping, running well.
Then went the king and princes out a door;
The squire then took the singer by the hand,
And hung the fiddle where it hung before, 100
And him led out amongst the rest to stand.
Unto the place they went; and follow'd were
By people numberless the sports to see;
And many lusty youths amongst them there,
Stood out to show their great ability. 105
Out stood Elatreus and Acroneus,

Eretmeus, Thoon, Nautes, and Prymneus,
Ambasineus and Amphialus,
Proteus, and Ponteus, and Anchialus;
Otyalus, warlike Euryalus, ¹¹⁰
And he that of them most their eye did please,
(Except the first son of Alcinous),
For countenance and shape, Naubolides,
And then Alcinous his three sons rise,
Laodamas, Halius, Clitoneus. ¹¹⁵
And first they all contended for the prize
Of who at running could his feet best use.
Then start they all at once, and swiftly run
As if they flew. And here the victory
The king's son noble Clytoneus won, ¹²⁰
And pass'd them all a land's length very nigh.
Euryalus at wrestling was the best.
Amphialus at leaping victor was.
Elatreus surpassed all the rest
To throw the stone. At cuffs Laodamas. ¹²⁵
When all was done Laodamas up stood.
Come friends, said he, let us the stranger try
If he at any of these games be good;
For in his person no defect I spy.
His thighs, his knees, his arms, his neck, are strong, ¹³⁰
Nor over aged yet he seems to me;
Only he hath endured the sea so long,
As for that cause he may excused be.
For than the sea nothing more potent is
To break a man how strong soe'er he be. ¹³⁵

Go, said Euryalus, 'tis not amiss
T'invite him to it, and his mind to see.
Then to Ulysses said Laodamas,
Come, stranger, father, pray, your virtue show;
'Tis no dishonour for you in this place 140
To show your skill at any game you know,
As long as feet and hands continue strong.
Come, try, and cast your careful thoughts away:
Your convoy ready is. 'Twill not be long
Before you shall be set upon your way. 145
Laodamas, then said Ulysses, why
To these your games invite you me in scorn,
Upon whose heart so many sorrows lie,
And am to nothing with much hardship worn,
And publicly a suppliant now sit, 150
And to the king and people grief profess?
Think you that pastimes for such men are fit,
As from their country wander in distress?
Then spake Euryalus, uncivilly:
No, no, said he, I do not think you are 155
Much us'd to pastimes of activity,
But rather one that of a ship takes care,
That merchantmen from place to place conveys,
And mindful of your freight are, and can tell
Which are to sudden wealth the nearest ways, 160
What merchandise will not, and what will sell,
And in such boisterous games has little skill.
Ulysses frowning on him then replied:
My friend, such words are indiscreet and ill.

The Gods the gifts as they think fit divide. 165
To one, of beauty they deny the grace,
But give him language steady and discreet,
Whereby he honour'd is i' th' public place,
And men gaze on him going in the street.
T'another they have giv'n a fair aspect, 170
Like that o' th' Gods, but have denied him wit.
So find I in your person no defect;
Only you want the grace to say what's fit.
Your words have put me into passion.
In these your games you say no skill have I. 175
I thought myself interior to none,
Whilst on my youth and hands I could rely.
But tamed now my strength is with much woe,
Wandering at sea, and often hurt in fight.
Yet of your games I'll make a trial so, 180
Weak as I am. So much your words me bite.
This said, he took up a much greater stone
Than that which the Phœacians had flung,
Now hollow as a quoit, his cloak still on.
And when above his head he had it swung, 185
Swiftly away the stone flew with a hum,
Which made the brave Phœacian seamen couch,
As o'er their heads they heard it singing come,
And outwent all the other marks by much.
For Pallas in the likeness of a man 190
Did set a mark at where the stone did light,
And said the difference be discerned can
By feeling, though a man had lost his sight.

And to Ulysses said he, Do not fear
That any man i' th' town shall out-throw this. 195
Ulysses very glad was this to hear,
And that amongst them stood one friend of his.
Then of himself began to speak more high.
Come youths, throw first as far as I have done,
And then as far or further throw will I. 200
And for the other games come any one,
Since your sharp words provok'd me have thereto,
Buffets, or wrestling, or to run the race,
And see if you at these can me out-do,
Any of you except Laodamas. 205
For I to him have come as to a friend
Of whom I hope for succour in my need.
He were a fool that with him would contend,
Without whose help his business cannot speed.
But of the rest not any I refuse; 210
And will contend with them for mastery.
For I know all the games the best men use.
To use the bow none abler is than I.
When many of us had a mind to kill
Some noted foe, and all at once did shoot, 215
Though every one of us had the same will,
My arrow was the first that found him out.
At Ilium in trials of the bow
None found I better than myself but one;
'Twas Polycetes. Of those that are now 220
I think myself inferior to none.
With those of former time I'll not compare,

As Hercules, or Eurytus that durst
Challenge Apollo. Apollo took a care
That prize should not be play'd, and kill'd him first. 225
As far as other men can shoot an arrow,
So far I able am to dart a spear.
But lodging I have had at sea so narrow,
That I may be out-run by some man here.
So said Ulysses; and all silent sat 230
Except the king, who thus unto him said:
Stranger, there's no man here offended at
The words you say. For open you have laid
Your virtue, when you were thereto constrain'd
By the unjust reproaches of this man. 235
For such it is as by none can be stain'd,
But those that nothing say discreetly can.
And hear me farther what I have to say,
That t'other heroes you the same may tell,
Who with you and your wife shall feasting stay, 240
In what from other men we bear the bell.
For cuffs and wrestling, not much praise we merit,
But our good ships and fleets are wondrous swift.
And these gifts from our fathers we inherit,
Dance, song, feasts, fiddle, and of garments shift, 245
And baths, and beds. Dance you that dance the best
Before the stranger, that his friends among
He may say how much we exceed the rest
Of men, in ships, in running, dance, and song.
Fetch out the fiddle. Then the squire went in 250
To fetch the fiddle. And the judges rise,

In number nine, who had elected been
By public vote, of games to hold assize;
And order took for large room in the middle,
And made it to be planed well and even. 255
When this was done, then brought out was the fiddle,
And by the squire was to the singer given.
Then came the young men that had learnt to dance,
And of their age were yet but in the flower,
And to the midst of the place advance. 260
Their feet play up and down like drops in show'r;
Such sparkling feet Ulysses ne'er had seen.
The singer as he played sung the song
Of Mars and Venus, and what love had been
Held secretly between them all along; 265
And how in Vulcan's house they used to meet;
And what he gave her; how the prying Sun,
As they embrac'd each other, chanc'd to see't,
And told her husband Vulcan what was done.
How Vulcan to his forge in anger went, 270
And on his anvil hammer'd out strong chains,
Which neither could be broken, nor relent;
And when he made an end had of his pains,
Into the chamber went where stood his bed.
His net o' th' bed-posts, and the beams he threw, 275
Like spider-webs about a chamber spread;
And then to go to Lemnos made a show.
So subtle were the chains and finely wrought,
They could by none, although a God, be seen.
How Mars to watch his going failed not. 280

When Vulcan was gone out, then Mars went in.
How Venus entered in, new come from Jove,
And by him sate. Mars took her by the hand,
And to her said, Let's go to bed, my love.
Vulcan is now at Lemnos gone a land. 285
And how they went to bed and made the net
Fall down upon, and hold them as they lay.
And how they knew no way from thence to get,
But must till Vulcan came to free them stay.
How Vulcan from hard by came quickly in; 290
For back he came before he was half way:
For by the Sun advertis'd he had been,
And angrily turn'd back without delay;
And roaring to the Gods, he said, D'ye see
What work is here, and how unseemly 'tis? 295
And how Jove's daughter does dishonour me,
Because my limbs are maim'd, and whole are his?
I grant he's fair, nor doth as I do halt;
Ought she to love him therefore more than me?
For that my parents' is, and not my fault. 300
But come, ye Gods all, and their posture see;
I hate the sight, yet they must not therefore
Hope e'er the sooner for that, to be free.
The net will suffer them to move no more,
How keen soever on their love they be; 305
And till her father shall the dow'r repay
Which for the girl, although incontinent,
I paid him down, 'cause fair she was and gay,
There they shall lie. This said, the Gods straight went

To Vulcan's house. Neptune and Mercury, ³¹⁰
And with them, with his silver bow, Apollo,
And many others. But (for modesty)
No Goddess could persuaded be to follow.
As soon as they perceived had the craft,
Which standing in the door they had survey'd; ³¹⁵
At first aloud they altogether laugh,
And by-and-by to one another said,
I see that evil works do ill succeed.
The slow has gotten of the swift the better;
Vulcan of Mars the God of greatest speed, ³²⁰
And that by arts which make his ransom greater.
And how Apollo did the question put
To Mercury, if he content would be
In such strong chains with Venus to be shut,
While all the Gods are standing by and see. ³²⁵
How Hermes said, O Phœbus, that I were
In Mars his place, and did with Venus lie,
And thrice as many chains about us there,
Though all the Gods and Goddesses stood by.
And how the Gods at this laugh'd out again, ³³⁰
Save Neptune only, who did never cease
T'importune Vulcan and his wrath restrain,
And that he would the God of war release;
And that himself would pay him what was due
If Mars did not. How Vulcan said again, ³³⁵
If Mars should fly, shall I imprison you?
Unsure the suretyship is of fled men.
And that again Neptune replying said,

Though Mars should run away, yet I will not.
And how that Vulcan at the last obey'd, 240
And Mars and Venus out of prison got,
And he to Thrace went, but to Cyprus she;
Where she a temple and an altar had,
And by the Graces that her servants be
Bath'd and anointed was and Godlike clad. 245
These of the merry song were the contents.
Ulysses was well pleased with the same;
And of the rest delighted was the sense.
Alcinous then called out by name
Laodamas and Halius to dance. 250
None else for either of them was a match.
And they into the midst themselves advance
The one to throw a ball, th' other to catch.
One threw't up high, reclining on his hip;
The other of the same the downfall watch'd, 255
And taking from the ground a lusty skip,
His feet above ground, in the air it catch'd.
When this was done, they laid aside the ball,
And danc'd with often changes on the ground;
Applauded much by the spectators all, 260
Who with their praises made the place resound.
king, then said Ulysses, what you said
Of how your men pass all the world beside
In noble dance, can never be gainsaid.
I see it to my wonder justified. 265
The king well pleased to the princes spake:
A worthy man the stranger seems to me;

Let's think upon what present him to make.
Twelve princes in Phœacia there be,
And I the thirteenth am. Let's ev'ry one ²⁷⁰
Bestow on him a handsome cloak and coat,
Besides a talent of pure gold. That done,
Let it be altogether to him brought,
That he at supper may sit cheerfully.
And you, Euryalus, go speak him fair, ²⁷⁵
For what you said before was injury;
Go therefore with some gift your fault repair.
This said, to fetch the gifts they sent the squire.
Then said Euryalus, O king, since 'tis,
That also I present him, your desire; ²⁸⁰
I will for reconciliation give him this
My sword, with scabbard all of ivory,
And silver hilt. The present is not poor.
And giving it: O father, though, said he,
I said amiss, pray think upon't no more; ²⁸⁵
And may the Gods restore you to your land,
Since absent from your friends you live in pain.
Ulysses took the sword into his hand,
And to Euryalus thus said again:
And you, my friend, may you still happy be, ²⁹⁰
And of this sword for ever need have none,
Which reconciling you have given me.
And as he speaking was he put it on.
The sun now set, the king no longer tarried,
But with the lords went to his house to sup. ²⁹⁵
Along with them the squires the presents carried

Unto the queen Arete to lay up.
Alcinous then said unto the queen,
Let a fair chest be straightway hither brought,
And for the stranger see there be laid in 300
A comely and well-wash'd cloak and coat,
And of warm water let a bath stand by,
That washing he may see the presents there,
And sit at supper the more joyfully,
And hearken to the song with better cheer; 305
And I will give him this my cup of gold,
That off'ring up unto the Gods the wine,
As often as he doth the cup behold,
He may both for his own health pray and mine.
This said, the maids, commanded by the queen, 310
Set up a cauldron with a triple foot,
Then make fire under, and pour water in.
Keen was the fire, and soon the water hot.
Meanwhile the queen came in, and with her brought
A curious chest, and into it laid in 315
The gold, and with it every cloak and coat,
That by the princes given him had been.
And then unto Ulysses said, Take care
You bind it fast, lest you be robb'd by one
Or other, whilst aboard you sleeping are, 320
Lest anything should missing be and gone.
And when she thus had him admonished,
Ulysses of the chest pull'd down the lid,
And girt it with a cord of various thread,
Thereby to know if any it undid, 325

For that trick he by Circe taught had been.
A woman then unto Ulysses said,
There stands your bath, which way you please go in.
Then went he in, and not a little joy'd;
For after he had left Calypso's house, ³³⁰
Warm and sweet water he had never seen,
But roll'd by Neptune always was in souse,
But had with her carefully treated been.
When him the maids wash'd and anointed had,
Out from the bath he came amongst the men, ³³⁵
With a clean cloak and comely garments clad.
To th' door the bright Nausicaa came then,
And to Ulysses said, Stranger, farewell,
And may you safely at your land arrive;
Remember that into my hand you fell, ³⁴⁰
And owe to me that you were kept alive.
O, said Ulysses, daughter of the king,
To you the ransom of my life is due,
And if the Gods me to my country bring,
As to a Goddess I will pray to you. ³⁴⁵
This said, he went and sat down by the king.
And now the meat in messes some divided,
Others the lusty wine were tempering,
And by a squire the singer in was guided,
And at a pillar in the midst made sit. ³⁵⁰
Ulysses half a chine of pork and fat
Cuts off, and in the squire's hands putteth it,
And said unto him, Give the singer that;
Singers through all the world have reputation,

And well respected be in ev'ry land; 355
The Muses teach them song, and love the nation.
Then went the squire and put it in his hand;
Demodocus receiv'd it and was glad.
Then fell they to the meat before them laid.
When thirst and hunger overcome they had, 360
Unto the singer then Ulysses said:
Demodocus, you all men else excel.
The Muses sure did teach you, or it was
Phœbus himself. For you have sung so well
The acts that did 'twixt Greeks and Trojans pass, 365
And all related that they did at Troy,
Or suffer'd there, or when they homeward came,
As if yourself beheld had their annoy,
Or had from some spectator heard the same.
Stand forth and sing now of the horse of wood 370
Made by Epeius, but by Pallas help'd,
Stuff'd by Ulysses full of warriors good,
Which in Troy town destruction to it whelp'd:
If this you sing in order as 'twas done,
I'll make the world with your just praises ring. 375
Then at the Gods Demodocus begun,
And how the fleet went off the shore did sing;
And how they fir'd their tents; and how the lords
Of Greece i' th' council of the Trojans sate,
Inclos'd and hidden in the horse of boards, 380
That by the Trojans was fetch'd in in state.
The Trojans sitting round about debate,
And many a foolish speech they uttered,

And on three points they there deliberate,
And voted what the Gods determined. 385
The three points which were most insisted on,
Were, whether they should cut the horse in twain,
Or throw it down the rock it stood upon,
Or let it, to appease the Gods, remain.
I' th' end they all resolved on the last. 390
For by the Fates it was determined
That Ilium should then be layed waste,
When o'er its walls a great horse entered,
And in his belly brought the enemy.
And how the Argives from the horse came out, 395
How divers ways they went and cruelly
Killed and burned as they went about.
Ulysses then, like Mars, with Menelaus
Unto Deiphobus together hie,
And for awhile there sharp the battle was, 400
But to Ulysses fell the victory.
This sung Demodocus. And then upon
Ulysses' cheeks the tears ran down apace.
As when in fight a woman looketh on,
And sees her husband fallen on the place, 405
That fought had for his town and children dear;
There sprawleth he, she o'er him falls and cries,
But back and shoulders is well basted there,
And carried captive by the enemy.
As wofully as then this woman wept, 410
So wofully Ulysses now sheds tears;
But from the king it was not secret kept,

Who sitting next him all his groaning hears.
And speaking to the princes sitting by,
Let us, said he, Demodocus release, ⁴¹⁵
His song not pleaseth all the company;
It makes the stranger's sorrow to increase,
And brings some grief or other to his mind.
Then let him hold; that we and he together
May in this meeting equal pleasure find. ⁴²⁰
The cause we met here was his coming hither,
That we might give him gifts and send him hence.
A guest is as a brother to be used,
As all men know that but pretend to sense.
And you, my guest, you cannot be excus'd, ⁴²⁵
If you not answer truth to all I ask.
Say what's the name your parents call you by?
You must no longer now keep on your mask,
Children new-born not long unnamed lie;
Tell me your land and city where it is, ⁴³⁰
That my good ship may know where you would be,
For in Phœacia no steersman is,
Nor rudder as in other ships you see;
Whither men bid them go they understand,
And pass in clouds concealed o'er the main, ⁴³⁵
And where the havens be in every land.
No fear they have of perishing or pain,
And yet my father to me once did say,
That with our convoys Neptune was offended,
And that one day our good ship to destroy ⁴⁴⁰
As it returned homewards he intended,

And from men hide our city with a hill.
But whether that shall be performed now,
I cannot tell. It lies in Neptune's will,
And not concerneth you at all to know. 445
But tell me now what lands you wand'ring saw,
What nations, and what cities you came to;
What kind of people, civil, or without law;
Civil or kind to strangers, godly or no.
When you heard sung the woful fate of Troy, 450
Why did you weep? The Gods that built the town
Decreed thereat much people to destroy,
And that their fate should be sung up and down.
Lost you some kinsmen there or near ally,
Which might in time of danger you bestead? 455
Or some good friend? A wise friend standing by
Is worth a kinsman in a time of need.

LIB. IX.

*Ulysses relates, first, what befel him amongst the Cicones at Ismarus.
Secondly, amongst the Lotophagi. Thirdly, how he was used by the Cyclops
Polyphemus.*

TO THIS ULYSSES said: Renowned king
Alcinous, methinks delightful 'tis
To sit as we do here, and hear one sing,
And specially so good a voice as this. 5
I, for my part, do never more rejoice,
Than when I see men sitting at their meat
Cheerful, and list'ning to a pleasant voice,
And see the cups go often and retreat.
This is a thing that I love best; but you 10
Had rather hear the dangers I have pass'd,
Which fright me yet, and do my pain renew.
But which shall I tell first? which next? which last?
For they be many. First my name I'll tell,
And place, that whensoever you thither come 15
You may there lodge, although far off I dwell,
And am uncertain of my getting home.
I am Ulysses Laertiades,
And far and wide I am reputed wise
'Mongst men that love subtile conveyances, 20
And known I am by fame up to the skies.

My place is Ithaca, in which is store
Of wool. Mount Neriton is cloth'd with wood,
A goodly hill; and many islands more
Lie close about it, yielding store of food. 25
Dulichium, Same, and the woody Zant,
On th'east of Ithaca are situate.
Another island, which is called Ant,
Lies westward of it, but is low and flat.
Rocky is Ithaca, and uneven ground; 30
But breedeth able men. Nor have I known
The man that to his own mind ever found
A country that was better than his own.
From mine Calypso kept me in a cave,
T' have been her husband; so did Circe too: 35
But neither of them my consent could have,
So much could love of my own country do;
For though far off I might have better land,
Yet should I from my kindred absent live.
But now 'tis time to let you understand 40
What passage to me Jove was pleas'd to give.
From Troy to Ismarus we first were blown,
Within an isle, Cicons the natives are;
And soon we plundered and burnt the town,
And of the plunder each man had his share. 45
The wives we prisoners made, and to the sword
We put the men: and then without delay
I did command them all to go aboard;
But they, fools as they were, would not obey:
For they to kill, eat, drink, themselves apply, 50

Beeves, sheep, and wine, which they had on the beach.
Cicons meanwhile to Cicons so loud cry,
That to the continent their voices reach;
And presently came others, numberless
As leaves in summer; stout and men of skill,
Ulysses relates his adventures. 55
To fight on horseback with much readiness,
Or else on foot, according as they will.
Jove had decreed us mischief, and the hour
Was come: and just before our ships we fought,
Spears were our weapons, which with all our power 60
We lanced on both sides with courage stout.
Whilst the sun mounted we resisted well,
But after noon they pressed us so sore,
That with the falling sun our courage fell;
And then in haste we thrust our ships from shore. 65
From out of every ship six men we lost:
And then with heavy hearts our sails we hoist,
And grieved for our fellows left the coast;
But first to ev'ry of them called thrice
Whom slain by th' enemy we left behind. 70
Then Jove with clouds both land and water veils,
And night came on us with a furious wind
From the north part of heaven, and tore our sails
In threes and fours, and all our ships were tost
Hither and thither, sideways with their blasts, 75
And one another's way hindered and crost.
Then took we in our sails, and down our masts,
For fear of death, and laid them on the decks,

And with our oars rowed our ships to land;
Two nights and days we staid, while grief did vex 80
Each mind, and labour tired had each hand.
But when the morn had led forth the third day,
We then set sail, and left their course to th' wind;
The which (we sitting still) did them convey
According as the steersmen had design'd. 85
And I had safely come to Ithaca,
Had not the north wind with the tide o' th' sea,
When I was come to th' Cape of Malea,
Forc'd us without the isle of Cytheré.
The horrid winds now found me on the main, 90
And toss'd me into one another's hand.
Nine days together I endur'd this pain;
Upon the tenth they cast me on a land
Where dwell a people call'd Lotophagi,
That have and live upon a fruit full sweet 95
I' th' continent. We went ashore; there I
Made them take in fresh water for the fleet.
Then having quickly supp'd, I chose out two
Of my companions to go and see
What men they were; with them I sent also 100
A third, who went as messenger from me.
They quickly went; but mingled with those men,
Who meant no harm, but gave them lote to eat,
Which made them hate returning back again,
And suddenly their country to forget: 105
And with the people there resolv'd to stay,
Forgetting home for love of lote. But I

Sent those that quickly fetched them away
By force, and under hatches did them tie.
The rest I bade unto their ships to haste, ¹¹⁰
Lest eating lote they should return no more.
Aboard they quickly come, and each one plac'd
In order, beats the grey sea with his oar.
Then to the land of Cyclopes we row,
Men proud and lawless, that rely for food ¹¹⁵
Upon the sky, and neither plant nor plough;
Yet have they barley, wheat, wine very good,
Unplough'd, unsown, fetch'd up by show'rs of rain.
They have no courts of counsel, nor of right.
On high huge hills themselves they entertain, ¹²⁰
And in their rocky bellies pass the night.
Each man gives law to his own wife and brood:
Nor do they much for one another care.
Before the port an isle lies clad with wood,
Not very near, nor from it very far. ¹²⁵
Wild goats in great abundance were therein:
Because there dwelt no man that might them kill,
Nor wretched hunters ever enter in,
To tire themselves running from hill to hill.
For the good ship with the vermilion cheeks ¹³⁰
The Cyclopes have not, nor art to make
All that is needful for a man that seeks
Trade, and to pass the seas must undertake.
The island else they quickly might adorn.
The land is good; to th' sea sweet meadows lie, ¹³⁵
And plentifully would yield wine and corn,

If it were helped with good husbandry.
Anchors and cables in the port needs none,
Nor any rope to tie the ship to land;
And when the master thinks fit to be gone, 140
With the first wind they take the oar in hand.
Within the entrance riseth a sweet spring
From out a cave, shaded with poplars tall;
Thither to shore our ships we safely bring.
Some God was guide. Nothing we saw at all. 145
Dark night it was, and nothing to be seen;
The air about us thick, and from the sky
The moon could not shine through the clouds between;
Nor waves, nor isle appear'd to any eye.
Then took we in our sails, and went to land, 150
And waited for the coming of the day,
And in the mean time slumbered on the sand;
But when we saw appear the morning gay,
Admiring th' isle, we walked to and fro,
Whilst the nymphs (sprung from Jove Ægiochus) 155
Refreshment on my soldiers to bestow,
Down from the mountain brought the goats to us.
And presently from out our ships we take
Our bows and arrows keen and came away,
And of our company three troops we make; 160
Then shooting, soon we had a lovely prey.
Our ships were twelve, to which they equally
Divide the spoil; for every ship had nine,
Save only mine had ten: then merrily
All day we sit and feast on flesh and wine; 165

For we had wine enough as yet unspent,
Of that we got and brought away with us,
Which ev'ry man had into budgets pent,
Then when we took the town of Ismarus.
Close by we saw the land of Cyclopes, ¹⁷⁰
And smoke, and heard the voice o'th'men, and sheep
And goats. 'Twas night, and on the sand o'th'sea
Ourselves till morning we refreshed with sleep.
But when the rosy morning 'gan t'appear,
My fellows I together call'd, and spake: ¹⁷⁵
You, my companions, by the ships stay here;
I with my ship and crew will undertake
A trial of this people, whether wild,
And proud, and insolent their nature be,
Or whether they be men of nature mild, ¹⁸⁰
Godly, and loving hospitality.
This said, I went aboard, and bade my crew
Embark themselves. Aboard they quickly come,
And sitting each man in his order due,
With stroke of oar they made the gray sea foam. ¹⁸⁵
Arriv'd, we of a cavern saw the door,
Both high and wide, and sheep and goats there lay
Abundance sleeping. It was shaded o'er
With boughs that downward grew of laurel gay.
Before it was a court well fenced with stone, ¹⁹⁰
And lusty oaks, and many a pine tree high.
I' th' cave a giant lodged, who used alone
His sheep to feed, no other Cyclops nigh.
It was a huge and ugly monster, and

Look'd not unlike a rocky mountain's head 195
That does 'mongst other hills asunder stand,
With a great perriwig of trees o'erspread.
Then bade I my companions to stay
And guard the ship, save that by lot a dozen
I took of them along with me, and they, 200
By chance, were the same men I would have chosen.
With me I took a goatskin full of wine,
Pleasant and strong, by Maron given me,
Evanthes son, priest to Phœbus divine,
At Ismarus, to save his family, 205
Fearing the God in whose grove he did live;
For which s'ven talents of pure beaten gold,
And a large silver bowl he did me give
Freely, besides twelve budgets of wine old,
Pure, pleasant, precious drink it was, which none 210
Knew of besides himself, his wife and maid;
Of the men servants that he kept, not one.
Which, when he drank, he usually allay'd
With water pure, full twenty times as much;
And when a man so temper'd had his cup, 215
Yet still the fragrant smell thereof was such,
He hardly could forbear to drink it up.
This goatskin I took with me in a case,
Expecting of some great and ghastly man,
That knew not law, nor right, to see the face; 220
And landing, quickly to the den we ran.
We entered in, but did not find him there;
But gaze we did at every thing with wonder:

Shelves full of cheese, as much as they could bear,
Pens full of sheep and goats, each sort asunder, 225
Old, younger, youngest; all vessels to the brim,
Pans, trays, and milking pails were full of whey.
My men desir'd me not to stay for him,
But make what haste I could to get away,
And take some of his cheeses from the shelves, 230
And sheep from out the pens, and then to go,
And setting up our sails to save ourselves.
But I would not, though 't had been better so.
But I desired to see the man, and try
If from him some good gift I might obtain; 235
But they with fear were ready for to die,
And could not think upon him but with pain.
Then kindled we a fire, and kill'd and fed
On flesh and cheese, and for his coming staid.
He came, and a great burden carried 240
Of wither'd boughs, which at the door he laid.
His supper with this wood he meant to dress,
And threw it down with such a hideous noise,
As frighted us to th' innermost recess
O' th' cave; there lay we, and supprest our voice. 245
Into the cave he comes, he and his flock,
All that was milch; the males he left without,
Rams and he goats, and the door with a rock
Stops up, which two-and-twenty carts scarce mought
Bear above ground, and then to milking fell; 250
But first he sets unto each ewe her lamb,
In order due, to see them suckled well,

And each young goat he puts under her dam.
Half of the milk he turned to curds, and put
Them into wicker baskets to set up: 255
The other half he into tankards put,
For drink to serve him when he was to sup.
When he had ended all his business,
He made a fire, and thereby spied us out.
What are you, says he, whence d' ye cross the seas? 260
Is it on business, or d' ye rove about
As pirates walk at sea, to and agen,
And are content to set their lives at stake,
So they may mischief do to other men?
Our hearts dismayed before, this language brake. 265
We fear'd his hollow voice, and body great;
But yet I made him answer, and said thus:
We are Achæans, making our retreat
Homewards from Troy, but winds have forced us
Upon this coast (for Jove would have it so.) 270
We are a part of Agamemnon's bands,
Whose glory for his sacking Troy is now
Renown'd both far and wide throughout all lands.
And now ourselves we prostrate at your feet,
Hoping for some good thing as visitants, 275
Such as all men have commonly thought meet;
Or, for the Gods' sake, as to suppliants.
As suppliants we before you here do lie,
With whom, and strangers, Jove still goes along;
He is the God of hospitality, 280
To punish whosoever does them wrong.

Thus I. But he replied with fell intent:
Stranger, thou art a fool, or com'st from far,
That counsel'st me to fear the punishment
Of Jove, or for the blessed Gods to care. 285
The Cyclopes care not at all for Jove
Ægiochus, or any other Gods.
For why, we stronger are than those above;
And if we strength compare, we have the odds.
No, no, 'tis not the fear of Jupiter 290
Can me from thee, or these with thee, restrain,
Unless I please. But tell me truly where
The ship that brought you rides, and do not feign.
This was to sound me. But I saw his mind,
And a deceitful answer did intend. 295
My ship was wreck'd by Neptune, and by wind
Thrown 'gainst the rocks at the land's furthest end,
Where all besides myself and these were drown'd.
To this he answer'd nothing, nor said more,
But snatching up a couple from the ground, 300
Knocks out their brains, like whelps against the floor;
Then cuts them into joints, and on them fed;
Nor did he flesh, or bone, or entrails leave,
Like hungry lion on the mountains bred.
Then weep we, and to Jove our hands upheave 305
To see such work, and have no remedy.
When he with human flesh his belly deep
Had fill'd, and drunk the milk that stood him by,
He laid himself along amongst his sheep,
And slept. And then I saw I might him slay: 310

'Twas but to draw my good sword from my side,
And gently on his breast my hand to lay,
And to the hilt my sword in's body hide.
Upon new thoughts that purpose I gave o'er,
For certainly it had destroyed us quite; 315
So great the stone was that lay on the door,
That to remove it was past all our might.
So there we sighing stay'd for day: and when
The rosy-finger'd morning did appear,
He made a fire, and milk'd his flock again, 320
And the young kids and lambs new suckled were.
When all his work was at an end and past,
Two more of my companions he takes,
And on those two he quickly breaks his fast,
And for his flock the way he open makes. 325
For easily he took the stone away,
And then again with no less ease he did
Set up the same, and in its right place lay,
Than of a quiver one would do the lid.
His flock with noise he drives up to the hills, 330
And in the den leaves us to meditate
How to revenge, with Phœbus' help, our ills.
At last within my breast this counsel sate.
Near one o' th' pens there lay an olive-tree,
Straight, and the boughs cut off, which, when 'twas dried, 335
Designed was a walking staff to be
Of the great Cyclops; which when we espied,
Of some good ship we thought might be the mast,
Or of a bark of twenty oars or more,

That Neptune's rugged waters might have pass'd 340
With a great burthen safe from shore to shore.
Of this a fathom I cut off, and gave it
To my companions to taper it:
They smooth'd and taper'd it as I would have it,
I sharpened it at point as I thought fit. 345
Then in the fire the same I hard'ned well,
And laid it by with dung all cover'd o'er,
Which in the cave from so much cattle fell;
For sheep and goats there always was good store.
From all my company who did not fear 350
To help me thrust this bar into his eye,
I took out four by lot, and such they were
As I myself did wish; and fifth was I.
At evening he returneth with his sheep,
Into the hollow cave he brings them all: 355
Without, he neither sheep nor goat did keep,
By presage, or upon some heav'nly call.
Then with the stone the cave's mouth up he dams,
And milks his she-goats and his ewes each one,
And suckles all his young kids and his lambs. 360
But after he his work had fully done,
Another couple of my men he took.
Then having in my hand an ivy can
Of good black wine, I thus unto him spoke:
Cyclops, since you have eaten flesh of man, 365
Here, drink this good black wine upon't, and see
What excellent good drink we had aboard,
Whereof I've hither brought a taste to thee,

Hoping you will some kindness me afford,
And some assistance in our voyage home; 370
But so intolerably furious
You are, that no man will dare near you come,
Knowing how cruel you have been to us.
When I had said, the good wine he drank up,
And was extremely pleased with the same; 375
And straightway calling for another cup,
Tell me, quoth he, right now what is thy name;
And I will give thee that shall please thy heart.
We Cyclopes have vines that yield good wine,
Which from the earth by rain from heaven start; 380
But this some branch of nectar is divine.
When he had said, I gave him wine again;
Three times I fill'd the can, and he as oft
Drank't off. But when it came up to his brain,
Then spake I to him gentle words and soft: 385
Cyclops, since you my name desire to know,
I'll tell it you, and on your word rely.
My name is Noman, all men call me so,
My father, mother, and my company.
To which he soon and sadly made reply, 390
Noman, I'll eat you last, none shall outlive you
Of all that are here of your company;
And that's the gift I promised to give you.
And having said, he laid himself along
With bended neck, sleeping and vomiting 395
Gobbets of human flesh, and wine among,
All he before had eaten uttering.

The bar with embers then I covered,
Till, green as 'twas, with heat I made it shine,
And with few words my men encouraged, 400
Lest any should have shrunk from the design.
The bar now hot, and ready to flame out,
And, though green wood, yet glowing mightily,
To him my fellows carried now stout,
And set the point thereof upon his eye; 405
But I myself erecting, with my hand
Twirled the bar about, with motion nimble,
As joiners with a string below do stand
To give a piercing motion with a wimble,
So, whilst the brand was ent'ring, I it turn'd. 410
The blood that down along it ran was hot,
And with his eye the lids and brows were burn'd,
And all his eye-strings with the fire did strut,
As when a smith hath heat his axe or spade,
And quickly quenches it while hot it is, 415
To harden it, it makes a noise; so made
His great moist eye the glowing brand to hiss.
He roared so as made the rocks resound,
And from his eye he pull'd, with both his hands,
The burning brand, and threw it to the ground; 420
And so awhile he there amazed stands,
And thence for more Cyclopes calls; and they,
Who dwelt about in every hollow cave,
Came in, some one, and some another way;
And from without the den ask'd what he'd have. 425
What ails thee, Polyphemus, so to cry

In dead of night, and make us break our sleep?
Goes any one about to make thee die,
By force or fraud, or steal away thy sheep?
Then Polyphemus answered from his cave, ⁴³⁰
Friends, Noman killeth me. Why then, said they,
We have no power from sickness you to save;
You must unto your father Neptune pray.
This said, they parted each one to his own
Dark cavern; then within myself I laugh'd ⁴³⁵
To think how with my name the mighty clown
I so deceived had, and gull'd by craft.
The Cyclops for the stone now grop'd about,
Found it, and threw it down, though pained sore;
Thinking to catch us at our coming out, ⁴⁴⁰
Sitting with arms extended in the door,
Such fools he thought us; but I formerly
Had thought upon the course I was to take;
And all my cunning, and my art to try,
Since no less than our lives was now at stake, ⁴⁴⁵
This counsel 'twas that in my breast then sat:
Male sheep there were within the cave well fed,
Fair, big, and deeply clad in wool and fat,
And these, with twigs ta'en from Cyclops his bed,
I bound together three and three; each three ⁴⁵⁰
Bore one under the middlemost fast bound;
One ram, by far the best of all, bore me
Under his breast, my hands in deep wool wound,
Thus hung we constantly, expecting day.
The morning came, the males to pasture hie, ⁴⁵⁵

(The ewes with strutting udders bleating stay),
Their master sitting there in misery,
Laid's hand upon their backs as out they pass'd,
Ne'er thinking of their bellies we were under.
Mine, heavy with his wool and me, came last, 460
To whom the Cyclops said, seeming to wonder,
Why, silly ram, art thou the last to come
Out of the cave, that formerly was ever
The foremost to go out, and to come home,
And foremost at the going to the river; 465
But now art last? Is't for thy master's eye,
Which Noman and his fellows have put forth?
couldst thou speak, and tell me where doth lie
Hidden within, that Noman, nothing worth,
I soon would with his brains besmear the floor, 470
And ease my vexed heart within me so,
Which Noman hath within me wounded sore.
This said, he let the ram that bore me go.
Got forth a little from the den and yard,
I left my ram, and set my fellows free; 475
Unto my ships I brought part of the herd,
That to our fellows we might welcome be,
We that escap'd; but they began to weep
For those we left behind us dead, till I
Commanded them to fetch aboard more sheep, 480
And after that their oars again to ply.
They brought in more, and each man takes his seat,
And in due order, with his oar in hand,
The water grey into a foam they beat,

And rowed us a little way from land, 485
As far as one that hallos can be heard;
So far I stood from shore, I hallo'd then:
Cyclops, Cyclops, why were you not afraid
To kill and eat, as you have done, my men?
For since you strangers do so ill intreat, 490
And of the Gods themselves no reck'ning make,
You ought to have expected vengeance great,
And that your wicked deeds should you o'ertake.
The Cyclops then provoked with this mock,
Threw a great stone at us with all his might, 495
And first he swing'd round o'er his head the rock,
Which just behind the rudder chanc'd to light;
And so much stirr'd the water falling in,
That what with th' eddy and tide from the main,
Brought back to th' land, and sure we dead had bin, 500
But that I quickly thrust it off again;
Then bade I my companions to row
Still further off, till we were out of fear.
They plied their oars again, and we were now
At twice the distance that before we were. 505
And then again I to the Cyclops spoke,
Though my companions would have hindered me:
Why, say they, will you still the man provoke?
How great a stone, how far he throws you see,
How near to land we were, how near to die; 510
If he but any one of us hear speak,
A rock will straightway from him hither fly,
And knock our brains out, and our vessel break.

So said they; but with me could nothing do,
I was resolv'd to vex him bitterly. 515
Cyclops, quoth I, if any ask thee who,
What was his name that robbed thee of thy eye,
Say 'twas Ulysses, prince of Ithaca,
Son to the old Laertes. He it was.
At which the Cyclops howling answered, Ha, 420
I see old prophecies are come to pass,
For Telemus Eurymedes, that here
Dwelled, and telling fortunes went about,
Told me I should by name Ulysses fear,
As he that one day should my eye put out; 425
But I some strong and mighty man expected,
Of stature great, should come to do that deed,
And never such a little wretch suspected,
Nor ever did of being drunk take heed.
But come, Ulysses, nearer, that I may 530
Give you a precious gift as you deserve;
And also to my father Neptune pray,
That you upon the seas he would preserve;
For I his son, and he my father is,
And to my sight again restore me can; 535
He, and no other of the Gods in bliss,
Nor any pow'r on earth. So said the man.
Cyclops, quoth I, I would I could as well
Send thee now down to Pluto's ugly den,
Depriv'd of life and soul i' th' deepest hell, 540
As I am sure thou ne'er shalt see again.
Then held he up his hands to heav'n, and pray'd:

Hear me, O Neptune, if thy son I be,
And thou my father truly, as 'tis said,
Grant that Ulysses never more may see 545
His native soil; or if perhaps by Fate
It be decreed he shall return again,
Let him return both wretchedly and late,
His ships and men lost, and at home meet pain.
His prayer granted was; and then he threw 550
A greater stone, first swing'd it o'er his head,
Which by good chance above the vessel flew,
But almost to the shore us carried.
When we were come into the isle again,
Where all the rest of our fleet then abode, 555
Expecting our return, in grievous pain,
And wondering why we were so long abroad;
Then with our sheep we landed on the beach,
And 'mongst the barks divided them with care,
Their just and equal number unto each, 560
That no ship might be wronged of his share.
On me my fellows over and above
Bestow'd a ram, which on the sand there-right
I made a sacrifice to mighty Jove;
But in my off'rings he took no delight, 565
And was contriving how to make away
My ship and fellows, and destroy them quite.
There on the shore we sat and spent the day,
With flesh and wine from morning unto night.
All night we slept upon the shore, and when 570
The morning had again the day restor'd,

I presently commanded all my men
To loose the ropes, and put themselves aboard.
Aboard they go, and beat the sea with oars,
All for their fellows that were eaten, sad, ⁵⁷⁵
And forward to the main we take our course,
For that we had ourselves escaped, glad.

LIB. X.

Ulysses' entertainment by Æolus, of whom he receives a fair wind for the present, and all the rest of the winds tied in a bag; which his men untying, flew out and carried him back to Æolus, who refused to receive him.

AT TH' FLOATING Isle Æolia we landed,
Where Æolus, the son of Hippotas,
Beloved of th' immortal Gods, commanded.
His house was walled all about with brass, 5
Th' ascent unto it was all one smooth stone.
Twelve were his children, six sons and their wives;
In wedlock he had join'd them one to one,
And with him in his house they led their lives,
And made good cheer; all day the house they make 10
To ring with mirth, and smoke with boil'd and roast;
At night their loyal wives to beds they take,
Richly set out with coverings of great cost.
A month he entertain'd me with delight,
Ask'd me of Troy, and th' Argive fleet, and how 15
The Greeks got home. And him I answer'd right
To ev'ry thing, as far as I did know.
And when I left his house, he was content
T' assist me friendly in my voyage back
With a west wind, and all winds else he pent
Ulysses' entertainment by Æolus, &c. 20

Into a tough and strong neat's-leather sack;
(For Jove had made him master of the winds,
To hold their breath, or blow as he thought fit),
And with a silver string the sack he binds;
No wind could stir but as I ordered it, ²⁵
But all this did no good for want of wit.
Nine days we sail'd fore-right, and came so near
To th' coast of Ithaca, that we could see't
By th' light of beacons that were fired there;
But then with weariness I fell asleep; ³⁰
For I had ne'er till now the helm let go,
Nor suffer'd any else my place to keep,
I long'd to see my native country so.
Meanwhile my fellows to discourse begin,
Thinking much gold and silver was i' th' sack, ³⁵
By Æolus Hippodates put in,
Which now to Ithaca I carried back.
And, Oh, did one unto another say,
How much this man is lov'd where'er he comes!
He brings from Troy a great share of the prey, ⁴⁰
Though we go empty-handed to our homes.
Now Æolus has given him God knows what;
Come quickly, let us while we think upon't,
And sleeping he upon the deck lies flat,
Undo the sack and see how much there's on't. ⁴⁵
This wretched counsel taken by the crew,
The budget they undid, to see my store;
And then at once the furious winds outflew,
And whistling, snatch'd our ship away from shore.

My fellows wept, I studied which was best, 50
To fall into the sea and end my pain,
Or patiently to live among the rest?
I chose to live, as better of the twain,
And hoodwink'd laid me down i' th' ship. At last
We found ourselves upon th' Æolian shore, 55
On which th' unruly winds our ship had cast,
Just at the place where we set forth before:
And there we landed, and short supper made
With my companions on the rocky shore.
I one man with me and a herald take, 60
And went up to the porch before the door
Of th' hall, where Æolus sat banqueting
Amongst his sons and daughters. They admir'd.
What wind, said they, did you now hither bring?
We furnish'd you for what place you desir'd. 65
Some devil cross'd you. Softly, I replied.
Of our misfortune other cause was none
But my men's folly, who the bag untied
The whilst I slept; you can repair what's done.
Their father answer'd at another rate: 70
Hence, rascal, hated of the Gods above:
I entertain none whom the Gods do hate.
Away, I say, the Gods thee do not love.
Thus sighing we were sent away; and though
We were already tired with the oar, 75
To sea we put, and forward still we row,
Six days and nights entire, ne'er giving o'er.
Upon the seventh day we landed near

To Lestrigonia, the royal seat
Of Lamus and his race; the herd's-men there, 80
When from the field they bring their sheep or neat,
Hallo to those at home; then they a-field
Their cattle drive. To one of little sleep
The site o' th' place doth double wages yield,
By tending one day cows, another sheep. 85
For it is seated just 'twixt day and night;
Into the port we came, the which within
On each side was beset with rocks upright,
Whereof two made it narrow coming in.
My fellows with their ships were in the port, 90
Near to the city; for the sea was still,
And not a wind stirring of any sort.
But I kept mine without, suspecting ill,
And with a rope had tied it to the rocks.
Then up a hill I went to look about, 95
But could no sign espy of man or ox;
Then down I came again, and straight sent out
T' enquire what kind of people lived there.
A herald then and two men more I sent,
Who as they going on the high-way were, 100
That from the woody hill to the city went,
Met with the daughter of Antiphates,
That was of Lestrigonians the king.
She had fetcht water from Artracies;
Artracies the name was of a spring. 105
They ask'd her of the king, and of the people,
Her father's house she shows. They thither hie,

And find the queen there looking like a steeple,
And straight abhor'd her as a prodigy.
Then she her husband from the market-place ¹¹⁰
Calls home, who straight intended to dispatch 'em,
And laid his hands on one; but in that space
The rest escap'd by flight, he could not catch 'em;
But then he raised with a mighty shout
The town and country, who in numbers great, ¹¹⁵
Liker to giants than to men, came out,
And with huge stones of a man's weight they beat
My men and ships. A woful noise and wild
I heard of dying men, and tearing planks.
When they had slain my men, they them enfil'd, ¹²⁰
And carried them like fishes hung in ranks.
While they did this, I had no other hope
To save myself, but quickly with my sword,
My ship being tied to th' rocks, to cut the rope,
And make what haste I could to get aboard. ¹²⁵
My crew into the ship leapt all at once,
And row'd for life, till they got far enough
From land, to stand in fear of throwing stones,
And glad they had escaped, onwards row;
The rest, both ships and men, all perished. ¹³⁰
Next at Ææa Isle ashore we run,
Where the wise Goddess Circ' inhabited,
Æetes' sister, daughter of the Sun,
And Perse daughter of Oceanus;
There in a good safe harbour quietly ¹³⁵
We rest ourselves; some God conducted us.

There full of grief two days and nights we lie.
Soon as the morn had shown us the third day,
With spear in hand, and sword girt at my thigh,
Up to a mountain's top I took my way, ¹⁴⁰
Some word of man to hear, or work to spy;
Through the thick wood I saw a smoke arise
About the place where th' house of Circe stood:
Then with myself I did awhile advise
What I should do; at last I thought it good ¹⁴⁵
To make my people all to dine, and then
Safely with company to go or send.
So back I came unto my ship and men;
But by the way (some God was sure my friend)
A gallant stag came by, whom heat and thirst ¹⁵⁰
Invited had down to the stream divine;
At him I quickly threw my spear, which pierc'd
Both his sides thorough, close beneath the chine.
Down dead he falls; on 's neck my foot I set,
Pluck'd out the spear, and laid it on the ground; ¹⁵⁵
To make a rope, I twigs and rushes get,
And his four feet together fast I bound;
Within his legs I place my head, and bear
His body on my neck; 'twas hard to rise,
Leaning with both my hands upon my spear: ¹⁶⁰
He was too great to take up otherwise.
I threw him down o' th' shore, and cheer'd my crew.
Friends, quoth I, though our present state be bad,
Death shall not come, I hope, before 'tis due:
Come, let us eat and drink, and not be sad. ¹⁶⁵

This said, they straightway from the ship descend,
And gaze upon 't, for 'twas a mighty beast:
And when their wondering was at an end,
They wash'd their hands, and dress'd it for their feast;
And all the remnant of the day till night 170
We made good cheer with wine and ven'son store.
After the sun had borne from us his light,
We laid us down to sleep upon the shore;
But when the rosy morn appear'd again,
I said to all my men, who grieved were: 175
My mates, although I have endur'd much pain,
I must entreat you patiently to hear;
We know not where is west or east, nor where
The sun does rise or set, nor where we be;
To me does little hope as yet appear, 180
And therefore we must go abroad and see.
In a low island, rising through the trees,
I saw a smoke when I stood on the hill;
Though I had utter'd no more words but these,
They heard them with a very evil will. 185
Of Cyclops and Antiphates they speak,
That had devour'd their fellows formerly:
And ready were their hearts with grief to break;
They weep and whine, but without remedy.
Of my companions then two bands I make; 190
Of one Eurylochus had the command,
The charge o' th' other to myself I take:
And two-and-twenty men were in each band.
Who should go first abroad, and who should stay,

We were content should be by lot defin'd; 195
To go, fell to Eurylochus. Away
They weeping went, we weeping stay'd behind;
Down in a dale they Circe's palace found,
Built of square stone; the place was full of shade:
Lions and wolves about it lay o' th' ground, 200
Whom Circe tame with magic arts hath made;
These flew not at my men, but laid their noses
Upon them lovingly, and wagg'd their tails,
As dogs salute their masters; Circe's doses
So much above their natures fierce prevail. 205
Eurylochus i' th' door stood with his band.
The Goddess Circe busy was within;
For she a wondrous fine-work had in hand,
Past art of man, and sung as she did spin.
Then did Polites, whom I lov'd most dear 210
Of all my crew, speak out unto them all:
My friends, quoth he, somebody singeth there,
A Goddess or a woman; let us call.
This said, they call, and she sets ope the gate,
Bids them come in; fools as they were, they enter, 215
All but Eurylochus; without he sat,
Suspecting somewhat, therefore durst not venture.
She places them, and sets before them food,
Cheesecakes of cheese, and honey, flour and wine;
But had mix'd something with it not so good, 220
Of wond'rous virtue, with an ill design.
For with a wand, as soon as they had din'd,
She drove them to the sties, and there them pent:

For body, head, hair, voice, all but the mind,
Right swine they were, and grunted as they went; 225
There to them threw she acorns, crabs and bran,
The things wherewith swine commonly are fed.
Eurylochus stay'd long, but not a man
Came out to let him know how they had sped.
Then back he comes: at first he could not speak, 230
Though he endeavoured; he grieved so,
The sighs and sobs his words did often break,
Till urg'd by us that long'd the truth to know;
At last he said, Renown'd Ulysses, we
Passing the woods, as we commanded were, 235
In a dark vale a stately palace see;
A Goddess, or a woman, dwelleth there.
We call'd, and straight she opening the gate,
Bids us come in; they ill advised enter,
All but myself; alone without I sat, 240
Suspecting fraud, and durst no further venture.
Lost they are all: for if they could, I know
Some of them would have come and brought me word,
For I stay'd long enough; this said, my bow
I took, and at my side my trusty sword, 245
And bad him guide me back the self-same way.
Then fell he at my feet on both his knees,
And weeping me entreats to let him stay;
Your life, quoth he, amongst the rest you'll leese.
To this I said: Eurylochus, stay you 250
Here at the ship, since you are frightened so,
Eating and drinking with the rest o' th' crew;

Necessity compelleth me to go.
This said, I went along the shore, till I
Was at the entrance of the valley, where 255
The house of Circe stood. Then Mercury
Encounter'd me; in form he did appear
Of a fair youth, whose beard but now began
In a soft down to peep above his face,
Which is the prime of beauty in a man. 260
Alas, said he, what make you in this place
'Mongst trees and shrubs? For I can tell you this,
Your mates at Circe's house are lodg'd in sties,
They now are swine; you'll of your purpose miss;
You cannot set them free though you be wise, 265
But rather you will with them lie. But well;
I'll give you such an antidote as you
Need not to be afraid of any spell;
And will, besides, her purpose to you show.
To make you drink she'll temper you a cup, 270
Which shall not, for the antidote, bewitch you;
And when she sees that you have drank it up,
With her long wand she presently will switch you.
Then to her with your naked sword in hand,
As if you purpos'd to cut off her head; 275
Then she will shriek, and weep, and trembling stand,
And buy her life with proffer of her bed;
You must not then refuse the Goddess' love,
If you intend your fellows to restore:
Yet make her swear by all the Gods above 280
She never will attempt to hurt you more.

Then gave he me the herb; the flow'r was white,
The root was black; the Gods do call it Moly,
And gather it, who have no stint of might;
For men to think to find it is a folly. 285
Then Hermes parting, mounted to the sky,
And I to Circe's house went on my way,
And musing stood awhile; but by and by
I call'd, and she came forth without delay,
And calls me in. I enter with sad heart; 290
There in a glorious chair she made me sit,
Studded with silver nails, and carv'd with art;
Then puts a low stool to it for my feet,
And brought the potion in a golden cup,
Which she had temper'd to her bad design; 295
And soon as ever I had drank it up,
She switch'd and bad me go lie with the swine.
Then start I up with my drawn sword, and make
As if I purpos'd to cut off her head;
Then did she shriek most fearfully and quake, 300
And weeping to me these words uttered:
Who, whence are you? what is your father's name?
That this drink worketh not, is very strange,
If any else had tasted but the same,
He soon had of his figure found a change; 305
But you a stubborn heart have in your breast.
Are you Ulysses, that should hither come,
As Hermes told me oft, and be my guest,
When from the Trojan shore he sailed home?
Put up your sword; and that we may confide 310

In one another better without dread,
Let's to my chamber go, and side by side
Compose the things we differ in a bed.
Circe, said I, oh how can I be kind,
When you to swine my fellows turned have? 315
And now you have me here, 'tis in your mind
To make me tame, and keep me for a slave.
I'll not come near your bed, unless before
You take an oath by all the Gods above
You'll never go about to hurt me more; 320
This said, she swore, and I gave way to love.
On Circe waiting-women four attended
To do the service of the house, and were
From sacred rivers, springs, and groves descended;
Each had her proper work assigned her. 325
One does the chairs with coverings array;
Another does the silver tables spread,
And on each one of them a basket lay
Of gold, and into it she puts the bread;
The third does in a silver flagon mix 330
The wine and water in a silver pot;
The fourth to make a fire brings in the sticks,
And for a bath makes ready water hot.
Circe herself the water tempered
Into a just and comfortable heat, 335
And pour'd it on my shoulders and my head,
Washing my limbs, till I my toil forget.
And when I bathed and anointed was,
She put upon me a fair coat and vest,

And led me in, into the dining-place, 340
And to my chair and table me address'd.
One maid a golden bason, with the ewer,
To wash our hands over a cauldron brings,
The cauldron also was of silver pure;
Another loads the table with good things; 345
Another on the table sets on bread,
And then the Goddess Circe bids me eat;
But other dangers running in my head,
I had but little stomach to my meat:
Which she observing, said, Ulysses, why 350
Do you thus sullenly your meat refuse,
And like a dumb man sit? D'ye think that I
Intend against you some new art to use?
Have I not sworn? To which I answered:
O Circe, how can I be pleas'd d'ye think 355
(When you my fellows keep disfigured
And pounded up in hog-sties) t' eat and drink;
If you mean well, set them at liberty,
And in the shape of men before my eyes,
That I may look on them, and they on me. 360
With switch in hand then out of doors she hies,
And opens all their prisons; out they come,
And were, to look to, pigs of nine years old.
She drives them with her wand into the room,
And makes them stand there while I them behold. 365
Then Circe went amongst them, and each one
Smear'd with an unguent, which straightway did make
Their hair fall off, and undid all was done;

And presently a human shape they take,
Greater and fairer than they had before. 370
They knew me all, my hand with theirs they press'd;
So glad they were, their eyes for joy ran o'er;
The whole house wept, and Circe with the rest.
This past, the Goddess said: Ulysses, go
And bring your ship a-land, and let her lie; 375
Your goods within the rocky caves bestow,
And make haste back with all your company.
This pleas'd me well. Down to the sea I hie,
Where my companions I weeping find;
But soon as I appear'd, they presently 380
About me came, their care now out of mind.
As when from pastures fat a herd of cows
Well fed return at evening to their home,
Their calves will not be kept within the house,
But play, and skip, and round about them come; 385
So did my fellows, soon as they me saw,
Come skipping out o' th' ship, with no less joy
Than if they had been come to Ithaca,
Their native country, from the town of Troy.
Our joy, said they, Ulysses, cannot be 390
Greater when we at Ithaca arrive,
Which we so wish for, than 'tis now to see
That you from Circe are return'd alive.
But tell us, pray, how died our fellows there?
But first, said I, hale up your ship to land, 395
And in the rocks hide all that's loose in her,
And come with me to Circe out of hand.

There shall you see your fellows how they live,
In want of nothing that they can devise.
To these my words my fellows credit give; 400
Eurylochus alone thought otherwise.
Wretches, said he, what mean you? Will you go?
Have you a longing to be lions tame,
Or swine, or wolves, and being transformed so,
To live at Circe's house, and guard the same? 405
Remember Cyclops, and how all they sped
That dar'd to put themselves within his cave,
By too much valour of Ulysses led.
Bethink you well how you yourselves may save.
When I heard that, I drew my sword, and meant, 410
Although he were my kinsman very nigh,
T' have made his head fly. But of that intent
I was made frustrate by the company,
That interposing spoke me fair, and said,
Let him stay here, but we'll go every man, 415
While he looks to the ship, since he's afraid.
Thus having said, to march they straight began;
Nor staid Eurylochus behind, for I
Had so affrighted him he went with th' rest.
Meanwhile at Circe's house my company 420
Were bath'd, and oil'd, and cloth'd with coat and vest.
Feasting we found them in a stately hall.
But when we saw them, and heard everything
That had befallen them, suddenly we all
Wept out so loud, as made the house to ring. 425
Then Circe said: Ulysses, why d'ye weep?

I know your sufferings both at land by men,
And what you have endured on the deep;
Drink wine, eat meat, and merry be again.
Recruit your hearts with courage, till they be 430
As strong as when from home you first set out;
Put all your danger out of memory,
Nor trouble more your wearied minds with doubt.
These words of Circe's did our spirits cheer,
And made us willingly fall to our meat; 435
Both then, and ev'ry day throughout the year,
In Circe's house we freely drink and eat.
But when the season was come round about,
And months and days of th' year had made an end,
Then my impatient fellows call'd me out, 440
And said, Strange man, do you no more intend
To see your country Ithaca? Shall we
For ever stay with Circe here? Have Fates
Decreed that you your house no more should see,
But perish here together with your mates? 445
This my companions said, and said but right.
Then what remained of the day we spent
Eating and drinking merrily. At night
They to their own beds, I to Circe's went;
Where prostrate at her knees, I press her hard 450
To keep her word, and let me go my way;
My mind, said I, is going thitherward
Now, and my fellows ask me why I stay.
Renowned Ulysses, answered Circe, here
Against your will with me you shall not stay. 455

But ere you go unto your country dear,
You must a voyage make another way.
You must to the house of Hades first repair;
For with Tiresias the prophet blind,
You must consult concerning your affair. 460
He knows what course the Fates have you design'd,
Though blind his eye, yet is his judgment clear.
For why, to him Proserpina alone
Hath granted to peruse Fate's register,
And know the history of things not done. 465
The ghosts to him stand up when he goes by.
At this my heart was ready ev'n to break,
And in the bed long time I weeping lie,
And turn'd, and wish'd for death. At last I speak:
Circe, said I, who shall me thither guide? 470
Never man yet to Hell went in a ship.
Then to me Circe presently replied:
Ulysses, let not that thought break your sleep.
You need but set your mast up, hoist your sail,
And then sit still; you shall not want a wind; 475
For Boreas to waft you will not fail.
When you are come to th' Ocean's end, you'll find
The woody shore and grove of Proserpine;
There the tall poplar and soft willow grows,
And there it is your bark you must put in. 480
Then go along the shore to Pluto's house,
And you shall see where into Acheron
Cocytas falls, which is a branch of Styx,
And with it also Pyriphlegeton,

And a great rock where the two rivers mix. 485
Close by that place make with your sword a pit
A cubit wide, and round about it pour
Wine mix'd with honey, and pure wine after it;
Then water pure, and over all throw flour.
Such is the drink that's offer'd to the dead. 490
And further, to them you must make a vow,
That when you be at home, and out of dread,
You'll gratify them with a barren cow.
But to Tiresias you must alone
Promise at your return to kill a ewe 495
All over black. The ceremonies done
Which to the dead by common law are due,
Then of the ram and ewe let out the blood
Into the pit; their heads to hellward place,
And turn your back, and so go tow'rd the flood; 500
Then shall you see the ghosts come out apace.
Bid your companions meanwhile to flay
The slaughter'd sheep. To Pluto must you and
To his queen Proserpine your prayers say,
Then sit down at the pit with sword in hand. 505
Let none come near the blood until you see
Tiresias the Theban prophet come.
'Twill not be long before he with you be;
He'll tell you all the ways to bring you home.
This said, Aurora had the light display'd, 510
And Circe cloth'd me with a coat and vest,
And with a pure white robe herself array'd,
With a gold girdle girt beneath her breast,

And put upon her head her veil. Then I
Went through the house to make my fellows rise, 515
And gently said unto them severally,
Let's go, for Circe now doth so advise;
And well content they were. But safe away
I could not bring them all. For there was one,
Elpenor, neither forward in a fray, 520
Not yet of very much discretion;
Heated with wine o'er night, himself to cool,
Up to the house's top he went to sleep;
But, wak'd with noise the rest made, like a fool
Ne'er thought of coming down the stairs steep 525
Backward, and so to th' earth he headlong fell,
And broke his neck-bone, and lay dead o' th' ground,
And his soul leaving him, went down to Hell.
The rest came forth, and stood about me round.
To these I said: You think without delay 530
That we to Ithaca are going now;
But Circe bids us go another way,
Of old Tiresias the mind to know,
The Theban prophet, who is now in Hell.
This broke the very heart-strings of my mates; 535
They sob and tear their hair, but cannot tell
How to avoid what's once decreed by th' Fates.
Then to our ship we weeping went. Mean space
Circe a ram and black ewe there had tied,
Unseen to us; we found them on the place.
For Gods, but when they list, cannot be spied.

LIB. XI.

Ulysses' descent into Hell, and discourses with the ghosts of the deceased heros.

WHEN WE WERE come unto the sea-side, where
Our ship lay, which we shov'd into the deep;
We rear our mast, pull up our sails, and bear
Aboard with us one male, one female sheep. 5
And so for Hell we stood, with fears in mind,
And tears in eye. But the fair Circe sent,
To bear us company, a good fore-wind,
That kept our sails full all the way we went.
To winds and steerage we our way commend, 10
And careless sit from morning till 'twas dark;
Then found ourselves at th' Ocean's farthest end,
Where up to land the wind had forc'd our bark.
Here dwell the Cimbers, hid in clouds and mist,
Whom thou, O Phœbus, with thy golden eye, 15
Nor coming from the sky to earth e'er seest,
Nor when from earth thou mountest to the sky;
But live, poor men, under a horrid night.
Here seek we for the place of which the wise
Circe had told us, and soon on it light,
Ulysses' descent into Hell. 20
And thither fetch'd the sheep for sacrifice.

Then with my sword i' th' ground I digg'd a pit,
And round about it wine with honey pour;
And round again pure wine pour after it,
Then water pure. O'er all I sprinkle flour; 25
And vowed, to those feeble folk, to kill,
As soon as I to Ithaca should come,
A barren heifer, and the altar fill
With many more good things I had at home.
And promis'd to Tiresias alone 30
A fat black ewe, the best in all my cotes.
When I my vows and pray'rs had rightly done,
Of both the victims straight I cut the throats.
Their reeking blood streamed down into the pit;
Out come the ghosts; maids, youths, decrepid age, 35
And tender virgins, they all scented it;
And warriors clad in gory arms, all rage,
And rushing out of Hell, with hideous cry,
About the blood bustling they go and turn,
Which not a little frightened me. Then I 40
Bade flay the victims, and their bodies burn,
And say their pray'rs to Pluto and his queen.
With sword in hand I sat on the pit's brink,
Resolv'd till I Tiresias had seen,
That not a ghost a drop of blood should drink. 45
First came my soldier Elpenor's spirit,
Which left the body just when we set sail,
So that we had no leisure to inter it;
His heavy fate I did with tears bewail.
How now, quoth I, Elpenor? art thou here 50

Already? Couldst thou me so much outstrip?
I first came forth, and left thee in the rear,
Hast thou on foot outgone my good black ship?
Then said Elpenor: Issue of Jove, divine
Ulysses, I had come along with th' bark, 55
But that the Devil and excess of wine
Made me to fall, and break my neck i' th' dark.
I went to bed late by a ladder steep,
At top o' th' house the room was where I lay;
Wak'd at the noise of parting, half asleep, 60
Headlong I hither came, the nearest way.
Now I adjure you by your father, and
Your wife, and son, and all his seed to come,
(For I assured am that you will land
Where Circe dwells before your going home), 65
To see I have the rites due to the dead.
Fear th' anger of the Gods above, and burn
My body with my arms, from foot to head,
And cast on earth to cover o'er my urn.
This done, for men hereafter sailing by, 70
Raise me a little tomb of earth by th' shore,
That they may eas'ly see where 'tis I lie.
Lastly, upon it upright plant my oar.
All this, quoth I, I'll do upon my word.
Thus we discours'd amongst the shades. He stood 75
While I continued with my naked sword
To keep the sprites from tasting of the blood.
Then came Anticlia my mother's ghost.
Alive I left her, when to Troy I sail'd,

To fight against it in the Argive host. 80
Now seeing her, exceedingly I wail'd;
And though I grieved were to keep away
My mother from the loved blood, yet still
In the same posture patiently I stay,
Till I might know Tiresias his will. 85
Then came the soul of old Tiresias,
And of the gilded staff he had in's hand.
Poor man, quoth he, perceiving what I was,
What brought thee hither to this ugly land?
Stand back awhile, and take your sword away, 90
That I may drink, and the unerring word
Of Fate deliver to you. I obey,
Retire, and up I put my trusty sword.
Then said the good old prophet: You are come,
Honour'd Ulysses, to enquire of me, 95
What the Gods say about your going home.
I tell you true, 'twill not be easily.
I think you'll not escape at sea unseen
Of angry Neptune, who I do not doubt
Will do his worst, and make you feel his spleen, 100
For Polyphemus' eye which you put out.
Yet for all that, you may to Ithaca
Safely return, if you can but command
Your passion when in th' isle Thrinacia,
An island lying in your way you land; 105
There feed the kine of the all-seeing Sun,
And flocks of goodly sheep. Hurt none of these.
Then shall your ship her course with safety run

At length to Ithaca, though not with ease.
But if you touch them, I denounce a wreck 110
To your good ship, and death to all your crew.
And though yourself may happen to come back
At last, and this unhappy fate eschew,
'Twill be alone, and in a ship not yours;
Besides that, when you are returned home 115
You'll fall into the danger of the wooers,
Who for your wife's and meat's sake thither come.
But you will be reveng'd of these; and when
You shall have made away these wooers, go
With oar on shoulder, to a land where men 120
Inhabit that the briny sea not know,
Nor ever mingle salt with what they eat,
Nor ever saw the ship with crimson face,
Nor yet those wings which do the water beat,
Call'd oars, to make your good ship go apace. 125
Now mark me well, when thou shalt meet a man
Just at the end of Neptune's utmost bound,
Bearing upon his shoulder a corn-fan,
Stick down thy lusty oar upon the ground;
There sacrifice to the world's admiral, 130
For new admittance, a ram, boar, and bull;
Then home again, and offer unto all
The Gods by name an hundred oxen full.
Your death will not ungentle be, for which
Age shall prepare you, and your soul unglue 135
Insensibly. Your people shall be rich
Which round about you dwell. All this is true.

Tiresias, quoth I, when he had done,
'Tis well. My mother yonder I espy
Amongst the shades; she knoweth not her son; 140
What shall I do to make her know 'tis I?
That, quoth he, I can tell you easily.
What soul soever you admit to drink,
To what you ask will make a true reply;
Those you put back, back into Hell will slink. 145
The prophet having thus my fate foretold,
Into the house of Pluto back retir'd.
I o'er the blood my former posture hold,
But let my mother drink as she desir'd.
She knew me then, and wept. My son, said she, 150
How came you to this place of ours so dark?
Th' ocean and so many gulphs there be
'Twixt you and us, that but with a good bark
No living man can pass. Come you but now
From Troy, and all this while have wand'ring been, 155
You and your company? You have, I trow,
Your wife Penelope by this time seen.
Mother, said I, the cause I came this way
Was to ask counsel of Tiresias.
Since I with Agamemnon went to Troy, 160
In Ithaca or Greece I never was.
But, mother, tell me, pray you, how came you
Unto this place? Was it by sickness long?
Or did Diana with a death undue
Send you down hither to this feeble throng? 165
And tell me if my father and my son

Remain as formerly in their estate;
Or that some prince of Greece my wife have won,
Supposing me now cast away by fate?
Tell me besides, whether Penelope 170
Remain at home together with my son,
Assisting him to rule my family;
Or whether she be married, and gone?
Your wife, said she, does still continue there;
For your long absence weepeth days and nights. 175
Your son still holds his own, and makes good cheer;
Oft he invited is, and oft invites.
Your father from his vineyard never budes;
Rich coverlets and bedding he refuses;
Ne'er comes to the town; in winter with his drudges 180
To lay him down, sleep by th' fire he uses.
In vile array in summer-time he creeps,
Till vintage pass, about his fruit-trees round,
And visits them each one; at night he sleeps
On bed of heaped leaves upon the ground. 185
Thus lies he griev'd and pining with the thought
Of your sad fate; afflicted too with age.
The like sad thoughts me also hither brought:
I neither died by Diana's rage,
Nor any long-consuming malady; 190
But very woe, thinking that you were dead,
My noble, dear Ulysses, made me die;
My soul thus hither from my body fled.
When she had spoken, I would very fain
Have ta'en her in my arms; three times I grasp'd 195

At the beloved shadow, but in vain.
Mine arms I closed, but did nothing clasp.
Sore griev'd hereat, I said unto my mother,
I am your son, why do you fly me so?
Why may we not, embracing one another, 200
Although in Hell, give ease unto our woe?
Hath Proserpine, my sorrows to augment,
Sent me a phantom in my mother's stead?
Oh no, quoth she, my son, she'd no intent
T' abuse you. 'Tis the nature of the dead. 205
We are no longer sinews, flesh, and bones,
We are substances incorporeal,
All that 's consumed i' th' fun'ral fire; when once
That's done, it in itself stands several;
Flies like a dream. No, go your ways to th' light, 210
And tell all I have told you to your wife,
That she may know in this perpetual night
The dead enjoy an everlasting life.
When we had thus discours'd, the ladies came,
Sent out by Proserpine to taste the blood; 215
Daughters and wives to princes of great fame,
And round about me at the pit they stood.
But I to know each one that came to drink,
Studied awhile; then thought this counsel best,
With sword in hand t' abide upon the brink, 220
Whilst one was drinking to keep off the rest.
There was not one but I enquired her name
And pedigree. All told me who they were.
And first of all the well-born Tyro came,

Who said Salmoneus was her ancestor, ²²⁵
And that of Cretheus she had been the wife,
And on Enipeus had enamour'd been
Once on a time whilst she remained in life;
On Enipeus, fair'st stream that e'er was seen,
Upon whose bank, Neptune, that chanc'd to spy her, ²³⁰
On Enipeus' sweet stream drew her aside,
And at the river's mouth laid him down by her,
Between two waves rais'd high, their deed to hide.
When he love's work had done, Thou shalt, said he,
Ere th' year be ended, bring forth children twain, ²³⁵
Who princes both of great renown shall be.
I Neptune am; the Gods ne'er work in vain.
See you that they be educated well,
Till they shall be at man's estate arriv'd.
So go you home: my name you must not tell. ²⁴⁰
This said, into the rolling sea he div'd.
Her time being come, she was delivered
Of two great boys, Neleus and Pelias,
Who for the service of high Jove were bred.
One king of Pyle, th' other of Iolcas was. ²⁴⁵
The noble lady Tyro, besides these,
Did many other goodly children bear:
Amatheon, and Æson, and Pheres,
But these her husband Cretheus' children were.
Next came the daughter of Æsopus (who ²⁵⁰
Through Theban fertile plains and meadows runs)
Antiope. Of Jove she boasteth too,
That by him she conceived had two sons;

Their names were Zethus and Amphion. They
The founders were of Thebes; with walls and towers, 255
And sev'n strong gates they fenc'd it ev'ry way
Against invasion from all neighb'ring powers.
Amphitriton's wife Alcmena there I saw,
That lov'd by Jove brought Hercules to life.
And the king Cretheus' daughter Megara, 260
That was the mighty Hercules his wife.
I saw there also the unfortunate
Mother of Œdipus, Jocasta bright,
That blindly did a horrid act, by fate,
Which the Gods' pleasure was should come to light. 265
Not knowing him, she married her own son;
Not knowing him, he his own father slew:
When they perceived both what they had done,
She hang'd herself; her Furies him pursue.
Chloris I saw, whom Neleus did wed 270
For beauty, got by the son of Joseus,
And with great dower he gain'd her to his bed;
Her father Amphion rul'd Orchomenus.
She queen of Pyle, by Neleus had three boys;
Nestor, Chronius, Periclumenus; 275
And one fair daughter to make full their joys,
Pero by name, for beauty wondrous.
The princes round about were suitors to her;
But Iphiclus had Neleus' cattle ta'en,
And Neleus was resolved to bestow her 280
On him that could his herds fetch back again.
There was a prophet undertook the task;

But ta'en by clowns, and into prison pent,
For answering Iphycus t' all he could ask
Was freed, and did the thing he underwent. 285
I saw the wife too of Tyndareus there,
Fair Leda; she two twins unto him bare,
Pollux, good cuffer; Castor, cavalier:
Twins, and alive, though under ground they are,
And have obtained of their father Jove 290
Both to be canonized Gods; but so,
As he that is to-day in heaven above,
Shall be to-morrow amongst men below.
Iphimedeia, Alcæus' wife,
I saw, that did two sons to Neptune bear, 295
Otus and Ephialtes; of short life;
The greatest and the fairest that ever were
Except Orion; each at nine years old
Between the shoulders was nine cubits wide,
And was in length nine cubits four times told, 300
And all the Gods in heaven terrified;
And threat'ned them with war, and heav'n to storm
They Ossa set upon Olympus high,
And Pelius on Ossa, and so form
Against the sky a mighty battery; 305
And surely they had storm'd it had they been
At man's estate; their beards were not yet grown;
Apollo kill'd them with his arrows keen,
Ere on their cheeks appeared any down.
Phædra and Procris there I also saw, 310
And Minos' daughter Ariadne, whom

Theseus was bringing towards Attica
From Creta, but he could not bring her home;
Diana killed her in Dia isle
On Bacchus' quarrel. There I did behold ³¹⁵
Mæra and Clymene, and th' woman vile
Eryphile, that her own husband sold.
To name the ladies all I saw, would make
My tale to last all night. 'Tis bed-time now,
Here or aboard, though not till you think fit; ³²⁰
Till you think fit, and give command to row.
This said, the company deep silence seiz'd,
Delighted with the things they heard him speak.
The queen herself, Arete, no less pleas'd,
At last resolv'd the silence thus to break. ³²⁵
Princes, what think you of this man so rare,
His look, his stature, and his noble heart?
My guest he is, but you have all a share
In th' honour of this visit. Ere he part
Make him a present to relieve his need. ³³⁰
Be liberal, have no respect to thrift;
For you the Gods from fear of want have freed
With wealth abundant. Do not pinch your gift.
Old Echinous said: The queen says right;
We shall do well her counsel to obey. ³³⁵
But since in king Alcinous lies the might,
'Tis better first to hear what he will say.
Then said Alcinous, It shall be so,
Unless I bear the name of king in vain;
Let not the stranger till to-morrow go; ³⁴⁰

Till we prepare our gift he must remain.
As for his passage we will all provide,
And chiefly I that do the sceptre bear.
To whom the wise Ulysses thus replied:
Renown'd Alcinous, that reignest here, ³⁴⁵
Though a whole year you should command my stay,
It will not trouble me. Nay, that I'd chuse,
Since you intend to send me rich away:
For I am sure I shall no honour lose
By coming richly home. Kings that have store ³⁵⁰
Of wealth, are better commonly obey'd,
And by their subjects are respected more,
Than those whose treasures and chests are void.
There be, the king said, many that can lie;
But there is form and sense in all you say; ³⁵⁵
Both your own fate you tell with harmony,
And of the Greeks with whom you went to Troy.
I should be well content to sit up here
All the night long, so you would undertake
To tell me ev'ry thing that you saw there. ³⁶⁰
To him Ulysses then did answer make:
Renowned king Alcinous, you know
There is a time for talk, a time for rest;
But since you long to hear, I'll tell you now
Whom else I saw, and what fate them oppress'd. ³⁶⁵
And first the saddest end of those that had
Escap'd the fury of the enemy,
And in their countries landed were and glad,
Were murder'd by a woman's treachery.

The female ghosts scatter'd by Proserpine, 370
Some one way, some another; thither came
Atrides' soul, first of the masculine,
And others with him, whose fates were the same.
No sooner he the blood had tasted, but
He knew me, sorely wept, and would have cast 375
His arms about my waist, but could not do't,
For now, alas, his strength was gone and past.
I griev'd to see him, and thus to him said:
King Agamemnon, what fate brought you hither?
Were you by Neptune on the sea betray'd. 380
And hither sent by fury of the weather?
Or landing to find booty, met with death?
Or else besieging of some town were slain?
Or for fair women were bereav'd of breath?
Then Agamemnon answer'd me again: 385
Noble Ulysses, I lost not my life
By Neptune's fury, nor in fight at land
For booty or for women; but my wife
Did basely kill me by Ægistus' hand.
At my first landing he invited me, 390
And slew me then when I at supper sate.
Just as a man would kill a cow, so he
Kill'd me. There's no such woful death as that.
My friends were butcher'd like so many swine,
Which when within a mighty rich man's hall 395
Numbers of men invited are to dine
At wedding, or at feast, are made to fall.
You very many men have seen to die

In ranged battle, and in single fight,
But never felt such pity certainly 400
As you had felt, had you but seen this sight,
How we 'mongst tables on the ground did lie,
That ran with blood. But my heart most did rue
To hear Cassandra, Priam's daughter, cry,
Whom close beside me Clytemnestra slew. 405
Then, though I were at the last gasp, I tried
If groping I might find my fallen sword;
But the curs'd woman push'd it from my side.
I died; to close mine eyes she'd not afford.
Nothing so cruel as a woman yet 410
Did nature e'er produce; a thought so ill
In any other breast did never sit,
As her own loving husband's blood to spill.
Yet this my wife, to the eternal shame
Of all the sex, (not only of the bad, 415
But ev'n of those that have no evil fame),
Betray'd my life, and of my death was glad.
Jove meant to Atreus' seed, said I, great spite
By womankind. By Helen first. At Troy,
For her sake, many lost their lives in fight, 320
And Clytemnestra now did you betray.
Therefore, said Agamemnon, never trust
A woman more, although she be your own.
Tell her not all you think: somewhat you must;
And somewhat keep t' yourself to her unknown. 325
But you, Ulysses, need not fear your wife,
Icareus' daughter, fair Penelope;

She loves you better than to take your life:
A wife so wise will scorn disloyalty.
When we for Troy set forth together, then 430
She gave suck to your son; but he is grown
A man by this time, and takes place with men;
Is rich, and one day shall his father own,
And he and you at home embrace each other.
But I was not allow'd my son to see, 435
But was first murder'd by his wicked mother.
Now hear ye; if you will be rul'd by me,
Let no man know beforehand, when and where
You mean to land in Ithaca. Beware
Of suffering your bark in sight t' appear. 440
Remember still, women unfaithful are.
But tell me, have you nothing all this while
Heard of my son Orestes? Whether he
At Sparta with his uncle be, or Pyle?
For dead he is not, I know certainly. 445
Alas, said I, Atrides, how should I,
That wand'ring was at sea, hear any news
Whether alive or dead he be? Or why
Should I with tales uncertain you abuse?
Discoursing thus, and weeping there we stood, 450
When great Achilles' soul appear'd to us;
And with him also the two spirits good
Of stout Patroclus and Antilochus.
The soul of Ajax, son of Telamon,
Was also there, who 'mongst those warriors tall 455
The goodliest person was, except the son

Of Peleus, who did much excel them all.
Achilles drank, and presently me knew,
And said, Ulysses, what brought you to Hell?
What plot upon the dead you hither drew, ⁴⁶⁰
Where none but shades of wretched mortals dwell?
Achilles, said I, I was forc'd to come
T' inquire of th' wizzard, old Tiresias,
What the Fates say about my going home,
Whether or no, and how 'twill come to pass. ⁴⁶⁵
For since I came from Troy I have not seen
Nor Ithaca, nor any Grecian shore;
For toss'd and cross'd at sea I still have been;
But you are now as well as heretofore.
Like any God we honour'd you at Troy, ⁴⁷⁰
And here among the ghosts you are obeyed.
Death hath not chang'd your state; you still enjoy
A regal power. To this Achilles said:
Talk not to me of honour here in Hell;
I'd rather serve a clown on earth for bread, ⁴⁷⁵
Than be, of all things incorporeal,
That are, or ever shall be, supreme head.
But tell me of my son, Neoptolemus;
Whether he came to Troy, and how he fought;
And of my aged father, Peleus, ⁴⁸⁰
Whether he keep his place, or be put out.
For since much time his vigour hath decay'd,
Some foe, it may be, hath usurp'd his place
In Pthia, and in Hellas where he sway'd,
And put him, with his people, in disgrace. ⁴⁸⁵

But were I now above, and strong as then,
When for the Greeks I fought at Ilium,
And slew so many of their bravest men,
And to my aged father's house should come;
If there I were, 'twould not be very long 490
Before I made some of their hearts to ache,
That go about to do my father wrong,
And would by force his honour from him take.
When he had done, I made him answer thus:
Concerning Peleus I can nothing say; 495
But of your son, stout Neoptolemus,
I know enough: 'twas I brought him to Troy
From Scyros' isle. In council, always he
First spake his mind, and never spake but well.
Nestor and I, sometimes, and only we, 500
Th' advice he gave were able to refel.
In fight, he sought no shelter in the throng,
But ever out he ran before the rest,
To show his courage and his strength among
Those foes that were in Troy esteem'd the best. 505
The names of all he slew I cannot tell;
They are too many. But 'twas by his sword
That great Eurypylus in battle fell,
Of all the Trojan aids the goodli'st lord,
Excepting Memnon. After, when we were 510
Within the wooden horse concealed, and I
The power had of ordering all things there,
I never saw your son to wipe his eye,
Or to wax pale, as many of us did.

He never longed to be set on land 515
From out the hole in which we all lay hid;
And to his hilt he often put his hand,
And often to his spear. And when at last
We won, and rifled had the town of Troy,
He home into his country safely passed, 520
His ship well-laden with his part o' th' prey.
And which is more, he came off safe and sound;
Though Mars each way threw deaths and wounds about
Amongst the crowd, he ne'er received wound,
Neither from them that shot, nor them that fought. 525
This said, the swift Achilles' soul retir'd,
Strutting into the mead of Asphodel,
Proud of his son, to hear what he desir'd.
Then other grieved souls their stories tell.
Only the soul of Ajax stood off mute 530
And sullen, because I did from him bear
Achilles' armour in that sad dispute,
Where Pallas and the Trojans judges were.
I would I had not had that victory,
Which cost the life of him that was the most 535
Admir'd by all, for form and chivalry,
Except Achilles, in the Argive host.
I gently to him spake Ajax, said I,
Forget that cursed armour now at last;
And since you dead are, let your anger die: 540
For why, the Gods determin'd had to cast
Those arms amongst us for a punishment,
Offended with us, what e'er was the matter,

And us'd them as an engine, with intent
Our greatest tower, which was yourself, to batter. 545
For whom the Argives did lament no less
Than for Achilles, Thetis' son. Come nigh,
And hear what I can answer, and suppress
Your mighty heart awhile. So ended I.
To this just nothing he replied, but went 550
Int' Erebus 'mongst other shadows dim;
Yet there, I think, he would have been content
To speak to me, if I to speak to him.
But I desired others' souls to see.
Then Minos there, the son of Jove, I saw, 555
With golden sceptre, dealing equity
To souls that stood and sat to hear the law.
Next after him, I saw the great Orion;
A mighty club he carried in his hand;
And hunted the wild boar, and bear, and lion, 560
Which when he lived he had kill'd on land.
There also saw I Titius. He lay
Upon his back, stretch'd out full acres nine.
He the fair Leto had, upon the way
To Pytho, injur'd; Leto, Jove's concubine. 565
Two vultures on his breast, on each side one,
Sate dipping of their beaks into his liver.
He stirreth not, but lets them still alone;
And thus devouring it, they stay for ever.
And Tantalus I saw up to the chin 570
In water clear, and longing sore to drink;
But as he bow'd himself to take it in,

Some devil always made the water sink.
Close o'er his head hung pleasant fruit, and ripe
Pears and pomegranates, olives, apples, figs, 575
Which ever when he ready was to gripe,
A sudden wind still whisk'd away the twigs.
And Sisyphus I saw, who 'gainst the hill,
With hands and feet, a heavy stone doth roll;
But when unto the top he brings it, still 580
The naughty stone falls back into the hole.
Then to 't he goes afresh, with no less pain
He heaves and sweats, and dusty is all o'er;
And when 'tis up, he labour'd has in vain,
For still it serves him as it did before. 585
Then Hercules I saw, — I mean his sprite,
For he is with th' immortal Gods above,
And taken has to wife Hebe the bright,
Daughter of Juno, and of mighty Jove.
The dead about him made a fearful cry, 590
Like frighted fowl. A golden belt he wore,
With wild beasts wrought, and slaughters cunningly,
The like shall never be, nor was before.
He saw, and knew me presently, and spake:
Renown'd Ulysses, why left you the light? 595
Alas, were you constrain'd to undertake
This task as I was, by a meaner wight?
Who, though Jove's son I was, did me constrain
Full many other labours t'undergo.
But he thought this would put me to most pain, 600
Th' infernal dog upon the earth to show.

I did it though, and dragg'd him up to th' light,
By Mercury's and by Athena's aid.
Having thus said, he vanish'd out of sight
'Mongst other phantoms. But I still there stay'd, 605
Hoping more heroes of th' old time to see;
And more had surely seen of heavenly race,
Theseus, Pirithous, whom t' had pleased me,
If longer I had dar'd to keep my place.
For then, from out of Hell, with hideous cry, 610
Thousands of souls about me gathered,
And frightened me; but most afraid was I,
Lest Proserpine should send out Gorgon's head.
Then went I to my ship and company,
And for a while our oars at sea we plied: 615
But after we were on the main, then we
A fair gale had, and pass'd the ocean wide.

LIB. XII.

His passage by the Syrens, and by Scylla and Charybdis. The sacrilege committed by his men in the isle Thrinacia. The destruction of his ship and men. How he swam on a plank nine days together, and came to Ogygia, where he stayed seven years.

THENCE OVER TH' ocean back we come away,
And at the isle Ææa we arrive.
There are the bowers of Aurora gay;
There 'tis that Phœbus doth the day revive: 5
And there we disembark upon the sand,
And having slept awhile, attend the day.
When day was come, my fellows I command
To fetch Elpenor's body dead away.
With wood from off a promontory near, 10
Weeping, his body we to ashes burn,
Together with his arms, and th' earth we rear,
To be a monument upon his urn;
And on the same we fix his oar upright.
These ceremonies done, came the divine 15
Circe, that knew we landed were that night.
Her maids brought to us bread, and meat, and wine;
And standing in the midst, Poor men, said she,
That come from Hell, and thither must again;
Twice-mortals, take your food, and merry be 20

With flesh and lusty wine, forget your pain.
To-morrow you shall sail again, and I
Will to you all your dangers open lay,
Lest you, by some malicious subtilty,
By land or sea, should perish by the way. 25
This pleas'd us well, and all day long we sate
Eating and drinking wine, until 'twas dark.
And somewhat e'er we saw it evening late,
My mates lay down to sleep beside the bark.
Then Circe led me by the hand aside, 30
And ask'd me all that I had seen in Hell;
Nor anything at all from her I hide.
'Tis well, said she. Now hear what I you tell:
First, you must pass the Sirens, who invite
All passengers that sail before the place 35
To land. But whosoever lands, that wight
Of 's wife and children ne'er more sees the face.
These Sirens in a meadow sit and sing,
Where dead men's bones in heaps about them lie
Rotting, and rivel'd skins lie scattering. 40
Pass on, and their enchanting music fly.
Command your mates to tie you to the mast;
And that, if you make signs to be set free,
They heed you not, but bind you still more fast.
That you alone may hear their melody,
His passage by the Syrens, and by Scylla and Charybdis. 45
Dam up your fellows' ears with chafed wax.
When you are gotten out of hearing quite,
And have the Sirens far off at your backs,

Another danger soon will come in sight.
Two ways there are; but which of them to take 50
I'll not advise you, both of them are naught.
Yourself upon the place your judgment make,
Of which I'll give you only a short draught.
Two rocks there be, that, with inclining brow,
Hang o'er the sea, which roaring runs between; 55
By th' name of Wanderers the Gods them know,
Because in changed posture they are seen.
Whereof the one does to such height ascend,
That never any birds that way take wing,
Nor fearful doves when they to Heaven tend, 60
Ambrosia to th' immortal Gods to bring.
One of these rocks doth vanish now and then,
But Jove still sets another in its stead.
This way, ne'er ship did safely carry men,
But dash'd was 'gainst the rocks, and perished. 65
The good ship Argo only pass'd that way
To and from Colchos safely; yet that, too,
Had perish'd, but that Juno did convey
The same, for love she bare to Jason, through.
The other rock unmov'd, with pointed head, 70
Pierceth the clouds, and reaches to the sky
In winter, and in summer 's covered
And wrapped up in mists perpetually.
Nor could a mortal man climb up unto't,
Although he were indued with twenty hands, 75
And with as many nimble feet to boot,
So smooth it is, and so upright it stands.

I' th' midst o' th' rock you 'll see a cavern dark
That looketh westward. That way you must row.
The mouth o' th' cave is more above your bark 80
Than th' youngest man can shoot to with a bow.
There 'tis that Scylla dwells and barks: her voice
Like to a lion's whelp's voice is; but she
A mighty monster is; 'twould not rejoice
A God, much less a man, her shape to see. 85
Twelve feet she has in all, and ugly ones.
Six huge long necks; and to each neck a head;
And in each head for teeth sh' has rows of bones,
And every row of them envenomed.
Half of her body in the cave she hides; 90
But all her heads she putteth out, and watches
For dog-fish, dolphins, and what fish besides
The sea affords, and whales she sometimes catches.
Ne'er did bold sailor boast, that pass'd that way,
That he had 'scaped safely by her den; 95
Or that a mouth of her's did want its prey,
But from him snatch'd away some of his men.
The rock that's opposite is not so high,
But there the passage is exceeding narrow.
For you, Ulysses, if you please to try, 100
From side to side can eas'ly shoot an arrow.
Out of this rock grows a great sycamore,
Under the which Charybdis hidden lies,
And suddenly the water does devour,
And suddenly again she makes it rise. 105
Thrice in a day the water rises high,

And thrice a day again the same doth fall.
But when it falls, take heed you be not nigh;
Keep Scylla side; better lose six than all.
When she had made an end, Goddess, said I, ¹¹⁰
Tell me, I pray you, when I have got free
From th'evil which Charybdis means me, why
On Scylla I may not avenged be?
Fie, fie, quoth she, are you at fighting still?
Dare you against the Gods oppose your might? ¹¹⁵
For Scylla is an everlasting ill.
Row on apace, and save yourselves by flight.
'Gainst such a monster, remedy there's none,
But row as fast as e'er you can away.
For if you stay to put your armour on, ¹²⁰
She'll stoop again, and take another prey.
Row swiftly on, and to Cratais cry,
That in her belly the foul monster bore,
And she will keep her in as you go by,
That she shall not assault you any more. ¹²⁵
Next at Thrinacia isle you shall arrive,
Where feed the Sun's broad-horned kine and sheep,
Sev'n herds there be, in each one ten times five,
As many flocks, which Sol's two daughters keep,
Phætusa and Lampetio divine; ¹³⁰
Their mother was Neæra, that did bear
And bring them up, and to them did assign
The keeping of their father's cattle there.
These if you suffer quietly to feed,
You shall get home again, though with some pain; ¹³⁵

But if you hurt them, know it is decreed
Your ship and men shall perish in the main;
And though yourself you save, your ship you'll lose,
And mates, and in your passage find delay.
This said, the rosy-finger'd Morning rose, ¹⁴⁰
And Circe up the island went her way.
But I went to my ship, and call'd my crew
To come aboard. Aboard they quickly come,
And sitting each man in his order due,
With stroke of oars they make the grey sea foam. ¹⁴⁵
The Goddess Circe also was so kind,
As when we were gone off, and sails had spread,
To fill them with a favourable wind.
So sate we while the steersman governed.
Then to my mates with heavy heart I spake: ¹⁵⁰
Not one or two of you alone must hear
What Circe said, but all, that you may take
Your own advice, since 'tis a common fear.
You must not hear the Sirens' melody,
But row with all your might till we be pass'd. ¹⁵⁵
To me alone, she gives that liberty,
But so as first you bind me to the mast.
Bind me you must upright both hand and foot,
And so as I may not the knot unknot:
And if I wink upon you to undo't, ¹⁶⁰
Then take more cord and bind me faster yet.
Whilst I my fellows thus informing stood,
The island of the Sirens came in sight:
For nimble was our ship, and the wind good.

But suddenly we were becalmed quite; 165
Some demon sure had laid the waves asleep.
Then took we in our sails, and laid them by,
And with our oars in hand provok'd the deep,
And in a milky path we forward ply.
Then from a ball of wax I pinch a bit, 170
Chafe it, and into th' ears of one it put;
And so to all in order as they sit.
Which soon was done, the weather being hot.
Then straight they rise and bind me to the mast
At th' arms and feet: the knot behind they tie; 175
And then upon their seats themselves they plac'd,
And row'd till to the island we were nigh.
When to the island we were come so nigh,
As that a man that holloes may be heard,
The Sirens, knowing when we should come by, 180
Had tun'd themselves, and had their song prepar'd.
Come, come, much prais'd Ulysses, come away;
The brightest glory of the Greeks, come near:
No mortal man did ever come this way,
That did not to our music lend an ear; 185
Delight they found, and wisdom carried hence.
Stay, stay your good black ship, forbear awhile
To beat the sea; please and inform your sense.
Come disembark yourselves upon our isle.
We know what feats of arms were done at Troy 190
Between the Greeks and Trojans all along:
We know what's done on th' whole earth everyday.
Come, come a'land, and listen to our song.

And this they sung with so much harmony
And sweetness in their voices, that I fain
The passage by Scylla and Charybdis. 195
Would have recovered my liberty,
And to them wink'd, to be set loose again.
But 'twould not be. My mates regard my words,
And not my winks, and sit still at the oar.
Eurylochus and Perimede bring cords, 200
And bind me harder than they did before.
When we had left the Sirens at our backs,
So far as not to hear them any more,
My fellows from their ears pull out the wax,
And me unto my liberty restore. 205
We had not sailed far, when there appear'd
An angry sea before us all in smoke;
And thumping of the mighty waves we heard
Upon the stubborn rocks at every stroke.
Besides, the sea so mighty loud did roar, 210
As with one dismal hum it fill'd the ear,
And made my mates each one let fall his oar,
So much their senses were benumb'd with fear.
Still stood the bark. Then I among them go
With gentle words, new courage to convey 215
Into their failing hearts, to make them row;
And passing by, to every one I say:
My friends, we all have many dangers pass'd,
And greater much than what we now do fear.
Remember how from Polyphemus vast, 220
By my good conduct, we deliver'd were.

I do not doubt but you remember it:
My counsel, therefore, also now obey.
Row close along the shore, the Gods may yet
Deliver us, but by no other way. 225
But you that have the guiding of the ship,
Steersman, to you I speak, mark what I say;
Steer her without the smoke; for if she slip
Aside, though little, we are cast away.
This said, my fellows speedily obey'd. 230
Of th' monster Scylla not a word I told;
Lest they should throw away their oars, dismay'd,
And for their shelter run into the hold.
But Circe's counsel I had quite forgot.
I arm'd myself, and took into my hand 235
Two spears, though she expressly had said not;
And looking upwards, at the head I stand.
But she appeared not. I look'd so high
And long upon the hideous rock, my sight
Began to fail, and now we were close by 240
That dismal straight, which doth us all affright.
Here Scylla stands, and there Charybids dire
Lies vomiting the sea, which sings and dances
Like water in a kettle o'er the fire,
And vapours to the highest rocks advances.
The sacrilege committed in the isle Thrinacia. 245
But when the sea it sucketh in again,
It sounds like thunder in the hollow stone,
And we could see the bottom very plain;
Sandy it was, and black to look upon.

Whilst we our eyes upon Charybdis fix, 250
And stand amazed at the horrid sight,
Suddenly Scylla stoop'd, and snatch'd up six
Of the best men I had to row or fight.
I from the ship that never stirr'd my eye,
Soon saw their sprawling arms and legs i' th' air, 255
And heard them lamentably to me cry,
And name me in their uttermost despair.
As fishers in a horn mix fraud and food,
And from the bank at th' end of a long wand,
To catch the fry cast it into the flood, 260
Then pluck them up, and throw them on the land:
So lifted were my mates. Of my mishaps
This was the saddest I did ever see,
When she my men cham'd in her ugly chaps,
Roaring and holding out their hands to me. 265
From Scylla we unto the island row,
Where feeding were Sol's sacred sheep and kine.
Before we landed I could hear them low;
Which brought into my mind the prophesy
Of old Tiresias the Theban bard, 270
That counsel'd me this island for to shun.
Of Circe also I like counsel heard,
And not to land i' th' Island of the Sun.
Then speaking to my fellows, Friends, said I,
This island sacred is to Sol; this place 275
Tiresias and Circe both bid fly,
And not to disembark in any case.
For if we do, for certain they declare

The greatest mischief that e'er men befel:
Therefore keep out to seaward, and beware 280
Of landing here, and then we shall be well.
But then Eurylochus to me began:
You have, Ulysses, a hard heart, quoth he;
There is no labour but you bear it can;
Your limbs of stubborn steel composed be. 285
But you consider not your mates are tir'd
With their continual tugging at the oar,
And that refreshment is and sleep requir'd,
Which is not to be had but on the shore.
But you would have us wander in the night, 290
When in the night the greatest winds arise,
The bane of ships; and when depriv'd of light,
To save ourselves we can no way devise.
What if great winds should blow from south or west,
Which often happens, though their king not know, 295
Or not consent? Therefore I think it best
To-night to sup ashore, — to-morrow row.
So said Eurylochus, and was commended
By all my mates: and presently I knew
One demon or another had intended 300
To ruin me, together with my crew.
Then said I to Eurylochus, 'Twere vain
To strive against so many men alone.
But you shall take an oath that you 'll abstain
From hurting of the cattle of the Sun. 305
Of Circe's meat there's left us yet good store.
This said, they took the oath; which having done,

They put into the harbour, and ashore
They sup. And when their hunger now was gone,
Their mates remembering, that in th' hollow rock 310
By th' monster Scylla were devour'd, they weep
And wail, and with their hands they knock
Their breasts, and in that posture fell asleep.
The stars had climb'd a third part of the sky,
When with a whirlwind Jove together fetch'd 315
The clouds from ev'ry part, and suddenly
On sea and land a dismal night was stretch'd.
And when the rosy-finger'd Morning came,
Our ship we to a hollow cave advance,
Wherein the sea-nymphs seats and couches have, 320
And where they are accustomed to dance.
Thither I call'd my mates, and said again:
Friends, we have meat and drink aboard, be wise,
And from the herds and flocks of Sol abstain,
Who heareth all we say, and all espies. 325
To this did my companions all assent.
But for a month there blew no other wind
Than south and east; so that we there were pent
I' th' island longer than we had design'd.
My mates, whilst they had bread and meat aboard, 330
Forbore to meddle with the sacred kine,
And fetch'd in what the island did afford
Of fish and fowl, to have wherewith to dine.
Up I into the island went aside,
The conduct of th' immortal Gods t' implore, 335
That some of them t' would please to be my guide,

And me unto my country to restore.
And in a place defended from the wind
I wash'd my hands; and then with tears and sighs
Before the Gods I poured out my mind, 340
And they a sweet sleep poured on my eyes.
Meantime Eurylochus bad counsel gives
To his companions. All deaths, quoth he,
Are hateful to what thing soever lives;
But death by hunger is the worst can be. 345
Let's kill some of the fattest of these cows,
And sacrifice unto the Gods on high;
And to appease the Sun, let's all make vows
To build a temple to his Deity,
Enrich'd with gifts. If not content with this, 350
For a few cows displeas'd, he seek our death,
For once to gape and die, far better 'tis
Than strive with hunger till we lose our breath.
This said, my fellows all his counsel take,
And chase Sol's sacred herds, that graz'd hard by; 355
And then for recompense their vows they make
To build a temple to his Deity.
But when they made their vows, chaplets they wear
Of tender leaves pluck'd from the spreading oak.
White barley they had none, the which men bear, 360
When in their danger they the Gods invoke.
After the vow perform'd, the kine they flay,
And take their thighs and cover them with fat,
And one of them upon the other lay,
To burn upon the altar. After that, 365

Their offering of drink they pour'd upon
The altar, as the sacrifice they burn;
It ought t' have been of wine, but having none,
They pour'd on water fair, which serv'd the turn.
When th' entrails by my fellows eaten were, 370
And fire consumed had the sacrifice,
The rest they roast on spits and made good cheer.
Just then it was that sleep forsook my eyes,
And back again I walk'd down tow'rds the shore;
But coming near, perceiv'd the vapour rise 375
Of roasted meat. Then to the Gods I roar:
You give me sleep, and take away my life;
So strange a thing my mates the while have done.
Swiftly Lampetio to heav'n flies,
And carries up the news unto the Sun. 380
The Sun in choler all the Gods defies,
Unless they right him of his injury.
Jove, father, and you other powers divine,
Revenge me of Ulysses' company,
That have so insolently slain my kine. 385
It was my joy to see them in the morn,
And in the evening e'er I went to bed.
Revenge me, oh ye Gods! of this their scorn,
Or I'll go down to Hell and light the dead.
No, Phœbus, answer'd Jove, hold up your light, 390
For Gods and mortal men to see their way.
As for the men that did you this despite,
Their ship at sea with lightning I'll destroy.
At this discourse in heaven was Hermes by,

And heard his father make this sad decree;
The destruction of the ship, &c. 395
And he again told all this history
To the fair Calypso, and she told it me.
When to my fellows I was come, I rate
Them all full bitterly, and one by one;
But all in vain, for now it was too late: 400
The Gods by signs detested what was done.
The skins did creep, the flesh o' th' spits did low,
Both raw and roast. Six days in th' isle we staid,
Feasting on Phœbus' kine, the seventh we row;
For then the fury of the wind was laid. 405
When we were out at sea we fix our mast,
And up into the wind our sails we draw,
And had the isle so far behind us cast,
That nothing else but sky and sea we saw.
Then Jove, when far from land he saw our ship, 410
Just over it a dismal black cloud hung,
Which made it dark as night upon the deep,
And then our good ship run not very long.
For presently from west a sudden blast
Came roaring in, and vehemently strains 415
And breaks the cordage that upheld the mast,
Which falling down, beats out the steerer's brains:
He drops into the sea. The mast hangs o'er
At stern. The yards lie cross the sink:
And all the while both heaven and sea did roar 420
With thunder loud, which made our hearts to shrink.
And by and by into the ship Jove threw

His thunder-bolt, which whirl'd it round about.
It smelt of sulphur rank; and all my crew
Into the sea it suddenly threw out. 425
They like to gulls from wave to wave were borne,
But I kept still aboard, till at the last
The rudder from astern the ship was torn,
And fell into the sea, and with't the mast.
The mast had hanging on it broken ropes, 430
Wherewith I bound them both together fast,
And sate upon them as my latest hopes,
Until the fury of the storm was past.
The storm now laid, th' wind came about to th' south,
And carried me before it, till the sun 435
Next morning rose; and then we were i' th' mouth
Of dire Charybdis, just when she begun
To swallow up the sea. Then up leap'd I,
And on a spreading sycamore laid hold,
But to't I could not climb; the boughs so high 440
I could not reach, and far off was the root.
There by the hands I hung, expecting when
Charybdis should cast up the sea, and bring
The rudder and the mast to th' top agen.
Meanwhile, in th' air I patiently swing. 445
What time the judge ariseth from his seat,
Ending the brabbles of contentious men,
And all come weary home to take their meat,
Then came my mast and rudder up agen;
And I into the sea close by them drop. 450
Then having soon recovered them, again

I place myself astride, once more, a-top,
And with my hands I rowed on the main.
If Scylla this had seen, undoubtedly
I had been lost. But 'twas the grace of Jove, ⁴⁵⁵
That all this while she did not me espy,
But kept herself retir'd i' th' rock above.
Thus wander'd I at sea nine days outright;
O' th' tenth at night the Gods brought me to land
In th' isle Ogygia, where Calypso bright ⁴⁶⁰
Receiv'd me with a charitable hand.
But how she treated me, I need not say;
You and the queen already know it well,
From the relation I made yesterday;
Nor do I love the same tale twice to tell.

LIB. XIII.

Ulysses sleeping is set ashore at Ithaca by the Phæacians, and waking knows it not. Pallas in form of a shepherd helps to hide his treasure. The ship that conveyed him turned into a rock; and Ulysses by Pallas is instructed what to do, and transformed into an old beggar-man.

THIS SAID, ALL silent and delighted were.
Alcinous then said, Ulysses, since
You safely to me are arrived here,
You shall not lose your way in going hence. 5
But, princes, you that daily with me sit,
Drinking good wine and hearing music sweet,
And given to the stranger have what's fit,
I'll tell you what yet farther I think meet.
Garments he has a chest full, and good store 10
Of gold, plate, and of other gifts he has.
Take my advice. Let each man give him more,
A cauldron, or a three-foot pot of brass.
I know to each man 'twill be too great largess,
But by the people's contribution 15
We'll make amends; the town shall bear the charges.
The motion pleas'd, and 'twas agreed upon.
Then went they every man to his repose.
And soon as morning did again appear,
Aboard the ship the vessels they dispose,

Ulysses sleeping is set ashore at Ithaca. 20

Alcinous himself directed where.

And then into the palace they return,

And sacrifice to Jove a well-fed beast;

The thighs upon the altar there they burn,

And with the rest they make themselves a feast. 25

Demodocus before them sung and play'd,

Who for his art was famous in the town.

Ulysses to the sun look'd up, and stay'd

Longing and wishing that it would go down;

As one that hath at plough been all the day, 30

Hungry his belly, feeble is his knee,

Beholds the setting of the sun with joy;

So glad Ulysses was sunset to see.

Then to Alcinous and all the rest,

Offer, said he, unto the Gods their wine. 35

I have already all that I request,

And many gifts, which may the pow'rs divine

Make happy to me. Let me now depart,

That I may see my dear wife and my friends.

And blest may you stay here with joy at heart, 40

Comfort your wives, and obtain all your ends;

And strong and worthy children may you have,

Nor 'mongst the people trouble or disease.

This said, they prais'd him all, and counsel gave

The stranger to conduct safe o'er the seas. 45

Alcinous then call'd for wine, and bad

Pontinous present it to each one,

Until unto the Gods all offer'd had,

That so Ulysses the sooner might be gone.
Pontonous brought wine, and carried it 50
From man to man, and each man drank his cup,
Blessing the Gods in order as they sit.
When all had drunk, Ulysses standeth up,
And speaking to queen Arete, he said:
Happy for ever may you be, O queen. 55
I take my leave. Be you for ever joy'd
In king Alcinous as you have been,
And in your children and your people all.
And when he this had said, away he went.
Alcinous did then a squire call, 60
Whom with Ulysses to the ship he sent.
Arete to her women sent. One brought
Fine bread and store of black wine of the best;
Another brought with her a cloak and coat;
Another brought, to lay them in, a chest, 65
Which by the mariners were quickly stow'd
Aboard the good ship, with the wine and bread.
And for Ulysses many rugs they strew'd
O' th' deck, astern, with linen at his head.
And then aboard he went. When he was lain, 70
Their seats they take, and parted from the strand,
Reclining dash'd with oars the liquid plain,
While sleep Ulysses bound had foot and hand.
As when four horses gallop o'er a plain,
The way runs swiftly by the coach's side; 75
So did the good ship mount upon the main,
And to the stern the water swiftly glide,

A hawk could hardly with it have kept pace,
A hawk that of all fowl the swiftest flies;
So swiftly ran the ship on th' ocean's face, 80
And with her breast the rising water slice;
Bearing a man for wisdom like a God,
That pass'd had fearful billows on the deep,
And many bloody paths of war had trod,
The thought whereof was now removed by sleep. 85
Above the earth now risen was the star,
Day's messenger, and brightest of the sky.
The ship was then from Ithaca not far.
A port there is, which from a deity
Is called Phorcys, a sea-deity. 90
Two jetting rocks defend it from the wind;
When once within, a ship will safely lie,
There needs no cord a floating ship to bind.
At the port's head grows a large olive-tree,
And near it an obscure and pleasant cave, 95
Where the Nereides delight to be,
And there they bowls of stone and beakers have;
The bees make honey there. Besides, there be
Long beams of stone, whereon the nymphs do weave
Rich purple garments, wonderful to see, 100
And fountains which their running never leave.
Two doors there are, one north, men go that way;
The other to the south more sacred is,
Th' immortals here go in, and none but they;
The Gods have to themselves reserved this. 105
All this Ulysses' convoy knew before;

And here the ship arrived, safely lands,
And half her length lay dry upon the shore,
Such was the strength of those Phæacian hands.
The lusty seamen, when they landed were, 110
First took Ulysses, sleeping as he lay,
Bedding and all, and to the land him bear,
And lay him from the sea a little way:
Then they unship his goods, gold, vestures, brass,
Gifts given him by the Phæacians; 115
Which at the foot of the olive-tree they place,
Out of the way, lest passengers should chance
To steal them while Ulysses was asleep.
When this was done, the convoy stayed not,
But rowed out the ship into the deep.
The ship that conveyed him turned to a rock. 120
Nor Neptune had Ulysses yet forgot,
But said to Jupiter, complaining then:
What honour from the Gods can I expect,
When the Phæacians, that are but men,
(Although descended from me), me neglect? 125
For though Ulysses I destroyed not,
Because his coming home you had decreed;
Yet that he should be brought home thus, ne'er thought,
Asleep, and painless, and with so much speed,
Enrich'd with gold, and brass, and vestures store, 130
As much as had come to his share at Troy.
This the Phæacians have done, and more,
In this licentiousness they take a joy.
Then answered Jove: Neptune, what's this you say?

The Gods neglect you not. It cannot be, 135
That are the eldest and of greatest sway
Of any of them. If man injure thee,
To take revenge enough your own pow'r is.
I will not hinder you, do what you please.
To Jupiter then Neptune answer'd this: 140
I could, O Jove, have been reveng'd with ease,
But that I fear'd you would offended be.
And now I'll tell you what I mean to do.
As soon as I the ship returning see,
I'll fix it, that they may no more do so; 145
Besides, their city with a hill I'll hide.
but, said Jupiter, were it my case,
When from the city people all espied
The ship hard by, I would a rock there place
In likeness of a ship not far from land, 150
To make men wonder, and then round about
The city make a mighty mountain stand.
This said by Jove, the God of Seas went out
To Scheria, where the Phæacians
First planted were. The ship came swiftly on, 155
And on it Neptune laid his mighty hands,
And roots it in the sea, turn'd into stone.
The rowers t' one another say, What's this?
Who hath our good ship fixed in the water?
And yet above the water still it is. 160
Thus said they, but knew nothing of the matter.
Then spake Alcinous. Performed, said he,
Is what long since I heard my father say,

That Neptune angry was that strangers we,
Whoe'er they were, do to their homes convey, 165
And threatened had with a great hill to hide
The city, and destroy the passage-boat.
This by my father then was prophesied,
And now, you see, at last about 'tis brought.
Therefore be rul'd by me. Convoy no more;
Ulysses by Pallas is instructed what to do. 170
But let us unto Neptune sacrifice
Twelve chosen bullocks, and his grace implore
To set no hill there. So did he advise.
And then to Neptune they their prayers make
Standing at th' altar, king and princes all. 175
And now Ulysses lying was awake,
But to his mind the place could not recal;
For Pallas had about him cast a mist,
That at his coming he might not be known;
But she herself instruct him as she list, 180
Till he the suitors all had overthrown.
All things seem'd to him other than they were,
Paths, highways, creeks, havens, trees, and rocks;
And rising up he was he knew not where,
And with his open hand his thigh he knocks. 185
Ay me, said he, whither am I come now?
To civil, or to wild and lawless men?
Where shall I hide my treasure? Whither go?
Would I were at Phæacia agen.
To other friends I might have gone from thence, 190
And t' Ithaca obtained a convoy,

Here for my treasure I see no defence.
Left here to others they will be a prey.
I see the princes of Phæacia
Are not so just as I take them to be. 195
They promis'd to set me at Ithaca,
But have to some place else transported me.
Jove, that sees all, and punisheth the ill,
Will be revenged also of these men.
But come, my presents number now I will, 200
The seamen may have ta'en some back agen.
His garments and his plate then number'd he,
And nothing missing was of all his pelf.
Then walk'd he softly along by the sea,
Lamenting and bewailing of himself. 205
And then came Pallas to him. She had on
The body of a shepherd young and tender,
As if she had of some prince been the son;
Lin'd was his coat, the thread was fine and slender,
With dart in hand, and fine shoes on his feet. 210
Ulysses, who beheld her, was much joy'd,
And forth himself advanced, her to meet.
And first he to her spake, and thus he said:
Joy to you be, and good-will towards me;
Save for me these my goods, and save me too. 215
You are the first I meet here; at your knee
I bow myself, as men bow Gods unto.
Tell me, I pray you, true: What land is this?
What town? Th' inhabitants what men?
An isle, or of the continent a piece?

And in the form of a shepherd, helps to hide his treasure. 220

To this the Goddess answered agen.

Simple you are, or very far hence dwell,

To ask what country this is. For 'tis not

A place obscure; for known 'tis very well

Both east and west, though but a little spot, 225

And rugged ground, nto fit for galloping;

Yet corn it bears abundantly and wine;

And is well watered both with dew and spring,

And nourisheth great herds of goats and kine.

Of wood of ev'ry sort there is good store. 230

Though from Achæa far men say is Troy,

Yet Ithaca is talk'd of on that shore.

These words unto Ulysses were great joy.

And to the Goddess then he answered:

(Falsely; on fables keeping still his hold, 235

As one that always plots hath in his head):

I have, said he, of Ithaca been told,

Far hence in Crete, and now am thither come

With these my goods; but leaving to my child

About as much as I brought out from home; 240

And here I am alone, a man exil'd.

For of Idomeneus I kill'd the son,

Orsilochus, for swiftness of his feet

So excellent, there was not any one

That could out-run him in the isle of Crete. 245

Because I had refused a command

Under his father at the siege of Troy,

And would command my own, he took in hand

To have depriv'd me of my share o' th' prey,
Which to my dangers and my deeds was due. 250
For which, by night, with one companion,
Near the highway, I with my spear him slew,
And in the dark escap'd when I had done.
And to Phoenicia by sea I went;
And hired with a good part of my prey 255
To Pylus or to Elis to be sent.
But adverse winds forc'd us another way.
And wandering, there arrived in the night.
And straight into this port we brought the bark,
Ne'er thought of food, though very well we might, 260
But went ashore, and lay down in the dark,
And there I slept. The mariners meanwhile
Take out my goods and lay them on the shore,
And back unto Sidonia they sail,
And after that I never saw them more. 265
At this the goddess smil'd, and strok'd his head,
And in a woman's shape before him stood,
Of stature tall and like to one well bred.
The craft that catches you had need be good.
You cannot, though at home, your wiles forego,
Pallas helps to hide his treasure. 270
And your feign'd stories, though there be no need,
So close they stick to you from top to toe.
But now no more of that; for 'tis agreed,
'Mongst mortals you, amongst immortals I,
For counsel and invention excel. 275
Did you not know me, that perpetually

Have at your need assisted you so well?
And now am come to help you to secure
The rich Phæacian presents you have here,
And tell you what at home you must endure? 280
Affronts and scorns, you shall find many there.
Then said Ulysses, Difficult it is
For any mortal man, though very wise,
To know a God, that can their form dismiss,
And, when they will, put on a new disguise. 285
When th' Argive army was besieging Troy,
Goddess, I know how gracious you were then;
But after (the town sack'd) we came away,
And scatter'd had the Gods our ships and men,
And I was wand'ring on the ocean wide, 290
I never saw you, never had your aid,
Save at Phæacia you were pleas'd to guide
Me to the town, and hasten me dismay'd.
But I beseech you (for still do I doubt
This is not Ithaca that I am at, 295
But some place else, and that you go about
With comforts feign'd my sorrows to abate)
Tell me if this my country be indeed?
Pallas said then, Suspicious still you are;
I cannot, therefore, leave you in your need, 300
Since wise you be, and willing to beware.
Another man that had been long away,
Had straight gone home to see his wife and son;
But that for you is not the safest way,
Nor had it yet been opportunely done. 305

Know how she'll take it first. She keeps within,
And spends in weeping both the night and day.
I know full well the Fates his coming spin,
But that his mates shall first be cast away.
But with my uncle Neptune had no mind ³¹⁰
To be at odds, that in such choler is,
For making of his son the Cyclops blind.
But come, I'll shew you Ithaca. First, this
The port of Phorcys is; this th' olive-tree,
There near it is the gloomy cavern, where ³¹⁵
The nymphs Naiades invoked be,
And by you in that cave much worshipp'd were.
The hill so cloth'd with wood is Neriton.
This said, the mist dissolves, and then Ulysses
His native country joyful looks upon, ³²⁰
And falling on his knees, the soil he kisses.
And then to the Naiades he pray'd,
Hail! Daughters of high Jove, Naiades,
Ne'er to have seen you more I was afraid;
But oft we shall again, if Pallas please ³²⁵
To give me life, and prosper my dear son,
Your altar fill with gifts as heretofore.
The Goddess Pallas, when his pray'r was done,
Answer'd, Let that thought trouble you no more.
But come, let's now see how your goods to save, ³³⁰
Now presently. 'Twere well that they were laid
Within some rock at bottom of the cave.
Then went she in, and caves in cave survey'd.
Ulysses brought into the grot his store,

Garments, and heavy brass, and golden plate; 335
Which Pallas plac'd, and laid a rock o' th' door,
And then in counsel both together sate
The suitors to destroy. Pallas first spake.
Ulysses, said she, think on how you may
Your just revenge of the proud suitors take, 340
That use your house and substance as their prey;
That marry would your wife by force. But she
Still keeps them off with hopes and promises,
Expecting your return continually,
But than of marriage thinks of nothing less. 345
Oh! said Ulysses, but for your advice,
I died had as Agamemnon did.
But now, O Pallas, find out some device,
How of the suitors best I may be rid,
And by me stand, inspiring courage stout, 350
As when we pull'd Troy's head-gear off her head.
For then to master them I should not doubt,
Three hundred though they were. Then answered
The Goddess Pallas: By you I will stand;
You cannot fight, but I shall of it know, 355
And bring unto you such a lucky hand,
That with their blood and brains the ground shall flow.
Come, first I'll make you to men pass unknown:
I'll shrink your skin, that 's now so fair and fresh,
And from your head take off that hair so brown, 360
And cover will with such array your flesh,
As men shall hate the sight of; then your eyes
I'll shrivel up, that were so full and bright,

That in this habit th' woo'rs may you despise,
Nor your wife know you standing in her sight. 365
Then go you to the master of your swine,
That loves you, and your son, and your consort;
And to direct you to him take this sign:
He 's at Crow-rock, thither the swine resort,
And t' Arethusa's well; for why, the oaken
Ulysses transformed into an old beggar-man. 370
Berries, with that sweet water, make them fat.
Stay there till to him you your mind have spoken,
And well inform'd yourself of your estate.
To Lacedæmon I the while will go,
To call your son Telemachus away, 375
Who thither went by sea, that he might know
What Menelaus there of you could say.
Then said Ulysses, Goddess, since you could
Have told him all yourself, why did you not?
Meant you that also he be wand'ring should, 380
While other men stay feeding on his lot?
Trouble not you yourself with him, said she:
I sent him, and went with him with intent
To show him to the world abroad. And he
At Sparta treated is to his content. 385
'Tis true, the suitors with a ship are gone
To wait for, and to kill him by the way;
But I believe, before that that be done,
Some will lie low that now your goods destroy.
And as she spake, she strok'd him with her wand, 390
And rivel'd seem'd his skin (which was before

So sleek and fair) as if it had been tann'd;
And gray his hair, rivel'd his eyes all o'er.
And then she gave him an ill-favoured rag,
Torn, foul, and smutted filthily with soot, ³⁹⁵
And over that the pill'd skin of a stag,
And satchel full of holes then added to 't
With twisted-string. And up their counsel brake.
The Goddess Pallas then to Sparta past,
To bid Telemachus his leave to take ⁴⁰⁰
Of Menelaus, and go home with haste.

LIB. XIV.

*Ulysses in form of a beggar goes to Eumæus, the master of his swine, where
he is well used, and tells a feigned story, and informs himself of the
behaviour of the wooers.*

BUT HE IN rugged way, o'er mountains steep,
Through woods obscure unto Eumæus went,
Whose office was the herds of swine to keep,
And of his servants was most diligent; 5
And found him in the porch before the door.
The house was handsome, and high-built, and great,
Nor to it was adjoined any more;
Well fenc'd from wind it was, and a warm seat,
Built by himself, on purpose for the swine
Ulysses' entertainment by his swine-master. 10
Of his good lord, Ulysses, that was gone,
With stone that hewn was from the rocky mine,
Besides those of Laertes and his son;
And with a quickset-hedge enclosed round,
And pales of heart of oak; the hedge without 15
Set close together, and stuck deep i' th' ground.
And thus the house was fenced round about;
Within the court twelve lodgings were for swine,
And ev'ry one of them held five times ten;
And there the female and the teeming lyen. 20

The males lay out, but much diminisht then;
For the proud suitors eaten had the rest,
Eumæus having sent in every day
One of the fattest of the herd and best,
And yet three hundred and threescore were they. 25
Near to the swine, four dogs were ever lying,
Like to wild beasts, and by Eumæus fed.
Himself was leather to his foot applying,
Made of a good cow-hide well coloured;
Three dogs attending were the herd; the fourth 30
Convoying was a swine unto the woo'rs;
The other three ran fiercely bawling forth,
When they Ulysses saw come near the doors;
Ulysses wisely then his staff lets fall,
And presently sits down upon the ground; 35
But had Eumæus not come in withal,
An unbeseeing fortune he had found;
Who letting fall the leather for his shoe,
Running and rating came in to his aid:
And snatch'd-up stones abundance at them threw, 40
And then he to Ulysses spake, and said,
Old man, yourself almost to death you brought,
By those accursed dogs, and me to shame;
As if my sorrow great enough were not,
But that there must be added to it blame. 45
While sitting here, I for my master weep,
And feed his swine for other men to eat;
He somewhere swallow'd up is in the deep,
Or wanders up and down for want of meat.

But come, old man, into the lodge let's go, 50
That when of meat and wine you have your fill,
You may then tell me whence you are, and who,
And how much you have suffered of ill.
This said, he led him in and made him sit,
And under him he store of rushes laid; 55
O'er that a goatskin, thick with hair was it,
Of which a speckled wild goat had been flay'd.
Ulysses, glad to see the man so kind
And very hearty, answered and said,
May all your pray'rs like entertainment find 60
With Jove for whatsoever you have pray'd.
Stranger, then said Eumæus, it was never
My custom any stranger to neglect;
The poor and stranger are in God's hand ever.
Few are my gifts, and but of small effect, 65
For servants of young masters stand in fear;
And by the Gods my old one fast is bound
From coming home. 'Twas he that gave me here
A house and fair possession of ground,
As much as fits a master to his swain, 70
And help'd me too contentedly to wive,
Which taketh off a great part of my pain;
Also the Gods have made my labour thrive.
How happy had I been if he had stay'd!
Accursed be that Helen and her kin; 75
For, for Atrides' sake he anchors weigh'd,
Himself much misery engaging in.
Having thus said, he girded on his coat,

And fetch'd in two young pigs; not long he staid,
But kill'd, singed, jointed, roasted, piping hot 80
Before Ulysses with the spits he laid,
Then strews them over with the flour of wheat,
And in an ivy bowl he tempers wine,
And sitting o'er against him bids him eat.
Eat, says he, servant's food, the lesser swine; 85
The great ones are the pamper'd suitors' fare;
The blessed Gods hate evil works, and love
Them that do well; but these men little care
For mercy or for vengeance from above;
Yet enemies and lawless men, when they 90
Disbark upon another's land, and there
With prey their ship have laden, come away,
And of revenge stand always in great fear.
But these men know not, nor by voice divine
Assured are, Ulysses now is dead; 95
Yet neither will go hence, nor have design
To seek by lawful ways his wife to wed;
But stay and waste his substance without hoe.
For not a day went o'er their heads that they
Did sacrifice one only beast or two; 100
And wine abundance drink and cast away.
Ulysses his estate and wealth was such,
In Greece nor Argos, no prince in Epire,
Nor twenty had in Ithaca so much;
And if to have it reckon'd you desire, 105
Upon the Continent twelve herds of kine,
Twelve herds of goats, as many flocks of sheep,

As many swine-houses replete with swine,
Which herdsmen of the country there did keep;
And here, upon the island's farthest end ¹¹⁰
There be eleven herds of goats; of these
The goat-keeper does ev'ry day one send,
The best of all, the suitors proud to please;
And daily I the best of all my swine.
Thus said he: but Ulysses silent sate, ¹¹⁵
Eating his meat, and drinking of his wine,
And plotting in his head the suitors' fate.
When he had supp'd, Eumæus to the brim
Fill'd up his cup with wine; Ulysses then,
Glad that Eumæus so well treated him, ¹²⁰
Drank, and the cup deliv'ring back again,
Friend, says he, that so rich and valiant man,
Your master, that was for Atrides lost,
If I have seen him, do you think you can
Know him? God knows I have seen many a coast. ¹²⁵
Then answer'd he: There is no stranger able
Nor with his wife nor son to get belief;
The news they tell both take but for a fable,
Invented by their want to get relief;
Many poor men come to Penelope, ¹³⁰
And make her weep in vain with tales untrue:
And where you think you shall rewarded be
With coat or other garment, so can you.
But he's devour'd by beasts or fowls at land;
Or fish at sea have on his body fed; ¹³⁵
And on the shore his bones lie clad in sand.

But howsoe'er it be, the man is dead;
And to his friends has sorrow left behind,
But to me chiefly, who, go where I please,
Shall never such another master find, 140
Nor ever be again at so much ease;
No, though I should unto my country go,
And parents, that have got and nourish'd me;
To see them though I wish, I long not so
As I Ulysses long again to see; 145
Whom, though now absent, I call by his name,
He was so kind, and took such care of me,
That of such small respect I feel some shame;
A second father he should called be.
Friend, said Ulysses, since so hard it is 150
To make you hope he will so soon be here,
Know that I have not rashly told you this,
What I have spoken I will also swear;
If true, with coat and vest my news requite;
If not, then not, although ill rayed am I: 155
Of him as of hell-gate I hate the sight
That can by want be made to tell a lie.
Know Jove, the chief of Gods, and then the host
That hath provided for us this good cheer,
And in Ulysses' house doth rule the roast, 160
Ulysses will be here some time this year;
This month expired, or the next begun,
And be reveng'd of th' wooers impudent
That have dishonoured his wife and son.
Then said Eumæus, leave this argument; 165

For your good news nothing will be to pay,
Nor will Ulysses ever come again;
Drink wine, and no more on this subject say,
I cannot think upon him without pain:
And swear no more; true be it all you say. 170
To me, Laertes, and Penelope,
And to Telemachus 'twill be great joy,
For whom my sorrows much augmented be.
He sprang up like a branch to man's estate;
I thought he would in prowess prove no less 175
Than's father was, whom he did imitate
In wit and figure and in comeliness:
But now the Gods bereav'd him have of wit,
He's gone to Pyle, to hear what men there say
About his father, whilst the suitors sit 180
Waiting at sea to kill him by the way.
But him let's leave a while with pow'rs above,
Whether to let him die, or bring him back,
Waiting upon the pleasure of high Jove.
And now of your own woes untie the sack, 185
That I may know them: tell me truly now
Your own, your father's, and your country's name;
And further I desire you, let me know
Whence are the mariners that with you came
Unto this town? and tell me this likewise, 190
Where rideth the good ship that brought you to't?
For verily I can no way devise
How you should come on horseback or on foot.
Then said Ulysses, Were we here alone,

And meat and drink for so long us attend, 195
And all the rest about their work were gone,
The year would sooner than my story end.
Of Crete I am, and rich my father was,
And many children more he had, but they
Begotten were according to the laws; 200
But of a concubine the son was I.
My father was Castor Hylacides,
That was for wealth in Crete much honoured,
And for his children, but lov'd me no less
Than those he had begot in lawful bed. 205
When he was dead and gone, my brothers proud
Divide his state amongst themselves by lot,
And little of it they to me allow'd:
But for all that a good rich wife I got;
My virtue won her; I no shun-field was, 210
Nor from my stock degenerate she saw;
(Though from me now my strength be gone, alas!)
But you I think can know wheat by the straw;
For now with hardship I am much decay'd.
Mars gave me courage, and Athena skill 215
To beat up quarters, and by ambush laid
With stratagems my enemies to kill:
Of being slain I never had a thought,
But foremost still I leap'd out with my spear;
And of the foes to death I still one brought, 220
Unless his feet than my feet swifter were.
And such I was in war. But husbandry,
And keeping home, though that bred children store,

I car'd not for. But ships I lov'd to see,
And war, darts, bows, and shafts, I loved more; 225
Yet horrible they be to other wights;
For, for such things the Gods have temper'd me.
Many things are there wherein one delights,
Which to another man unpleasant be.
Before the Greeks went to the siege of Troy, 230
Nine times had I commanded on the seas,
And always our success was good that way,
And of the prey I chose what did me please
Beside my share. And wealth came in apace.
Wise I was thought, and honour'd much in Crete. 235
And when Jove had decreed Troy to deface,
Idomeneus and I went with the fleet,
Or else we must our credit quite have lost.
Nine years we fought, the tenth we took the town.
And setting up our sails we left the coast, 240
And by the Gods were tossed up and down.
But Jove determined me more trouble yet:
For needs I would to Egypt go and trade.
A month I stayed at home, then forth I set
With nine good ships, and an ill voyage made. 245
For when six days I feasted had my crew,
And to the Gods devoutly offer'd part;
A good strong wind from the north heaven blew,
And from the coast of Crete we then depart;
Smoothly we sail'd, safe our arrival was, 250
Nor man nor ship had any harm at all;
From shore to shore we did in five days pass,

And in the Nile we let our anchors fall.
Then I my fellows bad aboard to stay,
And guard the ships, and some to places high 255
I sent to watch; but mov'd by lucre, they
On plunder and on rapine had their eye;
The fields they waste, and kill the men, and make
Women and children captives. Then the cry
Arriving at the city, arms they take, 260
And next day early to the field they hie;
With horse and foot then thundered the field.
Their armour light'ned. My men frightened were:
Some taken and made slaves; some flying kill'd;
And all the rest ran scatter'd here and there. 265
Then I (though 't had been better there t' have died,
So many woes have since befallen me)
Pull'd off my helmet, laid my spear aside,
And buckler too, and kneel'd at the king's knee.
He rescued me, and home with him me brought, 270
Sitting by him that did his chariot drive:
Though in their heat many to kill me sought,
Yet the king brought me to the town alive.
Seven years I there remain'd and riches got,
For every man almost me somewhat gave. 275
Then thither came a merchant, that had not
His fellow in all Egypt for a knave.
His house and riches in Phœnicia were,
And he with lies entic'd me to his home.
With him I went: and there I stay'd a year; 280
And when the months and days about were come,

He set me in a ship for Libya;
And there together with our goods we sate,
He cracking of the profit he foresaw,
And I suspecting, though it were too late. 285
With him I went. And when the ship was forth,
We steer'd our course without the isle of Crete;
For by good luck we had a wind full north,
But Jove determin'd had we should not see't:
For when the island we had left behind, 290
And nothing else appear'd but sea and sky,
Jove fetch'd the clouds together with a wind,
Just o'er the ship, and dark 'twas presently;
And therewithal into the ship he threw
His thunderbolt, which whirl'd it round about: 295
It smelt of brimstone rank. And all the crew
Into the sea it suddenly cast out;
And they like gulls from wave to wave were toss'd.
But Jove, to save me, put into my hand
The ship's tall mast, which with my arms I cross'd, 300
And after nine days came at last to land.
And in Thesprotia was cast on land;
And the king's son, who chanc'd that way to pass,
Lifted me up as I lay on the sand;
And by king Phædon well receiv'd I was. 305
He cloth'd me with good garments, coat and vest.
I ask'd him of Ulysses what he knew?
As he went home, said he, he was my guest,
And what he then had gotten did me shew;
Of brass, and iron, and gold, there was so much, 310

As might ten ages feed a man alone,
The treasure that he show'd me there was such.
But he, he said, was to Dodona gone,
There at the holy oak to be advis'd
(Since he from Ithaca so long has been), ³¹⁵
Whether 'twere better to go home disguis'd,
Or so as to be known when he is seen.
The king to me in holy form did swear,
That for the conduct of Ulysses home,
Both ship and mariners then ready were. ³²⁰
But when I went from thence he was not come.
A ship of that place in the harbour lay
Ready to part. The king bad land me there.
But they resolv'd were of another way;
Which made me yet more misery to bear. ³²⁵
When of that land they were got out of sight,
To sell me for a slave they did agree;
My coat and vest they take from me there right,
And gave me the torn coat and rags you see.
Late in the ev'ning they were at the land ³³⁰
Of Ithaca, and bound me fast i' th' ship.
But they to sup thought fit upon the sand,
And leaving me, out of the bark they skip;
But from my bonds some God sure set me free.
Then down I went and to the sea applied ³³⁵
My breast, and round the ship swam speedily,
And in a great thick wood myself I hide.
Sorry they were, and put to sea again,
To stay and seek me they lost labour thought.

Thus by Jove's favour I alive remain, 340
And to the house of a good friend am brought.
Then said Eumæus: I confess the story,
Poor man, of this your wand'ring and your pain,
Has had the pow'r to make me very sorry.
But of Ulysses what you say is vain. 345
I not believe a word. What needed you,
So wise a man as you appear to me,
In vain to tell me anything not true;
When I myself am sure 'twill never be?
For all the Gods have shown themselves his foes, 350
That neither suffer'd him to fall at Troy,
Nor, the war done, his best friends to compose
His body for the grave. For either way
He honourably buried had been
To th' honour of his son. But he is dead, 355
Unspoken of, devour'd by harpies keen;
And I despis'd sit here to see swine fed;
And never to the city come, but when
Some news is brought unto Penelope,
And she send one to call me. I come then, 360
And many list'ning to the news I see.
Some griev'd, and wishing for his coming home;
Some that seek nothing but shot-free to feed,
And these men wish that he may never come.
But I of what they say take little heed; 365
Especially, since an Ætolian,
As he from place to place for murder fled,
Came to my house, and I reliev'd the man,

And after found that I was cozened.
He said he saw him with Idomeneus, ³⁷⁰
In Crete, and that for certain he would come,
(His fleet much hurt repaired) to his house,
Rich, at the next spring, or the next autumn.
Therefore, old man, since you are come to me,
Think not your story anything avails, ³⁷⁵
Nor that false hopes provoke my charity;
My bounty looks on want and not on tales.
Pity, and fear of Jove, my favours guide.
Ulysses to this answers him, and saith,
Since you trust not my word, nor oath beside, ³⁸⁰
And in your breast resideth little faith,
Let's make a bargain. If Ulysses come,
Then a good coat and vest shall be my due,
And a safe conduct to Dulichium.
If not, and that I told you prove untrue, ³⁸⁵
Then make your servants throw me from a cliff,
High and upright, that others may beware
To cozen men into a false belief
Of things they know not, but uncertain are.
Then said Eumæus: Yes, 'twere a fine deed, ³⁹⁰
And noble, t' entertain a man with love,
And with good cheer relieve him in his need,
Then kill him, and beg pardon then of Jove.
But now I wish the swine from field were come,
For time it is of supper to advise. ³⁹⁵
And while they talk, the swains the swine bring home,
And with great noise they pent are in the sties.

Then did Eumæus to his servants call,
From out the herd to choose one of the best
His far-come friend to entertain withal, 400
And mend their own fare also with the rest.
'Tis long since others the work to us leave
To feed the swine they eat. Having said that,
Out went he, for the altar wood to cleave;
And they brought in a five-year-old pig fat, 405
And laid it on the hearth. Eumæus there,
Rememb'ring well the Gods, for he was wise,
First from the forehead clippeth off the hair,
And in the fire the same did sacrifice.
Then did he all the Gods above invoke, 410
That soon and safe Ulysses might arrive;
Next that, he takes a piece of the cleft oak,
And at a stroke did him of life deprive.
Then others take the work into their hands,
And with keen steel they quickly cut his throat. 415
That being done, with many flaming brands
They singe from head to tail his hairy coat,
And lay him open. Then Eumæus came,
And folded up the fleshy thighs in fat.
And then into the fire he threw the same. 420
The rest they cut in lesser parts; and that
They roast on spits; and being roasted well
And taken up, on chopping-boards they put it.
Eumæus then, who thereat did excel,
As he thought fit, did into messes cut it. 425
But one mess for the nymphs and Mercury

He set aside; and over that he pray'd;
The rest he set to each one severally.
But to Ulysses the whole chine was laid.
Jove, said Ulysses, be to you as kind 430
As you to me, and grant all your request.
Friend, said Eumæus, now your supper mind,
Such as it is. Gods give what they think best.
Then to the Gods he offer'd the first cut,
And fill'd a bowl, and offer'd part of that. 435
The bowl then in Ulysses' hand he put;
Ulysses it receiv'd, and down he sat.
Mesaulius then sets before him bread,
Which thither brought from Taphos was to sell,
And had been by Eumæus purchased. 440
Then heartily unto their meat they fell;
And when to eat they had no more delight,
Mesaulius took off the bread; and all
Prepared were for sleep. But cold the night
And moonless was; besides, much rain did fall. 445
Ulysses to the company then spake,
Tempting Eumæus; and to get a cloak
From him, or from some other for his sake.
Hear me, Eumæus, says he, and you folk,
I have a tale to tell. This foolish wine 450
To laugh and dance is able to provoke
Grave men sometimes that have no such design,
And to speak that which better were unspoke.
But out it shall, since I so much have said.
Oh! that I were as young and strong as when 455

Before the town of Troy the watch we laid,
And lodged were amongst the reeds i' th' fen,
By Menelaus and Ulysses led,
And me the third; the wind at north all night,
We lying with our bucklers covered. 460
With rain congeal'd, our armour all was white.
And they slept well wrapp'd up in cloak and coat,
Safe in their bucklers from the freezing wind;
But like a fool my cloak I had forgot,
I did not think I should such weather find. 465
And when a third part of the night was gone,
I nudg'd Ulysses, who did next me lie;
He felt me, and to him I made my moan:
Noble Ulysses, I am like to die,
The weather kills me, I have but a coat; 470
My cloak some demon made me leave behind,
And of such cold quite took away the thought;
I cannot tell what remedy to find.
No sooner said, but remedy he found,
For able was he both to shift and fight, 475
And said unto me, in a whisp'ring sound,
Peace, lest we heard be by some other wight.
And then with head on elbow, Friend, said he,
I dreamt we from the ships too far lie here.
Let some to Agamemnon go and see, 480
If he would have us rise and come more near.
Then up rose Thoas, son of Andræmon,
And down he laid his cloak, the which I kept,
And swiftly did to Agamemnon run;

I' th' cloak I wrapp'd myself and soundly slept. 485
Were I as young and strong as I was then,
Some one a cloak would lend me for respect,
Or else for kindness, 'mongst so many men;
But now my rags are cause they me neglect.
Old man, then said Eumæus, you have told 490
Your story well. Each word to purpose is.
To-morrow shake your rags against the cold,
Of what is needful now you shall not miss;
Of cloak or coat there's none of these has shift.
But when Telemachus from Pyle comes back, 495
From him you will have all you need, of gift;
And then you neither cloak nor coat will lack,
And be conveyed to what place you desire.
With that he rose, and woolly skins of sheep,
And shaggy goat-skins near laid to the fire; 500
And there Ulysses laid him down to sleep.
And over him a cloak Eumæus laid,
Both thick and soft it was, which he had kept,
And with it in sharp cold himself arrayed;
And thus Ulysses warmly cover'd slept. 505
By him the young men lay. But to the sties
Eumæus went; for fit he thought it not
To lie far from his swine, and out he hies.
Meanwhile Ulysses of his kindness thought.
Eumæus first of all his sword puts on 510
O'er his great shoulder: then, against the weather,
A thick warm cloak; and again, that upon,
A great goat-skin, the skin and hair together.

And then with dart in hand, for his defence
‘Gainst men and dogs, well armed at the head, 515
To where the tusked swine lay parted thence,
Within a rock from wind safe covered.

LIB. XV.

Pallas sends home Telemachus from Lacedæmon with the presents given him by Menelaus. Telemachus landed, goes first to Eumæus.

AND THEN TO Lacedæmon Pallas went,
To urge Telemachus his leave to take
Of Menelaus, to whom she had him sent,
And home again what speed he could to make. 5
Telemachus and Nestor's son she found
Within the entrance of the house abed;
The son of Nestor in a sleep profound.
Sleep came not in Telemachus his head;
Thought of his father open kept his eyes. 10
Then Pallas to him said: Telemachus,
To stay so long abroad you are not wise,
Leaving your goods with such men in your house,
As lawless there your substance do devour,
Lest afterward you to no purpose come. 15
Importune Menelaus with all your pow'r,
Or else your mother you'll not find at home:
Her father and her brethren bid her marry
Eurymachus. Of all he bids most high.
Take heed what goods out of your house they carry. 20
You know what thoughts in female breasts do lie;
They will their present husband's house promote,

But for their former children little care.
For he once dead, they have no longer thought
Of how his children after him shall fare. 25
Therefore return you, and commit to some
Maid of your own, for faith and care well known,
Such goods as in your house you have at home,
Until you have a good wife of your own.
I tell you more; remember what I say; 30
The bravest of the suitors lie in wait,
As you return to kill you by the way,
'Twixt Ithaca and Same, in the strait.
They'll fail, I think, of what they go about,
And sooner some of them their graves shall find.
Telemachus sent home with presents. 35
But, howsoever, steer the isles without,
The God that keeps you will provide a wind.
And when at Ithaca you are on land,
Unto the town your ship and fellows send,
But go you to Eumæus out of hand, 40
Who, though he keep your swine, is much your friend.
Then Pallas mounted to the sky, and he
Pisistratus awakens with his foot.
'Tis time, said he, that on our way were we;
Let's to the coach, and set the horses to't. 45
Then said Pisistratus: Too dark 'tis yet
To travel with a coach. Let's therefore stay;
'Twill soon be morning. Let's our presents get,
And by Atrides' self be sent away;
For guests use always to remember those 50

By whom they have been entertain'd with love.
This said, the morning by and by arose,
And Menelaus toward them did move.
Telemachus then puts on hastily
His coat and cloak to meet him on his way; 55
And when they were to one another nigh,
Telemachus first spake, and thus did say:
king, Atrides Menelaus, now,
Even now, dismiss me, let me go my way.
Then said Atrides: E'en now you shall go; 60
I purpose not to make you longer stay;
For I conceive 'tis not a good man's part,
To make too much or little of his guest,
To hold him when he gladly would depart,
Or press him to begone e'er he thinks best. 65
In hospitality this rule is true:
Love him that stays, help forth the going guest.
Stay then and take my gift along with you,
And your breakfast of what we have the best.
For he that will a great day's journey make, 70
Will find both joy and profit in his meat.
And if to visit Greece you pleasure take,
I'll with you go, and with you I'll retreat;
And to the Argive cities be your guide,
And be presented by each princely man, 75
With whomsoever we at night abide,
Two mules, a gold cup, a brave pot or pan.
Then said Telemachus: I needs must go,
(My father seeking lest myself I lose),

I have left none my goods to look unto, 80
And robb'd my treasure may be by my foes.
When that was said, forth Menelaus goes,
To give unto his wife and maids command
For breakfast of what then was in the house.
Then Boetheides, who lodg'd near at hand, 85
Came in; and, bidden by Atrides, cleaves
The wood, makes fire, lays down the roast;
Him to his business then Atrides leaves,
And down came to his treasure of great cost,
He, and his son, and wife Helena. There 90
Within a room lin'd with sweet-smelling wood,
A temperer to his son he gave to bear,
Of silver pure, which 'mongst the vessels stood;
And from a chest where robes for matrons were,
She took up one, with great variety 95
Wrought by herself, which she herself did bear,
Shining and bright as any star i' th' sky;
And forth unto Telemachus they come.
Then said Atrides, Jove grant your request,
And safely may you t' Ithaca come home; 100
See here my gift, of all I have the best:
'Tis massy silver, gilt about the brim,
By Vulcan made; but then it was possess'd
By th' king of Sidon: I had it of him
When by the way from Troy I was his guest. 105
Then Helen said, This gift too take from me,
Of Helen's handywork a monument,
To give to her that your dear wife shall be;

Think it meanwhile as to your mother sent;
Then gave it to Telemachus his hands. 110
I' th' coach Pisistratus then placed all,
And at the goodly gifts amazed stands;
Atrides then led them into the hall,
And made them sit; and while they sitting were,
A grave maid-servant from a golden ewer, 115
To wash their hands, pours on the water clear
Over a basin all of silver pure.
One tables sets, another lays on bread,
And from their store many good things brings out;
The messes Boetheides severed; 120
Atrides' son the wine delivered out.
When their desire of food was satisfied,
Up rose Telemachus and Nestor's son,
And to their coach they the swift horses tied,
And in the coach were ready to be gone; 125
And were already got the court without,
But after them Atrides followed,
And in his hand a gold cup he brought out
Of wine, and standing at the horses' head,
Brave youths, said he, to Nestor me commend, 130
That as a father was to me at Troy.
Farewell, and may you to your journey's end
With safety travel and arrive with joy.
Then said Telemachus, all this I'll say,
I wish at home I may so treated be 135
Within my father's house at Ithaca,
Besides the presents you have given me.

As he said this, an eagle dexter flew,
And seiz'd a great white tame goose grazing near;
The standers-by shouted and cried, Shue, shue, 140
But yet away the eagle bore him clear;
And none but with the sight was well content.
Then to Atrides said Pisistratus,
This prodigy, unto you is it sent
From Jupiter? Or is it sent to us? 145
While what to answer he was taking care,
Helen prevented him. I will, said she,
First tell you what hereon my own thoughts are,
And to my mind by th' Gods infused be;
You saw the eagle come down from the hill, 150
Where nature placed him to dwell and breed,
And kill that goose: so shall Ulysses kill
The suitors that upon his substance feed.
Or, it may be, already there he is
Devising for the suitors some ill end; 155
Gods, then said Telemachus, that this
Were so indeed! to you then should I send
As to a God my vows. This said, away
They whipp'd their willing horses through the town,
Which on the plain their harness shake all day, 160
And were at Pheres when the sun went down.
There Diocles, Orsilochus his son,
(Orsilochus by Alphæus begot),
Dwelt, and of entertainment want was none,
Nor acceptable presents were forgot; 165
And when the morning had herself array'd,

Again they put their horses to the coach,
Which when the whip they felt once, never stay'd,
Till to the town of Pyle they did approach.
Then said Telemachus to Nestor's son, ¹⁷⁰
You promis'd, I your father should decline;
But since we here are, how can that be done?
And therefore let us both our counsels join.
Friends you and I, and friends our fathers were;
One age we have; this voyage is some tie; ¹⁷⁵
Draw me not from my ship, but leave me here,
Lest th' old man force me at his house to lie,
In kindness, when I have such need to go.
This said, Pisistratus considered
What to make good his promise he should do. ¹⁸⁰
And then this counsel came into his head.
Turn off, said he, the coach to the sea-side,
And Menelaus' gifts a-shipboard stow,
And get aboard; your small stay here I'll hide.
So your departure shall my father know. ¹⁸⁵
For sure I am, if he know you are here,
So violent he is, he'll hither come,
And call you to his house and stay you there,
And be a hindrance to your going home.
And though away you'll not be empty sent, ¹⁹⁰
Yet will he doubtless very angry be.
This said, unto his father home he went.
Telemachus then bade his company
To see prepar'd all things for sailing fit,
And go aboard; aboard went also he. ¹⁹⁵

The rowers on their seats in order sit.
Thus they about their going busy be.
Then came a stranger, that a prophet was,
And fled from Argos then for homicide,
And by descent was of Melampus' race, 200
And stood near to Telemachus his side.
For this Melampus once had dwelt in Pyle,
And rich, but fled, by Neleus oppress'd,
And bound he lay in prison for awhile.
But afterward, he got himself releas'd, 205
And brought to Neleus his herds again,
And had his daughter Pero for reward;
But left her with his brother to remain
For wife. And then did Pyle no more regard,
But went to Argos, where a wife he got, 210
And children twain had: first, Antiphates.
And he the valiant Oicleus begot,
And Oicleus begat Amphlareus,
That was belov'd by Pallas and by Jove,
And yet he lived not till he was old. 215
He died at Thebes, betrayed by his love,
That him discover'd for a chain of gold.
Alcmæon and Amphilocheus he got.
But Mantius, Melampus' second son,
Cleitus and Polyphides then begot. 220
Cleitus was fair, but children he had none;
Aurora snatch'd him from the earth when young,
For mortals he in beauty did excel,
And placed him th' immortal Gods among.

And Polyphides, Phœbus loved well; 225
And to him gave the gift of prophecy.
And since Amphiraus was dead and gone,
To foretell anything with certainty
Upon the whole earth like him there was none.
Displeased by his father, Mantius, 230
At Hyperesia he prophecied.
His son it was, call'd Theoclymenus,
That then stood by Telemachus his side,
When he the blessed Gods was praying to.
And said, Since worshipping I find you here, 235
By him you worship, tell me truly who
You are, your father who, and dwelling where?
Stranger, then said Telemachus, I dwell
At Ithaca, born there; my father's name
Ulysses, if he live; but who can tell? 240
And to hear news of that, I hither came.
Then answer'd Theoclymenus, And I,
From Argos town, for killing of a man,
Pursued by his kin, am forc'd to fly;
Take me aboard that only save me can. 245
Welcome you are, then said Telemachus;
Aboard let's go, where you shall have such cheer
As we can make, and hath contented us.
Then took and on the deck he laid his spear;
And up into the ship he went, and at 250
The stern he plac'd himself, and close by him
The stranger Theoclymenus down sat.
Then bids Telemachus, the ship to trim.

And straight the mast upright they set and bind,
And hoist their sails with ropes of good cow-hide; 255
And Pallas sent them a good strong forewind,
And swiftly did the ship the sea divide.
The sun was down, and doubtful was the light,
When he to Pheræ came and passed by;
And then by Elis coasted he all night, 260
And came unto the Thoæ Islands nigh;
And thought upon the suitors in his way.
Ulysses and Eumæus supping sat,
And when their hunger they had put away,
The tables gone, they leisure had to chat. 265
And then Ulysses had a mind to know,
Whether Eumæus rather had he stayed
I' th' lodge with him, or to the city go;
And to the company he spake, and said:
Hear me, Eumæus, and you all, his friends; 270
I stay here helping to consume your meat,
My mind me to the city rather bends;
For bread and wine there begging I shall get.
But I must then entreat you to provide
Some good man to go with me. Being there, 275
Necessity itself will be my guide
To find the houses where there is good cheer.
And if I go unto Ulysses' doors,
Unto Penelope I can tell news,
And make myself well known unto the woo'rs, 280
And they to give me meat will not refuse.
I can do any service that they will,

(Thank Mercury, to whom I owe that good),
Few be they can compare with me for skill
To make a fire, or to cleave out wood, 285
To roast and carve meat, or wine to give out,
Or anything that great men's servants do.
Ay me, Eumæus said, poor man, what thought
Is this of yours? D' ye long to perish so?
As you must do, if you among them stay; 290
Their insolence is known up to the sky.
You are not like their serving men; for they
Are young, and are apparell'd handsomely
With coat and vest; their heads and faces shine
With unguents sweet. Stay therefore here with me; 295
There's none that at your staying doth repine,
Nor I, nor any of my company.
Telemachus, when he comes home again,
Shall give you garments, a fair coat and vest,
And good shoes also to your feet, and then 300
See you convoy'd to what place you think best.
To this, Ulysses answered, and said,
Oh! that Jove lov'd you but as well as I.
You have me from a wretched wand'ring stayed.
The belly brings to men such misery. 305
Then said Ulysses, Since I am to stay,
Say, of Ulysses' parents, if you know
His father and his mother, whether they
Be both remaining yet alive or no.
To this, Eumæus said: Laertes lives, 310
But woefully and weary of his life;

Still for the absence of his son he grieves;
But more lamenteth the death of his wife.
The loss of her was that first made him old.
She died for grief, thinking her son was dead; 315
As sad a death it was as can be told.
May we from such death be delivered.
While she was living, though she grieved were,
When cause there was, I could have asked her mind
Freely. For why, with her own daughter dear 320
She brought me up, and never was but kind.
This daughter Ctimene, when come of age
(For she the youngest was) to Same went,
To a rich man given in marriage.
But I, well clad in coat and vest, was sent 325
(And shoes upon my feet) into the field;
For she a purpose had to do me good.
But now the time does no such kindness yield,
And yet the blessed Gods provide me food;
For they so well have multiplied my swine, 330
That we have still enough of meat and drink,
And wherewithal to make a poor man dine,
Although the suitors' riot make them shrink;
But since this woe Penelope befel,
'Tis harsh to her to hear of business: 335
Yet servants need her both to ask and tell
All that belongeth to their offices,
And also sometimes, maybe, need they had
I' th' house to eat, and carry somewhat home,
Of that whereof servants are most part glad, 340

And which unto their lodges never come.
Ho, said Ulysses, since it doth appear
You were a traveller when but a boy,
Tell me, I pray you, what your adventures were,
And what your sufferings were upon the way. 345
Was your town plunder'd by the enemies,
And you brought hither as a part o' th' prey?
Or been by thieves (for you were no ill prize),
As you kept sheep or cattle, brought away?
Then said Eumæus, Since to hear the story 350
Of how I hither came it is your pleasure,
Sit patiently, the wine there stands before ye;
For sleep and joy the long nights give us leisure,
It is not good too soon to go to bed;
For too much sleep is but a weariness; 355
The rest that will may go, and, morning spread,
Drive forth the swine, which is their business.
Meanwhile let us sit here, and drink and chat,
And stories of our sad adventures tell;
For much contentment there is ev'n in that, 360
To them that suffer'd have and come off well.
But to my story now. An isle there is
Under the tropic of the sun, not great,
Call'd Syria, but very fertile 'tis,
Well stor'd with kine, and sheep, and wine and wheat, 365
Where famine never enter'd, nor disease
Amongst the people. When a man was aged,
Dian' and Phœbus made him die with ease,
And gentle shafts the pain of death assuaged.

Two towns it had; their laws were not the same; 370
But of them both my father was the king.
Phœnician merchants, rats, then thither came,
And in their ships did many baubles bring.
There then was in my father's house a maid,
Phœnician born, that well could sow and spin; 375
As washing clothes she at the sea-side stayed,
One of these merchants sooth'd her into sin,
(For good workwomen may be made to do that,
If flatter'd well), and then he ask'd her name,
And whence she was. And truth she told the rat. 380
From Sidon, said she, a rich town, I came,
And daughter am of wealthy Arybas;
But Taphian thieves took me by force away,
As homewards from the field I going was,
And sold me to this man with whom I stay. 385
Then said the merchantman that did her wive,
Will you to Sidon home return with me,
And see your parents? They are still alive,
And rich as heretofore. I will, said she,
If you and all your company will swear, 390
At Sidon you will set me safe ashore.
And when all sworn, and agreed on it were,
The woman spake again, and this said more:
If any of you see me in the street,
Or at the well, speak not at all to me, 395
Lest any of the house should chance to see't,
And tell my master. Jealous he will be,
Put me in bonds, and seek you to destroy;

Buy quickly what you buy, and ready be,
And secret. When you mean to go away, 400
Then send a privy messenger to me;
For all the gold I can lay hand upon
I'll bring, and somewhat else boat-hire to pay;
For I the charge have of my master's son;
Much profit he will yield if brought away. 405
Playing without, I'll take him by the hand
And lead him to the ship; much worth he'll be,
Transported into whatsoever land.
And home again, this said, returned she.
A year it was before these merchants went. 410
Meanwhile they buy and lade the ship; and when
They had their freight, straightway a man they sent
To bid the maid make haste away. And then
A man unto my father's house they sent;
A crafty merchant, with a chain of gold 415
And shining amber, on which were intent
My mother and her maids; they much behold,
And take into their hands, and for it bid.
Meanwhile the man a nod gave with his head,
The woman quickly understand him did, 420
And by the hand me out a-door she lead.
Aboard went he. The woman look'd about,
Saw standing on the tables many a cup,
Left by my father and his guests gone out,
And presently she three of them took up; 425
Out went she, leading me, that simple was.
The sun went down, and dusky was the way,

And to the ship we unpursued pass,
To th' haven where the merchants' vessel lay.
And then go they, and with them we aboard, 430
And sail'd before the wind six days and nights,
And to us Jove a fair gale did afford,
Diana on the seventh the woman smites,
And suddenly into the sink she fell;
And her they throw into the sea for cheer
Telemachus landed, goes first to Eumæus. 435
To fishes; but the rest arrived well
At Ithaca. Laertes bought me there.
You see now how I hither came. Then said
Ulysses, Truly you have pass'd much woe;
But Jove in part your sorrows hath allay'd, 440
That in a good man's house at ease are now,
That gives you meat and drink with a good will;
With him you live a happy life. But I
Have longer wand'ring been, and must be still.
Thus 'twixt themselves did they say and reply, 445
Then went to sleep. The night was almost past,
And with the morn Telemachus was nigh;
Quickly his mates take down the sails and mast,
And row the ship to land, and there her tie;
Then on the beach they quickly break their fast, 450
And with fresh water temper their old wine.
And when desire of meat and drink was past,
I'll, said Telemachus, go to my swine,
But to the city will return at night,
Next morn I'll feast you with good flesh and wine, 455

Your labour in my passage to requite.
And then said Theoclymenus divine,
What will you do meanwhile, I pray, with me?
Unto your mother's house must I go too,
Or to some other man commended be? 460
Then answered Telemachus: No, no,
To bring you to my house in vain it were.
My mother in my absence you'll not see,
She seldom to the suitors doth appear,
At top o' th' house at work still sitteth she. 465
But I will recommend you to another,
In Ithaca of best repute; his name
Eurylochus, and best he loves my mother,
And what my father did would do the same;
But folded up it lies yet in Jove's lap, 470
Whether he first shall married be or dead.
As he this said, there did a falcon hap
(Apollo's bird) to fly above his head
Dexter, and in his pounces held a dove;
And as he plumed her the feathers fell 475
Scatter'd as they descended from above
(Which Theoclymenus observed well)
Betwixt Telemachus and the ship's side;
And to Telemachus said secretly:
This from the Gods is, and doth good betide 480
Both to yourself and your posterity.
I knew that it portended at first sight,
No family but yours was here to reign.
O, said Telemachus, that that were right,

Such love, such gifts, you then should from me gain, 485
As men that saw you should your fortune bless.
Pyræus then his friend was standing by,
To him he then his stranger did address:
You are my best friend of the company;
Unto your care this stranger I commend, 490
To be well treated till I come again.
Though long you stay, said he, I do intend
The best I can your friend to entertain,
And with some gift. Then to the ship he goes,
He and his mates. They on their benches sit. 495
Telemachus then putteth on his shoes,
And takes a spear that for his hand was fit;
The ship about they to the city row.
Telemachus pursuing his design,
On foot unto Eumæus forth did go,
His faithful servant, master of the swine.

LIB. XVI.

*Telemachus sends Eumæus to the city to tell his mother of his return; and
how in the mean time Ulysses discovers himself to his son.*

EUMÆUS AND ULYSSES risen were,
And men, for dinner, sent out to fetch hogs,
And fire was made. Ulysses chanc'd to hear
One tread without, and whining of the dogs 5
That barked not, and to Eumæus said:
Some one of your acquaintance now comes in;
I hear his feet. The dogs are well appai'd.
These words scarce said, Telemachus was seen.
Eumæus, who then temp'ring was of wine, 10
Lets fall his cups, and meets him at the door;
Kisses his head and hands, and both his eyne,
And presently with tears his eyes run o'er.
As when a loving father sees his son
That had been ten years absent, and for whom 15
He had lamented long, come home alone;
So glad was he Telemachus was come,
And hugg'd him as one that had 'scap'd but then
From death; and weeping said, O are you come?
I never thought to see you more, sweet man, 20
Since first I knew to Pyle you went from home.
But come, come in, dear heart, that I may fill

Myself with looking, you're not oft among
Your herdsmen in the field, but almost still
I' th' city, in the suitors' dismal throng.

Telemachus sends Eumæus to tell his mother of his return. 25

Yes, said Telemachus, for why, I come
To see you, and to ask about my mother;
Whether she still remaining be at home,
Or gone be with a suitor one or other,
Leaving her husband's chamber and his bed 30
With cobwebs hung for want of furniture?

No, she yet stays, Eumæus answered,
And great the grief is which she doth endure;
And day and night the tears fall from her eyes.

Telemachus went in. His father there 35
To give him place did from his chair arise.
Sit still, said he, I'll find a seat elsewhere
In my own house. This man will one provide.

This said, he past unto another seat,
To which Eumæus a wool-fell applied 40
With rushes under it. Then brought in meat,
Trenchers of meat roasted the day before,
And in a basket sets on bread of wheat,
And in an ivy-tankard wine good store,
And o'er against Ulysses takes his seat. 45

Then on the meat prepar'd their hands they laid.
When thirst and hunger nothing more requir'd,
Telemachus unto Eumæus said,
And thus about his new-come guest inquir'd:
Father, said he, I pray you tell me now, 50

His own, his father's, and his country's name;
And farther I desire you let me know
Where are the mariners that with him came
Unto this place? And tell me this likewise,
Where rideth the good ship that brought him to't? 55
For verily I can no way devise,
How he should come on horseback or on foot.
To this Eumæus answered agen:
He says himself that he was born in Crete,
And seen the cities has of many men, 60
Wand'ring about, for Jove so thought it meet.
Thesprotian rats got him aboard their ship,
And forced were in Ithaca to land;
There he found means to give them all the slip;
So came to mine, and from mine to your hand. 65
I give him you, as you think best to use.
To this again Telemachus replies:
That which you say, Eumæus, is bad news.
How to receive him I cannot devise.
I am too young to save him with my hands, 70
If injury be done him by the wooers.
And at this time my mother doubtful stands,
Whether to stay within my father's doors,
And with the people her good name maintain,
Or with that suitor wed and go away, 75
That to her shall afford the greatest gain.
But since the stranger at your house doth stay,
I'll give him garments, a good coat and vest,
A spear in's hand, and good shoes to his feet,

And him convey to what place he thinks best. 80
Or if to keep him here you think it meet,
I'll hither for him garments send and food,
That he no charge be to your family.
To set him with the suitors 'tis not good
For me nor him, they so unruly be. 85
He'll be derided there, and I shall grieve,
But 'gainst so many men what can be done?
The strength of one man cannot him relieve.
Ulysses then made answer to his son.
Oh! friend, said he, it bites my heart to hear 90
What of the suitors in your house you say,
How 'gainst your mind they proudly domineer.
It is because you willingly give way?
Or that your people by divinity
Adverse are to you or your government? 95
Or are your kindred, that should stand you by
In quarrel and in battle, discontent?
Oh, were I young, and of the mind I am,
Or that I were the great Ulysses' son,
Or he himself, and wand'ring hither came, 100
I'd have my head cut off by any one,
If I were not reveng'd upon them all.
And though they were too hard for me alone,
I'd rather in my own house fighting fall,
Than daily see such ugly things there done. 105
Strangers abus'd, maids tous'd ill favour'dly,
And corn and wine consumed without end,
And to no purpose foolishly; for why,

They never shall arrive where they intend.
Then said Telemachus: No word o' th' Gods 110
Hath me deprived of the people's love,
Nor any brother is with me at odds,
Nor any other cause I know but Jove.
How many lords within these isles do sway,
Same, Dulichium, Ithaca, and Zant, 115
So many suitors duly every day
For marriage with my mother my house haunt.
Whilst she can none put off, and will none marry,
They spend my corn and wine, and cattle kill,
And eating here, and drinking still they tarry, 120
And me perhaps, at last, they murther will.
But what they shall do none but God can tell.
But, father, go you to Penelope,
And let her know I am arrived well.
And let no other person know but she.
Ulysses discovers himself to his son. 125
And after you have told her, tarry not.
Make haste. At your return, I shall be here,
For many are they that my death do plot.
True, said Eumæus, but not ill it were
To let Laertes know it by the way, 130
Who when his grief but for Ulysses was,
Did oversee his workmen all the day,
But since by sea to Pylus you did pass,
He neither oversees his husbandry,
Nor eats his meat, as still he did before; 135
But groaning and lamenting woefully

Liveth. Telemachus did thus reply:
The case is hard. But grieved though he be,
Let him alone; go not out of your way.
For first I wish my father here to see, ¹⁴⁰
If in my choice to have my wishes lay.
But pray my mother thither send a maid,
To tell Laertes secretly the news.
When to him thus Telemachus had said,
Eumæus on his feet tied on his shoes. ¹⁴⁵
Ulysses and his son now left alone,
Came Pallas to them. At the door she stood;
But by Telemachus she was not known.
Gods are not known but by whom they think good.
Ulysses knew her. Fair she was and tall, ¹⁵⁰
And of a grave wise matron had the look;
And by the dogs perceiv'd was. For they all
Whining and terrified the place forsook.
A sign t' Ulysses she made with her brow.
Then he went forth, and she unto him spake. ¹⁵⁵
Son of Laertes, wise Ulysses, now
Your son with your design acquainted make;
And when you have the suitors' fate contrived,
Go to the city both. 'Twill not be long
Before I at your combat be arrived, ¹⁶⁰
And give you my assistance in the throng.
And stroak'd him over with a wand of gold,
And presently his rags were cloak and coat;
His cheeks were plump; his beard black to behold,
To which his goodly locks unlike were not. ¹⁶⁵

This done, the Goddess mounted to the skies.
Ulysses to the house again retir'd;
But from him then his son turn'd off his eyes.
So much this alteration he admir'd;
He thought it was some God, and to him said, 170
You are some God descended from the sky;
Your colour's better, better you arrayed.
Save us. Our gifts shall on your altar lie.
And then Ulysses said, God I am none.
What ails you with the Gods me to compare? 175
For I your father am, whom you bemoan,
And for whom you have had such pain and care;
And then embrac'd and kiss'd his son, and wept,
So that the ground he stood upon was wet,
Though hitherto his eyes he dry had kept; 180
But by his son believ'd he was not yet.
You're not, says he, my father, but some spright
That flatters me into more misery.
Of mortal men there's none that has the might
To do such things without a deity. 185
A God indeed can man's decay redeem;
You were but now an old man ill arrayed;
And now like one new come from heaven seem;
To this Ulysses answered and said,
Telemachus, be not amaz'd too much; 190
Other Ulysses you shall never see.
I am the man, although my luck be such,
As after twenty year not known to be;
The change you see was by Athena wrought,

That made me what she list, for she can do't. 195
A beggar old, or youth in a fine coat,
And handsome cloak, and other garment to't;
For easy 'tis for Gods on mortal men
To lay on glory, and the same displace.
This said, Ulysses sat him down. And then 200
Telemachus his father did embrace,
And then they both together wept and sobb'd,
As eagles or as vultures, when they see
Their nests by country-people spoil'd and robb'd,
And young ones kill'd before they fledged be; 205
So wept these two, and weeping there had staid
Perhaps until the closing of the day,
But that Telemachus t' Ulysses said,
Father, how came you t' Ithaca, I pray?
Where are the seamen that set you ashore? 210
For sure I am you could not come by land.
In a good ship, said he, I was brought o'er
From th' Isle Phœacia, and left o' th' sand;
That people, strangers all that thither come,
Convoy unto the place where they would be; 215
And when I was desirous to go home,
At Ithaca asleep they landed me,
Enrich'd with presents, garments, gold and brass;
And in a cave I hidden have the same;
And, as I by Athena counsell'd was, 220
The suitors' fate to weave I hither came.
Tell me how many now they are, that we
Consider may if we two and no more

Shall be enough to get the victory,
Or must we of some else the aid implore? 225
father, said his son, you are renown'd
For a good councillor, a man of might;
But very hard the thing is you propound,
That two men should against so many fight.
They are not only ten, or two times ten, 230
But many more. Their number, let me see,
From out Dulichium two-and-fifty men;
And with them lusty serving men twice three.
From Same chosen men come twenty-four;
Twenty from Zant, and twelve of Ithaca. 235
Medon, the squire, a fiddler, and what more?
Two cooks that of a feast had learnt the law.
'Twill be but ill revenge to fight them all;
Therefore I think it best to look for aid,
And some good neighbour to assist you call. 240
To this Ulysses answered and said,
Consider then, and cast it in your mind,
Whether we two, Pallas and Jove to boot,
Will serve, or must we other succours find?
Then said his son, O father, that will do't. 245
Those friends indeed will serve us very much.
Immortals against mortals have great odds;
Higher they stand, and of themselves are such,
As would too hard be for all th' other Gods.
Yes, said Ulysses, if the woo'rs and I 250
Come but to battle once, 'twill not be long
Ere such good aids will have the victory,

And make an end of this unruly throng.
But you, Telemachus, go early home
To-morrow morning; mingle with the rabble; ²⁵⁵
I after you will with Eumæus come,
Like to a beggar old and miserable;
Where if you see me us'd ill-favour'dly,
Thrown at, or pull'd about the house by th' heels,
As unconcern'd, endure it patiently, ²⁶⁰
What pain soever thereby your heart feels;
But yet with gentle words you may persuade them;
For sure I am they will not you obey,
The Gods immortal have so stupid made them,
As on themselves to bring their fatal day. ²⁶⁵
But now to what I say attentive be.
When Pallas shall me prompt, I'll with my head
Make you a sign. As soon as that you see,
Let th' arms in th' hall away be carried,
And say, if any suitor ask wherefore, ²⁷⁰
The fire hath hurt them, and they are not now
Such as Ulysses left them heretofore,
When with the Greeks t' Ilium he did go.
Or say, for fear some quarrel should arise,
By th' indiscretion of one or other, ²⁷⁵
You thought the council would not be unwise,
To take them thence. One drawn sword draws another.
But two spears, two swords, and two shields keep still,
To take in hand when we onset make.
Jove from mistrust and Pallas keep them will: ²⁸⁰
And farther from me this instruction take.

As I your father am, and you my son,
Of my return a word let no man hear,
Father, or wife, or servant any one;
To speak of it in company forbear. 285
But let's of the maid-servants you and I
Endeavour what we can to know the mind;
And your men-servants also I would try,
From whom you honour or dishonour find.
Father, then said Telemachus, you'll see, 290
I am not loose of tongue. But 'tis not good
The men to question. 'Twill lost labour be,
Because without the house they have their food,
Though there they havoc of your substance make.
Do as you please. 'Tis a long business 295
Of ev'ry one of them account to take.
Inform yourself of th' women's wickedness,
I would not willingly go up and down
To ev'ry lodge, what there is done to see.
For our work done, theirs will be better known, 300
If you with signs from Jove acquainted be.
Thus they discours'd. The mariners meanwhile
Had brought into the haven of the town
The ship that brought Telemachus from Pyle;
Then drew it up to land, the sails pull'd down. 305
The presents unto Clytius they bear,
And to Penelope a man they sent,
That of her son's arrival she might hear,
And how unto Eumæus' lodge he went,
And sent the ship to put her out of fear, 310

Lest she should for his absence longer weep.
Eumæus was for the same business there;
He from his lodge, the other from the deep.
He told the queen th' arrival of her son;
And to her maids the other told the same. 315
And when they both their messages had done,
Back to Telemachus Eumæus came;
At this the suitors vex'd, look'd down and sad,
And out o' th' gates together went, where they
Amongst themselves a consultation had, 320
And to them thus Eurylochus 'gan say.
'Tis very strange, Telemachus is come,
We thought he never should return agen;
But since 'tis so, to call our fellows home,
Let's hire and man a boat with fishermen. 325
His words scarce out, Amphinomus comes near,
And turning towards th' haven them espied
Furling their sails, and laughing said, Th'are here,
You need not any messenger provide.
Some God sure told him of them, or else they 330
Saw the ship coming by, but were too slow
To overtake her. This said, they away
Down to the water's-side together go;
And up unto the land the ship they hale;
Their servants what was in her bear away. 335
And then to consultation they fall,
Nor with them suffer'd any else to stay.
To them Antinous began and said,
The Gods Telemachus have strangely kept.

Our scouts from morn to night o' th' mountains stayed, 340
Nor on the land by night we ever slept,
But rowed up and down until 'twas day.
We thought he could not 'scape in any wise;
And yet some dæmon brought him has away.
Come, let us how to kill him here devise: 345
For whilst he lives our work will not be done;
Crafty he is, and can his purpose hide;
Nor have we yet sufficiently won
The people of the town with us to side.
The multitude to council he will call, 350
And ranting tell them that we go about
To murder him, and so enflame them all,
That from our country they will cast us out,
And make us beg our bread. Which to eschew
Let's kill him in the fields, or in the way; 355
Divide his goods amongst us, as is due.
His houses to his mother leave we may,
To give to him with whom she means to marry.
If this you like not, but that he shall stay,
And have his father's state, then let's not tarry, 360
But each man to his own house go his way,
And there contend who shall the best endow her,
And in her favour the superior be;
Or let the fates dispose the happy hour
To whom she has a mind to. So said he. 365
Then spake Amphinomus, the noble son
Of the rich Nisus Aretiades,
Amongst the wooers inferior to none,

And best of all Penelope did please.
Telemachus, said he, I would not kill; 370
'Tis dangerous to slay the royal blood;
But let us first of Jove inquire the will;
If he command, I'll do't, and say 'tis good;
If he forbid, I wish you to desist.
So said Amphinomus, and 'twas thought fit; 375
And presently the council was dismiss'd:
And then into the house they go and sit.
And now Penelope resolved t' appear
Before her suitors sitting in the hall.
For to her son she knew they traitors were; 380
Medon, that with them was, had told her all.
Down to the hall she went, and in the door
Having a woman at each hand, she staid,
And proud Antinous rebuked sore.
Antinous, you traitor impudent, she said, 385
In Ithaca the glory you have got
Of wit and eloquence. You are belied.
Madman, what ails you, my son's death to plot,
And to his strangers here to show such pride?
Poor strangers have their passport from the Gods. 390
To do them wrong is great impiety;
And worse between themselves to be at odds.
You know your father hither once did fly,
Fearing the people whom he had offended,
Joining with Tophian thieves to make a prey 395
Of Thesprote cattle, and were here defended
Against the Thesprotes, though our friends were they.

They slain him had, and seized his estate,
But that Ulysses saved him; and now,
For to requite him, what d'ye, O ingrate? 400
You eat his cattle; and his wife you woo,
And kill my son, and daily me molest.
Desist, I tell you, and the rest persuade
To leave these evil courses, you were best.
To this Eurylochus then answer made. 405
Icarius' daughter, wise Penelope,
Fear not. None shall lay hands upon your son,
As long as I am living and can see;
Who does, his blood shall on my spear down run.
His father oft has set me on his knee, 410
And given me good wine, and good meat roast.
Afraid of any wooer you need not be;
Telemachus of all men I love most.
Of death from God's hand none can warrant you;
But as for us you may securely sleep. 415
So said he, and yet then his death did brew.
Away went then Penelope to weep,
And wept till Pallas came and clos'd her eyes;
And to Ulysses and his son at night
Eumæus came. A swine they sacrifice; 420
And then did Pallas from the sky alight,
And with her rod return'd Ulysses old,
And ill array'd, for fear he should be known
T' Eumæus or Penelope, and told
By them to others, and abroad be blown. 425
Telemachus then to Eumæus said:

Eumæus, are you come? what news from town?

The suitors, are they come, that me way-laid?

Or do they for me still look up and down?

Then said Eumæus, I did not inquire, ⁴³⁰

Upon my message only was my mind;

That done, to make haste back was my desire.

But there I chanc'd a messenger to find,

Sent by your mates to tell Penelope,

And he the news t' your mother first did tell. ⁴³⁵

I saw a ship that new came in from sea,

But whether that were it, I know not well.

Aboard were many arms and many men;

And though I were not sure, I thought 'twas it.

Telemachus on 's father smiled then, ⁴⁴⁰

But so as that Eumæus could not see 't.

Then came their supper in, which they fell to.

A supper good they had, and were well pleased;

And when their hunger had no more to do,

With gentle sleep their fear and care disseised.

LIB. XVII.

Telemachus relates to his mother what he had heard at Pyle and Sparta.

SOON AS THE rosy morning did appear,
Riseth Telemachus; his shoes puts on,
And takes into his hand his heavy spear,
And hasteth to the city to be gone; 5
And said unto Eumæus, Father, I
Am going to the city, there to see
My mother, that will never cease to cry
And sob, till in her sight I standing be;
But the poor stranger guide you to the town, 10
With broken meat and wine himself to feed,
Such as he gets by begging up and down.
I cannot maintain all men that have need.
Tak't how he will. For I love to speak plain.
Then said Ulysses: Sweet friend, nor would I 15
Here in the country willingly remain,
For beggars' wants great cities best supply.
Here at the lodge no service I can do;
And now to learn of others am too old.
With this man to the city I would go, 20
But warm me first I would, for very cold
This morning is; I fear this hoary frost.
Far hence the town is, and my garments thin;

And which I reason have to fear the most,
My rags will to the air betray my skin. 25
Telemachus then speedily went home,
With mischief to the suitors in his head;
And when he to the palace gate was come,
T' a pillar sets his spear, and entered.
Euryclea was cov'ring chairs i' th' hall, 30
And saw him first, and straight unto him went;
And then the other woman-servants all
Declared with much kissing their content;
Then, like Diana or fair Aphrodite,
Penelope came shedding tears of joy, 35
And on his shoulders laid her arms milk-white,
And kiss'd his head and eyes, and thus did say:
Telemachus, my dear child, are you here?
I never thought again your face to see,
Since of your father news you went to hear 40
At Pyle, by sea, without acquainting me.
But tell me, what at Pyle they of him say?
Mother, said he, pray let me take my breath,
My thoughts in great disorder are to-day;
I come but now from out the jaws of death; 45
But with your maids go to your chamber now,
And in your fairest garments you array,
And to th' immortal Gods all make a vow
A perfect hecatomb to them you'll pay,
If Jove be pleas'd our losses to restore. 50
But I unto the market-place must haste,
To treat a stranger whom I sent before,

And till my coming with Piræus plac'd.
Penelope then to her chamber went,
And put herself into her best array. 55
Her vows to all th' immortal Gods she sent
A perfect hecatomb to them to pay,
If Jove be pleas'd her losses to restore.
Telemachus in hand then takes his spear,
And with two dogs at's heels went out a door, 60
And Pallas made him like a God appear.
The people all admir'd him as he came;
The suitors all about him gathered,
And spake him fair, while in their hearts they frame
Plots and devices how his blood to shed. 65
But he his seat amongst them quickly quits,
To Mentor and his father's ancient friends,
Altherses, Antephus, with them he sits,
And there the time discoursing with them spends.
Piræus not long after cometh in, 70
And brings his stranger with him to the place,
Who there a very little while had been
But that Telemachus hard by him was.
Then, said Piræus to Telemachus,
Send of your women some to fetch away 75
The goodly presents you left at my house.
No, said Telemachus, let them yet stay,
I know not yet th' event of our affairs.
If th' wooers kill me and my goods divide,
I rather had they should be yours than theirs. 80
If I kill them, and God be on my side,

Then send them, and I'll take them joyfully.
And brought away the stranger with him home.
And by-and-bye the suitors thither hie;
And when they all into the house were come, 85
On couches and on chairs their cloaks they lay,
And presently into their baths they go;
And bath'd and oil'd, again themselves array,
And sat them down. And supper ready now,
A maid then water in a golden ewer 90
To wash their hands over a basin brings;
The basin also was of silver pure.
Another on the tables lays good things,
That in her keeping were, and sets on bread.
Penelope sat spinning in the door. 95
And then they heartily fell to and fed;
And when desire of meat and drink was o'er,
Unto her son Penelope then spake:
I will, said she, upon my bed lie down,
Though there I ever weeping lie awake, 100
Since he went with Atrides to Troy town,
Since you would not vouchsafe to let me know
The news you heard, before these men came in.
Mother, said he, the truth I'll tell you now;
We went to Pyle; and Nestor we have seen; 105
And lovingly we entertained were.
For as a father entertains his son
Come home from far, so were we treated there,
And welcome to his children every one.
But that Ulysses was alive or dead, 110

He met with no man that could tell him true.
But us to go to Sparta counselled,
And said, if any, Menelaus knew;
And us with coach and horses did provide,
(Where we saw Helen, bane of Greece and Troy.) 115
He also sent his son with us for guide,
And thither come, receiv'd we were with joy.
Atrides of my coming ask'd the reason.
I told him all the truth. He answer'd then,
Oh ho, into the strong man's house by treason 120
Are enter'd many weak and heartless men;
As when a stag and hind, ent'ring the den
Of th' absent lion, lulls his whelps with tales
Of hills and dales, the lion comes agen
And tears them into pieces with his nails; 125
So shall Ulysses all these rascals slay.
Oh! that the Gods Apollo, Pallas, Jove,
Amongst the suitors bring him would one day,
Such as when with Philomelide he strove,
And threw him flat, and made the Argives glad. 130
If such, Ulysses once amongst them were,
Short would their lives be, and their wedding bad.
But of the matter whereof you inquire,
On my knowledge I can nothing say,
Nor will with rash conjectures you beguile. 135
I told was, with Calypso he doth stay,
(By Proteus, an old sea-God,) in an isle,
And would come home, but wants both ship and men
To pass him o'er the broad back of the main.

This said, we took our leaves; a fair gale then 140
Quickly convey'd us o'er the liquid plain.
After Telemachus had spoken thus,
Penelope her heart was ill at ease.
And then spake to her Theoclymenus:
Wife of Ulysses Laertiades, 145
This man, said he, knows not; hear me, for I
Jove's mind foresee. Jove first, and then the ghost
That takes the care of this bless'd family,
And dwelling in it doth maintain the roast,
You know Ulysses is now in this isle, 150
Sitting or creeping, and observes these wooers,
What evil deeds they do; and he the while
The destiny contriveth of the doers.
I saw the same at sea by augury,
And said unto Telemachus no less. 155
Oh! that the Gods would make it true, said she,
I'd so reward you that men should you bless.
While they together thus within discourse,
The suitors were gone out to throw the stone
And darts upon the green before the doors, 160
As they at other times before had done.
Now supper-time drew near. Sheep home were brought
From ev'ry field. Then Medon to them spake,
Who 'mongst the suitors had most favours got;
Come in, says he, and care of supper take, 165
For of these games, I see you have your fill.
In supping early damage there is none.
Agreed they were; none thought the motion ill.

They then into the hall went every one.
On couches and on chairs their cloaks they throw. 170
Great sheep, fat goats enough they sacrifice,
And franked swine, and from the herd a cow.
Meanwhile, Eumæus to the city hies,
Ulysses with him, to whom thus he said:
Come, father, let us to the city go, 175
Since 'tis my master's will. You should have staid,
If my advice you would have harkened to.
But the commands of masters are severe;
The time o' th' day already is much spent,
And though it will be late ere we be there, 180
I fear, ere it be night you will repent.
And then Ulysses to Eumæus said:
I hear, I understand, I pray go on.
Only of rugged way I am afraid;
Give me a good strong staff to lean upon. 185
Then on his shoulder he his scrip did throw;
Given he had a great staff to his mind,
And they two to the town together go,
Leaving the swineherds and the dogs behind.
Ulysses like a beggar old and lame, 190
And all his raiment ragged was and wretched.
But when they near unto the fountain came
From which the citizens their water fetched,
The fountain sweetly streaming and well made
B' Ithacus Neritus, Polector, kings, 195
That flieth from a high and chilling shade,
Where in a poplar grove arise the springs,

And there an altar is, and on the same
The passengers to th' nymphs pay offerings.
When we were there, Melanthus to us came, 200
And goats, the fattest of his herds, he brings.
Whither now goest thou with this beggar here?
This trouble-feast, who begging scraps and snuffs,
Not swords and kettles, many blows shall bear
Of flying footstools, and get many cuffs. 205
Would thou wouldst give him me, my lodge to keep,
And lead my goats afield with a green bough,
And live on whey, and my goat houses sweep,
And his great knee unto to such service bow.
But hang him, he has such a custom got 210
Of idleness, with begging of his food,
That labour for his living he will not.
But this I tell you, and 'twill be made good:
When he within Ulysses' house appears,
Many a footstool in the hall will fly 215
From out the suitors' hands about his ears.
This said, he pass'd, and kick'd him going by;
Ulysses still stood firm upon the path,
Thinking to strike him with his great staff dead,
Or otherwise to kill him in his wrath. 220
But in the end his wrath he conquered.
Eumæus then held up his hands and pray'd:
Nymphs of these fountains, daughters of great Jove,
If the fat gifts here by Ulysses laid
Upon your altars were receiv'd with love, 225
Grant that he may come safely home again,

By some good spirit to his house convey'd.
Then, (to Melantheus said he,) all in vain
Will be your triumph, and your pride allay'd,
Wherewith you to the suitors daily go; ²³⁰
And knaves remain the cattle to abate.
Then said Melantheus again, O ho!
How boldly does this dog, this rascal prate!
Whom one day I shall from hence ship away,
And make of him somewhere abroad good gain. ²³⁵
Would th' wooers, or Phœbus, but as surely slay
The son, as 'tis t' expect his father vain.
When this was said, away he went apace,
And coming to the suitors in the hall,
Against Eurymachus he took his place, ²⁴⁰
Whom best he loved of the suitors all.
And there the waiters set before him meat;
The women of the pantry brought him bread.
Ulysses and Eumæus were not yet
Arriv'd, but near, for close they followed, ²⁴⁵
And of the fiddle they could hear the din.
Ulysses said unto Eumæus then:
'Tis a fine house Ulysses dwelled in,
And eas'ly known from those of other men;
The court with wall and hedge is fenced strong, ²⁵⁰
Having strong gates with two locks, great and fast.
Some feast here is; I hear the sound of song,
And fiddle, which with feast the Gods have plac'd.
Then answered Eumæus, 'Tis well guess'd,
And other things you mark as well as this. ²⁵⁵

But let us now consider what is best,
In that which at this time our bus'ness is.
Go you in first, and put yourself among
The suitors; or if you think better so,
I'll first go in, but do not you stay long, 260
Lest you of one or other take a blow.
I hear, I understand; go you in first;
The seas and wars have taught me patience.
Of all my suff'rings this is not the worst.
Of blows and throws I have experience; 265
And may the suitors henceforth have the same.
The belly forceth mortals to much woe;
But there is no force can the belly tame.
It sets the good ship on the sea to go,
Which t' one another evil fortune bears. 270
While they discoursed thus before the door,
Ulysses' dog held up his head and ears,
Argus by name, that had been long before
Well look'd to, ere Ulysses went to Troy.
They with him cours'd the wild goat, deer, and hare; 275
But all the while his master was away,
The servants of his keeping took no care,
But on the dung before the door he lay,
Which there was heap'd to manure fields and leas,
From many mules and cattle fal'n away. 280
There lay the old dog Argus, full of fleas;
And, as Ulysses near was, couch'd his ears,
And fawned with his tail, but could not rise;
And which Eumæus did not see, the tears

Ready to fall were from Ulysses' eyes. 285
And then Ulysses to Eumæus said:
This is a very well-shap'd dog I see,
'Tis strange to see him on a dunghill laid.
I know not whether also swift he be,
Or for his beauty only was he fed, 290
As lords make much of dogs for being fine,
And at their tables see them cherished.
Then answered the master of the swine:
The master of him is of life bereft.
If now he were the same for shape and deed 295
He then was when Ulysses here him left,
You'd quickly see he had both strength and speed.
There was no beast he once saw in the wood
That could escape him; for not only swift,
But also at a scent was very good: 300
But now himself scarce able is to lift;
For why, his master being dead and gone,
He was not left unto the woman's care;
And when the master is not looking on,
Men-servants of their duty careless are. 305
For half the virtue taken is away
Of whosoever is to service tied.
This said, into the house he went his way;
And Argus, having seen his master, died.
Telemachus, the first that saw him enter, 310
Unto him nodded to come to his seat.
A chopping-board was near him by adventure;
He took up that, whereon to eat his meat;

And near Telemachus he placed the same.
A waiter sets before him flesh and bread. 315
And after him Ulysses also came,
Like an old beggar, torn and tattered;
And said to Eumæus, Give the beggar this,
And bid him go and try the charity
Of all the rest; and tell him hurtful 'tis 320
For beggars to have too much modesty.
Eumæus then straight went unto the guest,
And said: Telemachus doth give you this,
And bids you try your fortune with the rest,
For modesty to beggars hurtful is. 325
And then Ulysses to Eumæus says:
God bless Telemachus, and make him great,
And always grant him that for which he prays.
And then with both his hands receiv'd his meat.
And as the fiddle with the feast gives o'er, 330
Ulysses when he eaten had his meat,
Sate quiet on the sill and said no more.
But still amongst the woo'rs the noise was great.
Then Pallas comes and stands Ulysses by,
And bids him try the suitors as they sat, 335
Which of them had, which wanted charity,
Though they the same men would be for all that.
Then rising up, before the first he stands,
And to the right hand onward still he goes
To every one, and holds up both his hands, 340
Like one that well the art of begging knows.
They gave him meat, and wonder'd at the man;

And one another ask'd, Who is't? and whence?

And then Melantheus to speak began:

I saw him, said he, but a little since ³⁴⁵

Brought hither by the master of the swine.

But who he is, his kindred, and his place,

It is not in my power to divine.

This said, Antinous in choler was.

Oh, noble master of the swine, said he, ³⁵⁰

What made you here to introduce this guest?

Think you that yet too few the beggars be,

That you must needs invite this trouble-feast,

Your lord's estate the sooner to eat up?

Good as you are, says he, you say not right: ³⁵⁵

No man a stranger e'er call'd in to sup,

And him on no acquaintance did invite,

Unless he were a man that most men need,

Prophet, physician, or armourer,

Or fiddler at a feast; for when men feed ³⁶⁰

A song doth add delight unto the cheer.

These use to be invited ev'rywhere.

Whoever call'd a beggar in to eat?

But to the servants you still cruel were,

And of them all you me the worst did treat. ³⁶⁵

But I care little whilst Penelope

Alive is, and Telemachus, her son.

Telemachus then bad him silent be.

Eumæus, said he, let him now alone;

He loves to quarrel, and set others on. ³⁷⁰

Then to Antinous he turn'd and spake,

Is this as from a father to his son,
To bid me make my guest my house forsake?
I'll never do 't. Give him what alms you will,
Nor shall my mother, nor I, nor any man, 375
Nor woman that here dwelleth, take it ill.
But eat than give, it seems you better can.
Then said Antinous: These words are great,
And passionate, but spoken without need.
If thus we all go on to give him meat, 380
He may himself three months together feed.
This said, his footstool to his foot he drew.
Ulysses with his scrip went to the sill,
For it was full, meaning to beg anew.
And first he tries Antinous his will. 385
Give a poor stranger, says he; you appear
Amongst th' Achæans here to be the best;
For like a king you look, and reason 'twere
You should in bounty exceed all the rest,
And I abroad your goodness will make known. 390
I could for riches once with most compare,
And kept a great and free house of my own,
And ask'd what want you, man, not what you are.
And many servants had, and things that pass
For happiness amongst us mortals all, 395
Till t' Egypt I by knaves persuaded was
To sail. I' th' Nile we let our anchors fall.
There I my fellows bid aboard to stay
And guard the ships; and some to places high
I sent to watch. But mov'd by lucre, they 400

On plunder and on rapine had their eye.
The fields they waste, and kill the men, and make
Women and children captives. Then the cry
Arriving at the city, arms they take,
And next day early to the fields they hie, 405
With horse and foot. Then thundered the field,
Their armour lighten'd. My men frightened were.
Some taken and made slaves, some flying kill'd,
And all the rest ran scatter'd here and there.
To th' king of Cyprus I was made a gift, 410
Demetor by name, the king of Egypt's guest.
And to come hither thence, I made hard shift.
Then said Antinous: Stand off you're best.
What devil to molest us sent this rogue
Unmannerly, that with such impudence 415
To beg presumeth here, and to cologue?
Stand off. Or ill at ease I'll send you hence.
They that have given have done foolishly,
And at another's cost been charitable.
No wonder in such superfluity. 420
Ulysses then retired from the table.
Oh, ho, said he, I had but little skill,
That from the aspect have inferred wit.
Not give, I see, a crum of salt you will
To a poor man that humbly asketh it. 425
Antinous at this enrag'd at th' heart,
Look'd on Ulysses angerly, and said,
To part hence safely thou not likely art;
Since to my face thou dar'st me thus upbraid.

This said, he threw the footstool at his head, 430
Which touch'd his shoulder, but remov'd him not.
Then to the sill himself he rendered,
Shaking his head with vengeance in his thought.
Ulysses then unto the suitors spake.
A man, said he, not much is griev'd, a blow 435
In fighting for his kine or sheep to take;
But he did for his belly at me throw.
If any care the Gods of poor men have,
Antinous, before he married be,
Is like enough to go into his grave. 440
Antinous replies, Sit quietly
And eat your meat, lest taken by the heels
The servants hawl and drag you out o' th' gate,
Or use you worse, your tongue so runs on wheels.
At this the rest all discontented sate, 445
And one among the rest unto him said,
Antinous, it was unjustly done
To use a stranger so. The Gods, array'd
In poor men's habits, men's deeds look upon,
And notice take, who well does, and who ill. 450
Telemachus was grieved at the heart
For what was done, but did no tear distil,
But shook his head, and hoped to make them smart.
When what had pass'd was told Penelope,
Apollo strike him to the heart, said she. 455
If I my wish had, said Eurynome,
No suitor of them all the morn should see.
Then said Penelope again, 'Tis true,

They all be enemies, and mean us evil;
But he the fiercest is of all the crew, 460
And rageth in the house like any devil.
A stranger in distress comes to the door,
Whom want constrained had to beg his bread;
The rest all give him somewhat of their store,
But he a footstool throweth at his head. 465
While she thus and her women talking were,
Ulysses supping sat upon the sill.
I fain, said she, would have the beggar here.
Fetch him, Eumæus, talk with him I will;
I'll ask him if Ulysses he has seen, 470
For many men and cities knoweth he.
Eumæus then made answer to the queen;
If once the suitors would but silent be,
You would be pleas'd his history to hear.
Three days and nights he staid with me and end; 475
And of his suff'rings much he told me there,
When new arriv'd; but came not to the end.
As when a man that knows the art of song,
Sings lovely words, with sweet and well-tun'd voice,
The man that hears him thinks not the time long; 480
So I, in his strange story did rejoice.
He said Ulysses was his father's guest,
In th' isle of Crete, where reigneth Minos' race.
Himself, he said, with many woes oppress'd,
The fates, at last, him tumbled to this place. 485
And that he heard Ulysses is hard by,
And that into Thesprotia he's come,

Alive and well; enriched mightily
With treasure which he now is bringing home.
Then said Penelope: Go, call me hither 490
The beggar. I myself will ask him all:
And meanwhile let the suitors chat together
Where they think best, without or in the hall;
For merry they must be, since they feed here,
And their own corn and wine and cattle save, 495
And with our cattle make themselves good cheer,
And on our corn and wine no mercy have;
For such as was Ulysses here is none,
That should defend us from their injuries;
But were he hither come, he, and his son, 500
Would bring destruction on these enemies.
This said, it chanced Telemachus to sneeze.
She laugh'd, and for the beggar calls agen.
You see, Eumæus, Jove with me agrees,
And certainly slain shall be all these men. 505
Go call the beggar, and say this from me,
If I find true what he shall to me say,
He shall with coat and vest rewarded be.
Eumæus to the beggar went his way;
And when he near him was, Father, said he, 510
Penelope desires to speak with you;
About Ulysses she inform'd would be,
And said, if she find all you say be true,
She clothe you will with a fair coat and vest,
Which you stand most in need of. But for food, 515
By begging in the town you'll get it best,

Where they relieve you will that shall think good.

Ulysses to Eumæus answered:

Penelope I quickly can inform,

For he and I have jointly suffered. 520

But from the suitors I much fear a storm;

Their insolence is known up to the sky;

Just now a footstool one threw at my head,

When given him no cause at all had I,

Nor could I by her son be succoured. 525

Therefore entreat Penelope to stay

Until the sun be set and suitors gone,

And by the fire-side hear what I can say.

You see what woful garments I have on.

Then back Eumæus went with his excuse, 530

And came without him to Penelope.

How now, said she, does he to come refuse?

They that are bashful but ill beggars be.

Not so, O queen, said he, he is discreet;

He prays you stay till setting of the sun, 535

Fearing some danger from the wooers to meet;

And for you also then 'twill best be done.

I see, quoth she, the stranger wants not wit,

For in the world never so many men

Contriving mischief did together sit. 540

So said Penelope. Eumæus then

Went down and put himself into the throng,

And to Telemachus said in his ear:

I have been absent from my swine too long;

I go, and to your care leave all things here, 545

And chiefly of your life to have a care;
Many there are that bear you evil mind,
And how to take your life contriving are,
But may they first their own destruction find.
Then said Telemachus, And so 'twill be. 550
Farewell. But I advise you first to dine;
The bus'ness here leave to the Gods and me.
Then din'd he, and went back unto his swine,
Next morning with more victims to return.
And full he left the hall and court with men, 555
Who there themselves to song and dancing turn,
For less than half the day remained then.

LIB. XVIII.

*The fighting at fists of Ulysses with Irus. His admonition to Amphinomus.
Penelope appears before the wooers, and draws presents from them.*

THEN CAME A beggar to Ulysses' gate.
The man to see to was both great and tall,
Though but a lither fellow. Down he sate
Boldly within the porch before the hall. 5
He had a greedy gut, and named was
At first Arnæus, then Irus; for he went
On errands oft, whenever there was cause.
The wooers' favour made him insolent;
This beggar thought to drive Ulysses thence. 10
Dost see those princes how they wink at me,
And by the heels would have me pluck thee hence?
Though to do that I should ashamed be.
Go from the door, old man, lest I should do it.
Up therefore quickly, and be gone; arise, 15
Before that with my fists I force you to it.
Ulysses frowning, answer'd in this wise:
Strange man, I neither do thee harm, nor say
Thee any ill. Here's room for thee and me.
I do not envy you the meat which they 20
Shall give you here, how much soe'er it be.
Envy not other men; I think you are

As well as I, a beggar; but forbear
To threaten me too much. You're best beware,
Old as I am, lest I your lips besmear ²⁵
And breast with blood, and so have better room.
For to Ulysses' house I'm confident
Thou never wilt be able more to come.
This made the beggar more impatient;
O, says he, how the rascal prates! 'Twere well ³⁰
To beat the rascal's teeth out, while his tongue
Thus runs on wheels, till to the ground they fell.
Let these see fight the old man with the young.
Whilst in great heat they quarrell'd at the door,
They by Antinous observed were, ³⁵
Who, laughing, said: There never came before
Such sport to th' house. The beggars standing there
Will go to cuffs; I pray let's hold them to it.
Then up they start, and round about them stand.
There are o' th' fire good puddings full of suet, ⁴⁰
Of these, let him that conquers lay his hand
On which he will; (so said Antinous);
And have the privilege, and none but he,
To beg within the porch before the house,
And of our talk at meat a hearer be. ⁴⁵
The motion pleas'd; and then Ulysses spake:
The match is hard, an old man 'gainst a younger;
Yet this my belly bids me undertake.
And I'm acquainted more with blows than hunger.
But I must first entreat you all to swear ⁵⁰
Not to help Irus, nor a heavy hand

To lay on me, but both of us forbear,
And justly 'twixt us both as neuters stand.
When all had sworn, then said Telemachus,
Stranger, if thou dare combat with this man
The fighting at fists of Ulysses with Irus. 55
None else shall do thee hurt. Antinous,
Eurymachus, and I, defend you can.
This said, Ulysses cover'd kept his gear,
But shew'd his shoulders wide, and his strong thighs.
His large breast and his brawny arms appear; 60
And Pallas standing by, enlarg'd his size.
At which the suitors greatly wondered,
And one unto another softly said,
Irus has pull'd an old house on his head.
And Irus then was mightily afraid; 65
But yet by force the servants brought him out,
His flesh still trembling on his limbs with fear.
Show not thyself a coward and a lout,
Nor fear a man worn out with many a year;
For if he get the better, thou shalt go 70
Unto king Takim, and there by his law
Thy nose and ears, and privy parts also,
Shall be cut off, and dogs shall eat them raw.
This made him quake more yet. Into the lists
They brought him so. Both ready were to fight. 75
Ulysses then thought how to use his fists,
Whether to beat him down or kill him quite;
But not t'offend the suitors, thought it best
To strike him gently. And when they were near

Irus did hit Ulysses on the breast; 80
Ulysses Irus struck just under th' ear.
He broke the bones, at 's mouth the blood gush'd out.
He fell, squeak'd, shed his teeth. The suitors were
With laughter almost dead, that stood about.
Ulysses dragg'd him to the utter gate, 85
And set him to the hedge, as 'twere a sign,
And put a staff in's hand. As there he sate,
Ulysses bade him keep out dogs and swine.
Think not thyself, quoth he, of beggars king
(That art a very wretch) and wandering souls. 90
This said, o'er 's head he threw the twisted string
By which his scrip hung, ragg'd and full of holes.
Then sat him down i' th' porch. The suitors enter
All laughing in, and as they passed by
Greatly congratulated his adventure. 95
Stranger, said they, Jove and the Gods on high,
Grant thee whatever thou shalt most desire,
That hast relieved us from the rascal there.
We'll send him to king Takim in Epire.
And glad Ulysses was his praise to hear. 100
Antinous a haggas brought, filled up
With fat and blood, and to't Amphinomus
Two loaves of bread, and with't a gilded cup
Of lusty wine, and said unto him thus:
Hail, father, stranger, rich and happy be
His admonition to Amphinomus. 105
As ere you were; though many miseries
Oppress you now. He answer'd him: I see

Amphinomus, you prudent are and wise;
So was your father. Nisus was his name,
Prince of Dulichium, both rich and wise. 110
You are his son, as I am told by fame;
Therefore I will a little you advise.
There's not a weaker creature lives o'th' ground,
Or goes, or creeps upon it, than a man;
Who whilst he's strong, and all his limbs are sound, 115
He makes account that fail he never can;
But when the Gods shall have decreed him woe,
He less endures it than another can.
Such is the nature Jove has assign'd to
This weak and short-liv'd creature called man. 120
For I myself was rich, and lived in
Great plenty, and was very insolent;
Bold on my strength, my father, and my kin,
Therefore let no man be too confident,
But rather quietly God's gifts enjoy. 125
These suitors here bring this into my mind,
Who of an absent man the goods destroy,
And that at last unto their cost they'll find.
For this I tell you (mark well what I say),
That he will soon, nay, very quickly come; 130
And that will be to some a heavy day.
Pray God that at his coming you keep home.
This said, he drank, and to Amphinomus
Returned the cup, who shook his head in vain;
For not long after by Telemachus 135
Amongst the rest of the wooers he was slain.

Then Pallas puts Penelope in mind
T' appear unto the wooers, that she might
Before her son and husband honour find,
And further bring the suitors' thoughts to light. 140
Penelope then laugh'd, not knowing why.
Eurynome, said she, my mind says, go
And show yourself before the company;
Which heretofore I never thought to do.
I hate them, yet I mean to go to th' door, 145
And bid my son their company to shun,
And mix himself with those ill men no more.
Dear child, said the old woman, 'tis well done.
Go tell him whatsoever you think fit,
But wash away the tears first from your eyes, 150
And 'noint your cheeks; they must sometimes remit
And hide their grief, that will be counted wise.
You have your wish, your son now is a man.
Penelope then answered her again;
Restored be my beauty never can:
Penelope appears before the wooers. 155
'Nointing and washing now are all in vain.
The Gods, Eurynome, then took away
All beauty from me when Ulysses went
With Agamemnon to the siege of Troy;
Such words afford me now but small content. 160
Call Hippodamia and Autonoe;
For why, I am asham'd myself alone
Amongst so many men in sight to be:
They shall go with me, on each side me one.

But when th' old woman was gone out, and staid, 165
Then Pallas pour'd sweet sleep upon her eyes,
And on her face a greater beauty laid,
And also made her limbs of larger size,
And whiter than the purest ivory.
Having so done, the Goddess rose to th' skies. 170
Her maidens coming made a noise, and she
Awak'd, and with her hand she strok'd her eyes.
I've had, said she, a very gentle sleep;
that Diana such a gentle death
Would send me presently, nor let me weep 175
My life out, nor with sorrow give me breath;
Sorrow for my dear husband, best of all
The Grecian princes: and that said, then down
She goes to th' porch before the door of th' hall
With her two maids; she would not go alone; 180
And so stood at the door within their sight,
But with her scarf her cheeks a little shaded.
A maid stood at her left hand and her right.
When she appear'd Love all their hearts invaded.
Her speech then to Telemachus she address'd: 185
Telemachus, said she, your wit's less now
Than when you were a boy. 'Twas then at best;
And backward more and more it seems to grow.
You now are tall, and come to man's estate,
And counted are the best men's sons among. 190
Of your discretion you begin t' abate;
Why else d'ye let your stranger suffer wrong?
If you your guests thus treat, what think you, can

Men say of you that's good or honourable?
You'll be reproach'd and scorn'd of every man, 195
And taken for a man unhospitable.
Mother, said he, you well may angry be;
And yet I better know what's good and ill
Than heretofore. But these men hinder me;
I cannot without help do all I will. 200
The quarrel 'twixt my guest and Irus was
None of the suitors' act; by chance it rose,
As they sate begging, from some other cause,
And Irus only bare away the blows.
Jupiter, I wish, and all the Gods,
Penelope draws presents from the wooers. 205
That all your suitors were in Irus' case,
(Who yonder sits, like one that's drunk, and nods)
Either here right, or in some other place,
Unable to go home. Penelope
And her lov'd son so talk'd. And then 210
Eurymachus: If all the lords, said he,
Which now through Argos bear rule over men
Should see you now, more suitors you'd have here
(For you do far all woman-kind surpass)
And come betime to taste of your good cheer; 215
None such for fair and prudent ever was.
No, no, said she; for when Ulysses went
With th' Argive princes to the war of Troy,
The immortal Gods took from me my content,
And with it all these ornaments away; 220
Were he come home that took a care of me,

I should more honour have and beauty so.
But now I lead my life in misery;
The Gods some evil on me daily throw.
My husband, when he parted hence to fight 225
For Agamemnon 'gainst the Trojans, laid
At taking leave on my left hand his right,
And all those words of counsel to me said:
Expect you cannot, wife, that we that go
Over the sea unto the siege of Troy 230
Shall all come safe away. The Trojans know
How t' use the dart and bow too, as men say,
And are good horsemen also, and can see
All their advantages in ranged field;
Therefore I know not what my luck will be, 235
Either to come again, or to be kill'd.
My father and my mother I therefore
To you commend, to see them cherished,
As they are now, or (in my absence) more;
And when Telemachus is grown, then wed: 240
Take whom yourself like best, and leave this house.
This said, he parts. Ay me, the time is come
I must embrace a marriage odious,
And I must leave this my most blessed home.
Suitors were wont, when they a woman woo'd 245
Of noble parentage, to please her all
They could, and strive who most should do her good;
Mine daily eat and drink me up in th' hall.
This said, Ulysses was well pleas'd to see
His wife draw presents from them, and was glad, 250

And th' wooers by her over-reach'd to be
With her fine words, when other thoughts she had.
Then said Antinous: Penelope,
Fair and wise daughter of Icarius,
Receive whate'er by us shall offer'd be; 255
It is not good, good presents to refuse;
Yet, till you choose some one whom you think best
To be your husband, we resolve to stay,
And be each one of us your constant guest,
And never absent from your house a day. 260
And with Antinous they all agree,
Who her presented with a fair, large, rich
And divers colour'd robe, with four times three
Buckles of pure and beaten gold, and which
As many clasps of gold had joined fit. 265
Eurymachus his present was a chain
Of gold and amber-beads alternate; it
Shin'd bright as is the sun-shine after rain.
Eurydamas two pendants gave, of which
Each had three gems, and polish'd very bright, 270
And both for art and workmanship were rich,
Reflecting to the eye a lovely light.
Pysandrus, son of Polycerides,
Gave her a costly necklace. All the rest
With some good gift endeavoured to please 275
The fair and wise Penelope the best.
This done, unto her chamber up she went
With her two maids, that did her presents carry.
Th' woo'rs with dancing and with merriment,

(Their wonted pastime) for the ev'ning tarry. 280
The ev'ning came, and then the lamps were lighted,
And torches, and the fir-staves long lain dry,
Which to that purpose had with tools been fitted,
And ready lay to light the company.
The lights the maids took up by turns and bore them. 285
Then said Ulysses, Maidens, if you please,
To save your pains, I'll bear the light before them;
I'm us'd to labour, and can do't with ease,
Though they should stay and sit up till to-morrow:
You may go up unto the queen, and there 290
Sit and spin with her, and divert her sorrow.
At this the wenches 'gan to laugh and jeer;
And one of them, Melantho, him revil'd
With bitter words. Her father Dolius hight.
Penelope did treat her as her child, 295
And in her company did take delight;
But yet she could not put away her grief.
The wench was fair, and too familiar was
With prince Eurymachus, one of the chief
Of all her suitors. And this woman 'twas. 300
And thus she said: Sure, stranger, thou art mad,
That wilt not here nor elsewhere go to bed;
Is it because thou too much wine hast had?
Or is't a humour in thy nature bred,
To prate so boldly in such company? 305
Thy victory o'er Irus may perhaps
Have made thee wild; a better man than he
May chance to send thee hence with bloody chaps.

Ulysses, looking sourly, answered,
You bitch, Telemachus shall straightway know 310
These words; he'll cause thee to be tortured.
They, fearing he would do't, away they go.
Ulysses ready stood to take in hand
A torch when bidden; casting in his mind
How he might safely carry on the grand 315
Mischief against the woo'rs he had design'd.
And Pallas yet not suffer'd them to keep
Themselves in any bounds of modesty,
But fix Ulysses' anger yet more deep.
Eurymachus then said to th' standers by, 320
To make them laugh, Ulysses to disgrace,
Hear, sirs, I pray, what now comes in my thought.
The man comes opportunely to this place;
'Tis sure some God that him has hither brought
To give us greater light; for from his head 325
Methinks I see arise another flame
Besides the flame the torch gives, and so spread
Upon his bald pate doubled has the same.
Then says t' Ulysses, Man, wilt thou serve me,
To pluck up thorns and briars, and trees to plant? 330
Thou shalt have meat enough, and clothes, and fee,
And shoes, and whatsoever thou shalt want.
But, since thou hast been us'd to idleness,
I doubt thou ne'er wilt labour any more,
But rather feed thy carcass labourless, 335
And wand'ring choose to beg from door to door.
This said, Ulysses answer'd him again:

Eurymachus, if we two were to try
Our labour, in a large green meadow, when
The days are long, the weather hot and dry, ³⁴⁰
With equal scythes from morning unto night;
Or with two equal oxen fed and strong
Were fasting put to plough, to try our might
Which of us labour could endure most long;
Or if an enemy to-day should land, ³⁴⁵
And I a helmet had fit for my head,
And target, and two fit spears for my hand,
Then you should see whether I fought or fled,
And not reproach m' of sloth or poverty.
You are too cruel, and you do me wrong, ³⁵⁰
And think yourself a man of might to be,
Because they weaker are you live among.
But should Ulysses come and find you here,
You'd think the door, though it be very wide,
As you are running out, too narrow were, ³⁵⁵
So glad you'd be your heads to save or hide.
To this Eurymachus with bended brow,
And furious eye, answer'd, Wretch that thou art,
And dar'st so saucily to prate. How now!
'Twill not be long before I make thee smart. ³⁶⁰
Is it because thou too much wine hast had?
Or is't thy nature always to be bold?
Or is't t' have beaten Irus makes thee mad?
This said, upon a footstool he laid hold,
And threw it at him, but it hit him not. ³⁶⁵
Ulysses sunk on's knees, the stool flew o'er

His head, and a cup-bearer next him smote
On the right hand, and down he falls o' th' floor.
Much the disorder then was in the room,
And one unto another next him said, ³⁷⁰
I would this beggar hither had not come,
But somewhere else before had perished.
For what ado about a beggar's here!
The pleasure of our dinner all is lost.
Then, said Telemachus, Can you not bear, ³⁷⁵
Madmen, your wine and cheer both boil'd and roast?
When fill'd, why do you not go home and sleep?
Go when you will, I drive you not away.
The suitors at this boldness bit the lip,
And thought it strange, but yet did nothing say. ³⁸⁰
Then, said Amphinomus, Let's not fall out
With any man for speaking truth, nor be
Rude and unkind. Cup-bearers, bear about
To every man the cup of charity;
And so go each man home, for now 'tis late ³⁸⁵
(Leaving the stranger with Telemachus,
Whose guest he is), and ourselves recreate
With gentle sleep, each one in his own house.
Then Meleus to each man presents a cup,
Whereof unto the Gods they offer'd part. ³⁹⁰
When this was done each one his wine drank up,
And then unto their houses they depart.

LIB. XIX.

Telemachus removes the arms out of the hall.

ULYSSES IN THE house remain'd, and staid
Contriving how the suitors to destroy.
And straightway to Telemachus he said,
Carry the armour in the hall away;
*Ulysses discourseth with Penelope, and is known by his nurse, but
concealed; and the hunting of the boar upon that occasion related.* 5
And tell them gently, if they ask wherefore,
The fire has hurt them, and they are not now
Such as Ulysses left them heretofore,
When with the Greeks he did to Ilium go:
Or say, For fear some quarrel might arise 10
By th' indiscretion of one or other,
You thought the counsel would not be unwise
To take them thence. One drawn sword draws another.
Telemachus then calls his nurse, and said,
Euryclea, shut all the rooms up fast. 15
Be sure to keep within door every maid,
Till I my father's arms have elsewhere plac'd;
The smoke does spoil them all; but I will now
Free them from soot. I'm glad, said she, at last
To see your husbandry. But I would know 20
Who 'tis shall light you when the maids are fast?

My guest, says he, this stranger whom you see.
For here he feeds, and nothing has to do;
How far soever hence his dwelling be,
I think 'tis reason he should help me too. 25
The nurse did what commanded she had been.
They laid up helmets, bucklers, swords, and spears;
And Pallas with a lamp came in unseen,
And up and down the light before them bears.
Then, Father, said Telemachus, I see 30
The walls, beams, roof, and all the pillars shine,
Like any fire; and certainly there be
Within the house some of the powers divine.
Peace, said Ulysses, be not curious,
The purpose of the Gods you cannot find. 35
Go you to bed. I must go through the house,
To find the women's and your mother's mind.
Telemachus then to his chamber went,
In which before he wonted was to lie,
Leaving his father in the house, intent 40
On how, with Pallas, to make th' wooers die.
Forth comes Penelope into the hall,
More than Diana, more than Venus fair;
Her maids upon her were attending all,
And set down for her a most stately chair, 45
Made by Icmalius of silver plate,
And iv'ry turned, white as any snow,
And footstool thereto fix'd. And there in state
Sat down the fair Penelope; and now
The housemaids enter in and take away 50

The tables, and the bowls, the cups, and bread,
Which (the wooers gone) about the room still lay
And having made a fire, there went to bed.
Melantho then Ulysses bitterly
Rebuk'd again. Art thou here, said she, still,
Ulysses discourseth with Penelope. 55
To peep at th' women in the night, and spy
What they are doing? an't, may be, hast the will
To stay all night. Go quickly; get thee gone;
T'hast supp'd; lest thou be driven out of door
With brands of fire. To this new insolence, 60
Ulysses answered gentlier than before:
Why d' ye pursue me thus? Is it because
I am not fine, but have ill raiment on?
The time has been I rich and wealthy was,
And beggars I did much bestow upon; 65
Not looking on the men, but on their want:
And many servants had. Of that which makes
Men called rich, I knew not any scant.
But Jove not only riches gives, but takes;
Think, therefore, that your beauty will decay; 70
Or of your mistress you may lose the grace;
Or that Ulysses may come back one day:
And though he ne'er return unto his place,
His son, Telemachus, knows all you do,
Knows better now what 's good, and what is worse. 75
Then be hereafter modester: go to.
Penelope o'erheard all this discourse.
Bold bitch, said she, I know what deeds you' ve done,

Which thou shalt one day pay for with thy head:
Did not I tell thee when the woo'rs were gone, 80
That I to speak with him had ordered?
Eurynome, I've much to say, said she,
Unto this man; set here a chair, that so,
Sitting, I may hear him, and he hear me;
For there are many things I'd from him know. 85
Ulysses sat. Penelope began:
The question I will ask you first, is this;
What is your name, and who your parents be;
And, further, tell me where your country is?
When she had said, Ulysses thus replies: 90
queen, through all the world your praises ring,
Your virtues known are up unto the skies;
No less than of some great and happy king,
That maintains justice, and whose fertile ground
Bears store of wheat and barley, and whose trees 95
Are charg'd with fruit, and all his sheep stand sound,
And under him a valiant people sees.
And, therefore, ask me what you will beside,
My kin and country to myself I'd keep.
For then my grief I can no longer hide, 100
Or think thereon, but ready am to weep;
Which here would be no seemly thing to do,
For why, your maids might, peradventure, think,
And you yourself, it may be, think so too,
My tears came not from sorrow, but from drink. 105
Stranger, said she, my beauty, form, and worth,
Th' immortal Gods took from me then away,

When first Ulysses with the Greeks went forth
To that abominable town of Troy;
But were he here that had the care of me, ¹¹⁰
I should more honour have, and beauty so.
But now I lead my life in misery;
The Gods upon me troubles daily throw.
For all the lords that in these islands be,
Same, Dulichium, and woody Zant, ¹¹⁵
And Ithaca itself, suitors to me,
My house continually together haunt,
And there devour my cattle, corn, and wine;
So that of strangers I can take no care,
Nor can myself dispose of what is mine, ¹²⁰
Nor messengers receive that public are;
But, longing for my husband, sit and pine.
They press for marriage, I, to put it by.
Then came into my thought (some power divine
Sure prompt'd me) to set up a beam; so I ¹²⁵
A beam set up, and then began to weave.
Suitors, said I, since dead Ulysses is,
Stay yet a little while, and give me leave
To make an end but of one business.
I must for old Laertes make a cloth, ¹³⁰
Which in his sepulchre he is to wear.
T' offend the wives of Greece I should be loath;
For, to accuse me they will not forbear.
They' ll say I very hasty was to wed,
If I go hence and not provide a shroud ¹³⁵
Wherein Laertes must be buried,

Out of his wealth; that might have been allow'd.
My suitors all were well content. And then,
All day I wove; but ere I went to bed,
What I had wov'n I ravel'd out agen. 140
Three years my suitors I thus frustrated.
In the fourth year my women me betray'd;
And in they came while I the web undid.
I could the wedding now no more avoid,
But I was rated by them much and chid. 145
What I am next to do, I cannot tell:
My father and my mother bid me marry;
My son is weary, and takes not very well
That th' woo'rs devouring him should longer tarry.
But for all this, I long to know your stock, 150
For sure you come not of the fabled oak,
Nor are, I think, descended from a rock.
To this Ulysses answering thus spoke:
Wife of Ulysses, since you so much press
To know my kindred, and from whence I come, 155
Although the telling grieve me, I'll confess,
For I have now long absent been from home.
In the wide sea a fertile island lies,
Innumerable therein are the men,
Creta by name. Many diversities 160
There are of tongues; and cities nine times ten.
There dwell Achæans and Cydonians,
And ancient true Creatans, Tribachichs,
And also Dorichs and Pelasgians,
Who divers dialects together mix. 165

And Cnossus the prime city was of these,
Where Minos reigned; the great Minos that,
Who often used with great Chronides
Familiarly of old to sit and chat;
Minos my father's father was, and he 170
Deucalion begot; Deucalion
First got Idomeneus, and then got me.
He went to Troy. My name is Aithon.
There 'twas I saw Ulysses. He came in
As he went homeward, and with much ado 175
T' Amphisus; for by winds he forc'd had been
This place, though no good port, to put into.
Then straight went up, Idomeneus to see,
With whom he had acquaintanace, as he said.
'Twas ten days after that, or more, that he 180
For Troy, with th' other Greeks, his anchors weigh'd.
I entertained him kindly with my own;
Gave him a handsome present too, and then
I made him to be feasted by the town,
Upon the public charge, himself and men. 185
Twelve days the wind continued at north,
Which kept the fleet perforce within the bay;
On the thirteenth th' wind changed, and came south,
And then they set up sail and steer'd for Troy.
'Twas so like truth, she wept. As when the sun 190
Dissolving is the snow upon a hill,
Innumerable streams of water run,
And the low rivers of the valley fill:
So wept she for her husband sitting by;

Who grieved and pitied her, but never wept; 195

As hard as horn or iron was his eye,

And by design himself from tears he kept.

After with weeping she was satisfied,

Stranger, said she, I'll ask you somewhat now,

By which most certainly it will be tried, 200

If you my husband, as you say, did know,

Or entertain'd him and his company.

What kind of person was he, and how clad?

How serv'd? To this Ulysses made reply:

Though twenty year ago it be, and bad 205

My memory; yet, what I can recall

I will relate; he wore a purple vest,

Unshorn and lin'd. Before, embroider'd all,

Two clasps of gold; and in it was exprest

A hound, that did between his forefeet hold 210

A fawn, that sprall'd and labour'd to get free;

Which was so lively done, and all in gold

Performed was, that wonder 'twas to see.

His coat I mark'd, so soft it was and fine,

As is the fold of a dry onion; 215

And as the sun, did gloriously shine,

And women gaz'd upon him many a one.

Such were his garments, but I know not whence

He had them. You know better that than I;

Whether he so apparell'd went from hence, 220

Presented by some of his company,

Or given to him somewhere by some guest;

For he was much beloved far and near,

And of the Achæans all esteem'd the best;
Amongst the Greeks he hardly had his peer. 225
And I him gave a purple double vest,
A sword, and coat edged with fringes trim,
And brought him to his ship. Amongst the rest
A herald was; and I'll describe you him.
Round shoulder'd was he, curled was his hair, 230
Swarthy his face, Eurybates his name.
Ulysses to him much respect did bear,
Because their thoughts for most part were the same.
When he had done, she could no longer hold,
But wept again, and sorer than before; 235
For she found true the tokens he had told.
But when this show'r of tears was passed o'er,
Stranger, said she, I pitied you before;
Now as a friend you shall respected be;
'Twas I gave him th' apparel he then wore, 240
And the gold buckles to remember me;
But I shall never see him more at home;
In an unlucky hour he cross'd the main
To that accursed town of Ilium.
Then thus Ulysses answered her again: 245
noble wife of Laertiades,
Blemish no more those your fair eyes with tears
For your Ulysses; set your heart at ease.
Not that your sorrow as a fault appears.
What woman that her husband of her youth, 250
And to whom children she had borne, had lost,
Could choose but grieve and weep, although in truth

She could not of his virtue greatly boast?
But that you would give ear to what I say;
I say Ulysses is not far from home; 255
He's in Thesprotia, hence a little way,
Alive, enrich'd with presents he is come;
His ship and men all perish'd in the main,
Then when he left the isle Thrinacie;
Because Sol's sacred kine his men had slain, 260
Hurl'd they were by Jove into the sea;
Ulysses only scap'd; for sitting fast
Upon the torn-off rudder by the waves,
After much labour came to land at last
In th' isle Phœacia; there his life he saves. 265
Much honour there and precious gifts he got.
They ready were to have convey'd him home
Safely to Ithaca, but he would not;
Else long ago he might have hither come.
But he thought best to travel longer yet, 270
And pick up presents which way e'er he went,
Before his going home much wealth to get;
For at designing he was excellent.
Phidon himself, king of Thesprotia,
Swore to me this; and that both ship and men 275
Were ready to convey him t' Ithaca,
His country; but he could not stay till then;
For now a vessel ready to set forth
Stood for Dulichium. But he show'd me all
Ulysses' treasure, which might serve, for worth, 280
Ten ages to maintain a man withal.

But he, he said, was gone o'er to the main,
There at Dodona with Jove's oak t' advise
How to return to Ithaca again;
As he was openly, or in disguise; 285
So then he's safe, and soon he will be here;
He cannot from his house be long away.
And, which is more, I will not doubt to swear,
And witness call the Gods to what I say.
Hear, Jove, of Gods the best and high'st, and thou 290
The guardian of the house that we are in:
Ulysses shall come to this place you know,
Ere this month end, or when the next comes in.
Penelope then answer'd: Stranger, oh
That this would so fall out, you then should see 295
Such friendship from me, and such gifts also,
That men should bless, and say you happy be.
But, maids, go wash his feet, and make his bed,
Lay on warm rugs, and handsome covering,
His limbs to cherish till the day be spread. 300
Then wash and 'noint him that my son may bring
And set him in the hall at dinner by him;
For he that wrongs him shall not be allow'd
To come into my house another time,
How angry at it e'er he be and proud.
He is known by his nurse, but concealed. 305
Stranger, by this I mean to let you see
I better know how to entertain my guest
Than many women do, though poor he be,
Far from his home, and in vile garments dress'd.

To this Ulysses answer'd her again, 310
noble wife of Laertiades,
Since I left Crete, on ship-board I have lain,
Soft and fine bedding give me little ease;
Many a night have I passed without sleep,
And often slept have on a homely couch. 315
The custom I have so long kept I'll keep;
Nor shall your maidens my feet wash or touch,
Such as wait on you; but if there be any
Old women here that hath endured much,
As I have done, and years have lived many, 320
I am content my feet be wash'd by such.
Then said Penelope, Ne'er man came here
Within my house from foreign country yet
So prudent as you are, whose answers were
To every thing so wise and so discreet. 325
There is a woman such as you desire,
That nurs'd and brought up that afflicted man;
Though she be very weak, she'll make a fire,
And wash your feet, but nothing else do can.
Rise, Euryclea, wash the feet of one 330
That's like your lord. Such feet and hands were his,
Woe makes men old, as well as years that run.
So said Penelope; and th' old woman ris,
And weeping held her hand before her eyes.
O my dear child, O Jupiter unkind! 335
Who more devout, who burnt to him more thighs,
Or fatter, or doth lesser favour find?
He pray'd to live so long that he might see,

Painless, the education of his child
Telemachus, but granted 'twill not be. 340
He now perhaps is where he is revil'd
And mock'd by women in some great man's hall,
As thou, O stranger, hast been scorned here;
And wilt not suffer any of them all
Either thy feet to wash or to come near. 345
I'll wash your feet, as I am bidden by
Penelope, and for your own sake too.
It is not her command alone. There lie
Thoughts on my heart that urge me thereunto.
Poor passengers come hither very many, 350
But one so like Ulysses never came;
For person, voice, and feet, I never saw any
Come to this house that had so near the same.
Ulysses answered, Woman, so they say
All that have seen us both. It may be so.
The hunting of the boar related. 355
She with her kettle bright then went her way
For water, wherewithal her work to do.
Cold water she brings in, and pours on't hot.
Ulysses sat by the fire, but turned that thigh
That had the scar, to the dark, that she mightn ot 360
Find it, and force him to appear openly.
She was not long about him when she spied
The scar a boar had made above his knee
When he was hunting on Parnassus' side,
At's grandsires, in his uncle's company. 365
His grandsire was Autolycus, that was

His mother's father, named Anticlia;
He in hermetic arts did most surpass;
And to his daughter came to Ithaca,
That newly of a son was brought to bed. 370
Euryclea laid the child upon his knee.
Autolycus, you are to give, she said,
Thename; how shall it named be?
Then said Autolycus, Since I of many,
Both men and women, have incurr'd the blame, 375
A fitter name I cannot think on any;
Therefore, I say, Ulysses be his name;
And when he's grown a man send him to me,
To Mount Parnassus; whither if he come,
He shall of what I have partaker be, 380
And from me go not ill-contented home.
And this the cause was that he thither went.
Autolycus and 's sons there take Ulysses
By th' hand, expressing very great content.
Antithea, his grannam, his head kisses, 385
And both his eyes. Autolycus appoints
His sons to have the supper very good.
A bullock fat they kill, slay, cut in joints,
Roast, and in messes distribute the food;
And so they feasted till the day was done; 390
And when 'twas dark parted and went to sleep.
But when Aurora had proclaim'd the sun,
Which ready was above the hill to peep,
Then to Parnassus up the hunters go,
The hounds before went searching out the see 395

Autolycus his sons were there also,
Ulysses with them; next the dogs he went,
And in his hand shook a long-shaded spear;
The dogs drew toward a wood; so close it was
That neither rain nor wind e'er enter'd there, 400
Nor yet the beams o' th' sun could through it pass,
And heaps of wither'd leaves there lay therein.
Within this thicket lay a mighty boar;
Only the noise of hounds and men came in.
When they were very near, and not before, 405
The boar rush'd out, and fire was in his eye;
Bristled his neck. Ulysses ready was.
The boar first wounded had Ulysses' thigh;
The spear did through the boar's right shoulder pass.
Slain was the boar. And of Ulysses' wound 410
His uncles took the care, and skilfully
They caus'd it to be closed up and bound,
And with a charm the blood stopp'd presently.
His wound soon cured, very glad they were,
And him with many gifts sent glad away. 415
At home they ask, and he relateth there
The story of the hunting of that day.
Euryclea on the wound had laid her hand,
And well assured was 'twas none but he,
Which made the water in her eyes to stand; 420
And now her joy and grief one passion be.
Her speech stuck in her throat; her hand lets fall
Her master's foot; that down the kettle threw;
The water runneth out about the hall;

And knowing now what she but thought was true: 425

You are Ulysses, said she, O my dear,

And tow'rd Penelope she look'd aside,

As if she meant to say, Your husband's here.

But Pallas, that did mean the truth to hide,

Still made the queen to look another way, 430

And he with one hand stopp'd the nurse's breath,

With th' other held her fast to make her stay.

Why, nurse, said he, mean you to be my death?

Since at your breast I nourished have been,

And none but you knows me in this disguise; 435

These twenty years I here was never seen.

Let none else know it in the house. Be wise;

For this I tell you, and will make it true,

That of the women some I mean to slay,

When by my hand the Gods the woo'rs subdue; 440

If you bewray me, you shall fare as they.

Then said Euryclea, What needeth this?

You know my heart can hold like stone or brass;

And who is honest, who dishonest is,

I'll tell you, if your purpose come to pass. 445

No, nurse, then said Ulysses, tell not me;

You need not; I shall know them every one.

Permit all to the Gods, and silent be;

For they best know what best is to be done.

Then out she went more water to fetch in, 450

The first being spilt. He wash'd and 'nointed was.

And covered the place where th' wound had been.

And nearer to the fire his chair he draws.

Then to them came Penelope, and said,
Stranger, I'll ask you but a little more; 455
'Tis almost bed-time, and when we are laid,
Our grief in gentle sleep is passed o'er.
But all the day my tears are my delight,
Or of my women's work the care I take;
And after I am gone to bed at night 460
A thousand dismal thoughts keep me awake;
As Philomela, sitting in a tree,
Mourns with a lamentable voice and shrill,
For Itylus, and turneth restlessly,
(Whom Zethus' son did by misfortune kill): 465
Just so my mind divided is in twain:
Whether to keep my servants with my son,
And my dear husband's bed, and here remain,
Or marry one o' th' suitors and be gone.
To marry and be gone I could not yet; 470
My son too young was yet to rule th' estate;
And now, grown up, it makes him vex and fret
To see them daily feast within his gate.
I'll tell you now a dream; expound it you:
I've twenty geese feeding i' th' yard without; 475
A mighty eagle from the hills down flew
And break their necks; dead they lay all about.
The eagle straightway mounted out of sight.
I dreaming wept; to see them at the trough,
Feeding on steeped wheat, I took delight; 480
And to bemoan me ladies came enough.
And then methought the eagle came again,

And on a beam which through the wall did start,
He sat; and said, in human language plain,
Child of Icarius, trouble not your heart; 485
The thing you see is real, not a dream;
The geese the wooers, I the eagle was,
And now return'd and sitting on the beam;
I am your husband, and will bring to pass
The death of all your suitors. Then wak'd I, 490
And went into the court my geese to see,
And found them all there feeding heartily,
Unhurt, and well as they were wont to be.
Woman, then said Ulysses, no man can
Expound this dream but as himself has done, 495
That says and does. Ulysses is the man.
The suitors will be killed every one.
Then said Penelope, Dreams are without
Such order as to make a judgment by;
And at two gates, men say, they issue out, 500
The one of horn, th' other of ivory;
Those that pass through the horn, to men of skill,
Never say anything but what is sooth;
But find a word of truth you never will
In those that come through th' Elephantine tooth. 505
But I much fear that my dream came this way;
For I have promised to quit this place,
And come already is th' unlucky day
That must determine who shall gain my grace.
Twelve axes here Ulysses set arow, 510
Like twelve boats laid along upon their sides,

And at a distance standing with his bow,
Through ev'ry one of them his arrow glides.
And this shall to my suitors be the prize.
He that most easily shall bend the bow, 515
And through the axes all his arrow flies,
Leaving this blessed house with him I'll go.
Then said Ulysses, Let the suitors try
If they can bend the bow, and thorough shoot
Through th' axes if they can, for sure am I, 520
Ulysses will be here before they do't.
Stranger, said she, whilst you discourse, my eyes
To sleep will never be inclin'd; but since
The force of nature on all mortals lies,
I up into my chamber will go hence; 525
There is my bed, wash'd nightly with my tears,
Since first Ulysses went to cursed Troy,
Wailing my husband's absence, wak'd with fears;
And yours in what part of the house you'll say.
This said, unto her chamber up she went, 530
And with her all her maids. And there she lies.
And for her husband did afresh lament,
Till Pallas threw a sweet sleep on her eyes.

LIB. XX.

Pallas and Ulysses consult of the killing of the wooers.

ULYSSES IN THE court lay out adoors
On a cow-hide; and on him skins of sheep
New kill'd and sacrificed by the woo'rs.
There lay he, but he could not fall asleep. 5
Eurynome a rug laid on him too.
Out came the maids that wont were to commit
With the proud wooers, giggling and laughing so,
And pleasing one another with their wit,
As made Ulysses in his mind to cast 10
Whether to start up quick and kill them all,
Or let them now go on and take their last
Farewell of those they had to do withal;
As when a bitch stands by her whelps, and spies
A stranger coming near, will bark and grin, 15
So at this sight of their debaucheries
Ulysses' heart, provoked, bark'd within.
Hold, heart, said he; when Cyclops eat my men,
Thou didst endure till counsel set thee free;
The danger now is less. Hold out again. 20
And so it did, though he lay restlessly.
As one that has raw flesh upon the fire,
And hungry is, is ever turning it;

So turneth he himself, with great desire
'Gainst th' wooers to devise some mischief fit. 25
Then Pallas came, and standing at his head
In woman's shape, O wretched man, said she,
What makes you toss and turn so in your bed?
The house is yours, your wife and son here be.
Then said Ulysses, I was casting how 30
I might alone these suitors insolent,
That always here are many, overthrow;
And if I kill them, then again invent
How to escape and save myself by flight.
To this the Goddess answered, and said, 35
Another man would trust a meaner wight,
Though mortal, and rely upon his aid:
But I a God immortal am, and say,
Though fifty bands of men should us oppose,
You should their herds of cattle drive away. 40
Enjoy securely, therefore, your repose;
A torment 'tis to watch all night, to one
That is already drench'd in misery.
Sleep then. This said, sweet sleep she threw upon
His eyes, and from him mounted to the sky. 45
And now Penelope awak'd, and sat
On her bed weeping. Having wept her fill,
She to Diana pray'd, and said, O that
You would now shoot your arrow and me kill;
Or that some great wind me away might bear, 50
And o'er a rock throw me into the main,
Ne'er to be heard of, or as th' daughters were

Of Pandareus, whose parents both were slain
By th' Gods; but Venus the orphans nourished
With butter, and with honey, and with wine. 55
Juno with form and wit them furnished;
Diana gave them stature; artifice divine
Pallas them taught; then Venus went to Jove
To get them husbands; for best knoweth he
The issue of conjunctions in love, 60
Whether for better or for worse they be,
While Venus absent was on that affair,
By harpies foul away they carried be,
And giv'n for slaves to th' furies in the air.
Oh that the Gods would so dispose of me; 65
Or else Diana send me under ground,
That I may with Ulysses be, and not
To please another meaner man be bound.
Grief all day long is but a woeful lot,
And sleep is some amends; but unto me 70
It evil dreams along with it doth bring.
This night, my husband seem'd i' th' bed to be;
No dream I thought it, but a real thing.
This said, the morning fringed had the sky;
Ulysses, musing, lay upon his bed 75
With closed eyes, and thought she certainly
Knew who he was, and stood at his bed's head.
Then rose he, and his sheep skins bare away,
And rug into the house; but the cow-hide
He carried out, and then to Jove did pray: 80
Hear, Jupiter, with lifted hands he cried;

Jove and Gods, if by your will divine,
Toss'd both at sea and land, I hither came;
By fatal word within, without by sign,
To me now presently confirm the same. 85
Jove heard his pray'r, and straight it thundered.
This made Ulysses glad. Then spake a maid
The fatal word. Twelve maids, to furnish bread,
Were to grind wheat continually employ'd:
Eleven their work had done and went to bed; 90
The weakest still staid grinding, and thus pray'd:
Jove, who without a cloud hast thundered,
Grant me poor maid my wish, and then she said,
Jove, that father art of Gods and men,
Let never more these wicked suitors taste 95
Meat in this house, nor ever come agen,
That pain me thus. This supper be their last.
Ulysses with this word, and with the thunder,
Well pleased was, and thought assuredly
With Pallas' help the suitors to bring under, 100
And many though they were, to make them die.
Then th' other maids came in and made a fire
Within the hall. And then too from his bed
Telemachus rose, puts on his attire,
And sword and shoes; his spear with brazen head 105
He took into his hand, and stood i' th' door,
And to the nurse, Euryclea, he spake:
What meat, what lodging, had this stranger poor?
Or was there none that care of him did take?
My mother's nature, wise as she is, is such 110

Highly to honour men of less desert;
But for this stranger perhaps cares not much.
Then said Euryclea, She has done her part;
Wine he has had as much as he thought fit,
She ask'd him if he had a mind to eat; ¹¹⁵
He answered that he had no appetite
To bread at present, nor to any meat.
She bade her maids set up a standing bed;
But he, as one in love with misery,
Would none of that, nor bed, nor covered, ¹²⁰
But on the ground resolved was to lie,
And make his scrip the bolster for his head,
And for a bed to take a raw cow-hide,
And sheep skins with the wool for covered
Without the door; and we the rug applied. ¹²⁵
This said, Telemachus with spear in hand
To council goes, and his dogs follow'd him.
Then Euryclea gives the maids command
The rooms of th' house to dress up and make trim.
Rise, maids, said she, sprinkle and sweep the hall, ¹³⁰
Lay cushions on the chairs, with sponges make
The tables clean, the temp'rer and cups all;
And see of water that there be no lack.
Go to the spring and fetch fair water thence
Quickly. You know to-day is holiday; ¹³⁵
The suitors will not now be long from hence.
So said the nurse. The women her obey;
For water to the fountain went twice ten;
The rest did diligently work within.

The maids that went for water came agen; 140
And the proud woo'rs by that time were come in.
And then came in the master of the swine,
Eumæus: three swine frank'd and fat he brought,
There to be ready 'gainst the suitors dine;
In all his swine-sties better there were not. 145
And he unto Ulysses kindly spake:
Stranger, how fare you 'mongst the wooers here?
Do they more pity now upon you take
Than formerly; or still deride you there?
O, said Ulysses, that the Gods would give 150
These men what to their insolence is due,
Who in a house not theirs so lewdly live,
As if no modesty at all they knew.
Then came Melanthus from a place hard by;
He had the charge o' th' goats, and brought the best, 155
And spake unto Ulysses spitefully:
Art thou here still, to beg and to molest
The company? D'ye mean before you go
To taste my fingers? Is there no good cheer
In other places 'mongst the Greeks, and so 160
You mean to dwell continually here?
Then came a third, that charge had of the kine;
Philœtius by name, with him he brought
A heifer and more goats, on which to dine,
Over the water, in the ferry-boat. 165
Philœtius ask'd Eumæus in his ear,
Who's this, that's new come hither, and from whence?
What countryman, and what his parents were?

For, for his person he may be a prince;
God can make princes go from land to land 170
And beg, when he will give them misery.
This said, he took Ulysses by the hand,
And spake unto him kind and lovingly:
Father, I wish you as much happiness
As ever you enjoy'd before; but now 175
I see you are in very great distress.
Jove! what God so cruel is as thou?
Though born thou wert, yet pitiest not to see
The torments of mankind. To think upon
Ulysses makes me weep. It may be he 180
Thus begs somewhere, with such apparel on,
Or else he's dead. O then I am undone.
He set me o'er his herds when but a boy;
But infinite they're grown since he is gone,
Or man would quickly all cow-kind destroy; 185
But mine the suitors force me to bring in
For them to eat, and ne'er regard his son;
The goods to share already they begin
Of th' owner, that so long now has been gone.
And I devising was what I should do, 190
To take my cattle with me and be gone,
And one or other prince to give them to;
But that, I thought, would be unjustly done,
For they Telemachus his cattle were.
Again, I thought it labour very sour 195
To stay and keep my master's cattle here,
For others in his absence to devour.

So here abide I, and myself I flatter
With hope to see Ulysses one day come
Back to his house, and the proud suitors scatter. 200
Thus said the master of the kine. To whom
Ulysses said: Honest you seem, and wise;
I therefore will a secret to you swear,
By Jove on high, you shall see with your eyes
Ulysses, if you wish to see him, here, 205
And all these domineering suitors slay.
Then, O, said he, that Jove would have it so;
For I should let you see in such a fray
Quickly how much these hands of mine can do.
Eumæus also did like prayer make 210
To see Ulysses there. So ended they.
While they discours'd, the suitors counsel take
How they might make Telemachus away.
Then o'er their heads an eagle flew on high,
Sinister, with a fearful dove in's foot. 215
Then said Amphinomus, Let's lay this by,
And think of supper, for we cannot do't.
The suitors all approv'd of what he said,
And in they went, and there on bench and seat
Within Ulysses' house their coats they laid, 220
And set themselves to kill and dress their meat.
Then from the herd they sacrificed a cow,
And many well-grown sheep, and goats well fed,
And many a very fat and pamper'd sow;
Th' entrails they roasted and distributed. 225
Eumæus gave out cups, Philœtius bread,

Melanthus from the temp'rer fill'd out wine;
The suitors on the meat before them fed
With stomachs good, and drank the blood o' th' vine.
Telemachus Ulysses in the hall 230
Hard by the threshold sets, (and there he sat
On an ill-favour'd stool at table small),
And gave him his just share of th' entrails fat,
And for him fill'd a great gold cup with wine.
Sit here, said he, and fare like other men; 235
Fear neither blows nor scoffs; the house is mine;
Ulysses is the owner of it. When
He first possessed it, he gave it me.
And you, my mother's suitors, mock no more,
But keep the peace as long as here you be; 240
For else perhaps arise may trouble sore.
At first the suitors knew not how to take
Telemachus his words, and silent were,
Admiring that such threat'ning words he spake,
So many men provoking without fear. 245
But by and by Antinous said thus:
Since Jove appeared has in his defence,
Let's put these threats up of Telemachus,
Else we should quickly spoil his eloquence.
So said Antinous. But Telemachus 250
Car'd not at all for anything he said.
When peace within doors was concluded thus,
In other rites o' th' feast they were employ'd;
The hecatomb they bear throughout the town
Into Apollo's shady grove divine. 255

The upper joints in messes they divide,
So fill'd their tables and sat down to dine.
The portion of Ulysses was no less
Than other suitors had, nor more; for why,
Telemachus had order'd every mess 260
Should equal be, and men serv'd equally.
Amongst the suitors was a very knave,
Ctesippus was his name, a rich man's son,
And therefore hop'd Penelope to have.
This man to th' wooers made a motion: 265
Hear me, you suitors of Penelope,
This stranger here is equal made to us,
And therefore reason 'tis that also we
Should love the strangers of Telemachus.
Lo, here's a gift I'll give him, that he may 270
Bestow it, if't please him, on him or her
That empts the chamber-pots, or giv't away
To any of Ulysses' bondmen here.
With that he hurled at Ulysses' head
A cow's foot, but he turn'd his head the while, 275
And from the stroke himself delivered.
Then smil'd Ulysses a sardonic smile;
Telemachus his anger could not hide.
'Tis well, said he, you did not hurt him here,
For else, believe it, you had surely died 280
O' th' place, run through the body with my spear,
And never found a wife here, but a grave.
Therefore give over this behaviour wild;
Of good and bad I now some knowledge have,

And do not always take me for a child. 285
What's past I bear, the havoc of my cattle,
My corn and wine consumed lavishly;
'Tis hard for one with many t' enter battle.
Use me no longer as an enemy;
For fighting to be slain I'd rather chuse, 290
Than see my guests or servants harshly used;
My women, as they pass about the house,
To be so basely tugg'd, touz'd, and abus'd.
This said, awhile the suitors silent were;
But not long after, Agelaus spake. 295
Let's not, said he, against a truth so clear
Struggle, and what is said in ill part take;
Nor harshly use the stranger any more,
Nor any servant of Telemachus;
But yet I have a silly word in store 300
For him, and for his mother, and for us.
Whilst there was hope Ulysses might come home,
The suitors had done best at home to stay,
Expecting him, and not have hither come;
But since there's none, to's mother he should say, 305
Take one of them for husband, which you please,
And most shall give you; so shall he enjoy
His father's means, and eat and drink at ease,
And she with her new husband go her way.
To this Telemachus replying says, 310
By Jove, and by my father's misery,
Who now is lost and dead, or somewhere strays
Far off from Ithaca, it is not I

That do my mother keep from marrying
Whom she thinks good. I do advise her still 315
To take the man that shall most treasure bring;
But I'll not make her do't against her will.
So ended he. Then on the suitors' faces
Pallas sets up a laughter not their own,
Nor to be stopp'd; their senses she displaces, 320
Their meat was bloody, and their hearts were down.
What is't, poor men, said Theoclymenus,
Your heads and faces are wrapt up in night;
You weep and groan; the walls and beams of th' house
To me seem bloody; and left there is no light; 325
The hall and porch, methinks are full of sprites
Ready to go to hell; the sun has lost
His place in heaven, nor are there any lights;
And dismal darkness hath the house engross'd:
At this they laugh'd. Then, said Eurymachus, 330
This stranger is not very well, let him
By those that wait be guided from the house
To th' market-place; for all within is dim.
I am, said Theoclymenus, not blind,
I can go the market-place alone. 335
I have both eyes and ears, and feet and mind:
With these I can go hence. Guide need I none,
And go I will; for evil is hard by,
Which none of you the suitors shall escape
That have so much abused the family. 340
This said, he parts, and left the woo'rs to gape
On one another, and with insipid jests

To vex Telemachus, and themselves please,
And all upon Telemachus his guests.
The words that one of them then said were these: 345
Telemachus, of all men you're least able
To make an entertainment or a feast.
For first you for this beggar set a table,
Who eats and drinks as stoutly as the best,
But can no work do, nor has any force; 350
A very burthen to the earth. And this
A prophet would be, and loves to discourse
Of ill to come. My counsel therefore is,
That you would put these strangers both aboard
Some ship, and send them into Sicily. 355
They that way may some profit you afford.
Thus said the woo'rs, but little cared he,
But silently the sign expecting stood
His father should have giv'n of falling on.
Penelope meanwhile sat where she could 360
Hear plainly what was said by every one.
And now the suitors merry supper made,
And laughing sat, and fed on much good cheer:
But after supper worse none ever had,
For of the wrongs themselves beginners were.

LIB. XXI.

Penelope bringeth forth her husband's bow, which the suitors could not bend. Ulysses makes himself known to Eumaus and Philætius. He bends the bow.

PENELOPE, THE SUITORS' strength to try,
Who soon'st could bend her noble husband's bow,
And through the axes make his arrow fly,
And whom she was to marry now to know, 5
To a high chamber up the stairs she went,
Wherein Ulysses' precious goods did stand.
There hung upon a pin the bow unbent;
The well-made key she carried in her hand.
This bow was given him by Iphitus 10
At Sparta. But Ulysses with him met
First at Messena; for it fell out thus.
Ulysses then was there about a debt.
Messena men their ships had put ashore
At Ithaca, and thence had ta'en a prey 15
Of sheep, which was in number fifteen score,
And, with the shepherds, carried them away.
This was the cause Ulysses thither went.
'Twas a long way, and he scarce past a boy;
But by his father and the lords was sent 20
T' ask reparation for this annoy.

But Iphitus twelve mares had lost; each one
A young mule had that followed her behind,
(Which of his death were the occasion),
And at Messena these he thought to find. 25
But as he was returning back again,
And came unto the house of Hercules,
That mighty man first did him entertain,
And after, killing him, his mares did seize.
This was the man that to Ulysses gave 30
The bow; and from him had a sword and spear.
But Hercules had sent him to his grave,
Ere they had tasted one another's cheer.
This bow he carried not to Ilium,
Nor ever had made use of it in fray;
Penelope bringeth forth her husband's bow, which the suitors could not
bend. 35
But often had it in his hand at home;
For only as a monument it lay.
Penelope now standing at the door,
Quickly the bolt strook back with her great key,
The valves fly open suddenly and roar; 40
As when a great bull roars, so roared they.
Penelope went in, and up she stepp'd
Upon a board whereon were standing chests,
In which, 'mongst odours sweet, the clothes were kept,
The costly garments, robes, and coats, and vests. 45
Thence to the bow she reach'd, and from the pin
She took it as it hung there in the case;
And sitting down, her lap she laid it in.

Aloud she wept, and tears ran down apace:
And when she long enough had weeping been, 50
The bow she did unto the suitors bear,
And quiver with it full of arrows keen:
The axes by her women carried were.
Then with her scarf she shaded both her cheeks,
Having a waiting-woman on each hand; 55
Unto her gallant suitors thus she speaks:
Hear me, you lusty suitors that here stand,
Using this house, not yours, continually,
To eat and drink in at another's cost;
And for it do pretend no reason why, 60
But as contenders who shall love me most.
Lo here; to him I make myself a prize,
Who this good bow with greatest ease shall bend,
And whose aim'd arrow through these axes flies,
With him from this most blessed house I'll wend. 65
This said, Eumæus th' axes and the bow
By her command unto the suitors bears;
And as he went, his eyes for grief o'erflow,
Nor could Philœtius abstain from tears;
For which Antinous gave them this reproof: 70
You foolish clowns, what ails you to shed tears?
Has she not for her husband grief enough?
That you must add your sorrow unto hers.
Sit silently, eat and drink quietly;
Or if you needs must weep, go weep without. 75
Leave the bow here, the suitors' strength to try,
And that it may be carried round about.

Not that I think there's any man among
Us all can bend it as Ulysses could:
For I remember him though I were young. 80
So said he; though he thought he bend it should,
And also shoot through th' axes every one,
Though he were only the first to be shot.
For he the other suitors had set on,
And was the first contriver of the plot. 85
Telemachus then to the suitors spake:
Sure Jove, said he, bereav'd me has of sense;
My mother tells me she'll a husband take,
And, leaving me, depart with him from hence;
And I here merry am that should be sad. 90
But be 't as 't will, the game must now begin,
For such a wife as ne'er Achaia had,
Nor in Mysen or Argos was e'er seen,
Nor Pyle, nor Ithaca, nor in Epire.
But what need I set forth my mother's praise? 95
You know't yourselves. Therefore I you desire
To put off all excuses and delays.
And I myself will be the first to try
This mighty bow, whether I can or no,
And through the axes make the arrow fly. 100
'Twill grieve me less to let my mother go;
Since I have strength to bend my father's bow,
Why should I doubt of governing his state?
And from him presently his coat did throw
And sword, and then fell to delineate 105
The ground whereon the axes were to stand.

On one long line he set them all upright.
The wooers admir'd the justness of his hand;
For why the like was ne'er done in his sight.
Then went he to the sill to try the bow. 110
Thrice he essay'd it, and was near it still.
And thrice again relenting let it go.
Once more had done it. But 'twas not his will;
For then his father check'd him with a wink.
Alas! then, said Telemachus, must this 115
Be all my strength? Too young I am, I think.
Come, let one take the bow that elder is.
This said, the bow and arrow he laid by,
And to the seat went where he sat before.
Then, said Antinous, The bow let's try, 120
In order as we sit. Let him therefore
Try first, whose table next the cupboard is,
And so to the right hand up, one by one.
The other suitors all approved this.
Leiodes was the first; so he begun; 125
His place was low'st. He to the threshold went
To try his force; but to his tender hand
And feeble arms the bow would not relent.
Then down he laid it there, and lets it stand;
And to the suitors spake: This bow, says he, 130
I cannot bend, some other take 't in hand.
It's like of many lords the death to be,
When by the strongest it comes to be mann'd.
For better 'tis to die than live and miss
The hopes you hither come for ev'ry day.

Ulysses makes himself known to Eumæus and Philætius. 135

And what is 't any of you hope but this,
That you Ulysses' consort marry may?
But when he shall this bow have understood,
Let him some other lady woo at ease
Amongst th' Achæans whom he shall think good, 140
And let Penelope take whom she please.
This said, the bow and arrow he set by,
And to the seat went where he sat before,
And by Antinous was angrily,
As soon as he had spoke, rebuk'd therefore. 145
What say you? That this bow the death shall be
Of many lords? Why so? 'Cause you have not
The strength to bend it. Others have, you'll see;
But you for bending bows were not begot.
Then to Melantheus he turn'd and said, 150
Let fire be made, and a great chair set by 't,
And let upon it cushions be laid,
And let us have good store of tallow white,
T' anoint and warm, and supple make the bow,
And try if we perhaps may bend it then. 155
Fire, chair, and cushions came, and grease enough,
But to no purpose; too weak were the men.
Antinous yet and Eurymachus
Gave it not over; these two were the best
Of all the suitors that came to the house: 160
No hope at all remained for the rest.
Eumæus and Philætius then went out
Together; after them Ulysses went,

And when they were the gate and court without,
Himself unto them to discover meant. 165
And fair he spake them: Master of the kine,
And you Eumæus, master of the swine,
Shall I keep in, or speak a thought of mine?
To speak it out my heart does me incline.
What if Ulysses should come suddenly, 170
Brought by some God, and stand before this rout,
On whose side, his or theirs, would you then be?
What your mind prompts you to, speak freely out.
Then answer'd him the master of the kine,
O that the Gods above would have it so, 175
You'd see the virtue of these hands of mine.
The master of the swine then said so too.
When now the hearts of both of them he knew,
He spake again and said, 'Tis I am he,
That after twenty years return to you; 180
And know you longed have this day to see.
Of all my servants I find only you
That wish me here. If therefore it shall please
The Gods by me the suitors to subdue,
I'll give you wealth enough to live at ease, 185
And houses near me, and shall wedded live,
And brothers of Telemachus shall be.
And that you may assuredly believe
Ulysses speaks it, you a sign shall see.
With that he pull'd his rags beside his thigh, 190
And lets them see the place the boar had rent,
Then when upon Parnassus' mountain high

He with his uncle's sons a hunting went.
And then they fling their arms about Ulysses,
And kiss his hand and shoulders, weeping sore; 195
And he again embraced them with kisses,
Nor had till sunset weeping given o'er,
But that Ulysses hinder'd it. Give o'er, said he,
Your weeping, lest that some one come out hither,
And tell within what here without they see. 200
Go in, but one by one, not altogether.
First I'll go in, and then come you. Now mark.
I'll pray the suitors I the bow may try.
If to my motion they refuse to hark,
Give it into my hand as you pass by; 205
And you Eumæus bid the women shut
The house-doors all, nor suffer any one
O' th' men without the house his head to put.
And though within they hap to hear men groan,
That they stir not, but ply their business. 210
The utter gate Philœtius lock you fast,
That to the house there may be no access.
This said, into the hall again he pass'd,
And after him his servants. Now the bow
Was in Eurymachus his hand by th' fire. 215
He warm'd and rubb'd, and did what he could do,
But for to bend it he was ne'er the nigher.
At this he vex'd, and took it heinously,
And, O, said he, 'tis not for my own part
I troubled am, but for the company, 220
'Tis chiefly that I take so much to heart.

Nor is it for a wife that I complain;
For in Achaia ladies be enough;
But that we hope Penelope to gain,
Although we cannot bend Ulysses' bow. 225
Then, said Antinous, 'Twill not be so.
This day unto Apollo sacred is,
And not a day for bending of the bow;
Therefore to lay it by is not amiss.
And let the axes stand still as they do; 230
For 'tis not like they will be stolen away,
And so go in and offer wine unto
The God. The bow may till to-morrow stay.
And bid Melanthus in the morning bring
Goats of the fattest, and whereof the savour
The suitors unable to bend the bow, which is bent by Ulysses. 235
May from Apollo, of all archers king,
For bending of the bow procure us favour.
They all agree. Into the house they went.
The officers for hands the water hold;
The waiters fill the cups, and them present; 240
And when they drunk had each man what he would,
Then spake Ulysses to the suitors thus:
Hear me, ye suitors, what I have to say,
Antinous, and you, Eurymachus,
For to you two 'tis chiefly that I pray; 245
Since you the bending of the bow remit
To th' Gods, to give to whom they please; and they
To-morrow doubtless will determine it;
Let me now of the bow make an essay,

That I may know whether my strength be spent, 250
And what I could before now cannot do;
Whether I still be firm or do relent
With hardship, and with want of looking to.
These words of his made all the suitors mad
With fear that he indeed would bend the bow. 255
Antinous gave him language very bad.
Thou wretched stranger, is it not enough
That of our feast thou hast an equal part,
And that of our discourse (and none but thou,
Stranger and beggar) made a hearer art? 260
'Tis wine that makes thee not thyself to know;
For wine serves all men so that drink too much.
Wine hurt Eurytion, the centaur great;
His carriage in Perithous' house was such,
Among the Lapithæ sitting at meat, 265
That angry with 't they were, and all arose,
And with sharp iron cut off both his ears,
And with the same they pared off his nose.
Away the cause of his own harm he bears.
From that day on, centaurs and men are foes. 270
Themselves men hurt by wine immoderate.
So if you bend the bow, your ears you'll lose;
For you'll find here no prating advocate;
But to king Takim forthwith you shall go,
And he will of you make a cruel end. 275
Therefore sit still, and let alone the bow;
Nor with men younger than yourself contend.
Then, said Penelope, I'd have you know,

Antinous, that you did very ill
To wrong Telemachus his guest. What though 280
He bend the bow, d'ye think I take him will
For husband? I am sure you think not so.
Let none of you be sad with fear of that.
Then to her said Eurymachus, No, no;
That's not the thing that we be troubled at. 285
'Tis of our honour that we jealous be:
For how will men and women, think you, prate;
But that such suitors woo Penelope
As could not bend Ulysses' bow, but that
A beggar that pass'd by by chance could bend it? 290
Which unto us will be no little shame.
Who, said she, live on others' means and spend it,
Should not stand much on honour and on fame;
Besides, this stranger is well made and tall,
And of a great man says he is the son. 295
Give him the bow to try his strength withal;
For this I'll promise him, and see it done:
If he do bend it, I'll on him bestow
Good clothing, and a handsome coat and vest,
Shoes to his feet, dart, sword with edges two, 300
And send him to such place as he thinks best.
Then spake to her Telemachus her son:
Mother, to give the bow, or to deny 't,
Is in my power, and hinder me can none
In Elis, or Achaia, or here right from 305
From giving it unto this stranger here,
If I think fit. But mother, pray go now

Up to your chamber, and look to your work,
And leave to us to dispute of the bow.
She mused on, and thought his counsel wise; 310
And being in her chamber sore did weep
For the absence of her husband, till her eyes
By th' Goddess Pallas closed were with sleep.
Eumæus now had brought the bow about,
And come it was to where Ulysses sat. 315
The suitors all at once then cried out,
Swineherd, rogue, lout, what meanest thou by that?
If the Gods please to favour our design,
Thou shalt be slain and carried out of sight,
And there devoured be by thy own swine. 320
This put Eumæus into a great fright.
Telemachus then roar'd on th' other part,
Bear on the bow (t' obey all is not best),
I'll pelt thee, though that thou my elder art,
With stones home to thy hogsties, like a beast; 325
For I the stronger am. O that I were
But so much stronger than these suitors all,
I soon of some of them the house should clear.
They laugh'd at this, and bated of their gall.
Eumæus then took up the bow agen, 330
And gave it to Ulysses in his hand.
This done, Euryclea he called then.
It is, said he, Telemachus' command
To lock the doors all; and that if you hear
Noise in the house of blows, or groaning men, 335
Let none go forth, but at their work stay there.

This said, Euryclea went in agen,
And lock'd the doors. Philoetius likewise
Went silently and shut the utter gate,
And with a ship-rope that lay by, it ties, ³⁴⁰
And coming back sits where before he sate;
And look'd upon Ulysses, who, to know
What work the worms had in his absence made;
This way and that way turning was the bow.
At this the suitors one t' another said, ³⁴⁵
This beggar surely has no little skill
In bows or in bow-stealing, or of 's own
He has one like 't, or make one like it will,
He doth examine it so up and down.
Another said, As he shall bend the bow, ³⁵⁰
So let him find, as he is begging alms.
So mock'd they. When he view'd it had enough,
And holden it awhile had in his palms,
He bent it. As a fiddler does not spend
Very much labour the sheep's gut to strain, ³⁵⁵
So he, Ulysses his strong bow to bend
Did put himself to very little pain.
Then with his left hand he the string essay'd;
It sounded like the singing of a swallow.
The suitors then began to be afraid, ³⁶⁰
And mighty claps of thunder straightway follow.
Jove's token very welcome was t' Ulysses.
Then to the bow he set a shaft, and there
Sitting, shot through the axes, not one misses.
The rest of th' arrows in the quiver were. ³⁶⁵

Then turning to Telemachus he said,
I have not sham'd you, nor have miss'd one axe,
Nor long a bending of the bow I staid:
You see then that the woo'rs me falsely tax.
But now 'tis time for after suppering, ³⁷⁰
Ere day be done, and taking such delights,
As cups, discourse, and pleasant music bring;
For these of feasting are the common rites.
Then to his son with 's eye he beckoned.
Telemachus that well him understood, ³⁷⁵
With spear in hand and helmet on his head,
Came unto him, and close by his chair stood.

LIB. XXII.

The killing of the wooers.

ULYSSES THEN HIMSELF delivereth
Of his foul rags, and leaps up to the sill,
With bow in hand and arrows tipt with death,
And spake to th' wooers boasting of his skill. 5
Suitors, said he, this match is at an end;
Jove speed me now. Another mark have at,
Which none ere shot at yet. Apollo send
Me luck to hit. As he was saying that,
T' Antinous the shaft he did address, 10
Who had the cup in's hand about to drink;
Than of his death he thought of nothing less.
For one amongst so many who would think,
How strong soever, durst do such a thing?
The arrow pierc'd his neck from throat to poll. 15
The wound receiv'd, he turns round staggering;
The blood stream'd out; away he threw the bowl;
And overturn'd the table with his feet;
Both bread and meat lay scatter'd in the hall.
The suitors bustle and in clusters meet, 20
Of this great man amazed at the fall.
Then one of them unto Ulysses said:
Stranger, this was ill shot; thou killed hast

The greatest man in Ithaca. Thou'st plaid
Thy last prize. To the crows thou shalt be cast. 25
But yet they held their hands; for why, they thought
'Twas done by misadventure, not contriv'd;
For, proud and foolish, they perceived not
The fatal hour was to them all arriv'd.
Then said Ulysses, with a sullen eye, 30
Dogs, dead you thought me, and spent my estate;
With you my woman you compell'd to lie;
And would have wedded, whilst I liv'd, my mate.
No fear you had neither of Gods on high,
Nor of revenge from any mortal man; 35
But now a vengeance to you all is nigh.
At this they frightened were, and looked wan;
And each one peep'd about what way to take
To save his own life, if he could, by flight.
None but Eurymachus t' Ulysses spake: 40
If you Ulysses be, you say but right;
Much harm is done you both in house and field;
But this Antinous author was of 't all;
He set us on, and here lies justly killed.
For wedding of your wife his care was small. 45
His care was how to make himself here king
(Which Jove not suffer'd him to bring to pass);
And to destruction how your son to bring,
He chiefly thinking and designing was.
And since that he deservedly is slain, 50
Spare your own people; we'll repair what's done,
And what is spent we will make up again,

And recompense with twenty cows each one;
And brass and gold till you be satisfied;
If not, there's no man can your anger blame. 55
To this Ulysses with a sour look replied:
Your whole estates, and added to the same
How much soever you can elsewhere get,
Too little is to bind me to desist,
Until the suitors shall have paid their debt. 60
Two ways before you lie, take which you list,
To fight or fly, if you will death avoid;
But fly, I think you cannot. So said he.
Eurymachus then to the suitors said:
The man will not lay down his bow you see; 65
But since 'tis in his hand, and arrows by,
And stands upon the threshold of the door,
His shafts will fly at us continually,
And till we are all slain will not give o'er:
Let's therefore take up tables for defence 70
Against his shafts, and, sword, in hand, run all
Unto the door at once and drive him thence,
And people of the town together call.
This said, his sword with double edge he drew,
And thundered him with words; but howsoever, 75
A deadly shaft first from Ulysses flew
That enter'd at his breast and stuck in's liver.
Down fell his sword, he turns himself quite round,
And throws his blood about him every way;
Kicks down the table, meat and cup, to th' ground, 80
And with his brow beating the floor he lay;

And sprawling made the seat shake with his feet,
And endless darkness lay upon his eye.
Then rose Amphinomus and death did meet,
He thought from thence to make Ulysses fly, 85
But by Telemachus prevented was,
That slew him with his spear upon the place.
From back to breast the well-thrown spear did pass;
Down with a thump he falls upon his face.
Telemachus i' th' body left the spear. 90
For why, he had good reason to mistrust
Amongst so many swords, if he staid there,
He might be killed by some blow or thrust.
Then to his father, as he by him stood,
To fetch down arms, said he, 'Twill do no harm, 95
Two spears, a buckler, and a helmet good,
And both Philœtius and Eumæus arm.
Run quickly, said Ulysses, while there be
Arrows remaining, lest they force me should
To quit the door. Then quickly up ran he 100
Unto the room wherein the armour stood.
Eight spears, four bucklers, and four helmets good
He took, and to his father came again.
And first he arm'd himself, and ready stood;
The two good servants themselves armed then. 105
Ulysses' arrows, till they all were gone,
Kill'd each his man, and one by one they fall;
But when they all were spent and left was none,
He sets his bow to lean against the wall.
Over his shoulder he his buckler cast, 110

And puts his well-made helmet on his head.
The two spears with his hand he griped fast,
And then his posture he considered.
There was i' th' wall a certain window high,
By th' sill whereof a way lay to the street, ¹¹⁵
To which he bade Eumæus have an eye,
And near it stand. But one way was to it.
Then Angelaus to the suitors said,
Why does not some man to that window haste,
And to the people cry aloud for aid, ¹²⁰
That so this shooter may have shot his last?
Then, said Melantheus, No, no, 'tis in vain;
The street-door and the court-gate stand so close,
That one good man the place may well maintain
Against how many s'ever them oppose. ¹²⁵
But well, I'll fetch you armour to put on,
And weapons I will bring you out of hand;
For where they by Ulysses and his son
Were laid, I know the room and where they stand.
Then up he went; twelve bucklers he brings thence, ¹³⁰
As many spears, as many helmets too.
The suitors then prepared for their defence.
And now Ulysses knew not what to do;
But to Telemachus he turn'd and said,
Th'ill women sure, or else Melantheus has ¹³⁵
For th' wooers gotten arms, and us betray'd.
No, father, answered he, my fault it was;
The door I left unlock'd, and but put to,
Which somebody observ'd. Eumæus, now

Go lock it fast. Withal consider who, 140
The women or Melantheus serv'd us so.
Whilst thus they talk, Melantheus went once more
To fetch down arms; Eumæus saw him then,
And told Ulysses: Him we thought before
To be the man, is thither gone agen. 145
Shall I go now and kill him (if so be
I can) or bring him hither to you, to endure
What you think fit for all his villainy?
Then said Ulysses, We two will be sure,
Telemachus and I, to keep these men 150
From going out, and therefore, go you two
And bind his hands and feet together; then
Betwixt his body and his legs put through
A rope, and at his back tie boards, and so
Close to a pillar hoise him up on high 155
Unto the beams of th' house, that he may know
His fault, and feel his pain before he die.
Then up they went, and stood without the door,
On each side one. Melantheus was within,
At the far end, looking for armour more; 160
And after there he long enough had been,
Out with an helmet in one hand he came,
A buckler in the other, great, but torn;
Laertes in his youth had borne the same,
But now with lying it was mouldy worn. 165
As he came out, they seiz'd him suddenly,
And in again they dragg'd him by the hair,
And then his hands unto his feet they tie,

And up they hoise him, as they bidden were.
This done, Eumæus said unto him jeering, 170
In that soft bed, Melantheus, easily
You will observe the morning's first appearing,
That for the woo'rs your goats may ready be.
Then armed both, and locking up the door,
And breathing courage, to Ulysses come; 175
So that on the threshold there were four;
But many were the suitors in the room.
Then down unto Ulysses Pallas came,
In Mentor's shape, to whom Ulysses said,
You are my friend, and our age is the same; 180
For old acquaintance let me have your aid.
Though thus he said, he thought it Pallas still.
The suitors clamour'd; Agelaus spake:
Mentor, beware, the course you take is ill,
Against us all Ulysses' part to take; 185
For 'tis our purpose when these two are slain,
Father and son, that you the next shall be,
And of your rashness suffer shall the pain,
And with his substance your own mix will we;
Nor shall your sons, daughters, or wife live here. 190
Pallas was angry at these words of his,
And chid Ulysses then, and ask'd him where
His courage was. And what, said she, is this
The man that bravely fought nine years at Troy,
And kill'd in fight so many gallant men, 195
And he whose prudence did the town destroy,
And whines so at his coming home again?

Come hither, milksop, says she, stand by me,
And how your old friend Mentor shall requite
The kindness you have shown him, you shall see. 200
Yet presently she would not end the fight;
For further yet she would the courage try
Both of Ulysses and Telemachus,
And in a swallow's shape she up did fly,
And sat upon a black beam of the house. 205
Meanwhile the suitors by Agelaus,
Amphimedon and Demoptolemus,
Eurynomus, Pisandrus, Polybus,
The best of all the suitors in the house,
(For many had been killed with the bow) 210
Encourag'd were: Friends, said he, let's be bold,
And at them all our good spears let us throw;
So shall we make the man his hands to hold;
Mentor with theirs his fortune will not mix,
He and those hopes are gone; upon the sill 215
There are but four; Let's throw at once but six,
That if Jove please, we may Ulysses kill.
When he is gone, the rest we need not fear.
The suitors all approved this advice,
And then they lanced ev'ry man his spear; 220
But Pallas made it fall out otherwise;
For from the beam she soon blew here and there
The flying staves, whereof one hit the door;
The two side-posts and the walls wounded were.
When of the spears the danger was past o'er, 225
Then said Ulysses, Now our turn it is

To cast our spears at this unruly rout,
That, not content with former injuries,
Do what they can to take our lives to boot.
This said, and taking aim, their spears they threw. 230
Ulysses killed Demoptolemus.
Telemachus Euryades then slew;
Eumæus with his spear kill'd Elatus;
Pisandrus by Philœtius was slain.
The suitors then to the room's end retreat, 235
And to the four gave time to take again
The spears that in the wounds were sticking yet.
Again they lanced ev'ry man his spear.
The swallow on the beam still puts them by,
And by the door, walls, posts, receiv'd they were. 240
Telemachus and Eumæus only
Had little scratches; one upon his wrist;
Eumæus on the shoulder: but the skin
Scarce broken was; and both the other mist.
And then the four amongst the throng threw in 245
Their spears again; and then Ulysses slew
Eurydamus; and by Telemachus
Was slain Amphimedon; Eumæus threw,
And killed Polybus; Philœtius
Then smote Cressipus, and through pierc'd his breast, 250
And over him insulting thus he said:
Bold Prætor, that in love art with thy jest,
And to say anything art not afraid,
For the cow's-foot t' Ulysses thrown, take that.
Ulysses kill'd too Damastorides; 255

Telemachus Leiocrates laid flat
With spear in hand. When they had killed these,
Pallas aloft held forth her frightful shield;
And then, as cattle, stung with a gad-fly,
In heat of summer run about the field, ²⁶⁰
So round about the hall the suitors fly;
As when the vultures stoop down from the hill
Upon the fowl, these couch close to the plain,
Threatened with heavy clouds, they slay and kill,
These cannot fly away, nor turn again, ²⁶⁵
So they upon the suitors fiercely fall,
And winding with them, as they shift their ground,
They killing went; all gore-blood was the hall,
And made with thumps and groans a dismal sound.
Leiodes then kneel'd at Ulysses' feet ²⁷⁰
To beg his life. I came, said he, as priest,
And told them their behaviour was unmeet,
And always gave them counsel to desist;
But nothing that I said would they obey,
And of their own destruction authors are. ²⁷⁵
There's not a woman in the house can say
I did amiss. Must I like these men fare?
To this Ulysses with a sour look said,
Did you come with the suitors as their priest?
Then surely for them you have also pray'd, ²⁸⁰
That of my coming home I should have miss'd,
That with these men you daily might here board
Yourself, your wife, and children. Therefore die.
With that he took up Agelaus' sword,

Which, when he died, fell from him and lay by. 285
And with it at a stroke cut off his head.
But Phemius, the minstrel, 'scaped free,
For thither he came not for meat or bread:
The suitors forced him of necessity.
He had his fiddle in his hand, and stood 290
Within the door, and studied what to do,
Whether unto Ulysses go he should,
Or out a door unto the altar go
I'th' court, whereon with many a fat beast
Ulysses oft devoutly had serv'd Jove; 295
And having paus'd, at last he thought it best
To go t' Ulysses and his mercy prove.
Then down he laid his fiddle on the floor,
Between the temp'rer and a studded chair,
Then went and fell upon his knees before 300
Ulysses, and thus to him made his prayer:
Save me, Ulysses, and consider that
If you me slay, it after you will grieve.
I am a singer, but was never taught;
For song to me the Gods did freely give. 305
I sing to Gods and men, and have the skill
To sing to you as to a God; therefore,
Of cutting off my head lay by the will.
Besides, Telemachus can tell you more;
I was not hither drawn with smell of roast, 310
But many men and strong brought me by force.
Telemachus, that knew this was no boast,
Cried out, Hold father, 'tis not our best course

To slay the innocent, and I would fain
Save Medon too, that lov'd me from a boy, 315
And took care of me, if he be not slain
By coming in your or your servants' way.
Under a seat Medon himself had laid,
And wrapp'd himself up in a raw cow-hide,
And hearing what Telemachus had said, 320
Skipp'd nimbly out, his cow-skin cast aside,
And falling at Telemachus his knee,
He to him said, O friend, lo here I stand;
Forbear, I pray, and to your father be
A means that also he may hold his hand; 325
For whilst his anger 'gainst the suitors staid,
That wasted have his goods, and him despis'd,
Killing each way about him, I'm afraid
He might perhaps kill me too unadvis'd.
Ulysses hearing, answered thus agen: 330
Take courage, man, there is no danger nigh,
And this remember, and tell other men,
That justice better thrives than knavery.
Go now into the court, and stay without,
Both you and Phemius, that I may do 335
The bus'ness in the house I am about.
Then out into the court away they go,
And on the altar of the God they sat,
Looking about, still fearing to be slain.
Ulysses, to be sure that none remain 340
Alive, and under seats or tables squat,
Search'd well the hall, and found they all were dead,

As fishes on the shore lie out, and by
The heat of Phaethon be murdered,
So did the woo'rs one on another lie. 345
Then to Telemachus Ulysses said,
Tell Euryclea I would speak with her.
Telemachus his father straight obey'd,
And scraped at the door that she might hear.
Nurse, says he, mother of the maids, come out, 350
My father to you somewhat has to say.
She heard him well, and presently, without
More words, the door she open'd with her key;
And found Ulysses standing 'mongst the dead,
Besmear'd with blood, as when a lion has 355
Upon a cow at pasture newly fed,
With goary breast and chaps, so dight he was.
Th' old woman there beholding so much blood,
And carcasses so many lying dead,
At such a mighty work amazed stood, 360
And was about to whoop, but hindered
Was by Ulysses. Hold, said he, within
Your joy, and let it not appear in vain;
To glory over dead men is a sin.
These men the Gods and their own sins have slain. 365
For neither from above they fear'd the Gods,
Nor men respected good or bad beneath,
And therefore now have felt the heav'nly rods,
And brought upon themselves untimely death.
But tell me, nurse, how many women be 370
That me dishonour and do wickedness.

Fifty, says she, do serve Penelope,
And learn to work and wait, no more nor less;
Of these there twelve be that are impudent,
And care not for me, nor Penelope; 375
Telemachus was young: the government
To him of maids might not well trusted be.
But now I'll to my lady's chamber go,
Where she's asleep, some God has closed her eyes,
To tell her you are here. But he said, No; 380
First call those women who do me despise,
And have behav'd themselves dishonestly.
Euryclea obeys, and goes her way,
And call'd those women. Come away, said she,
Telemachus i' th' hall does for you stay. 385
Meanwhile Ulysses call'd Telemachus
Unto him, and his faithful servants two,
Trusty Eumæus and Philœtius.
Hear me, said he, what I would have you do,
Make these lewd woman carry hence the dead, 390
The chairs and tables in the hall make clean,
And when that bus'ness they have finished,
Into the court make them go forth again,
Into that narrow place 'twixt th' house and hedge;
Till they forget the suitors' venery, 395
Make them of your sharp swords to feel the edge,
And for their stol'n unclean delight to die.
Then came the women down into the hall
Wailing, and tears abundantly they shed,
And presently unto their work they fall. 400

Into the porch they carry out the dead.
Ulysses giving order standeth by.
Telemachus then and Philæti^{us},
Also Eumæus, do with shovels ply
The pavement daub'd with blood, and cleanse the house 405
Scraping together dust and blood; and that
The women also carry out a door.
But when this bus'ness now an end was at,
There rested for them yet one bus'ness more.
They brought them thence into the narrow place, 410
From whence there was no hope at all to fly.
You, said Telemachus, for the disgrace
Done to me and my mother, must not die
An honest death. This having said, he stretch'd
Between two pillars high a great strong rope, 415
That with their feet the ground could not be reach'd;
Hung there, they sprawl'd awhile, but could not drop.
Then down they dragg'd Melantheus, and his nose
And ears with cruel steel from 's head they tear,
And brake his arms and legs with many blows, 420
And to the dogs to eat they throw his gear.
Their work now done, they wash'd their hands and feet,
And to Ulysses in the hall they went,
Who having found the place not very sweet,
For brimstone called to take away the scent. 425
Euryclea, said he, fetch brimstone hither,
And fire, and also wake Penelope,
And bid her maids come to me altogether,
But hasten them to come. Then answer'd she,

Dear child, 'tis well said. But first let me go 430
And bring you better clothes, a coat and vest.
These rags become you not. Then said he, No.
Bring me fire first, and after do the rest.
The fire she brought and brimstone presently,
Wherewith he aired both the court and hall, 435
The nurse then up goes to the rooms on high
To call the maids. T' Ulysses they came all.
They weep and sob, and all embrace Ulysses,
And kiss his head and shoulders, shake his hand;
And he again saluteth them with kisses. 440
Weeping for joy, they all about him stand.

LIB. XXIII.

*Ulysses maketh himself known to Penelope, tells her his adventures briefly,
and in the morning goes to Laertes and makes himself known to him.*

TH' OLD WOMAN to the upper rooms ascended,
To wake Penelope, and let her know
Her husband was return'd. Her joy amended
Much had her pace, and well she ambled now; 5
And standing at her head, Rise, child, said she;
The Gods at last have granted you your wishes.
Come down into the hall, where you shall see
The so long by you wish'd-for man, Ulysses.
The suitors he has killed ev'ry one, 10
Who needs the stewards of his house would be,
In despite of Telemachus, his son;
And live upon his substance lavishly.
To her again Penelope thus spake:
The Gods, Euryclea, sure have made you mad. 15
The Gods can wise men fools, and fools wise make.
The Gods have done you hurt, more wit you had.
You do me wrong, that know how little sleep
I have enjoyed since he went to Troy.
I never so well slept since, but still weep, 20
And now you come and wake me with a toy.
Be gone, if't had been any maid but you,

I should have sent her not well pleas'd away,
But to your age some more respect is due;
Go down again into the house you may. 25
Dear child, said she, I mock not, for 'tis true.
Ulysses is i' th' house. That stranger's he.
Telemachus and no man else him knew;
And known to others would not let him be,
Till they these proud and naughty men had kill'd. 30
Penelope then starting from the bed
Embrac'd the nurse; her eyes with tears were fill'd.
And, as yet doubtful, still she questioned.
Euryclea, is all this true you say?
Is he indeed come home? Be serious. 35
How could he the proud suitors all destroy,
He being but one, they many in the house?
Nor saw, nor ask'd I, but I heard the groans
Of dying men; for up we were all shut
Within our doors, and lock'd up all at once, 40
And of our lives into a fear were put,
Till me, your son, Telemachus, call'd out
To come t' Ulysses. In the hall he stood,
And there in heaps the slain lay him about,
That like a lion stood besmear'd with blood;
Ulysses makes himself known to Penelope. 45
You would have joy'd to see him. Now they lie
In th' court all in one heap. But busy he
Is airing of the house, a great fire by,
And for to call you hither has sent me.
But come, that in each other you may joy, 50

For now at last your wishes granted be.
Ulysses come, your son is past a boy,
And their revenge upon the woo'rs they see.
Nurse, answered she, triumph not out of season.
For to be glad to see him in the house, ⁵⁵
You know there none is that have so much reason
As I have, and our son, Telemachus.
But 'tis not truth you tell me. What you say
Will come at last to nothing else but this,
It was some God that did the suitors slay, ⁶⁰
Hating the sight of what they did amiss.
There never man came to them that can boast
He parted from them without injuries;
So by their wickedness their lives they lost;
Ulysses may have perish'd for all this. ⁶⁵
Euryclea to this again replied,
Dear child, what words are these that from you come?
Ulysses stands i' th' hall at the fire's side,
And yet you say he never will come home.
But well, I'll tell you now a surer sign: ⁷⁰
When I was washing of his legs and feet,
I saw where th' wound was giv'n him by the swine;
And had then told you had he thought it meet;
But with his hand, for that cause, stopp'd my breath.
Come, I will lay my life on't willingly; ⁷⁵
If it be false, put me to cruel death.
To this Penelope did then reply:
The purpose of the Gods, wise though you be,
You know not, nurse; but I'll go to my son,

And there upon the place with him I'll see 80
What men are slain, and who the deed has done.
Then down she went, consulting in her breast,
Whether at distance it were best to try,
Or else directly go unto the guest,
And there receive and kiss him presently. 85
But when into the hall she enter'd was,
Where sitting was Ulysses, in the light
Of a good fire, she went and took a place
That was to where he sat just opposite.
Ulysses look'd o' th' ground, expecting what 90
His wife would say, but long time she spake not;
But gazing on her husband, mute she sate,
As one that's in a trance, and has no thought:
But by-and-bye, surveying him, she thought
'Twas he; but seeing him so ill-array'd, 95
Her mind was chang'd; she thought that he 'twas not.
Telemachus his mother chid, and said,
Mother, hard-hearted mother, and unkind,
Why sit you at such distance from my father,
And have so little care to know his mind? 100
When many questions you should ask him rather.
Another woman would not keep off so
From her own husband that away had staid
Twenty years long, and suffer'd so much woe,
But at their meeting somewhat would have said. 105
Son, said she then, I am astonish'd so,
I cannot speak, nor look him in the face;
But whether he Ulysses be or no,

I shall be certain in a little space,
For we have signs between us of our own, 110
Which we shall soon know one another by,
That to none living but ourselves are known.
Ulysses to his son then smilingly
Said, Let, Telemachus, your mother try me,
Perhaps she know me better will anon. 115
The cause why now so little she sets by me,
Is that I have ill-favour'd garments on.
But now let you and I look well about.
Who kills one man, unless great friends he have,
Must leave his kin and country, and go out; 120
But we have kill'd both many men and brave,
Therefore, consider what is to be done.
Father, said he, let that be your own care;
So wise as you are, men say there is none.
Our hands to do your pleasure ready are. 125
Why then, I'll tell you what is best to do:
Put on your coats, and let the women all
Into the hall in their best garments go;
The minstrel play; and they to dancing fall;
That he that stands without, or dwelleth nigh 130
Unto the house, or travelleth that way,
When he shall hear such mirth and melody,
May think, This surely is the wedding-day.
That so before this slaughter Fame have spread,
Depart we may from hence into the field, 135
And 'gainst the people of the town make head,
And take such counsel more as Jove shall yield.

When this was said, the men their coats put on;
The damsels dress themselves, the minstrel sung
And played upon his fiddle, and each one 140
To dancing fell, with it the palace rung.
And one that heard this as he stood without,
Said to another by him, She is married.
Fie, fie, she could no longer now hold out.
So, said he, ignorant how things were carried. 145
Meanwhile Ulysses bath'd and ointed is
B' Eurynome, and also richly clad
With a fair robe and coat; and beside this,
Taller and greater Pallas made him had,
And varnished with black his curled head. 150
As one by Vulcan and Athena taught,
Gold upon silver skilfully had spread,
So Pallas on Ulysses' beauty wrought.
Then from the bath he like a God came in,
And sat him down before his wife again; 155
And with her to discourse did thus begin:
Woman, said he, to speak to you is vain;
Above all women harden'd is your heart.
What woman else that had her husband seen
After twice ten years' absence, thus apart 160
From him to sit, contented would have been?
Make me a bed, nurse; what should I do here?
Man, said Penelope, nor mightily
I magnify nor scorn you; what you were
When you went hence, full well remember I: 165
But go, nurse, make for him the bed that he

Himself fram'd, by the chamber-door without.
Thus said she, but to try if that were he,
Yet griev'd him to the heart, and made him doubt.
Woman, said he, who has remov'd my bed? 170
It cannot be but by a force divine.
With my own hands 'twas wrought and finished,
To th' end thereby it might be known for mine.
I' th' court an olive-tree stood great and tall,
Thick as a pillar. I about it made 175
A chamber. Of good stone I made the wall;
And cutting off the boughs the roof I laid;
And in the wall a good strong door I form.
When this was done, I cut up by the root,
And smooth'd with iron tools a lusty corm, 180
And setting it upright, fix'd the bed to 't,
And pierc'd the wood with wimbles where 'twas meet;
And laid on silver, gold, and ivory.
A purple thong unto the door I fit.
This is the sign for you to know me by. 185
Whether it still remain I cannot tell,
Or ta'en away and down be cut the tree.
This said, and she the sign rememb'ring well,
The tears roll'd from her eyes. Thus weeping, she
Acknowledgeth and runneth to Ulysses; 190
About his neck her milk-white arms she lays,
And both his shoulders and his head she kisses,
And, O Ulysses, be not angry, says,
The Gods have giv'n you wisdom, but denied
To satisfy our youth with mutual joy:

Ulysses relates his adventures briefly. 195

Take it not ill I have you thus far tried;
Since horror hath possess'd my mind alway,
Lest some deceitful man (for such there be
Too many in the world) should hither come,
And flatt'ring, bring me into infamy. 200
Helen of Argos would have staid at home,
And not gone with th' adulterer of Troy,
Had she consider'd that th' Achæan lords
Might chance to come and fetch her thence away
Again into her country with their swords. 205
This speech inflam'd his love, and wet his eyes.
As a man shipwreck'd swimming for his life,
Rejoiceth when the land he near him spies;
So welcome was Ulysses to his wife.
She hung upon him still, nor had let go 210
Till morning, but for Pallas, who would not
Let Phæton and Iampus, th' horses two
That draw the Morn, be set to the chariot.
Then said Ulysses to Penelope,
O wife! my troubles ended are not yet; 215
For still there many more remaining be;
Long time 'twill be ere to the end I get.
Tiresius did tell me this in hell,
When I went thither of his ghost to know,
Whether I with my mates should come home well, 220
Or not to Ithaca again, and how.
But come, 'tis bedtime, let us satisfy
Ourselves with sleep. Then said Penelope,

Your bed made ready shall be presently:
But since you mention'd have the prophecy, ²²⁵
Tell me what said Tiresias. I know
You'll tell it me one time or other, why,
If you will, may you not tell me it now?
To this Ulysses did again reply:
Because you long to know 't, I tell you then; ²³⁰
Tiresias advised me to go
With oar on shoulder to a place where men
Inhabit, that the briny sea not know,
Nor ever mingle salt with what they eat,
Nor ever saw the ship with crimson face, ²³⁵
Nor yet those wings which do the water beat
(Called oars), to make the good ship go apace.
Now mark me well. When you shall meet a man,
Just at the end of Neptune's utmost bound,
Bearing upon his shoulder a corn-fan, ²⁴⁰
Stick down your lusty oar upon the ground;
There sacrifice to the world's admiral,
For new admittance, a ram, boar, and bull;
Then home again, and offer unto all
The Gods by name a hundred oxen full. ²⁴⁵
Your death will not ungentle be, for which
Age shall prepare you, and your soul unglue
Insensibly. Your people shall be rich
Which round about you dwell. All this is true
Then, said Penelope. If this be all, ²⁵⁰
Since your old age the Gods will happy make,
The sorrow yet to come can be but small.

Whilst thus this couple t'one another spake,
Meanwhile their bed with cov'rings soft was clad;
The maids, returned i' th' hall, before them stand; 255
Eurynome a torch to light them had,
And carried it before them in her hand,
Then parting, left them under marriage-law.
Telemachus and the good servants two,
When they had to the dancers said Hola, 260
Unto their beds within the palace go.
Ulysses and Penelope their joy
Converted had into a new content;
She to Ulysses telleth the annoy
She suffer'd from her suitors impudent; 265
What havoc they had made of cows and sheep,
And many barrels of her wine had wasted.
And he to her, what hurt o' th' land and deep
He done and suffer'd had. While his tale lasted
Well pleas'd she was, and had no list to sleep. 270
He told her how the Cicons he had beaten;
How Lote from love of home his men did keep;
How Cyclops his companions had eaten;
And in revenge how he had made him blind;
How, to convey him home he did obtain 275
Of Æolus a leather-bag of wind,
Which breaking prison blew him back again;
And how in Læstrigonia he lost
His good ships all but one, in which he was;
Told her the wiles of Circe; what the Ghost 280
In Hell said to him of Tiresias,

To whom he went his fortune for to know,
In a black ship; and with his mother there
Discours'd; and saw many a one laid low
That in the Argive host had been his peer; 285
And how he heard the tempting Sirens sing
In concert, and scap'd safely by; and how
By th' shifting rocks, Charybdis vomiting,
And Scylla's clutches he did safely row;
How to Ogygia he came, and how 290
Calypso kept him in a cave, where she
To be his wife did promise to bestow
Upon him youth and immortality.
How to Phæacia he came, where he
Much honour'd was, and thence by sea did come 295
Enrich'd by public liberality
With brass and gold and costly vestures home.
And at these words sleep seized on his eyes.
When Pallas thought Ulysses satisfied
With bed and sleep, she makes the morning rise, 300
And day from mortals now no longer hide.
Ulysses rose, and speaking to his wife,
We have, said he, both of us had much woe;
You for my absence weeping out your life,
And I, because the Gods would have it so. 305
But since we now again united be,
Look to the goods within. My folds I'll fill
Partly with booty from the enemy,
And many also my friends give me will.
Now to my griev'd father I must go, 310

And therefore with your maids go up again;
For ere the sun be up, the town will know
That in my house the suitors all are slain.
Do not so much as look out, or inquire.
This said, he put on arms. To arm also ³¹⁵
His son and his two men he did require.
Then they got up, and there stood armed too.
Then open'd they the door and forth they went.
Ulysses led the way. Daylight was spread.
But Pallas out of town them safely sent ³²⁰
Into the field, and undiscovered.

LIB. XXIV.

*The Ithacesians bury the wooers, and sitting in council, resolve on revenge;
and coming near the house of Laertes, are met by Ulysses and Laertes, with
Telemachus and servants, the whole number twelve, and overcome &
submit.*

MEANWHILE UNTO THE house came Mercury;
A golden rod he carried in his hand,
Wherewith he lays asleep a mortal eye,
And opens it again with the same wand, 5
And at the bloody heap he calls away
The suitors' souls. They all about him fly.
And as the rod directeth them the way,
They follow all, but screaming fearfully.
As in some venerable hollow cave, 10
Where bats that are at roost upon a stone,
And from the ledge one chance a fall to have,
The rest scream out and hold fast one by one;
So screaming all the souls together fly.
And first pass by Oceanus his streams,
The Ithacesians bury the wooers. 15
Then by Sol's gate, and rock of Leucady;
And then they passed through the town of dreams,
And in a trice to th' mead of Asphodel,
And saw the soul there of Peleiades,

For there the souls of wretched mortals dwell, 20
And of Patroclus and Nestorides.
The soul of Ajax son of Telamon
Was also there, who 'mongst those warriors tall,
The goodliest person was, except the son
Of Peleus, who did much excel them all. 25
To these Atrides' soul came from hard by,
And theirs whose death had joined been with his,
And by Ægistus' hand were made to die.
Then to Atrides said Achilles this:
Atrides, we thought you of all the host 30
That came to fight against the town of Troy,
Had been by the high Gods beloved most;
For in the army you bore greatest sway.
Yet afterwards the first you were to fall.
T' had better been commanding t' have been slain. 35
Then had you had a noble funeral,
And tomb, whereby your glory might remain.
But now you died a miserable death.
To this Atrides' soul thus answered:
Happy were you at Troy to lose your breath, 40
With other Argives; that there perished
Fighting about you, in your dusty bed
Stretch'd out, your feats of horsemanship forgot,
But fighting we all day continued,
And till we gain'd your body ceased not. 45
Nor had we ceased then, but for the storm.
And then we bare your body to the fleet,
And there the blemishes thereof reform

With water fair and warm, and unguents sweet.
The Greeks about you wept, and cut their hair; 50
Your mother and her nymphs then came and roar'd,
Th' Achæan army was in such a fear,
That they were ready all to run aboard.
But Nestor, whose advice most current was,
Cried, Stay you, Argives, this is not the noise 55
Of armed foes, but Thetis now doth pass
With all her nymphs; of them this is the voice.
Then they all fearless stay'd. And the nymphs stood
Mourning, and clothed him with garments meet.
The Muses nine, in turn with voices good, 60
Singing, made all the standers by to weep.
And seventeen days both Gods and men we mourn.
On the eighteenth we sheep and cattle slay.
And then in God-like clothes your body burn,
With many unguents sweet that on it lay. 65
Both foot and horse many the pile sustain,
And loudly shout, and Vulcan makes an end.
Only the bones and nothing else remain,
Which with pure wine and unguents sweet we blend.
Your mother sent the urn, by Vulcan made, 70
But given her by Bacchus, and therein,
Noble Achilles, your white bones we laid,
Mix'd with Patroclus you delighted in.
By yours, the ashes of Antilochus,
Whom next Patroclus was to you most dear, 75
We placed in an urn apart, and thus
Over you all one monument we rear,

High to be seen from sea by them that now,
Or shall hereafter sailing be that way.
Your mother also to the Gods did vow 80
T' have noble prizes for the lords to play.
At princes' sepultures I oft have seen
Propos'd rich prizes to provoke the strife
Of noble minds, but that like these had been,
I never any saw in all my life. 85
So after death renown'd your name will be;
But what am I the better, to whom Jove
Did for my pains a wretched death decree
(Such was the pleasure of the Gods above)
B' Ægistus and my own wife's bloody hand? 90
Thus they to one another talk'd in hell.
Then Mercury came to them with his band
Of woo'rs that in Ulysses' palace fell.
Of these Atrides knew Amphimedon,
(For he in Ithaca had been his guest), 95
And speaking to him first, he thus begun:
Amphimedon, what ail'd you and the rest,
To come to this dark place so in a throng,
The flow'r of Ithaca, of equal years?
If purposely a man should seek among 100
Your people all, he should not find you peers.
Were you by Neptune drowned in the main,
And hither sent by fury of the weather?
Or landing to find booty were you slain?
Or fighting for fair women were sent hither? 105
Come, tell me freely; I have been your guest.

Know you not I t' your father's house did come
With Menelaus, Ulysses to request
That he would go with us to Ilium?
Then said Amphimedon: I know it all, 110
And how we all deprived were of life,
I'll tell you true, and manner of our fall.
Ulysses absent, we all woo'd his wife.
She none denied, nor any married,
But casting how of life us to bereave, 115
To set a loom up came into her head,
As if she somewhat did intend to weave.
She sets it up, and did begin to weave.
Suitors, said she, since dead Ulysses is,
Stay yet a little while, and give me leave 120
To make an end but of one business.
I must for old Laertes make a cloth,
Which in his sepulchre he is to wear.
T' offend the wives of Greece I should be loth.
For to accuse me they will not forbear. 125
They'll say I very hasty was to wed,
If I go hence, and not provide a shroud,
Wherein Laertes must be buried.
Out of his wealth, that might have been allow'd.
The suitors then were all content. And then 130
All day she wove, but ere she went to bed
What she had wov'n she ravell'd out agen.
Three years her suitors she thus frustrated;
In the fourth year her women her betray'd;
And in we came while she the web undid. 135

She could the wedding now no more avoid.
The robe when it was finished and done
She washed clean, and it before us laid:
As bright it shin'd as either moon or sun.
And then ill-fortune brought Ulysses home 140
To the house were dwelt the master of the swine;
And thither too Telemachus did come,
From sandy Pylus, safely through the brine;
And both together there our death contrive.
That done, they both into the city come. 145
Telemachus the first was to arrive.
The master of the swine brought th' other home,
Like an old beggar with his staff in's hand,
Apparell'd in such miserable gear,
That, that was he, we could not understand, 150
Nor no man else, although he elder were.
We mock, we rate him, throw things at his head;
He patiently endured all his harms,
Until, by Jupiter encouraged,
From out the hall he took away the arms, 155
And in an upper chamber lock'd them fast.
Then craftily he bids his wife to send
To us his mighty bow, our strength to taste.
This the beginning was of our ill end;
For much too weak to bend the bow were we. 160
But when it was unto Ulysses brought,
Fearing by him lest it should bended be,
We all at once cried out, Hold, give 't him not.
Only Telemachus cried, Let him try.

And then 'twas put into Ulysses' hands. 165
Ulysses bent it very easily.
Then leap'd he to the sill, and there he stands;
And round about he look'd upon us grim.
And first of all he shot Antinous,
At whom he took his aim, and killed him, 170
And with his arrows, after, more of us.
And one upon another down we fall.
'Twas plain, some present God there gave him aid,
For then he follow'd us about the hall,
Till all on heaps at last he had us laid. 175
Of groans and blows it made a dismal sound.
And thus, King Agamemnon, died we.
Our bodies yet there lie upon the ground;
Our friends yet unacquainted with it be,
That else would wash our wounds and us lament, 180
Which to the dead are ceremonies due.
Then said Atrides, O virtue excellent
Of your fair wife, happy Ulysses, you,
That with great valour have her repossess'd.
My wife, Tyndareus' daughter, was not such. 185
Your consort's fame will be hereafter dress'd
In noble songs, and the sex honour much.
But my wife's name shall stand in ballads vile,
And, sung in filthy songs, the sex disgrace.
Thus they discoursing were in hell. Meanwhile 190
Ulysses cometh to Laertes' place:
About it many lodgings were, wherein
His necessary servants all were laid;

And there they fed, and sat, and slept. But in
The house itself one old Sicelian maid, ¹⁹⁵
That of his person always had the care.
Ulysses then, lest supper they should lack,
Said to his two good servants, For our fare
You must again unto the town go back,
And fetch a swine, the fattest in the sties, ²⁰⁰
Meanwhile I'll to the vineyard go, and try
Whether my father know can with his eyes,
After so long an absence, that 'tis I.
This said, his servants armed homeward hie,
And to the vineyard goes Ulysses then. ²⁰⁵
But Dolius he there could not espy,
Nor any of his sons, or of his men.
His sons and servants all abroad were gone,
For thorns to mend the hedges of the ground.
Laertes in the vineyard all alone ²¹⁰
Placing of earth about a plant he found.
On him he had a foul coat, full of patches,
And ugly leather boots, those patch'd also;
But good enough to save his legs from scratches:
Gloves of the same against the briars too. ²¹⁵
A goat-skin head-piece he had on to boot.
Ulysses, when he saw him in this plight,
Worn out with age, and so much sorrow to it,
Under a tree stood weeping out of sight.
And then bethought him whether it were best ²²⁰
T' embrace and kiss him, and directly say,
I am Ulysses, or first talk in jest,

And give him time his person to survey.
Resolv'd at last, his father he goes nigh,
Who with his head down, digg'd about a plant. 225
Old man, said he, your skill is good. For why,
Your garden neither art nor care does want.
Nor plant, nor fig, nor vine, nor olive-tree,
Nor so much as a leek but prospers here.
One thing there wants (I pray not angry be); 230
You look not to yourself. Ill cloathes you wear,
And also pale and yellow is your hue,
Which cannot be imputed to being aged.
'Tis not because you do no work, that you
He little sets by that has you engaged; 235
There's nothing in your aspect of a slave.
The look and stature you have of a king,
And the appearance of a king would have,
If you, what's due to age had ev'ry thing.
Whose servant are you, and who owns the ground? 240
And say if this be Ithaca or no;
For this man whom upon the way I found,
Is not so wise as certainly to know?
I ask'd him of a friend that I had here,
Whether alive he were or dead. But he; 245
Whether he dead, or living still he were,
Unable was at all to answer me.
My house a stranger on a time was at,
Which of all strangers I did love the best;
That said he came from Ithaca, and that 250
Laertes was his father's name. This guest

I entertained as kindly as I could,
With viands good, whereof I had good store;
And gave him talents ten of well-wrought gold,
And beside that I gave him these gifts more: 255
A pot for temper'd wine of silver bright;
Twelve carpets fair; twelve robes; twelve coats that were
All lined through; and twelve more that were light;
And four maid-servants, both well taught and fair,
Such as he from a greater number chose. 260
Then said Laertes, Ithaca this is,
Now held by wicked men. But you will lose
Your presents all, and of requital miss.
But had you found my son Ulysses here,
He would have kept of amity the law, 265
And well requited both your gifts and cheer.
But say, how long it is since you last saw
And entertain'd my son, if yet he be;
But he at sea devoured is by fish
Far hence, or else to beasts and fowls is he 270
Somewhere, poor man, at land become a dish;
Neither his father nor his mother by,
To wind him and to shed tears o'er his bed;
Nor yet his wife weeping to close his eye,
Which are the honours due unto the dead. 275
Tell me also your dwelling and your name,
Your parents and your city what they be;
And where the good ship lies in which you came,
And what men with you came in company,
Or with some merchants in their ship, and they 280

Departing hence have left you here alone?
To this Ulysses answering did say,
I'll answer to your questions each one.
My city's Alybas, and of the same
Apherdas is the king. His son am I, ²⁸⁵
And called am Eperitus by name.
Far hence at the land's end my ship doth lie.
And since Ulysses from me went away,
'Tis now five years, and with good augury
That we should meet again another day, ²⁹⁰
And joy in mutual hospitality.
This said, Laertes, overcome with woe,
Took up the scalding dust with both his hands,
And pour'd the same upon his head of snow,
And sobbing thick and weeping there he stands. ²⁹⁵
Ulysses' heart up to his nostrils swell'd
With pity to behold his father's woe,
And to him leapt; and 's arms about him held,
And said, The man you weep and mourn for so
Am I, come after twenty years again. ³⁰⁰
Give over sobbing now; for, though in haste,
I tell you must, the suitors I have slain,
And made them of their crimes the fruit to taste.
Then said Laertes, If indeed you be
My son Ulysses, let me see some sign ³⁰⁵
To know you by for certain. Then, said he,
Behold the wound received from the swine
On Mount Parnassus, when I thither went
T' Autolycus my mother's father, to

Receive the gifts he promis'd me. You sent 310
Me thither, and so did my mother too.
I'll tell you too what trees you gave me when
I walking once was with you there. And I
Ask'd you of all the trees the names (for then
'Twixt man and boy I was). And severally 315
As I the trees' names ask'd, you told the same.
Pear-trees thirteen; apple-trees half a score;
Rankles fifty (to the vines you gave that name);
All of them in their season berries bore;
And forty fig trees. Th' old man knew it all; 320
Embrac'd his son, and with abundant joy
Fainted, and sinking ready was to fall,
But that his son's embraces were his stay.
Then coming to himself again he said:
Jove, father, and you Gods (Gods there are yet!) 325
The suitors for their evil deeds have paid,
But now I fear the town will on us set,
And with themselves make all the city rise
In Cephalenia. Then said his son,
Fear not. Of that we'll by and by advise. 330
Eumæus and Philœtius are gone
To get a supper ready at your house.
This said, into the house they come away,
And find Eumæus and Philœtius
At work to cut out meat, and wine allay. 335
Meanwhile Laertes oil'd and bathed is,
And by his maid in seemly garments clad,
And Pallas, standing by him, added this,

A larger stature than before he had.
As of a God his presence did appear. 340
Ulysses seeing him, admir'd, and said:
Father, you greater now are than you were,
Some God has beauty on your person laid.
Then said Laertes, O ye Gods on high,
Jove, Pallas, and Apollo, had I been 345
Such as I was at Neritus, when I
Stormed the town, and armed had come in
When you and the proud suitors were in fight,
I had made many of them bend the knee;
And you would have rejoic'd at the sight. 350
So to his son Ulysses talked he.
Supper brought in, they sit; and then came in
Old Dolius, sent for, from his husbandry,
And his sons, weary. Working they had been.
The nurse had bidden them come speedily. 355
They wondered to see Ulysses there;
But he to Dolius then gently said,
Pray for awhile your wond'ring to forbear;
We hungry are, and long have for you staid.
Then Dolius embrac'd him, and said, 360
Since long'd for you are come, and unexpected,
And to us by the Gods have been convey'd;
All hail, and by the Gods be still protected.
But tell me if Penelope yet have
The news received of your coming home,
The Ithacians in council resolve on revenge. 365
Or shall we send her word? That labour save,

Replied Ulysses, for she knows I'm come.
This said, he sat him down. His sons also,
With decent words, Ulysses entertain,
And lay their hands in his. That done, they go, 370
And by their father sat them down again.
Now fame divulged had the suitors' fate;
And people howling, came in ev'ry way,
And gather'd whereabout Ulysses' gate,
To fetch the bodies of the dead away. 375
And those that out of Ithaca had liv'd,
To fishermen they gave to carry home.
And staying on the place, though sorely griev'd,
Amongst themselves they into counsel come.
Eupeithes, father of Antinous, 380
That first of all slain by Ulysses was,
Spake first, and weeping for his son, said thus:
See how much mischief this man done us has.
He carried hence our ships, and ablest men;
And lost them all, as one that had design'd 385
Our utter ruin. Coming back agen,
He killed hath those whom he left behind.
Come then, let's to him quickly, lest meanwhile
He should pass over the wide sea, and get
Protection at Elis, or at Pyle, 390
And we so sham'd as we were never yet.
'Twill be a scorn to our posterity
To let the murder of our children so
Stay unrevenged, and put up cowardly.
For my part, to my grave I'd rather go. 395

Come quickly then, lest we prevented be.
This said, the people for him pity had.
Then came in Medon, who had scaped free,
And Phemius that scap'd too, and was glad.
And Medon to th' assembly spake, and said, 400
Ulysses of himself could not have done
This mighty deed without th' Immortals' aid.
I saw, when present I was looking on,
A God stand by that him encouraged,
In Mentor's shape he plainly did appear; 405
And then about the room the suitors fled,
And fell before Ulysses in their fear.
Next him spake Alitherses, who alone
Saw fore and aft. Hear me, you men, said he;
Of this great slaughter I accuse can none, 410
But even yourselves that gave no ear to me,
Nor yet to Mentor. We you counselled
The licence of your children to take down,
That spent the substance, and dishonoured
The wife of him that was of such renown. 415
My counsel, therefore, to you now is this,
Not to proceed, lest on yourselves you bring
More mischief yet, and of your purpose miss.
So said he then, but little profiting;
For more than half with alalaes up start, 420
And cry aloud, To arms, go on, proceed!
But quietly sat still the lesser part,
That with Eupeithes' judgment disagreed.
When they had clad themselves in glist'ning brass,

Without the town they came to rendezvous 425
In open field. Eupeithes leader was,
Seeking revenge where he his life shall lose.
Then Pallas to her father came, and said,
father, king of kings, what do you mean,
The war shall last between them, or be staid? 430
To this her father answer'd her agen:
Child, why d'ye ask me that? 'twas your request
The suitors for their insolence should pay.
Do what you please, but yet I think it best,
When you have done, that peace for ever stay; 435
And ever reign Ulysses and his race.
Which to confirm, oblivion I'll send
Of former acts the image to deface.
Then gladly Pallas did from heaven descend.
When now Ulysses and his company 440
Removed had their hunger with good cheer,
Ulysses said, Some one go forth and see
Whether the Ithacesians be near.
And then one of the young men standing there,
Went forth and saw them as he pass'd the sill; 445
And turning back, Arm, said he, they are here!
And then they all put on their arms of steel.
Ulysses and his son, and servants four,
Six sons of Dolius. And the old men,
Laertes, and Dolius, were two more. 450
Aged they were, but necessary then.
Then arm'd, Ulysses leading, out they go.
And Pallas, both in person and in voice

Resembling Mentor, in came to them too.

Ulysses seeing her did much rejoice. 455

And looking on Telemachus, he said,

Telemachus, this battle will declare

Who courage has, who not. Be not afraid:

That you dishonour not your stock beware.

Father, said he, you shall see by-and-bye, 460

You need not be ashamed of your son.

Laertes this discourse heard joyfully,

And to the Gods cried out in passion,

ye kind Gods, and happy day is this!

joy! My son and grandson are at strife

*And coming near the house of Laertes, are met by Ulysses and Laertes, with
Telemachus and servants, the whole number twelve, are overcome &
submit. 465*

Which of the two the most courageous is,

And ready to buy honour with his life.

Then Pallas to Laertes said, My friend,

Son of Arcesius, whom the Gods do love,

With all your force your spear now from you send. 470

But pray first unto Pallas and to Jove.

He pray'd, and threw his spear, which th' helmet smote

Of old Eupeithes, and went into's head.

Down dead he fell, the helmet sav'd him not.

His armour rattled, and his spirit fled. 475

And then fell on Ulysses and his son,

Upon the foremost, both with sword and spear,

And surely had destroy'd them ev'ry one,

Had not Jove's daughter, Pallas, then been there.

She to the people call'd aloud, and said, 480
Hold Ithacesians; the quarrel may
Without more blood be ended. They, afrai
Of th' heavenly voice, began to run away.
Ulysses yet not ceased to pursue
The captains of his foes, till from above, 485
In thunder, Jove his sooty bolt down threw.
Then Pallas said, Beware; offend not Jove;
And glad was then Ulysses to give o'er.
By Pallas were propounded terms of peace,
In Mentor's shape, and each part to them swore. 490
And thus it was agreed the war should cease.

FINIS.

The Poetry

A view of Chatsworth House, a stately home in the Derbyshire Dales, from the south-west, c. 1880 — in 1610 Hobbes became a companion to William Cavendish, 2nd Earl of Devonshire, and he served at Chatsworth as his private tutor for many years.

DE Mirabilibus Pecci: BEING THE VVONDERS OF THE PEAK IN
DARBY-SHIRE, Commonly called The Devil's Arse of Peak. In English
and Latine.

The Latine Written by Thomas Hobbes of Malmsbury. The English by a
Person of Quality.

London, Printed for William Crook at the Green Dragon without Temple-
Bar, 1678.

LICENSED.

Septemb. 3d. 1677.

Rog L'estrange.

AN ADVERTISEMENT.

THIS LATINE POEM, writ by the famous Mr. Thomas Hobs of Malmsbury, hath got such reputation, that many English Readers had a great desire to be acquainted with it, for whose sakes it is now translated into English, although without the knowledge of Mr. Hobs; who it is hop'd will not be displeased with this attempt which is left to others Idg•ments, whether done well or ill. Reader farewel, but do not forget to peruse that excellent Translation of Homer by Mr. Hobs. I think the most exact and best Translation that ere I saw.

TO THE NOBLE LORD WILLIAM EARL OF DEVONSHIRE CONCERNING THE WONDER OF THE PEAK. A POEM.

ON TH' ENGLISH Alps, where Darbies Peak doth rise,
High up in Hills, that Emulate the Skies,
And largely Waters all the Vales below,
With Rivers that still plentifully Flow,
Doth Chatsworth by swift Derwins Channel stand,
Fam'd for it's Pile, and Lord, for both are grand.
Slowly the River by its Gates doth pass,
Here silent, as in Wonder of the place,
But does from Rocky precipices move
In rapid streams below it, and above.
A losty Mountain guards the house behind,
From the assaults of the rough Eastern wind;
Which does from far it's rugged Cliffs display,
And Sleep prolongs, by shutting out the day.
Behind, a pleasant Garden does appear;
Where the rich earth, breaths odours every where.
Where in the midst of Woods, the fruitful Tree
Fears without prune-hook, seeming now as free.
Where by the thick leav'd roof the Walls are made
Spite of the Sun were all his beams display'd
More cool than the fam'd Virgil's Beechen shade.
Where Art (it self dissembling) rough hewn stone
And craggy flints worn out by dropping on

Together joyning by the workmans tool)
Makes horrid rocks, and watry caverns cool.
The Water that from native Cliffs had source
Once free and unconfin'd, throughout it's course,
By it's own Country Metal is led on
Captive to Rocks of Artificial stone.
There buried deep, it's streams it doubly throws
Into two circling Channels as it goes,
Through thousand cranies, which by art it does.
Then girds the Rock with many a hollow vain,
Frighting all under with surprising rain.
Thence turning it a Marble font does store,
Until it's lofty brims can hold no more.
And entring the house, obsequious is
To Cook and Butler, in their services.
And gushing up within the midst does spout
His Crystal waters ev'ry where about,
Fit for the hands, from the tall Cisterns out,
And though to this but four vents we assign,
Calliroe's not so fair that spouts from nine.
The river turning off a little space,
Part of a garden's seen that fronts the place.
Two rows of Crystal ponds here shine and dance
Which trembling wave the Sun beams as they glance,
In which vast shoales of fishes wanton float,
Not conscious of the prison where they'r shut.
How does it please when as the Nymphs fling in
The prey intic'd, to the bright flouds again,
T' observe the method that the wantons use,

First to inveigle men, and then refuse!
What can more gratefull or Surprising be,
Than gardens pend'lous on high mounts to see?
Within the midst of all the waters stand,
Caesarian Piles built by a womans hand.
Piles fit for Kings to build, and Monarchs rear,
In Cavendisian Lordships doe appear;
The petty products of a Female care.
But of fam'd Shrewsoury's great Countess this
The least of thousand commendations is.
To whom vast Structures their foundations own;
Who got great wealth with great and good renown;
Who by her candor made all friends in power,
And with her bounty shin'd upon the lower;
Who left an Off-spring numerous and great
With which the joyful Nation's still repleat;
How Sweet it is upon the Sandy shore
Of Crystall Pooles, great Nature to explore!
Or to my Lord Small gifts of verse prefer,
Wherein those happy fields I may declare
Prest by the Muses, which still urgent are.
A more commodious soile they never knew,
Nor a more friendly Lord had title to.
From hence, on rising ground, appears a neat,
And fair ascent, up to the Pallace gate.
Royall, August, sublime without tis seen;
Large, neat, commodious, splendid, rich within.
What thou may'st find in Marble figur'd out
Of Poets fables, or old Hero's stout,

Dwell not upon't; nor cement hard as stone,
Nor count the faithful Servants, one by one.
But the great Master celebrate my Muse.
To whome descended from an antient House,
Devon gives princely Titles, Derby Cares:
Who in a constant breast, discretion bears.
Magnificent, not lavish, still he spends
His riches freely, and amongst his Friends;
He of your Quire is the only grace,
He for the Muses finds a resting place,
And pleasant shades, and grateful leisure gives,
And he from them large Eloquence receives
With a discerning mind, 'twixt good, and ill.
Next view his Consort wistly, view her Still,
Descended from the Bruses antient line,
Whose Kingly Stock does in her visage shine.
Then view their Noble Off-spring; but above
The rest a Nymph, whom Jove himself may love.
With two Sweet Youths, who Angells might be said,
The common pledges of the Marriage bed.
These with their Parents may be wonder'd at;
What else of Miracles thou may'st repeat,
Fall short of these, and are not nigh so great.
Of the high Peak, are Seven wonders writ.
Two Fonts, two Caves, one Pallace, Mount and Pit.
To wit that Stately Pallace we have nam'd
But now, is first among the seven fam'd.
O'th' rest discoursing, Some who long'd to know
The cause of things, to see them joyn to goe;

And I ('twas worth the while) amongst them too,
'Twas at the time the earth did tribute pay,

And the hot Sun the dew had wip'd away
From off the stubble, when we first begun
Our journey, and to Guide us hired one:
Thus we set forwards from the gates, and make
Pilsly and Hassop in a rugged track.
From thence our horse with weary feet and slow
Towards a steep Hill's high top, doe climbing go;
And after many a tug and weary Strain,
Halfe breathless, they the Summity do gain,
Turning about with wonder we espy
The birds now lazily to creep, not fly.
And that the Pico of the Mountains brow
Had pierc'd the body of the Clouds quite through
Derwin appeares but as a crooked line,
And Chatsworth as a point it doth entwine.
W'had gone but little further, when we found
The Hills soft back, cut deep with many a wound.
And did the earth in whitish ranks espie
Cast up in heaps, upon the surface lye.
Tis a high soil; but cover'd with a crust
Of brittle earth, soon crumbling into dust;
Which least by it's own weight it should fall down.
Nature hath propt it with a roof of Stone.
But the dark Prince of wealth divides throughout,
In thousand channels, which himself had cut,
In order'd ranks the Stone; and each so drawn

From th' Eastern point, unto the Western one
You'd think they felt not the effects alone
Of heat and warmth, but that they view'd the Sun.
The griping hand of Dis within these beds
Had stor'd of better mettals the crude seeds:
To be hereafter to perfection brought
By the Sun beams, as they upon them wrought,
Till then for to be guarded by the Stone,
From all assaults sufficient Garrison.
But all in vain, for neither can the Sun
With oblique ray, bring to concoction
The rougher leaden lump; nor is the ground
Sufficient guardian, for it's treasure found.
For man (wealth's great invader wheresoe're
It hidden lies) with fire and Steel does tear
The bowels of the earth; and rends in twain
The Stony cover of the leaden vein.
And boldly dares, if poverty compel,
To rob th' Exchequer, of the Prince of Hell.
Not alwayes without danger, two were caught
As in their Mothers womb they deeply wrought
By death; who suddenly o'rewhelm'd them there,
Where they themselves had digg'd a Sepulcher.
The inlets (which with narrow vents admit
But hardly down those who are forc'd to it
By want, whose bellies are by hunger fit)
With beams of wood the Natives still distend,
And prop their way, as to the veins they bend.
A people expert in experienc'd wo,

Damn'd to the Mines, for many years ago;
That all may see they fell not unawares,
But were long sought for, by infernal snares.
Which now the main supporters take away
That did the earths weak brittle surface stay,
And gather to the neighbouring shades below
The souls, prest forth from their crust bodies now.
Bodies by bodies in these deeps we sound,
Thus arrows lost, are still by arrows found.
Before our feet, a Corps digg'd up we see,
Which minds us what we are, or ought to be.
Much like the body we about us bring.
T'other lies buried in the earth, but still
Hopes an extraction when 'tis Heavens will.
Upon the earth that from the mine was thrown,
A lazy people drawn from e'ry Town,
To see the mournful spectacle came down.
Two women weeping in the croud we spi'd;
One for the loss of joyes that she had tri'd,
T'other for want of hopes are now denied.
Ones flame continual use had near expir'd,
T'other with itch of novelty was fir'd.
Both mourn, because that both their joyes have lost,
But she who last had tasted them, the most.
Let them still mourn. We in our way go on,
And now four thousand paces we had gone,
By our horse feet we count, as oft the Stone
In equal space each foot precedeing still
In equal space each foot proceeding still

Before its fellow, now hath felt their heel.
Our shadowes go before, and shortest shew
What course the Sun bear's, and what course we go,
Many small Villages on either side
We leave behind us, as we onward ride,
The last is Hope; the rest I'll not rehearse,
Their names are too too cumbersome for verse.
On hollow ground, repleat with mines below,
And fill'd with mortals, high aloft we go.
The horse with hasty feet beats on the soil,
Redoubled eccho's from their hoofs recoil.
And in an hours space, or thereabout,
To a steep Mountains precipice we're brought,
It was great odds we did not headlong go
Into the neighbouring village stood below.
But we with winding steps, and wary foot
Strive as we may with safety, come unto't.
First we the Sun upon our right hand place,
Then turning to the left, with a soft pace
We downwards going to our feet confide.
Then again mounting on the Hills left side
Into the Village we securely ride,
Which built on a high Rock commands the sight
Of all the Passengers that travel by't;
Call'd from the Castle near it, Castleton.
Not famous for the warlike Deeds there done,
Not great, nor built with Art, not ever could
Against the Canon-shot it self uphold,
Nor yet impregnable to those of old;

But ancient and built up of Stone it bears
The injuries of time, and weather dares.
Under the Lords, that kept the mines of yore
It might of Thieves repulse the sudden power.
Behind a ruin'd mountain does appear
Swelling into two parts, which turgent are
As when we bend our bodies to the ground,
The buttocks amply sticking out are found.
I'th' midst there is a Cave: and on each hand
A lofty Rock does as supporter stand
Of a vast weight of earth, which else would fall,
So to the midst with safety guards us all,
And now we're come (I blushing must rehearse)
As most does stile it to the Devils Arse;
Peaks Arse the Natives.
A noble Cave between two Rocks appears,
Unto the Sun unknown, but to the Stars
Fearing to be immerg'd, and both the Bears
Turn'd, it its mouth with horrouer does present:
Just like a furnace, or as Hell they paint,
Swallowing with open Jawes the Damned croud
After the sentence is pronounc'd aloud.
On horseback we our entrance make, and spy
Horses within, and haycocks mounted high.
But we with wonder and amaze admire
The tall prodigious Rocky Hemisphere,
How without prop 'tis capable to bear
So vast a weight, how it the mountain stayes,
And the eternal Geometrician praise,

Through the thick Arch, we see the water stain'd
To fall in drops, which on the earth retain'd,
Even then to their own Country the Sea,
Seek out returns with much perplexity;
In little Channels even then they search
For fellow streams, to fortifie their march.
From whence they teaching, we these notions get,
Rivers proceed not from the earth's receipt
Of the salt billowes by the sandy shoars,
Which still imbibe them at their hollow pores,
As if the straitned waters were forc'd up,
The Main being taller than the mountain's top;
But by the Suns hot rayes the Sea on high
Mounts up in vapours, which do wandring fly
Drove by the winds, which cooling still as soon
As the heat fails them, or the Sun goes down,
In num'rous tears descend unto the earth,
From which collected, Rivers have their birth.
To view the dark recesses of the Cave
We thought it not amiss good lights to have.
Dismounting, a she-Native of the place
Leads us on forwards, with a gentle pace,
Handsome enough, and Girle enough she was;
Who with her steady foot, and accent clear,
As guide emboldens us with many a cheer.
Making our entrance with a confus'd light,
Two Rocks with crooked backs drive from our sigh
The beams of day, and bending down below,
On all four force us through their Arch to go.

Sometimes erect, then grov'ling tow'rds the ground,
In figures both of beasts, and men, we're found.
Until at length the slow and humble source
Of a dark River crossing, stopt our course.
A stream whose Channel ran tili now beneath
The earth, here under the low Arch does breath.
And winding in its Channel to and fro,
Not alwayes does irrevocably go.
Sometimes it bosomes you within its bay,
Then jetting out, it drives you far away.
Thus far we go; beyond it none can have
The least admittance, who e're credit gave
To the old Womans Fable of the Father,
Who did forsooth well fraught with lights swim over
A little ford, but durst not further roame,
Lest sunk in night, he ne're should backward come;
But we return, and with wet feet tread o're
The Sand again, that we had trod before.
The night and shades we now behind us leave,
And the blest day-light once again receive.
Got out, as is the pole a Mountain tall
Lifts up his head, like an old ruin'd Wall
Ready made weak by breaches now to fall.
Tis said eternally the Sand falls down,
Without the hills least diminution;
Strange this if true; and yet the Pyrami'd
Of falling sand, still gathering to a head,
Gives tacite Items that the Flux begun
By some great ruine, and will ever run

Until the mountains top and that be one.
And though the most call't Mam Tor, nev'rtheless
Maim'd for the cliff I rather should express.
Which does in English a torn Rock denote,
And the decrepit hill gives favour to't.
Turn'd to the left a thousand pace or so,
To the Peak-Forrest without Tree we go,
Hem'd in with Stony fence the naked Deer
Cold Winter pinches, not a leaf does here
To shelter them upon these hills appear.
Summers fierce heat does scorch them, not a shade
From the Suns ray, to cover them is had.
Many the bloody wantonness of man
Destroy's with Dog his lov'd companion.
Many the changes when the Heavens frown,
Some Elden with wide jawes does swallow down.
Of the torn earth a dire hiatus 'tis
Which should I labour truly to express,
The Ancients I to councel call in vain,
For no such thing the Poets e're could feign,
How e're my Muse, we some essayes must make.
And first the figure of its mouth let's take:
Let the apt fimily be but compleat,
To small things, so, thou may'st compare what's great:
Tell me, tell't me alone, tell't in my ear.
Whisper't, that none but thou and I may hear;
She's dumb, as conscious of the form obscene.
Upon the side of a fair hill that's green,
Its rim descending with the mountain's seen.

Driving off herds that graze around it far,
And sucking with dark lungs the pliant air.
While from the edge we prostrate view't, the sight
O'th' vast abyss does each of us afright.
With fear and dread the bold spectator spies.
No bounds to stop the progress of his ey's.
And though the stony battlements assure.
Whos' ere leans on them, may have sight secure,
Yet still distrust our fearful minds invades,
And we retire from the dreadful shades.
But through the field we diligently search
For stones; thrown in, long is their silent march,
At length by strokes their Journies end they speak,
(If any end, they in their journies make.)
Cast in they sink, and in their sinking knock,
After long pauses, on a hidden Rock.
Thence tilting, ten times they the strokes repeat
In vain, not center'd on a bottome yet.
And now so oft deceiv'd, we strive at length
Whole towers to throw in, had we but strength,
Whole buildings, roofs and all, vast mountains tall,
(Hid they been there, for 'twould have swallow'd all)
But a vast weighty stone, such we could get,
We by main strength, force from its Native seat.
And rowling it along th'enclining land,
Upon the sacred brink, we let it stand.
Then this repeat. Thou God to shades below,
Praefect in chief of torments, see we go
Of our chance certain, and high seats of glee,

(if they say true are rob'd in black like thee)
This torment add unto those many more
Thou hast invented, for the damn'd in store.
In thy dominions if a soul thou hast
Fam'd for rebellion, or for breach of trust,
Beneath this Chasme let it streight be put.
Say it be Simon; or Iscariot.
Or place the Gyants in a trice you'l see,
Bruis'd they the shadows, of a shade will be.
But O ye Soul's who shut up with them sweat
Known and belov'd by us, make quick retrat,
And slight not our advice. This said the stone
We drop, whcih circled in thick mist is thrown
Against a Rock, the Cavern groans the while,
Loud sighs are vented from the shaken Pile.
From Rock to Rock, the sound goes downward still,
Less heard by us but the more heard by Hell,
The third and fourth percussion's nearer made,
With awful sound affright each list'ning shade.
In short against Avernus craggy throat
At the eleventh stroak, it whispers out
Its journey only; what 'tis more you hear
After that blow, brought faintly to your ear,
Does but the Image of a sound appear.
Away the shades, swift as the winds do glide,
In vaults of Erebus strive to be hid,
In silence the mean while descends the Stone;
Through the infernal Spheres it post doth run
And passes them in order one by one.

Into the confines of dread Dis it goes
And empty seats in Limbo overthrows.
From thence by intense flames it moves in hast,
And Souls red hot in Heaven to be plac'd
(Purge from their dross as are the Pipes by fire
Tobacco er'st had sullied) and the Sphere
Of Infants unregenerate it flyes.
(Unconscious of its fault which tortur'd cries)
Thence sinking to the utmost Hell it goes
And center passes; where the wise suppose
Or Aristotles Sect should top, and so
Ascending to the t'other side does go.
Now the affrighted Ghosts turn back again
Freed from the object which had giv'n them pain.
Amongst which number Sysiphus alone
Does the approach lament of such a Stone,
More busky and more weighty than his own
'Tis said great Dudly to this Cave came down
In fam'd Eliza's Reigna a Peer well known.
He a poor Peasant, for a petty price
With Rope around his middle does entice,
And pole in hand, like to Sarissa tight,
And basket full of Stones down to be let
And pendulous to hang i'th' midst o'th' Cave;
Thence casting stones intelligence to have
By listning, of the depth of this vast hole.
The trembling wretch descending with his pole
Puts by the Stones, that else might on him rowl.
By their rebounds casts up a space immence,

Where every stroak does death to him dispence
Fearing the thread on which his life depends
Chance might cut off, e're Fate should give commands
After a hundred yards he had below
I'th' earth been drown'd, far as the Rope would go
And long enough hung by't within the Cave;
To th' Earl (who now impatient was to have
His answer) He's drawn up, but whether fear
Immoderate distracted him, or 'twere
From the swift motion as the Rope might wreath,
Or Spectrums from his fear, or Hell beneath
Frighted the wretch, or the Souls cittadel
Were storm'd or taken by some Imp of Hell,
For certain 'twas he rav'd; this his wild eyes,
His paleness, trembling, all things verifies.
Where venting something none could understand,
Enthusiastick hints ne're to be scand,
He ceasing dies after eight daies were gone.
But th' Earl inform'd, how far the Cave went down
He trembling from it hasts, not willing now,
Nor yet this way, down to the shades to go.
From hence within a Vale that hidden lyes;
A thousand paces off, a Fount doth rise.
From the low caverns of a grassie hill;
With double mouth it's waters gushing still.
Which since th' admir'd flux o'th' greater Sea
Doth by report in its small Channel play,
We thought it good (although the Sun made haste
And drove his Chariot quick into the West)

To stay a while, and haply so to see
When that the wonder of the Flux would be
With fame co-witnesses o'th rarity.
That which boils up with trembling waters bright
O'th' two the bigger, chiefly worth our sight,
A font receives not equal unto those
Are made by art, but yet by much out goes
What Fountain head; ere from wild chance arose.
Thence flowes, unless what doth at bottom keep
Two Cubits broad, three long, one Cubit deep.
One when no more then's own it doth contain,
But to it by the forreign floud doth gain.
A mark is by the swelling waters made,
Which gives the stony brink a signal shade.
Which by its blackness to have ebb'd of late
Discerning it uneasie seem'd to wait
So long until the tide again came on.
So we our Horse heads turn for to be gone.
When we're call'd back by th' gushing waters noise,
And see them plainly on the Stones to rise.
Now the full Fountains waters boil apace,
As when fierce fires we under Cauldrons place,
The water cannot rest that is above,
But shuns the mettle, and does volant prove.
When near the Font from the aforesaid head
A rivulet does suddainly proceed,
And pouring from above its streams deep in,
Helps the augmenting waters to attain
There wonted height, which got, decrease again

When streight the rivulet that with such force
Powr'd from above it's waters, stops its course.
And the dry Earth now thirsty grown for more
Drinks off the cups she had disgorg'd before.
Part of the Channel now dispers'd doth flow
Forth from the well, part under ground doth go.
Small thefts of Moss from off the Stones were there,
Grass, Chaff, torn bits of paper, and such geer.
Or what 'tis else its shallow stream can bear,
That we fling in, returning it doth come
Together with it, to earths hollow womb.
And now the humble Fount so low was grown
It scarce retain'd the waters were its own.
When as the tides return, again they swell,
Again to wonted Feavers trembling boil,
Increas't by forreign flouds so far to gain
Their bounds, and Tropick stations to attain,
Lading their shoars still with a fresh supply
So far, and then again they falling fly.
But the encreasing shades forbid our stay
Which monstrous grown Gigantick forms betray.
Our journey we hast on, but as we go,
We searching strive by ev'ry sign to know
From what hid cause, so great a strife should Spring.
For neither saltness, nor yet any thing.
That's common to the Water of the Sea
Are in this Fountain ever found to be.
On the Moons influence it don't depend,
Nor does it at set times its flouds extend,

(As does the Sea) unto these tides there is
No Rules from any Ephemerides.
What then should be the cause? in short 'tis this.
The water which from under ground doth rise
And with its forreign stream fills up the Well,
Does not come thither brought by 'ts own Cannel,
And willingly anothers right invades.
But while the footsteps of the floud that leads
It followes, seeking through the womb of earth
For Fountains, whence its waters may have birth,
On subterraneous Caves its flouds do fall,
With narrow vent, and entrances but small.
Hither as oft as that the waters flow,
With swelling tides, and stop the vents below
With their swift currents, suddenly the air
Shut up within, does for the place prepare
Defence against the waters, and deny
Their entrance, having no where for to fly.
And as there's nought then air inclos'd more strong,
It bears against the watry croud that throng;
Then as thick troops through narrow portal strain.
The first stick at the threshold, the remain
In a condenced croud before the gates
Make a full stand; part urges on their mates,
Part wandring seek out for some other way;
So the excluded waters at their stay
Impatient grown, and swelling, go astray;
Then roving, to this Font are slowly brought,
Hence 'tis with show'rs when the earth is fraught,

The fluxes happen ever and anon,
As now, three times they rise, three times go down;
With constant droughts but when the earth hath been
Burnt monthly then the wonder scarce is seen.
Now out of sight daies waggoner was gone,
And the Antipodes had shun upon.
The Sun burnt clouds but glimmer to the sight,
When at fam'd Buxton's hot bath we alight.
Unto St. Ann the Fountain sacred is:
With waters hot and cold its sources rise,
And in its Sulphur-veins there's med'cine lies.
This cures the Palsied members of the Old.
And cherishes the Nerves grown stiff and cold.
Crutches the Lamé unto its brink convey,
Returning the ungrates fling them away.
The Barren hither to be fruitful come,
And without help of Spouse, go pregnant home,
Into a Cistern square, the water flowes;
And seldome higher than five foot it goes,
The prying gazer's view the Walls prevent,
To th' R•in the Roof is an impediment.
One common Wall with open doors doth joyn.

While therefore turfie fewel does prepare
Our supper, jointly we resolved are
Our wearied limbs in the warm bath to cheer.
Soon stripp'd, the clearer waters round us glide,
And our naked limbs, with Christal covers hide,
Upon our face we swim, then backward try,

But fail. 'Tis known some others may outvy.
After an hours sport i'th' troubled floud,
Come out, dry sheets does our wet bodies shroud.
Then each again is cloth'd in's own array,
And the spread table speaks our suppers stay,
Night the mean time breaks forth from eryl glade
And conqu'ress covers all with darksome shade,
Till in by Candle-light our meats convey'd.
Where a small bowl, but not whole baths of broth
At our request is plac'd to be supt off.
The Mutton taken from't apart is laid;
From the same Sheep a smoaking loyn is had
Hot drawn from off the Spit, With a young fowl
From the demolish'd egg was lately stole.
And butter'd Pease by Spoonfuls. But rich Wine
In vain we seek; Ale in black pots that shine,
Good nappy Ale we drink. Thus supt, afar
We with Tobacco drive off sleep and care.
Aurora's Charriot had not driven on
And by her march spoke the approaching Sun,
By the eclipse of Stars that now were gone,
When we arose from sleep, again repair
To the warm bath, and amply tinged are
Now double dip't in its all healing floud,
Then once again, we our wet bodies shroud
Now dewy grown within our beds, and so
After nine hours sleep arise and go.
One thing remain'd, but highly worth our view,
Pool's hole, a Care so call'd, and near us too.

Pool was a famous thief, and as we're told
Equal to Cacus, and perchance as old.
Shrowded within this darksome hid retrieve
By spoils of those he robb'd, he us'd to live,
And towards his den poor travellers deceive;
But murder he with thefts did introduce
Thus they, and thus the Author lay abstruce.
This to behold a skilful guide we take,
And Captain in our darksome journeys make.
To a green hill on foot then bend our way
From Buxton near a thousand paces lay,
At bottom of the Hill to th' hollow ground
Stooping by a small vent a way is found;
More passable the further in you go.
At length we all with crablike gesture slow,
And light in hand, the passage do get through,
And with it gain an upright posture too,
A monstrous, horrid, shapeless den appears
Where the divided night, gives greater fears.
Now on the Court of the great Pool we look
Horrid, and rough with Rocks. The Ceiling struck
Shines with bright fiery sparks. We further yet
With mounted lights go on, and wary feet.
Vast, slippery, moist, and Stones to climb full hard
Loose, once to fall, now therefore to be fear'd,
Mountains and vallyes wild o'th' Stony Cave
We pass, with a blind River which each wave
With murmures flings, against the Rocks it meets

To th'top of a steep Mountain who doth get
From the low River rising, may with sweat,
And wearied hands, and weari'd feet, mount on
(Bolder by far than we) the utmost Stone
Of this dark Cave; three stadiums distant from
The entrance, by which to it we did come.
This Cave by Gorgon with her snaky hair
You'd think was first possest; so all things there
Turn'd into Stone for nothing does appear
That is not Rock. What from the ceiling high
Like hams of Bacon pendulous you spy,
Will scarce yield to the teeth; stone they are both
That is no Lyon mounts his main so rough,
And sets as a fierce tenant o'th' dark den,
But a meer yellow Stone. That grave old Man
That leaning lyes on his hard Rocky bed,
Himself may truly part of it be said.
Those Stars from the clear roof that shine so bright
Are nought but Stones which sparkle 'gainst the light.
The drop which hangs upon the pointed Stone
Is that so to? it is or will be one.
Took up between our fingers it is seen
To be nor Stone, nor Water, but between.
Of such a substance as a leaven'd Mass.
But on the flying water as we gaze,
Our lights perswade us now grown tow'rds decay,
To haste from the Caves labarinth away.
But turning first on the left hand, behold
The bed-chamber of Pool the robber bold;

All of plain Stone, ne're water'd with the dew,
Furnish'd with bed and chamber-pot we view.
And thence returning, to the day get clear.
Laborious climbing and of falls the fear,
Our wearied joints had now bedew'd with sweat,
Our creeping hands with the moist earth were wet.
When ready crouds at the Caves mouth attend
And waters mixt with flowers re-commend
Our hands to wash. Something indeed there is
Expected for these their civilties.
And justly too, were we wash'd ne're so clean,
Something of Dirtiness would still remain,
Unless by some rewards (although not great)
Their courtesies we should remunerate.
W'had seen now all the wonders of the Peak;
To Buxton we return, and dining quick,
Our horse are brought; and we through clouds convey'd
By Sheldon, (whilst two thousand pace are made)
And Ashford, with Shelmarton, petty towns,
To Chatsworth fam'd, where the swift Derwin runs.

THE END

ORIGINAL LATIN TEXT.

AD NOBILISSIMUM DOMINUM GULIELMUM COMITEM DEVONIAE, &C. DE MIRABILIBUS PECCI. CARMEN.

ALPIBUS ANGLIACIS, UBI Pecci nomine, surgit,
Darbensis Regio, montes ad sidera tollens,
Foecundasque rigans, non uno flumine, valles,
StatChatsworth praeclara domus, tum mole superba,
Tum Domino, Magnis, celeremDeroentis ad undam.
Miranti similis portam praeterfluit Amnis,
Hic tacitus, saxis, infra supraque, sonorus.
At Mons terga domûs rapidis defendit ab Euris,
Ostendens longè exertis juga consita saxis,
Praesectoquê die, producens tempora somni.
Summovet à tergo rupes gratissimus hortus,
Pinguis odoratis ubi tellus floribus halat;
Arbor ubi in mediis silvis sibi libera visa,
Dat fructus injussa suos; ubi frondea tecta
Arboreis praebent invito frigorasole
Porticibus, potioratuae (Maro) tegmine fagi,
Ars ubi (dissimulans artem) simulavit (ineptos
Consocians ferro lapides guttaque peresos)
In formes scopulos, & frigida fontibus antra.
Libera nativis veniens a rupibus unda
Accedit positis, patrio captiva met allo,
Et tellure latens, duplicem jaculatur in orbem,

Jussa, suum laticem per mille foramina caeca,
Et scopulum complexa tenacibus undique venis,
Jussa fugat misso subeuntes desuper imbre.
Hinc avecta creat sublimen marmore fontem,
Atque ingressa domum Promos conserva Cocosque
Ad juvat; in mediis surgitque penaltibus, alto
In fudens nitidam manibus de marmore lympham,
Et quamvis tubulis tantum effluat illa quaternis
Non tam Calliroe pulchrè fluit Enneacrune.
Reject o paulum suvio, sese ingerit horti
Angulus Alterius, tecta alta à fronte videntis.
Disposita hic gemino collucent ordine stagna,
Immersum tremulis undis quatientia solem,
Queis magno numero salit & lascivus inerrat
Non intellecto conclusus carcere piscis.
Quàm juvat hic, quoties piscatrix candida praedam
Abjicet illectam, morem observare puellis
Innatum, captare viros, & spernere captos!
Quàm libet in mediis mirari fluctibus, alto
Aggere suspensos hortos! quae Caesare moles
Digna Cavendisiâ certè est in gente, pusillum
Foemineumque opus. At quota pars ea laudis Elizae
Salopicae? quae multa, & magna palatia struxit;
Magnas divitias; magnamque bonamque paravit
Famam; quae magnos sibi conciliavit amicos,
Ornavitque humiles; Multam, magnamque reliquit
Prolem, qua regio late nunc usque beatur.
Quam dulce est, inter, circumque nitentia stagna
Insternete vias, aestivâ semper, arena,

Discipulum memet naturae tradere rerum;
Aut Domino exiguum meditari carmineMunus,
Et multum Musis, describere rura, rogatis.
Commodiore loco non usquam habitare, nec usquam
Candidiore frui Musae censeantur amico.
Hinc, ad tecta, solo surgente, ascendiur, Extra,
Augusta aspectu, sublimia, Regia; & intrae
Commoda, culta, capacia, splendida, ditia tecta.
At tu marmoreis quae sint descripta figuris
Ficta Poetarum, priscorum aut facta a virorum,
Ne cures, duro nec certans marmore Gypsum.
Ingenuos nec tu cupias numerare ministros,
Sed Dominum, mea Musa, colas, cui gente vetustâ
Orto, dat titulos Devoniam, Derbiam Curas.
Acrem iudicio; constantem pectore; lautum,
Vtentemque opibus, luxu sine, & inter amicos.
Ille Chori vestri summum decus; ille benigna
Otia dat Musis; sed & illi Musa diserto
Ore loqui, atque animo discernere turpia honestis,
Tum Dominam spectes, alta de gente Brusorum
Magnanimo proavos spirantem pectore Reges.
Amborumque vide Sobolem, imprimis{que} Puellam
Dignam, qua caleant Superi, binos{que} Puellios
Angelicos, casti communia pignora lecti.
Hos tu mireris, sobolem{que} & utrum{que} parentem;
Caetera quae referes miracula, sunt minoris.
Alti censer septem miracula Pecci.
Aedes, Mons, Barathrum, binus Fons, Antra{que} bina.
Scilicet illae ipsae, quas jam memoravimus, Aedes

Ornatae, tot sunt inter miracula, primae,
Intra has, ne Reliquis orto sermone quibusdam
Est visum, promptis rerum perdiscere causas,
Et mihi (nam {que} operae pretium est) ea visere mira.
Anni tempus erat quo tellus fœnora solvit;
Et vitreum sectis absterserat altus aristis
Jam Phoebus rorem, cum tecto excedimus, Ipsi,
Dux {que} viae servus {que} (sed ille vicarius) unus.
Egressi auferimur portis, petimusque propinquam
Pilsley, dein Hassop salebroso tramite. Montem
Hinc celsum, acclivemque, gradu lento, & pede lasso
Scandit equus, summum {que} jugum mox calcat anhelus.
Conversi miramur aves jam repere segnes,
Atque humiles claro transfigi vertice nubes.
Chatsworth jam punctum, Deroen jam linea curva est.
Vix iter inceptum sequimur, cum levia montis
Aspicimus crebro lacerari vulnere terga
Late {que} egesta liratum, albescere terrâ,
Est sublime solum, tenui {que} friabile gleba,
Quod ne quando sua possit subsidere mole,
Natura ingenito suffulcit provida saxo.
At saxum innumeris divisit in ordine rimis,
Ater opum Dominus. Cunct as {que} it a solis ab ortu,
Duxit in occasum, non ut sensisse calentem
Lampada Phœbaeam, sed & aspexisse putares.
Condidit his sulcis melioris cruda metalli
Semina, solari post perficienda calore,
Tutanda interera duræ munimine rupis
Ditis avara manus frustra. Nam nec satis igne

Concoquit obliquo Sol Plumbi terrea frusta,
Nec custodit humus sibi credita. Viscera terrae
(Certus opum quacunque latent regione repostae,
Insidiator) homo, ferro pervadit & igne,
Saxea plumbiferae rescindit tegmina venae
Exhauritque audax jam, paupertate jubente,
Tartarei praedo fiscum spoliare Tyranni.
Haud impune aliquando. Duos telluris in imo
Deprensos gremio, Mors occupat, at{que} profundo
Oppressos tegit, ipsi quod fodere, sepulcro.
Spiramenta (tubis aegrè admittentia iniquis
Quos castigato detrudit inedia ventre)
Ligniculis intus vincit, venam{que} sequutas
Materie fossas sustentat, gnara pericli,
At{que} experta, diu jam gens damnata metallis;
Vt non incautos scires periisse, sed Orco
Quaesitos. Terrae hic subducit fulcra caducae,
Expressas{que} animas, vicinis congregat umbris.
Corpora corporibus quaerunt. Sic credita saepe est
Emissa amissam monstrasse sagitta sagittam,
Ante pedes unum terra jacet ecce cadaver
Effossum; nostri{que} monet meminisse. Cadaver,
Marcida, iners, putris, nostri{que} simillima res est
Alterum adhuc tectum tellure, resurgere corpus
Expectat. Sedet egestae super aggere terrae
Turba supina, locis spectatum egressa propinquis;
Plorantes{que} duae mulieres. Altera sueta
Gaudia perdiderat; spem amiserat altera dulcem.
Alterius flammam, longus restrinxerat usus;

Alterius, spes effraenis {que} libido sciendi
Foverat ardentem. Plorant utrae {que} Maritum.
Illa quidem luget, luget magis altera sponsum.
Deploranto. Viâ qua coeptum est pergimus ire
Jam pede mille quater passus numer amus equino.
Et toties socium spatiis pes quilibet aequis
Praeteriens, terram alterno percusserat ictu.
Anteit umbra pedes, monstrat {que} brevissima, qua sta•
Titan parte poli, & quam nos spectamus euntes.
Linquimus opidula hinc at {que} illinc plurima. Quorum
Postremum tantum Romane dicere Spes est.
Caetera non referam impeditia nomina versum,
Per loca transversis longe late {que} sodinis
Plena, solo {que} cavo, & pleno mortalibus intus,
Ingredimur superi; medio tonat ungula Campo
Festinantis equi; at {que} una, aut paulo amplius, hora,
Praecipitis ferimur subita ad declivia Montis.
Pronum erat hinc vicum subjectum intrare cadendo.
Sed nobis ambage viam & cauto pede tritam
Ire placet, primum {que} ad dextras Sole recepto,
Et mox conversis laevo descendere eodem,
Paulatim, & pedibus nosmet concredere nostris.
Conscensis hic rursus equis, sub Monte sinistro,
Intramus pagum qui summa in rupe locatum
Aspect are jubet, deducto nomine, Castrum.
Castrum non aliquo bellorum insigne labore;
Non magnum, non arcis opus spectabile; nostris
Impar tormentis, nec inexpugnabile priscis.
Antiquum tamen, & saxo super aedificatum,

Sustinet annorum, ventorum incommoda temnit.
Forsitan & Dominis sub plumbi-potentibus olim
Latronum potuit subitos arcere tumultus.
A Castro statim mons scissus, detumet ambas
In partes; velut inclinato Corpore nostro
In crura extantes deturgent utra{que} clunes.
In medio sinus est: at{que} erectissima utrin{que}
Rupes quae ingenti redituram pondere terram
Destinet, & tutis succedere ad intima praestat.
Jam ventum est (pudet effari)Piutonis ad anum,
(Vt vocitant pleri{que}) loci vocat incola, Peak's ars.
Nobile suspensis aperitur rupibus Antrum,
Ignoto tibi Phoebe loco, sed segnibus Vrsis
Obverso, & reliquis mergi metuentibus astris.
In speciem{que} patet furni, vel qualiter Orci
Ora perhorrifico pinguntur hiantia rictu
Post Ite auditum, turbam sorbentis abactam.
Sublimes intramus equis. Tecta intus, & altos
Suspiciamus cumulos detonsi maner a prati.
Sed coelum attoniti miramur saxeum, ut ingens
Sustineat montis nullo fulcimine pondus;
Laudamus{que} tuas aeterne Geometer artes.
Cernimus & denso colatam fornice lympham
Guttatim elabi, & solidâ tellure receptam,
Aequoream in patriam reditum jam nunc meditari;
Jam nunc exiguis properare canalibus, undas
Quaerentem soeias, & fortius ire parantem.
Jam{que} Amnes ipsis videor didicisse magistris,
Non fieri, salsum terra potante, liquorem

Littora adipsa maris, quasi celsis montibus ipse
Celsior Oceanus conclusam expelleret undam;
Sed mare Phoebaeâ tenuatum surgere flammâ
In Caelum; actum{que} Eoliis err are ministris;
Mox Phoebos fallente algens, tota{que} recepta
Natura, in terras fletu descendere; & esse
Flumina collectas lachrymas. Placet ima cavernae
Vmbrosae, illatâ penetralia visere luce.
Descensos ab equis, antri virguncula civis
Praecedit, formosa satis, nimiumque puella;
Dat{que} animos, gressusque regit jucunda Celeustis.
Primumque ingressis confuso lumine sensim
Accedunt cantes utrin{que} diemque recurvis
Extinguunt sinibus, Tum demittentia sese
Arcto quadrupedes admittunt fornice saxa.
Erecto rursum rursum mox corpore prono
Pergimus, alterna pecudes homines{que} figura.
Donec transverso tandem prohibemur ab amne.
Amnem quem clausum fert sub tellure canalis
Hactenus, hic humili patitur spirare sub arcu;
Exit{que} inter dum non irrevocabilis unda.
Nunc speculatores propius, nunc longius arcens.
Huc nobis, ultra nulli licet ire, Nec est fas
Credere narranti vetulae de patre, quod olim
Lychnorum ingressus librali fasce, fluentum
Tunc modicum tranavit, & ulteriora sequutus,
Tantum ivit, quantum licuit remeare timenti
Incidere in noctem. Remeamus, & altius ante
Signatis, uda imprimimus vestigia arenis.

Exuimus noctem, dias {que} recepimus oras
Cum emersis, ante ora, poli mons aemulus alti
Tollitur, avulso praeceps ceu fragmine murus.
Defluere aeternum perhibent a vertice terram,
Nec tamen imminui montem. Mirabile dictu.
Constaret si certa fides. Sed acutus arena
Labente, agnoscens tumulus, tacito indicat auctu,
Continuum hunc fluxum primum caepisse ruina
Ingenii, aequato {que} habiturum culmine finem.
Quem {que} vocant alii correpto nomine Mam-Tor
Rectius hunc Clivum videor mihi dicere Maim'd-Tor
Quod sonat Angligenis Clivus Mutilatus, & ipse
Mons, nomen magnâ Mutilatus parte fatetur.
Progredimur, versi ad laevam, duo millia passum
Ad septam muris, dict amque, sine arbore, Sylvam,
Peccanam, Cervos nudis in montibus urit
Acris hyems, nulla tectos à frigore fronde;
Sicca aestas, nulla tectos à solibus umbra.
Saeva hominum, canibus sociis, lascivia multos,
Multos saeva necat varii inclementia coeli,
Et Fovea absorbet non magnam Eldenia partem,
Est ea terribilis scissae telluris hiatus,
Quem digne ut memorem veterum undi {que} convoco frustra

Concilium, nam tale nihil finxere Poetae
Tentandum tamen; & primum quam formam habet oris
Musa refer; formae simili composito. Magno
Nam potes exemplo parvis componere magna,
Dic tandem; dic summisso soli mihi, in aurem

Obticet obscoenae sibi conscia virgo figurae.
In latere herbosi collis, pascentia circum
Distituens armenta solum, rima{que} secundo
Monte patens, auras atro inbibit ore sequaces.
Quod procumbentes oculis de margine pronis
Cum inspicimus, vastum inspect antes terret inane,
Subjectum{que} horrens animus videt infinitum.
Et quamvis tutos jam securos{que} tueri
Continuo stantes hortentur marmore ripae,
Non animis eadem spondentibus, ora Barathro
Demimus, & diro regnatis Dite tenebris,
At lapides toto sparsos conquirimus agro,
Verbere qui tandem per longa silentia missi
Quis sit eis doceant (si quis sit) finis eundi.
Missisubsidunt lapides, feriunt{que} cadentes
Caecam (sed longo feriunt post tempore) rupem.
Inde docent decies repetitio verbere lapsi.
Deceptos decies necquicquam quaerere fundum.
Tum vero ardemus, si vis respondeat aequa.
Ingerere integras turres, & tect a (si adessent,
Et non angusto tellus nimis ore negaret)
Tota simul, totos{que} altos ibi perdere montes.
Quod licet, immani defixum pondere saxum,
Vi multa eruimus, prona & tellure volutum
Sistimus ad sacrum limen. Tum talia famur.
“ Umbrarum praefecte Deus cruciatibus, Ecce,
“ Securi nostrae sortis, certique supernae
“ Jampridem sedis (ni nos tibi concolor author
“ Fallat) tormentum jam inventis addimus unum.

“ Pone sub hac rimâ, tibi siqua sit umbra rebellis,
“ Insignilve fide violatâ. Subde Simonem,
“ Aut Judam (Judam Iscarioten,) Subde Gigantes.
“ Contriti fient Umbrarum protinus umbrae.
“ At vos, O animae, quibus incaluere retentis
“ Cognita amicorum, dilecta{que} corpora nobis,
“ Ferte pedem retro monitae, & non temnite dictâ.
Sic fati, lapidem demittimus. Ille per aur as
Stagnantes, densa mersus caligine fertur
In scopulum. Gemit horrendum percussa Caverna,
Collisae{que} cient alte suspiria moles.
Excussum primo, scopulus mox excipit alter,
Audito sonitu nobis minus, at magis Orco,
Territat arrectis jam stantes auribus umbras
Tertius, atque minis quartus propioribus ictus.
Quid moror? undeno dentatum guttur Averni
Verbere dum transit, se & tunc lapis ire susurrat.
Post id quicquid iners aer vix auribus adfert,
Non sonus est, sed imago soni. Vento ocyus umbrae
Diffugiunt, Erebi{que} tegi sub fornice certant.
Interea infernas percurrit in ordinae Sphaeras,
Descendens tacite saxum. Confinia Ditis
Attingit, vacuna evertitq, sedilia Patrum.
Inde per intensum festinans labitur ignem,
Candentesque animas (tubulorum more recoctas
Fictilium, quos, transmissa fuligine, pinguis
Infecit Peti fumus) coelo{que} locandas.
Infantumque semelnatorum pervolat orbem.
(Inscius admissi poena luit inscius, infans.)

Ultima tum subiens, infanda{que} Tartara, centrum
Transit (at haesurum promiseratEntelechia,
Credenda umbra tamen) fundum{que} ascendit adimum.
Et redeunt trepidi Manes residente favilla;
Quos inter timet, & fertunus Sysiphus aegre
Succesisse suo graviori pondere saxum.
Fertur ad hoc Antrum venisse Lecestrius heros,
Dudleius, notus Comes is regnantis Elizae,
Ille inopem quendam parvo (sic eredimus) ae•e
Conductum & longo succinctum pectora fune,
Instructum conto, Pelleam imitante Sarissam,
Exploratores cophino{que} ferente lapillos
Demitti, & media ussit pendere Caverna.
Inde jaci lapides, at{que} auribus aera pronis
Captari, inde cavum propius scrutarier altum.
Descendens pavide miser, accedentia saxa
Nunc removet conto, nunc desiliente lapillo
Calculat immensum spatium, numer atque, quot ict us
Tot mortes; & fila timet pendentia vitae,
Ne quis lascivus secet, injussu{que} Sororum.
Postquam bis centum sub terram circiter ulnas
Mersus substiterat, funemq, tetenderat omnem,
Satque diu tenso de fune pependerat, Antro
Extrahitur, cupido Heroi responsa daturus.
Verum, sive metus mentem expugnaverat ingens;
Sive celer motus torti vertigine funis
Immodica, Solio Rationem excusserat alto;
Sive Erebi, sive ipsa sui jam spectra timoris
Pallida terruerant; sive arcem mentis abactae

Spiritus inferni possederat improbus Orci;
Haud dubie furit infoelix. Sic lumina torva,
Mutatusque color, pallor, tremor, omnia monstrant
Ergo ubi non cuiquam intellect a profuderat, & quae
Aequabat magnis sententia nulla Prophetis,
Conticuit, Manes {que} dies post octo revisit.
At Comes audito quo pertinet us {que} Caverna,
Horruit, & (non hac, ne {que} nunc subiturus) abivit.
Hinc centum passus decies numer amus, & ecce,
In valle occulta, radicibus exilit imis
Graminei Collis, gemino Fons ore perennis.
Quem quoniam immensi mirandos aequoris aestus
Ludere in exigua fama affirmaverat unda,
Visum est (quantumvis Phoebo properante) morari
Paulisper, si forte aquulae miracula detur
Aspicere admotis, & famae testibus esse.
Quae vitreis ebullit aquis tremula unda, duarum
Major, splendidiorque & poscens sola videri,
Excipitur pu•eo, structis non aequiparando,
Sed qui fortuito quovis ornatior ortu est.
Inde soluta fluit, nisi quae fundo retinetur
Lata duos cubitos, tres longa, unum {que} profunda.
Vnum dico suo quando contenta liquore
Subsidet, at binos quando hospite tollitur undae.
Labra reclinatae signabat saxeae ripae
Linea, quam latices ipsi fecere tumentes,
Subnigris saxis modo detumuisse reperti.
Ergo cessatos iterum expectare labores
Taedet, & improbius visum est. Discedere prorsu•

Admotis properamus equis. Jam jam{que} abeuntes
Concussis revocamur aquis. Liquidos{que} videmus
Attolli latices; sensim{que} irrepere saxis.
Jam{que} fere pleno saltabat fervida fonte
Lympha, velut rabidus cum subditur ignis ahen•,
Nescia stare loco, refugit saevum unda metallum
Cum juxta fontem, condicto rivulus ortu
Erumpit subito, super infuso{que} liquore,
Praestat aquae solitos auctae contingere fines.
Quo perducta iterum decrescit, & illico rivi
De super immissi restinguitur impetus, & quae
Respuerat repetit sitiens sua pocula Tellus.
Distracti laticis pars effluit altera ripis
Fontis; pertuso infertur pars altera fundo.
Furtive muscosis erepta levissima saxis,
Gramina{que} & paleam & tenuis praesegmina chart•,
Sive aliud quicquam parva superabile lympa
Injicimus, rediens infert in viscera terrae,
Jam{que} humili fonti, proprius vix constitit humor,
Cum redeunt fluctus; Iterum ceu febre laborat
Vnde tremens; iterum aestuat; aucta{que} lymphis
Externis iterum tropicam contingere metam
Sufficit, accepto velans sua littora fluctu;
At{que} iterum residet, Sed nos vetat umbra morari,
Vmbra gigan•eas mentita Colossea formas,
Maturamus iter, sed quaerimus inter eundum,
Conamurque, omni collato discere signo,
Abdita quae tantum concivit causa tumultum.
Nam neque Salsedo, neque quid commune marinis,

His reperitur aquis; Phoebes nil imputat astro
Fons hic, temporibus nec tollitur (ut mare) certis,
Aestibus his nullam praefigit Ephemeris horam.
Ergo quid in causa est? Paucis sic accipe. Prodit
Quae tellure cavâ, fonti{que} ill abitur unda
Advena, non istuc proprio delata canali
Pervenit, at{que} volens alienos occupat ortus,
Sed dum ductricis sequitur vestigia lymphae,
Longinquosque petit, per terrae viscera, fontes,
Intratin angustis subeunda meatibus antra.
Huc quoties humor tumefactâ de fluit undâ,
Praecipitique aditum comprehendit flumine totum,
Protinus aura locum conclusatuetur, aquis{que}
Pernegat ingressum, nec habens quo cedere, pugnat,
Vtque est deprensa nihil obfirmatius aura,
Sustinet urgentes exili corpore lymphas,
Tum, conferta velut si portis irruat arctis
Turba, haerent, ipso defixi in limine, primi;
Quae sequitur stat pro foribus stipata caterva,
Parsque urget socios, alias dilabitur & pars
Quaesitura vias: Exclusus defluus humor
Intumet, impatiens{que} morae, expatiatur, & errans
Fertur in hunc fontem, lentarum impulsor aquarum.
Hinc fit post magnos guttis pluvialibus imbres
Transmissis, aestus fieri crebros, & in horas,
Fluctum (ut nunc) vicibus tolli, & subsidere ternis.
Sed post continuis tellurem ardoribus ustam,
Vix semel in toto cerni haec miracula mense.
Jam nostres fugiens visus, Auriga diei

Antipodas tota lustrabat Lampade; nobis
Languida succensae praebebant lumina nubes
Et simul ad celebrem tepidis deponimur undis
Buxtonam. Divae sacer est fons inclytus Annae:
Ambas miscet aquas calidae gelidae {que} ministra
Tellus; sulphureis {que} effundit Pharmac a venis,
Haec resoluta senum confirmat membra trementum,
Et refovet nervos lotrix haec lymphæ gelatos.
Huc infirma regunt baculis vestigia claudi;
Ingrati referunt baculis vestigia spretis.
Huc, Mater fieri cupiens, accedit inanis,
Plenaque discedit, puto, nec veniente marito.
Excipitur, ferme quadrato fonte, serena
Nascens unda & quin {que} pedes vehit alta natantes.
Spectator muris, & tecto excluditur imber.
Hospitioque eadem gratissima balnea nostro

Conjungit foribus paries communis apertis.
Ergo placet, coquitur dum cespite coena cremato,
Defessos lymphis refovere tepentibus artus.
Protinus exuti, nitidis illabimur undis,
Nudaque perspicuis velamus corpora lymphis.
Nunefacie prona namus; nunc nare supini
Tentamus. Bibimus. Nec enim omnia possumus omnes.
Postquam vexatis per totam fluctibus horam
Lusimus; egressi siccis lodicibus udi
Induimur. Mox quisque suo vestimur amictu,
Vestitos stratis expectat coenula mensis.
Nox atra interea simul evolat omnibus antris.

Et victrix tenebris involverat omnia caecis,
Donec succensis infertur coena lucernis.
Jam nobis lixae non integra balnea ovillae,
Sed modicum juris, consultis ponitur. Ipsa
Tum caro conditis thermis educta, seorsim.
Atque ovis ejusdem fumans à cuspidelumbus.
Et nuper rupto gallinaefilus ovo.
Pisaeque quae nobis converrat cochlear uncta.
ditia cùm frustra quaerantur pocula Bacchi,
Ollâ subridens bibitur cervisia nigrâ.
Coenati peto somnos arcessimus hausto.
Postera Phoebaeos ducens Aurora triumphos
Nondum vulgares Caelo dimoverat ignes,
Cùm somno excusso tepidis immergimur undis
Rursus, & infieimur penitus medicante liquore
Jam dibaphi; atq̃ iſerum rorantia corpora lecti•
Reddimus, & nonâ de somno surgimus horâ.
Vnica restabat, verum dignissima visu,
Haud procul hinc Spelunca Poli, sic dicta Caverna.
Insignis latro Polus, &, si credere famae
Debemus, furipar Caco, & forte coaevus.
Hac usus latebra consuevit vivere rapto;
Atque viatores spoliandos ducere in Antrum.
Verum & eisolenne fuit conjungere furtis
Caedem; Sic textit scelera authoremque Caverna.
Hanc inspecturi penitus, ductore perito
Caecarum assumpto ima sub tellure viarum,
Eximus, pedites collem petimus{que} virentem,
Distantem nostra vix passus, mille taberna.

Ipsas ad montis radices, concava tellus
Prostratis aditum pertusa foramine praebet
Exiguo, minus at praemissis invia plantis.
Omnes cancrino gressu, sumpta{que} lucerna
Quisque sua, tandem transmittimur, erigimur{que}
Antrum, horrendum, informe, ingens aperitur. Et atra
Divisa in partes nox dissilit atrior ambas.
Asperaque apparei Latronis, & horrida Saxis
Regia. Percussum rutilo micat igne lacunar.
Progredimur. Pedi bus{que} admoto lumine cautis,
Saxa ingentia, roscida, lubrica, & ardua scansu,
Libera, corruiura semel, nunc ergo timenda,
Saxosaeque feros montes valles{que} Cavernae
Transimus; fluvium{que} suas qui dissipat undas
Caecus in objectas impingens murmure rupes.
Qui scandet rauco surgentem à flumine montem,
Ille licet sudet{que}, pedes{que} manus{que} fatiget,
Dissita ab introitu stadiis tribus, ultima opaci
Pertinget (multo nobis audacior) Antri.
Speluncam hanc credas habitatam Gorgone primùm
Anguicomâ, & versa in rigidum sic omnia Saxum,
Nam lapis est, quodcun{que} vides. Laquearibus altis
Quae sicci tibi terga Suis pendere videntur,
Dentibus haud cedent. Durum sunt utra{que} saxum.
Non est ille Leo, Leo, quamvis erigat hirta
Colla jüba, sedeat{que} Antri ferus incola caeci,
Sed fulvus lapis. Ille Senex qui rupibus aspris
Innisus recubat cubito, pars rupis & ipse est.
Quaeque lacunari scintillam Astra micante,

Sunt nitidi illata gemmantes luce lapilli:
Guttaque quae saxi mucro nunc pendet acuti,
Numquid & illa lapis? lapis illa vel est, vel erit mox
Admoti exceptam digito deprendimus esse
Nec lapidem, nec aquam, verum media inter utrum{que}
Natura, quali{que} tenax humore farina.
Detinet intentos dum transfuga lymphæ, lucernæ,
Curtae perplexâ suadent exire Cavernâ.
Sed prius ad laevam remeantes, undiq, saxo
Obductum plano, Furis, nullo{que} madentem
Rore Poli thalamum, lecti, lasani{que} capacem,
Inspicimus. Superis tum demum reddimur oris.
Jam tepido fessos sudore rigaverat artus,
Scandendique gravis labor, & formido cadendi.
Reptantumque manus obleverat humida tellus.
Verum ante ora speus turba officiosa, lavandis
Praebibat manibus permistam floribus undam.
Scilicet exigitur tacite pro munere nummus.
Recte. Nam{que} haerent sordes ut cun{que} lavemur
Ni (quamquam levibus) referatur gratia donis.
Omnia jam Pecci Miracula vidimus Alti,
Buxtonamque iterum perlatis, & cito pransis
Adducuntur equi, nos qui inter nubila vectos,
Solliciteque decem numerantes millia passûm,
Per non insignes Chelmarton, Sheldon, & Ashford,
Ad Chatsworth referunt celerem Deroentis ad undam.

FINIS.

The Life of Mr. Thomas Hobbes of Malmesbury

1680 EDITION

Written by himself In a LATINE POEM.

And now Translated into ENGLISH.

LONDON: PRINTED for A. C.

and are to be sold in Fleetstreet,

and without Temple-bar. 1680.

THE LIFE OF MR. THOMAS HOBBS OF MALMESBURY.

IN FIFTEEN HUNDRED eighty eight, Old Style,
When that Armada did invade our Isle,
Call'd the Invincible; whose Freight was then,
Nothing but Murd'ring Steel, and Murd'ring Men;
Most of which Navy was disperst, or lost,
And had the Fate to Perish on our Coast:
April the fifth (though now with Age outworn)
I'th' early Spring, I, a poor worm, was born.
In Malmesbury Baptiz'd, and Named there
By my own Father, then a Minister.
Many things worth relating had this Town;
And first, a Monastery of Renown,
And Castle, or two rather it may seem,
On a Hill seated, with a double Stream
Almost environ'd, from whence still are sent
Two Burgesses to sit in Parliament.
Here lie the Bones of Noble Athelstane,
Whose Stone-Effigies does there remain;
Who for reward gave them the Neighbouring Plains,
Which he had moistned with the Blood of Danes.
Here was the Roman Muse by Adelm brought,
Here also the first Latin Schole was taught.
My Native place I'm not asham'd to own;
Th'ill Times, and Ills born with me, I bemoan:
For Fame had rumour'd, that a Fleet at Sea,

Wou'd cause our Nations Catastrophe;
And hereupon it was my Mother Dear
Did bring forth Twins at once, both Me, and Fear.
For this, my Countries Foes I e'r did hate,
With calm Peace and my Muse associate.
Did Learn to speak Four Languages, to write
And read them too, which was my sole delight.
Six years i'th' Greek and Latin Tongue I spent,
And at Fourteen I was to Oxford sent;
And there of Magd'len-Hall admitted, I
My self to Logick first did then apply,
And sedulously I my Tutor heard,
Who Gravely Read, althou' he had no Beard.
Barbara, Celarent, Darii, Ferio, Baralypton,
These Modes hath the first Figure; then goes on
Caesare, Camestres, Festino, Baroco, Darapti,
This hath of Modes the same variety.
Felapton, Disamis, Datisi, Bocardo, Ferison,
These just so many Modes are look'd upon.
Which I, tho' slowly Learn, and then dispense
With them, and prove things after my own sense.
Then Physicks read, and my Tutor Display'd,
How all Things were of Form and Matter made.
The Aëry Particles which make Forms we see,
Both Visible and Audible, to be
Th'Effects of Sympathy, Antipathy.
And many things above my reach Taught me.
Therefore more pleasant studies I then sought,
Which I was formerly, tho' not well Taught.

My Phancie and my Mind divert I do,
With Maps Celestial and Terrestrial too.
Rejoyce t'accompany Sol cloath'd with Rays,
Know by what Art he measures out our Days;
How Drake and Cavendish a Girdle made
Quite round the World, what Climates they survey'd;
And strive to find the smaller Cells of Men.
And painted Monsters in their unknown Den.
Nay there's a Fulness in Geography;
For Nature e'r abhor'd Vacuity.
Thus in due time took I my first Degree
Of Batchelor i'th' University.
Then Oxford left; serv'd Ca'ndish known to be
A Noble and Conspicuous Family.
Our College-Rector did me Recommend,
Where I most pleasantly my Days did spend.
Thus Youth Tutor'd a Youth; for he was still
Under Command, and at his Father's will:
Serv'd him full twenty years, who prov'd to be,
Not a Lord only, but a Friend to Me.
That my Life's sweetest Comfort was, and made
My Slumbers pleasant in Nights darkest shade.
Thus I at Ease did Live, of Books, whilst he
Did with all sorts supply my Library.
Then I our own Historians did peruse,
Greek, Latin, and Convers'd too with my Muse.
Homer and Virgil, Horace, Sophocles,
Plautus, Euripides, Aristophanes,
I understood, nay more; but of all these,

There's none that pleas'd me like Thucydides.
He says Democracy's a Foolish Thing,
Than a Republick Wiser is one King.
This Author I taught English, that even he
A Guide to Rhetoricians might be.
To Forrain Countries at that time did I
Travel, saw France, Italy, Germany.
This Debonaire Lord th' Earl of Devonshire,
I serv'd complete the space of twenty year.
His Life by Sickness Conquer'd, fled away,
T'exchange it for a better the last day.
But yet provided ere he di'd for me,
Who liv'd with little most contentedly.
I left my pleasant Mansion, went away
To Paris, and there eighteen Months did stay,
Thence to be Tutor I'm cal'd back agen,
To my Lord's Son, the Earl of Devon then.
This Noble Lord I did instruct when young,
Both how to Speak and Write the Roman Tongue;
And by what Arts the Rhetor deceives those
That are Illiterate; taught him Verse and Prose;
The Mathematick Precepts too, with all
The Windings in the Globe Terrestrial;
The whole Design of Law, and how he must
Judge between that which Equal is and Just.
Seven years to him these Arts I did Explain:
He quickly Learnt, and firmly did retain.
We spent not all this time in Books alone,
Unless you'l take the World for to be one;

Travel'd through Italy and France, did view
The sweet Retirements of Savoy too.
Whether on Horse, in Coach, or Ship, still I
Was most Intent on my Philosophy.
One only thing i'th' World seem'd true to me,
Tho' several ways that Falsified be.
One only True Thing, the Basis of all
Those Things whereby we any Thing do call.
How Sleep does fly away, and what things still
By Opticks I can Multiply at will.
Phancie's Internal, th'Issue of our Brain,
Th'internal parts only Motion contain:
And he that studies Physicks first must know
What Motion is, and what Motion can do.
To Matter, Motion, I my self apply,
And thus I spend my Time in Italy.
I scribbled nothing o'er, nor then e'r wrought;
I ever had a Mistriss that me taught.
Then leaving Italy, return we do
To Paris, and its stately Fabricks view.
Here with Mersennus I acquainted grew,
Shew'd him of Motion what I ever knew.
He both Prais'd and Approv'd it, and so, Sir,
I was Reputed a Philosopher.
Eight Months elaps'd, I return'd, and thought good
For to Connect what e'r I understood.
That Principles at second hand more clear,
By their Concatenation might appear.
To various Matter various Motion brings

Me, and the different Species of Things.
Man's inward Motions and his Thoughts to know,
The good of Government, and Justice too,
These were my Studies then, and in these three
Consists the whole Course of Philosophy.
Man, Body, Citizen, for there I do
Heap Matter up, designing three Books too.
I'th' interim breaks forth a horrid War,
Injurious to my Study, and a Bar.
In the year sixteen hundred forty, then
Brake out a Sickness, whereof many Men
Of Learning, languishing, gave up their breath
At last, and yielded to impartial death.
Wherewith when seized, he reputed was
The Man that knew Divine and Humane Laws.
The War's now hot, I dread to see it so,
Therefore to Paris well-belov'd, I go.
Two years elaps'd, I published in Print
My Book de Cive; the new Matter in't
Gratifi'd Learned Men, which was the Cause
It was Translated, and with great Applause
By several Nations, and great Scholars read,
So that my Name was Famous, and far spread.
England in her sad Pangs of War, and those
Commend it too, whom I do most oppose.
But what's disadvantageous now, who wou'd,
Though it be Just, ever esteem it Good?
Then I four years spent to contrive which way
To Pen my Book de Corpore, Night and Day;

Compare together each Corporeal Thing,
Think whence the known changes of Forms do spring.
Inquire how I compel this Proteus may,
His Cheats and Artifices to Display.
About this time Mersennus was (by Name)
A Friar Minorite, yet of Great Fame,
Learned, Wise, Good, whose single Cell might be
Prefer'd before an University.
To him all Persons brought what e'r they found
By Learning, if new Principle, or Ground,
In clear and proper Phrase, without the Dress
Of Gawdy Rhet'rick, Pride, Deceitfulness.
Which he imparts to th' Learned, who might there
Discuss them, or at leisure, any where.
Publish'd some Rare Inventions, to the Fame
Of their own Author, with each Authors Name.
About Mersennus, like an Axis, here
Each Star wheel'd round, as in its Orb or Sphere.
England, Scotland, and Ireland was the Stage
Of Civil War, and with its four years Rage,
Harras'd and wasted was; Perfidious Fate
Exil'd the Good, and Help'd the Profligate.
Nay, Charles, the Kingdom's Heir, attended then,
By a Retinue of Brave, Noble Men,
To Paris came, in hope Times might amend,
And Popular Fury once be at an end.
My Book de Corpore then I design'd
To write, all things being ready to my Mind.
But must desist: such Crimes and Sufferings I

Will not impute unto the Deity.
First I resolv'd Divine Laws to fulfil;
This by Degrees, and carefully I will.
My Prince's studies I then waited on,
But cou'd not constantly attend my own.
Then for six Months was sick; but yet at length,
Though very weak, I did recover strength,
And finish'd it in my own Mother-Tongue,
To be read for the good of old and young.
The Book at London Printed was, and thence,
Hath visited the Neighbouring Nations since;
Was Read by many a Great and Learned Man,
Known by its dreadful Name, LEVIATHAN.
This Book Contended with all Kings, and they
By any Title, who bear Royal sway.
In the mean time the King's sold by the Scot,
Murder'd by th'English, an Eternal Blot.
King Charles at Paris who did then reside,
Had right to England's Scepter undeny'd.
A Rebel Rous'd the Kingdom kept in aw,
And rul'd the Giddy Rabble without Law,
Who boldly Parliament themselves did call,
Though but a poor handful of men in all.
Blood-thirsty Leeches, hating all that's good,
Glutted with Innocent and Noble Blood.
Down go the Miters, neither do we see
That they Establish the Presbytery.
Th' Ambition of the stateliest Clergie-Men,
Did not at all prevail in England then.

Hence many Scholars to the King did go,
Expel'd, Sad, Indigent, Burthensome too.
As yet my Studies undisturbed were,
And my Grand Climacterick past one year.
When that Book was perus'd by knowing Men,
The Gates of Janus Temple opened then;
And they accus'd me to the King, that I
Seem'd to approve Cromwel's Impiety,
And Countenance the worst of Wickedness:
This was believ'd, and I appear'd no less
Than a Grand Enemy, so that I was for't
Banish'd both the King's Presence and his Court.
Then I began on this to Ruminare
On Dorislaus, and on Ascham's Fate.
And stood amazed, like a poor Exile,
Encompassed with Terrour all the while.
Nor cou'd I blame th'young King for his Assent
To those Intrusted with his Government.
Then home I came, not sure of safety there,
Though I cou'd not be safer any where.
Th'Wind, Frost, Snow sharp, with Age grown gray,
A plunging Beast, and most unpleasant way.
At London, lest I should appear a Spy,
Unto the State my self I did apply;
That done, I quietly retired to
Follow my Study, as I us'd to do.
A Parliament so cal'd did Govern here;
There was no Prelate then, nor Presbyter.
Nothing but Arms and Souldiers, one alone

Design'd to Rule, and Cromwel was that one.
What Royalist can there, or Man alive,
Blame my Defence o'th' Kings Prerogative?
All Men did scribble what they wou'd, Content
And yielding to the present Government.
My Book de Corpore through this Liberty
I wrote, which prov'd a constant War to me.
The Clergy at Leviathan repines,
And both of them oppos'd were by Divines.
For whilst I did inveigh 'gainst Papal Pride,
These, though Prohibited, were not deny'd
T'appear in Print: 'gainst my Leviathan
They rail, which made it read by many a man,
And did confirm't the more; 'tis hop'd by me,
That it will last to all Eternity.
'Twill be the Rule of Justice, and severe
Reproof of those that Men Ambitious are.
The King's Defence and Guard, the peoples Good,
And satisfaction, read, and understood.
I, two years after, Print a Book to show
How every Reader may himself well know.
Where I Teach Ethicks, the Phantomes of Sense,
How th'Wise with Spectres, fearless may dispense.
Publish'd my Book de Corpore withal,
Whose Matter's wholly Geometrical.
With great Applause the Algebrists then read
Wallis his Algebra now Published,
A Hundred years that Geometrick Pest
Ago began, which did that Age Infest.

The Art of finding out the Numbers sought,
Which Diophantus once, and Gheber Taught:
And then Vieta tells you that by this,
Each Geometrick Problem solved is
Savil the Oxford Reader did supply
Wallis with Principles Noble and High,
That Infinite had end, and Finite shou'd
Have parts, but yet those without end allow'd.
Both which Opinions did Enrage and Scare
All those who Geometricasters were.
This was enough to set me Writing, who
Was then in years no less than Seaventy two,
And in Six Dialogues I do Inveigh
Against that new and Geometrick way,
But to no purpose, Great Men it doth please,
And thus the Med'cine yields to the Disease.
I Printed then two Treatises that stung
The Bishop Bramhal, in our Mother-Tongue.
The Question at that Time was, and is still,
Whether at God's, or our own Choice We Will.
And this was the Result proceeding thence,
He the Schools follow'd, I made use of Sense.
Six Problems, not long after, Publish'd I,
A Tract but small, yet pure Philosophy.
Wherein I Teach how Nature does cast down
All weighty Bodies, and huge massy Stone:
How Vapors are exhaled by the Sun;
How Winds engender Cold, when that is done:
The Reason of their Levity, and how

The Barren Clouds do hang on Heaven's Brow;
How move, and when that they are pregnant grown
With Moisture, do in violent Showers pour down.
By what Cement hard Matter is conjoyn'd,
And how Hard Things grow Soft, the Cause do find:
Whence Lightning, Snow, Ice do proceed, and Thunder,
Breaking through wat'ry Clouds, even to wonder:
How Loadstones Iron attract: how, and which way
They th' Arctick and Antarctick Poles obey.
Why from the Sea unequal Waves do glide,
I'th' Year, or Month, each Day a double Tide;
And why a Ship doth Sail against the Wind,
In that small Treatise all these things you find,
Which may in time tread with applause the Stage,
As yet unblam'd in such a Carping Age.
The Nature of the Air I do discry
In a small Volume; and most pithily,
Compos'd on purpose for to obviate
An Inanifick Machin form'd of late.
Then, leaving Physicks, I return again
To my Beloved Mathematick strain:
For now the Barb'rous, Bloody Enemy
Had left the place, where my Estate did ly.
The Truth I cou'd not Teach; for none but Foole
May hope t'Instruct in their declaming Schools.
Another Book of Principles I Print,
Nothing cou'd be more clear than what was in't.
Whereby the Nature of Proportion is
Explain'd so fully, none can say amiss.

Upon this Subject most agreed that I
Of every one had gain'd the Victory;
Others seem in it to find Errors store,
But they are crazy grown, and I the more
Press upon them; then do ascend the high
And lofty Summit of Geometry.
The Circles Quadrature I Publish then;
The Pythian God's Porisma Teach all Men.
By a new Method I thought to o'rcome,
Though not by the same Reasons neither, some
O'th' Former Demonstrations, but in vain.
Mathematicians Half-Witted complain,
Who blush for to Subscribe; but I'll not lose
My Labour any longer, thinking those
Indocil Brutes will ever master Sense,
Or with good Literature ever dispense.
Then my Rosetum was put forth, which I
Stor'd with Rare Flowers of Geometry.
Wallis opposes, and I lost the day,
As both Divines and Algebrists do say.
The Army then Discamp'd, and gone, thereby
Wallis of nothing thinks, but Victory;
Who having chosen an unpleasant Field,
Which Thick and Troublesome deep Roots did yield,
Liking the Combat, I turn, scatter quite
All in a moment, Numbers Infinite.
These were my Wars; what more have I to say?
How Rich am I, that is, how wise, I pray?
No matter for my Money or my Land;

If any ask that, let him understand,
A small parcel of Ground I had to show,
My own Inheritance, and let him know,
That This I on my Brother did bestow:
Of small Extent, but a most Fertile Ground,
Which did with store of bladed Wheat abound
Fit for a Prince; and had not ev'ry thing
Run cross, I had been counted a great King.
When I the Civil War approaching find,
And people led by every breath of wind,
I sought than this a more commodious place
To live and study in, and that Paris was.
Stock'd with five hundred pounds of Coin before
I did desert, or leave my Native Shore;
To these two hundred added, but withal,
A Weighty Lasting Grief did me befall.
(Thou'rt Dead, Godolphin, who lov'dst Reason, true
Justice and Peace, Soldier Belov'd, Adieu)
Twice forty pounds, a yearly Pension, then
I from my own Country receiv'd; and when
King Charles restored was, a hundred more
Was allow'd me out of his private Store.
A Noble Gift: I slight Reproaches, when
I know I'm Good, from other Black-mouth'd Men.
Content with this, desire no more Pelf;
Who but a Mad-man lives beneath himself?
Let my Estate by yours Computed be,
And greater seem; if not, it's enough for me.
My Sums are small, and yet live happy so,

Richer than Croesus far, and Crassus too.
Verdusius, thou know'st my Temper well,
And those who read my Works, and with thee dwell.
My Life and Writings speak one Congruous Sense;
Justice I Teach, and Justice Reverence.
None but the Covetous we Wicked call,
For Avarice can do no good at all.
I've now Compleated my Eighty fourth year,
And Death approaching, prompts me not to fear.

FINIS.

HISTORIA ECCLESIASTICA CARMINE ELEGIACO CONCINNATA.
AUTHORE THOMA HOBBIO Malmesburiensi.

Opus Posthumum.
— Fraudesque dolique
Insidiae {que} & vis, & amor sceleratus habendi.

Ovid. Met.
AUGUSTAE Trinobantum: Anno Salutis, MDCLXXXVIII.

LECTORI SALUTEM.

ENTIBI, LECTOR BENEVOLE, Historiam Ecclesiasticam; non à Monacho, non à Clerico; sed à Libero, à Philosopho homine, à Thoma Hobbio Malmesburiensi conflata: qui neque Scholae, neque Sectae, neque Partibus, neque Magistris juravit uspiam; & cui tuto credas decurrenti hunc campum, ubi illi neque seritur, neque metitur hilum.

Non haec juvenis lusit; sed bene senex per totam vitam cogitata, jam tandem versibus ligata maluit. Phoebi oracula, primae leges versibus: nec non primus sapiendi Magister Pythagoras nil, nisi carmine sancitum, voluit.

Limatiori versu Fastorum libros Ovidius; & alii Historias pompâ quâdam, & Heroico flatu tumentes procuderunt. At quin liceat, Horatio duce, aliquando dare Sermoni propiora? &, iisdem avibus, Ridentem dicere verum!

Visum est res Christi, & quae Piscatores docuere tractanti, humilem Stylum magis idoneum esse & popularem. Et proinde nudâ indigenâ{que} simplicitate omnia fluunt, sic ut nulla vox quae non Memoriae praesens paratiôrque sit, in versum venit: Ut pii doctique viri, Alter Enchiridion Fidei, Alter Mnemosynon Biblicum, Alter Memoriale Biblicum, & id genus Carminice prolata concinnarunt; non alio fine, quam ut memoriae inserviretur. Noster quidem mole rerum mentem occupatus, & materia tutus, flores & pigmenta poetica parvi fecit. Non tamen, quod omnia tam siccè, tam religiosè, quin aliquando incalescat, aliquando illucescat illa Mens diviniôr, atque Os magna sonaturum.

Quae philosophice scripsit magna in vestibulo ferunt Mersenni & Gassendi nomina; quin & in his poeticis memoretur Edmundus Waller, nobilissimus poeta Anglus, & apud suos quasi Numerorum pater, qui

authori Nostro semper inter amicissimos fuit; & Monitor non defuisset, si Materia Culpam non protelasset.

Praeter paròdias nonnullas, nihil hîc cum Virgilio, Ovidio, reliquisve poetarum principibus. Noluit de toties recoctis phrasibus, & de communi penu quicquam apponere. Quid Nobis servum pecus Imitatores, cum ipsosmet, quos imitantur, praesentes habemus? Quis guttam quaerit, cui ad manum est ut toto se proluat auro?

Avia Pieridum, ut & ubivis aliquid novum, & minime tritum meditari amavit. Si in Syllabarum Modulo quandoque negligentior sit, profecto apud veteres poetas (Christianos velim) hoc non insolens fuit. Fortasse & alia sunt quibus non tanti habuit criticorum plebi in omnibus abblandiri.

Si quaerant Historici unde ista de Aethiopibus; de Neptuno, de Jove, diisque reliquis convivantibus; videant Homerum testem satis luculentum. De Rege Ergamene; & famosâ illâ Sacerdotum strage consulant Diodorum Siculum lib. 4. De more isto Aegypti dirimendi lites per Collare, & Gemmam, veri indicem, eundem habent Diod. Sic. & Aelianum, à quibus V. V. C. C. Seldenus, & Marshamus, & plures alii in sua traduxerunt.

Quoad caetera, neque Chronologos, neque Philosophos moramur multum. Theologis vero ut quodammodo satisfiat nonnulla incumbit cura. Non quod Thomistas, Scotistas, aut nescio quos Seraphicos, tanti habeamus; sed Nicaeni Patres, sapientia Graeca, & magnus ille Athanasius authori nostro horrida bella interminantur. At dicendum est eum in istis mysteriis poeticè aliquando (potius quam Catholicè) delirare.

Sed vero & istius Saeculi Divus ille Hilarius, ad Constantinum Augustum libro, eadem queritur; Conscii sumus quod post Nicaenam Synodam nihil aliud quam fidem scribimus, dum in verbis pugna est, dum de novitatibus quaestio est, dum de ambiguis occasio est, dum de Autoribus querela est, dum de studiis certamen est, dum in consensu difficultas est, dum alter alteri Anathema esse coepit, prope jam nemo Christi est. Incertis

enim Doctrinarum verbis vagamur; & aut dum docemus perturbamur, aut dum docemur erramus. Proximi anni fides quid immutationis in se habet? primum quae Homousion decernit taceri, sequens rursus Homousion decernit & praedicat; tertium quae Usiam simpliciter à patribus praesumptam per indulgentiam excusat, quartum non excusat, sed condemnat. Tandem eo processum est, ut ne{que} penes nos, ne{que} penes quenquam ante nos sanctum exinde aliquid aut inviolabile perseveret; annuas atque menstruas de Deo fides decernimus, decretis poenitemus, poenitentes defendimus, defensos Anathematizamus, aut in nostris aliena, aut in alienis nostra damnamus: & mordentes invicem, jam absumpti sumus ab invicem. Et ipsemet Constantinus quam dissentiens fuit à sacris hujus temporis rixis, & quam aegre tulit Graeculorum altercandi ingenium, Index sit illa ad Alexandrum, &c. Epistola apud Eusebium: ubi dolet pro parvis & valde modicis causis, propter leviculam quaestionem, propter parva & vana Sermonum Certamina, inanem verborum strepitum, subtilitates, futilitates, infantum fatuitates, fratres fratribus committi; & ad necessitatem blasphemiae, aut Schismatis impelli.

Ad eadem concinit inter Catholicos istius saeculi Poetas Aurelius Prudentius:

Fidem minutis dissecant ambagibus,
Ut quisque lingua est nequior.
Solvunt ligantque quaestionum vincula
Per Syllogismos plectiles.
Vae Captiosis Sycophantarum strophis,
Vae versipelli astutiae.
Nodos tenaces recta rumpit regula
Infesta dissertantibus.
Idcirco Mundi stulta delegit Deus,
Ut concidant Sophistica.

Utcunque autem illius saeculi Poetae novum prospicientes campum, in arenam descendunt fervidi: non jam Laestrygonas, Harpyiasque premunt, aucupantur; sed Monothelitas, Pneumatomachos, Homuncionistas (nova Monstra) Haereticos toto Marte confodiunt.

Et quàm avide ubique sectantur aenigmata illa Sacra, Oidipodas agere delectati! Nova Mysteriorum segete luxuriantes, & insolito caecutientes lumine, mirifico alite aethera petunt. Bellè Noster ille Sedulius Presbyter, in uno versiculo totum spirans Athanasium!

— una manens deitatis forma perennis
Quod simplex triplicet, quodque est triplicabile simplet.
Haec est vera fides —

Nos profectò longe sequimur; entheus ille tandem deferbuit ardor; tali oestro non rapimur; & Nobis non licet esse tam disertis.
Maluit hic Noster inter primos & piscatores Apostolos simplicitatem discere Christianam, quam apud Nicaenos patres, & Graeculos Theosophistas cerebellum perdere attonitus. Contentus nomine Philosophi, laïco ingenio, & ultra rationale animal parùm sapientis. Sed nollem te, Lector, ulteriùs detineri. Vale, & fruire.

HISTORIA ECCLESIASTICA. DIALOGUS.

SECUNDUS,
PRIMUS,
Interlocutores.

Sec.

QUID fers, Prime, novi? Visendae quae fuit urbis
Causa tibi, modò qui ruris amator eras?

Pr.

Rus mihi carcer erat; quo quamvis non male clauso,
Intravit bello praetereunte Metus.
Verum tu quid agis, qui magnâ tutus in urbe
Invito, Musis, Marte, Secunde, vacas?

Sec.

Non facio magni Musas, doctasve sorores,
Sunt illae nostri tristis origo mali.
Nonne vides rerum totus mutetur ut ordo?
Utque pium dicunt, quod fuit ante scelus?
Perfidiam, caedes, perjuria, furta, rapinas,
Nonne vides civis dicier acta boni?
Quam Christus dixit sinceram Relligionem
Monstrant perspicuè tradita jussa Dei:
Addas à Christi sperandam morte salutem,
Munera servatae Relligionis habes.

Pr.

Nunc impossibilem quandam formatur in artem,
Non Pietas vitam, Theiologia dabit.
Deque Dei dicunt naturâ dogmata vana
Pastores, populo non capienda rudi.
Excutitur natura Dei secreta. Sciendum est
Quid, Quando, Quare, Quomodo vult & agit.
Praeter Opus, Leges sanctas, Nomen{que} timendum,
Scire valent homines de Deitate nihil:
Sed nostri voluere viri praescire videri,
Quid Deus extremum judicat ante diem.
Unus, ab aeterno pendere, ait, omnia verbo,
Alter, ab arbitrio multa venire suo:
In partes veniunt omnes quibus utile bellum est:
Sic Doctis debes inde sequuta mala.
Nec miror, Natura homines raro facit ipsa
Egregiè bonos, egregiè malos,
Egregiè stultos, aut egregiè sapientes;
Perficit inceptum quodque Magister opus.
Ostendit Natura Deum; summeque colendum,
Sed cultus veri non docet illa modum.

Sec.

Quae nescit Natura, potestne docere Magister?

Pr.

Quid ni, Doctorem si docet ipse Deus?

Sec.

Quem vero docuit Deus, & quo teste sciemus

Credibili, quenquam sic docuisse Deum?

Pr.

Primus erat Moses, cui testes Signa fuere
Edita in Aegypto, retrogradoque mari;
Proximus huic Aron frater; summusque sacerdos
Doctus voce Dei est, ordine quique suo.
Tum Testamenti veteris his adde Prophetas,
Et Jesum Christum, qui fuit ipse Deus;
Postremò Paracletus, id est, Ecclesia Christi
Credenda est veri verba docere Dei.

Sec.

Adde & Phanaticos hujus nova lumina secli;
Et Romae, si vis, adjice Pontificem,
Sed scio, non docuit pugnantia dicere secum

Verba Deus. Lex sunt, & nisi clara nihil,
Perspicuè descripta tenet quaecunque requirit,
In libris sacris, lex Vetus atque Nova.
Quorsum igitur doctae lites? Sententia dispar
Doctorum parti demit utrique fidem:
Me sequere ad Regnum Coelorum clamat Alter,
Imo me potius, clariùs Alter ait.
Vela ratis sanctae jactantur in aere scisso:
Ejicitur Pietas simplicitasque foras.
Rex noster nobis & Moses est, & Aäron;
Nescio, Doctores qualia regna volunt.
Omnes alloquitur Dominus per Biblia sacra;
Verbaque, clam nobis, nulla susurrat eis.

Dié mihi, Prime, precor, secli studiose vetusti,
Et severe satis Censor in Historia,
Quis fuit ille hominum qui se (nisi Rex fuit idem)
Esse Deo-doctum dicere primus erat?

Pr.

Scis ut Aristotelis trutinata cacumina rerum
In duo divisit, Stultitiam, atque Dolum.
Est Dolus in rebus, sunt certi denique stulti,
Utris conveniunt Regia sceptrata magis?
Et melius defendet uter Stultusne Dolosum,
Anne Dolosus eum qui caret ingenio?

Sec.

Arma Deo-doctis ipsorum Lege negantur;
Vita truces gladios tam pretiosa fugit.
Ergo quibus telis, quibus artibus, & quibus armis
Nos hi defendent, bellaque nostra gerent?

Pr.

Quos tu forte times hostes, non dico nec arma;
Sunt hostes alii, terribilesque magis.
Est Mundo nostro Mundus conterminus alter,
Nostri dissimilis, pe•petu•sque comes:
Qui Phoebum nunquam vidit nunquamque videbit,
Quantuncunque gradum grandiat ille suum;
Quem{que} habitat populus numerosus, qui ne{que} mortem
Nec morbum norunt; Spirituale genus;
Umbri, Somnites, Amenenees, Astheneentes,
Et Cacodaemonii, Daemoniique alii;

Quotquot & hinc homines nostri moriuntur ad illos,
Nec Regum Leges id prohibere valent.
Hi nobis hostes, hi nos terroribus implent,
Defessos animos nec relevare sinunt.
Invadunt homines noctu, somnoque ligatos
Terribiles oculis, unguibus, atque minis.
Attamen ad lucem, percussi pectoris agmen
Spectrum, ventis ocyùs, omne, fugit.
Sed quoniam metuebat ab his, quod erat metuendum,
Et sperabat ab his omnia, turba levis,
Ars non magna fuit, jam fraenis ore receptis,
Ducere perdomitos quâ voluere viâ.
Sufficiebat enim, conjunctis foedere agyrtis
Cum sibi sit populi concilianda fides,
Alter ut alterius virtutem magnificaret,
In speciemque Artis verba locare nova:
Hinc Magus, Astrologus, Divin•s, Sortilegusque,
Creditur indoctis, esse Propheta Dei;
Talibus & cupiunt Regni committere jura.
Aut Praeceptores Regis habere sui.

Sec.

Scire velim fontem sceleratae qui fuit artis,
Primaque quae tantae fraudis origo fuit.

Pr.

Orbe fuit toto quondam sapientia vultu
Uno, jus Patriae scire & amare suae;
Quam docuit Natura, peritior Arte Magistra,
Commoda quae jussit quaerere quemque sua.

Ergo suae causa conspiravere salutis
Exigui multi magnus ut esset homo;
Cunctorumque opibus communem ut pelleret hostem,
Servaret pacem, justitiamque domi.
Regibus hinc vires, populo sunt otia nata;
Artibus ingenuis otium origo fuit.
Tunc astra, & coelum mirantibus, orta libido est
Quaerere quid faciunt, quo properantque loci;
Qua nobis facit arte diem Sol, Lunaque mensem,
Annum complures aedisicantque Dies.
Nec leges tantum Stellarum quaerere; frontes
Inspiciunt; utrum prospera, necne ferant.
Dama viatorem sic spectat praetereuntem,
Fortuitus quoniam nescit, an hostis eat.
Hinc primo nobis Ars utilis Astronomorum,
Ingenii puri filia nata fuit;
Haec cum Deliquium certa praediceret hora
Phoebi vel Phoebes, res faceretque fidem:
Si quo, quodque, loco coeli se ostenderet astrum,
Et quando, & nomen dicere promptus erat,
Quantus erat stupor bipedum, quanti faciebant
Astronomum! Socius creditur esse Dei.
Attamen ut tritici, crescunt zizania, in arvis,
Ambitio ingeniis gaudet adesse bonis.
Nam cum se tanto senserunt esse in honore,
Et sua dicta, velut dicta valere Dei,
Uti stultitiâ populi voluere, timeri
Quaerunt, humanum despiciuntque genus.
Credi scire futura volunt quaecunque; quia astris

Sunt inscripta, aiunt, nec legit astra alius.
Nec modo praedicunt adversa & prospera Regum,
Sed modicis etiam fata parata viris.

Sec.

Dic quibus in terris primùm, quo sole, lutoque
Egregio ingenia haec nata fuisse putas?

Pr.

Ne dubites, illic ubi summa potentia solis
Semper erat, tellus & bene cocta fuit;
Multus ubi serpens & corpore nascitur ingens,
Ingenio vincens quicquid habebat ager.

Sec.

Aethiopas dicis, quos, sunt qui dicere primos
Non dubitant hominum, quos generavit humus.
Ast ego cum multis deductas esse putavi
Artes Aegypto quasque Mathematicas:
Cernere ubi stellas longus concedit Horizon;
Adnictant quoties, quo coeuntque loco.
Nonne Aegyptia erat pretio sapientia quondam
Ingenti? Et Graecis non erat inde sua?
Quo nisi in Aegyptum Plato, Thales, Pythagorasque,
Atque alii plures, eximiique viri,
Et vacuus, nec habens longas quo falleret horas,
Ad mercandum artes ibat & ingenium?
Haec etiam Mosi placuit sapientia, cum vix
Nomen fama satis noverat Aethiopum.

Pr.

Aegyptus Graecos, Graeci docuere Latinos,
Artes; atque etiam (non nego) sacra sua.
Sed tamen Aethiopes priùs Aegyptum: Fuit illa
Limus, quando ingens fama erat Aethiopum.
Aethiopes coluere Deos, Urbes habuere,
Rexerunt, & erant artibus egregii,
Aegypto nondum prognatâ: Nam pietatis
Mercedem hanc illis apposuerunt Dii.
Nam quantis, quotiesque, Deos epulis meruere,
Essent ut placidi, submadidique sibi:
Neptunum imprimis, si vis cognoscere, testis
Natus in Aegypto certus Homerus erit.
Gratus ob haec, limum delatum flumine Nilo
Neptunus ripis addidit Aethiopum;
Firmavit Phoebus; missoque à montibus altis
Ignoto nobis Jupiter imbre rigat.
Nam surgens Nilus dum campos contegit undis
Nunc etiam Aegyptum dum rigat aedisicat.
Quam simulatque pati potuit, coepere colonis
Exercere suis Aethiopes Domini.
Atque suas populo leges, ritusque dedere,
Et sibi subjectos sic tenuere diu.

Sec.

Quis fuit Aethiopum status? Tum summa potestas
Cujus erat? Regis solius an populi?

Pr.

Nomine Regis erat, sed regnare Sophistae,

Quos deceptores diximus Astrologos.
Hos quia sermones cum Dîs conferre putabat
Plebs stupida, ignorans atque futura tremens,
Regum electores voluerunt esse suorum;
A solis, ipsi, Dîs voluere regi.
Et sic Sacrifici Regem, fictique Prophetæ
Per multos annos dantque reguntque suum.
Quid faceret Rex quoque die, quid qualibet hora,
Quando dormiret, quosque cibos caperet;
Quodque magis mirum est, quando discedere vita
Debebat Rex, nec quaerere quî meruit,
Audax dictabat Nebulonum Ecclesia stultis:
Parebant Reges, Lex valuitque diu.
Donec Alexandri paulò post tempora magni,
Rex fuit Aethiopum nobilis Ergamenes;
Qui regum vitam pendere à gentis iniquae
Arbitrio, indignum censuit esse viro.
Hic igitur misso delevit milite stirpem
Omnem, latrones anticipatque sacros.
Sic ratione dolum detexit, & ense abolevit
Ergamenes sapiens, nobilis Ergamenes.
Ex illo Aethiopum fit tempore pectus apertum,
Humanaeque capax gens rationis erat.
Et simulatque Dei coepit doctrina doceri,
Christi cum primis hi subiere jugum.
Ad Graecos artes venere bonaeque, malaeque,
Ante ex Aegypto quam fuit Ergamenes.
Una sacerdotis gens semper habebat honorem
Aegypto, Sophiae sanguis origo fuit.

Natos quisque sua pater instituebat in arte;
Ingenii fuit his una Magistra domus.
Sed numerosa domus, namque illis tradita alendis
Ex tribus Aegypti partibus una fuit:
Doctaque stillabant praecepris ora profundis,
Quae sitiens hausit Graecus, & Assyrius.
Mos erat unus eis ad sydera laude ferendus,
Nempe, in judiciis quem tenere modum.
Nullus erat strepitus, nec vox audita clientis,
Patronis nullus, causidicisque locus.
Nam triginta viri jus cognitionis habebant
De re quae nondum, cuja liquebat, erat.
Conspicuis totidem delecti ex urbibus omnes;
Unus & adjectus, Praesidis esse loco.
Distinctum gemmis Praeses collare ferebat,
Quod vix credibili luce micasse ferunt.

Ergo (Index Veri) Veri quoque nomen habebat,
Victrici causae nomen ubique datum.
Illud enim Praeses cum scriptis applicuisset,
Vera an falsa (legens) sint ea scripta videt.
Ergo suam quicunque petit rem quam tenet alter,
Et patriâ lege ut restituatur Agit,
Is Quid sit factum, quo Pacto, & Quando, simul{que}
Quid Testes dicant, quid Ratione ratum est,
Et documenta sui juris ferre omnia scripto,
Et non ambiguo, debuit hisce viris.
Hique legunt secum, quo vult petitor beante;
Nullus non scripti pensitat omnem apicem.
Copia Scripturae sit; respondere jubetur

Qui tenet & causam verificare suam.
Tum scripto rursus petitor respondet, & ille
Qui tenet huic iterum. Denique ter fit idem.

Se.

Nil video hic magni, nec magna laude ferendum;
In qua parte orbis non reperitur idem?

Pr.

Sed neque miror ego. Fertur sententia. Nemo

Obloquitur. Praeses judicat, at tacitus.
Nam {que} ut consessum est, scriptu^m effert Praeses utrum {que}
Collocat in mensam, separat atque manu.
Detractum collare sacrum scripto admovet uni:
Et certus litis terminus ille fuit.
Justitiam tacitam sine tempestate forensi
Miror; quam nunquam vis aliena movet.

Se.

Hoc rectè, sed utrum legissent scripta priusquam
Collare appositum est, noscere difficile est.
Parcere enim tanto cur non potuere labori,
Cum nil referret pars ultra justa fuit?

Pr.

Tunc ita inhumanos potuisti credere lectos
Spectatae fidei, praecipuosque viros?

Se.

Non ego inhumanos homines dico, sed iniquos.

Ut quid cuique libet sic quoque quisque facit.
Sed quia non multum refert aequine, an iniqui
Hi fuerint, fuerint ut sibi cunque placet.
Sed dic, Aegyptum mos hic, venit•e ab Hebraeis,
An contra? quoniam par fuit his, & eis.

Pr.

Nescio. At alterutrum si forte necesse putarem,

Aegypti (dixim) mos fuit ille prius.
Et maribus pueris praeputia scindere circum,
Author Niliacus, non Abrahamus erat.

Se.

Verumne est ergo quod rerum sola novarum
(Ut vulgo dicunt) Africa mater erat?

Pr.

Deinde Sacerdotum numerus, cum crescere coepit
Doctorumque fuit turba molesta sibi,
Ibat in Assyriam pars magna vocata. Sciendi
Sortem venturam tanta libido fuit.
His multas urbes terrasque dedere colendas

Assyrii. Cura his Religionis erat,
Nomine Chaldaeis: Nomen venerabile quondam,
Ut Magus, ut Sapiens, ut{que} Mathematicus.
Sed quando gentem Romanus vicerat illam,
Niliacum populum subdideratque levem,
Venerat & Romam Chaldaeus; tunc inhonestum

Chaldaei nomen, Philosophique fuit.
Nam Regum mortes, audax, bellicque futuros
Eventus, promptus dicere solus erat.
Persidiae coeptis audacibus atque pericli
Plenis, spem solitus vendere solus erat,
Matronis suasor, vates, adjutor & idem
Chaldaeus semper turpis amoris erat.
Astrologus, Leno, Chaldaeus, Philosophusque,
Judaus, mendax atque Mathematicus,
Sortilegus, Vanus, Deceptor, Veneficusque,
Nomina certa scias unius esse viri;
Quem Româ Reges potuerunt pellere saepe,
Pulsum non potuit Roma tenere foras.

Sec.

Claudius, ut nosti, Ptolemaeus qui fuit author
Magni operis, minimè vanus habetur homo;
Astronomus priscoque & nostro tempore clarus,
Ille Genethliacae conditor artis erat.
Is, quod ab astrorum dependent omnia nutu,
Fortunam & sobolem syderis esse docet.
An stellas torpere putas sine viribus; aut vim
Non efferre satis posse putabo suam,
Quae tamen ad nos us{que} ferunt lucem at{que} calorem,
Et mutant faciem temperiemque soli?
Nilne frequens coeli facit observatio, nonne
Id quod saepe fuit, nos docet id quod erit?

Pr.

Non. Scit enim quid erit nisi qui sciat omnia nemo;
Omni contribuunt omnia namque rei.
Nescit Ephemeridum confector postera quid sit
Allatura dies; decipit ille sciens.
Et cùm praedicit mala publica, cogitat illa
Quo pacto faciat; dignus & est laqueo.

Sec.
Verum cur habuit Chaldaeos Graecia nullos,
Graecia Romanis nota Magistra viris?

Pr.
Ob multas causas. Non fallit Aruspice Aruspex;
Callida Graecorum natio tota fuit;
Nec deceptores fictos habuere Prophetas,
Sed proprios sibimet; nempe genus Logicum;
Ars erat hisce malam, victricem reddere, causam
Dicendo, quarto propria & illa modo.
Adde quod & pauper dominis subjecta Latinis
Natio tota fuit; non erat unde darent.
Namque Impostori non est locus ille salubris
Qui lucris sterilis, fertilis ingenii est.
Aegyptus Graecis ultro non attulit artes
Ingenuas; Graeci sed petiere viri.
Pythagoras, Thales, Plato, plures; nec petiere
Aegypti fraudes, nec sacra Niliaca,
Nec demonstrandi praecepta, nec Officiorum;
Sed mensurandi quicquid in orbe fuit.

Se.

Quis Graecos reliquas artes docuit? Quis Elenchos?

Quis morum normam, justitiaeque dedit?

Pr.

Socratis inventum Dialectica dicitur esse,

Una quidem, dici quae solet Ironia.

Nam tantum rogat, & vult se nil scire videri,

Perpetua atque atrox hostis alazonibus,

Quae ducebat eos sensim, quaerendo, sequendo,

Non perceptibiles molliter in laqueos,

Mulciber ut Martem quondam fertur tenuisse,

Turpiter implicitum ridiculumque Deum.

Inde fuit magnis exosus civibus, atque

Ingenio vitam perdidit ipse suo.

Primus & ille fuit patrias concludere in Artem

Leges, mensurans jus ratione sua.

Et quia rem populi malè curans, sed sua rectè,

A populo Sapiens audit ubique loci.

Rectores stultos ridens nimis ambitiose,

Nec juvit, civis nec bonus ipse fuit.

utinam, matulâ, mortem prius oppetiisset,

Ictus ab insana conjuge turpe caput,

Quam de Justitiâ coepisset sermocinari,

Et vitae dominis scribere jura suae.

Namque ab eo multi didicerunt, publica primò

Censuris, cives, subdere jura suis,

Scribereque ad vulgus praecepta Politica stulti

Certatim, ut stultos gloria vana jubet,

Et, Libertatis specioso nomine, Leges

Negligere, & Reges esse putare lupos.
Quos inter Stagyrita fuit, licet ipse Tyranni
Doctor erat magni, magnus Aristoteles.
Quem Cicero, & Seneca, Tacitus{que} & mille secuti,
Reges nos nostros dedocuere pati.
His Democraticis lectis Authoribus, & qui
Nil Libertatem significare putant
Praeterquam vice quemque sua regnare, nefanda
In Regem cives arma tulere suum:
Quo bello periere virum prope millia centum,
Et victus tandem Rex jugulatus erat.
Quod fieri facinus plebs nunquam passa fuisset,
Maxima ni Cleri pars animasset eos;
Grex Aristotelis fuit hic; Metaphysicus atque
Physicus, & Logicus, Rhetoricusque simul;
Et quorum mandris nunc est Academia nomen,
Noster erat Pastor summus Aristoteles.

Se.

Non tanti puto scire fuit Graecè atque Latinè;
Nec nova vox pretio sanguinis empti placet,
Quo nobis minus esse licet felicibus absque
Linguis externis, quàm fuit Assyriis?
Cur contenta sua fuit unâ Graecia Lingua
Garrula, nec petiit verba Latina prior?
Quare qui linguam solam addidicere Latinam,
Illam nec valde, praetereaque nihil,
Dicuntur Docti; qui scit bene pluribus uti
Dicitur Indoctus, Plebs, Idiota, Rudis?

Pr.

Quaeritur hoc rectè; nempe hac latet anguis in herba;

Fons erat hic nostri principiumque mali.

Nam Graecis, Sapiens, simul ac virtute virorum

Septem, praeclari nomen honoris erat,

Incoepit multis quibus otia suppetiere

Libertasque animi Philosophia coli,

Mundum hi, non libros legerunt, ingenioque

Incoepit causas quaerere quisque suo,

Nullius addictus jurare in verba Magistri,

Solus enim his primis Author erat Ratio,

Horum Epicurus erat, Plato, Zeno, Democritusque,

Pyrrho, Aristoteles, nescio quotque alii,

Digni laude viri, quorum sapientia juvit

Humanum multâ commoditate genus.

Hujus, post illos, devenit gloria laudis

Ad quotquot primos hi docuere viros.

Hos tamen equales ne credas esse Magistris;

Ingenio quoniam non sapere suo.

His successerunt alii, verùm inferiores;

Atque artes lento sic periere pede.

Philosophis sed honos habitus non omnibus idem est

A cunctis; unum hic praetulit, ille alium.

Et distinxit eos nomen quandoque Magistri,

Et quandoque Scholae, quo docuere loco.

Hinc Stoa, & hinc Peripatus, multarum haeresiumque

Obvia sunt veteri nomina in historia.

Se.

Haeresis, oro, quid est? Nam me convicia tantum

Fecerunt magnum crimen ut esse putem.

Pr.

Doctorum Docti pugnans cum Dogmate Dogma,
Haeresis à Graeca gente vocata fuit.

Se.

Cujus erat quaeso legis violatio? natae,
Haeresis, an positae? Crimen ut esse sciam?

Pr.

Neutrius. Errat homo quia nemo libenter; & omnis
Libera apud Graecos Philosophia suit.

Hi converterunt Pietatem in Theiologiam

Primi, spernentes tertia verba Dei.

Mox illis bellum peperit sententia discors,

Pugnari & coeptum est fustibus & baculis.

Nec Graecis tantùm fuit haec sapientia cordi,

Semina dissidii sparsit ubique loci.

Quantum orbis patuit Romanus, rixa erat inter

Coecos, de, Quis habet lumina clara magis.

Quorum olim mores, lepidus, depinxit ineptos

Lucius, & postquam desiit esse Asinus.

De quorum vitiis, ut dignum est, stultitiaque,

Quantumvis Rhetor, dicere nemo potest,

Vile genus, lucri cupidum, nil turpe recusans

Auri suaveolens unde veniret odor;

Insima faex plebis, pauper gens, atque superba,

Nullius frugi, nil nisi barba gravis.

Frontibus austeris obsceni, totaque vita
Ipsorum, contra quam docuere, fuit.

Se.

Nunc quo{que} Centauros videor, Lapithas{que} videre,
Clamosae quoties audio verba Scholae.
Nec non Theiologûm libris convicia foeda
Miror, & indignor, cumque rubore lego.
Nam qui Theiologis dissentit, protinus audit
Passim Blasphemus, Atheus, Haereticus.
Improba non dicet mulier convicia summa,
Si non se laesam sentiat esse priûs.

Pr.

Non laesum credis Clerum, sapientia quorum
Spernitur, & parvi ducitur ingenium?
Virtute Ingenii dominari est summa voluptas;
Te, quibus hanc tollis, posse placere putas?
Et quibus est commissa teipsum cura docendi,
An diversa putas hisce docere leve?
Sunt quibus est etiam doctrinae gloria, Panis;
Non laedis, faciens hosce perire fame?
Si mandrita, pecus subreptum viderit iri,
Non vis ut fures clamet adesse gregi?

Sec.

Pastorem verò rectè non increpat alter
Pastor, nec furem fur bene, parque parem.

Pr.

Confiteor. Verum quid agemus? Reliquiae sunt
Antiquae nobis insipidaeque Scholae.
Tempore namque illo, quo nostrae Praeco salutis,
In Graecis sparsit semina, Paulus, agris,
Maxima erat mundo salsorum Philosophorum
Copia; nequitiae Plemmyris, illa fuit.
Quorum non paucos Ecclesia sancta vocavit

Ad mensam. Crevit sic parasita Fides,
Victum communem ut Christi cultoribus esse
Sensit egens nebulo, nomine Philosophus,
Rebus in adversis succurrere & omnibus omnes,
De grege Christicolûm se simulavit ovem.

Acceptusque fuit. Quid ni? Fuit utilis ille
Militiae Christi; dux fuit & sapiens.
Nam{que} Orator erat, doctusque abducere ab hoste,
Si cui forte duces non placuere sui.
Idem doctus erat duri vibrator Elenchi,
Et dilemma anceps torsit utraque manu.
Eminus è Cathedra telis pugnare peritus,
Cominus & furcis vincere doctus erat.
His igitur multis usa est Ecclesia Christi;
Nam docti multo sunt in honore bonis;
Et curanda ferè traduntur ovilia magna
His solis, sanctas hi Synodosque regunt.
Nam licet in Synodis Patres, Sanctique piique,
Atque proba noti simplicitate viri,
Philosophos numero superarent, attamen illos
Vincere sussragiis non potuere suis.

Attonitus verbis peregrinis Philosophorum
Vir simplex contrà dicere non potuit.
Christi vera Fides, Essentia quid sit ab Ente
Abstracta, ignorans, obstupefacta tacet.
Non ita Philosophi Patres; sed quisque Magistri
Dogmata conatur reddere vera sui.
Scinditur in partes Ecclesia; risit at hostis
Elanguitque jacens debilitata Fides.
Esse novae princeps fuit ingens gloria Sectae
Philosopho, sine qua non erat unde ederet.
Sic doctrinarum nascuntur mille colores,
Dum nebulo fama nobilis esse cupit.
Nascitur hinc odium, & pugnandi magna libido;
Sed pacem servant arma negata Gregi.
Mutua sed jaciunt convicia; credit utrique
Ethnicus, & Christi dulce jugum refugit.
Alter & alterius dum damnat dogmata, natum est
Nomen & Haeretici, Catholicique viri.
Nam cum sinisset Synodi sententia litem,
Vincere Catholicum, vinci erat Haereticum.
Consensere tamen signati nomine Christi
Contra Gentiles lignicolasque viros.
Ergo miles erat quoties bellum fuit inter
Ipsos Romanos Christicola egregius.
Hi Constantinum fecerunt vincere, & ille,
His, non credentum sanguine lavit humum;
Cunctaque falsorum destruxit templa Deorum,
Unius & sanxit publica sacra Dei;
Pastoresque gregum magno dignatus honore est

Praecipuos; Christi cultor & ipse fuit.
Summe temporibus Ecclesia floruit illis,
Agrorum sanctis proprietasque redit.
Inque dies crevit grex Christi; accessit ad illos
Omnibus è terris innumerus populus,
Principis exemplo, vel prosperitate vocati
Temporis, aut aliqua voce Ministerii.
Jamque nihil deerat quod gentem reddere Christi
Foelicem posset ni sibi deesse velit.
Sec

Desuit (haud dubium est) quod erat. Qui non bona norit
Ipse sua, aut nescit quid juvet aut noceat,
Hunc nec agri nec opes foelicem reddere possunt,
Nam sibi divitiis ipse molestus erit.

Pr.

Est ita. Divitias dederit si numen avaro
Quantum optat magnas, ambitiosus erit.
Si rerum curam commiserit ambitioso,
Vult dici sapiens, atque superbus erit.
Esse datam dicet, sicut par est, sapienti,
Debitaque ingratus, quae capit, esse putat.
Annis usa fuit paucis Ecclesia pace,
Quando commisit lis nova Philosophos.
Inter Alexandrum certatur, & inter Arium,
Inter, id est, Ephorum, Presbyterumque suum,
Christus an aequalis Patri fuit, an minor illo,
Illi, par visus, huic, minor esse Deo.

Ad mensam coeptum est, at{que} inter pocula quaeri:

(Ad mensam esse solet libera lingua mero.)

Hinc abit ad Cathedras sacra controversia sanctas,

Sectumque in partes concitat inde gregem.

Mox & Alexandri celebri pugnatur in urbe,

Et diversa furens miles in arma ruit:

Rex Constantinus multos jam, militiaeque

Florem, civili clade perire videns,

Ut Regem decuit prudentem, tollere causam

Dissidii studuit, & stabilire Fidem;

Convocat ex omni terrarum parte suarum

Doctos Rectores, Presbyterosque viros.

Ordinis & primi tunc convenere Trecenti

Octodecimque graves eximiique Senes.

Haec Nicena fuit Synodus Patrum generalis,

Primaque Romani totius orbis erat.

Cum consedissent, in Bouleuterion intrat

Princeps, in medio stansque salutatur eos.

Consurgunt Patres, sed eos jubet ille sedere;

Nec voluit Princeps ipse sedere prior.

Ingenium nunc disce virorum Philosophorum

(Si modo Philosophus, Simius esse potest.)

Disce quid ad mores confert legisse Platonem,

Aut Aristotelem, aut Biblia sacra Dei,

Si legis ut doceas, & non ut vivere discas;

Virtutem nihil est scire, nisi sacias.

Urbem Nicenam venere à finibus orbis,

Ut fieret cunctis unica certa Fides,

De Christo, cultuque Dei per saecula Patris

Aeterni, libris conveniensque sacris.
Sed quid fecerunt? Pastoris crimina Pastor
Accusat, Patrem dedecoratque Pater.
Desert ad Regem sua quisque inscripta libellis

Jurgia. Doctrinae cura nec ulla fuit.
Hac iter esse putas ad pacem? Ecclesia numquid
Moribus his sponsa est immaculata Dei?
Quid Constantinus fecit? Capit ille Libellos,
Atque legit, lectos condidit inque sinum.
Sanctorum invidiam miratur, & ambitionem,
Sordes, mollitiem, & facta pudenda virûm,
Deinde gravis culpa, sed leniter, admonet illos,
Et docet ut ridens Ethnicus illa videt.
Certè ego si vestro vidissem ex ordine quemquam
Talia peccantem qualia fertis, ait,
Non modo rem turpem tacuissem, veste sed ista

Texissem. Christi sic puto poscit honor.
Vos precor ergo Patres nunc uni incumbite paci;
Cumque unus simus Grex, sit & una Fides.
Consulite ergo Gregi. Fidei componite formam;
At{que} illam faciam ne sit inanis ego.

Dixit. Et illato coram omnibus igne libellos
Comburi Patrum jussit edace nigros.

Sec.
Heu, quantum experti praestat sapientia Regis
Doctorum libris, ingenioque Scholae.

Quid fecere Patres postquam essent igne libelli
Combusti, nec erat jam locus invidiae?

Pr.

Nescio. Non extant Synodi decreta. Quod extat
Indignum multis creditur esse fide.
Quorsum Philosophi spectat Comoedia victi?
Cur hostis sicto vulnere succubuit?
Dogmata sed constat Synodum damnasse Ariana,
Nam visum est, Jesum, Patribus, esse Deum.
Doctrinas etiam ante Arium damnasse fere omnes,
Adversas Fidei quam Sacra Scripta docent.
Sed dum verba Dei tentant exponere frustra
Verbis Graecorum, Philosophoque modo,
Non intellectae periere Patrum rationes,
Haeresis & crevit tanto Ariana magis.
Jussus Ab-aeterno genitum, si dixeris, ecquid
(Multoties repetens) concipis inde rei?

Sec.

Quî possum? superat captum generatio Christi
Nostrum, quâ Deus est, utque puto, Angelicum.
Sed possum jussus non contradicere. Possum
Credere, si dederit qui jubet ipse sidem.

Pr.

Dicit Aristoteles Ens est Essentia; dicunt
Doctores nostri quod Deus est Deitas.
Inque Deo Sapiens Sapientia, velle volens est,

Quodque Deo tribui debeat id Deus est.
Quem potes ex verbis sic junctis sculpere sensum?

Sec.

Audio verba, meras sed video tenebras.
Tunc Fidem Christi stabilitam dixeris esse
Principis imperiis, ingeniiisve Patrum,
Per nova, prolata, nil significantia verba,
Et quae divinis sunt aliena libris?
Istane perpetuam procurant credita vitam,
Perpetuamve dabunt ista negata crucem?
Antiquos Dominus nos jussit adire Prophetas,
Cum sit salvatrix inde petenda Fides?
In Veteri sacro legiturne Essentia libro?

Non. Neque repperies talia verba Novo.
Nam ne{que} Christus eo, Christi nec Apostolus usquam
More loqui jussit, sicve loquutus erat.
Progenies Noachi sic est fortasse loquuta,
Tunc cum cessarent aedificare Babel.
Sed missa haec facio, desidero namque quid actum est
Scire, quod Haeresium spectat ad Historiam.
Dic nunc quas isto signarunt nomine Patres
Doctrinas, & quae poena statuta quibus.

Pr.

Haereticum primò faciunt, qui, dicere nullos,
Aut uno plures, auserit, esse Deos.
Hoc expellebant Decreto Idololatriam,
Manetis, rerum Principiumque duplum.

Haereticum faciunt qui Mundum dixerit esse
Aeternum; aeterni quique opus esse negat;
Qui Jesum negat esse Deum, Genitumque, & eundem
Cum Patre; & ingenitum qui negat esse Patrem;
Qui {que} alium natum esse Deo Patre praeter Iesum
Dixerit; aut ipsum tempore natum aliquo;
Quique ipsum dicet, solido sine corpore, spectrum,
Vel rationalem non habuisse animam;
Aut illo negat esse modo Genitum quali generatur
Lumen ab accenso Lumine, & ambo simul;
Quique Deum carnem quo sumpsit tempore nostram
Descendisse negat Virginis in gremium;
Quique negat Genitum genitori esse
Ingenito; aut natum Virgine Matre negat;
Et qui pro nobis passum nostraque salute
Esse negat; vel qui mortem obiisse negat;
Et qui post mortem non surrexisse •atetur;
Vel negat ad dextram nunc residere Patris;
Aut negat inde iterum venturum, ut judicet omnes
Viventesque homines, quique obiere diem.
Hos facit Haereticos Synodus Nicena. Sed Acta
Nicenae Synodi non valere diu.
Nam Constantini Successor illud
(Areii fautor) noluit esse ratum.
Sic nec habebat adhuc constantem Ecclesia pacem,
Nec certam Patres quam voluere Fidem.

Sec.

Non rectè Patres mysteria dicere verbis
Tentarunt, animis non capienda suis.

Namque hominem esse Deum, factis cognoscere solis;
Testibus & solis cernere facta, licet;
Facta ferebantur Christi miracula multa,
A solo fieri quae potuere Deo.
Illa quibus mediis siunt comprehendere mente
Nemo, praeter eum qui sacit illa, potest.
Omne genus morbi verbi virtute fugavit,
Illum jussa levis sustulit unda gravem.
Illius ad vocem posucrunt stabra protervi
Venti, compressis & siluere animis.
Defunctis vitam; privatis lumine visum
Restituit, claudis (voce) gradumque dedit.
In vinum mutavit aquam. Bis multiplicatum
Ad populum panem numine fertque suo.
Quorum Factorum testes habuere probatos
Niceni Patres, queis habuere fidem,
Matthaeum, Marcum, Lucam, Petrum, at{que} Johannem,

Discipulosque alios. His habuere Fidem.
Quî potuere Patres igitur de re manifesta,
Et tam confessa, credere non eadem?

Pr.

Scis Graecos numero reliquos superasse, & in illis
Sectam Aristotelis praevaluisse aliis.
Judaeus Signis; Graecus cedebat Elenchis,
Ut qui quaerebat non sed ,

Sec.

Sed quo fine, Dei dum propria facta fatentur,

Quaerebant fieri quo potuere modo?

Pr.

Scilicet in Synodo docti, indoctique fuerunt;
Doctos quos fecit lectio Aristotelis.
Indocti verò, qui nil aliud didicissent
Quam pro se Christum mortem obiisse crucis,
Et quorum nullos servabant scrinia libros,
Excepto tantum Codice utroque sacro.
Hi quia non audent adversum dicere Doctos;
Dicere nec contra Biblia sacra volunt,
Contenti sanctam Triadem firmasse, simulque
Non uno plures in Triade esse Deos;
Solliciti nimium de verbis esse timebant,
Ne quis eos Doctus diceret esse rudes.
Namque ignorabant peregrina vocabula quantum
Ad res mutandas, dissidiumque valent.

Sec.

Damnatos autem quae tandem poena sequuta est?
Cujus ad arbitrium? Principis an Patrum?

Pr.

Aspera poena satis, citraque gravissima mortem.
Peccanti Clero poena erat exilium.
Peccanti Laico via claudebatur ad omne
Civilis vitae, militiaeque decus;
Nec Patrum arbitrio (quibus accusare dabatur)
Legibus at scriptis Principis Imperio.

Sec.

Crimen erat, fateor, Synodi contraria dictis,
Cum fuerint lata lege probata, loqui.
Cur tamen impietas dicenda sit, haud bene cerno;
Nam non es, si non impius esse velis.
Et qui credebant se Biblia sacra sequutos,
Esse proculdubio se voluere pios.
Illo, damnati quam magnos, tempore, honores,
Quantas divitias deseruere, puta;
Quo vixere metu, quantos subiere dolores,
Ut conservarent quam tenuere Fidem!
Anne Fidem quisquam tanti facit Impius? Illis
Regnare est summum, divitiaeque bonum.

Errarunt. Synodi doctrinam cernere sanctae
In scriptis caeci non potuere sacris.
Ergone caecus homo damnabitur Impietatis,
Quando non (jussus Lege videre) videt?
Cur non & patria jubeatur cedere simus,
Si non & nasum corrigat ille suum?
Aequum erat, in tenebris verborum, ignoscere si quis
Cavit ne plures diceret esse Deos.
Inter Non-genitum, Genitumque in tempore nullo,
Quid sit dissidii non capit omnis homo.
Nec quorum lingua Verbum substantia dici,
Aut animo possit qua ratione capi.
Vox Hypostasis sonat ut substantia Graecis;
Qui dicit tres sunt, tres ait esse Deos.
Regnorum medici, verborum discite vires,
Dementem populum Lex sine mente facit.

Dic nunc cur Synodus non sanxit & Haeresin esse.
Verbum, Scripturas esse negare, Dei.

Pr.

Jus Indicendi Synodum tunc Caesar habebat
Solutus, & indixit cum Synodo esset opus.
Tunc opus est autem cum turbant Dogmata pacem.
De Libris Sacris quaestio nulla fuit.
Quaestio talis enim Scriptura iudice nunquam
Finiri, aut (alio iudice) teste potest.
Quare si Patres certassent, Haereticique,
Dictavit libros quos Homo, quosque Deus,
Vir bone nonne vides, ut Iudice Caesare, Verba
Essent nulla Dei non placitura sibi?
Si Nunc Haereseos Synodus damnasset & illum,
Scripturas, verbum, qui negat esse, Dei,
Consilium Patrum periisset Philosophorum,
Resque ignota foret spirituale forum.
Ergo Fidem tenebris visum est involvere densis,
Proque Dei verbo subdere verba sua;
Ut sic dum Reges regeret Scriptura Fideles,
Scripturam regerent, ut voluere, Patres.
Primus ad Imperium Clero fuit hic gradus, unde
Sacra vident placitis subdita scripta suis.

Sec.

Dic mihi quam causam populi conversio tanti,
Regibus invitis, tam celeremque habuit?

Pr.

Imprimis fecit numeroso cognita teste,
Occiso Domino reddita vita fidem.
Tum quòd tot Christus miracula fecerat ipse,
Tantaque discipuli tam manifesta sui.
Quodque suam lucem Christi doctrina ferebat
Secum, cogentem simplicitate sua.
Adde quòd ad Christum populo veniebat ab omni,
Si cui Sacrifici non placuere sui.
Israelitarum sic regnum transtulit olim
Fastus Elidarum junctus avaritiae.
Turba frequens erat haec & habebat nomina multa
Nobilium, notos divitiisque viros.
Traxit & (ut dixi) multos aequatio vitae,
Mensaque communis queis erat una Fides.
Doctis, Indoctis, Fidis simul & Simulatis,
Haec paupertatis dulce levamen erat.
Crescentem numerum jam non mirabere; Nam {que}
Crevit vera Fides, Hypocrisisque simul.
Denique summus honor Doctis fuit in grege Christi;
Maxima Christicolis haec fuit ambitio.
Sed quod non fuerant eadem, at contraria docti,
Principium primum seditionis erat.

Sec.

Quos doctos narras? Quonia[—] nec Apostolus ullus,
Discipulusve fuit, quod scio, Philosophus.
An quibus ingenium breve erat sed barba profunda;
Quorum asper sermo, lubrica vita fuit;

Et quos ad fraudes damnarat Inedia viles,
Re stultos, falso nomine Philosophos?

Pr.

Hos ipsos. Quorum multos Ecclesia habebat.
Quicquid cepissent re•ia, Piscis erat.
Ex horum numero siebat Episcopus, ut quis
Insignis Logicus, Rhetoricusve fuit.
Qui veteris certant imbuti errore Magistri,
Verba Dei ad Sectam ducere quisque suam.
Verborum pugnam parit ignorantia discors,
Quam nexus rerum conciliare solet.
Horum quisque tamen sapiens sibi tam vehementer
Esse videbatur, tamque superbus erat,
Ut non-Philosophos prae se contemneret omnes,
Ut pecudes totidem, quae ratione earent.

Philosophos (iisdem si non didicere Magistris)
Spurcabant ipsos, quo potuere, luto.
Qua freti virtute? Modo quoniam, atque Figura
Scibant disserere, & ludere in ambiguo.
Haec illis Logica, Ratio, Sapientia, Virtus,
Ambitio, Spes, & gloria summa fuit.
Deque sacris verbis dum disceptatur, in Artem
Vertitur ignotam debilitata Fides.
Ars ignota fuit, quae nunc est Theiologia.
An circumscripsit quis sine sine Deum?
Quae, de Natura Divina dicere fas est,
Quaeque tacere decet, Pagina Sacra docet.

Discipulus Christi discernitur agnitione,
Et cultu, Sacri quem docuere libri;
Et vitâ, quae sit divinae congrua Legi.
Non à Naturae cognitione Sacrae.

Sec.

At cur Niceni tanto conamine quondam
De Christo, Physicè disseruere Patres,
Cum nihil in tota Scriptura clarius extet
Quàm Salvatoris cùm Caro, tùm Deitas?

Pr.

Cur nisi quod puduit quicquam nescire videri
Philosophum, aut victum discere, vera licet?
Dum pugnant freti veteris ratione Magistri,
Non tenuere novam vasa vetusta fidem.
Causa Potestatis tamen haec discordia Patrum,
Principium & Regni Spiritualis erat.
Nam Constantinus populis dum reddere pacem
Nititur, atque unam constabilire Fidem,

Lex (inquit) fiet quicquid statuetis; & illam
Curabo ne quis transgrediatur ego.
Hinc vulgò visum est, in rebus Relligionis,
Consensu Regis non opus esse sui.
Unus, habebatur Princeps quoque, de grege, Caesar,
Seque suae Synodo subdere visus erat.
Utque alii, poterat, si dissensisset ab illa,
Haereticus dici Legibus ipse suis.
Non illum Domini sancta depellere Coena

Hactenus audebant. Spes (sed inermis) erat.
Hinc quo {que} praesumptum est conscripta Oracula libris
Sacra, Sacerdotis solius ore loqui.
Quaeque, ad Scripturas spectarat libera Sacras,
Ad Patres spectat nunc pavefacta Fides.
Lege Dei dupla facta est Ecclesia biceps,
Lex una est animis, altera corporibus.
At {que} duplex homines terrebat poena misellos,
Cognita poena omnes, credita poena pios.

Sec.

Magna suit, fateor, Synodorum prisca Potestas;
Atqui res, Synodus, rara brevisque fuit;
Nec Papae potuit concedere, Regia jura;
Nec quamvis poterant, id voluisse puto.

Pr.

Per quatuor Synodos primas, centum {que} per annos,
Per Regum inscitiam, per populum {que} levem,
Creverat obscure Papae furtiva Potestas,
Donec Romano Principe major erat.
Nimirum, Piscator erat, piscemque petivit;
Et Piscatorum coetus erat Synodus.
Sed pro pisce fuit rerum suprema potestas;
Capturam facilem turbida praebet aqua.
Cuncta fuere priùs tenebris turbis {que} replenda,
Terrarum Domini quam potuere capi.
Et partes aliquas sibi vult fortuna relinqui,
Quae summi tacita est actio certa Dei.

Sec.

Verum quo pacto, de paupere Philosophastro,
Obtinuit, terris, proximus esse Deo?

Pr.

Historiae filum quod nunc subtile retexo,
Ostendet breviter, perspicuèque satis.
Finita Synodo statim nova dogmata surgunt,
Quamque priùs fuerat acrior ira redit.
Post Constantinum, rexit Constantius Orbem,
Catholicos vexans; namque Arianus erat.
Ille & Athanasium Magnum terroribus implens,
Martyrium, vitâ, fecit amare minus.
Exul ab Aegypto, Constantis castra per Alpes,
Gallorumque adiit frigida rura senex.
Judice te, meritò, latas à Principe Leges,
Ausus, doctrinae post-posuisse suae.
Proximus huic, mundi tenuit Julianus habenas,
Antè quidem Christi qui simularat ovem;
Sanctorum nunc hostis erat; verùm ille pepercit
Fortunis, sacri corporibus{que} gregis.
Sed fecit quod pejus erat. Nam Tempia Deorum
Surdorum pridem diruta restituit;
Atque Idolorum cultum revocavit ineptum.
Sic iterum ritus convaluere mali.
Christicolas autem sanxit non esse docendos
Ingenuas artes, bella paratque animis.

Sec.

Non tutam forsán Pietatem viderat inter

Grammaticos, Logicos, Rhetoricosque viros.
Scilicet, his, patrias amor est reprehendere leges,
Et statum rerum vertere, summa Venus.
Non minùs ingenii committit gloria Doctos,
Quàm Reges rapti dedecus imperii.

Pr.

At frustra cultum permisit Rex Julianus
Gentibus antiquum, nemo ubi sacra dabat.
Quis {que} suum Taurum, Vitulum, comedebat & Agnum;
Sacrificus rarus, victima cara fuit.
Frigeabant arae, desertaque Templa silebant:
Catholicum, de Diis dicere pauca, fuit.
Et dum quisque suam rem solam curat & urget,
De dubia dixit Relligione nihil.
Et quia desuerat populus Diis sacrificare,
Fit nova Relligio, quae fuit antè vetus.
At mox à Persis Rex caeditur hostibus (hostis,
Dicebat clerus, quod fuit ille Dei.)
Tunc etiam Gotthi coeperunt arma movere,
In sibi vicinos Imperii populos.
Forsitan injustè, sed non tamen absque colore
Justitiae; satis est Regibus ipse color.
Gentibus & tandem posuerunt nomina victis,
Non audita priùs, quae voluere Duces.
Vandalus hinc, Gotthusque, Herulusque, Hunnusque, & Alanus
Ad Boream fines occupat Imperii.
Nominibus variis, una sed origine Gotthi,
Nascitur ex una pustula multa lue.
Et tandem Italiam crebris successibus implent,

Et miscent verbis verba Latina suis,
Et Gentem genti. Romanam possidet urbem
Gotthus; sed doctus sacra Latina priùs.
Atque sui Gotthis (ut Graecis atque Latinis)
Catholici {que} inerant, Haeretici {que} viri.
Post hunc regnavit Jovianus mensibus octo,
Christicolis demptas reddidit ille Scholas.
Catholicus fuit ille quidem, sed legibus uti
Aequis Catholicos, Haereticosque jubet.
Quo facto moritur; tanquam si scepra tulisset,
Esset ut in tuto libera cuique Fides.
Romana accipiens tunc sraena Valentinianus
De sacra mutat Relligione nihil.
Nec qui successit cui nomen Gratia fecit.
Paci juncta fides dulcis utrique fuit.

Sec.

Quem tulit effectum concessa licentia tanta?

Pr.

Nec pax consequitur nec bene certa Fides.
Qui non audebant Deitatem tollere Christo,
Spiritus Sancto tollere non dubitant.
Impietatis erat tantae Macedonius Author,
Qui Byzantinas ore regebat oves.
Audax Orator; torrentis more sonorus,
Turbidus atque celer, non tamen altus erat.
Jamque iterum in partes Ecclesia scinditur. Iras
Aeternae vitae mutua cura facit.

Sec.

Unde meae vobis commissa est cura Salutis
Theiologi? Sine me consulitisne mihi?
Cur non & sine te liceat mihi cogere quemque
Vestrum, quod sperat, quaerere more meo?
Quod si praeceptis rem tantam credere vestris
Insanus cupiam, quis mihi ductor erit?
Nam dum continuò pugnatis, nescio cujum
Sum pecus; & videor neutrius esse mihi.
Hoc scio, sum Christi, qui jussit regibus omnes

Auscultare suis. Rex mihi rector erit,
Rex mihi rector erit Vocis; Mens libera soli
Parebit domino, quo velit ille modo.
Jam Divina Libro desixit Gratia Sacro
Quam servabo Fidem; si tamen ille velit.

Quam (puto) Doctorum sententia nulla resiget;
Sed nec eo Patriae jura tenebo minus.
Quid nobis Arius, quid Athanasius? Reperitur
In solo sacro Codice plena salus.
Unde igitur Patrum discordia tanta profecta est,
Si non ambitio maxima causa fuit?
Indignum Doctis non Reges esse putabant
Philosophi; pecudum nos habuere loco.

Pr.

Post hunc Theodosiusque, puer{que} Valentinianus
(Theodosius Magnus) Sceptra habuere simul.
Vicerat hic Gotthos, & eos servire coegit

Victos, sed certa conditione, sibi.
Hic & •berinis victas ejecerat arvis
Gentes Vandalicas, Haereticum populum;
Imperii summa meruit virtute coronam;
Jure etiam tenuit cum sibi dante pari.
Catholicus fuit & multum praebebat honorem
Praelatis sanctis de grege Catholico.
Nec nisi concordi censebat milite bella
Contra concordēs, prospera, posse geri.
His Synodum causis indixit. Episcopus omnis
Constantinopolin, jussus adire, venit.
Spiritus hîc Sanctus decernitur esse colendus
Ut Deus, & credi de numero esse Dei.
Hic quoque firmantur Synodûs decreta Nicenae
Omnia; Christicolûm perficitur {que} Fides.
Post hunc successit Honorius, Arcadiusque,
Principe Theodosio natus uterque patre.
In partes iterum Regnum discinditur. Ille
Occiduas Aquilas, hic Orientis habet.
Tunc Gotthis ducibus concessa à Caesare pridem
Audent Romani jura negare Duces.
Corripiunt e•ses Gotthi, Romanque petentes
Accipiunt Urbem sub ditione sua;
Aequassetque solo fortassis Alaricus Urbem
Dimidii mundi quae caput antè fuit,
Si non Romanus venientibus obviis isset
Papa, ferens Christi jura, precesque suas.
Sed flexus pietate viri, Rex cessit, & ipsum
Protegere incolumi jussit in urbe gregem;

Sic tamen ut tantum jus danti subditus esset,
Et successuris Regibus Italiae.
Hoc quoque nactus erat, dum miles crederet illi
De Verbo Domini; deque salute sua,
De Fidei mercede; quot essent gaudia coelis,
Et bona Catholicis quanta parata viris;
Quantus amor sratrum; quam suavis cantio, quando
Concinit Angelicus, Catholicusque Chorus.
Haereticis contrà quas servant Tartara poenas;
Quas ignis flammæ, quas tenebrasque simul;
Ardentesque animas, etiam clam corpore, quàmque
Aeterni colubri vulnera saeva dolent.
De forma & vultu tortoris, ut illius ore
Spires saevities, emineantque minae.
Haec inquam miles cum crederet, eligeretque
Idem, cui Romæ sceptræ gerenda daret;
Ne dubita quin eligeret quem Papa volebat,
Dummodo Catholicum; si numerusque sinat;
Si quoque non alii Regni tribuisset habenas
Qui prior in manibus jure tenebat eas.

Sec.

Theiologi verò concordēs, credo, fuere
Jam de Personis in Deitate tribus;
Vel tacuere metu legum, quas sanxerat antè,
Theodosius, multas, Haereticisque malas.

Pr.

Verum ut Theodosius naturæ Legibus ille
Magnus concessit, sitque timente minor,

Veste nova rursus prodit vetus Haeresis; Unà
Secum prodibat docta caterva virûm.
Hi clamant Christos plures non esse, sed unum;
Naturasque negant unius esse duas.
Dicite utram vultis, nam possum credere utramvis;
Res est difficilis credere utramque simul.
Catholicus regerit cur non potes impie utramque?
Anne ignota tibi est Unio Hypostatica?
Nota Et ob hoc ipsum non possum credere utramque;
Una est, quas unit Unio Hypostatica.
Concilium rursus placuit generale vocari;
Et resonat rixis u•bs Ephesina sacris.
Unde redit tristis ter victaque pars Ariana,
Non convicta tamen; sed neque muta diu.
Pòst etenim, Synodum tenuit pars illa, vocante
Principe, quo dubium, sed tenuere tamen;
Quae sua suffragiis stabilivit dogmata multis.
Sic lance aequata Theiologia stetit.
Et nisi Catholici Chalcedone consulissent,
Essent nunc illi forsitan Haeretici.
Cuncta sed ad normam Synodo revocantur ab illa
Nicenae Fidei, Catholicumque modum.
Haeresin, in plures formas quae vertitur una,
Quam quondam Proteus, vincula nulla tenent:
In Chalcedonia Synodo damnata repressa est,
Sed tamen ut verbis mox reditura novis:
Namque unam jussi Personam dicere Christi,
Scilicet ut nobis esse, nec esse duas;
Non plures una voluerunt dicere Christi

Esse voluntates; unica quippe Patri est.
Graeca vocavit eos Ecclesia Mounothelitas;
(Haeresis Imperio posthuma at illa fuit,
Nataque cum Synodos generales Papa vocabat,
(Neglecto dudum Principe) jure suo.

Sec.

Ille Voluntatem Christi qui fecerit unam
Ut debet, quamvis crederet esse duas,

Salvus erit. Nihil haec vitae subtilia prosunt;
Zona viatoris respuit hanc maciem.
Non populum Veteris docuit sic Foederis author;
Tale nihil dixit Sancta Cathedra Sinae.
Sed contrà; De me frustra quicumque loqueris,
Non impunè feres. Sum. Tibi sit satis hoc.
Vos, ô Doctores Graeci, cur dicitis uni
Tres Hypostases simplici inesse Deo?
Qui scitis? Si non scitis, ne dicite frustra:
Nuda Libri Sacri sint tibi verba satis.
Esse Deum Christum liber hic declarat apertè,
Atque Deo-genitum: Quî queat esse rogas?
Stulte, prius videas, an possis noscere ab actu
Ipse tui Patris, quòd generandus eras.
Tu, qui musca quid est, aevum nescibis in omne,
Quid siet, expectas, improbe, scire, Deus?
Pharmaca peccatis summo ne tange palato.
Sanari si vis, injice fortis hians.
Nam sacra qui Logico mandit mysteria dente,
Hunc vertigo capit, nauseaque, & vomitus.

Pr.

Philosophis illis Nicenis nota fuerunt
Haec satis, & scibant quid sacra verba docent.
Sed Doctrina Dei non expediebat eorum
Consiliis, mundi quos agitabat amor.
Nec populum mundi ranta dulcedine cepit,
Quantâ venalis gratia Pontlsicum.
Namque suos Christus jubet omnes invicem amare,
Et bona vicinis omnia velle suis.
Quae bona non tua sunt, Formae spectator & Auri,
Ne cupias, inquit, si meus esse cupis.
Omnibus ô legem duram moechis & avaris,
Quam, mundanorum quis tolerare potest?
Iraci vetat, & veniam donare petenti,
(Et puto si veniam non petat) ille juber.
Christe, vetas, ne quis sapientem se puter esse,
Despiciatve rudem simplicitate virum;
Aequa quidem, verùm tibi dura, Scholastice, lex est,
Qui cupis ingenio subdere cuncta tuo.
Discipulis Dominus, non, dixit, cogite quemquam,
Invitis quoniam gratia spreta perit.
Condere nec Leges jussit, nec habere tribunal
In terris; sed eos ire, docere, jubet.
Non placet hoc munus sapientibus; esse meretur
Qui Rex summus (ait) ludimagister erit?
Si peccatorum quem poenitet, atque salutem
Concredat Christo non variante fide,
Salvus erit, sacris si fas est credere libris,
Durum est Romanus Clericus omnis ait.

Illene salvus erit qui non intelligit utrum
Christus homo fuerit factus, an induerit?
Qui Genitum esse nequit distinguere ab esse Profectu⁻,
Aut nescit Genitus quî Deus esse potest?
Si datur hoc Laicis, frustra est sapientia nostra,
Atque animas nostras corpora crassa regent.
Semina, Christus ait, bona quidam severat arvis
Agricola, at veniens mox inimicus homo,
Nocte latens, agro Zizania sevit eodem.
In segetem semen crevit utrumque simul.
Mirantes servi, dubiique quid esset agendum,
Ut mos est, Dominum consulere suum.
Evelline jubes istas radicitus herbas?
Vel si non placet hoc, dicito quid facimus.
Ille, simul crescant dum Messis venerit, inquit,
Igni fasciculos inde parate meo.
Haereticos Christus vetat hac sub imagine tolli,
Ante diem extremum, judiciumque Dei.
Doctrinae vestrae si frater forte repugnet;
Molliter hunc verbis instrue, Paulus ait,
Si Deus illius velit illucescere menti,
Ne non inveniatur gratia sera locum.
Non magni fecere Patres textum hunc, ne {que} multo
Pluris eis rectae Lex rationis erat.
Maxima quando meo mea res sit agenda periclo,
Mene vetas uti, tu, ratione mea?
Daemonis inferni si te duce labor in ignem
(Quod ne contingat nescio quid prohibet)
Praecipit, ut redimas, Lex aequi, corpore corpus,

Proque salute mea perdere velle tuam.
Haec dictat ratio si coget. Det mihi qui vult
Consilium; sed qui coget iniquus erit.

Sec.

Haereticis leges tibi non placet esse molestas,
Doctrinae nulli crimen inesse putas?
Quas caedes, nescis, nuper doctrina nesanda
Egressa Oxonio, Cambrigiâque dedit?
Occidit Carolum doctrina Academica Regem,
Multosque insignes nobilitate viros.
Necnon Henrici, doctrina Pontificali,
Gallorum Reges occubuere duo.
Curam qui pacis suscepit cunque tuendae,
Doctorum duris legibus ora premat.

Pr.

Quid potuit doctrina mali ex hoc tempore vidi,
Et vidi Leges quàm valere parùm.
Infecto sed sera venit medicina popello
Multo; qui, quae sunt Principis, arma tenet.
Regi cui praesens non est exercitus, illi
(Seu vult, seu non vult) Ensifer est populus,
Ut nil sit quod agant leges. Nihil est resecandum;
Optima demulcens est medicina manus.
Exigat ad Leges pacem, convicia tollat
Rex; dubitare potes quin Schola inermis erit?
Caetera sit calamus liber, sit libera lingua,
Si mores saltem non docet illa malos.
Non loquitur Pietas perplexa. Sed insidiarum

Signum non fallax est tenebrosa phrasis.
Nam Christus lux est; ad eum venientibus ipse
Praelucens claro lumine monstrat iter.
Numquid divinae, sunt pars, aenigmata, legis,
Ingeniovè salus est tribuenda meo?
OEDIPODAS solos salvandos credimus esse?
Aut Christi tenerae Sphinge regentur oves?
At Sphinges nequeunt, aenigmata Conciliorum
Primorum quatuor, solvere mille decem.
Cur agit ergo (putas) Nicena Ecclesia Sphingem,
Si non ut tollat Regibus imperium?
Sustulit imperium, passus non debita jura,
Constantinorum primus, habere Patres.
Inde suos populus coepit contemnere Reges,
Portantes unâ Pontificale jugum.
Atque utri vellet, Domino servire, duorum,
Suetus, vix patria lege regendus erat.
Nam quoties patrias leges sibi frangere visum est,
Fracturae, leges opposuere Dei.
Et quoties servire Deo minus expediebar,
Excussit populus liber utrum {que} jugum.
Exitiosa fuit nimia ista licentia paci;
Sed populo Lotus, militibusque fuit.
Prona igitur facilisque fuit victoria Gotthis,
Qui Romam Mystae supposuere suo.
Jamque potestatis Papa esset culmen adeptus,
Si non Gotthorum Rex metuendus erat.
Namque à Romanis Aquilis Oriente remotis,
Non ulla apparens causa timoris erat.

Illas miles aves fecit quacunque volare,
Vellet; sunt & aves quas jubet ille bonae.
Non caret auspicio quodcunque inceperit ille
Cui non invitae subjiciuntur aves.
Jamque probans vires Papa excommunicat ipsum
Induperatorem, nomine Anastasium.

Se.

Cur?

Pr.

Chalcedoniae Synodi decreta teneri
Non fecit, quantum Catholicum decuit.
Post hunc Justinus, post illum Justinianus
Regnavit, Papis & placuere suis.
Quorum hic imprimis Romani Codice juris
Insignis, longo tempore jura dedit.
Foelix eximiis belloque & pace ministris,
Quorum virtutes credidit esse suas.
Huic Gotthos Latiis Belisarius expulit arvis,
(Quanquam uxore minor) maximus ille ducum.
Pontificum pulsus Effulsit gloria Gotthis;
Sub coelo rerum maxima, Papa fuit.
Cedunt arma mitrae, concessit Episcopus omnis,
Etsi quisque sibi jus cupiebat idem.
Cessit, sed tardè, Constantinopolitanus,
Aequali quanquam dignus honore fuit.
Leviathan naribus, Behemoth {que} receperat hamum;
Et Rex & Populus servus uterque fuit.

Sec.

Amplius ergo nihil Papae restabat agendum
Quàm genus humanum luce beare sua;
Et post terrarum, coelorum quaerere regnum,
Ut serpens, sapiens; simplicitate puer.

Pr.

Nempe datum prius est, posterius minimè.
Omnia Pontifices superarunt cnodula quotquot
Producit tellus calliditate sua.
Sed Regnum duplex, Carnale, & Spirituale,
Non nimiae signum simplicitatis erat.
Nec Papas credas egisse per otia vitas,
Nec quod agendum ultra nil habuere putes.
Vota hominum semper votis augentur adeptis;
Accedens partas copia servat opes.
Piscator solitam non spernit callidus artem,
Quantavis praeda retibus implicita.
Res agit ille suas semper. Vel retia sarcit,
Si quo perrupit magna balena loco.
Aut hamos fortasse novas mediatur, & escas
Piscibus, aut aliquod nectere fraudis opus.
Aut illis placitos escarum adhibere colores,
Noxia vel nitidis Pharmaca quaerit aquis.
Omniaque emissis scrutatur litora servis,
Quae fugit, & quae, quis litora piscis amat.
Tum quos, & quibus, & quanti vendat nova cura est;
Et mensae pisces quos retinere suae.
Quos sale conspergat, compluri quos sale duret;

Et quis marcescens abjiciendus erit.
Adde quod & multis cura est, & maxima, natis
Perduraturas aedificare casas.
Circumstant similes curae Papam; similisque
Ars est; & semper res agit ille suas.
Principibusque parat nova vincula religionis
Tenuia, quae faciet fortia stultities.
Doctrinisque novis sarcit, si postulat usus,
Aut levius reddit religionis onus.
Aut aliquod monstrum doctrinae, è pyxide Circes,
Ornat, ita ut Pytheus crederet esse suum.
Absurdumve aliquod sustentat dogma bifurcis,
Unde stupens capitur, qui fuit ante catus.
Debet & ad gentes longinquas mittere scitum
Quales sunt; illis qualis & esca placet.
Indo, namque Scythae, divisoque orbe Britanno,
Est anima, & salvam rem cupit esse suam.
Et Novus Orbis habet, tellusque Incognita, multas
Nec nigras animas, corpora nigra licet.
Argentique habet illa, & flavi frusta metalli;
Haec sibi ne pereant Papa cavere solet.
Quos premet, & quibus indulgebit, id est, sale sparget
Reges & proceres, abjicietve, putat,
Et quos post mortem (sed longo tempore) Divis
Debet sacratos adnumerare suis.
Ut sale durati, durant hi pluribus annis,
Non magno pretio quos sibi pauper amat.
Denique, quod primum est claras non negligit ille
Natis, cognatis, aedificare casas.

Plures Pontificum sunt curae; quas numerare
Difficile est, mentem ni juvet ordo meam.
Ostia sed susci stabo Polyphemus ad antri,
Utque foràs tendit quemque notabo dolum.

Sec.

Hac nimium vereor ne sit narratio longa;
Fraus potuit doctos nulla latere Senes.
quantum fraudis, sexcentos posse per annos,
Milleque ab ingeniis surgere, credis, opus?
Tempus adest coenae, serum est percurrere cuncta;
Crastina, si vis tu, finiet illa dies.

Pr

Non serum est, meus ecce bonus Chronometra quid inquit;
Praecisè sextam dimidiamque notat.
Septima sermoni finem faciet nota nostro,
Otia ne non det crastina forte dies.
Praeter Judaeos, Gentes Idola colebant,
Omnes, & domibus plura habuere suis.
Aurea divitibus stabant, & eburna Sacellis,
Aut ex argento, aut aere Corinthiaco,
Aut stabat summi Parius lapis arte Magistri

Factus. Materiam nam superabat opus.
Ingenium nullum, potuit facundia nulla
Eripere haec avidis tam pretiosa viris.
Quid faciet Praeco (quoniam miracula cessant.)
Quî potuit verbo conciliare fidem?
Nam si non illis simulachra indulta fuissent,
Judaeum Graecus vix coluisset homo.

Ergo coli sapiens permisit Doctor; at illa
Sub certa tantum conditione coli.
Nempe ut mutarent divorum nomina. Nolunt
Vel Solis dici, vel simulachra Jovis,
Vel Phoebi, Martis, Lunae, Veneris, vel Amoris,
Mercurii, Bacchi, Palladis, aut Cereris.
Sed Christi, Petri, Pauli, Sanctaeque Mariae,
Aut alio quovis nomine Apostolico.
Sic Fidei verae comes ire Idololatria
Permissa est; vera plus placuitque Fide.
Quam nullus Princeps est ausus tempore longo
Laedere, nec sibi grex senserat esse male.
Sed veluti properae curae subnascitur ulcus
Acre, quod ad tempus non breve saepe latet,
Et tandem erumpit; sic morbum Rex Leo primus
Sensit, nec potuit jam superare malum.
Sed tamen hinc natum est bellum calamare Sophistis.
Temporis illius qui docuere Fidem.
Hoc bello victi cessarunt Iconomachi,
Non concedentes, sed siluere diu.
Hac arte effectum est, ne quando cerneret artem
Stulta, stupens, & hians plebs in Imaginibus.
Numina nec tantum Gentes sictilia amabant,
Sed Festos etiam concelebrare dies;
Tollere quos quicunque esset conatus ineptus,
Fecisset madidum saxeus imber cum.
Hinc Chronicus festus (tunc Saturnalia) nunc est
Catholicus festus, nomine Carnevale.
Nonne etiam mensis Maii primum meministi,

Te puero, juvenes concelebrare diem?
Ut Phallum arboreum (membrum navile) ferebant
E sylvis, medio quem statuere foro;
Utque illum circa juvenes duxere Choreas
Aptus vir bellis, apta puella viris?
Hunc festum Gentes olim Priapeia vocabant,
Optatum pueris Virginibusque diem.
Nondum defecit vetus Ambervalia festus
(Festus, at innocuus, permanet ille dies.)
Et quem rurales sinita messe coloni
Cum Baccho Cereris concelebrare solent,
Temporibus priscis sunt Bacchanalia dicta,
Cum Vini colerent ebrietate Deum.
Multa tulere patres legi contraria Christi,
Dum populum properant conciliare sibi.
Nec sic venisset fortasse Proselyta multus,
Si non à causis pluribus actus erat.
Vita Sacerdotum cunctis odiosa erat, illis
Ingenii aut morum gratia nulla fuit.
Nam tristi gravitate superbus Hypocrita quem non
Offendit, quamquam caetera doctus homo?
Qui spretis aliis sapiens vult solus haberi
Et dici, quamvis nil sciat ille boni;
Justa tibi solvi qui postulat omnia, summo,
Adque datum punctum, jure Geometrico;
Ipse tamen solvit sua, libertate Poetae;
Hunc socium vitae dixeris esse bonum?
Compulit ad Christum, vita improba Sacrisicorum
Multos foelices ingenuosque viros.

Quippe parùm possunt insulsos ferre, pudico
Ingenio nati, non inopesque viri.
Sed multò plures traxit communio victus,
Quanquam illos inopes, contiguos{que} fami.

Sec.

Siste gradu[—]. Quonia[—] nec adhuc, in imagine Christi,
Aut Sancti, quicquam cerno ego inesse mali.
Non ego, si flector, si verba effundo precantum,
Sique meos oculos detinet effigies;
Non illi flector, non alloquor, aut colo. Solum
Oro Deum, nomen cogito mente Dei.
Tune Deos Romae credis simulachra videri?
Quid faciunt ergo tot simulachra? Monent.
Quod fuit olim Serpens Aeneus Israelitis,
Atque Sacerdoti quod Cherubinus erat,
(Ante illos, Domino{que} Authore, precatio facta est)
Hoc sancto, Sancti praestat imago, viro.

Pr.

Difficile esse putas homini, praesertim Idiotae,
Credere in Effigie posse latere Deum?
Naturam humanam nimium nescire videris.

Credere (crede mihi) quidlibet ille potest.
Nam simul ac hominem possedit cura futuri
Temporis, ipse suum consuluit{que} metum,
Credere pronus erit spem qualemcun{que} ferenti,
Atque sequi multos quâ videt ira via.
Credebant Gentes habitare in Imagine numen,

An minùs illorum est vivida nostra fides?
Quòd simulachra monent, color est è pyxide Circes
Sumptus, & Idolo cuilibet aptus erit.
Nil facit exemplum Serpentis, nec Cherubini,
Quos fieri & statui jusserat ipse Deus.
Respice mandatum Domini. Tibi sculptile, dixit,

Non facies. Populus fecerat illa Deo.
Cessantis quondam pluviae signum fuit Iris;
Sanatimorsus Aeneus ille Draco.

Sec.

Nec colui Simulachra, nec esse colenda putabam;
Attamen assensu laetus abibo tuo.
Persequere inceptum, quibus insuper artibus usi
Sunt Piscatores ordine quasque refer,

Pr.

Est aliud genus Idoli subtilius omni
Materia, quali vita carere nequit.
Aëre simplicius, subtilius aethere puro;
Mobile; sed nullo quod queat esse loco.
Talibus Idolis non est macilentior umbra;
Nam{que} patente oculo cernitur umbra nigra.
Illa Idola oculis nunquam cernuntur apertis,
Sed tantum clausis, attonitisve metu.
Sicut subtilis magis est sapientia per se
Quam quisquam sapiens, re bonitas{que} bona;
Sic etiam subtilior est Idololatria
Quam dico, quàm quae materialis erat.

Sec.

Haec aenigmaticè quamvis narrasse videris,
Attamen ut capiam non opus OEDIPODE est.
Namque mera indoctae coluerunt Somnia Gentes
Picta Sacerdotes quo voluere modo.
Nocturnum populum nemo non viderat. Unde
Advenere tamen nescius omnis erat.

Pr.

Hinc metus ignoti, doctrinaque Daemoniorum,
Subdita corruptis Philosophisque Fides.
Respexitque Fides ex illo tempore Patrum
Dogmata, non Sacri quae docuere Libri.
Sic populus trepidus pendebat ab ore Magistri;
Coeperunt Regum jussa valere parùm.
Cara nimis pauci versabant Biblia. Nondum
Artis erat libros multiplicare Typis.
Inque Patrum manibus mansere Oracula Sancta,
Quorum praeceptis tunc didicere loqui.
Deinde quod in Templis curabant commemorari
Doctorum quaedam nomina amica sibi,

Expediebat eis. Spes ostentata triumphi,
Militiae est semper maxima causa bonae.

Sec.

Sed quid, an in Templis, & dum celebrantur honores
Divini, fas est concelebrare hominem
Quem pius ignoras sit an impius, ignibus atris
Subtùs, an in coeli luce beatus agat?

Regibus infesto signabis nomine Fastos?
Becchetti stabit Fatum in Ephemeride?

Pr.

Quod stetit id stabit, vim legis dum tenet Usus.
Et populos recta pro ratione regit.
Papa sed ad magnam spem cor dilatat, & orbis
Totius imperium cogitat esse suum.
Et juris titulos extorquet Codice sacro;
Supponi sibi vult omnia Jure Dei.
Nominibusque capit Regum Regalia jura.
(Saepe Fidem gignit nomen inane rei.)
Pontificem dici vult se, quo nomine quondam
Augustus Romae coeperat Imperium.
Quodque fuit Moses Judaeis, & quod Aaron
In toto Christi postulat esse grege.
Utque vocant trepidae summi Jovis arma Tonantis
Gentes, Censuras sic vocat ille suas.
Nec Majestatis contentus nomine, nomen
Sanctius assumit, conveniensque Deo.

Sec.

Quin siet impietas nec parva haec, nolo negare.
Censuras rectè fulmina forte vocat.
Nam sicut Fulmen, si quando se insinuarit
In commissuras parjetis igne suo,
Disjungit lapides, si non & disjicit, & sic
Quod fuerat firmum debile reddit opus;
Sic quoque dissociat cives Censura timenda
Illis qui stultè Phasmata vana timent.

Pr.

Ad genus omne boni mundani carbasa praebent;

Ad visas, velis omnibus, itur opes.

Ut capiant populos, cogant & ovescere Reges,

Quoque modo possint parta tenere student;

Queis opus est multo stratagemate perficiendis,

Nequitia docta, Philosophaque Fide.

Suevit ut in Templis, audisti, Ecclesia Patrum

Prima, satellitium commemorare suum.

Nunc autem Papis dominantibus, adnumeratur

Divis, quisquis eis profuit arte sua.

Reddita sic rursus populo est Idololatria,

Nemoque non Divum coepit habere sibi.

Sec.

Romani moris suit haec imitatio prisci

Ut qui Caesaribus par tribuere decus.

Sed non tam temerè tantos concedit honores

Papa, sed ut vitas Signa probare videt;

Nec subito, sed cum vita decesserit annis

Permuitis quemquam sanctificare solet.

Pr.

Nec mirum. Praesens mendacia respuit aetas,

Ad quae posteritas sera coacta tacet.

Jam fuit aeternae nimium via commoda vitae.

Durum erat in tota Relligione nihil.

Externus labor omnis erat, nec erat gravis. Intus

Nescitum est cujus Relligionis erant.

Qui servit Clero, qui Clero praedia donat,
Clero magnificas aedificatque domos,
Is Pius est. Divum {que} olim referetur in Album;
Aeterna est illis vita in Ephemeride.
Papa licet rigidus divini exactor honoris
Non erat, & facilem praestitit esse Fidem,
Non ita neglexit placidè sua jura & honorem;
Sed summus, si quis deroget, ultor erat.
Gentis Anastasius Romanae erat Induperator,
Ille tamen sacro fulmine tactus erat.
Cur? Quia passus erat violari Chalcedonensis
Articulos Synodi, saepius admonitus.
Sed confirmata est Synodus sub Justiniano,
Haereticae Fidei terribilisque fuit.
Namque is Theiologus doctus cupiebat haberi,
Atque suo Princeps Codice plenus erat.
Ille tulit leges primus, quibus Haeresis (etsi
Congrua Scripturis) morte luenda foret.
Ille sibi, & Papis multos jugulavit honestos
(Quales nos hodie dicimur) haereticos.
Ille metu solvit, detraxit fraenaque Papis,
Expulsis Ghottis Regibus Italia.
Ille Potestatem Papalem Spiritualem
Inflavit, pestis quae fuit imperii.
Alter damnabat sanctos, spoliabat & alter;
Regnum Papa petens; Rex, ut avarus, opes.
Jamque animo Papae dolor unicus haesit, habere
Constantinopoli Praesulem honore parem.
Attamen obtinuit paulò post, Principe Phoca,

Primatum ad nostros quem tenet usque dies.
Nam Rex Tiberius successit Justiniano,
Cui vitam dempsit Sceptraque Mauritius;
Mauritio Phocas; Phocaeque Heraclius armis.
Proditor is fuit, hic mounothelita fuit.
Phocas Catholicus Primatum Spiritualem
Papae concessit; participi sceleris.
Plus ultra nihil est. Res est altissima terris
Papa, sibi visus vix-minor esse Deo.
Solaque cura manet quo pacto debeat uti
Fortunae fluxu, muneribusque frui;
Quantos induerat radios splendoris, & esset
Stella quibus foelix, stella maligna quibus;
Regna quibus deceat dare, vendere, tollere, quique
Exaltandus erat, quique premendus erat.
Promere sed lumen Libri, atque abscondere, Sacri,
Ipsius arbitrio, maxima cura fuit.
Nam {que} per hoc tempus cessavit lingua Latina
Romae, quae longo tempore Babel erat;
Inque unam linguas multas conflaverat aetas;
Italica haec vulgo nomine dicta fuit.
Sic qui doctrina caecus fuit antè popellus,
Cogitur officiis surdus adesse sacris.
Clerus cognoscet solus Scriptura Precesque

Quid dicunt. Populus dicere discat Amen.
Uni cunctorum commissa est cura salutis,
Romani loquitur Praesulis ore Deus.
Quod si concedas, quid prosunt Biblia sancta?
Salvus eris, si quae jusserit ille facis.

Sec.

Non erat ambitio, sed erat sapientia, vulgò
Scripturas sacras quod vetuere legi.
Nonne Dei populum vetuit conscendere montem
Flammantem Moses inde videre Deum?
Nuper ut in partes fracta est Ecclesia nostra
Vidisti; Sectae quotque fuere hominum?
Independentes, Tremuli, Presbyteriani,
Quintimonarchistae, Praesulici, Dibaphi.
Quàm multo saevum satiabant sanguine Martem.
Scituri bello iudice verba Dei.
Qui cupit in celsum Sinae conscendere montem,
Antè in Parnasso fabricet ille scalam.

Pr.

Tune adeo bonus es, tantorum ut causa malorum
Visa sit esse tibi Biblia Sacra legi?
Sederat in Clero veteris faex ambitionis;
Non illis nostrae cura salutis erat:
Quis Fidei nostrae, certabant, imperitaret,
Et caperet lucrum, quod venit inde, sibi.
Nam cum naufragium passa est Romana potestas
Ad scopulos nostros, juraque perdiderat,
Evasere tamen Praelati, & fragmina pauca
Antiqui juris salva tulere sui.
Hoc lucrum quamvis non magnum Presbyter illis
Invidet, & partem clamat habere suam.
Dumque illi bello certant de Relligione,
Jus Regni Populus certat habere sibi.
Non erat in culpa divini lectio Libri,

Nec vacuum est populo ruris, adesse libris.
Sed redeo Romam quae nil nisi grande sepulchrum est,
Et Papa ad tumulum Caesaris umbra minax,
Regnans in tenebris quas fecerat, & facit ipse;
Verborumque dolis regia jura petens.
Nicenae Synodi Patribus concesserat olim
Rex Constantinus (sed nimium temerè)
Ne Fidei lites alio sub Judice sinem
Acciperent, praeter Spirituale forum.
Pro se, dumque mererentur concesserat ille;
Hi semper poscunt, & quasi jure suo.
De causis Fidei tantùm concesserat ille;
Isti personis applicuere suis.
Desiit ex illo jam longo tempore Clerus
Formidare minas Caesaris, atque forum.
Nec de criminibus vult respondere vocatus
Coram Civili Judice Clericulus.
Cur? Quia Paulus ait, Nonne inter vosmet habetis
Solvere qui justè jurgia vestra sciat?

Sec.

Quae Deus indulsit crudeli jura sub hoste,
Non eadem Sanctis semper habenda dedit.
Vivere vix licuit; licuit jus dicere? Sancte,
Nunc quoque si placeant accipe utrum {que} simul.

Pr.

Si fur, si latro, si moechus Clericus esset,
Regum Judiciis eripiendus erat;
Sique suum Regem jugulasset proditor ipsum,

Aut compilasset delubra sancta Dei;
Tunc moderabatur poenas Ecclesia Judex,
Non inconsulta commoditate sua.
Sed si quis Laicus, non dico laeserat illos,
Sed si, quod dicunt, dicere nolit idem;
Ure, Ure, exclamant, & vociferantur ad ignem,
Mortemve atrocem, siqua sit, igne magis.
Sancti, soli qui Sancti vultis haberi,
Commendat vobis saevitiemne Deus?
Non tamen ingenii sunt haec, sed facta timentum,
Quae conabantur ne patefacta forent.
In populum láqueos pluerant, ideoque timendum,
Si populus sciret, ne plueret lapides.
Crimina criminibus celantur prima secundis;
Ultima sed tandem non erit unde tegant.
Nempe Lutherus erit qui fraudes deteget omnes;
Et Papas feriet fulmine Saxonico.
Ambitio in longos perrarò prospicit annos,
Quantumvis, praesens utile, acuta videt.
Nec sua', Philosophi credebant posse refelli
A Laicis unquam, dogmata docta, viris.
His quia temporibus turbabant Mounothelitae,
Cum Christi Sanctum distraherentque gregem;
Principis injussu tunc primùm Papa vocavit,
Ipsius arbitrio, Catholicam Synodum:
Coeperunt Reges tunc primum posse putari
Haeretici; & vinctos legibus esse Scholae.

Sec.

Legibus esse Scholae subjectos non puto Reges;

Subjectos nosti Legibus esse Dei.

Pr.

Lex divina nihil de nugls continet istis;
Nam Lex haec lux est, recta jubendo, docens.
Sed doctrinarum tenebras has, nec videt ipse
Umbrarum dominus, qui sine luce videt.
Mille voluntates habet unus, dum modo vult hoc,
Deinde aliud; nullam, si nihil optat, habet.
Christus ait clarè, Sumus unus Egoque Paterque;
Visne Voluntates Unius, esse duas?
Haec provenerunt ab inani Philosophia
Temporis illius, quam coluere Patres.
Namque animae lepidam narrabant Oeconomiam
Illis temporibus, Philosophi veteres:
Quod domus est Animae Corpus, fit quod jubet illa;
Non homo, non corpus, non opus ipsa facit:
Sed bene dispositis peraguntur cuncta ministris;
Fungitur & promptè munere quisque suo;
Olfacit, & Gustat, Tactu sentit, Videt, Audit,
Non homo, sed Sensus proprius ista facit.
Nempe suum mittit simulachrum res in ocellos,
Idque videt Visus; non videt illud Homo.
Nec sonus auriculas penetrat quin audiat illum
Auditus; nihil est ipse quod audit Homo.
Acceptas species, considerat Intellectus;
Supputat & Ratio; Visque memor retinet.
Sic quoque Judicium discernit; vult{que} Voluntas;
Sic verè dictum est, Est Microcosmus Homo.

Sec.

Nil facit ad nostram comoedia slulta salutem;
Nec nos salvabunt Physica, vera licet.
Sunt credenda quidem libris quaecunque leguntur
Sacris; sed Codex non habet ista, Dei.
Non tollit peccata hominum Sapientia Graeca,
Nec facta est tardis poena Gehenna animis;
Sed fastu plenis, mendacibus, atque hypocritis,
Ingratis, avidis, omnibus atque nigris.
Nam bene moratum Physicus si perderet error,
Quo staret Doctor discipulusque loco?

Pr.

Post hanc suppressam, statim venit altera major,
Quam Reges multi sustinuerunt diu.
Christicolis dederat primis Ecclesia prima

Idola (at verso nomine) habere sua.
His populus fudere preces, & honore colebant
Quem dederat falsis Ethnicus antè Deis.
Id quod Pastores, regnante Leone secundo,
Innumeri, & docti non potuerunt pati.
Certatum est centum, scripto {que} & voce, per annos,
An licitè in sacris possit Imago coli.
Sed victi tandem cesserunt Iconomachi,
Et simul Eoum languit Imperium.
Nam circa hoc tempus coepit Saracenica Secta
Fortiter armari, cum Mahomete suo;
Inque dies crescens, Turca duce, tandem Orientis
Sustulit Imperium, Catholicam {que} Fidem.

Haeresis interea longum lassata quievit
Partibus Occiduis, post valitura tamen.
Sed quantum Papae derasum est partibus illis,
Partibus his tanto durius incubuit.
Ut ferrum candens subitum si frigus ab una
Sensit parte, magis fervet ab opposita;
Sic quoque conatus Paparum Oriente repulsi,
Partibus Occiduis invaluere magis.
Credi namque jubent fieri miracula ab illis
Quorum sunt usi simplicitate virum.
Sed non ante obitum, nec post, nisi tempore longo:
Non patitur praesens ficta valere dies.
Non tot Moeonius narravit monstra Poeta,
Quot populo Christi Papa Legenda dedit.

Sec.

Nicenae Fidei subscripsit Episcopus unus
Qui paulò, ut dicunt, mortuus antè fuit.
Nam {que} Patres ipso posuerunt Acta sepulchro,
Orantes subtùs scribere ut ille velit.
Discessere boni Patres, saxoque reposto
Cauti signa omnes applicuere sua
Postridiè redeunt, subscriptum nomen & Actis
Inveniunt, gaudent, magnificentque Deum.

Pr.

Audiit hoc etiam Rex Constantinus? An ingens
Miraculum solus nesciit ille Dei?

Sec.

Nescio.

Pr.

Ne Credas. Cur non testatus & ipse est
Rem certam, ut posset certa valere Fides.
Sed nec tem vidit Princeps, nec id audiit unquam:
Multo posteriùs fabula ficta fuit.
Dein quod Daemoniis infernis imperitarent
(Nomine nam populus Spectra vocabat eo)
Quodque locis sacris illos expellere Epodis
Possent, possessis corporibusque hominum
(Cuncta videbatur quia sanctus scire Sacerdos)
Antiqua didicit crederé turba side.

Sec.

At Daemon mendax, qui nunc possederat ipsos,
Si credi cuperent, ejiciendus erat.

Pr.

Spiritus (adde) & avaritiae, fastûsque superbi,
Litis, vindictae, saevitiaeque ferae.
Sed nunc ridiculae miracula mitto Legendae;
Ut quae jamdudum sunt tibi nota satis.
Hoc aevo terrae spoliavit parte Latinae
Rex Lombardorum, Pontificem Laicus.
Tum Rex Chilpericus, stupidus cognomine, Regnum
Gallorum tenuit; fecit at ipse nihil:
Omnia erat Pipinus; opemque oravit ab illo
Contra Lombardos Papa; nec ille negat.

Armis Italiam petiit, superavit & hostem;
Pontifici glebam restituitque suam.
Digna rogas operae quae cepit praemia tantae?
Fit Rex Pipinus; Chilpericus Monachus.
Nec dum finis erat Pipino morte remoto,
Lombardus victus rursus in arma ruit.
Ablatas iterum Romanas occupat Urbes,
Quas iterum miles Gallicus eripiet.
Nam Carolus Magnus, Pipini filius, armis,
Lombardum ereptos reddere cogit agros.
Et veniens Roman turbatis Schismate firmam
Romanis pacem, Pontisicemque dedit.
Sic Papam fecit, victoris jure, Leonem;
(Tertius ille fuit cui Leo nomen erat.)
Nec fuit ingratus Leo; nam Carolo dedit ille
Caesaris antiqui nomen & Imperium.

Sec.

Talia dona solet producere gratia rarò;
Contracto potius foedere pacta puto.
Italus, aut Gallus quid in Anglos juris habebat?
Non sua Rex Carolus, non sua Papa dedit.

Pr.

Nil refert Quo Jure; sed actum est; & fuit alter
Terrarum Dominus; Rex Fidei alter erat.
Nec tot ad Imperii potuit tuba signa ciere
Tela, quot ad Fidei castra venire volunt.
Namque tubae clangor mortales indicat hostes;
In Sibilo Fidei creditur esse Deus.

Ipse caput Caroli cinxit diademate clarum
Papa suus (populo conspiciente) Leo.
Nec facile exultans populus sua gaudia texit,
Corde uno Reges laetus habere duos.
Ut verò capiti Regis Leo Papa coronam
Imposuit, verbis & benedixit ei;
Unus & alter erat qui clara voce DEUS DAT
Dixit, fortuitus, nescio, an appositus,
Tunc veluti quando nimium ferventia ligna
Intûs saevo ardent igne, latente tamen;
Admota facula collucent omnia flammis,
Monstrat & ardorem libera flamma suum;
Sic vulgus simul ac sensisset verba DEUS DAT,
Vocibus extensis, DAT DEUS omne sonat.
Post haec Christicolûm coeperunt regna videri
Esse data à Papis omnia, Jure Dei.
Sed non prospexit verborum posteritatem,
Aut parvi fecit Rex generosus eam.
Quae tandem neglecta in Legem transiit Usu,
Et Regum fecit jura valere parûm:
Quae Caroli soboles conatur reddere firma,
Frustra; nam Caesar nil nisi nomen erat:
Nomen, amicitiiis, regnique vigore paterni,
Egregiis factis, vix tenuere tamen.
Una, Potestatem partam nunc cura manebat,
Ut, quantis, colerent artibus esset opus.
Altera, ne possent sua jura reposcere Reges;
Ne populi saperent, tertia cura fuit.
Ergo Sacerdotum statuerunt ne quis haberet

Uxorem propriam. (Sed statuere senes.)

Sec

A stupro veniens potuit celebrare Sacerdos?

A propria veniens conjuge non potuit?

Pr

Non quo tu reris Legem tinxere Colore,

Sed qui de Sacro Codice sumptus erat.

In Regno, Christus, Coelesti, dicit aperte,

Conjugium nullum; non Vir & Uxor erit.

Omnibus at Regni, Sanctis Haeredibus, hujus,

Angelico, vitam vivere, more datur:

Clericus & (docti dicunt) Haeredicus idem est;

Atque hinc est Clero quod Venus omnis abest.

Sed Color hic falsus, fugiensque in luce diei;

Et nisi sub noctem fallere ineptus erat.

Ingeniosa fuit, meditataque machina, contra

Reges, ne possent Ordinis esse Sacri.

Nam duo conjuncti tituli, Rex atque Sacerdos,

Regnum Civile, & Spirituale dabant.

Quod ne quando foret, provisum hac lege videre

Pontifices, Reges non potuere boni.

Regibus, hoc Pacto, vel Regni haerede carere,

Ordinibusve Sacris, stante, necesse fuit.

Sec.

Nonne sui populi Rex, Pastor summus & idem est?

Et Sub-Pastores nonne creare potest?

Ipsa gregis Christi (data sit cuicunque) regendi

Cura, Sacerdotem solaque (credo) facit.

Pr.

Cernere sed Pythico velaras carmine technas,
Magnanimi Reges quo potuere modo?
Nullus erat Princeps, ad sancta oracula Papae,
Quin stupidus fieret, Chilperico{que} magis.

Sec.

Sed quare populus non sensit fraudis odorem?
Anne illo nasus tempore nullus erat?

Pr.

Nasus erat, toto sed tunc Epidemicus orbe
Nasorum morbus praevaluit Polypus.
Qui ne cessaret, subtilem excogitat artem,
Callidus ut Vulpes ambitione Leo.
Ingenio, studioque solet sapientia quaeri;
Hanc generi humano tollere Papa parat.

Sec.

Nescio qui stultus sieri queat ex Sapiente;
Ex stulto sapiens erudiendo potest.

Pr.

Stultitiam fortasse putas non posse doceri:
Difficile est •urum (credo) docere senem:
Sed teneris annis, ceu mollis cera, figuram
Quamlibet accipiet, sit bona sitve mala.
Stultior esse potest quisquam, quam qui sapientem,
Et doctum egregiè se putat esse, nec est?

Sec.

Certum est. Stultitias in sese possidet omnes,
Qui nimio ingenii est captus amore sui.

Pr.

Attamen hic stultus, non Naturalis, at arte
Est factus, gignet persimilesque sui.
Qui bene composito loquitur disiria vultu,
Sermones vacuos fundit & ore gravi,
Anne in Catalogo quaeres hunc classis euntis
Anticyram, an sanis adnumerandus erit?
Nam juvenes etiam diliria discere possunt,
Aut accusandus ludimagister erit.

Sec.

Posse quidem stultos fieri concedo docendo,
Verum sic factos nemo fuisse putat.
Dic quare, Quando, quibus artibus, atque Magistris,
Effectum est foedum pestiferumque scelus.

Pr.

Pontisicis suasu, Carolus, novus Induperator,
Artibus ingenuis ferre volentis opem,
Inscius includi curavit moenibus omnes,
Ut quae cui placita est, inde petenda foret.
Et primò foelix studiorum Gallus amator
Festinat Musis aedificare domum.
Parisiis surgit, quae nunc Sorbona vocatur,
Theiologûm studiis appropriata Schola.
Hujus ad exemplum, Reges, alii {que} Potentes
Christicolûm studiis tecta superba dabant,

Hortosque & libros, & quae tibi singula dici
Non opus est. Quae sunt, qualia, quot{que} vides.
Solutus Papa tamen Leges dabat atque' Magistros.
Laedere ne posset Philosophia Fidem.

Sec.

Non placet hoc. Animis quos non infigere sensus
Venturi populi, si voluit, potuit?
Nam cum carceribus vinctas concluderat artes,
Atque Fidem servam fecerat esse sibi,
Quid veruit, si quas sibi posse nocere putaret,
Aut prodesse parum, quin jugularet eas.

Pr.

Sic fecit. Nam qualis erat doctrina per orbem
Sparsa, à Lombardo, quae tenebraeque Scoti?
Quos Praeceptores habuit Schola Parisiensis

Primos. Illorum gloria durat adhuc.

Sec.

Fama, parum sana es, tantundem dando Sophistis,
Qui virtute carent, insipidisque viris,
Quantum illis quorum populos sapientia juvit,
Aut virtus ingens, vel decoravit eos:
Nil tibi Pelides, nil nunc tibi debet Homerus.
Vilia dona tibi jam periire tua.
Sufficit ergo mihi, si quid bene fecero, vivo
Aemulus oblatret, laudet amicus homo.

Pr.

Hi primi (dicunt) Lombardusque, & Scotus à Duns,
Cum sociis primae quos habuere Scholae,
Ex Patribus, Sacris Scripturis, & Stagyrta
Mixtis, doctrinam composuere novam.
Linguam Romanam vertère in Gallimatiam.

Sec.

Sermo quis?

Pr.

Appositè. Ducocalanus erat.

Sec.

Quorū hominū sermo?

Pr.

Somnitūm, non procul Umbris.
Scripsit eo multos Musa Lalia libros.
Quorum doctrinam pleno quicun{que} bibisset
Haustu, mutatus, non erat id quod erat.
Potus ut in mensa geminas putat esse lucernas;
Sic Regem ille suum concipit esse duos.
Ut qui veneficae gustarat pocula Circes,
Illic è puero sit lupus, ursus, aper.
Et cicures vigilare jubentur ad atria Circes;
Sic Papis debent advigilare Scholae.
Sicut amor Loti socios mutavit Ulissis,
Ne vellent patriae plus meminisse suae;
Sic Papis cives adjunxit vita Scholaris,

Fecit{que} aversos regibus esse suis.
Hoc quo{que} par Ithaci sociis est, at{que} Scholari,
Mutatus specie ut, se putet esse virum.
Egressus{que} Scholae tenebris, quos convenit omnes,
Communis vitae nescius ipse, docet.
Exclamat, clamat, declamat fortiter; omnes
Intempestivè corrigit atque docet.
Simpliciter, , Typicè, Topicè, Tropicéve
Omnia, quae libitum est dicere, vera facit
Huic hominum generi mandatum est justificare
Omnia, quae voluit Papa vocare Fidem;
Obsequium{que} Sacrae dare tunc sine limite Sedi,
Jussaque Pontificis, jussa vocare Dei.
Haec omnes sonuere Scholae, docuere Cathedrae,
A cunis didicit sic puer esse pius;
Contemptus Regum surgit cum Relligione;
Et plebs civili libera lege furit.
Nempe Deo visum est tunc solvere cingula Regum,
Qui mox stultitiae verbera digna ferent.

Sec.

Non ego Alexandri Magni, nec Caesatis acta
Amplius admiror, Hannibalisve dolos,
Qui sibi larga quidem, sed sanguine, regna pararunt;
Parta tenere tamen non potuere diu:
Quod potuit subjectus inertibus esse Magistris
Perdomitus mundus, dum reputo, stupeo.
Castra quidem video; nam sunt Collegia castra,
Arma tamen desunt, & quibus arma darent.

Pr.

Erras. Pontisicum fuit unusquis {que} satellites,
Quae {que} dabant Reges arma, ferebat eis.

Sec.

Heu, Schola qualis erat capiendis Machina Regnis!
Ingenii plusquam Mercurialis opus.
Vincula, quae mollem tenuerunt ferrea Martem,
Firma fuere minus, crassa fuere magis.
Tanta meâ nunquam sapientia laude carebit,
Qui sum stultitiae conscius ipse meae.

Pr.

Vasa quidem & nummos facile est subducere furto,
Et sceptrum, si vis, & Diadema simul;
Regnum, difficile est; fieri sed tempore longo

Possibile est. Aetas omnia, longa potest.
Movisset Terrae Siculus mirabilis orbem,
Si locus esset ubi staret in orbe alius.
Partem operis si dat breve tempus, tempore multo
Perficiet totum, qui tenet id quod habet.
Unco fur noctu subducit stragula lectis;
Pastorale pedum, crede, quod uncus erat.
Furtum ne laudes; non est sapientia, sed fraus,
Quae nunquam magnis insidet ingeniis.

Sec.

Sed quid agas? Nolles Collegia habere tot agros,
Aut tam magnificas, tot {que} habitare domos?

Ergo cave, si vis, ne forte fuga vitiorum
In majora ruas, barbariem {que} meram.
Non fama pejore videbere Templā deorum,
Doctrina celebres quam spoliare Scholas.

Pr.

Non illis, studio quibus est sapientia, & artes,
Tecta superba, libros, invideo nec opes.
Opto sed in primis ut vera scientia crescat,
Ut {que} sciens omnis sit manus artificis.
Ut {que} omnis Doctor quid justum est norit & aequum,
Quoque Deum deceat conciliare modo;
Et quae conducunt, quae sunt contraria Paci,
Quaelibet & virtus unde sit & vitium;
Noverit & factu quid turpe sit, & quid honestum;
Quosque onerat rerum copia, quos {que} levat;
Quid sperare facit, quid terret, quid {que} pudere
Cogit; quique humilem noverit erigere.
Haec si quis rectè, scierit, poteritque paterno
Ore, quasi ad natos, cum gravitate loqui;
Nec propriae suevit contraria dicere voci,
Nec, quae non quadrant cum ratione, docet;
Et norit Methodu^m rectam qua quae {que} docenda
Ars est; illius & prima Elementa sciat.

Sec.

Verùm quis tam doctus in ipsa est Arte Docendi,
Omnibus ut mereat scribere jura Scholis?

Pr.

Judicii res est & doctrinae mediocris;
Et facere hoc possem forte (vocatus) ego.
Hunc ego quantovis, meritò, dignabor honore;
Hunc merui, populi postulat utilitas.
Nondum se, Reges satis afflixisse, putabat
Papa; fuere amplae quas metuebat opes.
Quas ut pro Christo possent fudisse videri,
In bellum Eoum sub Cruce mittit eos.
Nam {que} armis Asiam Saraceni tunc tenuere
Papae subductam, quae repetenda fuit.
Inde mali Martis crudelia verbera passi,
Exhausti redeunt, ad mala multa, domi.
Mox majora audet, regum feritate subacta,
(Gesta priora meri gesta fuere hominis.)
Humano majus jus postulat, atque videri
Posse aliquid, solus quod Deus ipse potest.
In summum commissa Deum peccata remittit
Maxima, nescio quo Jure Tribunitio;
Quamvis in Sedem sacram commissa remitti
Aut nunc, aut post haec secula, posse negat.
At peccata idem pretio sine, nulla remittit;
Sed vult divinas vendere Sector opes.
Ut promus condus Divini, factus, Amoris,
Distribuit variis fata futura locis.
Egregiè meritos de Sacra Sede locabat
In summo coeli culmine stelliferi.
Deinde Patres veteres, ut Noen, ut {que} Abrahamum,
Davidem, Mosen, inferiore loco.

Post hos, Infantes nondum Baptismate lotos,
Expertes poenae Tertius Orbis habet.
Perpetuis Quartus consumit crimina nummis,
Et nisi quae non sunt igne levanda, levat.
Ultimus, horribilis Serpentibus atque tenebris,
Est datus Haereticis, Daemonibusque locus.
Spe summae Sedis vanos mulcebat amicos,
Atque hostes Imo terruit Orbe leves.
Prosuit, & prodest nunc Purgatorius ignis
Pontifici multùm, Sacrificisque suis.

Sec.

Sed Patribus quare visum est puerisque seorsim
Assignare orbes? Nil venit inde boni.

Pr.

Non summo hos Patres coelo posuere, quod illi
De Papa Romae nil meruere boni.
Non imo foedo{que} loco posuere, quod illi
De Papa Romae nil meruere mali.
Infantes Limbo neutro posuere, quod illi
Nil potuere boni, nil potuere mali
Sed simulatque animas decrerant esse animatas,
Debebatur eis certus in orbe locus.
Nec dum credebat Reges satis esse subactos,
Sed Nova Castra parat, Militiam{que} novam.
Infundit Regum terris examina Fratrum,
Mendicos sacros, quos aleret populus.
His quo{que} vermiculis Reges homines{que} opulenti
Magnificas certant aedificare domos.

Unde volant, alis enatis, Templa{que} bombo
Implent; nam musca est quae modo vermis erat;
At{que} per ora virûm volitans non multa scientum,
Illorum patulis insidet auriculis;
Corrumpens mores Civiles, nec sinit illos,
Ut debent, fidos Regibus esse suis.
Parendum esse Deo, potius quam Regibus, inquit,
Nil dubii est: Eadem Papa Deusque jubent.
Sedulus ad lectum morientibus adstat, & audit
Quae sua quis{que} velit non bene facta loqui.
Consilioque juvat, pia Testamentaque dictat;
Da{que} Deo, dicit, Qui tibi tanta dedit.
Inde tot & tanti sacris Donaria Templis,
In Reges videas arma parata, Deo.
Explorator erat quo{que} Confessarius omnis,
Et confessa Deo dicere doctus erat:
Nam Deus in terris hoc tempore Papa fuisset,
Si non per Regum jura creandus erat.
Papa Leo Carolus{que} agnus sibi mutua regna
Tradiderant pacto, Carnis & Ingenii.
Sed pactum hoc Papae non servavêre sequentes;
Non aequum est par jus Carnis & Ingenii.
Namque, inconsulto, Papas, Induperatore,
Est ausus Clerus saepe creare sibi.
Hinc sub Conrado (sed quaere quoto) ferus ille
Longusque occiduo motus in orbe fuit.
Pro Papa Guelphi, pro Caesare stant Gibelini,
(Temporis istius nomina forte ducum)
Exiit hoc bellum Frederico Caesare capto,

(Illo qui primus nomine Caesar erat.)
Hunc Veneti vicere, Fugatus Papa triumphat;
Nomine Alexander Tertius ille fuit;
Qui capta Roma, Veneta latitabat in Urbe,
Detectus {que} ipso Caesare major abit.
Cujus & in collum steterat, dictis {que} superbis
Insueto dederat vulnera saeva animo.

Sec.

Crescere plus ultra terrena potentia nescit,
Omnis & ambitio sic satiata perit.
Nil habuere ultra sperandum, nil metuendum
Pontifices; cessit spes {que} metus {que} simul.
Ridebat quoties spectabat aruspitem aruspex,
Ingenii miro captus amore sui.

Pr.

Quod risere parum est. Humilis sublatus in altum,
Insultans victis Iudere saeva solet.
Regibus imponit duram contra Saracenos
Militiam; ipsorum sumptibus id {que} suis.
Deinde animi causa, Reges populi {que} subacti
Experiebatur quid potuere pati.
Lascivire solet nimiùm secreta potestas;
Regnantumque facit jussa superba quies.
Nam {que} super Panem sanctum si quando Sacerdos
Verba Dei rectè Sacra loquutus erat,
Credi Papa jubet Panem non amplius esse,
Sed veri Carnem, Sanguinem, & Ossa Dei.
Qui non credebat, Christi pellendus ovill

Et vita (nisi se credere juret) erat.
Nec tamen hac crevit jam summa potentia Papae
Lege; sed ob pulchrè gesta Triumphus erat.
Nam voluit toti manifestum reddere mundo
Obsequium simplex se sibi velle dari,
Nec passurum impunè loqui sua dogmata contra
Quemquā hominem; Fidei nam dabit ipse modū.
Etsi tu Panem esse putas, si dixerit ille,
Caseus est, dices tu quoque Caseus est.
Sensit idem tecum; non indiget ut doceatur,
Indiget officiis obsequioque tuo.
Post multos cyathos stomachū movet ultimus, & quod
Antè erat ebibitum redditur omne simul.
Moverat haec multos sic Transmutatio Panis,
Ut scita à Papis plurima rejicerent.
Waldus erat quidam vir Lugdunensis, & idem
Ingenio atque opibus clarus in urbe sua,
Scripturaeque sciens sacrae Laicus, solitusque
Non quid sit Dominus quaerere, sed quid ait;
Deque Fide sensit quae nunc Ecclesia sentit
Nostra ferò; non est nunc nova nostra Fides.
Nec sensus narrare suos metuebat amicis,
Haereticis quanquam tunc grave tempus erat.
Ergo per innumerum populum doctrina volare
Waldi, & paulatim crescere vera Fides;
Donec ad ingentem strepitum percussus, in illos,
Immisit Reges Papa quibusque suos.
Waldenses tandem multi anni, praelia multa
Extinxere. Dei non sine consilio;

Nam{que} animis hominum tunc semina jacta fuere,
Quae surgent Papis exitiosa seges.
Territus his turbis multo crudelior exit;
Suspectum Haeretici nomine quem{que} rapit.
Suspectum abjurare facit (si vult) vel ab igne
(Si non vult) vivus vertitur in cineres.
Qui falsò abjurat, resipiscere dicitur; at si
Quem juramenti poenitet, ille perit.

Sec.

Nonne quibus vellent potuerunt parcere Reges?

Pr.

Non. Non credebant Juris id esse Sui.
Et mox Concilio Legem tulit in Laterano,
Ne quis Rex esset mitis in Haereticos;
Qua, nisi post annum, monitus purgaverit omnis
Haereseos regnum, dejiciendus erat.
Hoc est si Reges Papis parere recusent,
Civibus obsequii vincula nulla sient.
Quo potuere loco securi vivere Reges,
Cum percussori Lex daret ista sicam?
Sed solitos repetit securus Papa triumphos
Ad nomen quamquam palluit Haeretici.
Caetera fortis erat vacuusque superstitione.
An Romae Clerum Spectra timere putas?
Illorum nemo est, etiam sino Aqua Benedicta,
Qui dubitat noctu solus, & in tenebris;
Ad defunctorum monumenta quiescere sacra;

Inque adytis Templi; si jubet utilitas.
Sed metuunt potius ne nos ea non metuamus;
Hoc est, Haereticos, atque patere timent.

Sec.

Cur non in Clerum Laicis saevire Latinum
Principibus licuit, par{que} referre pari?

Pr.

Non patiebatur tempus. Papalis arundo
Haesit crudeli non quatienda manu.
Post haec Wiccliffus (regeret cum Tertius Anglos
Edwardus) doctus disputat Oxoniae,
Plera{que} defuncti defendens dogmata Waldi,
Ingeniis rectis vincere visus erat.
Mox{que} rei gestae commovit fama Bohemos,
Unde ortum bellum est Haereticale novum.
Perdidit Haereticos tandem victoria crebra,
Pontifices{que} auxit miles utrin{que} cadens.

Sec.

Sed miror potuisse homines tot ad arma vocari

Haereticos. Nemo lege coactus erat.
Nec, puto, cura fuit sinceræ Religionis,
De qua securus rusticus esse solet.
Paucis scire datur Verborum sensa Sacrorum;
Uno emptum (sine re) scire, nec asse, velint.
Vulgo nulla mali nota est mensura bonique;
Juris & Injusti nomina sola tenent.
Justum quis{que} vocat quicquid tutò facit ipse;

Quod patitur Nolens, id putat esse Nesas:
Impia sumpserunt in Reges ergo Bohemi
Arma suos stulti, nec placitura Deo.

Pr.

Nec placuere Deo; qui lucem reddere mundo
Lege parat Justa, non populi facibus.
Wiccliffum texit Dux Lancastrensis, & idem
Insignis sastûs spiritualis osor.
Secta tamen mansit, Lollardorum {que} vocata est,
Territa sed duris Legibus obticuit.
Nam Rex Henricus, Rex illo nomine Quartus
Adjutus populi sceptrâ favore rapit;
Invidiam {que} volens Cleri placare, quod hostis
Verticibus rasis Dux pater ejus erat,
Haereticis nostris Vivi-comburia festum
Lege dedit primus; expediebat enim.
Sed post centum annos, decimo Papante Leone,
Sub Duce Saxonico Principe legitimo,
Exurgit damnata Fides, clamante Luthero,
Qui magno populos permeat ore loquens;
Discidit {que} locis plus centum retia Papae,
Texta à Nobilibus, sed male texta Scholis.
Unde quot elapsi Reges, Urbesque Potentes,
Papali portant libera colla jugo;
Quàm sit ubi {que} ferè Papae nunc tonsa Potestas,
Dicere non opus est pluribus; ipse vides.

Sec.

Quod restat video. Sed te volo pauca rogare,

Et respondebis tu brevitae tua.
Gloria erat quondam Romani Praesulis ingens;
Calcavit pedibus Regia colla suis.
Illius innumeri Reges mandata manebant,
Et Regum cicurum bella gerebat ope.
Ut Jovis, illius tremuere ad fulmina gentes,
Sacro figentes oscula blanda pedi.
Divitias omnis cogeat ventus ad illum,
Frigidus Eurus, Afer, Vesperus, & Boreas.
Ille sedens nutu librabat cuncta verendo.
Quod curaret erat praeter hiare nihil.
Adde quod in tuto fuit illi tanta Potestas;
Si potes in terris quid reperire ratum.
Stabat nam {que} super populum fundata volentem:
(Quod, non fert populus si bene junctus, onus?)
At populum sensu varium res unica jungit,
Jussa sui Regis, jussa putare Dei.
Jussa Dei populis cum solus Papa ferebat,
Et credebatur vix minor esse Deo;
Quis tantum imperium, tam sedit milite fultum,
Rupe situm celsa, posse perire putet?
Verum nunc minus est. Quodcunque attriverit aetas,
Tandem & conficiet, dente licet tacito.
Magna {que} jampridem periit pars ense resecta
Machummet, quam nunc Turcica Luna regit.
Pars quo {que} defecit doctis abducta Lutheri
Scriptis, qui servam noluit esse Fidem.
Longos saepe dies sine Solibus ire videmus,
Cuncta {que} perpetua sydera nube tegi;

Quam Sol mox altus penetrans vibrantibus armis
Discutit, & varios cogit adire locos;
Sic nova Saxonici exoriens doctrina Lutheri
Discussit Papae Spirituale jugum.
Agricolis igitur missis ambos arat Indos,
His {que} novi Imperii semina condit agris;
Tanquam si migrare velit, sedem {que} locare,
Secula post aliquot, fertilior loco.
Et Fidei fontem surgentem forte videbunt
Monte Potossino secula sera sacrum:
Nos autem Christi populus portabimus istuc
Pontificis pedibus basia danda nigri.
Quas habuit tanti causas Ecclesia damni,
Tingendi {que} novo retia sicca mari?

Contemptum Regum, Dogmata surda, Typos.

Sec.

Scire etiam cupio Christus cui, quae facienti
Donat foelices, & sine fine dies.

Pr.

Foelicem fore Christus ait qui non petit alta,
Contentus paucis ambitione procul.
Qui {que} sit ingenio mitis nec pronus ad iram;
Qui sorti alterius compatitur {que} malae;
Vivere qui justè toto conamine tendit:
Et peccata libens corrigit ipse sua.

Cor quibus est mundum, simplex {que} dolo sine turpi;
Et qui certantes conciliare studet;
Et qui condonat facilis peccata aliena;
Atque animo si quis fert sua damna bono.
Denique salvus erit quisquis peccata sua odit
Corditùs; & Christi fixerit illa Cruci.

FINIS.

The Autobiography

Fetter Lane, City of London — Hobbes took up lodgings here in 1651 and he was living on this street on the publication of 'Leviathan'.

Considerations upon the Reputation, Loyalty, Manners and Religion of Thomas Hobbes of Malmsbury

WRITTEN BY HIMSELF, BY WAY OF LETTER TO A LEARNED PERSON.

SIR,

I AM ONE of them that admire your Writings; and having read over your Hobbis Heauton-timorumenos, I cannot hold from giving you some account of the causes why I admire it: And first I considered how you handle him for his Disloyalty, in these words, pag. the 5th. His great *Leviathan* (wherein he placed his main strength) is now somewhat out of season; which, upon deserting his Royal Master in distress, (for he pretends to have been the King's Tutor, though yet, from those who have most reason to know it, I can find but little ground for such a pretence,) was written in defence of Oliver's Title, (or whoever, by whatsoever means, can get to be upmost,) placing the whole Right of Government meerly in strength, and Absolving all his Majesties Subjects from their Allegiance, whenever He is not in a present capacity to force Obedience.

That which I observe and admire here first, is, That you left not this passage out, for two reasons; One, because M^r Hobbes could long for nothing more than such an occasion to tell the world his own and your little stories, during the time of the late Rebellion.

When the Parliament sate, that began in April 1640. and was dissolved in May following, and in which many points of the Regal Power, which were

necessary for the Peace of the Kingdom, and the safety of His Majesties Person, were disputed and denied, M^r. Hobbes wrote a little Treatise in English, wherein he did set forth and demonstrate, That the said Power and Rights were inseparably annexed to the Sovereignty; which Sovereignty they did not then deny to be in the King; but it seems understood not, or would not understand that Inseparability. Of this Treatise, though not Printed, many Gentlemen had Copies, which occasioned much talk of the Author; and had not His Majesty dissolved the Parliament, it had brought him into danger of his Life.

He was the first that had ventured to write in the King's defence, and one, amongst very few, that upon no other ground but knowledge of his Duty, and Principles of Equity, without special Interest, was in all points perfectly Loyal.

The 3^d of November following, there began a new Parliament, consisting for the greatest part of such men as the People had elected only for their adverseness to the Kings Interest. These proceeded so fiercely in the very beginning against those that had written or preach'd in the defence of any part of that Power, which they then intended to take away, and in gracing those whom the King had disgrac'd for Sedition, that Mr. Hobbes doubting how they would use him, went over into France, the first of all that fled, and there continued eleven years, to his dammage some thousands of pounds deep. This (Dr.) was your time of harvest: You were in their favour, and that (as you have made it since appear) for no goodness.

Being at Paris, he wrote and published his Book de Cive, in Latine, to the end that all Nations which should hear what you and your Concovenanters were doing in England, might detest you, which I believe they do; for I know no Book more magnified than this is beyond the Seas.

When His Majesty that now is came to Paris, Mr. Hobbes had the honour to initiate him in the Mathematicks; but never was so impudent or ignorant

as to call, or think himself the King's Tutor, as you (that understand not what that word, out of the University, signifies) do falsly charge him with; or ever to say, that he was one of His Majesties domestique Servants. While upon this occasion he staid about Paris, and had neither encouragement nor desire to return into England, he wrote and published his Leviathan, far from the intention either of disadvantage to His Majesty, or to flatter Oliver, (who was not made Protector till three or four years after) or purpose to make way for his return: For there is scarce a page in it that does not upbraid both him, and you, and others such as you, with your abominable hypocrisie and villany.

Nor did he desert His Majesty, as you falsly accuse him, as His Majesty Himself knows. Nor was His Majesty (as you unmannerly term it) in distress. He had the Title, Right and Reverence of a King, and maintained His faithful Servants with Him. It is true, that Mr. Hobbes came home; but it was because he would not trust his safety with the French Clergy.

Do you know that ever he sought any benefit either from Oliver, or from any of his Party, or was any way familiar with any of his Ministers, before or after his Return? or curried favour with any of them (as you did by Dedicating a Book to his Vice-Chancellor Owen?)

Did you ever hear that he took any thing done to him by His Majesty in evil part, or spake of him otherwise than the best of His Servants would do; or that he was sullen, silent, or sparing, in praising His Majesty in any company, upon any occasion?

He knew who were his enemies, and upon what ground they misconstrued his writings.

But your indiscretion appears more manifestly in giving him occasion to repeat what you have done, and to consider you, as you professedly have considered him: For with what equity can it be denied him to repeat your manifest and horrible Crimes, for all you have been pardoned; when you

publish falsely pretended faults of his, and comprehended in the same pardon?

If he should say, and publish, That you decyphered the Letters of the King and His Party, and thereby delivered his Majesties secrets to the Enemy, and His best Friends to the Scaffold, and boasted of it in your Book of Arithmetick (written in Latin) to all the World, as of a Monument of your Wit, worthy to be preserved in the University Library: How will you justify your self, if you be reproached for having been a Rebel and a Traytor? It may be you, or some for you, will now say, You decyphered those Letters to the King's advantage: But then you were unfaithful to your Masters of the Parliament: A very honest pretence, and full of gallantry, to excuse Treason with Treachery, and to be a double Spy. Besides, Who will believe it? Who enabled you to do the King that favour? Why hearded you with His Enemies? Who brought the King into a need of such a fellows favour, but they that first deserted him, and then made War upon him, and which were your friends, and Mr. Hobbes his enemies. Nay more, I know not one enemy Mr. Hobbes then had, but such as were first the Kings enemies, and because the King's therefore his. Your being of that Party, (without your decyphering,) amounts to more than a desertion. Of the Bishops that then were, and for whose sakes (in part) you raised the War, there was not one that followed the King out of the Land, though they loved him, but lived quietly under the Protection, first of the Parliament, and then of Oliver, (whose Titles and Actions were equally unjust) without treachery. Is not this as bad as if they had gone over, and (which was Mr. Hobbes his case) been driven back again? I hope you will not call them all desertors, (or because by their stay here openly they accepted of the Parliament's and of Oliver's Protection) defenders either of Oliver's, or of the Parliament's Title to the Sovereign Power.

How many were there in that Parliament at first that did indeed and voluntarily desert the King, in consenting to many of their unjust actions? Many of these afterwards, either upon better judgment, or because they pleased not the Faction, (for it was a hard matter for such as were not of Pymms Cabal to please the Parliament,) or for some other private ends, deserted the Parliament, and did some of them more hurt to the King than if they had staid where they were; (for they had been so affrighted by such as you, with a panick fear of Tyranny, that seeking to help Him by way of Composition and sharing, they abated the just and necessary indignation of His Armies, by which only His Right was to be recovered.)

That very entring into the Covenant with the Scottish Nation against the King, is by it self a very great Crime, and you guilty of it. And so was the imposing of the Engagement, and you guilty of that also, as being done by the then Parliament, whose Democratical Principles you approv'd of.

You were also assisting to the Resemblance of Divines that made the Directory, and which were afterwards put down by Oliver for counterfeiting themselves Ambassadors. And this was when the King was living, and in the head of an Army, which with your own endeavour might have protected you. What crime it is (the King being Head of the Church of England) to make Directories, to alter the Church-Government, and to set up new Forms of Gods Service, upon your own fancies, without the Kings Authority, the Lawyers could have told you; and what punishment you were to expect from it, you might have seen in the Statute printed before the Book of Common-Prayer.

Further he may say, and truly, That you were guilty of all the Treasons, Murders, and Spoil committed by Oliver, or by any upon Oliver's or the Parliament's Authority: For, during the late trouble, who made both Oliver and the People mad, but the Preachers of your Principles? But besides the wickedness, see the folly of it. You thought to make them mad, but just to

such a degree as should serve your own turn; that is to say, mad, and yet just as wise as your selves. Were you not very imprudent to think to govern madness? Paul they knew, but who were you? Who were they that put the Army into Oliver's hands, (who before, as mad as he was, was too weak, and too obscure to do any great mischief) with which Army he executed upon such as you, both here and in Scotland, that which the Justice of God required.

Therefore, of all the Crimes (the Great Crime not excepted) done in that Rebellion, you were guilty; You, I say, Dr. (how little force or wit soever you contributed) for your good will to their Cause. The King was hunted as a Partridge in the Mountains; and though the Hounds have been hang'd, yet the Hunters were as guilty as they, and deserved no less punishment. And the Decypherers, and all that blew the horn, are to be reckoned amongst the Hunters. Perhaps you would not have had the prey killed, but rather have kept it tame. And yet who can tell? I have read of few Kings deprived of their Power by their own Subjects, that have lived any long time after it, for reasons that every man is able to conjecture.

All this is so manifest as it needs no witnesses. In the mean time Mr. Hobbes his behaviour was such, that of them who appeared in that Scene, he was the only man I know (except a few that had the same Principles with him) that has not something more or less to blush for; as having either assisted that rebellious Parliament, without necessity, (when they might have had Protection from the King, if they had resorted to him for it in the field,) by Covenanting, or by Action, or with Money, or Plate, or by Voting against His Majesties Interest, in Himself, or His Friends; though some of them have since by extraordinary Service deserved to be received into favour: But what's that to you? You are none of them; and yet you dare to reproach the guiltless, as if after so ill fruits of your Sermons, it were not impudence enough to preach.

I admire further, That having been forgiven these so transcendent Crimes, (so great a debt to the Gallows) you take Mr. Hobbes by the throat for a word in his Leviathan, made a fault by malicious or over-hasty construction: For you have thereby, like the unmerciful debtor in the Gospel, (in my opinion) forfeited your pardon, and so, without a new one, may be hanged yet.

To that other Charge, That he writ his Leviathan in defence of Oliver's Title, he will say, That you in your own conscience know it is false. What was Oliver when that Book came forth? It was in 1650, and Mr. Hobbes returned before 1651. Oliver was then but General under your Masters of the Parliament, nor had yet cheated them of their usurped Power: For that was not done till two or three years after, in 1653. which neither he nor you could foresee: What Title then of Oliver's could he pretend to justify? But you will say, He placed the Right of Government there wheresoever should be the strength; and so by consequence he placed it in Oliver. Is that all? Then primarily his Leviathan was intended for your Masters of the Parliament, because the strength was then in them: Why did they not thank him for it, both they and Oliver in their turns? There (Doctor) you decypher'd ill: For it was written in the behalf of those many and faithful Servants and Subjects of His Majesty, that had taken His part in the War, or otherwise done their utmost endeavour to defend His Majesties Right and Person against the Rebels; whereby, having no other means of Protection, nor (for the most part) of subsistence, were forced to compound with your Masters, and to promise Obedience for the saving of their Lives and Fortunes, which in his Book he hath affirmed they might lawfully do, and consequently not lawfully bear Arms against the Victors. They that had done their utmost endeavour to perform their obligation to the King, had done all that they could be obliged unto; and were consequently at liberty to seek the safety of their Lives and Livelihood wheresoever, and without

Treachery. But there is nothing in that Book to justify the submission of you, (or such as you) to the Parliament, after the King's being driven from them, or to Oliver; for you were the King's Enemies, and cannot pretend want of that Protection which you your selves refused, denied, fought against, and destroyed. If a man owe you money, and you by robbing him, or other injury, disable him to pay you, the fault's your own; nor needs this exception, Unless the Creditor rob him, be put into the Condition of the Bond. Protection and Obedience are Relative. He that says a man may submit to an enemy for want of Protection, can never be construed, but that he meant it of the Obedient. But let us consider his words. They are in pag. 390. Where he puts for a Law of Nature, That every man is bound as much as in him lieth, to protect in War the Authority by which he is himself protected in time of Peace; which I think is no ungodly nor unreasonable Principle. For confirmation of it, he defines in what point of time it is, that a Subject becomes obliged to obey an unjust Conquerour: And defines it thus; It is that point wherein having liberty to submit to the Conquerour, he consenteth either by express words, or by other sufficient signs, to be his Subject.

I cannot see, Doctor, how a man can be at liberty to submit to his new, that has not first done all he could for his old Master: Nor if he have done all he could, why that liberty should be refused him. If a man be taken by the Turk, and brought by terrour to fight against his former Master, I see how he may be kill'd for it as an Enemy, but not as a Criminal: Nor can I see how he that hath liberty to submit, can at the same time be bound not to submit.

But you will say, perhaps, That he defines the time of that liberty to the advantage of Oliver, in that he says, that for an ordinary Subject, it is then, when the means of his Life are within the Guards and Garrisons of the Enemy; for it is then, that he hath no protection but from the Enemy, for his

Contribution. It was not necessary for him to explain it to men of so great Understanding, that you and other his Enemies pretend to be, by putting in the Exception, Unless they came into those Guards and Garrisons by their own Treason. Do you think that Oliver's Party, for their submission to Oliver, could pretend the want of that Protection?

The words therefore by themselves, without that exception, do signifie no more than this, That whosoever had done as much as in him did lye to protect the King in War, had liberty afterwards to provide themselves of such Protection as they could get; which to those whose means of life were within the Guards and Garrisons of Oliver, was Oliver's Protection.

Do you think when a Battel is lost, and you at the mercy of the Enemy, is it unlawful to receive Quarter with condition of Obedience? Or if you receive it on that condition, do you think it honesty to break promise, and treacherously murder him that gave you your life? If that were good Doctrine, he were a foolish Enemy that would give Quarter to any man.

You see then, that this submission to Oliver, or to your then Masters, is allowed by Mr. Hobbes his Doctrine only to the King's faithful Party, and not to any that fought against him, howsoever they coloured it, by saying they fought for the King and Parliament; nor to any that writ or preached against His Cause, or encouraged His Adversaries; nor to any that betrayed His Counsels, or that intercepted or decyphered any Letters of His, or of His Officers, or of any of His Party; nor to any that by any way had contributed to the diminution of His Majesties Power, Ecclesiastical or Civil; nor does it absolve any of them from their Allegiance. You that make it so heinous a crime for a man to save himself from violent death, by a forc'd submission to an Usurper, should have considered what crime it was to submit voluntarily to the Usurping Parliament.

I can tell you besides, why those words were put into his last Chapter, which he calls the Review. It happened at that time that there were many

Honourable Persons, that having been faithful and unblemished Servants of the King, and Souldiers in His Army, had their Estates then Sequestred; of whom some were fled, but the Fortunes of them all were at the mercy (not of Oliver, but) of the Parliament. Some of these were admitted to Composition, some not. They that Compounded, though they help'd the Parliament less by their Composition, than they should have done (if they had stood out) by their Confiscation, yet they were ill spoken of, especially by those that had no Estates to lose, nor hope to Compound. And it was for this that he added to what he had written before, this caution, That if they would compound, they were to do it bonafide, without intention of Treachery. Wherein he justified their Submission by their former Obedience, and present Necessity; but condemned Treachery. Whereas you that pretend to abhor Atheism, condemn that which was done upon necessity, and justifie the Treachery: And you had reason for it, that cannot otherwise justifie your selves. Those struglings which happened afterwards, lost His Majesty many a good and able Subject, and strengthened Oliver with the Confiscation of their Estates, which if they had attended the Discord of their Enemies, might have been saved.

Perhaps you will take for a sign of Mr. Hobbes his ill meaning, that His Majesty was displeased with him. And truly I believe He was displeased for a while, but not very long. They that complained of, and mis-construed his writings, were His Majesties good Subjects, and reputed Wise and Learned men, and thereby obtained to have their mis-construction believed for some little time: But the very next Summer after his coming away, two Honourable Persons of the Court that came over into England, assured him, that His Majesty had a good opinion of him; and others since have told me, that His Majesty said openly, That He thought Mr. Hobbes never meant him hurt. Besides, His Majesty hath used him more graciously than is ordinary to so humble a person as he is, and so great a Delinquent as you would

make him, and testified His esteem of him in His bounty. What Argument now can you draw from hence more than this, That His Majesty understood his writings better than his Accusers did.

I admire in the next place, upon what ground you accuse him (and with him all those that have approved his Leviathan) with Atheism. I thought once, that that slander had had some (though not firm) ground in that you call his new Divinity: But for that point he will allege these words of his Leviathan, pag. 238. By which it seemeth to me (with submission nevertheless both in this and all other Questions, whereof the determination dependeth on the Scriptures, to the Interpretation of the Bible authorized by the Commonwealth, whose Subject I am,) That, &c. What is there in these words but Modesty and Obedience? But you were at this time in actual Rebellion. Mr. Hobbes, that holds Religion to be a Law, did in order thereto condemn the maintenance of any of his Opinions against the Law; and you that reproach him for them upon your own account, should also have shewn by your own Learning, wherein the Scripture, which was his sole proof, was mis-cited, or mis-construed by him; (for he submitted to the Laws, that is to say, to the King's Doctrine, not to yours;) and not have insulted for the Victory won by the power of the Law, to which you were then an enemy.

Another Argument of Atheism you take from his denying immaterial, or incorporeal Substances. Let any man impartially now compare his Religion with yours, by this very measure, and judge which of the two savours most of Atheism.

It is by all Christians confess'd, that God is incomprehensible; that is to say, that there is nothing can arise in our Fancy from the naming of him, to resemble him either in shape, colour, stature, or nature; there is no Idea of him; he is like nothing that we can think on: What then ought we to say of him? What Attributes are to be given him, not speaking otherwise than we think, nor otherwise than is fit, by those who mean to honour him? None

but such as Mr. Hobbes hath set down, namely, Expressions of Reverence, such as are in Use amongst men for signs of Honour, and consequently signifie Goodness, Greatness, and Happiness; and either absolutely put, as Good, Holy, Mighty, Blessed, Just, Wise, Merciful, &c. or Superlative, as most Good, most Great, most Mighty, Almighty, most Holy, &c. or Negative, of whatsoever is not perfect, as Infinite, Eternal, and the like: And not such as neither Reason nor Scripture hath approved for honourable. This is the Doctrine that Mr. Hobbes hath written, both in his Leviathan, and in his Book de Cive, and when occasion serves, maintains. What kind of Attribute I pray you is immaterial, or incorporeal substance? Where do you find it in the Scripture? Whence came it hither, but from Plato and Aristotle, Heathens, who mistook those thin Inhabitants of the Brain they see in sleep, for so many incorporeal men; and yet allow them motion, which is proper only to things corporeal? Do you think it an honour to God to be one of these? And would you learn Christianity from Plato and Aristotle? But seeing there is no such word in the Scripture, how will you warrant it from natural reason? Neither Plato nor Aristotle did ever write of, or mention an incorporeal Spirit; for they could not conceive how a Spirit, which in their Language was ... (in ours a Wind) could be incorporeal. Do you understand the connection of substance and incorporeal? If you do, explain it in English; for the words are Latine. It is something, you'll say, that being without Body, stands under — . Stands under what? Will you say, under Accidents? Almost all the Fathers of the Church will be against you; and then you are an Atheist. Is not Mr. Hobbes his way of Attributing to God, that only which the Scriptures Attribute to him; or what is never any where taken but for honour, much better than this bold Undertaking of yours, to consider and decypher Gods nature to us?

For a third Argument of Atheism, you put, That he says, Besides the Creation of the World, there is no Argument to prove a Deity; and, That it

cannot be evinced by any Argument that the World had a Beginning; and, That whether it had or no, is to be decided not by Argument, but by the Magistrates. Authority. That it may be decided by the Scriptures, he never denied: Therefore in that also you slander him. And as for Arguments from natural Reason, neither you, nor any other have hitherto brought any (except the Creation) that has not made it more doubtful to many men than it was before. That which he hath written concerning such Arguments, is in his Book De Corpore. Opinions (saith he) concerning the nature of Infinite and Eternal, as the chiefest of the fruits of Wisdom, God hath reserved to himself, and made Judges of them, those men whose Ministry he meant to use in the ordering of Religion; and therefore I cannot praise those men that brag of Demonstration of the Beginning of the World from natural Reason. And again, pag. 238. Wherefore I pass by those Questions of Infinite and Eternal, contenting my self with such Doctrine concerning the Beginning and Magnitude of the World, as I have learn'd from the Scripture, confirmed by Miracles, and from the Use of my Countrey, and from the Reverence I owe to the Law. This, Doctor, is not ill said, and yet 'tis all you ground your slander on, which you make to sneak vilely under a crooked Paraphrase.

These Opinions, I said, were to be judged by those to whom God has committed the ordering of Religion; that is, to the Supreme Governours of the Church, that is, in England, to the King: By His Authority, I say, it ought to be decided, (not what men shall think, but) what they shall say in those Questions. And me thinks you should not dare to deny it; for it is a manifest relapse into your former Crimes.

But why do you stile the King by the name of Magistrate? Do you find Magistrate to signifie any where the Person that hath the Sovereign Power, or not every where the Sovereign's Officers. And I think you knew that; but you and your fellows (your fellows I call all those that are so besmeared all

over with the filth of the same Crime, as not to be distinguished,) meant to make your Assembly the Sovereign, and the King your Magistrate. I pray God you do not mean so still, if opportunity be presented.

There has hitherto appeared in Mr. Hobbes his Doctrine no sign of Atheism; and whatsoever can be inferr'd from the denying of Incorporeal Substances, makes Tertullian, one of the ancientest of the Fathers, and most of the Doctors of the Greek Church, as much Atheists as he: For Tertullian in his Treatise De Carne Christi, says plainly, *Omne quod est, corpus est sui generis. Nihil est incorporale, nisi quod non est.* That is to say, Whatsoever is any thing, is a body of its kind. Nothing is Incorporeal, but that which has no Being. There are many other places in him to the same purpose: For that Doctrine served his turn to confute the Heresie of them that held that Christ had no Body, but was a Ghost: Also of the Soul he speaks, as of an invisible Body. And there is an Epitome of the Doctrine of the Eastern Church, wherein is this, That they thought Angels and Souls were Corporeal, and only called Incorporeal, because their Bodies were not like ours. And I have heard that a Patriarch of Constantinople, in a Council held there, did argue for the lawfulness of painting Angels, from this, that they were Corporeal. You see what Fellows in Atheism you joyn with Mr. Hobbes.

How unfeigned your own Religion is, may be argued strongly, demonstratively, from your behavaviour that I have already recited. Do you think, you that have committed so abominable sins, not through infirmity, or sudden transport of Passion, but premeditately, wilfully, for twenty years together, that any rational man can think you believe your selves, when you preach of Heaven and Hell, or that you do not believe one another to be Cheaters and Impostors, and to laugh at silly People in your sleeves for believing you; or that you applaud not your own wit for it; though for my part I could never conceive that very much wit was requisite for the making of a knave. And in the Pulpit most of you have been a scandal to

Christianity, by preaching up Sedition, and crying down Moral Virtue. You should have preach'd against unjust Ambition, Covetousness, Gluttony, Malice, Disobedience to Government, Fraud, and Hypocrisie: But for the most part you preach'd your own Controversies, about who should be uppermost, or other fruitless and unedifying Doctrines. When did any of you preach against Hypocrisie? You dare not in the Pulpit (I think) so much as name it, lest you set the Church a laughing: And you in particular, when you said in a Sermon, That Sophos was not in Homer; what edification could the People have from that, though it had been true, as 'tis false? (For it is in his Iliade, lib. 15. v. 363.) Another I heard make half his Sermon of this Doctrine, That God never sent a great Deliverance, but in a great Danger: Which is indeed true, because the greatness of the Danger makes the greatness of the Deliverance, but for the same cause ridiculous; and the other half he took to construe the Greek of his Text: And yet such Sermons are much applauded. But why? First, Because they make not the People ashamed of any Vice. Secondly, Because they like the Preacher, for using to find fault with the Government or Governors. Thirdly, For their vehemence, which they mistake for Zeal. Fourthly, For their zeal to their own ends, which they mistake for zeal to Gods Worship. I have heard besides divers Sermons made by Phanatiques, young men, and whom by that, and their habit, I imagined to be Apprentices; and found little difference between their Sermons, and the Sermons of such as you, either in respect of Wisdom, or Eloquence, or Vehemence, or Applause of Common People.

Therefore I wonder how you can pretend (as you do in your Petition, for a Dispensation from the Ceremonies of the Church) to be either better Preachers than those that Conform, or to have tenderer Consciences than other men. You that have covered such black Designs with the Sacred words of Scripture, why can you not as well find in your hearts to cover a black Gown with a white Surplice? Or what Idolatry do you find in making

the Sign of the Cross, when the Law commands it? Though I think you may conform without sin, yet I think you might have been also dispensed with without sin, if you had dispensed in like manner with other Ministers that subscribed to the Articles of the Church. And if tenderness of Conscience be a good Plea, you must give Mr. Hobbes also leave to plead tenderness of Conscience to his new Divinity, as well as you. I should wonder also how any of you should dare to speak to a multitude met together, without being limited by His Majesty what they shall say, especially now that we have felt the smart of it, but that it is a Relique of the Ecclesiastical Policy of the Popes, that found it necessary for the dis-joyning of the People from their too close adherence to their Kings, or other Civil Governours.

But it may be you will say, That the rest of the Clergy, Bishops, and Episcopable men, no Friends of yours, and against whose Office Mr. Hobbes never writ any thing, speak no better of his Religion than you do.

'Tis true, he never wrote against Episcopacy; and it is his private opinion, That such an Episcopacy as is now in England, is the most commodious that a Christian King can use for the governing of Christs Flock, the misgoverning whereof the King is to answer for to Christ, as the Bishops are to answer for their mis-government to the King, and to God also. Nor ever spake he ill of any of them, as to their Persons: Therefore I should wonder the more at the uncharitable censure of some of them, but that I see a Relique still remaining of the venom of Popish Ambition, lurking in that seditious distinction and division between the Power Spiritual and Civil, which they that are in love with a Power to hurt all those that stand in competition with them for Learning (as the Roman Clergy had to hurt Galileo) do not willingly forsake. All Bishops are not in every point like one another. Some it may be are content to hold their Authority from the King's Letters Patents; and these have no cause to be angry with Mr. Hobbes. Others will needs have somewhat more, they know not what, of

Divine Right, to Govern by vertue of Imposition of Hands, and Consecration, not acknowledging their Power from the King, but immediately from Christ. And these perhaps are they that are displeased with him, which he cannot help, nor has deserved; but will for all that believe the King only, and without sharers, to be the Head of all the Churches within His own Dominions; and that he may dispence with Ceremonies, or with any thing else that is not against the Scriptures, nor against natural Equity; and that the consent of the Lords and Commons cannot now give Him that Power, but declare for the People their advice and consent to it. Nor can he be made believe that the safety of a State depends upon the safety of the Church, I mean, of the Clergy: For neither is a Clergy essential to a Common-wealth; and those Ministers that preached Sedition pretend to be of the Clergy, as well as the best. He believes rather that the Safety of the Church depends on the Safety of the King, and the entireness of the Sovereign Power; and that the King is no part of the Flock of any Minister or Bishop, no more than the Shepherd is of his Sheep, but of Christ only; and all the Clergy, as well as the People, the King's Flock. Nor can that clamour of his adversaries make Mr. Hobbes think himself a worse Christian than the best of them. And how will you disprove it, either by his disobedience to the Laws Civil, or Ecclesiastical, or by any ugly action? Or how will you prove that the obedience which springs from scorn of Injustice, is less acceptable to God, than that which proceeds from fear of punishment, or hope of benefit. Gravity and heaviness of Countenance are not so good marks of assurance of Gods favour, as cheerful, charitable, and upright behaviour towards men, which are better signs of Religion than the zealous maintaining of controverted Doctrines. And therefore I am verily perswaded, it was not his Divinity that displeased you or them, but somewhat else, which you are not willing to pretend. As for your Party, that which angred you, I believe, was this passage of his Leviathan, pag. 89.

Whereas some men have pretended for their Disobedience to their Sovereign, a new Covenant made, not with men, but with God; this also is unjust: For there is no Covenant with God, but by mediation of some body that representeth Gods Person; which none doth but Gods Lieutenant, who hath the Sovereignty under God: But this pretence of Covenant with God, is so evident a lye (this is it that angred you) even in the pretenders own Consciences, that it is not only an act of an unjust, but also of a vile and unmanly disposition.

Besides his making the King Judge of Doctrines to be preach'd or published, hath offended you both; so has also his Attributing to the Civil Sovereign all Power Sacerdotal. But this perhaps may seem hard, when the Sovereignty is in a Queen: But it is because you are not subtle enough to perceive, that though Man be male and female, Authority is not. To please neither Party is easie; but to please both, unless you could better agree amongst your selves than you do, is impossible. Your differences have troubled the Kingdom, as if you were the Houses revived of York and Lancaster. A man would wonder how a little Latin and Greek should work so mightily, when the Scriptures are in English, as that the King and Parliament can hardly keep you quiet, especially in time of danger from abroad. If you will needs quarrel, decide it amongst your selves, and draw not the People into your Parties.

You were angry also for his blaming the Scholastical Philosophers, and denying such fine things as these, That the Species or Apparences of Bodies come from the thing we look on, into the Eye, and so make us see; and into the Understanding, to make us understand; and into the Memory to make us remember. That a Body may be just the same it was, and yet bigger or lesser. That Eternity is a permanent Now; and the like. And for detecting, further than you thought fit, the fraud of the Roman Clergy. Your dislike of

his Divinity was the least cause of your calling him Atheist. But no more of this now.

The next Head of your Contumelies is to make him contemptible, and to move Mr. Boyle to pity him. This is a way of railing too much beaten to be thought Witty. As for the thing it self, I doubt your Intelligence is not good, and that you Algebricians, and Non-conformists, do but fain it, to comfort one another. For your own part, you condemn him not, or else you did very foolishly to entitle the beginning of your Book, Mr. Hobbes considered; which argues he is considerable enough to you. Besides, 'tis no Argument of Contempt, to spend upon him so many angry lines as would have furnisht you with a dozen of Sermons: If you had in good earnest despised him, you would have let him alone, as he does Dr. Ward, Mr. Baxter, Pike, and others, that have reviled him as you do. As for his Reputation beyond the Seas, it fades not yet: And because perhaps you have no means to know it, I will cite you a passage of an Epistle, written by a learned French-man to an eminent Person in France, a passage not impertinent to the point now in question. It is in a Volume of Epistles, the fourth in order, and the words, page 167. concerning Chymists, are these: Truly, Sir, as much as I admire them, when I see them lute an Alembick handsomely, philter a Liquor, build an Athanor, so much I dislike them when I hear them discourse upon the Subject of their Operations; and yet they think all they do, is nothing in respect of what they say: I wish they would take less pains, and be at less charges; and whilst they wash their hands after their work, they would leave to those that attend to the polishing of their discourse, I mean, the Galileo's, the Descarteses, the Hobbeses, the Bacons, and the Gassendi's, to reason upon their work, and themselves to hear what the Learned and Judicious shall tell them, such as are used to discern the differences of things. *Quam scit uterque libens censebo exerceat artem.* And more to the same purpose.

What is here said of Chymists, is applicable to all other Mechaniques.

Every man that hath spare money, can get Furnaces, and buy Coals. Every man that hath spare money, can be at the charge of making great Moulds, and hiring Workmen to grind their Glasses; and so may have the best and greatest Telescopes: They can get Engines made, and apply them to the Stars; Recipients made, and try Conclusions; but they are never the more Philosophers for all this. 'Tis laudable, I confess, to bestow money upon curious or useful delights; but that is none of the praises of a Philosopher. And yet, because the multitude cannot judge, they will pass with the unskilful, for skilful in all parts of natural Philosophy. And I hear now that Hugenius and Eustachio Divini are to be tried by their Glasses, who is the more skilful in Optiques of the two; but for my part, before Mr. Hobbes his Book De Homine came forth, I never saw any thing written of that subject intelligibly. Do not you tell me now, according to your wonted ingenuity, that I never saw Euclid's, Vitellio's, and many other mens Optiques; as if I could not distinguish between Geometry and Optiques.

So also of all other Arts; not every one that brings from beyond Seas a new Cin, or other janty device, is therefore a Philosopher: For if you reckon that way, not onely Apothecaries and Gardeners, but many other sorts of Workmen, will put in for, and get the Prize. Then, when I see the Gentlemen of Gresham-Colledge apply themselves to the Doctrine of Motion, (as Mr. Hobbes has done, and will be ready to help them in it, if they please, and so long as they use him civilly,) I will look to know some Causes of natural Events from them, and their Register, and not before: For Nature does nothing but by Motion.

I hear that the reason given by Mr. Hobbes, why the drop of Glass so much wondred at, shivers into so many pieces, by breaking onely one small part of it, is approved for probable, and registred in their Colledge: But he has no reason to take it for a favour, because hereafter the Invention may be taken by that means not for his, but theirs.

To the rest of your Calumnies the Answers will be short, and such as you might easily have foreseen. And first, for his boasting of his Learning, it is well summ'd up by you in these words: 'Twas a motion made by one (whom I will not name) that some idle person should read over all his Books, and collecting together his arrogant and supercilious Speeches, applauding himself, and despising all other men, set them forth in one Synopsis, with this Title, *Hobbius de se*. What a pretty piece of Pageantry this would make, I shall leave to your own thoughts.

Thus say you: Now says Mr. Hobbes, or I for him, Let your idle Person do it, and set down no more than he has written, (as high praises as they be) I'll promise you he shall acknowledge them under his hand, and be commended for it, and you scorned. A certain Roman Senator, having propounded something in the Assembly of the People, which they misliking made a noise at, boldly bad them hold their peace, and told them he knew better what was good for the Common-wealth than all they: And his words are transmitted to us as an Argument of his Virtue; so much do Truth and Vanity alter the complection of self-praise. Besides, you can have very little skill in Morality, that cannot see the Justice of commending a mans self, as well as of any thing else, in his own defence: And it was want of prudence in you, to constrain him to a thing that would so much displease you. That part of his self-praise which most offends you, is in the end of his *Leviathan*, in these words: Therefore I think it may be profitably printed, and more profitably taught in the Universities, in case they also think so, to whom the judgment of the same belongeth. Let any man consider the truth of it. Where did those Ministers learn their seditious Doctrine, and to preach it, but there? Where therefore should Preachers learn to teach Loyalty, but there? And if your Principles produced Civil War, must not the contrary Principles, which are his, produce Peace? And consequently his Book, as far as it handles Civil Doctrine, deserves to be taught there: But when can

this be done? When you shall have no longer an Army ready to maintain the evil Doctrine wherewith you have infected the people. By a ready Army I mean Arms, and Money, and men enough, though not yet in pay, and put under Officers, yet gathered together in one place or City, to be put under Officers, armed, and payed on any sudden occasion; such as are the people of a great and populous Town. Every great City is as a standing Army, which if it be not under the Sovereigns command, the people are miserable; if they be, they may be taught their duties in the Universities safely and easily, and be happy. I never read of any Christian King that was a Tyrant, though the best of Kings have been call'd so.

Then for the Morosity and Peevishness you charge him with, all that know him familiarly, know 'tis a false accusation. But you mean, it may be, onely towards those that argue against his Opinion: But neither is that true. When vain and ignorant young Scholars, unknown to him before, come to him on purpose to argue with him, and to extort applause for their foolish Opinions, and missing of their end, fall into undiscreet and uncivil expressions, and he then appear not very well contented, 'tis not his Morosity, but their Vanity that should be blamed. But what humor (if not Morosity and Peevishness) was that of yours, whom he never had injured, or seen, or heard of, to use toward him such insolent, injurious, and clownish words, as you did in your absurd Elenchus?

Was it not impatience of seeing any dissent from you in opinion? Mr. Hobbes has been always far from provoking any man, though when he is provok'd, you finde his Pen as sharp as yours.

Again, when you make his Age a reproach to him, and shew no cause that might impair the faculties of his minde but onely Age, I admire how you saw not that you reproached all old men in the world as much as him, and warranted all young men, at a certain time, which they themselves shall define, to call you fool. Your dislike of old age, you have also otherwise

sufficiently signified, in venturing so fairly as you have done to escape it. But that is no great matter to one that hath so many marks upon him of much greater reproaches. By Mr. Hobbes his Calculation, that derives Prudence from Experience, and Experience from Age, you are a very young man; but by your own reckoning, you are older already than Methuselah.

Lastly, Who told you that he writ against Mr. Boyle, whom in his writing he never mentioned? And that it was because Mr. Boyle was acquainted with you? I know the contrary. I have heard him wish it had been some person of lower condition that had been the Author of the Doctrine which he opposed, and therefore opposed because it was false, and because his own could not otherwise be defended. But thus much I think is true, that he thought never the better of his Judgment, for mistaking you for Learned. This is all I thought fit to answer for him and his manners. The rest is of his Geometry and Philosophy, concerning which, I say only this, That there is too much in your Book to be confuted: Almost every line may be disproved, or ought to be reprehended. In sum, it is all Errour and Railing, that is, stinking wind, such as a Jade lets flie when he is too hard girt upon a full belly. I have done. I have considered you now, but will not again, whatsoever preferment any of your friends shall procure you.

FINIS.

The Biographies

Thomas Hobbes by John Michael Wright, c. 1670

Thomas Hobbes by George Croom Robertson

From '1911 Encyclopædia Britannica, Volume 13'

HOBBS, THOMAS (1588-1679), English philosopher, second son of Thomas Hobbes, was born at Westport (now part of Malmesbury, Wiltshire) on the 5th of April 1588. His father, vicar of Charlton and Westport, an illiterate and choleric man, quarrelled, it is said, with a brother clergyman at the church door, and was forced to decamp, leaving his three children to the care of an elder brother Francis, a flourishing glover at Malmesbury. Thomas Hobbes was put to school at Westport church at the age of four, passed to the Malmesbury school at eight, and was taught again in Westport later at a private school kept by a young man named Robert Latimer, fresh from Oxford and "a good Grecian." He had begun Latin and Greek early, and under Latimer made such progress as to be able to translate the *Medea* of Euripides into Latin iambic verse before he was fourteen. About the age of fifteen he was sent to Oxford and entered at Magdalen Hall. During his residence, the first principal of Magdalen Hall, John Hussee, was succeeded by John Wilkinson, who ruled in the interest of the Calvinistic party in the university. Thus early was he brought into contact with the aggressive Puritan spirit. Apart from this, Hobbes owed little to his university training, which was based on the scholastic logic then prevalent. We have from himself a lively record of his student life (*Vit. carm. exp.* p. lxxxv.), which, though penned in extreme old age, may be taken as trustworthy. He tells how, when he had slowly taken in the doctrine of logical figures and moods, he put it aside and would prove things only in his own way; how he then

heard about bodies as consisting of matter and form, as throwing off species of themselves for perception, and as moved by sympathies and antipathies, with much else of a like sort, all beyond his comprehension; and how he therefore turned to his old books again, fed his mind on maps and charts of earth and sky, traced the sun in his path, followed Drake and Cavendish girdling the main, and gazed with delight upon pictured haunts of men and wonders of unknown lands. Very characteristic is the interest in men and things, and the disposition to cut through questions in the schools after a trenchant fashion of his own. He was little attracted by the scholastic learning, though it would be wrong to take his words as evidence of a precocious insight into its weakness. The truth probably is that he took no interest in studies which there was no risk in neglecting, and thought as little of rejecting as of accepting the traditional doctrines. He adds that he took his degree at the proper time; but in fact, upon any computation and from whatever cause, he remained at Magdalen Hall five, instead of the required four, years, not being admitted as bachelor till the 5th of February 1608.

Translation of Thucydides.

In the same year Hobbes was recommended by Wilkinson as tutor to the son of William Cavendish, baron of Hardwick (afterwards 2nd earl of Devonshire), and thus began a lifelong connexion with a great and powerful family. Twice it was loosened — once, for a short time, after twenty years, and again, for a longer period, during the Civil War — but it never was broken. Hobbes spoke of the first years of his tutorship as the happiest of his life. Young Cavendish was hardly younger than Hobbes, and had been married, a few months before, at the instance of the king, to Christiana, the only daughter of Edward, Lord Bruce of Kinloss, though by reason of the bride's age, which was only twelve years, the pair had no establishment for

some time. Hobbes was his companion rather than tutor (before becoming secretary); and, growing greatly attached to each other, they were sent abroad together on the grand tour in 1610. During this journey, the duration of which cannot be precisely stated, Hobbes acquired some knowledge of French and Italian, and also made the important discovery that the scholastic philosophy which he had learned in Oxford was almost universally neglected in favour of the scientific and critical methods of Galileo, Kepler and Montaigne. Unable at first to cope with their unfamiliar ideas, he determined to become a scholar, and until 1628 was engaged in a careful study of Greek and Latin authors, the outcome of which was his great translation of Thucydides. But when he had finished his work he kept it lying by him for years, being no longer so sure of finding appreciative readers; and when he did send it forth, in 1628, he was fain to be content with "the few and better sort." That he was finally determined to publication by the political troubles of the year 1628 may be regarded as certain, not only from his own express declaration at a later time (*Vit. carm. exp.*), but also from unmistakable hints in the account of the life and work of his author prefixed to the translation on its appearance. This was the year of the Petition of Right, extorted from the king in the third parliament he had tried within three years of his accession; and, in view of Hobbes' later activity, it is significant that he came forward just then, at the mature age of forty, with his version of the story of the Athenian democracy as the first production of his pen. Nothing else is known of his doings before 1628, except that through his connexion with young Cavendish he had relations with literary men of note like Ben Jonson, and also with Bacon and Lord Herbert of Cherbury. If he never had any sympathy with Herbert's intuitionist principles in philosophy, he was no less eager, as he afterwards showed, than Herbert to rationalize in matters of religious doctrine, so that he may be called the second of the English deists, as Herbert has been

called the first. With Bacon he was so intimate (Aubrey's *Lives*, p, 602) that some writers have described him as a disciple. The facts that he used to walk with Bacon at Gorhambury, and would jot down with exceptional intelligence the eager thinker's sudden "notions," and that he was employed to make the Latin version of some of the *Essays*, prove nothing when weighed against his own disregard of all Bacon's principles, and the other evidence that the impulse to independent thinking came to him not from Bacon, and not till some time after Bacon's death in 1626.

Philosophic Inquiry.

So far as we have any positive evidence, it was not before the year 1629 that Hobbes entered on philosophical inquiry. Meanwhile a great change had been wrought in his circumstances. His friend and master, after about two years' tenure of the earldom of Devonshire, died of the plague in June 1628, and the affairs of the family were so disordered financially that the widowed countess was left with the task of righting them in the boyhood of the third earl. Hobbes went on for a time living in the household; but his services were no longer in demand, and, remaining inconsolable under his personal bereavement, he sought distraction, in 1629, in another engagement which took him abroad as tutor to the son of Sir Gervase Clifton, of an old Nottinghamshire family. This, his second, sojourn abroad appears to have been spent chiefly in Paris, and the one important fact recorded of it is that he then first began to look into Euclid. The engagement came to an end in 1631, when he was recalled to train the young earl of Devonshire, now thirteen years old, son of his previous pupil. In the course of the next seven years in Derbyshire and abroad, Hobbes took his pupil over rhetoric, logic, astronomy, and the principles of law, with other subjects. His mind was now full of the thought of motion in nature, and on the continent he sought out the philosophical speculators or scientific workers. In Florence in 1636 he saw Galileo, for whom he ever

retained the warmest admiration, and spent eight months in daily converse with the members of a scientific circle in Paris, held together by Marin Mersenne (q.v.). From that time (the winter of 1636-1637) he too, as he tells us, was numbered among philosophers.

His introduction to Euclid took place accidentally in 1629 (Aubrey's *Lives*,). Euclid's manner of proof became the model for his own way of thinking upon all subjects. It is less easy to determine when he awoke to an interest in the physical doctrine of motion. The story told by himself (*Vit.* p. xx.) is that, hearing the question asked "What is sense?" he fell to thinking often on the subject, till it suddenly occurred to him that if bodies and their internal parts were at rest, or were always in the same state of motion, there could be no distinction of anything, and consequently no sense; the cause of all things must therefore be sought in diversity of movements. Starting from this principle he was driven to geometry for insight into the ground and modes of motion. The biographies we possess do not tell us where or when this great change of interest occurred. Nothing is said, however, which contradicts a statement that on his third journey in Europe he began to study the doctrine of motion more seriously, being interested in it before; and as he claims more than once (*L.W.* v. 303; *E.W.* vii. 468) to have explained light and sound by a mechanical hypothesis as far back as 1630, the inspiration may be assigned to the time of the second journey. But it was not till the third journey that the new interest became an overpowering passion, and the "philosopher" was on his way home before he had advanced so far as to conceive the scheme of a system of thought to the elaboration of which his life should henceforth be devoted.

Hobbes was able to carry out his plan in some twenty years or more from the time of its conception, but the execution was so broken in upon by political events, and so complicated with other labours, that its stages can hardly be followed without some previous understanding of the relations of

the parts of the scheme, as there is reason to believe they were sketched out from the beginning. His scheme was first to work out, in a separate treatise *De corpore*, a systematic doctrine of Body, showing how physical phenomena were universally explicable in terms of motion, as motion or mechanical action was then (through Galileo and others) understood — the theory of motion being applied in the light of mathematical science, after quantity, the subject-matter of mathematics, had been duly considered in its place among the fundamental conceptions of philosophy, and a clear indication had been given, at first starting, of the logical ground and method of all philosophical inquiry. He would then single out Man from the realm of nature, and, in a treatise *De homine*, show what specific bodily motions were involved in the production of the peculiar phenomena of sensation and knowledge, as also of the affections and passions thence resulting, whereby man came into relation with man. Finally he would consider, in a crowning treatise *De cive*, how men, being naturally rivals or foes, were moved to enter into the better relation of Society, and demonstrate how this grand product of human wit must be regulated if men were not to fall back into brutishness and misery. Thus he proposed to unite in one coherent whole the separate phenomena of Body, Man and the State.

Hobbes came home, in 1637, to a country seething with discontent. The reign of “Thorough” was collapsing, and the forces pent up since 1629 were soon to rend the fabric of the state. By these events Hobbes was distracted from the orderly execution of his philosophic plan. The Short Parliament, as he tells us at a later time (*E.W.* iv. 414), was not dissolved before he had ready “a little treatise in English,” in which he sought to prove that the points of the royal prerogative which the members were determined to dispute before granting supplies “were inseparably annexed to the sovereignty which they did not then deny to be in the king.” Now it can be proved that at this time he had written not only his *Human Nature* but also

his *De corpore politico*, the two treatises (though published separately ten years later) having been composed as parts of one work; and there cannot be the least question that together they make “the little treatise” just mentioned. We are therefore to understand, first, that he wrote the earliest draft of his political theory some years before the outbreak of the Civil War, and, secondly, that this earliest draft was not written till, in accordance with his philosophical conception, he had established the grounds of polity in human nature. The first point is to be noted, because it has often been supposed that Hobbes’ political doctrine took its peculiar complexion from his revulsion against the state of anarchy before his eyes, as he wrote during the progress of the Civil War. The second point must be maintained against his own implied, if not express, statement some years later, when publishing his *De cive* (*L.W.* ii. 151), that he wrote this third part of his system before he had been able to set down any finished representation of the fundamental doctrines which it presupposed. In the beginning of 1640, therefore, he had written out his doctrine of Man at least, with almost as much elaboration as it ever received from him.

In Paris.

In November 1640 the Long Parliament succeeded to the Short, and sent Laud and Strafford to the Tower, and Hobbes, who had become, or thought he had become, a marked man by the circulation of his treatise (of which, “though not printed, many gentlemen had copies”), hastened to Paris, “the first of all that fled.” He was now for the fourth and last time abroad, and did not return for eleven years. Apparently he remained the greater part of the time in or about Paris. He was welcomed back into the scientific coterie about Mersenne, and forthwith had the task assigned him of criticizing the *Meditations* of Descartes, which had been sent from Holland, before publication, to Mersenne with the author’s request for criticism from the most different points of view. Hobbes was soon ready with the remarks that

were printed as “Third” among the six (later seven) sets of “Objections” appended, with “Replies” from Descartes, to the *Meditations*, when published shortly afterwards in 1641 (reprinted in *L.W.* v. 249-274). About the same time also Mersenne sent to Descartes, as if they came from a friend in England, another set of objections which Hobbes had to offer on various points in the scientific treatises, especially the *Dioptrics*, appended by Descartes to his *Discourse on Method* in 1637; to which Descartes replied without suspecting the common authorship of the two sets. The result was to keep the two thinkers apart rather than bring them together. Hobbes was more eager to bring forward his own philosophical and physical ideas than careful to enter into the full meaning of another’s thought; and Descartes was too jealous, and too confident in his conclusions to bear with this kind of criticism. He was very curt in his replies to Hobbes’ philosophical objections, and broke off all correspondence on the physical questions, writing privately to Mersenne that he had grave doubts of the Englishman’s good faith in drawing him into controversy (*L.W.* v. 277-307).

Meanwhile Hobbes had his thoughts too full of the political theory which the events of the last years had ripened within him to settle, even in Paris, to the orderly composition of his works. Though connected in his own mind with his view of human nature and of nature generally, the political theory, as he always declared, could stand by itself. Also, while he may have hoped at this time to be able to add much (though he never did) to the sketch of his doctrine of Man contained in the unpublished “little treatise,” he might extend, but could hardly otherwise modify, the sketch he had there given of his carefully articulated theory of Body Politic. Possibly, indeed, before that sketch was written early in 1640, he may, under pressure of the political excitement, have advanced no small way in the actual composition of the treatise *De Cive*, the third section of his projected system. In any case, it

was upon this section, before the others, that he set to work in Paris; and before the end of 1641 the book, as we know from the date of the dedication (November 1), was finished. Though it was forthwith printed in the course of the year 1642, he was content to circulate a limited number of copies privately; and when he found his work received with applause (it was praised even by Descartes), he seems to have taken this recognition of his philosophical achievement as an additional reason for deferring publication till the earlier works of the system were completed. Accordingly, for the next three or four years, he remained steadily at work, and nothing appeared from him in public except a short treatise on optics (*Tractatus opticus*, *L.W.* v. 217-248) included in the collection of scientific tracts published by Mersenne under the title *Cogitata physico-mathematica* in 1644, and a highly compressed statement of his psychological application of the doctrine of motion (*L.W.* v. 309-318), incorporated with Mersenne's *Ballistica*, published in the same year. Thus or otherwise he had become sufficiently known by 1645 to be chosen as a referee, with Descartes, Roberval and others, in the famous controversy between John Pell (q.v.) and the Dane Longomontanus (q.v.) over that problem of the squaring of the circle which was seen later on to have such a fatal charm for himself. But though about this time he had got ready all or most of the materials for his fundamental work on *Body*, not even now was he able to make way with its composition, and when he returned to it after a number of years, he returned a different man.

Leviathan.

The Civil War had broken out in 1642, and the royalist cause began to decline from the time of the defeat at Marston Moor, in the middle of 1644. Then commenced an exodus of the king's friends. Newcastle himself, who was a cousin of Hobbes' late patron and to whom he dedicated the "little

treatise” of 1640, found his way to Paris, and was followed by a stream of fugitives, many of whom were known to Hobbes. The sight of these exiles made the political interest once more predominant in Hobbes, and before long the revived feeling issued in the formation of a new and important design. It first showed itself in the publication of the *De cive*, of which the fame, but only the fame, had extended beyond the inner circle of friends and critics who had copies of the original impression. Hobbes now entrusted it, early in 1646, to his admirer, the Frenchman Samuel de Sorbière, by whom it was seen through the Elzevir press at Amsterdam in 1647 — having previously inserted a number of notes in reply to objections, and also a striking preface, in the course of which he explained its relation to the other parts of the system not yet forthcoming, and the (political) occasion of its having been composed and being now published before them. So hopeless, meanwhile, was he growing of being able to return home that, later on in the year, he was on the point of leaving Paris to take up his abode in the south with a French friend, when he was engaged “by the month” as mathematical instructor to the young prince of Wales, who had come over from Jersey about the month of July. This engagement lasted nominally from 1646 to 1648 when Charles went to Holland. Thus thrown more than ever into the company of the exiled royalists, it was then, if not earlier, that he conceived his new design of bringing all his powers of thought and expression to bear upon the production of an English book that should set forth his whole theory of civil government in relation to the political crisis resulting from the war. The *De cive*, presently to be published, was written in Latin for the learned, and gave the political theory without its foundation in human nature. The unpublished treatise of 1640 contained all or nearly all that he had to tell concerning human nature, but was written before the terrible events of the last years had disclosed how men might still be urged by their anti-social passions back into the abyss of

anarchy. There was need of an exposition at once comprehensive, incisive and popular. The State, it now seemed to Hobbes, might be regarded as a great artificial man or monster (*Leviathan*), composed of men, with a life that might be traced from its generation through human reason under pressure of human needs to its dissolution through civil strife proceeding from human passions. This, we may suppose, was the presiding conception from the first, but the design may have been variously modified in the three or four years of its execution. Before the end, in 1650-1651, it is plain that he wrote in direct reference to the greatly changed aspect of affairs in England. The king being dead, and the royalist cause appearing to be hopelessly lost, he did not scruple, in closing the work with a general "Review and Conclusion," to raise the question of the subject's right to change allegiance when a former sovereign's power to protect was irrecoverably gone. Also he took advantage of the rule of the Commonwealth to indulge much more freely than he might have otherwise dared in rationalistic criticism of religious doctrines; while, amid the turmoil of sects, he could the more forcibly urge that the preservation of social order, when again firmly restored, must depend on the assumption by the civil power of the right to wield all sanctions, supernatural as well as natural, against the pretensions of any clergy, Catholic, Anglican or Presbyterian, to the exercise of an *imperium in imperio*.

We know the *Leviathan* only as it finally emerged from Hobbes' pen. During the years of its composition he remained in or near Paris, at first in attendance on his royal pupil, with whom he became a great favourite. In 1647 Hobbes was overtaken by a serious illness which disabled him for six months. Mersenne begged him not to die outside the Roman Catholic Church, but Hobbes said that he had already considered the matter sufficiently and afterwards took the sacrament according to the rites of the Church of England. On recovering from this illness, which nearly proved

fatal, he resumed his literary task, and carried it steadily forward to completion by the year 1650, having also within the same time translated into English, with characteristic force of expression, his Latin treatise. Otherwise the only thing known (from one or two letters) of his life in those years is that from the year 1648 he had begun to think of returning home; he was then sixty and might well be weary of exile. When 1650 came, as if to prepare the way for the reception of his *magnum opus*, he allowed the publication of his earliest treatise, divided into two separate small volumes (*Human Nature, or the Fundamental Elements of Policy*, E.W. iv. 1-76, and *De Corpore Politico, or the Elements of Law, Moral and Politic*, p-228). In 1651 he published his translation of the *De Cive* under the title of *Philosophical Rudiments concerning Government and Society* (E.W. ii.). Meanwhile the printing of the greater work was proceeding, and finally it appeared about the middle of the same year, 1651, under the title of *Leviathan, or the Matter, Form and Power of a Commonwealth, Ecclesiastical and Civil* (E.W. iii.), with a quaint frontispiece in which, from behind hills overlooking a fair landscape of town and country, there towered the body (above the waist) of a crowned giant, made up of tiny figures of human beings and bearing sword and crozier in the two hands. It appeared, and soon its author was more lauded and decried than any other thinker of his time; but the first effect of its publication was to sever his connexion with the exiled royalist party, and to throw him for protection on the revolutionary Government. No sooner did copies of the book reach Paris than he found himself shunned by his former associates, and though he was himself so little conscious of disloyalty that he was forward to present a manuscript copy “engrossed in vellum in a marvellous fair hand” to the young king of the Scots (who, after the defeat at Worcester, escaped to Paris about the end of October), he was denied the royal presence when he sought it shortly afterwards. Straightway, then, he saw himself exposed to a double

peril. The exiles had among them desperadoes who could slay; and, besides exciting the enmity of the Anglican clergy about the king, who bitterly resented the secularist spirit of his book, he had compromised himself with the French authorities by his elaborate attack on the papal system. In the circumstances, no resource was left him but secret flight. Travelling with what speed he could in the depths of a severe winter and under the effects of a recent (second) illness, he managed to reach London, where, sending in his submission to the council of state, he was allowed to subside into private life.

Return to London.

Though Hobbes came back, after his eleven years' absence, without having as yet publicly proved his title to rank with the natural philosophers of the age, he was sufficiently conscious of what he had been able to achieve in *Leviathan*; and it was in no humble mood that he now, at the age of sixty-four, turned to complete the fundamental treatise of his philosophical system. Neither those whom his masterpiece soon roused to enthusiasm, nor those whom it moved to indignation, were likely to be indifferent to anything he should now write, whether it lay near to or far from the region of practice. Taking up his abode in Fetter Lane, London, on his return, and continuing to reside there for the sake of intellectual society, even after renewing his old ties with the earl of Devonshire, who lived in the country till the Restoration, he worked so steadily as to be printing the *De corpore* in the year 1654. Circumstances (of which more presently), however, kept the book back till the following year, and meanwhile the readers of *Leviathan* had a different excitement. In 1654 a small treatise, "Of Liberty and Necessity" (*E.W.* iv. 229-278), issued from the press, claiming to be an answer to a discourse on the same subject by Bishop Bramhall of Londonderry (afterwards archbishop of Armagh, d. 1663), addressed by Hobbes to the marquis of Newcastle. It had grown out of an

oral discussion between Hobbes and Bramhall in the marquis's presence at Paris in 1646. Bramhall, a strong Arminian, had afterwards written down his views and sent them to Newcastle to be answered in this form by Hobbes. Hobbes duly replied, but not for publication, because he thought the subject a delicate one. But it happened that Hobbes had allowed a French acquaintance to have a private translation of his reply made by a young Englishman, who secretly took a copy of the original for himself; and now it was this unnamed purloiner who, in 1654, when Hobbes had become famous and feared, gave it to the world of his own motion, with an extravagantly laudatory epistle to the reader in its front.

Controversy with Bramhall.

Upon Hobbes himself the publication came as a surprise, but, after his plain speaking in *Leviathan*, there was nothing in the piece that he need scruple to have made known, and he seems to have condoned the act. On the other hand, Bramhall, supposing Hobbes privy to the publication, resented the manner of it, especially as no mention was made of his rejoinder. Accordingly, in 1655, he printed everything that had passed between them (under the title of *A Defence of the True Liberty of Human Actions from Antecedent or Extrinsic Necessity*), with loud complaint against the treatment he had received, and the promise added that, in default of others, he himself would stand forward to expose the deadly principles of *Leviathan*. About this time Hobbes had begun to be hard pressed by other foes, and, being never more sure of himself than upon the question of the will, he appears to have welcomed the opportunity thus given him of showing his strength. By 1656 he was ready with his *Questions concerning Liberty, Necessity and Chance* (E.W. v.), in which he replied with astonishing force to the bishop's rejoinder point by point, besides explaining the occasion and circumstances of the whole debate, and reproducing (as Bramhall had done) all the pieces from the beginning. As

perhaps the first clear exposition and defence of the *psychological* doctrine of determinism, Hobbes' own two pieces must ever retain a classical importance in the history of the free-will controversy; while Bramhall's are still worth study as specimens of scholastic fence. The bishop, it should be added, returned to the charge in 1658 with ponderous *Castigations of Mr Hobbes' Animadversions*, and also made good his previous threat in a bulky appendix entitled *The Catching of Leviathan the Great Whale*. Hobbes never took any notice of the *Castigations*, but ten years later replied to the charges of atheism, &c., made in the non-political part of the appendix, of which he says he then heard for the first time (*E.W.* iv. 279-384). This *Answer* was first published after Hobbes' death.

Controversy with Wallis and Ward.

We may now follow out the more troublesome conflict, or rather series of conflicts, in which Hobbes became entangled from the time of publishing his *De corpore* in 1655, and which checkered all his remaining years. In *Leviathan* he had vehemently assailed the system of the universities, as originally founded for the support of the papal against the civil authority, and as still working social mischief by adherence to the old learning. The attack was duly noted at Oxford, where under the Commonwealth a new spirit of scientific activity had begun to stir. In 1654 Seth Ward (1617-1689), the Savilian professor of astronomy, replying in his *Vindiciae academiarum* to some other assaults (especially against John Webster's *Examen of Academies*) on the academic system, retorted upon Hobbes that, so far from the universities being now what he had known them in his youth, he would find his geometrical pieces, when they appeared, better understood there than he should like. This was said in reference to the boasts in which Hobbes seems to have been freely indulging of having squared the circle and accomplished other such feats; and, when a year later

the *De corpore* (L.W. i.) finally appeared, it was seen how the thrust had gone home. In the chapter (xx.) of that work where Hobbes dealt with the famous problem whose solution he thought he had found, there were left expressions against Vindex (Ward) at a time when the solutions still seemed to him good; but the solutions themselves, as printed, were allowed to be all in different ways halting, as he naively confessed he had discovered only when he had been driven by the insults of malevolent men to examine them more closely with the help of his friends. A strange conclusion this, and reached by a path not less strange, as was now to be disclosed by a relentless hand. Ward's colleague, the more famous John Wallis (q.v.), Savilian professor of geometry from 1649, had been privy to the challenge thrown out in 1654, and it was arranged that they should critically dispose of the *De corpore* between them. Ward was to occupy himself with the philosophical and physical sections, which he did in leisurely fashion, bringing out his criticism in the course of next year (*In Th. Hobbii philosophiam exercitatio epistolica*). Wallis was to confine himself to the mathematical chapters, and set to work at once with characteristic energy. Obtaining an unbound copy of the *De corpore*, he saw by the mutilated appearance of the sheets that Hobbes had repeatedly altered his demonstrations before he issued them at last in their actual form, grotesque as it was, rather than delay the book longer. Obtaining also a copy of the work as it had been printed before Hobbes had any doubt of the validity of his solutions, Wallis was able to track his whole course from the time of Ward's provocation — his passage from exultation to doubt, from doubt to confessed impotence, yet still without abandoning the old assumption of confident strength; and all his turnings and windings were now laid bare in one of the most trenchant pieces of controversial writing ever penned. Wallis's *Elenchus geometriae Hobbiana*, published in 1655 about three months after the *De corpore*, contained also an elaborate criticism of

Hobbes' whole attempt to relay the foundations of mathematical science in its place within the general body of reasoned knowledge — a criticism which, if it failed to allow for the merit of the conception, exposed only too effectually the utter inadequacy of the result. Taking up mathematics when not only his mind was already formed but his thoughts were crystallizing into a philosophical system, Hobbes had, in fact, never put himself to school and sought to work up gradually to the best knowledge of the time, but had been more anxious from the first to become himself an innovator with whatever insufficient means. The consequence was that, when not spending himself in vain attempts to solve the impossible problems that have always waylaid the fancy of self-sufficient beginners, he took an interest only in the elements of geometry, and never had any notion of the full scope of mathematical science, undergoing as it then was (and not least at the hands of Wallis) the extraordinary development which made it before the end of the century the potent instrument of physical discovery which it became in the hands of Newton. He was even unable, in dealing with the elementary conceptions of geometry, to work out with any consistency the few original thoughts he had, and thus became the easy sport of Wallis. At his advanced age, however, and with the sense he had of his powers, he was not likely to be brought to a better mind by so insulting an opponent. He did indeed, before allowing an English translation of the *De corpore* (E.W. i.) to appear in 1656, take care to remove some of the worst mistakes exposed by Wallis, and, while leaving out all the references to Vindex, now profess to make, in altered form, a series of mere “attempts” at quadrature; but he was far from yielding the ground to the enemy. With the translation, in the spring of 1656, he had ready *Six Lessons to the Professors of Mathematics, one of Geometry, the other of Astronomy, in the University of Oxford* (E.W. vii. 181-356), in which, after reasserting his view of the principles of geometry in opposition to Euclid's, he proceeded to repel Wallis's

objections with no lack of dialectical skill, and with an unreserve equal to Wallis's own. He did not scruple, in the ardour of conflict, even to maintain positions that he had resigned in the translation, and he was not afraid to assume the offensive by a counter criticism of three of Wallis's works then published. When he had thus disposed of the "Paralogisms" of his more formidable antagonist in the first five lessons, he ended with a lesson on "Manners" to the two professors together, and set himself gravely at the close to show that he too could be abusive. In this particular part of his task, it must be allowed, he succeeded very well; his criticism of Wallis's works, especially the great treatise *Arithmetica infinitorum* (1655), only showed how little able he was to enter into the meaning of the modern analysis. Wallis, on his side, was not less ready to keep up the game in English than he had been to begin it in Latin. Swift as before to strike, in three months' time he had deftly turned his own word against the would-be master by administering *Due Correction for Mr Hobbes, or School Discipline for not saying his Lessons right*, in a piece that differed from the *Elenchus* only in being more biting and unrestrained. Having an easy task in defending himself against Hobbes' trivial criticism, he seized the opportunity given him by the English translation of the *De corpore* to track Hobbes again step by step over the whole course, and now to confront him with his incredible inconsistencies multiplied by every new utterance. But it was no longer a fight over mathematical questions only. Wallis having been betrayed originally by his fatal cleverness into the pettiest carping at words, Hobbes had retorted in kind, and then it became a high duty in the other to defend his Latin with great parade of learning and give fresh provocation. One of Wallis's rough sallies in this kind suggested to Hobbes the title of the next rejoinder with which, in 1657, he sought to close the unseemly wrangle. Arguing in the *Lessons* that a mathematical point must have quantity, though this were not reckoned, he had explained the Greek word $\sigma\tau\iota\gamma\mu\acute{\eta}$,

used for a point, to mean a visible mark made with a hot iron; whereupon he was charged by Wallis with gross ignorance for confounding στιγμή and στιγμή. Hence the title of his new piece: Στιγμαὶ ἀγεωμετρίας, ἀγροικίας, ἀντιπολιτείας, ἀμαθείας, or *Marks of the Absurd Geometry, Rural Language, Scottish Church Politics, and Barbarisms of John Wallis, Professor of Geometry and Doctor of Divinity* (E.W. vii. 357-400). He now attacked more in detail but not more happily than before Wallis's great work, while hardly attempting any further defence of his own positions; also he repelled with some force and dignity the insults that had been heaped upon him, and fought the verbal points, but could not leave the field without making political insinuations against his adversary, quite irrelevant in themselves and only noteworthy as evidence of his own resignation to Cromwell's rule. The thrusts were easily and nimbly parried by Wallis in a reply (*Hobbiani puncti dispunctio*, 1657) occupied mainly with the verbal questions. Irritating as it was, it did not avail to shake Hobbes' determination to remain silent; and thus at last there was peace for a time.

Before the strife flamed up again, Hobbes had published, in 1658, the outstanding section of his philosophical system, and thus completed, after a fashion, the scheme he had planned more than twenty years before. So far as the treatise *De homine* (L.W. ii. 11-32) was concerned, the completion was more in name than in fact. It consisted for the most part of an elaborate theory of vision which, though very creditable to Hobbes' scientific insight, was out of place, or at least out of proportion, in a philosophical consideration of human nature generally. The remainder of the treatise, dealing cursorily with some of the topics more fully treated in the *Human Nature* and the *Leviathan*, has all the appearance of having been tagged in haste to the optical chapters (composed years before) as a makeshift for the proper transition required in the system from questions of Body Natural to questions of Body Politic. Hobbes had in fact spent himself in his earlier

constructive efforts, and at the age of seventy, having nothing to add to his doctrine of Man as it was already in one form or another before the world, was content with anything that might stand for the fulfilment of his philosophical purpose. But he had still in him more than twenty years of vigorous vitality, and, not conscious to himself of any shortcoming, looked forward, now his hands were free, to doing battle for his doctrines. Rather than remain quiet, on finding no notice taken of his latest production, he would himself force on a new conflict with the enemy. Wallis having meanwhile published other works and especially a comprehensive treatise on the general principles of calculus (*Mathesis universalis*, 1657), he might take this occasion of exposing afresh the new-fangled methods of mathematical analysis and reasserting his own earlier positions. Accordingly, by the spring of 1660, he had managed to put his criticism and assertions into five dialogues under the title *Examinatio et emendatio mathematicae hodiernae qualis explicatur in libris Johannis Wallisii*, with a sixth dialogue so called, consisting almost entirely of seventy or more propositions on the circle and cycloid. Wallis, however, would not take the bait. Hobbes then tried another tack. Next year, having solved, as he thought, another ancient *crux*, the duplication of the cube, he had his solution brought out anonymously at Paris in French, so as to put Wallis and other critics off the scent and extort a judgment that might be withheld from a work of his. The artifice was successful, and no sooner had Wallis publicly refuted the solution than Hobbes claimed the credit of it, and went more wonderfully than ever astray in its defence. He presently republished it (in modified form), with his remarks, at the end of a new Latin dialogue which he had meanwhile written in defence of another part of his philosophical doctrine. This was the *Dialogus physicus, sive De natura aëris* (*L.W.* iv. 233-296), fulminated in 1661 against Boyle and other friends of Wallis who, as he fancied, under the influence of that malevolent spirit,

were now in London, after the Restoration, forming themselves into a society (incorporated as the Royal Society in 1662) for experimental research, to the exclusion of himself personally, and in direct contravention of the method of physical inquiry enjoined in the *De corpore*. All the laborious manipulation recorded in Boyle's *New Experiments touching the Spring of the Air* (1660), which Hobbes chose, without the least warrant, to take as the manifesto of the new "academicians," seemed to him only to confirm the conclusions he had reasoned out years before from speculative principles, and he warned them that if they were not content to begin where he had left off their work would come to nought. To as much of this diatribe as concerned himself Boyle quickly replied with force and dignity, but it was from Hobbes' old enemy that retribution came, in the scathing satire *Hobbius heauton-timorumenos* (1662). Wallis, who had deftly steered his course amid all the political changes of the previous years, managing ever to be on the side of the ruling power, was now apparently stung to fury by a wanton allusion in Hobbes' latest dialogue to a passage of his former life (his deciphering for the parliament the king's papers taken at Naseby), whereof he had once boasted but after the Restoration could not speak or hear too little. The revenge he took was crushing. Professing to be roused by the attack on his friend Boyle, when he had scorned to lift a finger in defence of himself against the earlier dialogues, he tore them all to shreds with an art of which no general description can give an idea. He got, however, upon more dangerous ground when, passing wholly by the political insinuation against himself, he roundly charged Hobbes with having written *Leviathan* in support of Oliver's title, and deserted his royal master in distress. Hobbes seems to have been fairly bewildered by the rush and whirl of sarcasm with which Wallis drove him anew from every mathematical position he had ever taken up, and did not venture forth into the field of scientific controversy again for some years, when he had once

followed up the physical dialogue of 1661 by seven shorter ones, with the inevitable appendix, entitled *Problemata physica, una cum magnitudine circuli* (L.W. iv. 297-384), in 1662. But all the more eagerly did he take advantage of Wallis's loose calumny to strike where he felt himself safe. His answer to the personal charges took the form of a letter about himself in the third person addressed to Wallis in 1662, under the title of *Considerations upon the Reputation, Loyalty, Manners and Religion of Thomas Hobbes* (E.W. iv. 409-440). In this piece, which is of great biographical value, he told his own and Wallis's "little stories during the time of the late rebellion" with such effect that Wallis, like a wise man, attempted no further reply. Thus ended the second bout.

After a time Hobbes took heart again and began a third period of controversial activity, which did not end, on his side, till his ninetieth year. Little need be added to the simple catalogue of the untiring old man's labours in this last stage of his life. The first piece, published in 1666, *De principiis et ratiocinatione geometrarum* (L.W. iv. 385-484), was designed, as the sub-title declared, to lower the pride of geometrical professors by showing that there was no less uncertainty and error in their works than in those of physical or ethical writers. Wallis replied shortly in the *Philosophical Transactions* (August 1666). Three years later he brought his three great achievements together in compendious form, *Quadratura circuli, Cubatio sphaerae, Duplicatio cubi*, and as soon as they were once more refuted by Wallis, reprinted them with an answer to the objections, in compliment to the grand-duke of Tuscany, who paid him attentions on a visit to England in 1669 (L.W. iv. 485-522). Wallis, who had promised to leave him alone henceforward, refuted him again before the year was out. In 1671 he worked up his propositions over again in *Rosetum geometricum* (L.W. v. 1-50), as a fragrant offering to the geometrical reader, appending a criticism (*Censura brevis*, p-88) on the first part of Wallis's treatise *De*

motu, published in 1669; also he sent *Three Papers* to the Royal Society on selected points treated very briefly, and when Wallis, still not weary of confuting, shortly replied, published them separately with triumphant *Considerations on Dr Wallis's Answer to them* (*E.W.* vii. 429-448). Next year (1672), having now, as he believed, established himself with the Royal Society, he proceeded to complete the discomfiture of Wallis by a public address to the Society on all the points at issue between them from the beginning, *Lux Mathematica excussa collisionibus Johannis Wallisii et Thomae Hobbesii* (*L.W.* v. 89-150), the light, as the author R. R. (Roseti Repertor) added, being here "increased by many very brilliant rays." Wallis replied in the *Transactions*, and then finally held his hand. Hobbes' energy was not yet exhausted. In 1674, at the age of eighty-six, he published his *Principia et problemata aliquot geometrica, ante desperata nunc breviter explicata et demonstrata* (*L.W.* v. 150-214), containing in the chapters dealing with questions of principle not a few striking observations, which ought not to be overlooked in the study of his philosophy. His last piece of all, *Decameron physiologicum* (*E.W.* vii. 69-180), in 1678, was a new set of dialogues on physical questions, most of which he had treated in a similar fashion before; but now, in dealing with gravitation, he was able to fire a parting shot at Wallis; and one more demonstration of the equality of a straight line to the arc of a circle, thrown in at the end, appropriately closed the strangest warfare in which perverse thinker ever engaged.

Later Years.

We must now turn back to trace the fortunes of Hobbes and his other doings in the last twenty years of his life. All these controversial writings on mathematics and physics represent but one half of his activity after the age of seventy; though, as regards the other half, it is not possible, for a reason that will be seen, to say as definitely in what order the works belonging to

the period were produced. From the time of the Restoration he acquired a new prominence in the public eye. No year had passed since the appearance of *Leviathan* without some indignant protest against the influence which its trenchant doctrine was calculated to produce upon minds longing above everything for civil repose; but after the Restoration “Hobbism” became a fashionable creed, which it was the duty of every lover of true morality and religion to denounce. Two or three days after Charles’s arrival in London, Hobbes drew in the street the notice of his former pupil, and was at once received into favour. The young king, if he had ever himself resented the apparent disloyalty of the “Conclusion” of *Leviathan*, had not retained the feeling long, and could appreciate the principles of the great book when the application of them happened, as now, to be turned in his own favour. He had, besides, a relish for Hobbes’ wit (as he used to say, “Here comes the bear to be baited”), and did not like the old man the less because his presence at court scandalized the bishops or the prim virtue of Chancellor Hyde. He even went the length of bestowing on Hobbes (but not always paying) a pension of £100, and had his portrait hung up in the royal closet. These marks of favour, naturally, did not lessen Hobbes’ self-esteem, and perhaps they explain, in his later writings, a certain slavishness toward the regal authority, which is wholly absent from his rational demonstration of absolutism in the earlier works. At all events Hobbes was satisfied with the rule of a king who had appreciated the author of *Leviathan*, and protected him when, after a time, protection in a very real sense became necessary. His eagerness to defend himself against Wallis’s imputation of disloyalty, and his apologetic dedication of the *Problemata physica* to the king, are evidence of the hostility with which he was being pressed as early as 1662; but it was not till 1666 that he felt himself seriously in danger. In that year the Great Fire of London, following on the Great Plague, roused the superstitious fears of the people, and the House of Commons embodied the

general feeling in a bill against atheism and profaneness. On the 17th of October it was ordered that the committee to which the bill was referred “should be empowered to receive information touching such books as tend to atheism, blasphemy and profaneness, or against the essence and attributes of God, and in particular the book published in the name of one White, and the book of Mr Hobbes called the *Leviathan*, and to report the matter with their opinion to the House.” Hobbes, then verging upon eighty, was terrified at the prospect of being treated as a heretic, and proceeded to burn such of his papers as he thought might compromise him. At the same time he set himself, with a very characteristic determination, to inquire into the actual state of the law of heresy. The results of his investigation were first announced in three short Dialogues added (in place of the old “Review and Conclusion,” for which the day had passed) as an Appendix to his Latin translation of *Leviathan* (*L.W.* iii.), included with the general collection of his works published at Amsterdam in 1668. In this appendix, as also in the posthumous tract, published in 1680, *An Historical Narration concerning Heresy and the Punishment thereof* (*E.W.* iv. 385-408), he aimed at showing that, since the High Court of Commission had been put down, there remained no court of heresy at all to which he was amenable, and that even when it stood nothing was to be declared heresy but what was at variance with the Nicene Creed, as he maintained the doctrine of *Leviathan* was not.

The only consequence that came of the parliamentary scare was that Hobbes could never afterwards get permission to print anything on subjects relating to human conduct. The collected edition of his Latin works (in two quarto volumes) appeared at Amsterdam in 1668, because he could not obtain the censor’s licence for its publication at London, Oxford or Cambridge. Other writings which he had finished, or on which he must have been engaged about this time, were not made public till after his death — the king apparently having made it the price of his protection that no

fresh provocation should be offered to the popular sentiment. The most important of the works composed towards 1670, and thus kept back, is the extremely spirited dialogue to which he gave the title *Behemoth: the History of the Causes of the Civil Wars of England and of the Counsels and Artifices by which they were carried on from the year 1640 to the year 1660*. To the same period probably belongs the unfinished *Dialogue between a Philosopher and a Student of the Common Laws of England* (*E.W.* vi. 1-160), a trenchant criticism of the constitutional theory of English government as upheld by Coke. Aubrey takes credit for having tried to induce Hobbes to write upon the subject in 1664 by presenting him with a copy of Bacon's *Elements of the Laws of England*, and though the attempt was then unsuccessful, Hobbes later on took to studying the statute-book, with *Coke upon Littleton*. One other posthumous production also (besides the tract on Heresy before mentioned) may be referred to this, if not, as Aubrey suggests, an earlier time — the two thousand and odd elegiac verses in which he gave his view of ecclesiastical encroachment on the civil power; the quaint verses, disposed in his now favourite dialogue-form, were first published, nine years after his death, under the title *Historia ecclesiastica* (*L.W.* v. 341-408), with a preface by Thomas Rymer.

For some time Hobbes was not even allowed to utter a word of protest, whatever might be the occasion that his enemies took to triumph over him. In 1669 an unworthy follower — Daniel Scargil by name, a fellow of Corpus Christi College, Cambridge — had to recant publicly and confess that his evil life had been the result of Hobbist doctrines. In 1674 John Fell, the dean of Christ Church, who bore the charges of the Latin translation of Anthony Wood's *History and Antiquities of the University of Oxford* (1670), struck out all the complimentary epithets in the account of his life, and substituted very different ones; but this time the king did suffer him to defend himself by publishing a dignified letter (*Vit. Auct.* pp. xlvii.-l.), to

which Fell replied by adding to the translation when it appeared a note full of the grossest insults. And, amid all his troubles, Hobbes was not without his consolations. No Englishman of that day stood in the same repute abroad, and foreigners, noble or learned, who came to England, never forgot to pay their respects to the old man, whose vigour and freshness of intellect no progress of the years seemed able to quench. Among these was the grand-duke of Tuscany (Ferdinand II.), who took away some works and a portrait to adorn the Medicean library.

His pastimes in the latest years were as singular as his labours. The autobiography in Latin verse, with its playful humour, occasional pathos and sublime self-complacency, was thrown off at the age of eighty-four. At eighty-five, in the year 1673, he sent forth a translation of four books of the *Odyssey* (ix.-xii.) in rugged but not seldom happily turned English rhymes; and, when he found this *Voyage of Ulysses* eagerly received, he had ready by 1675 a complete translation of both *Iliad* and *Odyssey* (E.W. x.), prefaced by a lively dissertation “Concerning the Virtues of an Heroic Poem,” showing his unabated interest in questions of literary style. After 1675, he passed his time at his patron’s seats in Derbyshire, occupied to the last with intellectual work in the early morning and in the afternoon hours, which it had long been his habit to devote to thinking and to writing. Even as late as August 1679 he was promising his publisher “somewhat to print in English.” The end came very soon afterwards. A suppression of urine in October, in spite of which he insisted upon being conveyed with the family from Chatsworth to Hardwick Hall towards the end of November, was followed by a paralytic stroke, under which he sank on the 4th of December, in his ninety-second year. He lies buried in the neighbouring church of Ault Hucknall.

Personal characteristics.

He was tall and erect in figure, and lived on the whole a temperate life, though he used to say that he had been drunk about a hundred times. His favourite exercise was tennis, which he played regularly even after the age of seventy. Socially he was genial and courteous, though in argument he occasionally lost his temper. As a friend he was generous and loyal. Intellectually bold in the extreme, he was curiously timid in ordinary life, and is said to have had a horror of ghosts. He read little, and often boasted that he would have known as little as other men if he had read as much. He appears to have had an illegitimate daughter for whom he made generous provision. In the National Portrait Gallery there is a portrait of him by J. M. Wright, and two others are in the possession of the Royal Society.

Place in English thought.

As already suggested, it cannot be allowed that Hobbes falls into any regular succession from Bacon; neither can it be said that he handed on the torch to Locke. He was the one English thinker of the first rank in the long period of two generations separating Locke from Bacon, but, save in the chronological sense, there is no true relation of succession among the three. It would be difficult even to prove any ground of affinity among them beyond a desposition to take sense as a prime factor in the account of subjective experience: their common interest in physical science was shared equally by rationalist thinkers of the Cartesian school, and was indeed begotten of the time. Backwards, Hobbes' relations are rather with Galileo and the other inquirers who, from the beginning of the 17th century, occupied themselves with the physical world in the manner that has come later to be distinguished by the name of science in opposition to philosophy. But even more than in external nature, Hobbes was interested in the phenomena of social life, presenting themselves so impressively in an age of political revolution. So it came to pass that, while he was unable, by

reason of imperfect training and too tardy development, with all his pains, to make any contribution to physical science or to mathematics as instrumental in physical research, he attempted a task which no other adherent of the new “mechanical philosophy” conceived — nothing less than such a universal construction of human knowledge as would bring Society and Man (at once the matter and maker of Society) within the same principles of scientific explanation as were found applicable to the world of Nature. The construction was, of course, utterly premature, even supposing it were inherently possible; but it is Hobbes’ distinction, in his century, to have conceived it, and he is thereby lifted from among the scientific workers with whom he associated to the rank of those philosophical thinkers who have sought to order the whole domain of human knowledge. The effects of his philosophical endeavour may be traced on a variety of lines. Upon every subject that came within the sweep of his system, except mathematics and physics, his thoughts have been productive of thought. When the first storm of opposition from smaller men had begun to die down, thinkers of real weight, beginning with Cumberland and Cudworth, were moved by their aversion to his analysis of the moral nature of man to probe anew the question of the natural springs and the rational grounds of human action; and thus it may be said that Hobbes gave the first impulse to the whole of that movement of ethical speculation that, in modern times, has been carried on with such remarkable continuity in England. In politics the revulsion from his particular conclusions did not prevent the more clear-sighted of his opponents from recognizing the force of his supreme demonstration of the practical irresponsibility of the sovereign power, wherever seated, in the state; and, when in a later age the foundations of a positive theory of legislation were laid in England, the school of Bentham — James Mill, Grote, Molesworth — brought again into general notice the writings of the great publicist of the 17th century, who, however he might,

by the force of temperament, himself prefer the rule of one, based his whole political system upon a rational regard to the common weal. Finally, the psychology of Hobbes, though too undeveloped to guide the thoughts or even perhaps arrest the attention of Locke, when essaying the scientific analysis of knowledge, came in course of time (chiefly through James Mill) to be connected with the theory of associationism developed from within the school of Locke, in different ways, by Hartley and Hume; nor is it surprising that the later associationists, finding their principle more distinctly formulated in the earlier thinker, should sometimes have been betrayed into affiliating themselves to Hobbes rather than to Locke. For his ethical theories see Ethics.

Sufficient information is given in the *Vitae Hobbianaë auctarium* (L.W. i. p. lxxv. ff.) concerning the frequent early editions of Hobbes' separate works, and also concerning the works of those who wrote against him, to the end of the 17th century. In the 18th century, after Clarke's *Boyle Lectures* of 1704-1705, the opposition was less express. In 1750 *The Moral and Political Works* were collected, with life, &c., by Dr Campbell, in a folio edition, including in order, *Human Nature*, *De corpore politico*, *Leviathan*, *Answer to Bramhall's Catching of the Leviathan*, *Narration concerning Heresy*, *Of Liberty and Necessity*, *Behemoth*, *Dialogue of the Common Laws*, the Introduction to the *Thucydides*, *Letter to Davenant and two others*, the Preface to the *Homer*, *De mirabilibus Pecci* (with English translation), *Considerations on the Reputation, &c., of T. H.* In 1812 the *Human Nature* and the *Liberty and Necessity* (with supplementary extracts from the *Questions* of 1656) were reprinted in a small edition of 250 copies, with a meritorious memoir (based on Campbell) and dedication to Horne Tooke, by Philip Mallet. Molesworth's edition (1839-1845), dedicated to Grote, has been referred to in a former note. Of translations may be mentioned *Les Éléments philosophiques du citoyen* (1649) and *Le Corps politique* (1652),

both by S. de Sorbière, conjoined with *Le Traité de la nature humaine*, by d'Holbach, in 1787, under the general title *Les Œuvres philosophiques et politiques de Thomas Hobbes*; a translation of the first section, "Computatio sive logica," of the *De corpore*, included by Destutt de Tracy with his *Éléments d'idéologie* (1804); a translation of *Leviathan* into Dutch in 1678, and another (anonymous) into German — *Des Engländer Thomas Hobbes Leviathan oder der kirchliche und bürgerliche Staat* (Halle, 1794, 2 vols.); a translation of the *De cive* by J. H. v. Kirchmann — *T. Hobbes: Abhandlung über den Bürger, &c.* (Leipzig, 1873). Important later editions are those of Ferdinand Tönnies, *Behemoth* (1889), on which see Croom Robertson's *Philosophical Remains* (1894), ; *Elements of Law* (1889).

Biographical and Critical Works. — There are three accounts of Hobbes' life, first published together in 1681, two years after his death, by R. B. (Richard Blackbourne, a friend of Hobbes' admirer, John Aubrey), and reprinted, with complimentary verses by Cowley and others, at the beginning of Sir W. Molesworth's collection of the *Latin Works*: (1) *T. H. Malmesb. vita* (pp. xiii.-xxi.), written by Hobbes himself, or (as also reported) by T. Rymer, at his dictation; (2) *Vitae Hobbianaë auctarium* (pp. xxii.-lxxx.), turned into Latin from Aubrey's English; (3) *T. H. Malmesb. vita carmine expressa* (pp. lxxxi.-xcix.), written by Hobbes at the age of eighty-four (first published by itself in 1680). The *Life of Mr T. H. of Malmesburie*, printed among the *Lives of Eminent Men*, in 1813, from Aubrey's papers in the Bodleian, &c. (vol. ii. pt. ii. p-637), contains some interesting particulars not found in the *Auctarium*. All that is of any importance for Hobbes' life is contained in G. Croom Robertson's *Hobbes* (1886) in Blackwood's *Philosophical Classics*, and Sir Leslie Stephen's *Hobbes* (1904) in the "English Men of Letters" series, both of which deal fully with his philosophy also. See also F. Tönnies, *Hobbes Leben und Lehre* (1896), *Hobbes-Analekten* (1904 foll.); G. Zart, *Einfluss der*

Thomas Hobbes by Leslie Stephen

From 'Dictionary of National Biography, 1885-1900, Volume 27'

THOMAS HOBBS (1588–1679), philosopher, second son of Thomas Hobbes, vicar of Charlton and Westport, was born at Westport (now part of Malmesbury, Wiltshire) on 5 April 1588. His mother, of whom it is only known that she came of a race of yeomen, gave birth to her second son prematurely, owing to her agitation at the reports of the Armada. The father, described by Aubrey as ignorant and choleric, was forced to fly for an assault made at the church door on a neighbouring parson. He died in obscurity 'beyond London.' His children, two boys and a girl, were brought up by his brother, Francis, a flourishing glover at Malmesbury. The eldest son, Edmund, a plain, sensible man, entered the glove trade. He lived to old age, and left a son, who was kindly treated by his uncle Thomas, but turned out ill, and died in 1670, leaving five children, remembered in their granduncle's will. Thomas Hobbes was sent to school at Westport Church when four years old, and at the age of six was learning Latin and Greek. At eight he was sent to Malmesbury school, and afterwards to a private school kept by Robert Latimer at Westport. Latimer, a 'good Grecian,' afterwards Aubrey's schoolmaster, took an interest in his pupil, who translated the 'Medea' of Euripides into Latin iambics before he was fourteen, and already showed a contemplative turn. About January or February 1602–3 his uncle entered him at Magdalen Hall, Oxford. The discipline was at that time much relaxed, and ecclesiastical disputes were caused by the rising energy of the puritans, who were very strong at Magdalen Hall. Hobbes found the teaching, still conducted on the old scholastic methods,

uncongenial, amused himself with snaring jackdaws (according to Aubrey), and took to reading books of travel. He graduated B.A. on 5 Feb. 1607–8. The principal of the hall recommended him to William Cavendish (d. 1626), afterwards first earl of Devonshire, who required a tutor for his eldest son, William Cavendish (1591?–1628), afterwards second earl. Hobbes says that the next twenty years, spent with the young earl, were the happiest part of his life (*Vita carmine expressa*). He became the friend, rather than the teacher, of the youth, who took him out hunting and hawking, and employed him in borrowing money. Amid such occupations his Latin grew rusty. In 1610 they set out on the grand tour, and visited France, Germany, and Italy. Hobbes learnt to speak French and Italian, and found that the philosophy of Oxford had gone out of fashion on the continent. He resolved to become a scholar, and after his return, while living with his pupil as secretary, devoted his leisure to the study of classical literature. He delighted chiefly in poets and historians, and especially in Thucydides, of whom he made a translation, published, after long delay, in 1629. He had already, according to his later statement, the political purpose of showing how much wiser is one man than a crowd. The death of his patron in 1628 left him for a time to his own resources. The widow was engaged in energetically repairing the family affairs, injured by her husband's extravagance, and dispensed with Hobbes' services, although allowing him to remain for some time in the house. In 1629 he became travelling tutor to the son of Sir Gervase Clifton, and spent eighteen months, chiefly, it seems, at Paris, though he also appears to have visited Venice. In 1631 he was recalled from Paris to become tutor of his first pupil's eldest son, William Cavendish (1617–1684), third earl of Devonshire. He instructed the boy in rhetoric, logic, astronomy, the principles of law, and other subjects. In 1634 he took the earl on a third foreign tour, visiting Italy, and spending much time at Paris, where he was now beginning to be known to the philosophic

circles of the time. It was probably during his second tour (1629–31) that he had the intellectual experience described most fully by Aubrey. He accidentally opened a copy of Euclid's 'Elements' at the forty-seventh proposition of the first book. Reading it, he exclaimed, 'By God, this is impossible.' Examining the proofs, he was at last convinced, and fell 'in love with geometry.' Another story, told by himself (Latin Works, i. xx), is of uncertain date. He heard some one inquire, in a company of learned men, what sense was. No one being able to answer, he reflected that sensation was only made possible by motion. He was thus led to the mechanical explanation of nature, which became a leading principle of his philosophy, and studied geometry in order to understand the modes of motion. It is doubtful (see Robertson, p–5) whether this should be referred to the second or third tour. A tract (in Harl. MS. 6796) contains an early statement of his theory of sense, which probably shows his first attempts at working it out. In any case, Hobbes was now interested in the philosophical movements of Europe. He had gained the intimacy of Galileo at Florence about 1636, and always retained the profoundest respect for the old philosopher, who was in his last period of retirement. At Paris Hobbes was received in the circles of which Mersenne, the friend of Descartes, was the centre, and in which all the new philosophical and scientific theories were most eagerly discussed. At a later period he became intimate with Gassendi, whose philosophy was congenial to his own, though they appear to have reached their conclusions quite independently. Hobbes acquired many other eminent friends at different periods. Before his first foreign tour, presumably during the period between the chancellor's fall and his death (1621–6), he had been known to Bacon. Hobbes, according to Aubrey, wrote from Bacon's dictation, showing, as may be believed, more intelligence than other amanuenses, and helped in turning some of the essays into Latin. Hobbes, however, makes very slight reference to Bacon, and does not seem to have been directly

influenced by his philosophy. Among other friends mentioned (see list in *Vitæ Auctarium*, Latin Works, i. lxii) are Herbert of Cherbury, whose rationalism would be congenial to him, Kenelm Digby, Chillingworth, and Harvey; while among literary friends were Sir Robert Ayton, Ben Jonson, Cowley, D'Avenant, and Waller. He was admitted, probably after his third tour, to the circle of Falkland, Hyde, and Sidney Godolphin (1610–1643), the last of whom was especially dear to him. After his return to England with Devonshire in 1637, Hobbes continued to live with the earl, and set about composing the systematic treatises in which he had now resolved to embody his philosophy. He contemplated three treatises: the 'De Corpore,' containing his first principles, as well as his mathematical and physical doctrines; the 'De Homine,' upon psychology; and the 'De Cive,' giving his political and religious theories. The growing troubles led him to interrupt the systematic development of his philosophy by writing a treatise called 'The Elements of Law, Natural and Politique,' afterwards published in two separate parts, as 'Human Nature' and 'De Corpore Politico.' This treatise, which already contains his characteristic positions in psychology and politics, was circulated for the present in manuscript. The dedication to the Marquis of Newcastle, cousin of the second Earl of Devonshire, is dated 9 May 1640 (copies are preserved at Hardwick Hall and in the British Museum). The Short Parliament had been dissolved on 5 May. Hobbes, however, said long afterwards that his treatise had 'occasioned much talk of the author, and had not his majesty dissolved the parliament it had brought him into danger of his life.' He may have forgotten the order of events, and no doubt exaggerated the effect produced by his treatise. At any rate, when the Long Parliament met in November and impeached Strafford, Hobbes took fright and went over to Paris, 'the first of all that fled, and there continued eleven years, to his damage some thousands of pounds deep.' At Paris he took up his old friendships, and transmitted through Mersenne, in

January 1641, sixteen objections to various points in Descartes's 'Meditationes de primâ philosophiâ,' and afterwards objections to some of Descartes's physical positions in the 'Dioptrique.' He concealed his name and the identity of the two objectors. Descartes received both criticisms contemptuously, and declared finally that he would not continue a correspondence with the author. The development of the struggle in England now led Hobbes to give a fuller exposition of his political theories. He composed his 'De Cive,' printed in 1642, and with a dedicatory epistle to the Earl of Devonshire, signed T. H., and dated 1 Nov. 1641. It is a developed statement of the doctrine already set forth in his unpublished treatise; he gives more explicitly and elaborately his favourite theory that peace could only be obtained by the complete subordination of the church to the state. Few copies were printed, and the book is now very rare. There are copies in the Bodleian (formerly Selden's) and Dr. Williams's Library. The authoritative edition was published, with notes in reply to objections, at Amsterdam in 1647, under the supervision of his friend Sorbière, a French physician. A preface explained its relation to his general scheme.

Although Hobbes contributed some scientific papers to books published by Mersenne, his interest in political events induced him again to postpone the systematic exposition of his philosophy, and to set about the composition of his great book, the 'Leviathan.' Refugees from England were coming over and discussing politics with him. He carried 'a pen and inkhorn' about with him, according to Aubrey, and entered any thoughts that occurred to him in a note-book. He was occasionally pressed for money. He had left England with five hundred pounds. Hyde afterwards brought him two hundred pounds, bequeathed to him by his friend Godolphin, and he received eighty pounds a year from the Earl of Devonshire (*Vita carmine expressa*). The earl had taken the royalist side, and had left England on being impeached before the House of Lords in July

1642, when his estates were sequestrated. Hobbes' salary would probably be precarious at this period. In 1645, however, the earl returned to England, submitted to the parliament, and in 1646 compounded for his estates. Hobbes was about this time on the point of retiring to Languedoc to live with a French friend and admirer, Du Verdus (Robertson,). The arrival of the Prince of Wales in the summer of 1646 induced him to stay at Paris where he was engaged to teach the prince the elements of mathematics. The position, as he explained to Sorbière (letter of 4 Oct. 1646), had no political significance, and was a mere engagement by the month (22 March 1647). The last letter shows that he had already thoughts of returning to England, where his patron was now settled. In 1647 Hobbes had a dangerous illness. His old friend Mersenne came to his bedside and begged him not to die outside the catholic church. Hobbes observed that he had long ago considered that matter sufficiently, and turned the conversation by asking 'When did you last see Gassendi?' Some days later he welcomed Cosin (afterwards bishop of Durham), and took the sacrament according to the Anglican rites, a fact to which he afterwards referred in proof of his orthodoxy.

While the 'Leviathan' was progressing, Hobbes' unpublished treatise of 1640 was published in two parts, 'Human Nature, or the Fundamental Elements of Policy,' and 'De Corpore Politico, or Elements of Law, Moral and Politic,' and in 1651 he published an English translation of the 'De Cive.' His 'Leviathan' was now being printed in London, and appeared in the middle of 1651. When Charles II reached Paris about the end of October, Hobbes presented him with a beautifully written copy on vellum (now in the British Museum, Egerton MS. 1910). His position in Paris had become difficult. His orthodoxy was suspected, not without reason. In 1646 he had had a private discussion with Bramhall upon freewill in presence of the Marquis of Newcastle, which some years later produced a keen

controversy. The 'Leviathan' was not likely to conciliate churchmen, and shortly after presenting his manuscript to the king he was denied access to the court, and told by the Marquis of Ormonde that he was suspected of disloyalty and atheism. His usual timidity was excited by the murders of Isaac Dorislaus and Anthony Ascham in 1649 and 1650, and he thought that similar dangers might await the author of the 'Leviathan.' The French clergy, irritated by his bitter assaults on the papacy, were also thought to be meditating an attack. His flight to England soon afterwards gave credit to the suspicion that he had written the book in the interests of Cromwell. Clarendon tells a story of a conversation with Hobbes, who, in answer to remonstrances against the forthcoming book, said: 'The truth is, I have a mind to go home.' The 'Leviathan,' however, would hardly recommend its author to either party. Its abstract principles might no doubt be applied in defence of the protectorate when definitely established, which, however, did not become an accomplished fact till the end of 1653. The only passages alleged in support of the imputation of subservience to Cromwell were some phrases in the brief 'Review and Conclusion.' These, it may be remarked, are in the copy presented to Charles. They endeavour to define the circumstances under which submission to a new sovereign becomes legitimate. Hobbes argues in favour of those who had compounded for their estates, saying that by submitting in order to retain a part of their rights they were really more detrimental to the usurper than if by not submitting they enabled him to seize the whole. He defended this position when afterwards attacked by Wallis, and said truly that he had never justified rebellion. It was indeed idle to blame an elderly and timid philosopher, upon whom the exiled court looked with disfavour, for submitting with so many others to the new government then thought to be permanently established. His defence of the compounders applied to his patron, who had himself compounded in 1646, and to whom he was soon to return. He fled secretly

to England at the end of 1651, suffering from the hardships of the frontier journey after a second severe illness (described in Guy Patin's *Letters*, 1846, ii. 593–4); submitted to the council of state, and was allowed to live quietly in private. An intimation, apparently sanctioned by Clarendon's language, that he received some offer from Cromwell appears to be groundless. The charge was first expressly made by John Dowel in 'The Leviathan Heretical' in 1683. Hobbes, indeed, in 1656 ventured to boast of his having reconciled 'a thousand gentlemen' to submission to the government (*Six Lessons*, &c. E. vii. 336); but, in any case, he received nothing, and in 1653 resumed his position in the household of his old patron. He remained, however, in London, in Fetter Lane, in order to have the advantage of intellectual society while completing the exposition of his system. Selden and Harvey were at this period his chief friends. He received a legacy of 10*l.* from each, from Selden in 1654, and from Harvey in 1657 (for a doubtful story about Hobbes' visit to Selden when dying see Aubrey, *Lives*, ii. 532; Macray, *Annals of the Bodleian*, n.) He took pains to find a church where he could take the sacrament according to the rites of the church of England.

Hobbes ultimately published the 'De Corpore,' representing the first part of his plan, in 1655. It had been delayed for a year by his difficulty in meeting objections raised by his friends to certain unlucky solutions of impossible geometrical problems. Finally the 'De Homine' should have completed the system by giving his psychology. The treatise, however, published under that title in 1658 was a mere makeshift, containing some psychology less systematic than that which he had already published, and a Latin translation of some chapters on optics from an unpublished treatise written by him in 1646 (now in Harleian MS. 3360). Hobbes' labours had been interrupted, not only by the advance of age, but by a number of controversies which lasted the rest of his life. After the discussion in

presence of the Marquis of Newcastle Hobbes had answered a written statement of Bramhall's position by a reply which remained in manuscript. He had allowed a translation to be made by a young Englishman for the satisfaction of a French friend. The translator had taken a copy, which he published in 1654 without Hobbes' privity, prefixing a letter in denunciation of priests and ministers. Bramhall, indignant at this proceeding, which he naturally ascribed to Hobbes, printed in 1655 all that had passed, including a long rejoinder to Hobbes' argument. Hobbes in 1656 published a reply to Bramhall, called 'Questions concerning Liberty, Necessity, and Chance,' clearing himself of the personal charges, and replying with remarkable vigour upon the philosophical question. Bramhall replied in 'Castigations of Hobbes' Animadversions' in 1658, with an appendix called 'The Catching of Leviathan the Great Whale.' Hobbes did not carry on the argument, but in 1668 replied to the charges of atheism and blasphemy (of which he declared that he had now heard for the first time) in 'An Answer to ... Dr. Bramhall,' not published till 1682. The argument upon necessity shows Hobbes at his best.

A more unfortunate dispute arose with the mathematicians. The group of scientific men who after the Restoration founded the Royal Society were already meeting at Oxford. Seth Ward was Savilian professor of astronomy during the protectorate, and in his 'Vindiciæ Academicæ' (1654) asserted against John Webster's 'Examen of Academies' that the university had now made advances in science which, as he added in an appendix, would enable it to judge the geometrical novelties of which Hobbes had already boasted. Hobbes, in his 'De Corpore' (1655), retorted upon Ward, and produced his solutions of some ancient puzzles, especially the squaring of the circle. Ward replied by an 'Exercitatio' upon Hobbes' philosophy a year later; but turned over the mathematical argument to another of the circle, the famous John Wallis, Savilian professor of geometry. Wallis's 'Elenchus Geometriæ

Hobbianaë' showed unsparingly the manifold absurdities of Hobbes' solutions, and by an ingenious examination of an early copy of the book, exposed his hopeless attempts, made in consequence of Ward's remarks, to patch up the faulty demonstrations. Further replies and rejoinders followed, in which, while Wallis was clearly victorious as to the mathematical questions, the disputants rivalled each other in abuse and verbal quibbling. The controversy was renewed by Hobbes in 1660, by an examination in dialogue form of Wallis's mathematical works, which, failing to bring Wallis into the field, was succeeded by a solution of the duplication of the cube brought out anonymously by Hobbes in Paris. As soon as Wallis refuted this Hobbes acknowledged it, and reproduced it at the end of a 'Dialogus Physicus, sive, de Natura Aeris,' an attack upon Boyle's 'New Experiments touching the Spring of the Air.' Hobbes resented his exclusion from the founders of the Royal Society, and attributed their coldness to the malignity of Wallis. He made an unpleasant allusion to Wallis's achievement in his deciphering the king's papers taken after Naseby. Boyle answered Hobbes, and Wallis, out of regard (as he said) for Boyle, once more demolished Hobbes' mathematics in 'Hobbius Heauton-timorumenos' (1662). He ventured, however, to add that Hobbes had written the 'Leviathan' in support of Cromwell, to which Hobbes replied effectively in his 'Considerations upon the Refutation, Loyalty, Manners, and Religion of Thomas Hobbes,' 1662. In 1666 Hobbes once more took up the hopeless task of defending his own fantasies and attacking Wallis. Wallis published his last retort in 1672. Hobbes in 1674 again published some of his pretended solutions, and as late as 1678, at the age of ninety, fired his last shot in the 'Decameron Physiologicum.'

Hobbes lived after the Restoration at his patron's houses in London and the country. Charles II, two or three days after his return to England, saw Hobbes in the Strand, and spoke kindly to him. Afterwards, while sitting to

Samuel Cooper, the miniature-painter, the king amused himself by talking to Hobbes. Hobbes could match the courtiers at repartee, and the king would say, 'Here comes the bear to be baited' (Aubrey and *Sorberiana*, 1694,). Charles also gave him a pension of 100*l.*, which was paid as irregularly as other pensions of the time (see Hobbes' *Petition*, E. vii. 471). The bishops and Clarendon, however, looked upon the author of the 'Leviathan' with suspicion. In 1666 a committee of the House of Commons, appointed to consider a bill against 'Atheism and Profaneness,' was empowered to receive information about offending books, and especially the 'Leviathan.' According to Aubrey, Hobbes was so alarmed as to burn his papers. A report given by White Kennett (*Memoirs of Cavendish Family*) says that he now frequented the chapel and took the sacrament, though he 'turned his back upon the sermon.' He argued (in an appendix to a Latin translation of the 'Leviathan' in 1668) that since the abolition of the high commission there was no court which could try him for heresy. He found protectors in Arlington and in the king. Charles, however, would not permit him to publish any work of political or religious tendency. 'The Behemoth' (finished about 1668) was suppressed by Charles's orders, though a surreptitious edition appeared in 1679, and some other books were silenced. In 1669 the Cambridge authorities forced one Daniel Scargil, who had defended some theses from the 'Leviathan,' to recant publicly, and assert that his vicious life had been due to his Hobbist principles. John Fell (1625–1686) , dean of Christ Church, introduced some contemptuous remarks upon Hobbes into a Latin translation of Wood's 'History and Antiquities,' and persisted, in spite of a remonstrance from Hobbes. Many attacks upon his doctrines by distinguished writers were also appearing; but his fame was spreading abroad, and distinguished foreigners were eager to pay him homage during visits to England. Among them was the Grand

Duke of Tuscany, who saw him in 1669, and to whom he dedicated his 'Quadratura Circuli.'

When eighty-four he wrote his autobiography in Latin verse, and at eighty-six completed his translation of Homer's 'Odyssey' and 'Iliad.' In 1675 he finally left London, passing the rest of his time between Hardwick and Chatsworth, the seats of the Devonshire family. As late as August 1679 he was still writing, but had an attack of strangury in October. He insisted upon travelling with the family from Chatsworth to Hardwick during November, but soon afterwards was attacked by paralysis, and died quietly on 4 Dec. 1679. He was buried in the chancel of Hault Hucknall Church.

Hobbes' health was weak in youth, but improved after he was forty. He was over six feet high, and in old age erect for his years. He had good eyes, which shone 'as with a bright live coal' under excitement. His black hair caused him to be nicknamed 'Crow' at school. He had a short bristling auburn moustache, but shaved what would have been a 'venerable beard,' to avoid an appearance of philosophical austerity. He took little physic, and preferred an 'experienced old woman' to the 'most learned but inexperienced physician.' He was generally temperate, though he calculated that he had been drunk a hundred times during a life of ninety-two years. His diet was regular; he drank no wine after sixty, and ate chiefly fish. He rose at seven, breakfasted on bread and butter, dined at eleven, and after a pipe slept for half an hour, afterwards writing down his morning thoughts. He took regular exercise, playing tennis even at seventy-five, and in the country taking a smart walk, after which he was rubbed by a servant. He is said to have had an illegitimate daughter, for whom he provided. He was affable and courteous, a pleasant companion, though it is recorded that he sometimes lost his temper in arguing with Thomas White or 'Albius' (Wood, *Athenæ*, 'Joseph Glanville'). A common story of his fear of ghosts is denied in the 'Vitæ Auctarium' (see also Bayle, s. v., note N). He read not

much, but thoroughly, and was fond of saying that if he had read as much as other learned men he would have been as ignorant. He was charitable and very liberal to his relations. His long connection with the Cavendishes is creditable to both, and he appears to have been a faithful friend. He was constitutionally timid, though intellectually audacious, and always on his guard against possible persecution. But the charges of time-serving seem to be disproved. There is a portrait of him by J. M. Wright in the National Portrait Gallery, and two in the possession of the Royal Society. A portrait by Cooper was formerly in the royal collections.

Hobbes produced a fermentation in English thought not surpassed until the advent of Darwinism. While, however, the opponents of Hobbes were countless, his biographer could discover only a single supporter. ‘Hobbism’ was an occasional name of reproach until the middle of the eighteenth century (he is mentioned on the title-page of ‘Deism Revealed,’ 1751), although his philosophy had long been eclipsed by Locke’s ‘Essay.’ He is one of Kortholt’s ‘three impostors’ (1680) along with Spinoza and Herbert of Cherbury. In Farquhar’s ‘Constant Couple,’ 1699, the hypocritical debauchee carries Hobbes in his pocket; and among ‘Twelve Ingenious Characters,’ 1686, is a dissolute town-fop who takes about ‘two leaves of Leviathan’ (D’Israeli, *Miscellanies*, 1840,). Atterbury holds him up as a warning in a sermon ‘on the terrors of conscience’ (*Sermons*, 1734, ii. 112). He was reviled on all sides as the typical atheist, materialist, political absolutist, and preacher of ethical selfishness. Hobbes was in truth a product of the great intellectual movement distinguished by such names as Bacon (1561–1629), Galileo (1564–1642), Kepler (1571–1630), Harvey (1578–1657), and Descartes (1596–1650). He mixed in the scientific circles of Paris and London. He shared in the general repudiation of scholasticism. In his so-called ‘Philosophia Prima’ he touched hastily upon first principles, but failed to recognise the significance of the ultimate problems the answer

to which by Descartes founded modern philosophy. His thorough-going nominalism is his most remarkable characteristic. At the same time he was scarcely influenced by Bacon's theory of the importance of systematic induction and experiment. He conceived of a general scientific scheme of universal knowledge, deducible by geometrical methods from the motions of matter which he assumed to be the ultimate fact. The conception recalls in some respects that of Mr. Herbert Spencer. Hobbes was very ill qualified for elaborating his scheme. His self-confidence was so great and his intellect so rigid when he began Euclid that he mistook blundering for original discovery, and wasted his old age in the obstinate defence of absurdities. De Morgan, however, observes (*Budget of Paradoxes*,) that he was not such an 'ignoramus' as is sometimes supposed, and that he makes 'acute remarks on points of principle.' His psychology remained fragmentary, though affording abundant indications of sagacity. His short statement of the associationist theory influenced his successors. His great achievement, however, is his political philosophy, especially as given in the 'Leviathan.' It was the edifice under which he endeavoured afterwards to introduce the foundation of philosophy, doubtless congenial, but not the real groundwork of his doctrine. Like all the great thinkers of his time, he had been profoundly impressed by the evils caused by the sectarian animosities of the time. His remedy was the entire subordination of the ecclesiastical to the secular authority — a theory which made the religion of a state dependent upon its secular sovereign, and therefore not derivable either from churches or philosophers, and shocked equally the rationalists and the orthodox. It is disputable how far Hobbes carried his own scepticism. He ostensibly accepted the creed of the national church, but in virtue of obedience to the law. He argues from texts as confidently as a puritan, but, besides twisting them to strange uses, incidentally suggests many of the leading criticisms urged by later rationalists. In support of his absolutism he

interprets the doctrine of the social compact (which had been recently expounded by Hooker and Grotius) not as a compact between the sovereign and his subjects, but as between the subjects to obey the sovereign. Virtually he argues that states have been formed as the only alternative to the state of nature, or, on his showing, to anarchy and barbarism. The supremacy and unity of the sovereign power is therefore an expression of the essential condition of civilised life. To this, though with some reserves, he subordinates even the moral law; and his characteristic theory of human selfishness reduces the only sanction to fear of force or each man's hopes of personal advantage. Hobbes loves to display his paradoxes in the most extreme form, and has the force of a sublimely one-sided thinker. The effect is increased by an admirable style, sententious and weighty, terse and lucid in the highest degree, and enlivened by shrewd strokes of wit and humour. In spite of occasional archaisms, the 'Leviathan' is a model of vigorous exposition, unsurpassed in the language. Among the prominent assailants not hitherto noticed of Hobbes were Clarendon in his 'Brief View and Survey of the ... Errors ... in ... "Leviathan"' 1676, written by 1670; Thomas (afterwards Archbishop) Tenison in the 'Creed of Mr. Hobbes examined,' 1670; and John Eachard in two dialogues (1672 and 1673), which went through many editions. More serious philosophical criticisms came from the Cambridge Platonists. Cudworth, whose 'Intellectual System' is an elaborate examination of Hobbes' materialism, had already attacked Hobbes' principles in his academical thesis in 1644, and left many manuscripts, one or two of which [see under Cudworth, Ralph] have been published, directed against Hobbes' ethics and doctrine of necessity. Henry More criticised Hobbes' materialism in his 'Immortality of the Soul,' 1659. Richard Cumberland (1631–1718) , in his 'De Legibus Naturæ,' 1672, attacks chiefly Hobbes' theory of selfishness. Samuel Clarke, in his two courses of Boyle lectures (1704–5), also defends immutable morality and

free-will against Hobbes. His first purely political assailant was Sir Robert Filmer in 1652; and he is frequently mentioned by Harrington in the 'Oceana,' 1656, who, however, respected him, and pays him a very high compliment in the 'Prerogative of Popular Government' (*Works*, 1700,). Locke has been accused of plagiarising from Hobbes, and there are points of coincidence, although it cannot be doubted that Locke struck out his new way under the influence of Descartes, and owed little to Hobbes. Hobbes' influence is remarkably shown in Spinoza's political treatises. The impression upon Leibniz appears in the 'Theodicée' and many of his writings, early and late. His later influence in Germany is described in G. Zart's 'Einfluss der englischen Philosophie ... auf die deutsche Philosophie des 18ten Jahrhunderts.' In France Diderot expressed enthusiastic admiration for Hobbes in the 'Encyclopædia,' and Rousseau's interest in him appears in the early discourse on 'Inequality and the Contrat Social.' De Maistre's 'Du Pape' is a curious application of Hobbes' logic to an antagonistic conclusion. After being much neglected in England Hobbes' fame was rehabilitated by the utilitarians, who found much that was congenial to them in his unflinching clearness and rationalism, his doctrine of association, his recognition of utility as the aim of social action, and his theory of sovereignty. Their interest was proved by Molesworth's edition of Hobbes' works, which, unfortunately, was not completed by any general survey or biographical investigation.

Hobbes' works are as follows (the letters E. and L. refer to their places in Molesworth's edition of the English and Latin works respectively): 1. 'Translation of Thucydides,' 1629, 1634, 1676, &c.; E. viii. and ix. 2. 'De Mirabilibus Pecci,' 1636? (n. d.), 1666, 1675, 1678; L. v. 321–40. 'A Latin Poem on the Peak,' an English translation, by 'A Person of Quality,' was added to the edition of 1678. 3. 'Objectiones ad Cartesii Meditationes' (placed third in the sets published in the 'Meditations'), L. v. 249–74. Ib.

275–307, gives the correspondence upon them with Descartes and Mersenne, 1641. 4. ‘De Cive,’ Paris, 1642; Amsterdam (as ‘Elementa Philosophiæ de Cive’), 1647, 1650, 1660, 1669, in English, 1651; two first parts, translated by Du Verdus, Paris, 1660, as ‘Eléments de la politique de M. Hobbes;’ L. 133–432, E. ii. 5. Part of preface to Mersenne’s ‘Ballistica,’ 1644; L. v. 309–18. 6. ‘Tractatus Opticus’ in Mersenne’s ‘Cogitata Physico-Mathematica,’ 1644, L. v. 215–48. 7. ‘Human Nature, or the Fundamental Elements of Policy,’ 1650, E. iv. 1–76. 8. ‘De Corpore Politico,’ 1650, E. iv. 177–228 (Nos. 7 and 8 are the original unpublished treatise of 1640; the first part of No. 8 being removed to it from the last part of No. 7. The prefatory epistle, dated 9 May 1640, is prefixed to No. 7. The original treatise, called ‘The Elements of Law, Natural and Politic,’ was republished in 1889 by Dr. Ferdinand Tönnies, after a careful collation of six manuscripts, resulting in many corrections). 9. Epistle to D’Avenant on Gondibert, 1651, E. iv. 441–58. 10. ‘Leviathan; or the Matter, Form, and Power of a Commonwealth, Ecclesiastical and Civil,’ 1651. A Latin version of the ‘Leviathan,’ partly modified, and with three apologetic dialogues, in place of the old ‘Review and Conclusion,’ was prepared by Hobbes for the edition of his works published at Amsterdam in 1668; E. iii. and L. iii., the last from the 1668 edition. The ‘Leviathan’ was also reprinted in 1680, and recently at Oxford by J. Thornton, in 1881 and again in 1885, as a volume in Morley’s ‘Universal Library.’ 11. ‘Of Liberty and Necessity,’ 1654 (surreptitious), E. iv. 229–78. 12. ‘Elementorum Philosophiæ sectio prima. De Corpore,’ 1655, L. i. An English translation (E. i.), corrected by Hobbes, appeared in 1656, with ‘Six Lessons’ to the Savilian professors of astronomy and geometry appended (E. vii. 181–356), in answer to Ward’s ‘In T. H. Philosophiam Exercitatio Philosophica,’ and Wallis’s ‘Elenchus Geometriæ Hobbianæ.’ (answered by Wallis’s ‘Due Corrections for Mr. Hobbes’). 13. ‘Questions concerning Liberty, Necessity, and Chance,’ in

reply to Bramhall's 'Defence of the true Liberty of Human Actions,' &c.; 1656, E. v. 14. "Στίγμαι Ἀγεωμετρίας Ἀγροικίας Ἀντιπολιτείας Ἀμαθείας, or Marks of the Absurd Geometry, Rural Language, Scottish Church Politics, and Barbarisms of John Wallis,' E. vii. 357–428 (including letter from Henry Stubbe), 1657. Wallis replied in 'Hobbiani puncti Dispunctio.' 15. 'Elementorum Philosophiæ, sectio secunda de Homine' (partly from an unpublished manuscript now in Harl. MS. 3360; see Robertson, n.), 1658, L. ii. 1–132. 16. 'Examinatio et emendatio Mathematicæ Hodiernæ, qualis explicatur in libris Johannis Wallisii ... distributa in sex dialogos,' 1660, L. iv. 1–232. 17. 'Dialogus Physicus de Natura Aeris' (with a duplication of the cube, previously printed anonymously at Paris), 1661, L. iv. 233–96. Answered by Boyle in 'Examen of Mr. Hobbes' and 'Dissertation on Vacuum against Mr. Hobbes,' and by Wallis in 'Hobbius Heautontimorumenos.' 18. 'Problemata Physica,' 1662, L. iv. 297–384. An English version, 'Seven Philosophical Problems,' was presented to the king at the same time, but not published till 1682, E. vii. 1–68. 19. 'Considerations upon the Reputation, Loyalty, Manners, and Religion of Thos. Hobbes,' 1662, E. iv. 409–40 (in answer to Wallis's 'Hobbius Heautontimorumenos'). 20. 'De Principiis et Ratiocinatione Geometrarum,' L. iv. 385–484, 1666. 21. 'Quadratura Circuli; Cubatio Sphæræ; Duplicatio Cubi,' 1669. 22. 'Rosetum Geometricum,' L. v. 1–88, 1671. 23. 'Three Papers presented to the Royal Society against Dr. Wallis, with Considerations on Dr. Wallis's Answer to them,' E. vii. 429–38, 1671. 24. 'Lux Mathematica: excussa Collisionibus Johannis Wallisii et Thomæ Hobbesii,' L. v. 89–150, 1672. 25. 'Principia et Problemata aliquot Geometrica, ante desperata nunc breviter explicata,' L. v. 151–214, 1674. 26. 'Odyssey,' translated into English verse, 1674, and with the 'Iliad,' 1675, 1677, 1686, E. xi. 27. 'Decameron Physiologicum,' 1678, E. vii. 69–180. 28. 'Behemoth; History of the Causes of the Civil Wars of England;' finished about 1668,

suppressed by the king's desire, surreptitiously published in 1679, and authoritatively in 1681, E. vi. 161–416. An edition by Dr. F. Tönnies, from the original at St. John's College, Oxford, appeared in 1889, under the old title, 'Behemoth, or the Long Parliament.' 29. 'Vita, carmine expressa,' 1679, 1681, L. i. lxxxi–xcix. 30. 'Historical Narrative concerning Heresy,' E. iv. 385–408 (written about 1668), 1680. 31. 'T. H. Malmesb. Vita,' L. i. xiii–xxi; written by himself or dictated to T. Rymer; published with the last and 'Vitæ Hobbianæ Auctarium' (by Richard Blackburne), in 1681. 32. 'Dialogue between a Philosopher and a Student of the Common Law of England,' E. vi. 1–160, 1681. 33. 'An Answer to a Book published by Dr. Bramhall ... called "The Catching of the Leviathan,"' E. iv. 279–384 (written about 1668), 1682. 34. 'Historia Ecclesiastica, Carmine Elegiaco concinnata,' with anonymous preface by T. Rymer, 1688. A 'Whole Art of Rhetoric,' vi. 419–510, corresponds to a free version of Aristotle's 'Rhetoric,' dictated to his pupil about 1633. The boy's book is in the 'Hardwick Papers' (Robertson, *n.*) A letter to E. Howard, prefixed to the 'English Princes,' 1669, is in E. v. 458–60. Bishop Laney wrote a tract about Hobbes' views of free-will in 1672, but an answer by Hobbes, mentioned in the 'Vitæ Auctarium,' is not discoverable (Robertson,). 'Hobbes' Tripos,' 1684, contains Nos. 7 and 8, and the 'Liberty and Necessity' (No. 11). A collection called 'T. H. M. opera Philosophica, quæ Latine scripsit omnia,' was published by Blaeu at Amsterdam in 1668, Hobbes being forbidden to publish them at home. It included the amended 'Leviathan' (see above), the three systematic treatises, and reprints of mathematical pieces from 1660. The 'Moral and Political Works of T. H. of Malmesbury' were published in 1750, with life by John Campbell (1708–1775) from the 'Biographia Britannica.' The 'Human Nature' and 'Liberty and Necessity' were republished in 1812, with life by Philip Mallet. The

standard edition is Sir W. Molesworth's, 1839–45, the Latin works in 5, and the English in 11 vols. 8vo.

[The admirable monograph by Professor G. C. Robertson in Blackwood's Philosophical Classics, 1886, collects all the information, including that contained in the Hobbes MSS. at Hardwick, belonging to the Duke of Devonshire, and gives a very full and concise criticism of Hobbes' writings. A special study of Hobbes, has been made by Dr. F. Tönnies, who has published (from the originals in the National Library at Paris) seventeen letters between Hobbes and Sorbière in the *Archiv für Geschichte der Philosophie*, iii. 58–71, 192–232, reproduced (with trifling omissions) in *Mind*, xv. 440. See also Sir Leslie Stephen's monograph in *Men of Letters* series, 1903. Original authorities are three lives prefixed to the Latin works in Molesworth's edition, first published in 1681, by R[ichard] B[lackburne], M.D. The first is by Hobbes himself, or dictated by him to Rymer; the second, *Vitæ Hobbianæ Auctarium*, with lists of works, friends, and opponents, was written by Blackburne from the notes of his friend Aubrey; the third, T. H. Malmesb. *vita carmine expressa*, was written by Hobbes in Latin at the age of eighty-four (Bayle's letter to Coste, 8 April 1704, in *Œuvres Diverses*, 1711, iv. 841). The life by Aubrey was first published in 1813, in *Letters and Lives of Eminent Men*, ii. 592–637. See also Wood's *Athenæ* (Bliss); White Kennett's *Lives of the Cavendishes*, 1708, p–16; Clarendon's *Brief View and Survey ... of the Leviathan*, 1676; Boyle's *Works*, v. 533; Sorbière's *Voyage en Angleterre*, 1664, p, 66, 95–100. The lives by Campbell and Mallet are mentioned above. Two articles upon Hobbes are in D'Israeli's *Quarrels of Authors*. See also Masson's *Life of Milton*, vi. 279–91. In Bayle's *Dictionary* is an interesting article.]

The Delphi Classics Catalogue

We are proud to present a listing of our complete catalogue of English titles, with [new titles](#) being added every month. Buying direct from our [website](#) means you can make great savings and take advantage of our instant Updates service. You can even purchase an entire series ([Super Set](#)) at a special discounted price.

Only from our website can readers purchase a complete [Parts Edition](#) of our titles. When you buy a Parts Edition, you will receive a folder of your chosen author's works, with each novel, play, poetry collection, non-fiction book and more divided into its own special volume. This allows you to read individual novels etc. and to know precisely where you are in an eBook. For more information, please visit our *Parts Edition* [page](#).

Saint John the Baptist's Church, Ault Hucknall, Derbyshire — Hobbes' final resting place

Hobbes' tomb. In October 1679 Hobbes suffered a bladder disorder, and then a paralytic stroke, from which he died on 4 December 1679, aged 91. His last words were said to have been "A great leap in the dark."
